allowed to trade with the large amount of shipping which visited the port (both from their own and other countries), nor with the natives, nor even with each other; but gradual encouragement, in the shape of advances in money and stock, being held out, nine soldiers and sailors requested their discharge, and others followed their example. More troops were sent to protect, or rather aid them in their aggressions, and slaves were procured from Guinea,† Angola, Madagascar, and other places. The determined desertion of the slaves, notwithstanding the fearful punishment inflicted upon them when recovered, furnished a new cause of complaint against the Hottentots, more particularly the women, who were accused of harbouring them, and were more than once seized upon suspicion, and detained prisoners until their relatives should discover and bring back the missing slaves, in spite of their tears and entreaties, and the offer of "a good number of cattle and sheep,"‡ as a ransom. In this state of things, little was wanted to occasion open warfare between the white and coloured races. The whole Dutch population amounted, in 1658, only to 360 persons, i.e. garrison 95;§ free persons, 51; women and children, 20; slaves (who were kept in irons), 187; and convicts, 7; and it was hardly to be expected that a people so numerous as the Hottentots must then have been, would submit to be robbed of their lands and cattle, without any attempt at resistance. Nothing is said in Van Riebeeck's journal respecting the intercourse which existed between the Dutch and the Hottentot women; that it was extensive is evident from the rapid increase of the race called *Bastaards*, and we subsequently learn from the statements of the early missionaries, that it was accompanied by gross brutality on the

‡ Van Riebeeck's Journal, July 3rd, 1658.

§ No less than twenty-one of the garrison had escaped by concealing themselves in the last homeward-bound fleet, a circumstance clearly indicative of the hardships to which they had been subjected.

part of the colonists. This probably was an additional root of bitterness. The Dutch, notwithstanding their small number, considered themselves, owing to their superior civilization and the possession of fire-arms, more than a match for the Hottentots, and multiplied their complaints against them, alleging constantly some new theft as a reason for seizing the finest cattle; and, not content with acting on the defensive, besought the commander and council (who evidently shared the popular feeling) to direct the troops to assist them in taking actively hostile measures. The natives on their part reiterated the statement which they had made from the first, that the Dutch were intruders; that they were depriving them, without any right whatever, of their land, a possession so highly valued, that the best pastures had been ever a fruitful subject of dispute and war among themselves. Van Riebeeck, writing in 1659, states, that, on questioning a prisoner, captured in the act of cattle-lifting, as to the cause of their enmity, the man, who spoke tolerable Dutch, "declared that it was for no other reason than because they saw that we were breaking up the best land and grass where their cattle were accustomed to graze, trying to establish ourselves everywhere, with houses and farms, as if we were never more to remove, but designed to take for our permanent occupation more and more of this Cape Country, which had belonged to them from time immemorial. Aye! So that their cattle could not get at the water without passing over the corn land, which we would not allow them to do; that they consequently resolved (as it was their land) to dishearten us by taking away the cattle (with which they could see that we broke up and destroyed the best land), and if that would not produce the effect, by burning our houses and corn until we were all forced to go away. Doman [a Hottentot who had been to Batavia, and was to some extent civilized] had also put into their heads, that after all the houses in the country were destroyed, the fort could be easily surprised, as the earth walls were built with a slope, and thus the Dutch might be forced quite to abandon the country."

The reply made by the Chamber of the Seventeen (August, 1660) is so far creditable that it contains an unqualified admission of the just ground of offence given to the Hottentots by the forcible occupation of their territory, declaring that "the discon-

tent shown by those people in consequence of our appropriating to ourselves, and to their exclusion, the land which they have used for their cattle from time immemorial, is neither surprising nor groundless, and we should therefore be glad to see that we could purchase it from them, or otherwise satisfy them."

Before receiving the above communication, Van Riebeeck had formed and dispatched against the Hottentots the first of those "commandoes," or warlike expeditions, which the desire of injuring, if not extirpating the natives, and seizing on their cattle, rendered so attractive in the sight of the colonists. On this occasion eighty soldiers and fifty inhabitants were sent out in three companies, under the command of the fiscal. Van Riebeeck professing to believe cattle-stealing "a matter most displeasing to the Almighty, when committed by such men as they [the Hottentots] were (who did not know him)," declared the Dutch to be justified in His sight, not only in offering them all possible resistance, but likewise in doing them all possible injury, in order to bring them to a better behaviour. He offered a reward of 100 guilders for the person of Doman, if taken alive, and 50 if dead; and for the rest, 20 guilders living, and 10 dead, "women and children half-price," nor did he scruple to apply "a little torture," to make the prisoners betray the hiding-places of their associates. The slaves were released from irons to join in hunting them, care being taken to prevent their staying away, by detaining their wives, to whom they were known to be tenderly attached. It being, however, discovered that the Guinea slaves purposed joining the Hottentots, they were again put in irons. In spite of these sanguinary proceedings, but few lives were lost. The Hottentots sued for peace, and stated that they had no intention of doing personal injury to the settler whose death had caused the outbreak, but had used their assagays, in the first instance, only in self-defence, after having been fired on; they likewise pleaded much wanton injury and insult on the part of some of the farmers. When asked why they were so anxious to be allowed to return to the Cape, they replied, that finding it hopeless to expel the Dutch, who were daily gaining strength, they gave up the attempt, and earnestly desired to be suffered to live in quiet "in their birthplace and their own land, full

of pure water, after which their hearts always longed." The various arguments urged by them in vindication of the border-warfare which they had been carrying on, as related by Van Riebeeck (a witness by no means favourably disposed towards them), are so forcible, and so nearly what might be urged by the Kafirs to the English with equal propriety at the present day, that they are quoted at length, although, to some extent, they reiterate the sentiments expressed in a previous extract.

"They dwelt long upon our taking every day for our own use more of the land, which had belonged to them from all ages, and on which they were accustomed to depasture their cattle, &c. They also asked whether, if they were to come to Holland, they would be permitted to act in a similar manner, saying, 'What would it signify if you remained here at the fort? but you come quite into the interior, selecting the best for yourselves, and never once asking whether we like it, or whether it will put us to any inconvenience.' They therefore insisted very strenuously, that they should be again allowed free access to the pasture [in the vicinity of the Cape and Table Mountain, from which the Dutch had debarred them]. It was at first objected that there was not grass enough for their cattle and for ours also; they said in reply, 'Have we then no cause to prevent you from procuring any cattle? for if you get cattle, you come and occupy our pasture with them, and then say, the land is not wide enough for us both! who then can be required, with the greatest degree of justice, to give way—the natural owner, or the foreign invader?' They insisted much upon their natural right of property, &c., and that they should at least be at liberty to gather, for their winter food, the bitter almonds and roots which grew there naturally; but this also could not be acceded to, because, on the one hand, it would give them too many opportunities to injure the colonists, and on the other, because we this year had need of the bitter almonds ourselves, for the purpose of planting the projected hedge or live fence [projected for the express purpose of forming a wall to cut off the free communication of the aborigines with the native land they loved so well], (a reason which was not stated to them), but they insisted so much upon this point, that this word must out at last: that they had now lost that land in war, and therefore could only expect to be henceforth entirely deprived of it, the rather because they could not be induced to restore the cattle which they had, wrongfully and without cause, stolen from us; that their country had thus fallen to our lot, being justly won by the sword in defensive warfare, and that it was our intention to retain it."—*Journal of Commander Van Riebeeck, April 6th, 1660. Record, p. 205.*

Whether, in this argument, the civilised or the savage man had the advantage, admits of no question, at least, so far as reason and justice were concerned; but right

* Van Riebeeck solicited and obtained from the Dutch East India Company, the grant of a certain tract of land along the sea-coast, behind Table Mountain, which, on his departure from the Cape, he sold

and might were on different sides. Van Riebeeck,* notwithstanding the suggestion made to him by the Chamber of Seventeen, did not attempt to reconcile the Hottentots to the seizure of their land, by offering them any compensation, nor was anything done in the matter until 1672, when Arnout van Overbeke, one of the commissioners sent occasionally by the company to examine and report upon the state of affairs at the residency, stated to the council "that he had been reflecting whether it might not be both practicable and serviceable to the company, as well as necessary for the prevention of much future cavilling," to enter into an agreement with the Hottentots, especially with those in whose lands the residency had been, or might be established, whereby they should declare the Cape district, and its dependencies, lawfully sold to the company for a specified sum of money, "in order thus more firmly to establish our masters in the right of property." A formal contract was, in consequence, agreed upon between Van Overbeke, on the part of the East India Company, and a Hottentot chief named Manckhagou, *alias* Schlacher, in whom the hereditary sovereignty of the Cape district was alleged to vest, and who agreed to sell and surrender to the Dutch the whole of it, "beginning from the Lion Hill, and extending along the coast of Table Bay, with the Hout and Saldanha Bays inclusive," for the sum of 4,000 reals of Eight, in sundry goods and articles of merchandise. The district called Hottentots' Holland, beginning from the Cape District, and including Table Bay and "the place where the *Yselsteyn* lay at anchor during last June," supposed to be Simon's Bay, was purchased from "the minor prince D'houw, hereditary sovereign of the country called by us [the Dutch] Hottentots Holland, and its dependencies, assisted by the Hottentot chief, Dackkggy (*alias* Cuyper), stadhouder and guardian of the prince, and the captain Oyth'key, his counsellor and representative." No mention is made in either of the deeds, of any provision for the maintenance, much less for the civilization or conversion of the natives dispossessed by these sweeping "contracts," of their birthright, by the cupidity of a few individuals, who, whatever their sovereign

for 1,600 guilders, (about £160 English coin sterling of that period.) For this territory there is no reason to suppose he ever made the native owners the slightest compensation.

power might have been (and even that is very questionable), could have had no such *territorial* dominion, as to authorise them to reduce a numerous people to the condition of beggars, making them henceforth vagrants on their own land. In a subsequent despatch from the Cape, the merchandise stated in both deeds to have been worth 4,000 reals of Eight, is shown to have consisted, in the first case, of "tobacco, heads, brandy, bread, and other trifles, to the value of $\text{f}81 : 16$, prime cost;" and, in the second of the same, articles to the value "of $\text{f}33 : 17$, also prime cost, a sum so inconsiderable [write the local authorities] that the matter should not have been so long postponed."*

It is but too evident that these so-called contracts were steps in the right direction, only in so far as they acknowledged the absence of any inherent right, on the part of the white race, to take forcible possession of the country of the coloured; in all other respects they were as far from being equitable agreements, as if a man should barter with a child sugar-plums for sovereigns. At this early period the Hottentots were far from experiencing or foreseeing the full extent of the misery which the Dutch, on becoming numerous and powerful, would bring upon them. They appear to have sincerely endeavoured to live in quiet, and their inoffensive behaviour during several years (that is, until roused by renewed aggression), is repeatedly noticed by the local authorities. Commander Wagenaar, the successor of Van Riebeeck, expressly stated, in reply to the questions of one of the company's commissioners, that he had never heard of any murders, thefts, or robberies, committed by them since the war of 1659, and did not anticipate any, so long as the colonists should refrain from giving them cause by

* The real of Eight is the old Spanish dollar, value about four shillings and four pence; the florin is identical with the guilder, and the stiver is the twentieth part of a florin.

† *Record*, pp. 255, 258.

‡ "The greater number of the freemen," says Van Riebeeck, "whenever any ships are in the roads, may be daily seen as intoxicated as irrational creatures, with the strong drink they obtain from the shipping."—*Record*, p. 181. Yet this very vice, which he knew to be so destructive to steady industry and propriety of conduct, he scrupled not to foster in the untutored Hottentots. While using every possible precaution to prevent their acquiring a knowledge of the management of fire-arms, which would have rendered them to the last degree dangerous as enemies, he remorselessly, and under pretence of friendship, encouraged them in the use of that more deadly wea-

ll-treatment, "to take revenge by theft or fire-raising." He therefore gave orders that they should no longer, "out of wantonness, or upon trifling causes, be called by the garrison, the cattle herds, or the sailors, 'black stinking dogs;' still less be kicked, pushed, or beaten, as our Masters in the fatherland most earnestly recommend [this caution], in order that these poor people may not thus be rendered more adverse and disposed to fly from us."†

The settlement itself progressed very slowly, and gave little indication of the magnitude and importance which it was eventually destined to attain. The records of the administration of Van Riebeeck and his successors, contain heavy complaints, on the one part, of the drunkenness,‡ laziness, and dishonesty of the burgers§ or farmers who had received their freedom; and on theirs of severe restrictions, against which it was impossible to make head by any industry. After becoming hopelessly indebted to the company, frequent and occasionally successful endeavours were made to escape in vessels bound to India, Holland, or England. The Dutch Governor-general of India, in answer to a communication from Van Riebeeck on this subject, writes (Dec., 1659)—"We agree with you that the desertion and concealment of free men, as well as of the company's servants, at the Cape, ought to be met with severe punishments, for it would otherwise be impossible to keep the Cape residency any longer in existence. * * * At the same time innumerable complaints are made to us that the free men cannot earn a subsistence there, and are thus compelled to fly by hunger and privation." There can be little doubt that the cultivation of the land at this time, under the restrictions of the Dutch system, rarely proved remunerative; among other

pon, by which, according to his own account, he constantly witnessed nominally civilized and Christian men reduced to the condition of brute beasts. Every purchase of cattle was concluded by dram-drinking, and on one occasion "a tub of brandy and arrack mixed was set open in the middle of the esplanade of the fort, with a little wooden bowl, from which these people made themselves so drunk that they made the strangest antics in the world." This scene, so disgraceful to the person who instigated and records it, occurred, we are informed in the same paragraph, "before the sermon," on the day on which the Dutch commemorated the holy festival of the Ascension.—Van Riebeeck's Journal, May 6th, 1660.

§ *Burger*, *burgher*, or *borger*, signifies a citizen, burgess, or freeman; *boer* signifies a countryman or peasant, and by general usage, though not strictly correct, is translated by the English word *boor*.

evidence may be noticed a resolution of the council in 1660, which provides for employing, at his own request, as a farmer on account of the company, a man who had landed as a free immigrant in 1659, at ten guilders per mensem (twenty shillings a month) for the term of ten years; and Commander Wagenaar, in 1662, found the greater part of the free farmers inclined to leave the plough and return to the company's service, if allowed so to do, finding that all their crops were required to repay the advances of the company. Of their character he gives a very unfavourable account, declaring that not above six or eight of them were either in repute, or, in fact, respectable and industrious men, and that the rest were "depraved from their youth upwards, lazy, drunken fellows," who cared as little for their Dutch servants as for beasts. In a despatch dated four years later, he speaks of them, and of their servants, in equally strong terms, declaring many of them to be reckless and useless, disobedient and worthless subjects, whom it would be well to get rid of one way or the other, as it was to be feared that in the event of a hostile attack* they would be the first to go over to the enemy, some of them having been long known to wish and pray that the English fleet might but come hither to convey them from this devil's land, as they commonly called it. Unsuccessful attempts at desertion were severely punished, the culprits being sentenced to be flogged and kept for two or three years in irons, without wages; and one man, for only expressing a wish that he had accompanied some deserters into the interior, was sentenced to fall thrice from the yard, and receive 100 lashes before the mast. Nor was it this offence only which was punished with excessive severity; caprice and tyranny marked the general proceedings of Van

Riebeeck and the Cape Council, both in their judicial and legislative capacity. In the list of convictions and penalties for crime, extending from 1652 to 1662, we find one man (a seaman) for stealing fruit from the company's garden, sentenced to six months' hard labour in irons, fifty lashes, and forfeiture of one month's wages. Another for evincing discontent with the provisions issued, and wishing the devil to take the purser for serving out penguins instead of beef and pork, received 100 blows with the butt of the musket. To be keelhauled, to have the tongue bored, or a knife drawn through the hand, are punishments also mentioned as inflicted upon different members of this small community.

But while every lapse from right was liable to be visited so heavily, proportionate encouragements for good conduct were wholly wanting. Commissioner Verburg, in 1676, declared that the colonists were so limited and restricted in every respect, as to be freemen only in name, and that if the placats of the council (proclamations or ordinances) "were enforced to the letter, the ruin of the inhabitants would often be the consequence."† They could scarcely be expected to refrain from endeavouring to evade enactments which required them to deliver up to the local government all the corn they raised at a fixed price, and to purchase from it monthly whatever they needed at an advance of twenty-five per cent., which interdicted them from carrying on any barter with the natives, the shipping visiting the bay, or even with each other, and compelled them to purchase their cattle, provisions, merchandise, clothing, &c., from the company alone. Besides these hardships, they were required to be constantly armed, to attend military parades on Sundays, and at other times, to be ready at any moment to proceed against the aborigines,

* The Dutch at this time looked with jealousy both upon the French and Portuguese, but the English were the especial objects of their dread and dislike. The partiality evinced by Herry and many other natives towards them, had been from the first an additional cause of suspicious distrust; consequently, when English vessels put in at the Cape, they found great difficulty in procuring the most inferior and insufficient supplies of meat and vegetables, and were treated with ill-disguised enmity. On several occasions captains with ships disabled from bad weather, or with crews so reduced by scurvy—the plague of that age—as to be scarcely able to work them, were preserved from the worst treatment only by the recollection of the £80,000 which Cromwell had compelled the Dutch to pay on making

peace in 1654, for the injuries inflicted upon the English East India Company, at their Asiatic possessions. In a despatch, dated May, 1663, Commander Wagenaar informs the directors of a horrible outrage committed upon an English crew by the commanders of two Dutch vessels; the captain and ten persons having been put to the torture by lighted matches being placed between their fingers, to force them to reveal where their money was secreted. Wagenaar states, that he has been particular in recording the details, as the event might create new disputes with "the easily excited English nation;" and probably it did have some share in producing the renewed hostilities which broke out in the following year.

† *Record*, p. 254.

and were not permitted to build within three miles of each other. The lands granted in freehold to the first settlers, though exempted from taxation for three years, were subsequently made liable to an assessment, fixed at one-tenth of the produce raised. A tenth of all stock grazed on the pasture land, which they were allowed to occupy, was also required by the government, and the value of imported goods received by them on credit from the company was secured by special mortgages on their freeholds. The tithe was to be assessed by the collector before the crops were reaped, and to prevent frauds and evasions, no person was allowed to bake bread or to purchase grain, without a licence, or to have flour ground except at the Dutch East India Company's mills, near the fort.

In 1666, Cornelis Van Quaelbergen succeeded Wagenaar as commander, but was superseded in the following year (on account of the kind reception and supplies which he furnished to the admiral and crew of a French vessel which touched at the Cape, instead "of allowing them to drift upon their own fins"), by Jacob Borghost, under whom great cruelties were practised towards the Hottentots. Of this there is no record in the official documents of that period; but Governor† Bax, writing a few years after (1677), animadvert strongly on the shameful conduct of the settlers in former times, but especially under Commander Borghost, in not only frequently and forcibly despoiling the "Gonnema" and other Hottentots of their cattle, but also in treacherously firing upon and killing many of them, in consequence of which, so strong a feeling of hostility had been produced in the minds of the natives, that instead of its being deemed safe to send two or three men far into the interior, now twelve in a body could hardly be dispatched "twenty mylen," without apprehension. These remarks throw considerable light on the true causes of the renewal of warfare between the settlers and the Gonnema Hottentots, and of the commando dispatched against the latter in 1672. Before the expedition started, news arrived at the Cape of the attack on the little garrison at Saldanha Bay, the loss of

* Despatch from the Chamber of Seventeen to Commander Borghost and council. Nov. 1637.

† The Cape was raised to a government in 1671, but the directors, finding but small progress made in agriculture, declared that the country which could not produce its own corn, could not be called a colony,

the corporal in charge and three men, and the plunder of the company's effects; orders were consequently given to endeavour to fall upon the Gonnema people and their allies unexpectedly, and, as far as possible, destroy them without mercy, sparing nothing that was male. To surprise the natives, when on their guard, was, however, no easy matter, and the Dutch were compelled to return after capturing "800 excellent horned cattle, and 900 fine sheep," having sustained no injury, with the exception of one of the mounted burghers, who having "left the rest of the party, in order to kill some Hottentots who had hidden themselves in a sedgy river, was wounded in the back with an assagai (though not dangerously), in consequence of his pistols repeatedly missing fire."†

In 1676 another commando was despatched against the same tribe, who were then encamped a day's journey beyond the Berg River, in the "Suyker Bergen" (Sugar Mountain), which resulted in the death of a chief named Kees, and some Hottentots, and the capture of about 160 head of cattle and a few sheep; a booty which, though small, was doubtless very acceptable to the Dutch, from the great mortality which had previously ravaged their flocks and herds, and the hope of which had probably no small share in prompting the expedition. The Gonnemas sued for peace in the following year; it was granted on condition of their paying an annual tribute of thirty oxen for the first returning fleet—a quantity which there is every reason to suppose they could not afford to part with, without being reduced to beg or steal, for the support of their families, from the Europeans, or from other tribes.

Under these circumstances it is not surprising that the handful of colonists should have deemed it necessary to have an armed force protecting the cattle when grazing; one-third of the garrison mounted guard every night, and the commander, chaplain, and surgeon, never moved about without pistols or fire-arms of some description.

Such a state of things could not long continue; in truth, no European settlement, however small, could well be established amid savage tribes, without greatly improving and again reduced it to a residency, and, on the death of Governor Bax, appointed an officer (Simon Van der Stell) to succeed him, with the rank of commander only.

‡ Despatch from Governor Goske and council, to the Chamber of Seventeen. July, 1673.

ing or greatly deteriorating their condition. It would seem to be almost hopeless to expect from a body of nominally Christian and civilized men, the mixture of forbearance, firmness, discretion, and strict honesty, so peculiarly necessary to those, who, from whatever motive, desire to obtain the confidence and permanent affection of the people of a nation yet buried in heathen darkness; putting aside, therefore, all idea of elevating them, it remains either to extirpate or reduce them to subjection. The course adopted by the Dutch combined these alternatives, and gradually brought under their yoke the various neighbouring tribes, whose love of ardent spirits, and jealousy of each other, rendered them an easy prey. Famine and sickness, the too frequent accompaniments of war, thinned the ranks and diminished the individual strength and courage of the aborigines. Various diseases unknown before the arrival of the foreign invaders, likewise committed fearful ravages; measles, and an infectious malady not named, destroyed thousands, and an eye-witness, the Rev. Mr. Valentyn, speaks in 1713, of a sweeping pestilence,* whereby "hundreds of fugitive natives lay dead upon the roads." It would be needlessly prolix to follow the colonists step by step, in their gradual increase in number and power, or more than illustrate, by a few striking instances, the atrocities committed by the settlers, and the injustice legalized by local authorities against a foe by nature barbarous, and too often brutalized by oppression. In Africa, most especially, it might then as now be said—

"Man's inhumanity to man, makes countless nations mourn."

The civilization which became a potent element of destruction, could not have its violence checked, or its vengeance softened by a merely nominal profession of Christianity, which changed not the heart; the first principles of justice were violated in 1652, and after two centuries of Dutch and English administration, the white and black man are still struggling to the death—the one for dominion, the other for existence; the soil of South Africa is still bedewed with human gore; and the causes of this terrific violation of the divine law are to be traced to the grievous errors of dis-

honesty, false policy, and neglect of Christian duties, which so strongly marked the first stages of Dutch colonization, and which, it is to be feared, are far from having been wholly abjured, even in the middle of the nineteenth century, by their successors in the government of the country.

In 1700 the free trade in cattle was allowed between the settlers and the natives, on condition that no force or compulsion should be made use of. The farmers, however, soon turned this licence to a means of oppression; and, instead of trading, proceeded in parties of eighty or ninety beyond the boundaries, and, being armed, forced the natives (and even murdered them in some instances) to give up their cattle, and afterwards shared the plunder. In 1702, one of these marauding parties, consisting of forty-five persons, returned with 2,000 oxen, which they had forcibly taken from the Honisons and Gonoquas; these, together with the Namaquas, Ubiquas, and Kockemans, retaliated, and many innocent persons suffered. Therefore, in October, 1702, the commander and council repealed the permission given in 1700, and forbade future cattle trading under pain of corporeal and even capital punishment, until the pleasure of the Chamber of Seventeen should be known. So general had been the ill-conduct of the colonists towards the natives, that the directors considered that no punishment could be inflicted without material injury to the colony, as more than half the inhabitants were deeply implicated; they therefore passed it over with a feeble threat, that it should be punished if repeated. It is difficult to suppose they could expect such a warning would prove sufficient to deter the offenders from crimes which they tacitly admitted it to be not to their interest to put a stop; the cattle trade was again sanctioned, and the records thenceforth note annually hostility with the native tribes, many killed on both sides, and numerous cattle taken and recaptured, by both Europeans and aborigines. Kolben, a Prussian astronomer and naturalist, who visited the Cape in 1705, and remained there some years, under the especial protection of the Dutch East India Company, gives many details, correct and incorrect, concerning the extensive Hottentot popu-

* Thunberg, doubtless alluding to the same "sweeping pestilence," says, "in 1713 the small pox was first brought here by a Danish ship, when it made a dreadful havoc among Europeans, as well as

Hottentots, only three houses having escaped. The Hottentots died in such multitudes, that their bodies lay in the fields and highways unburied."—Vol. i., p. 120.

lation which then inhabited South Africa, and devotes a chapter (VI.) of his work,* to the description of what he terms sixteen different "nations," viz., the "Gunjeman, Kochaqua, Sussaqua, Odiqua, Chirigriqua, Greater and Lesser Namaqua, Attaqua, Koopman, Hessaqua, Sonqua, Dunqua, Damaqua, Guaros or Guariqua, Houteniqua, Chamtouer, and Heykom," to which he adds the "Terra de Natal, inhabited by the Caffres." Each nation he describes as having an hereditary chief called *Konquer*, who presided in the courts of the elders or captains of each kraal or village, declared war or peace, and commanded the fighting men. The duties attendant on the hereditary office of the captain of the kraal, were to preserve peace, administer justice within his jurisdiction, and hold a subordinate command in war. Before taking office, he solemnly assured the assembled people that he would not alter or deviate from their ancient laws and customs.

In his fourth chapter, Kolben describes the Hottentots as he saw them, and refutes many of the mis-statements put forth by the Dutch; he says—"they are by no means stupid, have some sense of God and of religion; I have known many of them understand Dutch, French, and Portuguese, to a degree of perfection; and, allowing for defects in pronunciation, express themselves roundly in those languages. I knew one who had gained the English and Portuguese in a very little time, and spoke them with surprising readiness and propriety. In agriculture and many other arts and customs these people discover good marks of capacity and discernment; they make excellent servants, and perhaps the faithfulest in the world."

* Kolben's *Present State of the Cape of Good Hope*. English edition. London, 1731. Vol. i., p. 61.

† Parliamentary Papers relative to the Cape of Good Hope, 1835; p. 17.

‡ The Bushmen, Buschies, or Bosjesmen, are supposed by Barrow and others to be the veritable aborigines of this part of Africa; but some authorities consider these wild and predatory tribes to be the remains of large Hottentot hordes, reduced by war or famine to extreme poverty.

§ Sparrman, vol. i., p. 213. This good old woman, named Helena, and some few others, lived to reap, even in this world, the fruits of patient continuance in well-doing. From time to time reports reached the Moravian Society of the earnest desire entertained by the converts for the return of their beloved teacher, and the "United Brethren" repeatedly applied to the Dutch East India Company to sanction it. This, however, was as constantly refused. Schmidt died; but the society increasing in influence, and becoming

In 1723 the barbarous treatment of the Hottentots, and the complaints made by them, were laid before the Council by the "churchwardens at the Paarl;"† but it would appear without effect. In 1727, some feelings of compunction appear to have been aroused in their favour; the cattle trade was once more prohibited, on account of the extreme poverty to which they had been reduced by forced barter with the farmers, who were enjoined to refrain from injuring them under pain of being punished as disturbers of the public peace.

In 1739, "the great Bushmen‡ and little Namaquas complained to the Council that frequent murders and robberies were committed upon them by the colonists. The fiscal (a kind of local magistrate) was ordered to investigate their statements; and the result of the inquiry being considered unfavourable to the complainants, two commandoes were ordered out against them. About this time an attempt was made for the promulgation of the Christian religion among the Hottentots, which it will be easily conceived the burgers and boors met with undisguised hostility. A Moravian missionary, named George Schmidt, preached the gospel to them during three years (from 1739 to 1742) with remarkable success, it being received "with great avidity and zeal." There were numerous converts at *Serjeant River*, a small branch of the river *Zonder End*; one of these was mentioned to Dr. Sparrman, in 1775, as still living; she "used to perform her devotions every morning on her bare knees by the side of a spring; she had a German bible, which she often read, and treated with the greatest veneration: her behaviour throughout life was decent and quiet."§ Schmidt, who had

more and more convinced of the urgency of the case, at length prevailed on the directors to permit the renewal of their mission; and at the close of 1792 three missionaries—who, according to the principles of the Moravians, were able mechanics as well as sound and zealous Christians—arrived at Bavian's Kloof (Baboon's Glen), and established themselves on the very spot where Schmidt had taught half-a-century before, holding their first meetings under the shade of a large pear-tree, planted by him. Many Hottentots flocked joyfully round their new teachers, especially old Helena, who, taking her Testament from its leathern case, read to the astonished missionaries the narrative of our Saviour's birth. For eighteen years after this she lived peacefully at Bavian's Kloof, and expired in 1800, having attained the age of nearly a hundred years.—[For further details on this interesting subject, see *Historical Sketches of the Missions of the United Brethren*, by the Rev. John Holmes; pp. 372-6.]

obtained the name of "the Great Hottentot converter," having christened five natives in Sept. 1742, was prohibited from repeating that offence, and banished from the country on the pretence of his having "illegally made himself a chief among the Hottentots in those parts, in order to enrich himself by their labour, and the presents they made him of cattle."* This allegation comes with peculiarly ill-grace from a government and people who were at that time forcibly depriving these very Hottentots of their lands, plundering them of their cattle, and slaying

them if they resisted being made slaves of; while it proves beyond dispute the hold upon their affections that might be gained by kind treatment, when one man, poor and unaided, could do so much in so short a period. The following table, showing the number and condition of the people, and the amount or stock, produce, revenue, and expenditure for the years 1769 to 1773 inclusive, derived from the annual reports of the Cape government, is interesting as affording a view of the state and progress of the colony about a century after its establishment:—

Particulars.	1769.	1770.	1771.	1772.	1773.
Company's servants—civil, military and commercial	1,356	1,401	1,361	1,325	1,490

Expenditure ³	450,524	464,775	452,010	475,228	510,902

Note.—No census taken of native population, of whom and of other free coloured persons twenty-two were convicted and eight capitally punished during the same period.

¹ The sick consisted chiefly of scorbutic recruits or seamen: the number of deaths from scurvy, between Holland and the Cape, much exceeded, during this period, that of the sick left there; in 1771, twelve ships lost, on the passage, 1,034 men, or nearly half their crews.

² In consequence of an urgent appeal made by Commander Van der Stell and council, in 1685, on behalf of the colonists, the chief number of whom were "strong, gallant, and industrious bachelors, who, for the solace of their cares, and for the managing of their domestic concerns, would most gladly be married," forty-eight young women were sent out to the Cape, by the Chamber of the Seventeen, in the following year.

³ The following is the detail of the expenditure of 1773:—Expenses of shipping, f184,488; ordinary rations, f78,878; ordinary expenses, f30,902; extraordinary expenses, f3,866; buildings and repairs, f17,783; fortifications, f1,155; expense of company's slaves, f18,969; condemnation and confiscation, f4,576; expenses of boats, f9,615; pay of shipping, f14,169; salaries on shore, f146,497.

The explanations attached to each branch of expenditure make no reference to any expense incurred for operations, offensive or defensive, against the natives. In subsequent years such expenses appear under the head of extraordinaries—the extraordinaries for the above five years are successively—3,355—3,427—3,373—4,799 and 3,866 guilders. The expense of the journey of the Landdrosts in 1770 is noticed under this head.

The same observation applies as to the particulars of the colonial revenues;—in 1773, of a total income of 171,637 guilders, 77,775 were derived from the licensed retail of wine, brandy, and beer, of which sum only a small portion was drawn from the interior of the colony. The following are the details of this source of revenue. At Cape Town:—Sale of wine, f29,800; brandy, f32,000; beer, f5,400; impost on spirits sold to foreigners, f9,300; sale of Cape wine at Rondebosch and False Bay, f3,300; of wine and brandy at Stellenbosch and Drakenstein, f800.

The European portion of the population, though generally alluded to as Dutch, was chiefly composed of, or descended from, disbanded soldiers from various German regiments, and comprised Prussians, Hanoverians, Flemings, and Poles, besides the descendants of about 150 French refugees, who, in 1690, in consequence of the revoca-

tion of the Edict of Nantes, sought and obtained a home in South Africa. The so-called Dutch, with some few exceptions, had little knowledge of, and no family connexion with the Batavian Republic; they only knew that the Cape belonged to a company of merchants in Amsterdam, whose especial desire it was that their native tongue should be spoken and taught, to the

* Parliamentary Papers, 1835; p. 18.

exclusion of any other, and that the Dutch laws and customs should, in all points, be steadily enforced. So completely did the language prevail, that the slaves and Hot-tentots soon acquired it sufficiently to speak it even among themselves, as did also the French immigrants, whose very names lost their nationality; thus Rousseau was changed into Roussouw, Bruyère into Bruel, Terre Blanche into Ters Blans.

The manner in which soldiers were obtained for the Dutch East India Company, to be sent to the Cape of Good Hope and other settlements, is described and strongly condemned by Thunberg, a learned Swede, who in 1772 sailed for the Cape in one of their ships, as surgeon-general.* He cautions all strangers visiting Amsterdam to be on their guard, for—

"Kidnappers (zeelverkoopers), the most detestable members of society, frequently effect the ruin of unwary strangers, by decoying them into their houses and then selling them to be transported to the East Indies. * * * These man-stealers are citizens who, under the denomination of victuallers, have the privilege to board and lodge strangers for money, and under this cloak, perpetrate the most inhuman crimes. * * * They not only keep servants to pick up strangers in the street, but also bribe the carriers who carry the baggage of travellers from the ships to the inns, to bring strangers to lodge with them, who, as soon as they arrive are shut up in a room, together with a number of others, to the amount of an hundred and more, where they are kept upon scanty and wretched food, entered as soldiers upon the company's books, and at length, when the ships are ready to sail, carried on board. The honest dealer receives two months of their pay, and what is called a *bill of transport* for 100, 150, or 200 guilders. In the two, three, or four months during which they are shut up at the kidnapper's, they contract the scurvy, a putrid diathesis, and melancholy (which break out soon after they come on board), and by their pale countenances, livid lips, and swelled and ulcerated legs, are easily distinguished from the others, who are healthy and sound. * * * Many innocent people, often of decent family and in easy circumstances, are trepanned by these man-stealers, and must go as soldiers to the East or West Indies, where they are obliged, by the articles of their agreement, to serve at least five years. * * * The Directors of the East India Company can neither be defended as not knowing of such scandalous practices that disgrace humanity, nor, indeed, be acquitted of favouring them at times. For as the company is often in want of men, and does not care to give better pay, they are obliged to overlook the methods used by these infamous traders in human flesh to procure hands."—P. 73, '4, '5.

Of the internal state of the honourable

* *Travels in Europe, Africa, and Asia, between 1770 and 1779, (to the Cape of Good Hope, 1770 to 1773) by Charles Peter Thunberg, M.D.; in four volumes. Third edition. London: 8vo edition, 1793. Vol. i.—Africa.*

company's fleet, the writer describes in most unfavourable terms.

"Theft can hardly be carried to a greater extent than it is on board an East Indiaman, during the time it lies in the Texel. Chests are broken open in the night and emptied of their contents, so that the owner has not a single rag left for shifting himself; hammocks and bed-clothes are stolen, insomuch that the owners are obliged to sleep on the bare boards of the deck: shoes and night-caps are purloined from the feet and heads of those that are asleep, and the sick have frequently their breeches and stockings stripped from off their bodies, so that those who slept, when they awake, and the sick when they recover, must run about in the cold bare-headed, bare-footed, and half naked."—P. 77.

Add to this, that these unfortunates were, according to the same authority, hard-worked, badly fed, and miserably lodged, and the mortality which took place annually in the fleet, is then amply accounted for. Some idea of the fearful loss of life thus wantonly sacrificed, may be formed from Thunberg's statement of what he witnessed during his voyage from the Texel, in the middle of December, 1771, to the Cape, which was reached the 16th of April, 1772. Each ship had above 100 so-called sailors, and from 200 to 300 of the so-called soldiers. On arriving in the Texel, Thunberg found that several ships which had been lying there since September, had so many sick and dead, "as to be obliged, for want of hands, to wait for a fresh supply, notwithstanding that they had each been sent out at first with more than 300 men" (p. 72). On reaching Table Bay, it was ascertained that on board Thunberg's ship 115 had died, including ten who perished before leaving the Texel, and two who had fallen overboard. The *Hoencoop* had lost 158 men; the *William V.*, 230; and the *Jonge Samuel*, of Zeeland, 103.—(p. 99.)

To resume the history of the colony. In 1773, its limits had extended in far more than due proportion to its population, who coveting yearly more and more land, had driven the natives from pastures which they had not even the poor excuse of needing for the sustenance of their own flocks and herds. This, however, they did not accomplish without some severe struggles, and a most fearful destruction of life on the part of the aborigines, who were hunted and shot like so many wild beasts, only with greater ignominy—the slaying of men by their ruthless and most savage brethren, being looked upon rather as the necessary act of exterminating venomous reptiles or loathsome vermin than as a contest with the

nobler animals, in whose pursuit there was danger to be braved, and glory to be won.

Looking back after the lapse of years, it seems scarcely possible to credit the existence of such an utterly degraded state of public feeling; yet official records and private testimony concur too exactly, to leave any doubt on the subject. Nor, while expressing the deep and just abhorrence excited by a course of almost unmixed cruelty, should it be forgotten that the colonists themselves were oppressed and surrounded by temptations. If Thunberg's statements are correct, which there appears no ground for doubting, many of them had been entrapped, in the first instance; and even supposing them to have come of their own free will, the regulations of the Dutch East India Company were, as has been shown, extremely rigorous, and enforced by heavy penalties; and while their errors were liable to excessive punishment, comparatively little encouragement was held out to them to persevere in well-doing. Many of them were unmarried, and lived in open concubinage with slaves and Hottentots; how could they be otherwise than debauched? they were slave owners—that alone would be sufficient to render most men indolent and cruel, to give them a distaste for the laborious and anxious pursuits of farming, and incline them rather to look to the increase of their stock, under the herding of their bondsmen, as an easier mode of acquiring competence and even affluence; they had many incitements to drunkenness in a land where the vine grew wild; and too little occupation for mind or body, to find pleasure in any but sensual gratifications. This is a fearful picture—the illustrations given in the following pages, will enable the reader to form some estimate of its general truth.

In 1772, Thunberg saw in confinement at Cape Town, 950 men, women, and children of the Bushman nation, who had been made prisoners about 150 miles from Cape

* Thunberg's Travels. English edition, 1795. Vol. i., p. 132.

† This assertion was probably a mere cloak for their desire of exterminating the natives. Colonel Collins, writing respecting the "horrors which disgraced the name of Christian in these parts," attributes them chiefly to the false accounts made by the burgers or boors—(as they were more generally and perhaps more correctly termed, inasmuch as few were by birth and education above the condition of peasant farmers)—to the authorities at the Cape; and thus proceeds to account for their ill-will. "An attempt to draw them (the Bushmen) into their ser-

Town. They had concealed themselves in a mountain kloof (the colonial word for cleft or narrow pass), and defended their home against a party of boors and soldiers by rolling large stones down upon their enemies. They asserted that they had been forced to attack the colonists, by reason of the Europeans making every year fresh encroachments upon their lands and possessions, and forcing them continually further up the country, whence they were driven back again by other Hottentots, or else killed.* "The Hottentots," he says, "are almost extirpated."—(p. 279.)

In 1774, the governor (Van Plettenberg) and council approved of an extensive commando devised by the Landdrost and Heemraden (local board of magistrates,) of Stellenbosch, and the militia officers assembled there, for the purpose of re-establishing in their "loan farms" certain of the settlers, or rather squatters, who having taken forcible possession of the best portions of the Camdeboo, Nieuweveld, Ilantam, Groote, Middel and Kleyn, Rogge and Bokkeveld districts, reported themselves to have been compelled to quit by the marauding incursions of the Hottentots and Bushmen.†

The expedition was divided into three distinct bodies or commandoes; one of which was "to assemble behind the Sneeuwberg, and to make the attack in those districts;" the second "to assemble at the Sax (Zak) River, and make the attack in the surrounding districts;" the third "to meet in the Lower Bokkeveld, and to make the attack in the so-called Bosjesman's (Bushmen's) land." "Ninety firelocks, 900 lbs. of gunpowder, 1,800 lbs. of lead, 3,000 flints, 24 handcuffs, and 12 leg-irons," were contributed from the "Castle of the Good Hope," in addition to the offensive weapons possessed by the burgers and local militia; a field-commandant was appointed, to whom, for the first time, was given the rank of cornet, and promotion was likewise conferred on the field-corporals.

vice having proved unsuccessful, and some losses having been occasioned by their disposition to theft, *a people not inferior in natural endowments to any upon the face of the globe*, were represented to the colonial government as unfit to live. A journey from the Cape was supposed at that time to be too great an undertaking for the purpose of ascertaining any point which concerned only so distant a quarter. The reports received were implicitly believed, and orders were given for unlimited commandoes.—Parliamentary Papers, 1835; p. 40. This testimony, borne by a writer by no means generally prejudiced in favour of native races, deserves particular notice.

In the event of the Hottentots and Bushmen not fleeing from their country, or giving it up on the combined attack being made, they were to be "entirely subdued and destroyed." According to the instructions given to the commandant by the local authorities, it was left to his good management, and that of the leaders of the other parties, to act "according to the circumstances and exigencies of the case, and to attack and slay them (the natives) in such a cautious manner however, that our own inhabitants may be as little as possible exposed to danger, and not rashly led to slaughter." The women and children would, it was expected, be captured in such numbers as "to become troublesome; the commandants were therefore authorized, if they chose, to release them, but were ordered to keep the adult and young males until quiet should be restored, when they were to be (at the pleasure of the commandants) released or else distributed among the poorest settlers as servants, without hire, for a term of years. The ammunition was to be "frugally used, not wasted, nor unnecessarily expended," as a satisfactory account would be demanded of the quantity expended. This latter injunction, repeated on subsequent occasions, in some measure explains the reason of the peculiarly cruel mode of slaughter, to be hereafter mentioned, which, according to Mr. Maynier, was occasionally adopted by the boors. The instructions to the commander-in-chief concluded with the following sentence:—"Trusting now that all will be managed by you discreetly, according to the duty of an upright and honourable man, the authority of the government maintained, and the best interests of the colony and of the inhabitants duly consulted, we will recommend you to the protection of the Almighty, and remain your good friends."* It would be out of place to do more than notice in passing the shocking impiety of commending to the protection of a just and merciful Being, men about to engage in establishing wrong and robbery by murder. The commando fulfilled its direful mission, drove out the rightful possessors of the soil, and the three companies, comprising in all 150 men, succeeded in surprising the natives, and firing upon them, killing 513, and capturing 241, with the loss on their own side of only one man. This and subsequent commandoes were

too evidently not battles but *battues*. Van der Merwe, one of the field-corporals, was charged by a burger named Schombie of having needlessly destroyed women and children, in the great commando of 1774; in proof of which the accused stated that having requested Van der Merwe to give over to him a wounded girl that she might be cured, he had refused, and caused both her and a little infant at the breast, who was also wounded, to be shot. Van der Merwe stated, in his defence, that he had not wantonly taken the lives of females and defenceless children, but that "a few who were mortally wounded, and who thus must necessarily have suffered a painful death on the field, had on that occasion been dispatched, in order that their death might not be still crueller."† The result of the investigation was that Van der Merwe was declared to have done his duty, and to prevent "the zeal and public spirit of the field-corporals from being damped, Schombie was sharply reprimanded, and fined for having brought forward what the board thought fit to call an 'unfounded charge.'" The children saved from the commandoes were registered as servants, or rather slaves, to such of the colonists as desired it, for the term of twenty-five years, and at the expiration of that period few had the courage or ability to claim their freedom; and even against this alternative their masters generally provided by tempting them to receive spirituous liquors, tobacco, and other articles, at the price of a renewed term of servitude, when the first should have expired.

This circumstance doubtless had weight in inducing expeditions from which much was to be gained, and little to be hazarded. They became so frequent, that in 1775, field-corporal Joubert applied to the council to excuse his men from their burger duties for that year, because their horses were tired with constant commandoes. The details of these are all nearly similar; some a little more, some a little less cruel, and more or less sanguinary according as the boors surprised them in larger or smaller numbers, for they never attempted to attack them in open warfare, and thus endanger their own lives; but having tracked them to their homes, in rocky caves or amid sheltering bushes, they waited till the dawn of day to surprise them, while yet sleeping, and pour in on them volley after volley until all was

* *Record*, pp. 29, 30.

† Extracts from Records of the Board of Land-

drest and Militia Officers. Stellenbosch. June, 1775.

still, save the groans of the wounded and the dying—then they entered, and counted at leisure their twenties or fifties slain so valiantly. Thus, field-corporal Jaarsveld, in a report of his proceedings, addressed to Commandant Opperman, relates how, having in August, 1775, started on a commando comprising in all about seventy persons, he had encountered a small party of Bushmen, and had made them presents, and assured them on the part of himself and his companions, of their peaceful intentions, the better to get them and the rest of the robbers into his power. The Bushmen, however, suspected the snare, and fled during the night, but the Dutch succeeded in tracing them to a place where lay the bodies of some sea-cows (hippopotami), which they had slain, on purpose to entice them. Here they surprised the sleeping natives; fired on them in the dark, and, “on searching, found 122 dead, and five escaped, who saved their lives by swimming through the sea-cow pool.” Shortly after this the same commando “surrounded another kraal (or assemblage of natives) and fired upon it, when not one of the thieves escaped, but fifteen fell upon the spot, and eight little ones were taken; two days later, after murdering in cold blood two Bushmen, who refused to point out the hiding-places of their tribe, they proceeded at night-fall to some caves, where a larger party had been followed by the Dutch spies, and, says the field-corporal, “in the morning we fired upon them in their caverns, so that not a single one escaped. On counting the dead we found forty-four, and took seven little ones.” Those poor “little ones,” at the close of the commando, which was soon afterwards brought to a conclusion by the “want of food and lead,” were as usual divided as spoil, and entrusted to the tender mercies of the ruthless murderers of their parents.

At the period now referred to, Dr. Sparrman, an intelligent naturalist, was engaged in traversing the colony. He remained there four years, from 1772 to 1776, and on returning to Europe, made public a fearful picture of the state of society; describing the government as cruel and tyrannical,* and the boors as leading most immoral and sensual lives, being very ignorant and very wealthy, treating their slaves and Hotten-

tot servants with extreme barbarity, but evincing ever the one redeeming trait of hospitality to strangers. The following passages express his opinion of their behaviour towards the Bushmen, and the spirit in which they formed commandoes against them:—

“The capture of slaves from among this race of men is by no means a difficult matter, and is effected in the following manner. Several farmers that are in want of servants, join together and take a journey to that part of the country where the Boshies-men live. They endeavour to spy out where the wild Boshies-men have their haunts. This is best discovered by the smoke of their fires. They are found in societies, from ten to fifty and a hundred, reckoning great and small together. Notwithstanding this, the farmers will venture on a dark night to set upon them with six or eight people, which they contrive to do by previously stationing themselves at some distance round about the kraal. They then give the alarm, by firing a gun or two. By this means there is such a consternation spread over the whole body of these savages, that it is only the most bold and intelligent among them who have the courage to break through the circle and steal off. These the captors are glad enough to get rid of at so easy a rate; those that are stupid, timorous, and struck with amazement, and who in consequence of this stupor, allow themselves to be taken and carried into bondage, answering their purpose much better.”

After describing the manner in which the kidnapped Bushmen are treated, Sparrman proceeds to show how the wild man of the woods, even though in some instances well fed and gently treated, sensibly feeling the want of his liberty,—

“Generally endeavours to regain it by making his escape, but what is really a subject for wonder is, that when one of these poor devils runs away from his service, or more properly, bondage, he never takes with him anything that does not belong to him. This is an instance of moderation in the savages towards their tyrants, which is universally attested, and, at the same time, praised and admired by the colonists themselves. * * * None of this species of Hottentots are much given to violence or revenge. * * * Some live in small societies peaceably and quietly, in desert tracts where the colonists cannot easily come at them, and are sometimes in possession of a few cows. * * * The slave business—that violent outrage against the natural rights of mankind, which is always in itself a crime, and leads to all manner of misdemeanours and wickedness—is exercised by the colonists with a cruelty towards the nation of Boshies-men, which merits the abhorrence of every one; though I have been told that they pique themselves upon it; and not only is the capture of the Hottentots considered by them merely as a party of pleasure, but in cold blood they destroy the bands which nature has knit between husband and wife, and between

* Sparrman speaks with horror of the gallows, with above half-a-score wheels placed around it, but adds that the gallows itself, though the largest he had ever seen, “was by no means too large for the purpose of

a tyrannical government, who, in so small a town as the Cape, could find seven victims to be hanged in chains.”—*Voyage to the Cape of Good Hope*; published in 1786: vol. i., p. 53.

parents and their children. Not content, for instance, with having torn an unhappy woman from the embraces of her husband—her only protection and comfort—they endeavour all they can, and that chiefly at night, to deprive her likewise of her infants; for it has been observed that the mothers can seldom persuade themselves to flee from their tender offspring. * * * This amiable tenderness is the very circumstance laid hold on by their persecutors to rivet the chains of the wretched female so much the faster. There are some mothers, however, that set themselves free, when they have lost all hopes of saving their children. * * * They sometimes keep secretly about the neighbourhood. * * * They wander up and down, less in fear of the wild beasts than of the colonists, and perhaps, in the end, fall a prey to some of those ferocious animals, or not unfrequently perish with hunger; for as soon as they have eloped, men are set to lie in ambush by the rivers' sides, which it is supposed they must pass in their way, and by this means they are often retaken. And though they should reach their own homes in safety, they may even then very possibly happen to be laid hold on by some peasant and carried into slavery."—Vol. i., p. 202, *et sequitur*.

"Does a colonist at any time get sight of a Boshies-man, he takes fire immediately, and spirits up his horse and dogs, in order to hunt him, with more ardour and fury than he would a wolf or any other wild beast. On an open plain a few colonists on horseback are always sure to get the better of the greatest number of Boshies-men that can be brought together, as the former always keep at a distance of about 100 or 150 paces (just as they find it convenient), and charging their heavy fire-arms with a very large kind of shot, jump off their horses and rest their pieces in their usual manner, on their ramrods, in order that they may shoot with the greater certainty, so that balls discharged by them will sometimes go through the bodies of six, seven, or eight of the enemy at a time, especially as these latter know no better than to keep close together in a body. It is true, on the other hand, that the Boshies-men can shoot their arrows to the distance of two or three hundred paces, but with a very uncertain aim, as the arrow must necessarily first make a curve in the air; and should it, even at that distance, chance to hit any of the farmers, it is not able to go through his hat, or his ordinary linen or coarse woollen coat. * * * Government, indeed, has no other part in the cruelties exercised by its subjects, than that of taking no cognizance of them; but on this point it has certainly been too remiss in leaving a whole nation to the mercy of every individual peasant, or, in fact, of every one who chooses to invade their land; as of such people one might naturally expect that interested views and an unbridled spirit of revenge should prevail over the dictates of prudence and humanity. I am far from accusing all the colonists of having a hand in these and other cruelties, which are too frequently committed in this quarter of the globe. While some of them plumed themselves upon them, there were many who, on the contrary, held them in abomination, and feared lest the vengeance of Heaven should, for all these crimes, fall upon their land and their posterity."—Vol. ii., pp. 143-4.

* Including that of Mr. (afterwards Sir John) Barrow, and various missionaries and travellers. The public punishments for slaves were probably still the same as in the time of Kolben, 1706 to 1713, when

The description given by Sparrman, and supported by much corroborative testimony,* of the barbarities inflicted by the boors on their wretched slaves, might be now passed over in silence, since, praised be God, the foul sin of slavery, in which they originated, is no longer suffered in British dominions. But it is well that men should remember, even in the present day, that the mere circumstances of having been born in a free country, bred in the habits of civilized society, and even baptised in the name of Christ, have not sufficed to preserve others, and will not alone suffice to preserve them—when no longer under the wholesome control of a strong government, or the restraints imposed by the opinions and customs maintained by mutual consent among the citizens of an old country—not only from debasing their bodies by sloth and debauchery, to a level with the brutes that perish, but from rendering their immortal souls fit only for association with fiends and demons. This is strong language, but surely it is justified by statements such as these:—

"I have known (writes Sparrman) some colonists, not only in the heat of passion, but even deliberately and in cool blood, undertake themselves the low office (fit only for the executioner) of not only flaying, for a trifling neglect, both the backs and limbs of their slaves by a peculiar slow lingering method, but likewise, outdoing the very tigers in cruelty, throw pepper and salt over the wounds. * * * Many a time, especially in the mornings and evenings, have I seen in various places unhappy slaves who, with the most dismal cries and lamentations, were suffering the immoderately severe punishments inflicted upon them by their masters; during which they are used, as I was informed, to beg not so much for mercy as for a draught of water: but so long as their blood was still inflamed with the pain and torture, it was said that great care must be taken to avoid allowing them the refreshment of drink of any kind, as experience had shown that in that case they would die in the space of a few hours, and sometimes the very instant after they had drank it. The same thing is said to happen to those who are impaled alive, after having been broken on the wheel, or even without having previously suffered this punishment. This operation is performed by thrusting up the spike along the backbone and the vertebræ of the neck, between the skin and the cuticle, in such a manner that the delinquent is brought into a sitting posture. In this horrid situation, however, they are capable of supporting life for several days, as long as there comes no rain, as in that case the humidity will occasion their sores to mortify, and consequently put an end to their sufferings in a few hours."—Vol. ii., pp. 342, '4.

It is now impossible to form any estimate breaking on the wheel, roasting alive, and the frightful tortures subsequently witnessed by Sparrman, were among the ordinary sentences."—*Vide Present State of the Cape of Good Hope*, p. 363.

of the number of Bushmen slain by the colonists throughout the long years during which they made war against them. One man informed Colonel Collins, in 1809, when speaking of the exploits of his younger days, that the parties under his orders had either killed or taken 3,200 of these unfortunate creatures within a period of six years; and another stated that the parties in which he had been engaged had caused the destruction of 2,700. The same writer adds, "they had acted thus in compliance with the instructions of a government, which not only violated all the principles of religion and humanity by the indiscriminate massacre, but even acted in direct opposition to the plainest rules of policy, and of common sense, by depriving the colony of the benefit which might have derived from so useful a people."* That the government ordered or even desired the extermination of the Bosjesmen, except in consequence of the misrepresentations of the boors, and at their earnest request, does not however appear to have been the case. Sparrman, as we have before seen, with more justice attributes great blame to them for suffering and even sanctioning the atrocities of the colonists, but does not accuse them of originating any. On the contrary, the official records prove that both the Cape and the local authorities did offer various remonstrances, which probably weakness alone prevented from being commands. Thus in March, 1776, the Landdrost and Heemraden of Stellenbosch, addressed an earnest remonstrance to Field-commandant Opperman, and Field-cornet Van der Berg, urging them to act with somewhat greater moderation, to be less vindictive, to oppose "almost needless commandoes, and to give the necessary orders, that henceforth there may not be so much unnecessary bloodshed."† The degree of attention likely to be paid to this counsel, may be judged from the postscript of an official report from one of the field-cornets, dated a few days later, in which the writer states, with undisguised vexation, "we have only shot twenty-three Bushmen, with three successive commandoes; thus we see that commandoes, according to the times, are now in vain."‡ That they were, however, actively continued, and with murderous effect, is too clearly proved by

the official evidence of Mr. Maynier, who, when examined by the commissioners of inquiry, sent to the Cape by the British government, in 1824, stated that on being appointed Landdrost of Graaf Reynet, in 1792, he "found that regularly every year large commandoes, consisting of 200 or 300 armed boors, had been sent against the Bosjesmen, and learnt by their reports that generally many hundreds of Bosjesmen were killed by them, amongst which number there were perhaps not more than six or ten men escaped (they generally contriving to save themselves by flight), and that the greatest part of the killed comprised helpless women and innocent children. I was also made acquainted with the most horrible atrocities committed on those occasions, such as ordering the Hottentots to dash out against the rocks the brains of infants, too young to be carried off by the farmers, for the purpose to use them as bondsmen, in order to save powder and shot."

The humane Landdrost endeavoured to prevent these commandoes, and establish peaceable relations in their stead; this the boors declared to be impossible, and even lodged a complaint with the government against him, urging that he neglected his duty of extirpating the Bosjesmen.§

It was indeed time, if even a remnant of the miserable people were to be saved, that a stop should be put to such indiscriminate slaughter, for the official returns of the number killed and taken prisoners by commandoes from the Graaf Reynet district alone, during a period of ten years—from 1786 to 1795—were 2,480 killed, and 654 prisoners; the annual average being 244 killed, and sixty-four captured, the proportion of killed to prisoners being four to one. At the close of the period above alluded to, the local government, not from any consideration of humanity, but from the most selfish and cruel expediency, at length made an effort to check, by something stronger than empty threats, the sanguinary proceedings of its subjects, and offered a reward of fifteen rix-dollars for every Bushman, Hottentot, or Bastaard taken alive, purposing to detain the prisoners thus captured, and compel them to labour in iron fetters at the public works for the remainder of their lives. It is true that these unfortunates, hunted to

§ Parliamentary Papers relative to the Cape; published in 1835: p. 28.

the death, had retaliated by stealing the cattle, and even firing the dwelling of the colonists; but Mr. Maynier expressly declares that "experience has taught us (the Dutch) that the Bosjesmen had never burnt the habitations of the boors until the latter had commenced to set fire to the huts of the former."*

When the Dutch had well-nigh subjugated the Hottentots, and greatly diminished the power and number of the Bushmen, they commenced a system of robbery of the cattle and aggression on the lands of another and more powerful people, differing very remarkably both from the Hottentot and African negro,† and termed Kafirs, whose country lay to the eastward of the Gamtoos River, this stream being recognized in various proclamations dated 1739, 1770, 1774, and 1778, as the boundary between the colony and Kafirland.‡ The term Kafir, or Caffre (unbeliever), is an Arabic word, said to have been originally applied by the Moorish navigators of the Indian Ocean to the inhabitants of the east coast of Africa, and adopted from them by the Portuguese and other nations. The native name of the more southern Kafir tribes is *Amakosæ*, of which *Kosa* is the singular; their territory is sometimes called *Amakosina*, and appears to have at one time extended from the Sunday to the Umbashee River, which is about 160 miles east of the Fish River.

The *Amapondæ*, or *Mambookie* Kafirs, dwelt in the territory between the Umbashee River and the Umsimcoolu River, about thirty miles beyond the St. John or Umzimvoobo River. The *Amatembu*, or *Amatymbæ* (*Tambookies*), dwelt to the northward of the *Amakosæ*, near the sources of the Umbashee; from this tribe the *Amakosæ* obtained their wives by purchase. The *Amazoolu* or *Zoolus*, *Vatvaks* or *Hollontontes*, inhabited the country to the north and east of the *Amapondæ*, and, probably, far beyond Delagoa Bay. Each tribe lived in a feudal state, with an aristocracy of chiefs, who acknowledged, on extraordinary occasions, the authority of a sovereign or paramount chief. They had numerous petty chiefs presiding over a greater or less number of hamlets or kraals, each containing a dozen, or even two dozen families, who

were ruled patriarchally by their chief, assisted by a council of the elders of the hamlet; they cultivated millet and vegetables, but lived chiefly on the milk of their kine, and on the wild animals of the country. Whatever may be the diversity of idiom among the various tribes included under the general name of Kafir, it is found that when brought together, the natives, even where there is most apparent dissimilarity, after a little time converse fluently with one another. This and other circumstances, tend to prove the common descent from the same branch of the human family of the numerous tribes of the *Amakosæ*, of the *Amapondæ*, of the *Amatembæ* (*Tambookies*), of the *Amazoolu* or *Zoolus*, of the *Bechuanas* or *Sichuanas*, and the *Damaras*, on the west coast, beyond Namaqua land. And in their freedom from idolatry, strict observance of the rite of circumcision, abhorrence of pork, and several of their customs, may be traced a resemblance to the Jewish nation. The supposition of Barrow respecting their origin, is, that they have sprung from some of the wandering Arabs known by the name of *Bedouins*, who having made their way from the north-eastward, gradually traversed the eastern border of Africa. The Kafirs have no records, and little traditionary lore, but the investigation and persevering inquiries of the celebrated Van der Kemp, Dr. Philip, the Rev. Mr. Brownlee, the Rev. Stephen Kay, Justus (Mr. Beverley), Mr. G. Thompson, and others, have thrown some light on the manner and date of their occupation of the territory called by their name. The earliest chief in the annals of the *Amakosæ*, named Thlanga, appears to have migrated with his followers from the north-east, about the period 1470—1500,§ and settled on the banks of the river Kei, whence the Hottentots were driven to the southward and westward. The lineal descendants of Thlanga were, in succession, Goösh, Malangana, Isikomo, and Toguh. The last named had three sons, Gondé, Tindé, and Keitshé. Gondé inherited his father's chieftainship on the Kei River, and his brothers removed thence with their herds and followers to the coast, then inhabited by the *Gonaquas*,|| whose kraals extended along the Buffalo River up to the very sources Hottentot-Kafir race, who occupied the country not far from the Cape peninsula. According to native tradition, the *Gonaquas*, when the Europeans first made encroachments into the interior, were a united people under their last chief, named Quama: unable

|| The *Gonaquas* appear to have been a mixed
DIV. VII.

of the Keiskamma River. The Kafirs purchased for a large number of cattle the territory near the sea-shore, between Fish and Sunday Rivers, and occupied the Zuurveld (now Albany). This necessitated the removal of the Gonaquas further inland, and they settled about the Zuurberg and Bruintjes-hoogte, whence they were eventually expelled by the encroachments of the Dutch settlers.

Gondé was succeeded by his eldest son, Tshio, whose younger brother, Mandanka, had been declared by his father independent of Tshio.* Mandanka removed with his people to the country between the Chumie and Kat Rivers, and afterwards occupied the banks of the Konap, and the district on the Great Fish River, opposite to where Somerset is now placed. Tshio, soon after his accession to power, sent his men to attack the clan of Keitshé, who, being defeated near the mouth of the Kalumna, Krumna, or Kroomie River, retreated to the northward with his horde, and has not since been heard of; this was about 125 years ago. The warrior who on this occasion commanded the forces of Tshio, was created by him a chief, and from him are descended the Congo family, since well known on the British frontier. Tshio was succeeded by his two sons, Galaka or Tgaraka, and Palo (called Pharoah by the colonists), who ruled in amicable conjunction.† On the decease of Palo there was, by mutual consent, a division of the Amakosé Kafirs, and Khahae, his second son, migrated from the Great Kei River with his followers, and settled near the sources of the Keiskamma and Chumie. Palo was succeeded in the Kei territories by his son, Galeka, the father of Khauta, whose heir was Iinza or Hintza, the acknowledged head of all the Amakosé clans. Khahabe died, leaving his second son, Zlambie, regent over the tribe until the minority of Gaika (child of Umlao, the rightful heir of Khahabe) should be past. Zlambie refused to give up his delegated authority at the request of Gaika, wherefore to prevent the onward progress of the Dutch, and unwilling to acknowledge inferiority, they moved eastward, and finding an improving country for their cattle, they continued retreating until the territories of Tzeeo, a Kafir chief, were reached. Tzeeo was as much disinclined to admit the encroachments of the Gonaquas as the latter were those of the Dutch; contests took place, and after a loss of men and cattle, the wanderers retraced their steps; some settled in the fine plains on both banks of the Great Fish River, and of the Keiskamma; others, still fearing the wrath of Tzeeo, proceeded in a northerly direc-

fore the youthful chief declared war against his uncle, and after several rencontres, made him a prisoner. He was, however, afterwards set at large, and settled in the Zuurveld. Gaika being the principal chief near the frontier, was subsequently erroneously treated as the supreme head of all the Kafir tribes—a mistake which has been attended with very unfortunate results. The sons of Gaika, whose names will often appear in the future narrative, were, Sandilli, Macomo, Cheäli or Tyali, &c. Jan Tzatzoc was the fifth chief in descent from Tindé, second son of Toguh; Botman, fifth from Cheou, second son of Malangana. Several tribes were broken up, and became scattered among various clans. The larger ones were subdivided, their numbers and cattle increased; some moved to the northward, others advanced westward into the Zuurveld, and towards the Zwaartkops River, near Algoa Bay.

I have brought this brief notice of the genealogy of the leading chiefs of the southern Kafirs down to the present date, in order that the reader, growing confused as to their identity during the long series of years, when hostilities or at least disputes and border forays between them and the colonists occupy so large a share of the annals of the country, may have some clue to guide him as to the relationships of the Kafir chiefs and clans to each other.

For more than a century after the establishment of the Cape residency, all traffic between the colonists and the Kafirs was studiously interdicted, from a not unfounded fear of the dangerous coalition which the latter might possibly form with the Hottentots and slaves; but licences to hunt elephants "towards the Kafir country" were occasionally granted. In consequence of the murder of some elephant hunters by the Kafirs in 1737, even this was forbidden. The prohibition was shortly afterwards recalled, and the licences granted as before, but trading was still forbidden, under heavy penalties, and the boors were strictly inter-

tion, where they encountered the Bosjesmen, by whom they were driven westward, until they reached the Atlantic Ocean, where their posterity became known as *Namaquas*, and their territory as *Namaqualand*.—Parl. Papers, 18th March, 1835; p. 43.

* It is necessary to remember that the eldest son of a chief does not necessarily succeed his father, but that more frequently the son of the wife of highest rank is the acknowledged heir—this question being arranged at the time of the marriage.

† This is the general account, but Kay gives a somewhat different version.—*Travels and Researches*, p. 160.

dicted from passing the Gamtoos River, which having formed the boundary between the territory of the Kafirs and Hottentots, was, in the various proclamations referred to in a previous page, adopted by the Dutch as their eastern limit.

The boors, as they grew more numerous and wealthy, became less and less inclined to obey the orders issued at intervals from the Cape; and, elated with their successes over the Hottentots and Bushmen, confidently hoped to find as little difficulty in dealing with the Kafirs. They therefore passed and repassed the Gamtoos River at their pleasure, and in 1770 the commissioners sent from the Cape to fix the boundaries of the Stellenbosch and Zwelendamdorp districts, reported "having found between the Gamtoos and Fish rivers, several families, with large flocks of cattle (some of them several days' journey from the loan places), wandering from one spot to another, and thereby defrauding the revenue of the company, and carrying on an illicit trade with the Caffres (Kafirs), with whom they had opened a direct communication." The council immediately ordered the Landdrost "to oblige every person beyond the Gamtoos River to decamp," and graze their cattle upon or in the vicinity of their own loan farms only, on pain of confiscation. This was easy enough to command, but to enforce was a very different matter, and one far exceeding the ability of the Landdrost.

In 1774, Governor Joachim van Plettenberg, in council, passed a resolution which set forth that covetous persons, notwithstanding rigorous and repeated proclamations to the contrary, having prosecuted a barter with the Kafirs for cattle, and some colonists having passed the boundary of the

colony, and made it their business to wander about "everywhere in the interior" with goods and merchandise, conveyed on waggons, carts, horses, or pack-oxen, thus causing many irregularities; the barter for cattle was again strictly prohibited, and every one was forbidden to settle, or having settled, to remain, beyond the Bruintjes-hoogte, or Gamtoos River; or to traverse the interior districts with merchandise or cattle, for barter or sale, under heavy penalties of confiscation of property, fine, &c." The Kafir chiefs on their part took every pains to prevent free intercourse between their people and the Dutch. Lieutenant Paterson, who visited Kafirland in 1779, writes, "the Kafirs are so jealous of the encroachments of the Dutch, that they strictly prohibit individuals from entering their territory; while its remoteness has prevented the States or the Company from considering it as an object of conquest." He found that there were then frequent disputes between the Kafirs and Gonaquas, "originating about cattle, of which both nations are extremely avaricious."* In the following year open warfare commenced between the Dutch and the Kafirs, in consequence of the disgraceful conduct of two inhabitants named Joshua Joubert and Petrus Hendrik Ferricira, who, together with a number of others, formed a large commando without any authority, killed a great number of Kafirs, carried off their cattle, and divided the spoil.† As may naturally be supposed, the Kafirs retaliated, upon which a great commando was sanctioned by the governor and council, 24th October, 1780, to take the field, and drive them beyond the Fish River, which was declared to be thenceforth the boundary of the colony.

* *Narrative of Four Journeys into the Country of the Hottentots and Caffraria, in 1777, '8, and '9.* London, 1789. Quarto edition; p. 77.

† In the appendix to Mr. Thompson's *Travels and Adventures in Southern Africa*, a sketch of the history of the Amakosse, or Southern Kafirs, is given, on the authority of Mr. Brownlee, a missionary who resided many years among them, and collated it from their own statements. He says, that the colonists, or squatters, who first located themselves at the Bruintjes-hoogte, not daring at first to oppress or expel the Kafirs, as they had done the weaker Hottentots, treated them for some time kindly, and both races occupied the country together and lived in amity, until a barbarous act of perfidy was perpetrated by the boors, who, according to the Kafirs, invited the Amadanka, or Mandanka clan of Kafirs, of whom Jalamba was then chief, to meet them on the west bank of the Great Fish River, for the purpose of holding a *palaver*, or consultation on some

public matter. The conference took place; the Kafirs were entertained with tobacco, and informed that their Dutch friends had brought them a present of beads; these were spread on some rush mats, and, while the Kafirs were eagerly employed in gathering them up, the boors retired to a little distance, snatched up their loaded guns from the place where they had been lying concealed, and at a signal given by Veld-cornet Botman, poured a murderous volley on the unsuspecting natives. Mingled, as they were, in a heap on the mats, very few escaped the massacre. The residue of the Mandankæ immediately abandoned the banks of the Fish River, and sought refuge in the Zuurveld, with the chief, Congo, and their countrymen of the Tindé tribe, and became the most inveterate in their hostility to the colonists. The Dutch seized 5,200 head of cattle: and the next year Dlodlo, the son of Jalamba, was slain in resisting the aggressors.—Thompson's *Southern Africa*, vol. ii. p. 338.

The Kafirs resisted this aggression by the only means in their power. Having no fire-arms, they could not meet their adversaries in open fight; they could only hope to compel them to quit by maintaining unceasing guerilla warfare; and as both parties contested for the two things most valuable in their sight, land and cattle, desperate border frays were made on either side, under circumstances of greater or less provocation, as the case might be, the conquerors dividing the spoil, and the vanquished consoling themselves with the hope of regaining their own with interest by another struggle.

In 1785 a circumstance occurred which clearly evidenced how little authority or even influence could be exercised over the scattered boors by their own government, and doubtless hastened the formation of the Graaf Reynet district, and a more extended system of surveillance, if not control. On the 2nd of May, the English East India Company's ship *Pigot* put into Algoa Bay (then called Baya a la Goa), on whose shores a few Dutch wanderers had located themselves, nominally under the jurisdiction of the Landdrost of Swellendam. With their permission, above 100 scorbutic English patients were landed and lodged at one of the chief farms. The notification of this event did not reach Swellendam (a distance of only 350 miles) until the 10th of July. Colonel Dalrymple, a distinguished British officer, engineer, and surveyor, who had been a passenger in the *Pigot*, hired a waggon, and was the first to convey the news to the astonished governor and council at Cape Town, who (the old jealousy of the English being stronger than ever), lost no time in establishing a new magistracy, of which the chief object was stated to be "to prevent any foreign power from settling at the Baya a la Goa.* The newly-appointed Landdrost was specially directed to cultivate peace and amity with the Kafirs, and to recal such of the colonists as should have migrated into Kafirland to the colonial side of the Fish River. The endeavours of the magistrates could, however, but faintly check the evils of the frontier system, which invested the field-commandants (so far as the unfortunate aborigines were concerned), with almost irresponsible power. These commandants, being chosen from the boors, held councils of war, with minds prejudiced

and inflamed, and then proceeded to carry their own resolutions into effect; they were generally averse to pacific measures, and had been long accustomed to acquire cattle from the Kafirs, and slaves from among the Bushmen, under pretence of procuring compensation for their losses. Mr. Maynier, whose testimony with respect to the latter people has been before cited, bears somewhat similar witness regarding the Kafirs, declaring (as do other authorities) that most of the disputes with the frontier tribes might have been peaceably settled if the boors had not always been so eager to form these commandoes, from which they expected to reap considerable advantage. He states most positively his conviction, founded on long experience—

"That the complaints of the boors about depredations from the Kafirs were often altogether unfounded, and always exaggerated; originating from a design to enrich themselves with the cattle they were in the habit of taking from the Kafirs, on the commandoes which they were allowed to conduct under no other control than that of officers appointed from their number, and consequently having the same object in view. * * * I recollect particularly to have witnessed on these journeys, the distribution of cattle taken from the Kafirs by a commando, under the orders of a certain field-commandant, Daniel Kuhn (who had been either a sailor or a private soldier, and after his discharge had intermarried with the family of the Ferreiras), when the number of cattle taken from the Kafirs was computed to be 30,000 head."—Parliamentary Papers, 18th March, 1835; pp. 27, 29.

Mr. Maynier added, that he had had frequent opportunities of observing the effect of conciliatory measures, with both Kafirs and Bushmen, and had found them invariably successful. The different Kafir chiefs and tribes generally evinced every disposition to maintain peace with the colonists. In most instances the quiet of the colony was disturbed by the acts of one or other of the colonists.

The best proof of the willingness of the Kafirs to preserve peaceable relations with the Dutch, is furnished by the fact that these latter, when in open revolt against the government for checking their lawless and barbarous proceedings, scrupled not to take refuge among the very people on whom they had been with difficulty prevented from making war. Moreover, Europeans in small parties did not fear to enter their territories, for we find that a report having reached the Cape that some persons belonging to the unfortunate *Grosvenor*, wrecked in 1782, still survived, an enterprising colonist named Van Reenen, actuated by the

* *Cape of Good Hope*, by J. C. Chase. Edited by J. S. Christophers. London, 1843: p. 58.

noblest motives of humanity, volunteered to go in search of them. Although unsuccessful in the object of his visit, Van Reenen made a very singular discovery, namely, that among the Kafirs were scattered "descendants from whites; some, too, from slaves of mixed colour, and natives of the East Indies,* who had formed the survivors of the crew of a vessel cast ashore at the mouth of the Lauwambaz, a small river to the eastward of the Umzimvoobo. In 1790 three old women still lived, and though sunk in the manners and habits of barbarism, they received Van Reenen gladly, and would have accepted his offer of taking them to the colony, but that they desired to remain with their children and grand-children till harvest-time, to gather in their crops, "after which, with their whole race, to the amount of 400, they would be happy to depart from their present settlement."† Van Reenen adds that, "they had very extensive and handsome gardens, planted with Kafir corn, maize, sugar-canes, plantains, potatoes, black beans, and many other things." The sweet potatoe referred to in the above extract, was probably introduced by the immigrants, for this tribe (at least, until very recently,) alone cultivated this vegetable; they are, moreover, distinguished by using fish as an article of food, although it is generally rejected by the Kafir race.

In 1793 a treaty was entered into between the border colonists and the Kafirs, and in a report made by Mr. Maynier to the Cape authorities, on the best means of preserving peace, he strongly enforces the necessity of checking the predatory incursions of the farmers, and not allowing them to enter Kafirland, either to shoot elephants, or on any other pretext, without special permission. The government, however, were too weak to support him in re-

* Van Reenen's Journal, November 4th, 1790.

† The Rev. Stephen Kay, who visited this part of the country in 1830, obtained from a chief named Daapa, an interesting account of his mother, one of the "three old women" discovered so unexpectedly by Van Reenen, domesticated in the heart of Kafirland. He (Daapa) repeatedly asserted that she was as white as Kay and his European companions, and his statement was confirmed by several other natives who had known her well. Her hair, they said, was at first long and black, but before she died (which was in extreme age) it became quite white. Whatever might have been her original name, Quma was the only one by which she was here remembered. She had been taken to wife by a principal chief, who, being greatly attached to her, made her head of his household. At his death, which was very shortly

straining the turbulent boors, who persisted in proceeding without his sanction (as Landdrost) on commandoes against the Kafirs, and daily shewed themselves more inclined to defy all control. At length they compelled him to depart, and organized a popular government, electing from among themselves a president and secretary who could hardly read and write, and holding meetings in avowed imitation of the revolutionary assemblies of France.‡ A commission of some members of the government came from Cape Town to endeavour to restore order, but after the first interview with the ringleaders, gave up the attempt as hopeless, and returned, leaving the boors to pursue their mad career unchecked. The excitement spread rapidly from Graaf Reynet to the other districts, and the rebel boors, assuming the title of "Nationals," deposed the Landdrost and secretary at Swellendam. A stronger power than that of the Dutch East India Company, was however, about to become supreme in South Africa.

Soon after the separation of the northern colonies of America from England, in 1782, the attention of English statesmen was directed to the growing importance of the British territories in Hindostan, and to the necessity of raising in the east a dominion and maritime power as an equivalent for that which had been lost in the west. A glance at the map of the world was sufficient to demonstrate that the Cape of Good Hope was not only a "half-way house," for vessels in their voyages between Europe and Asia, but that from its peculiar geographical position, it was, in fact, a military and naval key to the British possessions eastward of the Cape, including the colony recently formed in Australia. Holland, even before the breaking out of the French revolution, in 1793, had been a declining

after their marriage, his brother, contrary to one of the most stringent laws of Kafirland, insisted upon marrying "the white woman," whose popularity appears to have reconciled the whole clan to this step. By her he had many children, five of whom lived to years of maturity; to one, who in 1830 was still living, was given the name of Bess, an evident abbreviation of Betsy, which, in all probability, was the original name of one of the shipwrecked party, if not of the mother herself. One of the daughters of Bess married Dushani, the eldest son of the celebrated Zlambie, so that the descendants of Quma and her companions are now probably scattered over a very considerable extent of country.—*Vide Researches in Caffraria*, pp. 353 to 362.

‡ Lichtenstein's *Travels in Southern Africa*, during the years 1803-6. Vol. i. p. 372.

power; the Cape of Good Hope was a drain on its finances, and ideas were entertained either of ceding it to England, or making it a free port open to all nations, under the guarantee of the leading powers of Europe. When the spread of revolutionary principles compelled the Prince of Orange to retire from Holland, and it became evident that France was not only aiming at becoming an important naval power, but also at the extension of her territorial dominion and influence in India and the eastern hemisphere, where her fleets had become equal, if not superior to those of England; the occupation of the Cape of Good Hope was a matter of great importance to the latter power, lest that settlement should become the prize of the ruling authorities of France, and their allies and supporters in Holland. A military and naval force was therefore dispatched from England, with letters from the Prince of Orange, then in London, to take possession of the colony in the name of his royal highness.

The Cape people or Capians, as they were sometimes called, imbued with revolutionary views, and misled by the false reports of some emissaries sent for that purpose, were only awaiting the expected arrival of a French force to depose the existing authorities, and hoist the tricolor flag and "cap of liberty." The few officers of government attached to the cause of the Stadtholder, were unable to control the popular will; and the weakness of the government favoured the views of the disorderly citizens, who were clamorous to declare themselves, by some public act, a free and independent republic. "They prepared," says Barrow, "to plant a tree of liberty, and establish a convention, whose first object was to make out proscribed lists of those who were either to suffer death by the new-fashioned mode of the guillotine, which they had taken care to provide for the purpose, or to be banished the colony. It is almost needless to state that the persons so marked out to be the victims of an unruly rabble were the only worthy people in the settlement, and most of them members of government."*

The adult male slaves, who bore the proportion of five to one to the white men, having heard their masters descant on the blessings of liberty and equality, and the inalienable rights of man, naturally desired to participate in these advantages, and held

* *Travels in Southern Africa*, vol. ii. p. 165.

their meetings to decide on the fate of their owners when the day of emancipation should appear, which they were encouraged to hope could not be very distant. The timely arrival of the British fleet saved the colony from anarchy and bloodshed. The governor called a council to deliberate as to the course to be pursued in this emergency; some were inclined to place the settlement under the protection of the British flag, but the governor and a majority voted for resistance. The militia or burgher cavalry, whose numbers on paper were estimated by thousands, were called out in aid of the regular troops, and a few hundreds reluctantly obeyed the summons; but the self-styled "Nationals" refused to assist in the defence of Cape Town, declaring themselves alike independent of the Dutch company and of the English. The advocates of liberty and equality then proceeded to disperse the mission settlement at Bavian's Kloof, and to issue a proclamation containing the following resolutions, to which they obtained nearly 3,000 signatures, compelling many to affix their names without allowing them time to read it:—

"We will not permit any Moravians to live here and instruct the Hottentots; for, as there are many Christians who receive no instruction, it is not proper that the Hottentots should be taught; but they must remain in the same state they were before.

"Hottentots born on the estate of a farmer must live there and serve him until they are twenty-five years old, before they receive any wages.

"All Bosjesmen or wild Hottentots, caught by us, must remain slaves for life."

Meanwhile the British forces, consisting of the 78th Regiment, some marines, and two battalions of seamen, amounting in all to 1,600 men, led by Sir James Craig, landed under the orders of Sir Alured Clarke, protected by the fire from the shipping, which soon cleared the important pass called Muysenberg; the regular troops then retreated to Wynberg, an elevated tongue of land projecting from the east side of Table Mountain, and about eight miles from Cape Town. A Hottentot corps did some damage to the advancing party from behind the rocks where they were ensconced; but these were soon dislodged, and fell back on the main body; whereupon the burgher cavalry made a precipitate retreat to their respective homes. The sailors, having with much tact and alacrity drawn up some guns, they were

brought to bear upon the Dutch camp, and the Hollanders soon retreated within their lines; the English encamped on the spot from whence they had fled, and the fleet entered Table Bay. Perceiving it hopeless to attempt further resistance, a flag of truce was sent by the Dutch during the night; the terms of capitulation were settled on the ensuing day, and the British troops marched into Cape Town. Most of the members of the Dutch government who were well affected towards the Prince of Orange, and had conducted themselves with propriety, were continued in office,* those only being dismissed whose behaviour had been decidedly revolutionary; the missionaries were reinstated at Bavian's Kloof (afterwards called Genandendal), as also several of the Hottentots who had been summoned from the settlement to assist in the defence of the Cape, and had taken an active part in the late engagement.†

When these proceedings became known in England, the question arose under what tenure the new acquisition should be held? little doubt being at that time entertained either by her majesty's ministers or the public that at a general peace the settlement would be made over in perpetuity to England, as it was evident that Holland having lost one resource after another, was no longer able to hold an independent position of the Cape, being "neither rich enough to maintain its establishments, nor strong enough to govern its people."‡ It was doubted whether the charters of the English East India Company gave them a claim to the territorial possession of the Cape, or whether it should be considered as a foreign dependency of the Crown, and subjected to the same regulations as the other colonies. Until these points should be decided, it was judged advisable that the possession should be treated as dependent on the Crown, and its affairs administered by the executive power, as constitutionally responsible to parliament; but that the rights and privileges of the East India Company should be carefully preserved, and the advantage of supplying the Cape with Indian and Chinese goods exclusively conferred on them.

In May, 1797, the Earl of Macartney, a scholar of good repute, who had filled with credit several diplomatic positions, was sent out as governor; his lordship

was accompanied by Mr. (afterwards Sir) John Barrow (as private secretary), whose *Travels in South Africa*, first published in 1806, mainly contributed to diffuse a just idea of the actual condition, value, and capabilities of the colony. No small amount of administrative ability was needed, of judgment, firmness, and sound policy, to cope with the disorganized, seditious spirit, then rampant at the Cape. The settlement had been in the undisturbed possession of the Dutch for nearly a century and-a-half; it comprised four large districts, named the Cape, Stellenbosch and Drakenstein, Swellendam, and Graaf Reynet; was supposed to extend about 580 miles in length, by 315 in breadth, and to contain an area of 120,000 square miles; yet so little pains had been taken to ascertain even its physical conformation, that there was not a survey of a single bay whose accuracy could be depended upon (with the exception of a recent one of Table Bay), or a map, that took in a tenth part of the extent of the colony. So extraordinary was the ignorance that prevailed among the inhabitants, that few knew even the direction of Graaf Reynet, and still fewer could form any estimate of its distance from Cape Town. It was called a month's journey, or so many hours with an ox-waggon (then and now the ordinary mode of travelling in South Africa, camels having strangely enough never been introduced). Sir James Craig, who had held the chief command during the interval between the taking of the Cape and the arrival of the Earl of Macartney, roughly calculated it at 800 miles, which proved to be 300 too many.

Equally exaggerated notions prevailed with respect to the number of the inhabitants, it being currently reported that the three country districts could raise a militia of cavalry to the amount of from 15,000 to 20,000 men, when, in fact, the white population of the whole settlement scarcely exceeded 20,000.§ The monetary system was in a wretched state, and a large irredeemable and irresponsible paper currency had contributed to induce almost total bankruptcy.

While personally examining into the causes, and striving to rectify these evils at the Cape, Lord Macartney strongly felt the necessity of obtaining accurate informa-

§ Barrow, vol. i., p. 2.

tion concerning the state of the distant parts of his government and the frontier tribes; for this purpose, as also to reinstate the Landdrost and clergyman who had been driven out by the boors of Graaf Rynnet, he despatched thither Mr. Barrow, and a detachment of soldiers. The clergyman, however, terrified or disgusted with the treatment he had met with, positively refused to return; and the Landdrost reluctantly consented again to place himself among a people who had more than once threatened to take his life.

Mr. Barrow so far succeeded in his mission, that aided by his military escort, many of the boors submitted to the reinstatement of the expelled Landdrost; but some, disgusted at the restraints likely to be enforced, instead of merely commanded, fled to Kafirland, under pretence of refusing to take the oath of allegiance to his Britannic Majesty, from a feeling of fidelity to the rulers against whom they had been so lately in avowed rebellion. Two of the most turbulent among them, named Pisani and Delport, were transported to Holland, where they represented themselves as martyrs to their patriotic principles. The internal state of the Kafirs was also extremely disturbed, war having broken out among them about the time of the taking of the Cape by the English, in consequence of a quarrel between the young chief, Gaika, the son of Umlao, and his uncle Zlambie, who, during his minority (as previously stated, p. 26), had been his appointed guardian. The cause of the quarrel is said to have been the refusal of Zlambie to resign the reins of government into Gaika's hands, upon the latter attaining the fit age; in consequence of which, Gaika resorted to arms, supported by his mother, Palo and his adherents, and some other chiefs; while the sons of Khauta, and his brother Jalulsa, adhered to Zlambie, and took possession of their former territories on the southern side of the Great Fish River, whence the colonists were too weak to expel them. At this critical juncture Conrad Buys, a fugitive colonist, fled to Kafirland, was well received by Gaika, and contracted (according to Lichtenstein*) a sort of a marriage with his mother. Zlambie was conquered and fell into the power of Gaika, who detained him prisoner for two years, at the expiration of which time he suffered him to

return to his people. Hintza, the younger son and heir of Khauta, was carried away during the night by some of his late father's retainers, and two of his brothers likewise escaped with life; but the others were put to death, and one, who was somewhat deformed, Gaika slew with his own hands.

Zlambie was in the custody of Gaika at the time of Mr. Barrow's visit, when he vainly attempted to bring about a reconciliation between the severed clans; Gaika declaring, on the one part, that he had not strength to compel them to quit the colony, and that, moreover, he had not the right, as the chiefs who led them were entirely independent of him; while they, on theirs, received Mr. Barrow courteously, but refused to place themselves within Gaika's territory. They admitted that they were aware of a treaty having been made fixing the Great Fish River as the line of demarcation; but stated that the colonists had, on their part, made no scruple of crossing the boundary, not only to hunt the hippopotamus and other large sorts of game, but had also used the Kafir side of the river as their own—had sown, planted, and driven over their cattle to graze. Indeed not only had the boors entered and used, without leave or licence, the land of the Kafirs; but some of the squatters of Bruintjes-hoogte had gone among the peaceful Gonoquas, taken possession of some of the choicest land, laid out the extent that each meant to occupy, planted vines and other fruit-trees, and, says Barrow, "making themselves certain that the avaricious and unjust views of the government would keep pace with their own, joined by twenty or thirty names that they contrived to muster from different parts of the colony, they had the audacity to petition Sir James Craig to grant them, as an indemnification for their losses by the Bosjesmans and Caffres, a small piece of ground on the Kaapna; and that it would still further oblige them, if he could extend it to the Kat River. This small piece of ground is [was] only about five-and-forty miles beyond the present boundary. The daring and impudent falsehoods on which the letter was grounded, were easily seen through by Sir James Craig, and their petition was at once rejected."

Hoping to put a stop to the constant aggression of the colonists, by establishing his statements narrowly, and even then it is sometimes difficult to escape being misled.

* Lichtenstein gives many details respecting the Kafir history of this period, but it is necessary to sift

limits—not only for the eastern frontier, but for the whole colony—Lord Macartney issued a proclamation in July, 1798, in which it was stated, that—

“—whereas hitherto no exact limits have been marked out, respecting the boundaries between this colony and the Kafirs; and in consequence of such limits not having been regularly ascertained, several of the inhabitants in the more distant parts of the settlement have united in injuring the peaceful possessors of those countries, and under pretence of bartering cattle with them, reduce the wretched natives to misery and want, which at length compels them to the cruel necessity of having recourse to robbery, and various other irregularities, in order to support life.”

The northern boundaries thenceforth were to be the Great Fish River, the Kachas, Tarka, Bamboes, and Zuur Mountains, to the Edele Heers beacon on the Zeekoe River; and the Bushmen frontier, the Nieuwveld Mountains, the Riet and Fish Rivers, behind the Roggeveld Mountains, the Spiou, Kobies-Kouw, and Long Mountains, the north corner of the Kamiesberg, and the Koussie River. These limits the colonists were strictly prohibited from passing. Any colonist found across the boundary, without a government pass, was liable to corporeal punishment and the confiscation of his cattle.*

However good the intention of this proclamation might have been with respect to the natives, it contained a repetition of the enactment which declared them intruders on the land from which having been first driven by commandoes, they had returned to cultivate and occupy; and confirmed the usurpation of Governor Plettenberg, in 1778. The position of the large number of Kafirs, hostile to Gaika, was thus rendered anything but an enviable one. At this time they were widely scattered under their respective chiefs, both within and without the stated limits. Some had joined Congo, others had gone towards the Zwaartkops River, still further to the westward; a third division proceeded in a northerly direction towards the Orange River; and on obtaining his liberty, Zlambie established himself in the Zuurveld, now Albany.†

The Earl of Macartney left the colony in 1798, and his departure was the signal for the standard of rebellion being again raised by the turbulent frontier boors, who imagined that with “the old lord” all power to restrain their outrageous behaviour had departed. For this conduct there was no

excuse, inasmuch as they had been treated with great forbearance by the British government; no new taxes had been imposed, and some old ones taken away, or lightened, and a considerable sum of money, in which they were indebted to the treasury, had been freely remitted. Their only grievances were the restraining their lawless wanderings, encroachments, and pillage of the aborigines of the land; and the protection and countenance afforded to the Moravian missionaries, whom they hated for having taught the Hottentots, of whom no less than 600 had assembled at Bavian's Kloof, the use of their liberty and the value of their labour, of which they had long been kept in ignorance. To such a length (according to Barrow) did some of the peasantry carry their hatred, that a party, consisting of about thirty, entered into a conspiracy to murder the three teachers, and seize and force into their service all the young Hottentots that might be found at the place, and they had actually assembled at a neighbouring house, intending to carry their murderous purpose into execution on the Sabbath, when all should be assembled for divine service. A timely warning was conveyed to the missionaries, who forthwith appealed to the British authorities for protection, which was immediately extended, and for a brief period they were enabled to exercise their functions unmolested.—(Vol. i., p. 311.)

While the boors were themselves committing all kinds of depredations and injuries upon the Kafirs, they strove to imbue them (and more especially the clans within the colonial territory) with fear and aversion to the English. The before-mentioned Conrad Buys is said to have fostered the same feelings in the mind of Gaika and his followers, to whom he represented the English, in most unfavourable terms, stating that the old Dutch company were inhabitants of a large country, and what they possessed in that neighbourhood, was only of the size in comparison to it, that a cattle-fold is compared with a whole farm. Then, taking advantage of the dislike entertained by the Kafirs to their roving and predatory neighbours, he said that the English were the Bushmen of the Seas, and had taken this cattle-fold from its rightful owners.‡ By these and other statements made by him and several more disaffected colonists and

‡ Lichtenstein, vol. i., p. 328.

deserted soldiers or sailors, who had likewise found asylums without the boundary, the Kafirs were influenced against the British; that is, they were induced to extend to them the distrust with which they had long regarded the Dutch. Graaf Reynet soon became a scene of anarchy and disturbance. Even among each other, a witness, generally very favourable to the boors, and strongly prejudiced against the English, describes them as harsh, unforgiving, and so quarrelsome, that "out of ten near neighbours, nine would be at variance," the principal cause of dispute being the boundaries of their respective properties; while so violent were their resentments, that without the check of severe civil regulations, "it seemed inevitable that every generation would go backwards in civilization, and that they would at last sink nearly as low in the scale of human nature as the former savage inhabitants of the country.* The much needed control imposed by the British they made a desperate effort to shake off. The first avowed act of the revolt of 1798 was an attempt to rescue one of their most turbulent members, Zacharias van Jaarsveld, who had been pronounced guilty by the provincial court of judicature, on the clearest evidence, of having committed a forgery and appropriated some orphan property entrusted to the care of a duly constituted board for managing the effects of minors and orphans. Having failed in this attempt, through the courage of the dragoon in whose charge the prisoner had been placed to be conveyed to the Cape, they sent a threatening message to the Landdrost, informing him that unless he would not only release the prisoner, but also "comply with

all the demands they were about to make, they should in the first place seize upon his person, and either hang him before his own door, or deliver him over to some of the settlers against whom he had on a former occasion been the instruments of obtaining a decree of outlawry, and who were now living among the Kafirs.† A few dragoons being happily stationed at the Drosdy (district town), for the purpose of forwarding despatches to the Cape, the Landdrost was enabled to hold the undisciplined rabble, though ten times the number of his forces, at defiance; and also secretly to convey to the government, intelligence of his position. General Dundas, who had succeeded Lord Macartney as lieutenant-governor, immediately dispatched to his relief Brigadier-general Vandeleur, a squadron of dragoons, a few companies of infantry, and the greater part of the Hottentot corps.‡ The rebels, although collected together in considerable numbers, on learning the approach of the troops, thought proper to disperse at once, leaving in the hands of a neutral person a most humble petition for pardon. The General returned a verbal answer, desiring them to appear before him on a certain day, and voluntarily surrender themselves to his discretion, declaring that all who should fail to present themselves at the place and time appointed, would be considered in the light of traitors, and treated accordingly.

On the day fixed the majority obeyed the summons. General Dundas, selecting nine of the ringleaders, sent them on board H.M.S. *Rattlesnake*, then at anchor in Algoa Bay, to be conveyed to the Cape, there to take their trial by their own laws, before their own court of justice,§ and

* Lichtenstein, p. 369.

† Barrow, vol. i., p. 364.

‡ Towards the close of the first period of Dutch occupation, a number of Hottentots had been assembled near Cape Town; but being neither paid, clothed, nor fed, they exhibited a scene of filth, misery, and wretchedness, which rendered their presence a nuisance, and they were in consequence disbanded. Yet, as we have seen, the Hottentots suddenly collected from Bavian's Kloof, and other places, at the time of the expected attack of the Cape, actually made the only effectual resistance offered to the assailants. Predictions of failure were nevertheless made when the British government undertook the formation of a corps of upwards of 300 Hottentots, but the result was highly satisfactory. Lieutenant-general Sir James Craig declared that "never were people more contented, or more grateful for the treatment they now receive. . . . With the opportunity of knowing them well, I venture to pronounce them an intelligent race of men. All who bear arms exercise well,

and understand immediately and perfectly whatever they are taught to perform. Many of them speak English tolerably well. I do not find they are more given to the vice of drinking than our own people. Of all the qualities," he further observes, "that could be ascribed to a Hottentot, it will be little expected that I should expatiate upon their cleanliness; and yet it is certain that at this moment our Hottentot parade would not suffer in comparison with that of some of our regular regiments." This is but an extract from fuller testimony borne by a distinguished general officer: Mr. Barrow, who records it, says, "it will be no less satisfactory to the reader than gratifying to myself, in thus having an opportunity of adding, in support of my former description of the moral character of this people, the opinion of such high and respectable authority."—Barrow, vol. i., p. 374-5.

§ They were tried, found guilty, and condemned to death, but the sentence was still unexecuted when information arrived of the transfer of the colony back

levied on the rest a certain fine towards defraying the expenses of the expedition, which they had occasioned. Infuriated by the sudden check they had received, the boors, on returning to their homes, unable longer to restrain their savage tempers, wreaked their vengeance on their unoffending Hottentot servants, being especially maddened against them by seeing the orderly and efficient corps of this despised race, well treated, and respected as a valuable ally. The long-continued oppression of nearly a century and-a-half, was now to receive its first reversal; for the Hottentots, inspired perhaps with hope, by the very circumstance that had filled their masters with rage and alarm, fled from the farms, carrying with them such muskets and gunpowder as they could lay hands on. They assembled in large numbers, and commenced making open war upon the colonists; some went among the Kafirs, and incited them to join them, by the story of their sufferings, while others proceeded to ask the protection of the British troops. One large armed party met General Vandeleur, a few days after he had subdued the rebellious boors, and was preparing to leave the district, as he thought, in peace. Their leader, the afterwards celebrated Klaas Stuurman (Nicholas the Helmsman), stepped forward, and confessing that they had been on a plundering expedition, entreated the General to hear their excuse, and forthwith commenced a narrative of the injustice of the boors, who having first deprived them of their country, forced them and their offspring into a state of slavery; and stated, that being no longer able to bear their cruel treatment, they had resolved to apply for redress before the English soldiers should leave the country. Their employers, suspecting their intention, threatened to shoot them if they attempted to escape, or to punish their wives and children in their absence. In proof of what he advanced, Klaas called out a young Hottentot whose thigh had been pierced through by a large musket-ball, but two days before, which had been fired at him by his master for having attempted to leave his service. "This act," continued he, "among many others equally cruel, resolved us at once to collect a sufficient force to deprive the boors of their arms,

to its former rulers, and General Dundas, considering that the pretence of adhering to the mother country had been one reason urged in their defence, left the

in which we have succeeded at every house which has fallen in our way. We have taken their superfluous clothing in lieu of the wages due for our services; but we have stripped none, nor injured the persons of any, though," added he, shaking his head, "we have yet a great deal of our blood to avenge."

The further the troops advanced, the more alarming they found the state of the country; and the representations of Klaas, says Barrow, "were more than confirmed by our own observations." In illustration of numerous instances of cruelty which they witnessed, he records the two following as particularly striking:—

"Stopping at a house to feed our horses, we by accident observed a young Hottentot woman, with a child in her arms, stretched on the ground in a most deplorable condition. She had been cut from head to foot with one of those infernal whips, made from the hide of a rhinoceros or sea-cow, known by the name of *samboes*, in such a barbarous and unmerciful manner, that there was scarcely a spot in her whole body free from stripes; nor had the sides of the little infant, in clinging to its mother, escaped the strokes of the brutal monster. * * * She gradually recovered, and the fellow was suffered to depart, after making her a pecuniary compensation; had the wounds proved mortal [as was for several days expected], the perpetrator would, no doubt, have afforded the first instance of retributive justice for the numberless cases of murder that have been committed with impunity on this unfortunate race of men. The only crime alleged against her, was the attempt to follow her husband, who was among the number of those of his countrymen that had determined to throw themselves upon the protection of the English.

"The next house we halted at upon the road, presented us with a still more horrid instance of brutality. We observed a fine Hottentot boy, about eight years of age, sitting at the corner of the house, with a pair of iron rings clenched upon his legs, of the weight of ten or twelve pounds; and they had remained in one situation for such a length of time, that they appeared to be sunk into the leg, the muscle being tumefied both above and below the rings. The poor creature was so benumbed and oppressed with the weight, that, being unable to walk with ease, he crawled on the ground. It appeared on inquiry, that they had been rivetted to his legs more than ten months ago. What was to be done in a case of such wanton and deliberate cruelty? It was scarcely in human nature to behold an innocent boy for ever maimed in so barbarous a manner; and at the same time to look upon the cold-blooded perpetrator without feeling a sentiment of horror, mingled with exasperation. The fellow shrunk from the inquiries of the indignant General; he had nothing to allege against him but that he had been a worthless boy, he had lost him so many sheep; he had slept when he ought to watch the cattle, and such-like frivolous charges of a negative kind, the amount of which,

final decision with the reinstated Dutch authorities, by whom four years' imprisonment was deemed a sufficient punishment.

if true, only proved that his own interest had sometimes been neglected by this child.

"Determined to make an example of the author of such unparalleled brutality, the General ordered him instantly to yoke his oxen to his waggon, and, placing the boy by his side, to drive directly to headquarters. Here he gave orders to the farrier of the 8th regiment of Light Dragoons to strike the irons from the boy, an operation that required great nicety and attention, and to clench them as tight as he could on the legs of his master. * * * For the whole of the first night his lamentations were incessant; with a stentorian voice a thousand times he vociferated, "*Myn God! is dat een maniere om Christian mensch te handelen?*" ("My God! is this a way to treat Christians?") His, however, were not the agonies of bodily pain, but the bursts of rage and resentment on being put on a level with one, as the boors call them, of the *zwarte natie*, between whom and the *Christian mensch* they conceive the difference to be fully as great as between themselves and their cattle, and whom, indeed, they most commonly honour with the appellation of *zwarte vee*, black cattle. Having roared for three days, and as many nights, at first to the great amusement, but afterwards to the no less annoyance of the whole camp, he was suffered to go about his business, on paying a penalty in money, for the benefit of the boy whom he had abused in so shameful a manner."

Notwithstanding the veneration for "*Christian mensch*," expressed by the Graaf Reynet boors, their sanguinary dispositions were, in fact, incapable of understanding the value of human blood, no matter the character of those in whose veins it flowed. One illustration of this will suffice, and we may turn from the painful subject. Three fine young men had deserted from the 81st regiment; on their absence being discovered, General Vandeleur desired a farmer named Van Roy to arrest them, if he should have an opportunity, as his sons and people were abundantly sufficient for the purpose. The following day Van Roy appeared, and stated that he had shot the three deserters for the protection of his family. The General rode to the spot immediately, and found the dead bodies lying on the ground; one, at the distance of ten or twelve yards from the house-door, had been shot through the breast; the other two lay at forty or fifty yards' distance, and had both been shot through the back. From these circumstances it was strongly conjectured that the ruthless boor and his sons had waited at the door with their loaded muskets—that on the first being shot, the other two had attempted to escape, by which endeavour they afforded the Dutchmen the opportunity of taking a cool and sure aim. Of this, however, no proof could be obtained, and as desertion had already begun, it was

deemed advisable to let the matter rest. Van Roy escaped the judgment of an earthly tribunal, but was destined, nevertheless, to afford a warning to his fellow-men, of the retributive justice which, even in this world, in so frequent and remarkable a manner overtakes the bloodthirsty and deceitful. In the subsequent wars between the boors and Hottentots, Van Roy was shot through the head in his own house, which was afterwards burnt to the ground, his property plundered and destroyed, and his family reduced to extreme poverty.

The position of General Vandeleur and the British troops was becoming more and more embarrassing, especially with regard to the Hottentots. He had neither the right nor the power to compel them to return to their cruel taskmasters, and although great numbers of them would gladly have enlisted as volunteers, the difficulty would remain of providing for the old people, the women and the children. Klaas Stuurman thought the justice of the case very clear. "Restore," said he, "the country of which our fathers have been despoiled by the Dutch, and we have nothing more to ask. We lived very contentedly before these Dutch plunderers came among us; and why should we not do so again, if left to ourselves? Has not the *Groot Baas* (the Great Master) given plenty of grass-roots, and berries, and grasshoppers, for our use? and, till the Dutch destroyed them, abundance of wild animals to hunt? And will they not return and multiply, when these destroyers are gone?" Klaas, however, and his party, were prevailed upon to deliver up their arms, and follow the troops until some arrangement could be made for their future welfare.

Congo, the Kafir chief, and his followers, as also Zlanbie and his adherents, were less easily dealt with. Congo declared that the ground he stood on was his own by inheritance; that, nevertheless, being desirous of remaining in friendship with the English, he would remove eastward in the course of a few days; but that he would not, and could not, cross the Great Fish River, as "there was blood between Gaika and himself."

Meanwhile, such of the rebel boors as had refused to make their submission to Brintjes-hoogte, had, together with previous fugitives, so stirred up the minds of the Kafirs with false representations of the intentions of the English, as to induce

* Barrow, vol. i., pp. 396-8.

them to commence a system of guerilla warfare, and even to attack General Vandeleur's camp near the Bushman's River. Numbers were killed in this unsuccessful attempt; but about the same time, Lieutenant Chumney, with a detachment of twenty men of the 81st, returning from the sea-coast to the camp, was surprised by a large party of Kafirs, who fought them hand to hand with the iron part of their assagays, the wooden shaft being previously broken off. The young officer defended himself bravely till sixteen of his party were killed. Then, finding himself mortally wounded, and perceiving that the whole aim of the enemy was against him, he directed the four survivors, and a Dutchman who had accompanied them, to drive off in the waggon, and turning his horse, galloped in a contrary direction, followed by the whole body of Kafirs; thus affording an opportunity for the small remains of his party to escape, of which they availed themselves, and reached the camp in safety, there to bear testimony to the self-possession and the generous devotion of their gallant leader.

While these events were taking place, Barrow, who had been dispatched with about a dozen dragoons to Algoa Bay, found, to his great astonishment, that the whole of the boors, with their families, in number about 150, who had been plundered by the Hottentots, had assembled on an adjoining plain, with their cattle and the remains of their property, and were waiting in order to claim protection against "the heathens." The heathens, that is the Hottentots, on their part made precisely the same request, and they numbered upwards of 500. Each party vowed vengeance against the other, and a contest was with difficulty prevented by Mr. Barrow, who obtained from the *Rattlesnake* twenty armed seamen, and caused a swivel gun to be mounted on a post immediately between the boors and the Hottentots. Thus matters remained for several days, until a report circulated among the latter by the malice of the rebel boors residing with Congo's tribe of Kafirs, to the effect that it was the intention of the English to get them on board ship, and send them to the Cape, so alarmed them, that influenced by this false rumour many of them stole away in the night and joined the Kafirs. The consequence of this proceeding was that all attempts on the part of the English to restore peace were rendered unavailing by the general want of

confidence which prevailed alike between the Europeans themselves and between the different Kafir clans. Before a decided contest commenced between the boors and the Hottentots, part of the troops had returned to the Cape; the remainder, who were about to follow them, were detained and placed at Algoa Bay, where a small military post was established, which formed a nucleus for the peaceably disposed. Some time before these events took place, the celebrated Doctor Van der Kemp had attempted to form a mission station in the territory of Gaika, who at first received him favourably, as did also the Dutch fugitives living under his protection; but when these latter saw his earnest exertions to enforce with unflinching fidelity the necessity of reformation of life as well as of profession; they injured and annoyed him in various ways, shamelessly stealing his money and goods, and so prejudicing the mind of the Kafir chief against him, that they at length compelled his return to the colony. The fate of the men who thus conspired to defeat the endeavours of one, who, notwithstanding some striking eccentricities of deportment and errors of judgment, united to extraordinary abilities, the most childlike singleness of purpose, and almost apostolic zeal, was remarkable. Not one of them died a natural death: "Faber was afterwards hung in the colony as a rebel; Buis wandered about amongst the tribes, murdering and plundering until he himself was murdered. Botha was killed by the Kafirs at the instigation of his companions. The hut in which Bezuidenhoud slept was one night fired by the natives, and he was burnt to death. The Irishman (a deserter connected with the band), together with one of his children, was also burnt to ashes, while asleep, by one of the native women with whom he had lived; and Lochenberg was literally cut to pieces by the Amakwabi about the middle of 1829.*

On quitting Gaika, Van der Kemp went to Graaf Reynet, to attempt the conversion and civilization of the Hottentots, but was expelled thence by the enraged colonists, who fired several times upon him for daring to put Hottentots and Kafirs on a level with Christians. General Dundas then offered him any piece of ground he might think suitable, on which to form a missionary establishment, and urged him to use his great influence in pacifying Klaas Stuur-

* Kay's *Travels and Researches in Caffraria*.

man and his followers, who were taking a leading part in the warfare then desolating the country. In this Van der Kemp succeeded; Klaas entirely withdrew from the contest, and bore with equanimity the ill-usage of both parties, neither of whom could appreciate his stedfast sincerity. The united body of Hottentots and Kafirs, after spreading terror through the whole of the Graaf Reynet district,* and defeating the boors in the Uitenhage district, chased them to the Chamtoos River, and were met at Lochenberg's place by a strong body under the brave Tjaard Van der Walt, who was killed in the contest which ensued.† With him the affrighted boors lost all hope; some crossed the boundary, others fled half-way to Cape Town, until the progress of their pursuers was stopped at the Kayman's River, not far from Mossel Bay, by a body of English combined with the Swellendam settlers, who, although they had at one time shown much disposition to join the disorderly boors of Graaf Reynet, had been won by gentle and judicious treatment to renounce their seditious spirit, and had afterwards cordially co-operated with the British authorities. The truth was, that with the exception of the Graaf Reynet boors, the whole colony had progressed rapidly when released from the harsh restraints and oppressive taxes levied upon them by the now defunct Dutch company. The severity of the law, especially the criminal law, had been greatly relaxed; and the application of torture, the rack, and breaking on the wheel, wholly abolished, notwithstanding the strenuous opposition of the court of justice at the Cape, who urged that the use of these engines of terror was necessary to prevent the commission of murder, from which bad men would not be deterred by the prospect of being strangled with a cord. Contrary however, to this opinion, instances of capital crime were less frequent under the British government than

* The aborigines having attacked a party of boors, the latter fled at once, leaving their wives and wagons in the hands of the enemy, who, "on this, as on all similar occasions," treated them with respect, and despatched a Hottentot after the fugitives, to say that they would restore the prisoners for a certain very trifling ransom. Instead of joyfully accepting the offer, one of them recognising in the messenger a former servant of his own, in an excess of uncontrollable fury, shot him dead on the spot. Intelligence of this atrocious act was speedily conveyed by the companion of the deceased to the Hottentots and Kafirs, but they nobly released their helpless captives notwithstanding, declaring that they disdained to

in any period of the same duration for the previous thirty years; so much so, indeed, that one of the public executioners made an application for a pension in lieu of the emoluments he had been accustomed to receive for the breaking of legs and arms. Having therefore, had seven years' experience of British rule, during which nearly half-a-million sterling had been annually expended among them by the army, the navy, and the English settlers,‡ the Dutch learned with regret the change to be made in accordance with the terms of the peace of Amiens, by the restoration of the colony to Holland, in March, 1803; and when General Dundas passed along from the castle to the place of embarkation, escorted by Commissary-general de Mist and General Janssens, into whose hands, as representatives of the Batavian government, he had surrendered his authority; the road was lined with spectators, not drawn together to express the boisterous joy usual on such occasions, but rather to take a melancholy farewell of a just and merciful ruler. And such indeed had General Dundas been to them. Lord Macartney, during his brief tenure of office (about a twelvemonth), had taken the initiative in instituting a very different course of policy to any heretofore adopted, by respecting the rights both of the white and coloured races. One enactment of his with regard to the Bushmen, though unfortunately only partly carried out, was so far attended with success that it unquestionably influenced those wild and wandering tribes in remaining at peace during the whole of the hostilities which desolated the frontier in 1799.

The proclamation of July, 1798, after dwelling on the mischiefs produced by the constant hostilities carried on between the inhabitants of the Middle Roggeveld, the Hantam, and Under Bokkeveld districts, with the Bushmen, set forth the advisability of adopting conciliatory measures;

take away the lives of the innocent, but should soon find an opportunity of revenging this and other murderous acts upon the perpetrators. They likewise suffered English dragoons, travelling alone with despatches, and even a house which they discovered at Plettenberg's Bay to belong to an Englishman, they left undisturbed, though all the rest that fell in their way were burnt to the ground. This very house was afterwards plundered by the same party of boors, who had just before fled from the Hottentots, leaving their wives and little ones in their hands.—Barrow, vol. i., p. 416.

‡ Barrow, vol. i., p. 425.

and as it was well known that the predatory incursions of the latter were chiefly occasioned by hunger, authorized the field-cornets to levy from the inhabitants, as a free contribution, a sufficient number of sheep to satisfy their urgent necessity, and also to provide for their future subsistence by the natural increase of the same.* The chiefs of the Bushmen were in future to be recognized and distinguished by metal-headed canes and brass gorgets, in the same way as the chiefs and captains of the other Hottentot tribes; encouraged to consider themselves as under the protection of the British government, and allowed to visit the governor at Cape Town, to receive marks of kindness and good will. A sufficient tract of country was to be traced and assigned to them; no expedition was to be fitted out against them, nor any violence committed, unless in actual self-defence; their habitations were not to be molested, nor their children taken from them, or made slaves or servants of on any pretence whatsoever.

General Dundas cordially entered into Lord Macartney's views with regard to the Bushmen, and formed similarly humane and politic plans for the location of the Hottentots. He cordially supported the Moravians at Bavian's Kloof, and, as we have seen, enabled Van der Kemp to establish a place of refuge at Algoa Bay. He had intended granting land to the Hottentots, and endeavouring to induce them by this means, and by presenting them with a few head of cattle and some seed-corn, to become farmers. Thus he trusted gradually to ameliorate their condition, and give them a permanent interest in preserving the peace of the colony, as landed proprietors; while the jealousy which this step might excite in the minds of the colonists would, he believed, be eventually overcome by its justice and sound policy.† The project of General Dundas was unhappily frustrated by the surrender of the Cape to the Dutch; and while the better class of colonists, knowing the weakness of Holland and the poverty of her exchequer, viewed with regret the departure of the English, the missionaries and the natives were inspired with apprehensions of a still more alarming nature.

* The good effects of this measure, which the Landdrost Stockenström most zealously entered into, were greatly diminished by the insufficiency of the quantity raised, and the thefts of other tribes.

† *Vide* Letters of General Dundas to Mr. Maynier,

Nor did the British government, on its part, relinquish possession of the colony from any doubt of its great importance, since of that there had been recent and convincing proof. The Earl of Mornington (afterwards Marquis Wellesley), when proceeding to India as governor-general, in 1798, visited the settlement; saw at once the importance of the position, and in a letter dated Cape of Good Hope, 28th of February, 1798, addressed to the Right Hon. Henry Dundas (afterwards Viscount Melville), dwelt forcibly on its high value with reference to the defence of our trade to the East, and of our territories in India. As a depôt for the maintenance of a military force in India, his lordship considered the Cape to be invaluable: to an enemy, in this respect, it would furnish every means of pouring in troops, either upon the coast of Coromandel, or of Malabar, in such a state of health as to be able to encounter at once all the inconveniences of a tropical climate; Lord Mornington therefore viewed with serious apprehension the possibility of the Cape being in the occupation of an inimical power. As a naval station he looked upon its possession as still more important, for the following cogent reasons:—‡

"Many ships in the Indian and China trade make the land upon the outward, and all upon the homeward-bound passage. The course of those even which keep farthest to the southward never is more distant from the Cape than two or three degrees of latitude. An enemy's squadron, stationed at the Cape, could not fail to intercept the greater part of our trade to and from the East, without being under the necessity of making any very distant cruises. We should find it impossible to check the operations of such a squadron, unless we could continue to send out with every trading fleet from Europe a convoy of such considerable force as must compel us greatly to increase our present naval establishments. The expense of fitting out such large fleets of ships of war, victualled and stored for the whole voyage to India or China, would be enormous; and here, in my opinion, is the point of the question upon which the whole argument must turn—which would be the heavier expense? to retain the Cape, keeping up a large naval and military establishment here, and using it as an outpost to your Indian empire, or to leave the Cape in the hands of the enemy, and by so doing incur the necessity of increasing to a vast amount the protecting naval force requisite for the defence of your Indian and China trade? The expense of the Cape in our hands, however large, must not be estimated as so much positive loss. There are two points of view in which that loss may be con-

dated January, 1800. Parliamentary Papers, March, 1835; pp. 31 to 35.

‡ See *Wellesley Despatches on British India*, vols. i. to v. Edited by R. Montgomery Martin. Published by Allen & Co. London: 1837.

sidered to be compensated by a proportional diminution of expense in other establishments. The army stationed at the Cape might always be looked upon as a part of the Indian force, and a corresponding saving ought to be made in the expense of your European army in India. Your Indian and China ships might, under proper regulations, be victualled at the Cape at a much cheaper rate than in Europe; consequently their valuable cargoes, both outward and homeward, might be increased in proportion to the smaller quantity of tonnage occupied by their provisions. Instead of taking six months' provisions from Asia or Europe, they need not take more than three, and the vacant tonnage might serve for an augmentation of their cargoes of merchandise. In this view a great advantage would result to the East India Company from the possession of the Cape. The whole of this comparative statement might be reduced to calculation, and it would not be difficult for you at once to estimate the several articles of expense which must be incurred by the public in either event, of retaining the Cape or of abandoning it to France.

"But I doubt whether, with the Cape in the hands of the enemy, it would be possible for you to maintain your Indian trade or empire, unless you could acquire some other settlement on the southern continent of Africa. This I know to be Lord Macartney's opinion; and if this opinion be just, the question of the expense of maintaining the Cape will be materially varied."

The governor-general added, in a postscript,—

"I believe the necessity of retaining Ceylon [which we had recently taken in the name of the Prince of Orange], is now admitted universally: with the Cape in the hands of an enemy, would it be possible to retain Ceylon for any long period of time?"

Practical experience amply confirmed Lord Mornington's opinion of the value of the possession of the Cape to Great Britain as a military dépôt. Foreseeing shortly after his arrival in India, that a war with Tippoo Sultan was inevitable, and that Tippoo was intriguing for the support of a French armament, Lord Mornington dispatched orders to Earl Macartney to send immediately Sir David Baird and three regiments, containing upwards of 2,000 men forming a Scotch brigade, to Madras, where the whole number arrived in the highest state of health, in time to lead the assault under Sir David at the capture of Seringapatam, in May, 1799. Again, when the governor-general planned the grand design of an Anglo-Indian army on the plains of Cairo, for the expulsion of Napoleon Buonaparte and the French troops from Egypt, his lordship sent to the Cape to provide an addition to the Indian forces, which were to meet in the valley of the Nile the regiments sent from England *via* the Mediterranean. So also, when Lord Wellesley designed the plans for the cap-

ture of the Isles of France, Bourbon, and Java (subsequently carried into effect by his successor, Lord Minto), the Cape would have furnished its quota of men or material. Notwithstanding these incontestible proofs of its value, the British government, influenced probably by their having taken possession of it in the name of the Prince of Orange, restored the Cape to Holland, who, however, desired it only at the instigation of France, Holland having little influence in adjusting the terms of peace.

Few events of any importance occurred during the second epoch of Dutch ascendancy. General Janssens, on first arriving to assume the reins of government, was joyfully welcomed by the most turbulent of the border farmers, who at once proposed to him that all the Hottentots belonging to Van der Kemp's missionary establishment should be seized; that every individual among them should have a chain put on his legs, and that they should be distributed among them as slaves.* This scheme met with a decided refusal from the new governor, who, hoping by his presence to restore order and bring about a better state of feeling, determined personally to examine the condition of the country districts. Graaf Reynet, he found, as the English had done before him, the seat of internal and external disturbance and dissension. "The chest of the district was empty," says Lichtenstein, who accompanied General Janssens, "the books of accounts were in the most lamentable disorder, the public buildings were destroyed, and presented nothing but a sad monument of crimes; the most important posts were filled by people wholly ignorant and devoid of capacity;" the former holders having been fairly driven away by the disorderly populace, whose "reciprocal irreconcilable spirit of discord and enmity towards each other, their wholly perverted ideas of right and wrong, their extravagant notions with regard to liberty, their total want of true religious principles though making much external profession of piety, their perfect ignorance, in short, of all the social virtues, had placed them in a most unfortunate situation both for themselves and the government." More than sixty families had emigrated, the Kafirs had re-established themselves in the whole southern part of the district, half the farms were

* Dr. Philip's *Researches in South Africa*, vol. i., p. 90.

forsaken and destroyed, dearth and murrain had followed, to carry misery to its height. To remedy such complicated and deep-rooted evils, was far beyond the power of any governor; but General Janssens did his utmost, by installing a most efficient Landdrost, in the person of the hitherto secretary of the Swellendam district, named Stockenström; by putting the financial affairs of the colony into a more promising state, and making many excellent arrangements for the local administration. The old and most impolitic regulation affecting all the country districts, by which marriage and baptism could be legally solemnized only at Cape Town, was removed, and these ceremonies were thenceforward to be performed in the presence of the respective Landdrosts. It is only surprising that so unwise a restriction had not been long before repealed, from the manifest hardship and even impropriety of compelling two people to come, for such a purpose, perhaps a month's journey, by the tedious and expensive mode of travelling then practised in the colony, namely, in waggons drawn by a team of oxen. Before leaving the frontier, the governor took great pains to reconcile the differences of the inhabitants, each one of whom assailed him with the bitterest complaints of some other public or private person, and endeavoured to make them understand that they owed their misfortunes to their own perverted views of things, and must act in a very different manner towards the government and towards each other, if they would wish to avoid a renewal of them.* The district of Graaf Reynet being found too extensive to be included in the same jurisdiction, a new *Drostdy* (Uitenhage) was founded in the neighbourhood of Algoa Bay, which, since the departure of the British, had likewise been the scene of much misery and crime of a very atrocious nature. General Dundas, on leaving the colony, had earnestly entreated Van der Kemp and his companion missionaries to quit Algoa Bay on the withdrawal of the British troops, and remain at Cape Town until the Dutch should take formal possession, and order be restored. This they nobly refused to do, declaring that since, feeble as they were, their presence, and the fear of the testimony they might hereafter bear, was the sole restraint on the conduct of the peasantry to the peaceable and unoffending Hottentots

belonging to the mission-station, they would, if need be, die at their post. And fearful indeed, were the outrages witnessed by them, though their own lives and persons were uninjured. The Hottentots had rallied round Van der Kemp, as the best proof of their desire to remain at peace; but the boors, enraged by their refusal to continue in their service, or assist in massacring their countrymen, not content with placing every obstacle in their way, appear, even at this critical time, to have given vent to their ungovernable passions, by shedding their blood like water. A poor Hottentot, on his way to the small missionary village then established near the Sunday River, called at a boor's house in Langé Kloof, of the name of Van Roy (a relation of the man who shot the three deserters), to ask for a little milk for his wife and child, who were nearly exhausted with hunger. The unfeeling monster seized the man, and bringing a loaded musket, ordered a Hottentot in his service to kill him; upon his reiterated refusal, his exasperated master, seizing the gun, shot him dead upon the spot, and then caused the other Hottentot, with his wife and child, to be murdered!

This, and many other enormities, were made known to Governor Janssens by Van der Kemp; of these an instance, recorded by the governor's private secretary, is one of the most atrocious acts of savage brutality on record.—“As soon as the English had abandoned the Fort at Algoa Bay, a boor named Ferreira, of a Portuguese family, made himself master of it, and kept possession until a detachment of troops were sent thither by the Dutch. Meanwhile the Kafirs, considering that peace had been made between them and the European authorities, and being anxious to preserve it, sent the self-appointed commandant a bullock, to be slain in token of friendship. The Kafir messenger put himself under the guidance of a Hottentot; Ferreira (whether actuated by a vindictive desire to revenge some real or supposed injury, or solely by diabolical hatred towards the coloured race), laid hold of the Kafir and broiled him alive; bound the poor Hottentot to a tree, cut a piece out of his thigh, made him eat it raw, and then released him.”† The difficulty of procuring proof sufficient to convince a colonial jury of that day, of Ferreira's guilt, induced General Janssens, in this and other cases brought

* Lichtenstein, vol. i., pp. 378, '9.

† Barrow, vol. i., p. 383.

before him at the same time, to take the whole matter upon himself, lest by sending the offenders to Cape Town, they should, instead of receiving a more severe punishment, escape entirely. This, at least, is the reason given by Lichtenstein for the award of so insufficient a penalty as banishment from the immediate scene of his misdeeds, and a command to live under the eye and control of the Landdrost of Swellendam.

General Janssens, though personally well-disposed towards Dr. Van der Kemp, from the circumstance of their having been school-fellows and intimate friends in early life, appears to have been in no small degree prejudiced against the mission, by the fact of its being supported by British funds; neither was he ignorant of the strong feeling of gratitude inspired in the minds of both the Hottentots and their instructors, by the active protection of General Dundas; therefore, while refusing to countenance the persecution of the boors, he gave little support to the mission. As it was necessary they should remove from Fort Frederick, Dr. Van der Kemp requested the governor to grant them another place for their establishment, but could only succeed in obtaining a tract which, from the barrenness of its soil, and the bad quality of the water, was very ill-adapted for the purpose for which it was required. The boors, who had induced General Janssens to select it, subsequently avowed that they had done so, "that the Hottentots might not find any means of subsistence in the vicinity, excepting in the service of the farmers."* To obviate the objections of the missionaries, they were assured that it was only a temporary arrangement, until a more suitable location should be found; a promise which was not fulfilled.

After the site of the institution had been fixed upon, the governor requested Dr. Van der Kemp to give it a name, remarking that he exceedingly disliked appellations taken from the bible. Pausing a moment, the missionary, remembering that he had preached on the preceding Sabbath from Genesis xxxv., 2, 3, proposed calling it "Bethelsdorp." The governor approved, and the next day, on learning the derivation and meaning of the word, and the advantage taken of his ignorance of the scriptures by his old school-fellow, he readily forgave it, and joined in the laugh thus turned against him.

* Dr. Philip's *Researches*, vol. i., p. 93.

Governor Janssens also visited the Moravian settlement of Bavian's Kloof, the name of which was, at his suggestion, changed to Genadendal (Grace Vale). He had some intercourse with the Kafirs, belonging both to Zlambie and Gaika, but quite failed in his attempt to reconcile their differences; he likewise made presents, and granted land to Klaas Stuurman, the Hottentot chief, and his brothers, and showed especial kindness to certain of the Bushmen, for whose welfare he would probably have made some permanent provision, but for his hasty recall to the Cape by the rumoured invasion of the English.

On the renewal of war in Europe, which the treaty of Amiens had but temporarily interrupted, the British ministry determined to attempt the capture of the Cape, before it should be strongly reinforced by a French garrison and squadron, then about to proceed from Brest for the purpose, consisting of eleven sail of the line, some frigates and corvettes, under the orders of Admiral Villeaumez, with whom was associated Jerome Bonaparte, commanding the *Veteran*, of 74 guns, invested, it was said, with a commission as commander-in-chief of the French forces and possessions eastward of the Cape of Good Hope. Self-preservation imposed on England the necessity of averting the danger which thus threatened her maritime supremacy and East Indian territories; and with the promptitude, efficiency, and secrecy which marked the brilliant and patriotic administration of Mr. Pitt, an expedition was forthwith organised for the conquest of the Cape of Good Hope, which, though nominally under Dutch authority, might at any moment have been made available by Napoleon Bonaparte, in the prosecution of his gigantic designs against England.

The naval force consisted of the *Diadem*, *Raisonable*, and *Belliqueux*, each of 64 guns; *Diomedé*, 50; *Narcissus* and *Leda*, each 32 guns; and several transports under the command of Rear-admiral Sir Home Popham. The land-force comprised the 24th, 38th, 59th, 71st, 72nd, 83rd, and 98th regiments of foot; 20th light dragoons; artillery and engineers, 320; East India Company's recruits, 546; in all 6,654 rank and file. A part of these troops were about proceeding on the tour of regular service for India, and in the East India Company's outward-bound fleet, they were, therefore, immediately applicable for this service without inconvenience. As transports were then always kept in readiness at Cork,

victualled for six months, the troops in the south and west of Ireland were embarked in a few days, destined ostensibly for the Mediterranean, but with sealed orders to be opened in a certain latitude, which directed that they should join his majesty's ships and the East India Company's fleet at Madeira (the appointed rendezvous for the whole naval and military force), and depart thence for the Cape of Good Hope. His majesty's government were informed that the Cape did not contain more than 1,500 to 2,000 regular troops, and those not of the best description; and that the militia and inhabitants generally, looked with anxiety for the arrival of a British force. Whereas the garrison in reality consisted of a strong detachment of Batavian artillery, the 22nd Dutch regiment of the line, a German regiment of Waldecks, and a corps of Hottentots, disciplined to act as light infantry; there were several battalions of colonial militia, and a numerous cavalry, composed of boors, well mounted and armed with long guns, capable of throwing shot to a much greater distance than ordinary muskets. There was also an auxiliary battalion of seamen and marines belonging to the *Atalanta* frigate and *Napoleon* French corvette. The former had been stranded in Table Bay during a heavy gale, and the latter driven on shore in Hout's Bay by H.M.S. *Narcissus*, which had been despatched from Madeira to St. Helena for information respecting the strength of the Dutch garrison, and arrived off the Cape a few days before the remainder of the British fleet. The Dutch could bring into the field twenty-five pieces of cannon. The defences which cover Cape Town had been restored and increased by the English themselves, who found them in an almost ruinous condition in 1795; they comprised a chain of redoubts, connected by a parapet, with banquettes and a dry ditch, extending from the Devil's Berg, a lofty eminence about 800 or 900 yards to the sea. Along the face of the mountain, which advances into the plain, were various enclosed works, and open batteries constructed to flank the approach; the whole mounted with 150 pieces of heavy ordnance and howitzers. The scarped character of the mountains rendered the heights nearly inaccessible, and one battery, with its protecting block house, stood 130 feet above the level of the plain, along which troops must move to attack the lines. Behind these, at the distance of

about a mile, and immediately at the entrance of the town, was the Castle of Good Hope, a regular pentagon, with outworks of sufficient importance to require an assailing force to break ground and attack it regularly. The side of the town towards the bay was covered by heavy batteries. To attack these formidable works, there was a corps of infantry, which amounted only to about 4,000 effective men, and a few pieces of light artillery.

The command was entrusted to Major-general Sir David Baird, who had distinguished himself by his gallantry at the siege of Seringapatam, in May, 1799, and by skill and foresight, as an officer in command of the Anglo-Indian army, sent by the Marquis of Wellesley from India, to co-operate with the British troops for the expulsion of Napoleon Buonaparte from Egypt.

The instructions of Lord Castlereagh, bearing date, "Downing-street, 25th July, 1805," are full, clear, and precise. The General was directed to summon the garrison to surrender, and then by a vigorous and immediate attack to avail himself of the probable neglect of due vigilance and precaution on the part of the enemy. Too much time was not to be wasted in negotiations with the inhabitants or persons in authority, but such favourable terms of capitulation were to be conceded as might appear best calculated to ensure possession of the place in the most expeditious manner, and with the least loss or hazard to the ships and troops employed on the service. In the event of failure, the expedition was to retire to St. Helena, there to await further orders; and not receiving any, to proceed to Fayal, and thence home. The fleet reached Madeira on the 28th of September, and St. Salvador on the 10th of November, with the loss of the *King George* transport, and the *Britannia* East Indiaman, which were wrecked on a low sandy island, called Roccas, surrounded by rocks, and situated in 3° 53' S. lat., 33° 54' W. long. The hulls, stores, and cargoes were lost, and Brigadier-general Yorke, commandant of the artillery, was one of the three who perished during the shipwreck. At St. Salvador the troops were landed for review, refreshed, and some small horses procured for the 20th light dragoons. The fleet again put to sea on the 28th of November, and in the afternoon of the 4th of January, 1806, anchored off Table Bay, Cape of Good Hope, beyond the range of the town batteries. The evening

was spent in reconnoitring and taking soundings along the coast, which ought to have been done during the British possession of the settlement. Leopard's Cove, an indent of Table Bay, about sixteen miles to the north-east of Cape Town, was deemed the most favourable and accessible place for effecting a landing, and preparations were made to cover the debarkation by the ships of war. On the ensuing morning the surf was too great to permit the beaching of boats; it was resolved, therefore, to proceed to Saldanha Bay, and march down thence on Cape Town, although the route was seventy miles long, and lay over heavy sand, destitute of water. In conformity with this resolution, Major-general Beresford, with the 20th light dragoons, and 38th regiment, were sent on the evening of the 5th to effect a landing at Saldanha Bay, the remainder of the troops and fleet being under orders to follow them on the ensuing morning. During the night, however, there was a considerable abatement of the violence of the surf, and although the armament was weakened by the departure of the dragoons, and a regiment of 925 rank and file, Sir David, after a brief consultation with Sir Home Popham, who was associated with him as naval commander, resolved to endeavour to effect a landing at Leopard's Cove, without further delay. The Highland brigade, consisting of the 71st, the 72nd, and the 93rd regiments, first made the attempt, and reached the shore in safety, with the exception of one boat containing part of the 93rd regiment, which was upset, and thirty-five men of that corps drowned. Some light troops, placed among the sand-hills and brushwood adjoining the landing, were soon dispersed by Major Graham, of the 93rd, and the disembarkation proceeded without further molestation. By the morning of the 8th, Sir David was enabled to commence his march towards Cape Town with his small force, mustering about 4,000 strong (of course excepting that portion despatched to Saldanha Bay), taking with him four six-pounders and two howitzers, which were dragged through the heavy sand by a detachment of "blue jackets," with their wonted alacrity. No enemy appeared until the troops reached the Bauwe Berg, which forms part of the elevated ridge or chain of hills intersecting the road, about four miles from Leopard's Cove, when it was ascertained that General Janssens, who was well known to be an able and experienced officer,

was in force on the opposite side, with the design of preventing the further progress of the British. The latter were immediately formed into two parallel columns of brigades; the right consisting of the 24th, 59th, and 83rd regiments, under Lieutenant-colonel Baird; the left of the 71st, 92nd, and 93rd, under Brigadier-general Fergusson. On attaining the crest of the Bauwe Berg, after dislodging the enemy's light troops, the Batavian force was seen in battle array on the plain beneath; their infantry formed in two lines, supported by the burgher cavalry, and comprising about 5,000 men (the greater proportion of whom were mounted) and twenty-three pieces of cannon, which immediately opened their fire. The nature of the ground occupied by, and the disposition of the enemy's troops, evinced the intention of reserving their right flank, and with their left attempting to turn the right of the British. Sir David frustrated their design, by deploying his columns into line, and with the right keeping the Dutch cavalry in check, while he threw forward the left, composed of the Highland brigade, which, headed by the gallant Fergusson, marched forward with rapid but steady step, undeterred by volleys of round shot, grape, and musketry. The enemy stood the fire of the advancing brigade without flinching, but fled precipitately at the moment of their impetuous charge, leaving a very considerable number, amounting, it was reported, to about 700 men, killed and wounded on the field.

Had the Batavian artillery been well served, the loss of the British must likewise have been very severe; as it was, one captain, and fourteen rank and file were killed; and three field-officers, one captain, five subalterns, seven sergeants, three drummers, and 170 rank and file, wounded. The want of cavalry prevented pursuit, and enabled the defeated foe to carry away the guns, which had horses attached.

After a short halt on the field thus gallantly won, the victors again advanced; but General Janssens, instead of retiring upon Cape Town, as was expected, took the road towards the mountains of Hottentot's Holland, Stellenbosch, and the interior, with a view of carrying on a protracted warfare until reinforcements should arrive from Holland or France. Among other reasons assigned by the Dutch commander for this line of policy, he states that the Waldeck battalion had retreated at the first on-

slaught, in confusion; that the twenty-second battalion of the grenadiers and riflemen were also retreating, although still attending to orders; and that the French, the dragoons, and the artillery, alone kept the field until ordered to retire. He likewise stated that the useful remnant of his troops was very small, that Cape Town had scarcely any defenders but its own inhabitants, who had sufficient bread* for only two days, and consequently, could afford him no efficient support; that by retreating into the town, all kind of communication with the country might be immediately cut off, and an unconditional capitulation, by reason of hunger, be inevitable.

Sir D. Baird made no attempt to follow the Dutch general, but judiciously pushed forward for Cape Town. The deep, heavy, dry sand, covered with shrubs, and the total privation of water, together with the extreme fatigue previously undergone, rendered the march most trying to the troops, who with difficulty succeeded in reaching that night a government farming establishment at Riet Valley, where a scanty supply of water was procured, and whither some casks of salt provisions, which had been hauled on shore through the surf, were conveyed by Sir Home Popham and a party of seamen and marines.

The British general, from his previous residence at Cape Town, was well-acquainted with the strength of the works, from which he was scarcely a day's march distant, and was not aware of the scanty force by which they were manned. He also knew the strength of the position of Hottentot's Holland Kloof, occupied by his opponent, and the critical situation in which he might be placed with regard to supplies. No wonder, then, that in after times, Sir David Baird should have frequently declared the night spent at Riet Valley to have been one of the most anxious of his life.† On the following morning the British marched to within a short distance from the lines, and took up a position in the neighbourhood of a narrow inlet of the sea called the Salt River, whereby communication could be kept up with the fleet, on which they were entirely dependent for supplies, where also some additional guns, and a reinforcement of seamen and marines, might be

landed, to aid in the contemplated attack. The inhabitants were not disposed to await an assault; the commandant of Cape Town soon sent a flag of truce to the British head-quarters, and proposed an armistice for forty-eight hours, to give time to negotiate a capitulation. In reply to this overture, Sir D. Baird (feeling that every moment was rendered important by the uncertainty of his communication with the fleet), required possession of the lines or out-works of the town, within six hours; but offered a further suspension of arms for thirty-six hours, to arrange terms. These conditions were acceded to, and Fort de Knokke, the principal work on the lines, was immediately occupied by the 59th regiment. The capitulation was soon arranged; under it the burghers and other inhabitants were confirmed in their rights and privileges; those who had borne arms were allowed to return to their homes; the regular troops in garrison, together with the French seamen and marines, became prisoners of war (such officers as were domesticated in the town having liberty to remain there on *parole*); the paper-money, which formed the principal part of the circulating medium, was to remain current until the pleasure of the British sovereign should be known. Again the standard of England waved over the castle of Good Hope, and our fleet took up the usual anchorage inside the bay. The colonial militia was disarmed, and a corps of Hottentot infantry enrolled (13th January, 1806), to be paid and subsisted on the same footing as other infantry regiments. The civil officers and others in the service of the late Dutch government, and the principal inhabitants of the settlement, were required forthwith to take an oath of allegiance to his Britannic Majesty, and a proclamation was issued, announcing to the colonists generally the capture of Cape Town, assuring them of protection, if they demeaned themselves peaceably, reminding them of the uninterrupted prosperity previously experienced under the English administration, and warning them of the horrors and miseries of warfare, to which they would inevitably be exposed by joining or aiding General Janssens. Simultaneously with these and other measures for the speedy

* The two preceding wheat harvests had been very scanty, and so great was the consequent scarcity of bread, that each citizen of Cape Town was limited to a certain weekly allowance, according to the number

of his family, and at great entertainments the bread was wholly omitted, or else each guest brought his own with him.—Lichtenstein, vol. ii., p. 121.

† *Life of Sir David Baird*, in two volumes; 1832.

and bloodless subjection of the colony, Symond's Town at False Bay, Muysenberg and Wynberg were occupied by our troops; and on the 13th, Brigadier-general Beresford was ordered, with the 59th and 72nd regiments, and a detachment accompanied by four six-pounders and two howitzers, to Stellenbosch, twenty miles from Cape Town, by which means the country was kept open for the supply of provisions.

The Dutch commander, although much respected by the colonists for his bravery and kind-heartedness, soon found himself isolated; his little force (after the dismissal of the country militia and burgher cavalry), of about 1,200 regular troops, and twenty to thirty pieces of cannon, was daily lessened by desertion; and although his position at Hottentot's Holland Kloof was almost impregnable in front, it was assailable on the right by a circuitous route through the Roodezand (red sand) Kloof, and on the left by a force landing from False Bay. On the 11th of January, Sir D. Baird transmitted a letter to General Janssens, pointing out the fatal consequences of a fruitless contest with a superior force, by which misery and ruin would be entailed on the peaceable and well-disposed settlers, and appealing to his known humanity to stop a further effusion of blood, and the desolation of the country. This communication led to an armistice; the Dutch held a council of war, and deputed their general, on the 16th, to meet Brigadier-general Beresford, who demanded a surrender of arms; this was refused, and the leaders separated without coming to terms. Sir D. Baird then proceeded to the camp of Brigadier-general Beresford; the 59th and 72nd regiments were moved to Roodezand Kloof, the 83rd sailed on the 16th for Mossel Bay, to cut off the enemy from approaching Swellendam, and at four a.m., on the 17th, one Scotch regiment, with two pieces of artillery, and a battalion of the 20th dragoons, advanced to the out-posts, pitched their camp, and prepared for the assault. "The bitter draught," says General Janssens, in his despatch to the Dutch government, dated Cape Town, 27th January, 1806, "was now to be drunk, and a letter was forwarded to acquaint the British general, Beresford, that a capitulation would be entered into." Another conference took place between the

hostile commanders, at which Sir D. Baird refused to consent to any change in the conditions which he had originally proposed, and they were finally agreed to. By the second capitulation, the whole colony of the Cape of Good Hope and its dependencies, and all the rights and privileges held and exercised by the Batavian government, were surrendered to his Britannic majesty; the Batavian troops were to march from their camp, within three days, to Symond's Town (on the shores of False Bay), with guns, arms, and baggage, and the honours of war, retaining their private property, and the officers their swords and horses; but the arms of the troops, and public property of every description, including the cavalry and artillery horses, were to be given up. The troops, who had maintained their fidelity to General Janssens, in consequence of their gallant conduct, were to be sent direct to Holland, at the expense of the British government, without being considered prisoners of war, but under an engagement not to serve against the British sovereign, or his allies, until after landing in their own country. The Hottentots under arms were permitted either to return to their homes, or to enter his majesty's service; and all the inhabitants of the colony were to participate in the terms granted to the inhabitants of Cape Town.* As soon as the Dutch troops were removed, Sir D. Baird heard of the intended arrival of the French fleet before adverted to (p. 42). By this time the English naval and military force was much reduced, the troops and ships destined for the East Indies having proceeded thither, and the vessels in Table Bay consisting only of the aforesaid *Dia-dem* and *Diomède*, *Leda* and *Narcissus*, and a few gun-brigs. To meet the expected attack of six or seven large ships of the line, besides lesser vessels, this small fleet took up a defensive position, so that the heavy shore batteries commanding the anchorage might have a clear range for the red-hot shot, while the French would be exposed to a cross and raking fire. In order to prevent a scarcity of food in Cape Town, all duties were repealed on the importation of grain; the "grain commission," which had been entrusted under the Dutch with the duty of storing and preserving corn under arbitrary and ever-changing proclamations of the

* For fuller particulars as to the capture and subsequent events, see the *Biography of Sir D. Baird*, and the proclamations and orders drawn up by a dis-

tinguished officer, Captain (afterwards Sir James Carmichael) Smyth, of the Royal Engineers, whom Sir D. Baird appointed colonial-secretary.

legislature, was remodelled, and a new law made, providing that the government should receive into store, wheat of a certain quality at sixty rix-dollars per muid, and issue the same at the rate of eighty rix-dollars; such rates to be revised at intervals according to the circumstances of the colony, and the state of agriculture. Many farmers were thus induced to bring forward concealed stores of corn, prices fell, and the fear of famine was dissipated. Thus prepared, the British awaited with confidence the arrival of the French fleet, but Admiral Villeaumez having learned during his voyage the conquest of the settlement, altered his course and sailed for the West Indies.

The next important event in the history of the colony, was the abolition by Great Britain of the slave carrying trade as far as her own territories were concerned. During our former occupation of the Cape, from 1795 to 1802, some cargoes had been imported, although the traffic was then becoming viewed in its true light. Slaves were also landed in 1807, one year after the second capture, and one year previous to the abolition, which took place in 1808, and doubtless influenced the minds and manners of the inhabitants, though at that period no idea was entertained of the emancipation of the slaves then in the colony, whose numbers yearly increased, notwithstanding the diminution occasioned by death and manumission. Various ordinances were enacted by which their social condition was greatly ameliorated, and due provision made for the instruction of their children in the duties of religion. That the same care was not extended to the poor Hottentots, was a great error on the part of the local legislature. Judicious grants of land, of which if fairly distributed and properly cultivated, there was abundance for the agricultural and pastoral wants both of the original proprietors and colonists, might have done much to render the former a contented and valuable class of British subjects. But so far was this from being the case, that while the farms of the settlers varied in extent from 5,000 to 10,000 acres, the aborigine could not obtain a legal title to a single rood. Nor was this all: the disposal of his only property, the labour of his lands, was not under his own control. The old Dutch laws remained in force, and he, his wife, and children, were compelled to labour for a miserable pittance, often withheld from

them on some unjust pretext. The benevolent plans conceived during the former administration appear to have been quite unthought of; and the Hottentots, cruelly disappointed at the treatment they received, declared that the English were no longer the same people as under General Dundas. The boers having made peace with the government, resumed, at least to some extent, their previous oppressive and tyrannical conduct. The remonstrances of the missionaries, and the touching appeals of some Hottentots, who, escaping from the houses of their masters in the dead of night, succeeded in obtaining a hearing from the then governor, the courteous and benevolent Earl of Caledon, induced the sending of Colonel Collins in 1809, as commissioner, to examine into the condition of the country districts, with regard to the coloured races. The result proved most unfortunate to the people whom the visit was designed to benefit. Colonel Collins could not but perceive the necessity of extending legal protection to the Hottentots, but by a strange contradiction he appears to have solicited and followed the advice of those very local authorities—the Landdrost Cuyler and others—who had been long openly accused of oppressing them for their own purposes—as to the most efficient mode of benefiting them. The consequence of his report and suggestions to Lord Caledon was not to loosen their chains, but rather to rivet them more closely, by a proclamation which restricted them to fixed habitations, prohibited them from passing from place to place without a written permission granted for a limited time, failing which they would be liable to be treated as vagabonds or deserters if they attempted to travel about even in search of employment. Therefore, though some of the provisions of this proclamation were good, as for instance those which regulated the terms and period of their service to the farmers, yet so completely were they neutralized by others, and especially by the “law of passes” above referred to, that the practical working of the whole left the Hottentots no option but that of changing one service for another; afforded them no security for any small property they might acquire by their industry, and tacitly forbade their holding land, though it purported to deal with them as a free people.

At this period, one small Hottentot horde still retained its independence. It will be remembered that in 1803, General Janssens,

in consideration of the essential service rendered by Klaas Stuurman, in the pacification of his insurgent countrymen, had allotted to him, his three brothers, and their retainers, a tract of land on the Little Chamtoos or Gamtoos River, in the Uitenhage district. Klaas was killed shortly after by the explosion of his gun while hunting the buffalo, and was succeeded as chief of the kraal by his brother David. The boors, who had from the first objected most strongly to the existence of an independent Hottentot community, however small, watched their proceedings with most jealous scrutiny, and endeavoured by every possible means to have them dispersed and reduced to the same state of servitude as the rest of their nation. They filled the ears of Colonel Collins with calumnies, which he appears to have both received and repeated as truths, without examination; while he would scarcely listen to the testimony of Dr. Van der Kemp and other persons intimately acquainted with the facts of the case. At length the long desired opportunity arrived; two Hottentots belonging to the kraal, having served a farmer for a stipulated period, desired to return home, and on their master (as was too frequently the case) refusing his permission, they departed without it. The boor followed, and demanded them from Stuurman, who declined to deliver them up; he therefore appealed to the nearest field-cornet, who accompanied him the next day at the head of a party of armed colonists to take the fugitives by force. Stuurman, on the approach of this band, drew up his men, and warned the field-cornet that if he attempted to enter his kraal in arms he would fire upon him; and there the matter ended for a time. A report of his contumacious conduct was made to the Landdrost Cuyler, who peremptorily summoned the Hottentot chief to appear before him to answer for his conduct, which the latter, apprehensive probably for his personal safety, refused to do, and thus afforded a pretext for his arrest and the destruction of his kraal, which was effected by a most unworthy stratagem. A heemrad (member of the Heemraden or Landdrost's council), having acquired Stuurman's confidence, enticed him and some of his most trusty followers into his house, under pretence of needing their assistance to recover some cattle stolen by the Kafirs. They were made prisoners; their families and others of the kraal were distributed by the Landdrost asservants among the neigh-

bouring boors; but some fled into Kafirland, and a few, at the earnest request of Dr. Van der Kemp, were suffered to establish themselves at Bethelsdorp. A grant of the land was solicited and obtained by Cuyler himself, who moreover kept in his own employment, without any legal agreement, four of the children of the Stuurmans, until after the arrival of the commissioners of inquiry, in 1823. The chief, his brother, and two others, were tried at the Cape for resistance to the civil authorities of the district, and condemned to work in irons for life at Robben Island. From thence they escaped some years after, and made their way through the colony (a distance of above 600 miles) into Kafirland. Stuurman earnestly petitioned the Landdrost through Mr. Read, the missionary, to grant him permission to return to his family, but without avail. After waiting three years the unhappy chief ventured into the colony, was discovered, recaptured, and sent prisoner to Cape Town, whence, after having been kept in close confinement until 1823, he was finally transported to New South Wales. His mournful story having been made public by the good and gifted poet, Thomas Pringle, in 1826, attracted the notice of General Bourke, through whose intervention some improvement was made in the condition of poor Stuurman, and in 1831, the Colonial Office sanctioned his return to his native land; but the permission came too late, the banished chief had died in the hospital at Sydney a year before.

About a twelvemonth after the destruction of Stuurman's kraal, a letter written by Mr. Read containing an account of two or three flagrant instances of the barbarous oppression exercised by the boors over the Hottentots, and seriously involving the characters of the Landdrost (Major Cuyler,) and the field-cornet of Uitenhage, was published in England, and produced considerable excitement, which reacted on the colony, and induced Lord Caledon to summon Dr. Van der Kemp and Mr. Read from Bethelsdorp to Cape Town. They laid before him statements of "upwards of 100 murders, with very many cases of maltreatment,"* and instances of cattle and wages being wrongfully withheld; on hearing which his lordship appointed a special commission to investigate the alleged grievances. Before the time fixed, the chief witness, Dr. Van der

* *Vide* Evidence of the Rev. James Read, before the Aborigines Committee of 1836, p. 598.

Kemp, was seized with mortal sickness* and the Earl of Caledon was succeeded by Sir John Cradock. In Dr. Van der Kemp, the Hottentots sustained an irretrievable loss; his great abilities, uncompromising honesty, and zealous devotion, compelled even his most inveterate enemies to respect him. Soon after his death another proclamation was issued, which gave the farmers a legal right to claim any Hottentot child born upon their premises, on arriving at the age of eight years, as an "apprentice" for ten years longer, with or without the consent of the parents. At first sight this arrangement does not seem so cruel and arbitrary as it actually was, because some such measure might be thought almost necessary to indemnify the colonists for the support allowed to the children during their infancy, besides which the terms of the indentures would appear to have provided for their kind usage and proper instruction. But, with regard to the first of these points, it was well known that the little Hottentots cost the farmers scarcely anything, that they were seldom weaned until two years of age, that they were turned to some useful purpose almost as soon as they could crawl about, and that when residing in the huts of their parents they were chiefly if not wholly supported by them. The apparently stringent

instructions respecting the treatment of the apprentices became little better than a dead letter in most of the country districts, and even the expiration of the fixed time of their service was concealed from them, so that on one pretext or another they were forced or deluded into remaining many years beyond the allotted period. The colonists, with but few exceptions, were, in the words of Commissioner Bigge, "averse to their receiving moral or religious instruction of any kind," and the provincial functionaries being for the most part thoroughly imbued with the same feelings, suffered only a very limited number to join the missionary institutions; and in many cases, but more especially in the district of Uitenhage, continued to harass those institutions with so much interference and oppression as greatly to circumscribe their usefulness. Nevertheless the facts made known by Dr. Van der Kemp and Mr. Read had the good effect of inducing the immediate institution of judicial circuits: these consisted of deputations of members of the supreme court, appointed to proceed annually through the interior districts to investigate all complaints and abuses, and try all offences brought under their cognizance. Being usually composed of persons who shared the predominating colonial feelings in regard to the Hottentot

* This remarkable man was born in Germany, and educated at Leyden University. He attained an eminent rank among scholars, being able to read and write no less than sixteen different languages; Latin was as familiar to him as his vernacular tongue; and the criticisms he has left behind on the Greek and Hebrew text of the Scriptures, written in Greek and Hebrew, evidence careful study and extraordinary ability. Even when between fifty and sixty years of age, his facility for acquiring languages enabled him, during the few months he spent in Kafirland, to draw up a rough sketch of a Kafir grammar, and form a vocabulary of about eight hundred words. His literary were equalled by his scientific acquirements, and his knowledge of chemistry, natural history, comparative anatomy, and botany, would severally have entitled him to a professorship in any of the universities of Europe.

In early youth he chose the army as a profession, and passed sixteen years in the service of the Prince of Orange, with whom he was on intimate terms. Possessing considerable skill in mathematics, he was regarded as a man likely to improve the military tactics of that period. He had attained the rank of a captain of horse, and high promotion was in his reach, when a personal misunderstanding with the Prince induced him to resign his commission, study medicine in Edinburgh University, take a degree, and establish himself as a physician in his native country, where he speedily obtained a high reputation and extensive practice. All his talents and opportunities had, however, failed to guard him

from the infectious spirit of infidelity then so widely spread over France and Germany; from its delusions he was at length roused, by a sudden and complete bereavement. His wife and child were drowned by the upsetting of a boat, and his own life was by the same occurrence placed in imminent jeopardy. From that time may be dated an entire change in his sentiments and conduct—thus suddenly severed from all earthly ties, the desire to honour his Redeemer and serve his fellow-men by disseminating the doctrines he had long denied, became the ruling motive of his life. An address, published by the London Missionary Society, induced him, when advanced in years, and possessed of a good property, to resign the conveniences of civilized life and the enjoyment of literary leisure, for the arduous and self-denying labours of an African missionary. For thirteen years he never wavered, but through evil report and good report, remained the unwearied teacher, the staunch advocate of a poor and degraded people. One act, which has been much and very unfavourably commented upon, must not here be passed over in silence. Out of his private property he purchased the freedom of seven slaves; one of these, a very young girl, he, by the ceremonial of marriage, was led to make his wife. Dr. Philip, in alluding to the blame so freely lavished upon Dr. Van der Kemp for this procedure, says, that he was actuated by warm sympathy with this unfortunate class, and an earnest desire to elevate their condition; but adds, that he "lived to see and regret his mistake."—*Researches*, vol. i., p. 137.

race, their early verdicts were generally more remarkable for extreme leniency to white delinquents than for accordance with the claims of impartial justice. Most of the cases of murder brought to light by the missionaries had been committed under the former English or Batavian governments, and could not, it was considered, be legally punished; beside which, the Hottentots not being permitted to take an oath, were not allowed to give any evidence at all. Some instances of maltreatment being proved, the perpetrators were fined, and the Hottentots procured a number of cattle and a considerable amount of wages clearly proved to be due to them. Some recent murders were also investigated, and punished with a twelvemonth's imprisonment. One miscreant in the district of Swellendam, found guilty of shooting, in mere wanton wickedness, a Hottentot woman with a child in her arms, was sentenced to kneel down blind-folded, to have a naked sword passed over his neck by the executioner, and be banished the colony, under the penalty of becoming liable to a "severer punishment" if he should return: the latter part of the sentence, being merely intended to save appearances, was not enforced. This and other verdicts* were subsequently severely commented on by Sir John Cradock, and from that time a great change took place in the proceedings of the county courts, which by their publicity, and the facility they afforded for the reception of complaints from the country districts, thenceforth exercised a very beneficial effect in checking the perpetration of much cruelty.

It was not, however, with regard to the Hottentots alone, that serious faults were committed by the British authorities on re-assuming the reins of government. By a total want of anything like a systematic attempt to form equitable arrangements with the Kafir tribes within and without the colonial boundary, an opportunity was lost which, if wisely used, might have established peace on the most substantial basis, by rendering it the interest of both settlers and natives to maintain it. Certainly it would have been no easy matter to decide how far the claims of the Kafirs to the land included within the limits of the colony by the proclamations of Governors Plettenberg and Macartney were to be recognised, and being

recognised, how they were to be met; but the fact was clear enough that the aforesaid territory had been included without even the pretence of any purchase or permission, real or pretended, willing or compulsory, although the prospect of compensation had been clearly held out to them in 1789, when a special committee was appointed to establish peace with them, and "if necessary, to purchase the claim which they might pretend to have upon the colonists."† The people thus wrongly dispossessed of land which they had occupied the greater part of a century, and a portion of which they had duly purchased from its aboriginal inhabitants (the Ghonaqua-Hottentots), had gradually returned; some had taken by violence the farms of the boors who had before driven them away in a similar manner; others harassed the border colonists by frequent predatory incursions; but a considerable number lived quietly, engaged in cultivating the ground, and herding their flocks; and these, together with another class who had entered the service of the colonists at their request, would gladly have pledged their allegiance to the British crown, had the privileges of British subjects been offered and duly explained to them in return. The chiefs were daily becoming more sensible of the advantages to be gained by civilisation; and entreated that missionaries should be sent for the instruction of their young people. Under these circumstances there is little doubt a large body of Kafirs might, by legalizing their tenure of certain lands, and otherwise by judicious treatment, have been incorporated with, and rendered useful members of the community; others might have been bought out with far less expense than they could be driven out; and the really irreclaimable, when proved such, expelled with the consent of the chief and council of the sub-tribes to which they belonged. With the border tribes arrangements might have been made through the intervention of Hintza, the acknowledged sovereign or paramount chief of all the Amakosa Kafirs, with whom alone we had then any intercourse, and also of the several minor chiefs and their principal officers or counsellors. Instead of this or any similar line of policy, the local government, influenced by the exaggerated and often unfounded complaints of a certain party among the boors, of whom some had

* Pringle cites another equally striking case in illustration of the little importance attached to offences committed against the lives and limbs of

coloured people by the settlers.—*Narrative of a Residence in South Africa*, p. 255.

† Parl. Papers for 1836, p. 20.

really suffered from the aggressions of marauders, while others simply coveted the exclusive possession of the land—issued a proclamation, in which the Kafirs were described as “irreclaimable, barbarous, and perpetual enemies,” whilst the conduct of the colonists was set forth as unoffending towards “those faithless and unrelenting disturbers of the public peace,” and orders were forthwith issued for the utter expulsion of every Kafir beyond the Fish River. Many years before, Mr. Maynier had greatly increased his unpopularity by forcibly urging the manifest imprudence as well as cruel injustice of making war upon a whole people, and establishing as a permanent boundary to be crossed only at the hazard of life, a fordable river, bordered by dense jungle and deep recesses impenetrable to Europeans, but quite available to the natives as places of refuge and of ambush. He had also stated his conviction that peace might be preserved with the Kafirs “by fair means and with little trouble.” And in 1805, under the Dutch government, Captain Alberti, the Landdrost of Uitenhage, publicly vindicated the Kafirs from the charge of wholesale robbery brought against them by the boors, declaring that though some thefts of cattle had recently been committed, there was nothing to be feared from the bulk of the Kafir nation, the chiefs and the well disposed part thereof having strongly condemned the few plunderers, and assisted zealously to punish them and recover what was stolen.

In 1807 a law was made that all Kafirs detected in the act of carrying off cattle should be shot; of this severe measure the chiefs who had frequently expressed a wish that the government would aid them more in suppressing theft, highly approved; Zlambie in particular remarked that he was glad of it, because he and his people had been very often wrongfully accused without having power to exculpate themselves, whereas if men were captured or killed, it would be easy to ascertain to what tribe they belonged. In 1809, Colonel Collins, as we have before had occasion to remark, was deputed as commissioner for the settlement of the frontier. The same interested and prejudiced advisers who induced him to suggest the adoption of so harsh a policy towards the Hottentots, probably advocated yet more cruel injustice towards the Kafirs, and the result was his recommending the

expulsion of the tribes who had settled in the Zuurveld, and the severance of all connexion between them and the colonists, by compelling the dismissal of the Kafir and even of the Ghonaqua servants domiciliated in the families. And in 1811-12 the whole of this arbitrary proposition was carried into execution. A great commando, comprising a large force of military and burgher militia, was assembled under Colonel Graham; and though the Kafirs earnestly pleaded the cruelty of including the innocent and the guilty in the same condemnation, all were expelled with unrelenting severity. No warning was given, but they were forced to abandon their crops of maize and millet, then nearly ripe, and so extensive that the troops were employed for many weeks* in destroying their cultivations by trampling them down with large herds of cattle, and burning to the ground their huts and hamlets; and a much longer time before they succeeded in driving the whole of the people (Kafirs and Ghonaquas to the number of 20,000 souls,) over the Great Fish River. Had Gaika, and the border chiefs whose country lay on the other side of the colonial boundary, sided with Zlambie and Congo, affairs might have taken a very different turn; but the local authorities, availing themselves of the known hostility existing between Gaika and his uncle, despatched Mr. Stockenstrom, the Landdrost of Graaf Reynet, who had been five-and-twenty years in the public service of the colony, to assure Gaika that no ill was intended towards him or his associates; upon hearing which, the chief pledged himself that his people should take no advantage of the absence of the boors from their homes, but would remain in peace, and he faithfully kept his word. Soon after this successful attempt at mediation, the Landdrost, who had always placed great reliance on the generosity of the Kafir character, with which he had had long and intimate acquaintance, gave a last and fatal proof of his confidence, under the following circumstances. In December, 1811, the colonial troops entered the Zuurveld in three divisions; the right commanded by Major Cuyler; the centre by Captain Fraser, accompanied by the Commander-in-chief, Colonel Graham; and the left by the Landdrost (Stockenstrom), who, desiring an interview with Colonel Graham, left his camp, at the foot of the Zuurberg, in commando, before a committee of the House of Commons, appointed in 1836.

* *Vide* evidence of Captain (now Sir Andries) Stockenstrom, who was personally engaged in the

charge of his son, Ensign (now Sir Andries) Stockenstrom, and proceeded across the mountains, accompanied by about forty men. On approaching one of the kloofs, or passes, of the White River, the party beheld numerous bands of Kafirs assembling on both sides of the narrow ridge connecting two arms of the great mountain chain, along which lay their path. Relying on his great personal influence, and hoping to prevent bloodshed, by inducing the Kafirs to leave the country without further hostile operations, he rode straight up to them, and dismounted in the midst, followed by his trusty associates, the field-cornets Potgieter and Geyling, and several boors, who, having vainly striven to dissuade their leader from his daring enterprise, determined to share whatever hazard he might incur. The conference began, and continued for some time in the most amicable manner, the chiefs and their counsellors gathered round the venerable magistrate, and listened with deference to his arguments, until a messenger arrived with the intelligence that the right and centre divisions of the British troops had attacked the Kafirs, some of whose principal men had already fallen. The hope of striking a decisive blow, by the destruction of leaders so powerful as the Landdrost and field-cornets, combined, perhaps, with the desire for retaliation, was irresistible. A boor, standing close by Mr. Stockenstrom, remarked to him the agitated discussion which had suddenly arisen among a party of Kafirs who stood aloof in the thicket, but he replied, with a smile, that there was no danger. While yet speaking, his words received a fearful contradiction; the Kafir war-whoop rent the air, and was re-echoed by barbarian voices from hill and dale for many miles around. In a brief space the Landdrost and fourteen of his companions lay dead, pierced by innumerable wounds. The survivors, of whom several were wounded, availed themselves of the fleetness of their horses to

escape along the mountain ridge to the camp.

It is not known who were the principal chiefs present on this occasion. Zlambie was in the Zuurveld; and Congo, unable to move, lay sick of an incurable disease, in his hut on the Addo heights, where he was murdered a few days afterwards by a party of boors. The Rev. John Brownlee states, probably on Kafir testimony, that some of the Amandankæ, whose clan had been nearly extirpated by a bloody deed of colonial treachery, already recorded, (vide note to page 27), were the chief instigators of this fearful massacre; but the younger Stockenstrom, from the uniform accounts he had received from various eye-witnesses of the tragic scene, has since stated his conviction, that it was the result of a sudden impulse, and not of premeditated treachery.*

The death of the Landdrost and his companions, doubtless increased the animosity entertained towards the Kafirs, but the details of the commando, as quoted by Pringle from the journal of Lieutenant Hart, an officer actively engaged in it, are most disgraceful. According to this authority, "the Kafirs were shot indiscriminately, women as well as men, wherever found, and even though they offered no resistance;" the females, however, "were killed unintentionally, because the boors could not distinguish them from men among the bushes!"† Most distressing scenes took place between the farmers and their Kafir and Ghonaqua servants, when the cruel order came for their instant dismissal, after long and faithful service. A gentleman intimately acquainted with the facts of the case (Mr. Moodie,) describes these people as having forgot their savage habits, and even their language; the old men said, "we have been with you fifteen or twenty years; we are your friends; we have watched your cattle, when they were taken away by our countrymen; we have followed

* Ensign Stockenstrom was subsequently appointed Landdrost of Graaf-Reynet. He inherited the ability, the rectitude, and the humanity of his noble-minded parent, and in the midst of most trying circumstances, steered ever an honest and independent course, steadily fulfilling his duty to his countrymen, the boors; but never allowing his natural sympathy with them to warp his strict sense of allegiance towards the British government, or justice towards the coloured races. Many years after the death of his father he was charged with a special message to the Kafirs assembled at Wesleyville (a missionary station in Kafirland). Adverting briefly to the lamentable events of former days, he re-

marked, 'the Kafirs killed my father, and some of you were near at the time. The boors killed your father (Congo) and I was not far off when it happened. Those were bad doings; but now all is changed. You have received missionaries; you have now the same word of God that we have. The only difference between us is the colour of our skins; but though you are black and we are white, yet God has made of one blood all nations of the earth.' The conference being ended, captain Stockenstrom dined at the mission-house in company with the chiefs.—*Vide Kay's Travels and Researches in Caffraria*, p. 254.

† Pringle, p. 291.

them, reclaimed them from the captors, and brought them back; our wives have cultivated your gardens; our children and yours speak the same language." The young men prayed at least to remain until they could earn cattle enough to purchase themselves wives; and asked where now they could procure their tobacco, their iron, their beads, or a bit of bread.* Mrs. Gardner, a resident in the Uitenhage district, from the year 1793 to 1825, gave much valuable evidence respecting the Kafirs, declaring that her father had continued to occupy his farm in the Zuurveld after the return of Zlambie, Congo, and other tribes; that he had lived surrounded by nine different kraals, and that when he or the other farmers lost cattle, they applied to the chief of the kraal to which the depredators were traced; and when the cattle were discovered, they were restored by the chief, but if they had been killed, an equivalent was given, either from the stock of the plunderer, or his family. The same witness added, that the men were the best herdsmen to be obtained, and the women were disposed to work very hard, from being accustomed to it.†

The bodies of armed militia, called out from all the districts, were not finally disbanded until 1815; although troops (mounted dragoons) were constantly employed in patrolling the thickets, and guarding the passes by which the Kafirs might enter the newly acquired country. All Kafirs found on the right bank of the Fish River, on refusing "to deliver themselves up when discovered, were to be followed up and shot." Nor was this an empty threat, for many were killed in this manner. Very severe penalties of flogging, and even of death, were enacted against such of the colonists as should be found on the left bank of the Great Fish River without a pass, or engaged in any description of traffic with the Kafirs; but these were never attempted to be carried out, the severest punishment for the European transgressor being a few months' imprisonment.‡ A line of posts was established by Colonel Graham along the frontier; and a commanding position selected for the headquarters of the military force, and named Graham's Town. A corps of Hottentot infantry was raised, the expense of which was partly defrayed by levying an annual

tax on the inhabitants of the interior districts, as a commutation for their services when not required in the commandos; but the settlers of the frontier districts (Uitenhage and Graaf Reynet,) were exempted, as being at all times liable to be called on for this service.

In 1815, the peace of the colony was disturbed by a fresh outbreak of the same spirit of causeless disaffection which had actuated the "patriots" of 1798. A Hottentot, named Booy, having been grossly ill-treated by his master, a boor, named Bezuidenhout, complained to the Landdrost of Cradock, that although the term of his contract had expired, he was forbidden either to depart, or to remove what little property he had on the place. Finding his statements correct, the magistrate sent the field-cornet to see him righted, upon which Bezuidenhout openly defied any attempt at interference on the part of the civil authorities, and after admitting the truth of the facts alleged by Booy, he fell upon him in the presence of the field-cornet, gave him a severe beating, and threatened to do the same to any person who should dare to come upon his grounds to claim the property of a Hottentot. Legal proceedings were forthwith instituted, and the boor having refused to make his appearance after having been repeatedly summoned, was sentenced to imprisonment for contempt of court. On seeing the approach of the under-sheriff, and the military escort despatched to arrest him, Bezuidenhout left his house, and betook himself to a cave in a huge rock overhanging the river, into which he had previously conveyed a large quantity of powder and ball, together with a supply of provisions, to enable him to stand a siege, and aided by two young men who lived with him, he opened a brisk fire upon his assailants. Refusing to listen to a parley, he continued to shoot deliberately at every man who came within reach of his "roer" (long-barrelled elephant gun,) until at length, in his eagerness to take sure aim at the besiegers, who were striving to shelter themselves among the stony ledges around his retreat, his own person became so much exposed, that a ball fired by one of the Hottentot soldiers took effect, and killed him on the spot, upon which his two companions immediately surrendered.

This affair produced much excitement

* Parl. Papers, 1835; Part i., p. 176.

† *Ibid.*, p. 174.

‡ *Vide* Evidence of Major Dundas. Committee of 1836, pp. 133-4.

throughout the country; the settlers too generally considering any efficient protection extended to the Hottentots, in the light of tyrannical oppression towards themselves. The "patriots," instigated greatly by a man named Prinslo, entered into a conspiracy to bring about a general insurrection, and despatched a deputation to wait upon Gaika, to request his co-operation in expelling the English from the eastern parts of the colony, offering, in the event of success, to vacate the Zuurveld and other territory from which the Kafirs had recently been driven, and confine themselves between the Kat and Koonap streams. Gaika, however, was not to be thus easily cajoled by his old antagonists. He positively refused their alliance, telling the messengers, that if the proposal was really made in sincerity, and not with the intention of decoying him and his followers into the open plains for the purpose of destroying them, it was, at least, a very foolish one, as they had no prospect of success; and that moreover, in any case, he would not take a part in the quarrel, having no inclination to place himself, like a silly deer, between a lion on one side, and a wolf on the other (the English and the Dutch). A seditious letter drawn up at a meeting of the boors by an outlaw named Bothma, who had been banished the colony for forgery, fell into the hands of the local authorities, and Prinslo, who had signed it, was instantly arrested by a party of dragoons. Thus disappointed in their hope of obtaining assistance from Gaika, deprived of their leader, and thwarted by the premature discovery of their designs, the greater part of the insurgents, on being appealed to by their loyal countryman, the Landdrost Stockenstrom, renounced their rebellious project; but about sixty formed themselves into a band and took possession of a mountain pass at the eastern extremity of the Boschberg range, where they were met by a detachment of British troops accompanied by a body of burgher militia. As this force advanced up the hill called Slaghter's-nek, on the brow of which the rebels were posted, the latter were seen shaking hands together, as a mutual pledge to stand together to the last. They then levelled their long guns at the leaders of the party, and were about to fire, when Captain (now Colonel) Fraser, ordering his men to halt, advanced alone, and addressing the leaders, many of whom he knew personally, entreated them with much energy

not by a fruitless resistance to shut out all hope of mercy. One man took deliberate aim at the generous mediator, but the weapon was struck to the ground by another boor, and after a brief consultation they all surrendered, with the exception of a few of the most deeply implicated, who vainly endeavoured to escape, but were either killed or taken prisoners after desperate resistance.

A special commission was despatched to Uitenhage to try the prisoners, of whom five were executed on the 9th of March, 1816, at Van Aard's Post, where they had first appeared in open rebellion; the rest were condemned to witness the death of their own comrades, after which some were set at liberty, and others punished by fine, imprisonment, or banishment.

After this severe lesson the frontier became somewhat tranquillized. The agricultural capabilities of the colony, on whose development its welfare materially depended, were strongly stimulated by the considerable amount of provisions of all kinds, corn, cattle, wine, and other articles required for the supply of Napoleon Buonaparte, his suite, and the considerable military and naval guard stationed at St. Helena during his detention, that is, from 1815, until his death in 1821. An urgent demand for their produce, was, however, an advantage from which too many of the inland farmers could reap but little benefit, owing to the impracticable nature of the country, and the general want of roads and bridges. In this respect the government exercised a false economy. A tithe of the money lavished in keeping under the Kafirs and Hottentots by force of arms, judiciously expended in encouraging the poorer class of His Majesty's South African subjects, whether white or coloured, to labour for the internal improvement of the country by opening up its resources (opportunities being at the same time offered for their own education, and that of their families,) would have rendered them, with few exceptions, peaceable and orderly, by providing them with food and employment.

Unhappily, the then governor, Lord Charles Somerset, entertained extremely despotic ideas; and in the exercise of the almost irresponsible authority entrusted to him, seems to have systematically preferred a narrow and compulsory, to a liberal and conciliatory policy in his dealings, whether individually or collectively, with the people

over whom he ruled for nearly fourteen years. Most disastrous consequences attended his arbitrary interference in the internal affairs of the Kafirs, and his obstinate confirmation of the former error of treating Gaika as the sole and responsible sovereign of his whole nation; notwithstanding the reiterated and public denial with which the chief had met this assertion, in the presence of Mr. Barrow and his companions in 1798, and of Colonel Collins and Landdrost Stockenstrom, in 1809; on which latter occasion he had acknowledged that Hintza was superior to him in rank.* But it suited the views of Lord Charles to "thrust greatness" upon Gaika, and in April, 1817, a message was forwarded to him, through Mr. Williams, a missionary connected with the London Society, who had in the previous year obtained the long-withheld permission to preach Christianity to the Kafirs. He had been very cordially received both by Zlambie and young Congo, and also by Gaika, who, after several refusals, was with difficulty prevailed upon to meet the governor at the Kat River.

The arbitrary character of Lord Charles Somerset, and his imperious bearing towards English settlers, impart strong probability to the accounts given by the Kafirs of this memorable interview. The formidable appearance of the troops, six hundred strong, drawn up in martial array, of the cannon and other warlike preparations, were doubtless sufficient to induce Gaika to assent to any terms which might insure him immediate deliverance from his critical position, although one condition should have been the assertion of his exclusive dominion over all Africa, with Europe, Asia, and America to boot.† The chief topics entered into by the governor were the depredations committed on the colony, to remedy which it was enacted that Gaika should in future be considered by the Cape government as the sole head of Kafirland; that his agents should be allowed to barter at Graham's Town; but that all other Kafirs found within the colony should be treated as enemies. It was also decided for the first time, that whenever cattle should be stolen from the colonists by Kafirs, a military patrol should follow the traces into Kafirland, and seize from the first kraal or

small village the number of cattle taken, or said to have been taken, from the colonists. Here a great door to irregularities was opened. Subsequent experience proved that in nine cases out of ten it was impossible to find the guilty party, and therefore the innocent generally suffered. Being extremely attached to their cattle, they naturally resisted their being carried away, and any unscrupulous leader who chose to construe their resistance into a hostile feeling, could proceed to the last extremity in the execution of his orders, and deprive them of life for striving to preserve their chief means of supporting it. Thus constant irritation was kept up between the borderers on either side, which a fresh act of impolitic interference on the part of the government soon fanned into open war. In 1818, Gaika, by forcibly seizing the wife of one of Zlambie's principal counsellors, and by other aggressive acts, excited the anger of his superior chief Hintza, and also of Zlambie, Jaluhsa, Habana, Congo, and a remarkable man named Makanna, who, though of humble origin, had, by the force of talent, energy, and eloquence, raised himself to something more than an equality with the leading hereditary chiefs of his country. He adopted the tone of a religious reformer, as well as of a patriot and a warrior, and boldly reprobated the vices of his countrymen, inculcating a stricter morality. Assuming the title of a prophet sent from above, for the purpose of raising the social and political condition of his nation, he declared himself endowed with the supernatural gifts necessary for the performance of his mission. Makanna, or *Lynx*, as he was commonly called, was the chief inciter of the powerful confederacy by whose combined forces Gaika, after a fierce battle fought between the Buffalo River and the Debe, was defeated with great slaughter. Upon this Gaika appealed to Lord Charles Somerset to assist him, not in bringing about a reconciliation, but in making war upon his enemies, amongst whom, it should be borne in mind, was Hintza, who, by his own public admission, was the paramount chief of the whole country. In compliance with his request, a powerful force, consisting of regular troops and armed colonists, to the number of 3,352 *the same compliment from himself.*" Gaika had certainly equal reason for addressing Lord Charles as monarch of Great Britain; as had Lord Charles to consider Gaika sole chief of Kafirland.—*Vide the Account of Mr Williams, and Wrongs of the Caffre Nation*, p. 72.

* Aborigines' Committee of 1836; p. 156.

† When Mr. Williams informed Gaika of Lord Somerset's intention with regard to him, he replied that "he was much obliged to his lordship for conferring on him the honour and title of chief of his nation, and begged that his excellency would accept

men, was despatched under Colonel Brereton, into the territory of the united chiefs, who strongly protested against this invasion, declaring that it was an international quarrel, in which the governor of the Cape colony could have no right to interfere, as they desired to remain at peace with the settlers, but would not submit to the yoke of Gaika. All their arguments were in vain; the inhabitants of the villages were either slaughtered or driven into the woods, and the commando returned from Kafirland, leaving multitudes who had with difficulty escaped death by the sword, to perish under the more cruel pangs of famine, but enriched with a spoil of more than 30,000 head of cattle, of which about 21,000 of the finest were divided among the colonists, and about 9,000 given to Gaika. As a natural consequence, the plundered tribes, rendered desperate by famine, crossed the Fish River in numerous bodies, drove in the small military posts, and compelled the border colonists to abandon their dwellings, most of which were destroyed; and when resisted, they did not hesitate to shed blood. Some few successful attempts at resistance were, however, made by insulated parties of the inhabitants, and especially by about a hundred Hottentots, settled at the Missionary Institution of Theopolis, in Albany, and at the Moravian Institution, near Uitenhage, by whom the Kafirs were triumphantly repelled, and an important pass into the colony secured. Additional troops were sent to the frontier, and a plan was formed for the re-invasion of Kafirland; but before it could be carried into execution, the Kafirs, to the number of 9,000, led by Makanna, and Dushani the son of Zlambie, attacked Graham's Town. Had the advance been made by night, it could scarcely have failed of success, but Makanna delayed it, apparently for the purpose of sending overnight (in conformity with a custom held in repute among the heroes of his country) a message of defiance to Colonel Willshire, the British commandant, announcing "that he would breakfast with him the next morning." Accordingly at break of day he assembled his troops on the neighbouring mountains, addressed them in an animating speech, to which they responded with their wild war-cries, and advanced to the assault of the little garrison, which consisted of only about 350 European troops, and a small corps of disciplined Hottentots. The Kafirs poured down in dense disorderly masses, flinging

showers of assagays, which, however, fell miserably ineffective, compared with the destructive fire of musketry opened upon them by the troops, of which every shot was deadly. Still they came forward courageously, their chiefs cheering them on almost to the muzzles of the British guns; and many of the foremost warriors were seen, by the direction of Makanna, breaking short their last assagay to render it a stabbing weapon, in order to rush in upon the troops, and decide the battle in single combat. At the very moment when their overwhelming superiority of numbers, and great bodily strength, seemed about to ensure them the victory, the old Hottentot captain, Boczak, and his followers, to whom most of the Kafir leaders were personally known, singling out the boldest of those who, now in advance, were cheering on their men to the final onset, took fatal aim, and levelled in a few minutes a number of the boldest warriors. A momentary confusion ensued, and the field-pieces, just then brought to bear, poured a destructive fire on the front ranks; those behind recoiled, wild panic succeeded, and Makanna, after vainly attempting a rally, accompanied their flight through broken ravines, where pursuit was impracticable. The slaughter was great for so brief a conflict, 1,400 Kafirs being left dead on the field, and many more perished of their wounds before reaching their own country.*

To punish the invasion injustice had provoked, all the disposable force in the colony was concentrated upon the frontier, and Colonel Willshire, at the head of the British and Hottentot troops advanced into the enemy's country in one direction, while Landdrost Stockenstrom, with a burgher commando of a thousand horsemen, swept it in another, inflicting a fearful amount of misery; everywhere carrying off cattle, burning huts, and destroying cultivations. The leading chiefs, Zlambie, Congo, and Habana, were denounced as outlaws, and large rewards offered for their capture, dead or alive; yet among the starving multitudes, not one man or woman could be induced to betray their countrymen, even to save their own lives and those of their children.

At length Makanna freely surrendered himself into the hands of the British, hoping by this means to obtain better terms for his people; but in this he utterly

* Pringle, p. 301.

failed. He was detained a prisoner, sent to Cape Town, and finally transported to Robben Island, with others of his unfortunate countrymen, there to work in irons in the slate quarries with convicted felons, rebellious slaves, and other malefactors. About a year afterwards, aided by a few Kafirs and slaves, over whom, even in their common bondage, he had established his characteristic ascendancy; he rose upon the guard, overpowered and disarmed them. Then seizing a boat he placed his adherents in it, and quitted the island in safety; but in attempting to gain the iron-bound coast of the mainland, the overloaded pinnace, in which he had been the last to embark, was upset. The ill-fated African leader clung for some time to a rock, whence his deep sonorous voice was heard cheering on those who were struggling, some of them successfully, with the billows, until he was swept off and engulfed by the raging surf.*

During the time of the commando against Makanna, the life of the most efficient and most dreaded of the British officers had been spared, and his personal liberty preserved without condition or ransom, under very peculiar circumstances.† Our treatment of Kafir chiefs and warriors unhappily affords no such instance of magnanimity; on the contrary, it would seem as if the colonial government of that day had taken a peculiar pleasure in trampling upon the strongest prejudices of their opponents, by doing everything in their power to degrade their rulers and lower all to the same standard, making Gaika the nominal head of his nation, only for the sake of using him as a tool wherewith to oppress and impoverish the Kafirs. Thus, when it became evident that the Fish River was a perfectly untenable boundary between a starving people on the one side, and isolated groups of settlers enriched with their spoil, on the other—the governor proceeded to the frontier, had a second interview with Gaika, and entered into another verbal treaty, in accordance with which all the Kafirs, friends and foes, were to retire beyond the Keiskamma and Chumie Rivers, leaving nearly 3,000 square miles of fertile

and well-watered country to be added to the already overgrown colony, while they themselves were driven back upon territory fully occupied by native inhabitants, whose pursuits being chiefly pastoral, required additional rather than diminished space. The whole territory of the tribe belonging to the brothers Congo and Pato, over whom Gaika had never pretended to exercise authority, lay within the newly enacted boundary: consequently from 7,000 to 10,000 souls were at once deprived of their land, by a so-called convention between two persons; and there were other tribes whose case was scarcely less cruel and unjust. The boundaries of the country of which the Kafirs were thus dispossessed were very loosely defined, no map being traced, nor even so much as an imaginary line laid down in writing, for their guidance, extending between close and well-known landmarks; and a fresh series of disputes eventually arose from this omission. It was at first specifically stated that the whole of the valuable tract in question was to be held as neutral; it was to become a waste land without inhabitants, or, in the words of Captain Stockenstrom, who acted as interpreter, "the waters of the Koonap, Keiskamma, and the Kat Rivers, were to run in future undisturbed to the sea, and neither Kafirs nor whites were to inhabit the territory." Lord C. Somerset likewise officially declared that the colonial government had no desire to pass "the known boundary of its settlement, the Great Fish River;" but that on the contrary, it rigidly prohibited its subjects from crossing that line of demarcation. Strong permanent posts were, however, established within it, containing each "a force sufficient for aggression, by which means," writes Lord C. Somerset to Colonel Wade, the commandant on the frontier, "it is not to be doubted but that Gaika and his subordinate chiefs may be controlled." The same communication directs Colonel Wade to inform Gaika that it was from him, as the recognised and responsible head of his country, that the colonial government would exact satisfaction for all depredations committed on the

naked. In about an hour he returned, accompanied by a mounted boor, and a led horse. He then resumed his ingubo and assagays, and disappeared in the woods, while the Landdrost rode to rejoin his party. After peace was concluded, Captain Stockenstrom made every effort to discover and reward his generous deliverer, but without success.—Pringle, p. 306.

* Pringle, p. 307.

† Captain Stockenstrom, while walking alone in the rear of his men, was taken suddenly ill, and left behind unable to move, and ignorant of the way. In this situation he was surprised by an armed Kafir, one of Zlambie's warriors, who, after ascertaining his case, laid down his ingubo (cloak) and his arms, at the feet of his now helpless enemy, and darted off

colony; that troops would be at hand to enforce the orders of the governor on this head; that therefore it would not avail him to say that his inferior chiefs would not attend to his injunctions, but that "he must control them, and point out the depredators, who would be punished with exemplary severity."*

At the request of Gaika, a missionary instructor was again appointed to reside with him,† who, however, was most injudiciously expected to act likewise as a political agent, and correspond closely with the colonial government.

Shortly after the return of Lord Charles from the Cape frontier, intelligence arrived at Cape Town that a large increase of population might soon be expected, and, in fact, the sum of £50,000 was voted by the House of Commons for the conveyance and settlement of about 4,000 persons, men, women, and children (principally from Scotland), who reached Table Bay in the months of March and April, 1820. This gave a new turn to affairs; a few months before, his lordship had publicly stated that no enlargement of the colony was desired, but rather deprecated; now he became anxious to appropriate to the use of the immigrants the neutral, or *ceded* territory, as it was found more convenient to term it. Being then on the point of visiting England, Lord Charles left Sir Rufane Donkin as acting governor, with the understanding that he would be perfectly justified in locating settlers on the tract in question; but the remonstrances of the colonial secretary, Colonel Bird, and of Landdrost Stockenström, so far prevailed, as to induce Sir R. Donkin, before taking further proceedings, to ask the consent of Gaika to the

proposed measure; the rights of the other proprietary chiefs, Zlambie and Dushani, Eno, Habana, Congo, Pato, Botman, and many others, who nine months before had been hunted over the new border, being, in this as in previous instances, totally disregarded. Gaika, who had himself been expelled from the neutral ground, passively acquiesced, and a proclamation was forthwith issued, annexing the "newly acquired territory" to the Zuurveld or Albany district. Grants of this land were then made to some of the English settlers; but Lord Charles, on his return to the Cape, disapproving of this, as of every other act, good or bad, done by the acting governor on his behalf,‡ withdrew the proclamation, resumed all the grants, except such as had been legally confirmed, and called back the colonists within the previous limits of the colony, not, it would appear, from any lingering feeling of respect to his own engagements, as he soon afterwards appropriated part of it to his own use,§ and gave farms of immense extent to various frontier boers, the nature of whose claims upon him reflect little credit on either party. It is worthy of remark, that the fathers of these men had attempted to obtain possession of this very ground, thirty years before, but their petition had been firmly and indignantly rejected by Sir James Craig (see p. 32).

The band of British settlers,|| many of whom had embarked, filled with most unreasonable expectations, raised by statements circulated in pamphlets and speeches, of a soil and climate known only in romance, had their difficulties increased ten-fold by the arbitrary waywardness of the governor in reversing the various measures taken by

* Aborigines' Committee of 1836. Evidence of Col. Wade, p. 404.

† As the successor of the excellent Mr. Williams, who had died of fever, to the deep grief of the Kafirs, who would scarcely permit his widow and her two infant children to leave them, so sensible had many of them become of the benefit of missionary teaching.

‡ *Vide* Parl. Papers for 1827, and pamphlets by Sir Rufane Donkin and Col. Bird, on the government of the Cape, published in 1827.

§ *Vide* Pringle, pp. 315-317.

|| Among their number was the gifted poet Thomas Pringle, who emigrated with his immediate family and connexions. In consequence of his endeavours to establish a free press at the Cape, he was compelled by the intolerance of Lord Charles Somerset to resign his situation as public librarian, which he had obtained through the intervention of Sir Walter Scott with Mr. Goulburn, the then colonial secretary,

and eventually obliged to return to England, where he was enabled to become a fellow-worker in a noble cause, by being selected as Secretary to the Society for the Abolition of Slavery. Mr. Fairbairn, his able coadjutor in the publication of the *South African Commercial Advertiser*, manfully held his ground, and at length, after pleading in person at Downing-street, the injustice of suppressing a paper against which neither sedition, libel, nor immorality of any kind could be justly pleaded, but which on the contrary had adopted from the first a temperate and conciliatory tone that many other colonial journals might do well to imitate, the press was restored, and placed on the safe and sound footing of legal responsibility. From the time of its re-establishment in 1828 to the present day, Mr. Fairbairn has maintained the sole editorship of the paper which, though commenced under such ungenial auspices, has continued ever since to reflect credit both on him and on its supporters in the colony.

Sir Rufane Donkin on their behalf. The total inadequacy of the lands in the first instance assigned to them, rendered prompt exertion necessary to save them from utter ruin, and the important and multifarious duties of Landdrost were taken from a popular and courteous magistrate (Major Jones), and entrusted "to a person who neglected the interests of the settlers, and who aggravated the feelings of the governor by attributing the dissatisfaction that undoubtedly did from this cause prevail, to a spirit of turbulence, and disaffection towards the government."* The newly-formed village of Bathurst was ruined, and the hasty withdrawal of the military guard from the Fredericksburg settlement, compelled its abandonment† by the half-pay officers and their families, who had been placed there as an advanced post to cover the Zuurveld. The necessary enlargement of the locations was refused, or obtained with great difficulty; while, as we have seen, lavish grants were given to numbers of the frontier boors of the worst class. Successive failures of the corn crops and of potatoes, fell under these circumstances, with crushing weight upon the unfortunate settlers, whose grievances and misfortunes were, however, eventually, to a considerable extent, redressed or compensated: the former by the measures which resulted from the Special Report of the Commissioners of Inquiry, dated May, 1825; the latter by the liberal subscriptions raised in their behalf, about £7,000 being remitted from India and England, and about £3,000 collected in the colony. The distribution of this fund, according to a scheme very judiciously framed from data carefully collected on the spot, did much to restore a numerous and respectable class of people to comfort and independence, and give a renewed impulse to the settlement, which from that time steadily advanced, notwithstanding the partial continuance of blight in the wheat crops for several years.

Meanwhile the condition of the Hottentots, whose valour and fidelity had been so remarkably manifested during the late warfare, was growing worse and worse. Dr.

* Report of Commissioners of Inquiry. Parl. Papers, 1827; p. 91.

† *Ibid.*

‡ *Researches in South Africa*, vol. i., pp. 201, 202.

§ In a despatch addressed to the Commissioners of Inquiry, dated September, 1824, Lord Charles peremptorily denied all knowledge of this transaction. "The seizure of Gaika," he writes, "I never

Philip, who was sent from England in 1818 by the directors of the London Missionary Society, to examine into and report upon the condition of their missions, gave a deplorable account of the systematic oppression, of which Dr. Van der Kemp had previously complained so bitterly, as exercised towards the Hottentot race throughout the colony. He described the Bethelsdorp institution as having been virtually converted into a slave-lodge, and the people called out to labour at Uitenhage, to work on the public roads, to cultivate the lands of the local authorities, or to serve their friends, or the colonial government, receiving for these labours never more than a trifling remuneration, and very frequently none at all. In addition to the daily oppressions exercised upon this people, "we found," says Dr. Philip, "that seventy of the men had been employed for six months in the Kafir war. For this service they received nothing but rations for themselves; nothing in the shape of wages was allowed to their families; and the women, to keep themselves and children from starving, were under the necessity of contracting debts among the farmers, to be liquidated by the personal service of the husbands on their return from Kafirland."‡

In addition to this heavy list of sufferings must be added, that long after the boors were dismissed from the commandoes, the poor Hottentots were still detained from their homes. It would occupy too much space to set forth all their grievances; enough has been already said to show that every class of H.M. subjects within the colony were suffering from gross misgovernment. Meanwhile the frontier tribes, Kafirs, Bushmen, and even the more favoured Griquas, of whom we shall have occasion to speak at greater length in a subsequent page, were all kept in a state of constant irritation. The Kafirs especially were again outraged by an attempt to seize the person of Gaika during a time of peace, which was frustrated by his disguising himself in the mantle of one of his wives, and pretending to be occupied in some feminine occupation. What cause of offence or suspicion Gaika§

heard of until I read it in this tissue of falsehoods," alluding to the statements made by the Albany settlers to the commissioners. A letter in his lordship's own handwriting, directing the attack upon Gaika, was, however, subsequently found at Graham's Town, upon which he boldly defended the measure, and only expressed his regret that it had not succeeded! (See Parl. Papers for 1827, No. 371, pp. 39, 40, 43, 92; and No. 444, p. 13.) The pamphlets

might have given does not appear, but the natural results of this attempt, and "of the irregular incursions of the boors into the Kafir country,"* were renewed depredations on the part of the provoked and goaded Kafirs. These were speedily followed by a retaliatory expedition, consisting of a strong force of military and burgher militia, headed by Major Somerset (the son of the governor, and the newly-appointed commandant on the frontier), of which the following is the official account printed in the *Cape Government Gazette* of December 20th, 1823, where the whole affair is described as a very gallant and meritorious exploit:—

"At day-break on the 5th, Major Somerset, having collected his force, passed with celerity along the ridge, and at daylight had the satisfaction of pouring into the centre of Macomo's kraal, with a rapidity that at once astonished and completely overset the Caffers. A few assagais were thrown, but the attack was made with such vigour that little resistance could be made. As many Caffers having been destroyed as it was thought would evince our superiority and power, Major Somerset stopped the slaughter, and secured the cattle to the amount of 7,000 head, and had them driven to Fort Beaufort, where kraals had been previously prepared for them."

After the frontier boors had received a liberal share of these cattle, as an indemnity for their real or pretended losses, the "surplus" is stated in the *Gazette* to have been returned to Macomo (the son of Gaika) to save the women and children of his tribe from want. But what the surplus was, or how many Kafirs had been killed to "evince our superiority," is not mentioned; we are only informed that not a single man of the colonial force was hurt.

The following account, given by Dr. Philip, of the state in which he found the unfortunate Bushmen, proves that the treatment to which they were subjected was even worse than that endured by the Kafirs, and their condition at this period was certainly discreditable in the highest degree to those whose covetousness brought about, or whose apathy tacitly permitted proceedings attended with such frightful results:—

"In no period of equal length, in the history of the colony of the Cape of Good Hope, has the work of death and slavery been carried on with the same degree of success which has attended it in the interim between 1817 and 1825. In 1816, we had 1,600 people belonging to our Bushman stations of Toverberg and Hephzibah; and the Bushmen, though reduced and harassed by the commandoes which had been sent against them, were still the nominal possession of Col. Bird and Sir Rufane Donkin prove that the whole of this affair was actually planned by Lord C. Somerset, and they likewise expose other most disgraceful intrigues.

sessors of the Bushman country south of the Orange river, and were to be seen existing in separate and distinct kraals, in different parts of the country. But in 1825, when I visited their country, those kraals had disappeared; the missionary stations had all been put down; the country was then in the possession of the farmers; and the poor Bushmen still residing in it, were either in their service, or living like fugitives among the rocks, afraid to appear by daylight, lest they should be shot at like wild beasts."—Vol. ii., p. 269.

At length the general feeling of dissatisfaction and insecurity throughout the colony became felt at home, and a commission of inquiry was despatched to the Cape to investigate its government, and its social condition. The commissioners, Mr. Bigge and Sir William Colcl Brooke, were happily men of unimpeachable honesty, and notwithstanding the extreme difficulty of obtaining information, owing to the tyrannical despotism exercised by the governor, his great power, and the fear inspired by the system of espionage† by which he had surrounded, or at least permitted himself to be surrounded; they ascertained sufficient facts to enable them to frame a report which speedily produced an important change of policy towards the settlers, and in some degree ameliorated the position of the Kafirs. The result of the inquiry with respect to the Hottentots was a grave exposure of the injustice they had so long endured, and a full vindication of the missionary institutions, from the ungrounded charges brought against them by some of the colonists, who sought to suppress them on the ground of their encouraging the Hottentots in idleness, whereas the real objection to these institutions was, as it ever had been, that they helped the labourer to stand firm on his demand for reasonable wages. The commissioners reported strongly in their favour. To this report, to the unremitting labours of Dr. Philip, and the enlightened zeal of Sir Richard Bourke, who in 1828 succeeded Lord Charles Somerset as governor of the colony, may be attributed the passing of a local law which was immediately confirmed in England, and which has justly been called the Magna Charta of the Hottentots. This was the fiftieth ordinance which simply placed these people on an equality with Europeans. It repealed all former enactments affecting the Hottentots, and other free persons of colour lawfully

* Report of Commissioners. Parl. Papers, 1827; p. 92.

† See Letter of Sir Rufane Donkin. Parl. Papers, 1827; p. 45.

residing within the colony, excepting so far as related to existing contracts, and provided that all grants, purchases, and transfer of land, or other property whatsoever, made to or by any Hottentot, &c., should be of full force and effect, and authorized such persons, on procuring deeds of burgership, to obtain and possess by grant, purchase, or other equitable means, any land or property in the colony.* From and after the passing of this ordinance, the Hottentots were no longer subject to any compulsory service, to which other classes of his Majesty's subjects were not liable; nor to any hindrance, molestation, fine, imprisonment, or punishment of any kind whatsoever, under the pretence that such person had been guilty of vagrancy or any other offence, unless after trial in due course of law, "any custom or usage to the contrary in any wise notwithstanding." In order to protect the ignorant and unwary from improvident contracts, engagements for hiring or service were not generally to exceed one month in duration, or they might be renewed from month to month; but in the event of a contract being made for a longer period, of which twelve months was the extreme limit, master and servant were to appear before the superintendant of police, or district magistrate, and sign an agreement which was to be duly filed and registered. Wages were no longer to be paid in liquor or tobacco: women and children were to have separate contracts from the husband and parent: proof of payment of wages was required, and penalties were enacted for detaining children without contracts, or beyond the time stipulated in existing engagements. At the age of eighteen years the Hottentots, and other free people of colour, were to be considered competent to enter into contracts: notice of births and deaths to be given by employers to the field-cornets of their district, and half-yearly returns to be made by the field-cornets to commissioners. In the event of ill-usage, Hottentots, &c., who should bring a reasonable complaint against their masters, if unable to bear the expense, were to have a summons free of charge issued on their behalf. There are other useful provisions in this ordinance. The Hottentots attested their sense of its importance by attaching printed copies of it to their bibles. It is true that no law had previously existed, declaring them incapable of holding land; but the government had habitually abstained from mak-

ing them grants, though aware that their wages were far too low to enable them to become purchasers. Thus the parliamentary returns of 1822 and 1824, show that in ten years 200 acres had been granted to six Hottentot families; and this in a country where a European would consider himself ill-used if his farm were under 2,000; while the amount granted in previous years to the boors greatly exceeded this latter quantity. These petty grants had been obtained by the Hottentots under circumstances highly creditable to the humanity of the private individuals whose disinterested exertions had wrung them from the local government. One instance deserves to be recorded in letters of gold. Among the settlers of 1820 was a Mr. Parker, an Irishman, who came to South Africa as head or leader of a considerable party of immigrants. On arriving at the tract of country allotted to him, he found to his surprise, that it was already in the possession of a Hottentot family. The senior Hottentot, Abraham Lwartz, offered no resistance; he only said that it was a hard case, after his having laboured there, under the instructions of the missionaries, for fifty years, that he, his children, grandchildren, and great-grandchildren, who were all Christians, should be thus dispossessed of their lands and houses (of which there were about fourteen built comfortably, in the English style); but, he added, opening a large bible that lay on the table, and turning to the thirteenth chapter of Romans, "pursuant to these instructions, which I consider divine, I will yield to the powers that be." Mr. Parker states that several of the settlers who accompanied him were extremely anxious to get possession of these lands, which in beauty of cultivation exceeded anything he had seen in the colony; but he considered that he should ill discharge his duty as a man and a Christian, in accepting Varkens' Fountain: he therefore assured the aged Hottentot that neither he nor any of his party of colonists should disturb him. He kept his word, and although his decision was met by the local authorities with "very strong expressions of indignation," he nevertheless persevered until he succeeded in obtaining for Abraham Lwartz the legal title to the land which his industry and perseverance so justly deserved.

Before proceeding further with the general history, it is necessary to notice the

* Parl. Papers, 18th March, 1835; p. 169.

proceedings of the race called Bastaards, or Griquas, the offspring of the original Dutch settlers and the female aborigines. Being driven out of the colony by the oppressions of the farmers, they established themselves, under the guidance of their missionary instructors, near the banks of the Orange River, and called their principal station Griqua Town, where a patriarchal government was created, without reference to the colonial laws. They were, however, considered as dependent on the British authorities at the Cape, and two chiefs, named Adam Kok and Barend Barends, were appointed by the Earl of Caledon, during his administration. Disturbances having arisen among them, Landdrost Stockenström was sent to restore order. He recommended the appointment of a resident British agent, and in 1822, Mr. Melville, of the London Missionary Society, was appointed government agent at Griqua Town, with instructions to interfere as little as possible with the customs of the people, to encourage their attendance on Christian instruction, to restrict their intercourse with the colony to the fairs established at Beaufort, and to furnish statistical details and reports as to their condition, &c. All traffic in arms and gunpowder with the borderers was strictly forbidden; but an illicit traffic was largely carried on, the boors selling gunpowder to the Griquas, as onion seed.

In 1821, previous to the arrival of Mr. Melville, the Griquas, owing to internal dissensions, had separated into three parties; Waterboer, who, although by extraction a Bushman, had been created a chief by the election of the people, remained at Griqua Town; Adam Kok and his followers located themselves at Campbell Town; and B. Barends, at Daniel's Kuil: the whole territory extended along both banks of the Orange River, nearly from 28° to 30° S. lat., and from 22° to 25° E. long. The remissness and neglect of the old chiefs, Adam Kok and Barends, caused the Griqua community to fall into a disorderly condition, and a few deserters from the body, named Hendricks, Goegman, and others, established a separate township near the Hart River. They subsequently removed to the hills, were joined by others and by Corannas, and were termed Bergenaars, or mountaineers. Being provided with fire-arms and horses, well-acquainted with the country, excellent sharpshooters, inured to

hardship, and despising danger, they soon became a terror to the Bechuanas, Mantatees, and other yet more barbarous tribes, whose territories they occasionally entered in marauding parties, which, in turn, induced incursions to be made on our exposed northern frontier. Happily, Mr. Melville, and subsequently, Mr. Wright, a "very intelligent missionary from the London institution,"* obtained considerable influence over the mind of the chief, Andreas Waterboer, whose son, at fourteen years of age, became one of the under-teachers in the mission-school at Griqua Town.

Mr. Wright induced Waterboer and his son to pay a visit to the governor at Cape Town, where they were well received, and a treaty was signed† by Sir B. D'Urban and Waterboer, under which the latter engaged to be the faithful friend and ally of the colony; to restrain and punish any attempt to violate the peace of the frontier by any people living within his country; to protect that portion of the colonial border opposite to his own, against all enemies or marauders from the interior, who might attempt to pass through his territory; to assist the colonial authorities in any enterprise which they might undertake for the recovering of property or the apprehension of banditti; to seize and send back criminals or fugitives from the colony; to inform the British government of any intended predatory or hostile attempts which might come to his knowledge, and to co-operate cordially and in all good faith with the Cape authorities, in preserving peace and extending civilization among the native tribes. The governor, on his part, engaged to pay the chief the sum of £100 per annum, to defray the expenses which the execution of the aforesaid engagements might incur; to supply him with 200 muskets, and a proportionate quantity of ammunition, and more of the latter, as occasion might require. Fifty pounds were likewise to be annually placed in the hands of the missionary stationed at Griqua Town, in aid of the school for the education of the children, and especially for their instruction in the English language. To encourage the observance of these engagements, and to secure the benefits which they were intended to afford to both parties, an agent (Mr. Wright) was appointed to reside at Griqua Town, whom the chief agreed to receive and protect, and with whom he was

* Words of Sir B. D'Urban.

† 11th December, 1834.

to communicate confidentially upon all matters mutually concerning his territory and the colony. This treaty was immediately confirmed in England; the Earl of Aberdeen, then his majesty's secretary of state for the colonies, in a despatch dated April, 1835, writes,—“I not only approve in the fullest manner of the object and the terms of this agreement, but I am desirous of expressing the high satisfaction which it has afforded to H.M. government to learn that you have, even in one instance, succeeded so completely to realize the views which the king's government entertain of the only policy which it becomes this country to observe and steadfastly to pursue, in regard to the native tribes by which the colony under your government is in a great measure surrounded.”* It is indeed extraordinary, that the treaty with Waterboer should be the only one before or since carried out effectually with any native chief by the governors of the Cape of Good Hope.

In no colony of the Crown has there been greater administrative difficulty; this has arisen almost unavoidably from the neighbourhood of various barbarous tribes; but this disadvantage has been increased beyond calculation by the almost entire absence of any system, and by vacillating and indeterminate policy. If the destruction of the aboriginal African races had been resolved on, the measure, however atrocious, might, in all human probability, long ere this have been accomplished. If, on the other hand, a due regard to Christian responsibility—social advantage, and native rights, had been the guiding motives of our conduct, the Kafirs might now have been like the New Zealanders, a peaceful and prosperous people, with extensive herds and flocks, cultivating large tracts of lands, and consuming a considerable amount of British manufactures. The Hottentots and Bushmen would, under a similar civilizing procedure, have supplied the demand for labour within the colony,

* Parl. Papers, June, 1835; p. 117.

† Ordinance of 14th July, 1838.

‡ During the years 1825–6, numerous commandoes and patrols were sent from the Graaf Reynet and Somerset districts against the miserable Bushmen, which were not inferior in barbarity to those carried on under the Dutch administration. In one instance (2nd April, 1825) a commando murdered thirteen Bushmen at the Brak River; in another, at Baviana's River (22nd August, 1825), two Bushmen chiefs and one woman were slain, one woman and one child were wounded, and one woman and three children were taken prisoners. On this occasion, Field-cornet

and prevented the necessity of admitting the Mantatees and other savage and foreign tribes into our territory.†

The colonial government oscillated between the two courses, and thus not only left public opinion unsettled, but subjected the Kafirs to the evil influence of the prevailing inimical spirit on their European frontier, while the absence of any penetrating ray of civilization among the Zoolu and other savage tribes on the western and north-western boundaries of Kafirland, caused frequent irruptions and attacks, which not only prevented the Kafirs settling down into peaceable habits, but almost necessitated the maintenance of a belligerent attitude by the colonists, and seemed to justify the continuance of the pernicious system of commandoes against the border tribes, under the authority of the Landdrosts of the several districts, as established by the Dutch government, which was continued in full force on our occupation of the Cape. Earl Macartney, in May, 1797, issued an ordinance requiring all persons to “pay immediate and cheerful obedience” to the commands of the Landdrost when ordered on these expeditions; and Sir Lowry Cole, in June, 1833, thirty-six years after, enforced obedience by enacting penalties of fine and imprisonment against those who refused to obey the summons to service.‡ The commandoes were first objected to by the Right Honourable E. G. Stanley, now Earl of Derby, then H.M. secretary of state for the colonies, who, in a despatch to Governor Sir L. Cole, dated 13th November, 1833, writes—“These expeditions have been represented as a system of military execution inflicted upon the natives, sometimes to prevent or to punish their hostile incursions into the territory wrested from them by the European settlers, but more frequently as a means of gratifying the cupidity or the vengeance of the Dutch or English farmers; and further, as being marked by the most atrocious disregard of C. F. Van der Nest, as usual, fired on the inhabitants of the kraal at daybreak, while its inmates were all asleep, killing or wounding indiscriminately all within its boundaries. [Parl. Papers, January, 1835; pp. 6, 7, 8.] What idea of Christianity could these unhappy beings entertain, when they found its nominal professors perpetrating such wholesale murders? or how could the colonists expect the blessing of peace within their borders? or anything but punishment, sooner or later, from Him in whose sight the life of the humblest of His creatures is as sacred as that of the monarch of the greatest throne on earth, and who says, “*Vengeance is mine,—I will repay.*”

human life, and by cruelties alike disgraceful to those who sanctioned, and destructive to those who endured them." Mr. Stanley was therefore far from being prepared to approve the recent ordinance of Sir Lowry Cole, as affording permanent rules for the habitual conduct of the magistracy, though he might appreciate it as a temporary provision against an extreme emergency; he therefore requested further information on the subject.* Sir L. Cole, in reply, upheld the system of commandoes as the only available means of defending the frontier; stating that—

"During the last four or five years some wandering hordes on the north frontier of the colony have become not merely troublesome, but have organized a system of murder and depredation to an extent that has seldom or never been equalled in past times; whole families have been attacked and butchered by these hordes, composed of the outcasts and refuse of the colony and native tribes; their houses burnt down, and the whole of their live stock and every article belonging to them either carried off or destroyed. The approach of these barbarians can neither be foreseen nor provided against beforehand. They come suddenly and in great force from the deserts, and are generally far advanced on their return thither before any sufficient force can be mustered, either for punishing their crimes or rescuing the plunder from their grasp. On the several points to the north and north-east, the colonists are most liable to the attacks of wandering tribes, and considering the abject poverty as well as the extreme ferocity of these people (who are frequently engaged among themselves in wars of plunder and extermination, the stronger against the weaker, some of the latter have even been reduced to the practice of cannibalism), whose only riches consist of bows and poisoned arrows, it cannot be supposed that the colonists are moved by cupidity in endeavouring to repel their attacks, or follow up their retreat. The desire of vengeance and punishment is only natural, but even this is more frequently defeated than gratified. * * * The atrocities imputed to the colonists are now of rare occurrence, and seldom fail to bring down punishment on their heads, where the guilty individuals can be traced."

Notwithstanding these arguments, Mr. Stanley, after carefully reviewing the whole subject, while fully admitting the difficulties of the case, announced his majesty's disallowance of the commando ordinance; stating, among other just and humane reasons, that by its practical working the sword might be "drawn against whole bodies of people at the bidding of a provisional constable;" and they might be rendered liable to military execution, "though not found in the actual commission of outrages so violent as to be repelled only by force."†

* Parl. Papers, 1st June, 1835; p. 62.

† Parl. Papers, 1st June, 1835; p. 65. Despatch to Sir B. D'Urban, 27th November, 1833.

It was not, however, by the provincial authorities only, that the commando system was carried on, without regard to the claims of justice and humanity; the officer placed in command of the troops on the frontier cannot be exempted from the same censure. One instance of reckless blundering was forcibly represented by certain of the Albany settlers, as calculated to produce disastrous results. To understand this fully, we must bear in mind the unusually peaceful state of the frontier at the time. One of the most successful measures of Sir Rufane Donkin, had been the promotion of an equitable barter between the colonists and Kafirs by means of fairs or markets held at Fort Willshire, on the Keiskamma River, every Wednesday, Thursday, and Friday, throughout the year. No fire-arms, ammunition, or fermented liquors, were allowed to be sold. These fairs were sanctioned, in July, 1824, by Lord Charles Somerset. The Kafirs attended them in large numbers, bringing for sale ivory, ox hides, skins, corn, gum, mats, &c., and purchasing, in return, woollens, cottons, agricultural and other implements, beads, bread, &c. To such an extent was this civilizing traffic carried, that among other articles, 50,441 lbs. of ivory were bought from the Kafirs by about 200 British traders, between the 18th of August, 1824, and the 12th of March, 1825, at a price of from 2s. to 3s. per pound. The Commissioners of Inquiry, in their report dated the 25th of May, 1825, when referring to the unsuccessful attempt to establish tranquillity on the frontier, by compelling the Kafirs to retire beyond the Fish River, which had "entailed expenses upon the government, and sacrifices upon the people, in no degree compensated by the acquirement of the territory which was the object of it," notice the great success that had attended the establishment of fairs on the boundary of the neutral territory; as an important fact to be borne in mind in considering the means of civilizing the Kafirs and permanently establishing the tranquillity of the border. But no scheme that promised peaceful intercourse was allowed a fair chance of permanent success. Some information, perhaps false, and certainly exaggerated, was conveyed in 1825 to Lieutenant-colonel Somerset, the commandant, respecting certain horses and cattle which had been stolen from the colony, or had else strayed over the border,

and were alleged to be detained at the kraal of a native named Neuka. No inquiry appears to have been instituted into the truth of the story, neither was any complaint or appeal made to the leading chiefs, although one of them (Botman) had some time before sent into Fort Willshire a Kafir concerned in the murder of a herdbooy (Isaac Williams), and Gaika, by the peremptory command of Lieut.-colonel Scott, had caused the offender to be strangled. Without even adopting any sufficient measures for the protection of the European traders at Fort Willshire, Lieutenant-colonel Somerset planned a secret and sudden expedition. Accompanied by about 200 men of the Cape mounted cavalry and a party of boors, he proceeded from Graham's Town, intending to attack the kraal of Neuka. By some strange mistake, the onslaught was made on the village of Botman, the very chief who had previously given a marked proof of his desire to keep peace with the colony; several women and children were killed, and Botman himself would have fallen, had he not been recognised by a member of the expedition. The commander, on discovering his mistake, returned the cattle he had just captured, and marched off again in search of Neuka. Unwarned by his past fatal indiscretion, he actually repeated the same outrage by assaulting a kraal occupied by a Gaika tribe, some of whom were likewise fired upon and killed before their innocence was ascertained. On the remonstrance of the chief, a portion of the cattle seized, was restored, and for the third time the commando started afresh after the alleged offender, who, having learned what was going on, had retreated to the woods with all his people and their property, so that he sustained no loss, although upwards of 500 head of cattle were brought into the colony by this murdering and marauding expedition. The military employed, estimated the number of Kafirs, men, women, and children, destroyed, at about twenty. These were all slain at the kraals of Gaika and Botman, from whence also the 500 head of cattle were procured.

Mr. H. Huntley, a settler who had resided eleven years on or near the frontier, in a letter addressed to the Commissioners of Inquiry, dated, Uitenhage, January 17, 1826, says:—

"The enlightened policy of permitting an intercourse and entering into trade with our former ene-

mies, had nearly put a stop to the system of plunder and bloodshed which had so long prevailed. Murder was unheard of, and plunder (save in a very few instances, and to a very small extent) had ceased. In the midst of this long wished-for peace (which had only occasionally been interrupted by such petty depredations as must always be expected from a nation totally uncivilized) when mutual confidence began to be felt, when the trade of the colony was likely to derive the greatest benefit from this new channel, and when the intercourse between a civilized and savage nation promised the happiest results, a wanton, cruel, unprovoked, and treacherous attack was made on the kraals of the very chief whose alliance we had courted, and who considered himself under the particular protection of the colonial government. * * * Is it possible, gentlemen, to expect that the Kafir nation will tamely submit to such galling injustice—to such violation of faith and breach of treaties? Will they not revenge themselves on the inhabitants of this colony? will they not shed blood for blood? and will they not at least attempt to recover their stolen property? Severely will the British settlers, who are just beginning to recover from their losses and other miseries, suffer for this wanton aggression on the part of the colonial government."

EXPULSION OF MACOMO FROM THE KAT RIVER.—Gaika died in 1829, aged fifty-six years. The habits of intemperance which accelerated his death, had for some years before so greatly impaired his faculties, as to render him of little political importance. Unhappily the same brutalizing vice obtained considerable hold upon the mind of his son Macomo, who exercised the chief authority for some time before his father's decease, and afterwards acted as regent during the minority of the young heir Sandilli, the son of Sutu, a Tambookie woman, and Gaika's head wife. Notwithstanding this serious drawback, Macomo was no ordinary character, but possessed much ability and energy. He seems to have been at this time deeply impressed with the necessity of maintaining amicable relations with the colony, and having been permitted by the governor, in 1822, to return and reoccupy a portion of the neutral or ceded territory on the Kat River, he evinced his good-will to the settlers on various occasions by sending to Fort Hare sheep and cattle recaptured by him from other Kafirs. Captain Somerset bore witness in 1828 that Macomo and his people had become very quiet, and even afforded considerable assistance in preventing depredations.† This state of things was interrupted by the breaking out of hostilities between Macomo and the Tambookie or

* Statements laid before the Commissioners of Inquiry, January, 1826, and published in the Parl. Papers of 18th March, 1835; pp. 183—4.

† Parl. Papers, August, 1836; p. 82.

Amatembu Kafirs, under Chalala, who while living, so far as the colonists were concerned, in peace on the borders of the Tarka district, were attacked by him, and being overpowered, fled into the colony for protection; Macomo overtook, plundered, and slew several of them. This breach of the peace he vindicated on the plea of his having acted as the auxiliary of his father-in-law, Powana, himself a Tambookie chief, whose rightful authority Chalala had thrown off. In obedience to the command of the government, he restored his own share of the captured cattle (380 head), and was collecting the remainder from among his followers, when the order arrived for his expulsion from the Kat River.* He remonstrated forcibly, but offered no resistance, and he and his people were removed without bloodshed, the military executing their stern mission with as much lenity as possible. The expelled chief made no immediate attempt to recover the land from which he had been driven, well knowing that he could not expect the co-operation of other Kafir leaders. His brother Tyalic was still suffered to remain within the neutral territory; the sons of Congo,—Pato, Kama, and Cobus, were residing among the colonists, and an alliance had been voluntarily formed by the government with Hintza, the Great Chief of Kafirland, to whose assistance Major Dundas had proceeded, when the Zoolus, sent by their ferocious leader Chaka, (instigated, it is alleged, by some evil disposed persons resident at Natal),† threatened to invade his territories. The primary object of the embassy despatched by General Bourke was the promotion of peace. It was hoped that its leader would be able to act as mediator between Chaka and Hintza, though, on account of the friendly dispositions manifested by the latter towards the colony, he was to be assured of the resolve of the British government to uphold and co-operate with him, in the event of its being found impossible to prevent hostilities. No collision took place with Chaka, who perished miserably shortly after by the hands of his own counsellors, but the mission was nevertheless attended with fatal results. Major

* Evidence of Major Dundas and Dr. Philip, Parl. Papers, 1836; pp. 632—3.

† Much confusion has arisen from the application of the terms *king*, *paramount* or *sovereign chief*, to Hintza, as his actual position was thereby ill-expressed. He was viewed with superstitious reverence, as the lineal descendant of an elder branch of the ruling

Dundas, though expressly sent to act as mediator or defender in an extreme case, allowed the small expedition under his command to be employed for a less worthy purpose. On arriving among the Tambookies, he found their chief, Voosani, suffering from the plundering incursions of the Monguanas, a section of a people commonly called Mantatees, (or, when on warlike expeditions, Fitcani,) who, having been bereft of their country by the rapacity of Chaka, incited by their wants and injuries, had gone forth in turn to plunder and devour. Without any attempt at friendly intervention, the officer, to quote his own words, did not hesitate to avail himself of the opportunity of giving the marauders a lesson. Recommending to Voosani the immediate adoption of hostile measures, he attacked and fired upon a party of 150 to 200 Monguanas, who, he acknowledges, made "little or no attempt at resistance," killed from sixty to seventy of them, and took from twenty to thirty thousand head of cattle, which were distributed among the Tambookies, who declared them to be their property, and therewith returned to their homes in great triumph.§ In a few days, however, Matuwana, the chief of the defeated natives, sent down an overwhelming force, recaptured the cattle, and threatened to come himself at an unlooked-for moment, when "the assistance of white men and guns would not be obtainable." The whole of Kafirland was thrown into confusion, the colony itself was supposed to be in danger, and in about a month after the above-mentioned skirmish, it was deemed necessary to despatch a strong military and burgher force to the distance of nearly 300 miles from the colonial boundary. Delighted at obtaining so powerful an auxiliary, an immense host of Kafirs joined the commando, and pointed out the temporary huts erected in the vale where Matuwana and his men were lying. On the evening of Sunday, the 26th of August, 1828, the troops arrived within a few hours' march of the spot, and after halting for an hour or two, again proceeded, with the view of taking them by surprise at dawn of day the following morning. In this they succeeded.

family, and consulted upon all points of ancient customs or ceremonies, but he exercised no control over any of the other feudal and independent chiefs, all of whom were more or less allied to him by blood.

† Parl. Papers, June, 1835; part ii., p. 25: and Parl. Papers, August, 1836; p. 282.

§ Parl. Papers, 1835; part ii, p. 26.

The greater part of the wretched people were still sleeping when the soldiers galloped in among the huts, and opened a destructive fire upon them as they rushed out. The men, seizing their spears, vainly attempted to defend themselves against the balls and rockets of their assailants; hundreds quickly fell, and the rest fled to the mountains. The troops pursued them, and on their return found their Kafir allies, who, probably from the want of fire-arms, had hung back, and taken little or no share in the engagement, now busily employed in driving off cattle and slaying women and children.* Previous to the attack being made, strict orders had indeed been given by the Commander-in-chief, prohibiting the cruelties common to barbarian warfare; but, after witnessing the ruthless destruction inflicted by British troops upon a people who had never harmed a British subject, it is scarcely to be supposed that they would be restrained by an injunction, the sincerity of which they might possibly have doubted. A writer who has recorded the painful details of these proceedings, states that an officer whom duty required to be on the spot, declared the whole of this sanguinary affair to have been "one of the most disgraceful and cold-blooded acts to which the English soldier had ever been rendered accessory;†" and Captain Stockenstrom publicly declared that this expedition had "brought such indelible disgrace upon us, that any attempt to prevent a repetition may be deemed supererogatory."‡ The colonial government, disgusted by the atrocities committed by the Kafirs, caused it to be notified to them that they were not to expect protection on any future occasion,§ but nevertheless founded upon this most unsatisfactory interference a claim to the lasting gratitude of Hintza and his people, who, it is asserted, as well as the Tambo-

* Colonel Somerset states, "after a continued fire from six o'clock to about half-past one, the enemy was driven from all points, and I found by reports from the rear, that, during these operations, the Kafirs, who, I regret to say, did not attempt to render me the least assistance against the enemy, had employed themselves in the work of destruction, by slaying and wounding the women and children whom they found in the huts along the mountain, and in the rear."—Parl. Papers, June, 1837; p. 51. Thus, while the warriors of the offending tribe were pursued and fired upon for the space of seven hours and-a-half, their wretched wives and infants were perishing also. No estimate states the number of lives destroyed, though it must have been very large; the amount of suffering inflicted is, of course, quite

incalculable, but perhaps it may be well to remember that rockets thrown by British soldiers among groups of naked and fugitive Kafirs, may occasion agony quite as acute as that inflicted by the savage who wreaks his vengeance upon the helpless family of his foe, in a manner far more painful to the beholder or the reader, but possibly not more torturing to the sufferer. It does not appear that the attacking party sustained any loss whatever.

SETTLEMENT OF HOTTENTOTS ON THE KAT RIVER.—The use to which a portion of the territory taken from Macomo was applied, made some amends for, though it could not justify, the manner in which it had been obtained. The government, wishing to give effect to the provisions of the 50th ordinance, felt the necessity of opening a field for the industry of the class in whose behalf it had been framed, and accordingly resolved upon allotting certain lands for their use. The governor, Sir Lowry Cole, and Captain Stockenstrom, who had been recently appointed commissioner-general of the eastern frontier, took an especial interest in the project, and the latter went to the mission stations, villages, and towns, inviting Hottentots of good character to settle with their families on the branches of the Kat River.

This measure would, it was hoped, prove beneficial in many ways. While it afforded some compensation to the natives for the loss of the extensive country possessed by their forefathers, and some reward for the faithful services of many past years, especially during the war; it was likewise expected to ensure an efficient bulwark to the most exposed part of the frontier.

The Hottentots gladly responded to the call, and assembled by hundreds at the appointed rendezvous. Some came on pack-oxen, some on sledges, some in carts, and all who could in waggons, either of their own, or borrowed from the missionary institutions. They could scarcely believe their senses, or realize their freedom and their heritage. The Commissioner-general was on the spot to welcome the new burghers, and impress upon them the duties of their altered position. He then formed

incalculable, but perhaps it may be well to remember that rockets thrown by British soldiers among groups of naked and fugitive Kafirs, may occasion agony quite as acute as that inflicted by the savage who wreaks his vengeance upon the helpless family of his foe, in a manner far more painful to the beholder or the reader, but possibly not more torturing to the sufferer. It does not appear that the attacking party sustained any loss whatever.

|| The situations of landdrost were abolished in 1828, and civil commissioners substituted in their stead.

them into parties, under separate heads, to whom was entrusted the duty of selecting spots of certain extent, and dividing them into "erven" or building allotments. Of these erven, diagrams were promised to be given; but this was never done, and, consequently, the people became simply occupiers of land on sufferance, as members of the Hottentot nation, and not proprietors as individuals, which could not but have an injurious effect on individual exertion. For a long while they waited patiently, and their fortitude and perseverance during the early years of their settlement were beyond all praise. It was feared that the ejected Kafirs would attack the new settlers, and the latter were therefore provided with fire-arms for their defence. Upon this a large number of the colonists declared that the assaigais of the Kafirs were less dangerous than a congregation of almost starving Hottentots, with muskets in their hands, surrounded on all sides by numberless flocks. Even the originators of the scheme began to doubt whether they had not acted too rashly; but the conduct of the people under these peculiarly trying circumstances amply justified the confidence placed in them. They were told, "show yourselves worthy of freedom, and your further improvement is in your own power." Thus encouraged, they bravely set to work; those who had no other means of their own, lived upon the natural products of the country, bulbs, berries, &c., technically called "*veldt kos*," *field provisions*, or worked for those who had something, while the latter were obliged to economise, to support their families, until in a few months they had an abundance of pumpkins, Indian corn, peas, beans, &c. In a very short time, dams, sloods, and aqueducts appeared, cut through rock and indurated soil with the most miserable instruments. They early showed great anxiety to have schools established among them, regularly travelled great distances to attend divine service, and petitioned the government that their grants might contain a prohibition against the establishment of canteens or brandy-houses. In June, 1833, the settlement contained a population of 2,185 men, women, and children, permanently fixed in the district, under fifty-two heads of parties. These were, for the most part, comfortably lodged, and possessed of

2,444 head of cattle, and 4,966 sheep; they had reaped 2,300 muids of wheat and barley, and completed three-and-twenty miles of water-course for the purpose of irrigation.* Meanwhile they had cost the government nothing beyond the salary of their minister, from fifteen to twenty muids of Indian corn, a few more of oats, given them for seed the first year (1829), and the loan of muskets, together with a little ammunition, as much for the protection of the colony as for their own. They cheerfully paid every tax, too glad to be at length placed on an equality with their European fellow-subjects; to be treated like whom was their first desire—any difference, however trifling, being viewed with suspicious distrust. And trusty defenders they proved to this the most troubled portion of the frontier, defending themselves manfully against the incursions of the Kafirs, who, naturally jealous and displeased at their position, frequently molested them.†

After his expulsion from the Kat River, Macomo retired to the banks of the Chumie; but so far from instigating his people to plunder the colony, he appears rather to have done his utmost to restrain them. Thus we find Colonel Somerset, in August, 1831, acknowledging the material assistance he had received from Macomo's Kafirs, in tracing the murderer of a Hottentot boy,‡ and recovering stolen cattle. Later in the same year, Commissioner-general Stockenstrom writes that Macomo and his brother, Tyalie, had sent forty horses back into the colony, which they had exerted themselves to find in Kafirland, and adds, "any difficulty towards a considerable reduction of our military force, is attributable to the ferment we keep up among the Kafirs, by depriving them of the means of subsistence."§

Notwithstanding this testimony, Sir Lowry Cole, before leaving the colony, in 1833, gave orders for the expulsion of Tyalie from the Mankazana, beyond the colonial boundary. The command was obeyed, and the chief placed beyond a small periodical stream called the Gaga, or Kaga. Colonel Wade, on succeeding Sir Lowry Cole as acting-governor, being informed by Lieutenant Pettin-gal, the engineer officer originally engaged in determining the boundary, that the Gaga, instead of being beyond, was within the colonial frontier, without consulting the

§ *Idem*, pp. 294—5.

frontier authorities, gave orders for the further removal of Tyalie, Botman, and Macomo, beyond the Chumie. Colonel Somerset, the commandant of the frontier, was absent on leave: Colonel England, the officer appointed in his stead, after consulting Captain Aitchison, who had been named by the colonial government to the ungracious task of removing the chiefs, wrote back suggesting a few months' delay, as an act of charity towards the Kafirs, on account of the forward state of their corn and pumpkins. By return of post, however, a peremptory repetition of the former instructions arrived. The force entrusted to Captain Aitchison was quite inadequate to effect its purpose by violence.* He sent for Macomo and Botman, both of whom he had known for years, and explained the case to them. The former was very much irritated, said that they could bear witness at Fort Willshire to his good conduct, and asked what was the cause of his removal. Captain Aitchison could not tell him, having heard nothing, no reason having been assigned to him. Being, moreover, asked by a boor who lived near to Macomo, the same question, he could only reply that he was obeying orders; upon which the farmer said, "I am very sorry for it, for I have never lost, so long as they have been here, a single beast; they have even recovered beasts for me." After many hours' discussion, during which Macomo told Captain Aitchison he knew very well he could not force him; he was persuaded to go quietly, on being assured that his good behaviour should be represented to Colonel Somerset and the new governor, Sir Benjamin D'Urban, both of whom might be expected on the frontier very shortly. In two days the territory in question was evacuated. In reliance upon the prospect of redress held forth by a man who "had never deceived them in any way whatever," the tribes left their cultivations, and removed in a time of severe drought to a country much inferior in quality, and already thickly inhabited. They took Captain Aitchison over the country which they were to inhabit, and there was not a morsel of grass upon it; "it was as bare as a parade."† This occurred in November, 1833.‡

* *Vide* Captain Aitchison's evidence before the Aborigines Committee of 1836; p. 8.

† *Idem*, p. 9.

‡ At this very time it was admitted by the leading authorities, in an official communication, that the

Colonel Somerset, on his return from England, seeing the very lamentable state of distress into which Macomo, Tyalie, and their people had been thrown, by their expulsion from a space of upwards of forty square miles, their cattle being actually dying of starvation, besought the governor to permit their temporary reoccupation of a portion of the lands as an act of mercy. He specially urged the "most exemplary" conduct of Macomo, attested by Colonel England and all the field-cornets.§ In consequence of this appeal the Gaikas were again allowed to cross the Keiskamma; but the late acting-governor (Colonel Wade), and the civil commissioner, Captain Campbell, remonstrated so strongly with the governor against the consideration thus evinced to them, as being equally "extraordinary as injudicious,"|| that they were again expelled by return of post.

In the same year they were allowed to resettle themselves,—and again removed. This last ejection took place on the 21st October, 1834. Colonel Wade, who witnessed it, says, "at this time they had been returned about a month, had built their huts, established their cattle-kraals, and commenced the cultivation of their gardens." He states, that, together with Colonel Somerset, he made a visit to Macomo and Botman's kraals, across the Keiskamma, and that Macomo rode back with them to the Ombobina, a tributary of the Chumie, where a fearful scene awaited them.

"These valleys were swarming with Kafirs, as was the whole country in our front, as far as the Gaga; the people were all in motion, carrying off their effects, and driving away their cattle towards the drifts of the river; and, to my utter amazement, the whole country around and before us was in a blaze. Presently we came up with a strong patrol of the mounted rifle-corps, which had, it appeared, come out from Fort Beaufort that morning: the soldiers were busily employed in burning the huts, and driving the Kafirs towards the frontier. * * * I rode with Macomo some time, who was evidently sorely vexed at the work that was going on around us. He complained of the Kafirs being so often permitted to enter the colony, and again thrust out, without any apparent cause for their removal; that they had remained for the last five weeks unmolested, and were again burnt out, when there was no cause of complaint against them. He asked me, emphatically, 'When am I to have my country again?' In the evening we [i.e. Colonels Somerset and Wade] proceeded to Fort Beaufort, and, on

Kafirs had "good grounds for complaining of aggressions on the part of the colonists."—*Parl. Papers*, July, 1837; p. 102.

§ Letter to Sir B. D'Urban.—*Vide Parl. Papers*, July, 1837; p. 103. || *Idem*, p. 109.

the following morning, breakfasted at the Chumie, within three miles of Tyalie's kraal. In compliance with Colonel Somerset's request, he had assembled his warriors for a sham fight; he was, however, evidently out of humour, and conversed but little. After the fight, I told him I would visit him on the following day at his own kraal, which I did, in company with Captain Armstrong; but he was still in a sulky state, and talked but little."—Evidence of Colonel Wade before the Aborigines Committee of 1836; p. 315.

The sight of burning villages, ruined cultivations, and people driven away like wild beasts before the sword, might well render the chief "sulky," that is, too full of sorrow and anger to be inclined for friendly conversation with those who, however unwillingly, were the chief actors in this scene of havoc and destruction. That British officers, under such circumstances, should request the diversion of a "sham fight," is passing strange. The proud Kafirs, in whose breasts an insult rankles when an injury might be forgotten, in complying, possibly solaced themselves with the hope that ere long they would take the initiative in a real fight in which the spectators should bear their part.*

SECONDARY CAUSES OF THE WAR OF 1834-'5.—The extension of the colony, not by right but by might, and the consequent expulsion of Macomo and Tyalie from the territory each regarded as peculiarly his own, was beyond doubt the leading cause of the war; but there were many minor ones. The frontier system can scarcely be classed among these; it was in itself sufficient to have produced the most fearful results. Stockenstrom, from whose appointment in 1828, as commissioner-general of the eastern division, so much had been expected, had found himself quite powerless to follow out his view of giving protection to both sides, to the colonists, the Kafirs, and the other native tribes. The tacit opposition of the colonial government, evinced

* One of Macomo's Kafirs, named Goobie, having raised his hand to oppose the burning of his hut, built on the Gaga, in which (according to the statement made by the Kafirs to Dr. Philip) his sick wife and child then were; was taken to Graham's Town, and sentenced by the magistrate to be imprisoned for two months, and receive fifty lashes, for resisting a serjeant in the execution of his duty. Goobie, when released, went through Kafirland, showing his wounded back, and calling upon his countrymen to avenge a wrong which, according to their notions of honour, was an unpardonable affront to them as a nation, and far worse than death to him, no other Kafir having ever been subjected to so degrading a punishment.—Aborigines Committee: evidence of Capt. Bradford, p. 161; Dr. Philip, p. 552.

chiefly by all communications being held with the inferior officers of his department, instead of with or through their head; and the difference of opinion existing between himself and the military commandant, Colonel Somerset, respecting the defence of the frontier, induced him to come to England and explain the utter inutility of his office to the secretary of state, who abolished it in December, 1833.

The commissioner-general considered the great source of misfortune on the frontier to be the reprisal system, namely, the taking Kafir cattle by patrols, and he gave the following reasons for his opinion:

"If Kafirs steal cattle, very seldom the real perpetrators can be found, unless the man losing the cattle has been on his guard, and sees the robbery actually perpetrated, so that he can immediately collect a force and pursue the plunderers; if the cattle be once out of sight of the plundered party, there is seldom any getting them again; our patrols are then entirely at the mercy of the statements made by the farmers, and they may pretend that they are leading them on the trace of the stolen cattle, which may be the trace of any cattle in the world. On coming up to the first Kafir kraal, the Kafir, knowing the purpose for which the patrol comes, immediately drives his cattle out of sight; we then use force, and collect those cattle, and take the number said to be stolen, or more;† this the Kafirs naturally, and as it always appeared to me, justly resist; they have nothing else to live on; and if the cows be taken away, the calves perish, and it is a miserable condition in which the Kafir women and children are left: that resistance is usually construed into hostility, and it is almost impossible to prevent innocent bloodshed. * * * There have been instances where the farmers have gone into Kafirland with a patrol, pretending to be on the spoor of stolen cattle, and where cattle were taken from the Kafirs on the strength of this supposed theft, and on returning home he has found his cattle in another direction,‡ or found them destroyed by wolves, or, through his own neglect, entirely strayed away; and thus men, not losing cattle at all, but coveting Kafir cattle, have nothing more to do but to lead the patrol to a kraal, and commit the outrages above described. The Kafirs have frequently told me—'We do not care how many Kafirs you shoot, if they come into your

† The regulations varied greatly in this respect, as in most others; sometimes the number stolen was to be restored four-fold; at others twice as many were to be taken; and again, only an equal number to that lost; but these rules varied every three or four months. With regard to the taking of life by patrols, our system was equally vacillating.—Aborigines Committee of 1836; pp. 6 to 37.

‡ Captain Aitchison stated that he had known boors come and report the loss of certain cattle, and the patrol, sent in consequence, had found them in the little jungles near the farm. The same witness declared that patrolling expeditions were the sole business of the corps, and that the junior officers had been out as often as four times a week.—*Iidem*, pp. 6, 7.

country, and you catch them stealing; but for every cow you take from our country you make a thief. This I know to be the case, and though I am aware that this is an unpopular view of the question, I must persist that as long as Kafir cattle be taken, peace on the frontier is utterly impossible."*

To remedy these evils, the commissioner-general proposed that, in granting land within the ceded or neutral territory, one condition should be the support in each location of a certain number of armed men to take care of the flocks; and that where it should be proved, that a man had left his cattle unguarded, or had not seen them for the space of four-and-twenty hours, no patrol should cross the frontier in search of them. He declared that nine-tenths of the losses so much complained of happened through the negligence of the colonists, and that while commandoes were actually assembling in consequence of alleged depredations, flocks were scattered through the thickest part of the bush, both day and night, unguarded, which was a sufficient temptation for barbarians to steal them. During his tenure of office, if unable to effect the good he desired, Stockenstrom at least prevented the commission of much evil, and more than once prevented the outbreak of war by deprecating the assembling of unnecessary commandoes, though clamorously demanded by a certain class among the farmers. Unhappily his representations were often disregarded, and expeditions, such as that against the Kafirs in 1831, were sent out in direct opposition to them; while in other cases his authority was wilfully ignored both by the Cape and frontier authorities, as in the instance of the Bushman commando in 1830, of which he became aware only by accidentally hearing of the ammunition furnished by government on that occasion. Even his most forcible statements respecting individual cases of wrong and aggression, which were goading the Kafirs to madness, were suffered to remain wholly unnoticed. A striking illustration of this is furnished by the circumstances attending the death of the aged Kafir chief, Zeco, the uncle of Gaika. At the requisition of Somerset, Stockenstrom, in June, 1830, had been induced to sanction and accompany a commando against the Kafirs. As usual, the expedition was to be carried out in divisions. The general

order given by Stockenstrom was that only cattle which could be sworn to as stolen from the colony, should be seized, under pain of prosecution for theft and perjury, unless the Kafirs should offer forcible resistance, in which case the cattle of the offending kraals were to be confiscated. This he desired to be made known to the Kafirs as an inducement to them to remain quiet, and he gave most explicit directions in writing to Field-cornet Erasmus, who commanded the Dutch burgher force, which he himself enforced on them by word of mouth when on the eve of starting.

Other and opposite directions would, however, seem to have been given on the same occasion; for Colonel Somerset, when appealed to some six years after, declared that under any circumstances he intended all the cattle of Zeco and several minor chiefs to be taken to Fort Willshire, where, after all the colonial cattle had been selected, a portion of that belonging to the Kafirs would be retained as an equivalent for the losses of the settlers.† So great a misunderstanding between the leaders of the expedition could scarcely fail to impress the Kafirs with an idea of deliberate bad faith, when they found some portions of the commando making distinct promises on the part of their leaders, and others violating them on the same authority.‡

When the various divisions united in Kafirland, Erasmus reported that his party had had a severe fight with the Kafirs, who had resisted his attempt to seize the colonial cattle; that his people were obliged to fire on them in self-defence, had killed several, and borne away their cattle. The two commanders believing this account of the matter, retained most of the captured cattle and distributed them among the colonists. Not long after, on again visiting the frontier, the commissioner-general was informed that the report of Erasmus was untrue, and that Zeco had been shot even unarmed. He forthwith proceeded into Kafirland, and instituted a searching inquiry, collecting all possible information, both from the Kafirs and from the Hottentots who had accompanied the boors. The result led him to arrive without doubt at the following conclusion. That the Kafirs, on seeing their cattle assembled, had besought Erasmus to leave them at least the milch cows; that he

* Evidence before the Ab. Com., 1836; p. 83.

† *Vide* deposition of Colonel Somerset, written in 1836, published in the Minutes of Ab. Com., p. 384.

‡ Macomo long afterwards continued to cite this commando, its broken promises, and fatal results, as having been peculiarly grievous to his people.

had left them a portion, and that they had followed him upon his saying that they might come and demand their cattle of the commandant and commissioner, provided they left their assagais behind, which they did, and that they were assisting in driving their cattle through the bush when they were fired upon.* Zeco and six of his people were killed, and another Kafir was dangerously wounded; the evident inducement for this brutal conduct being to have a plea for the confiscation of the cattle. Stockenstrom immediately acquainted the governor with the statements he had received, expecting that the whole case would be publicly investigated. He admitted that he had not been able clearly to prove that Erasmus had actually given the order to fire, but he urged that the confidence previously placed in him rendered his false report the more unpardonable, and recommended his dismissal as a very necessary example.

Before addressing the governor, or even obtaining full evidence on the subject, the commissioner-general wrote to Erasmus, advising him to come and hear what was alleged by the Kafirs respecting the death of Zeco, in order that he might defend himself.† No notice was taken of either of these communications, and Stockenstrom's remonstrances on other important frontier questions were equally unheeded. His opinions and those of Colonel Somerset were utterly at variance; Stockenstrom warmly deprecated the evils of the patrol system, pleaded the immense majority of cases in which the innocent would suffer, and condemned reprisals under any circumstances, except where upon the authority of government, a regular commando was sent out under proper responsible commanders.

* One account of this melancholy affair, and certainly not an improbable one, is, that the owners of certain of the cattle, on seeing their property carried away, uttered from a distance the peculiar whistle, on hearing which, the cattle are trained to wheel round, and set off at full speed. The backward movement among the herd, caused by this signal, induced the boors to fire a loose charge among them, with the intention of preventing their escape, and Zeco and his men fell in the confusion. But the statements are so various and so contradictory, that it is now hopeless to arrive at a satisfactory conclusion.

† Aborigines Committee, 1836; pp. 85, 115, 231, 236, 303, 322. In 1836, six years after the death of Zeco, in consequence of the evidence given by Stockenstrom before the parliamentary committee, the depositions of several individuals were taken, and sent to England, on behalf of Erasmus and his

This he considered as different as possible from any man pretending to have lost cattle going in and taking Kafir cattle; the one being necessary and legitimate protection, the other making every man judge and avenger in his own cause. The military commandant, on the contrary, vindicated the patrol system, and went so far as to suggest as a mode of intimidating the Kafirs, that patrols should be directed to fire upon the people of any kraal to which the spoor of cattle might be traced.‡ It was quite evident that two officers equal in rank, with each distinct responsibility, yet differing so widely in their views, could not conscientiously act together on matters imperatively demanding perfect unity. The governor, Sir Lowry Cole, probably felt this when he threw the affairs of the frontier almost wholly in the hands of the military commandant, and so greatly superseded the functions of the civil commissioner-general as to induce the latter to leave the colony. After his departure matters grew from bad to worse; patrols became more and more frequent, until their occasional cessation became necessary, because the horses of the military were so harassed. Other circumstances combined to hurry on a crisis. The Kafirs regard their chiefs with extreme veneration, and they all agreed in numbering among their grievances the ill treatment these had received; citing especially the fate of Zeco, and others of inferior rank, who fell not in time of open and declared war, but during the forays made into their country. The seizure of Macomo, while attending as an invited and honoured guest, a missionary meeting at the Kat River settlement, performed as it was in a peculiarly insulting manner,§ is an instance of the fickle and

companions. Colonel Somerset bore witness to having known Erasmus for many years, and "considered him a humane man, and discreet in his intercourse with the Kafir people." Be this as it may, the guilt or innocence of Erasmus affords no justification for the neglect with which so serious a charge, made by so high an authority, was treated in the colony.—*Idem*, p. 385.

‡ Colonel Somerset to Colonel Wade, August, 1831.

§ Macomo had come at the request of the missionaries belonging to the Glasgow society, who were not aware that any frontier regulation required him first to obtain a pass to enter the colony. He had, however, asked for one, and been refused (why, or by whom, does not appear); but probably thinking the object of his visit—and especially coming alone and unarmed—a sufficient justification, he ventured to come. After addressing the meeting

uncertain conduct observed towards the haughty chiefs, who at one time received marked courtesy from the highest men in the colony, while at another they were subjected to the most gross insults. The wounding of Xoxo, the brother of Macomo and Tyalie, (on 10th December, 1834), while defending the cattle of the latter chief; his calling out to his followers on partially recovering from the fainting fit in which he had fallen, to "fight away!"* and the determined spirit evinced in consequence, doubtless had its effect on the Kafir people, who had long been kept tranquil by repeated promises that the governor would soon visit the frontier and do them justice. About a week before the wounding of Xoxo, a patrol under the command of an ensign aged eighteen, sent out for the recovery of some horses alleged to have been stolen, had seized cattle instead; resistance was made, and the young leader slightly wounded by an assagai. A fine of 300 head of cattle was demanded, and paid by Eno; not that stolen property had been found in the kraals of his people, but because they had wounded an officer in resisting the carrying off of their own. The Kafirs, therefore, asked why so high a value was set upon the blood of the youngest and most inferior European leader, when that of their own highest and hereditary chiefs was so lightly regarded?

These things, and such as these, had fanned the flame of discontent in minds where it had been long smouldering. Macomo and Tyalie were still disposed to wait the promised coming of the governor to hear and redress their grievances; but in an excellent speech, favouring the missionary cause, he was about to depart, when some horsemen were seen riding furiously down the hill into the village. The serjeant who led them, if not intoxicated, was at least coarse and unmannerly in the extreme. He threatened to pinion the chief upon the slightest show of resistance, though none was offered, or even practicable, and loaded his firelock in his face, putting a ball cartridge in both barrels. When they were going off, Macomo said, "I cannot go with this man; this man will shoot me on the way: one of you missionaries had better accompany me, and see what is done to me; for this man will shoot me, and then say I wanted to escape; and therefore some of you had better go with me to see me to the post." The military station alluded to was eighteen miles distant, over a hilly and bad road; but the elder Mr. Read, (the former companion of Van der Kemp), though then advanced in years, and already fatigued with the exertions of the day, went himself with Macomo, and, according to Colonel Wade (Aborigines Committee, p. 420), "begged very hard" for the chief, who was accord-

their people were no longer governable. The disturbed state of the colony had likewise probably its share in urging on the Kafirs, for there is reason to suppose that they were well acquainted with the disaffection prevalent among the boors, and likewise knew the anxieties rife in the minds of the Hottentots, whose support, on condition of being allowed to remain possessed of the Kat River, they are said to have confidently expected. The discontent of the former sprung from various causes, among which may be named the deprivation of compulsory labour, occasioned by the emancipation of the Hottentots, and now about to be followed by the total abolition of slavery. This aggravated their ill-feeling towards the colonial government, of whose frontier policy they made many and bitter complaints. The chief cause which led the Kafirs to look for the co-operation of the Hottentots, was the state of dread and uneasiness which had been kept up among them by the frequent discussion of the vagrancy question, both in the Cape councils and in the public journals. The old Dutch law against vagrancy, by whose provisions the first offence was punishable by whipping, the second by whipping and banishment from the district, and the third by branding and banishment from the country, had been annulled by the fiftieth ordinance, which ordinance having been confirmed at home by an order of the queen in council, could be set aside only by another act of the supreme authority. The apprenticeship of the slaves, by which their complete manumission was heralded, being about to commence, the subject of a vagrancy ingly liberated after a severe reproof.—*Vide* account published by Mr. Barker, one of the missionaries present on this occasion, and cited in the Report of Committee of 1836, p. 421. See also the evidence of the younger Mr. Read, pp. 593-4. At this very time there were about 200 traders, with their wives and families, residing in Kafirland, many of them under the special protection of Macomo. Captain Bradford, of the East India Company's service, who spent eight months of the year 1834 in Kafirland, declared, that a friend of his asked the wives of some of these men if they were not alarmed when their husbands left them to go into the colony. They replied, they were as safe as if residing in Graham's Town; for their huts were seldom or never robbed, although they contained the things esteemed most precious by the Kafirs.—*Idem*, p. 160.

* Evidence before the Aborigines Committee of Jan Tzatzoe, the Christian chief of a tribe numbering about 2,000 souls, who sided with the colonists, pp. 563-4-7. See Lieutenant Sutton's account of the affair, Parliamentary Papers, June, 1835; Part II., p. 121.

law was again mooted, its promoters either forgetting or wilfully overlooking the cruelty of such a measure in a country where there were no poor laws, and consequently no public provision for the relief of the really indigent and incapable, who would thus be subjected to the penalties designed for the idle and disorderly. One great proof that the Hottentots had used their freedom well, was that they had brought no burden upon the colony. Contrary to the general opinion, that their excessive indolence would incapacitate them for earning their own livelihood except when under stringent and systematic coercion, many of them not only contrived to provide the necessaries of life for themselves, but also for their infirm and aged relatives, who had no "parochial aid" to look to in the hour of necessity. Unquestionably there was an increase of vagrancy, that is to say, the Hottentot, in many cases, gave way to the indolent habits induced by a fine climate, the ability to maintain life upon the poorest and cheapest diet, and above all by the absence of any sufficient motive for exertion. Still, however, there was clearly no sufficient cause to justify the proceedings of the majority of the colonial legislature, by whom a vagrancy law was passed, and sent to England, notwithstanding the energetic protest of some of the most eminent men in the colony,* including the governor (Sir B. D'Urban), who declared himself to have arrived at the conviction, from his own investigation and the opinion of competent authorities, that the existing laws were sufficient for holding a proper check upon vagrancy. He, moreover, dissented from the bill on the grounds of its containing several clauses so fraught with danger to the liberties of H. M. colonial subjects, and especially to one large class of them, that while he felt sure that they would never be allowed by the king in council, he feared the having enacted them would essentially prejudice the colony in the opinion, not only of the government, but of the English nation.†

The governor had foreseen rightly; the proposed measure was decisively rejected by the home authorities; but meanwhile so much anxiety and doubt had been excited among the Hottentots, as to lead the Kafirs to hope for their co-operation against the

colony, of whom, however, the result proved them brave and loyal members.

WAR OF 1834-'5.—The wounding of Xoxo occurred about the 15th of December, 1834. It was immediately followed by the assumption, on the part of Tyalie's people, of a most threatening and determined aspect. The chief himself proceeded to the mission-station established on the western side of the Chumie. Mr. Chalmers was absent in the colony, having left his wife and family as usual under the sole protection of the Kafirs. Tyalie desired Mrs. Chalmers to write and inquire why the military at Fort Beaufort had wounded his brother; but she induced him to remain quiet until the arrival of her husband, when the chief returned, attended by a number of his counsellors, who all appeared exceedingly infuriated, declared that the white men were determined to ruin them, that the soldiers had unjustly taken their country, burned their houses, killed their chiefs, and seized their cattle; they knew not what to do—they sought vengeance. Tyalie declared, "every year a commando comes, every week a patrol comes, every day farmers come, and seize our cattle." Mr. Chalmers pressed him to go to the military post, and there ask redress, assuring him that he would be safe; but his counsellors said, "No, do you wish our chief to be killed, like the son of Eno and Zeco?"‡

A message was sent to Hintza, who lived to the eastward, over the Kei River, about ninety miles distant from Tyalie's kraal; but without waiting his answer, the border clans at once commenced making incursions into the neutral territory, driving their own cattle into the interior, slaying the goats, avowedly because they could not run from the white men, whom they expected shortly to invade their country, and ordering the English traders residing among them to quit immediately.

Notwithstanding all this, the authorities on the frontier, up to the last moment, appear to have had little dread of anything worse than what may be termed Kafir patrols, and were quite unprepared for the desolating inroad made on the 23rd, when an overpowering body§ of native warriors, led by Tyalie and the wounded Xoxo,|| burst into the districts of Albany and Somerset,

* *Vide* opinions of Chief Justice Wyld and Justice Burton.—Parl. Papers, June, 1837; pp. 170—181.

† Parl. Papers, June, 1837; p. 102.

‡ *Vide* Parl. Papers, July, 1837; p. 82.

§ According to Sir B. D'Urban they probably numbered 20,000; but, from later evidence, 5,000 would be probably much nearer the truth.

|| There is reason to believe that Macomo never

and swept along the whole frontier line from the Winterberg to the sea (90 to 100 miles in extent), massacring the farmers, burning their dwellings, and carrying off the live stock, but sparing universally the women* and children.

The horrors of war were now felt at Graham's Town—all was alarm and uncertainty. Such military preparations were made as the emergency would permit; the town was divided into five wards; the males capable of bearing arms, numbering perhaps from 400 to 600 men, were enrolled, and all the spirit-shops were immediately closed. Colonel Somerset, fettered by the want of men and ammunition, continued to make demands on the few troops stationed at Graham's Town, whither the ruined farmers and their families poured in from all quarters, each bringing some new tale of rapine and bloodshed. On the 25th of December the Kafirs ravaged the farms within twenty miles of the town; and during the first week of January, 1835, had penetrated in straggling parties to the eastward, even beyond the Sunday River, spreading the panic to Port Elizabeth, in Algoa Bay, whither many inhabitants of Albany and Uitenhage had fled with their live stock and effects.† Fort Willshire, on the Keiskamma, (a square of barracks, store-houses, and stables, with four small bastions at the angles, and a couple of guns,) was taken possession of by the Kafirs, and in part burnt. The open post at Kafir Drift, and the "wattle and daub post" at Kat River, shared the same fate. Between the outbreak on the 23rd of December and the 1st of January, 40 farmers had been murdered, 450 farm-houses were burned, and 4,000 horses, above 100,000 head of cattle,

entered the colony, but remained in the mountains during the whole of the war.—Parl. Papers, August, 1836; p. 606.

* One woman was killed, but it was not intentionally; many were specially protected. More than one instance occurred of Kafirs, not only carefully guarding little children who had fallen into their hands, but even travelling many miles through the disturbed country to restore them to their mothers.—Parl. Papers, July, 1837; p. 300.

† *Idem*, p. 131.

‡ Parl. Papers, July, 1837; p. 47. The damage done was estimated at above £288,000, but this statement was probably greatly exaggerated.—*Idem*, p. 329.

§ Parl. Papers, August, 1836; p. 364.

|| Macomo, Tyalie, and others, had for years been promised by official authorities, that "the Governor" of the time being, would come to hear and redress their wrongs. It was the more imperative upon

and above 150,000 sheep and goats, were carried off.‡ Meanwhile the messengers sent to the powerful Hintza returned, bearing a very laconic reply, "Hintza sends his word to you, and says, you must not fight, for I do not fight."§ Some of the chiefs obeyed this mandate; but the majority gave way to the fury of their people, who persisted in entering the colony in heavy columns, though generally under leaders of inferior rank. For the colonists, however, efficient succour was near at hand. The governor, on hearing the fearful news from the frontier, acted with a promptitude and energy which contrasted painfully with his previous delay;|| Colonel (now Sir Harry) Smith was sent off to the eastern frontier to take the command of the army, which he assumed on the 7th of January, having performed the journey from Cape Town to Graham's Town, a distance of 600 miles, on horseback, in six days. Troops and stores were forwarded on the 2nd of January, disembarked on the 11th at Algoa Bay, and sent forward to Graham's Town as quickly as the difficult route and the tedious means of conveyance by ox-waggons over bad roads would permit. The governor proclaimed martial law to be in force within the districts of Albany, Somerset, Uitenhage, Graaf Reynet, George, and Beaufort, for all cases and in all matters connected with the combined forces of the burghers in the eastern division and H.M. forces. In communicating the tidings of the invasion to H.M. government, he stated that the Kafirs were "no longer the sort of enemy they were in 1819, either in the nature of their arms, or in their military skill and arrangements; they have now many muskets¶ among them, and their movements are all directed with

Sir B. D'Urban to have fulfilled this promise, since he had not scrupled to declare his conviction that "a complete and effectual reformation of our system of proceeding with the native tribes—if that could be called a system, which seems to have been guided by no fixed rules, certainly by no just one—had become absolutely necessary." He likewise admitted that "a spirit of retribution" combined with other causes to excite the marauding incursions of the Kafirs.—*Vide* Despatch, dated 28th October, 1834. Parl. Papers, June, 1835; part ii, p. 103.

¶ The extensive importation of gunpowder and fire-arms into the Cape colony, and thence into Kafirland, had previously attracted the attention of Acting-governor Lieut.-colonel T. Wade, who, in January, 1834, pointed out, in an official despatch, the danger to which the colonists were thereby exposed. Even the partial change of assagais for muskets would, he rightly predicted, make the defence of the frontier a very different thing from what

no ordinary military combination."* Sir Benjamin then hastened to the frontier, whither he arrived on the 20th, and immediately took command of the troops. His "disposable bayonets" he then reckoned at 1,200, beside which, he proceeded to organize 3,000 men of all descriptions, reckoning much, and with good reason, on the services of the Hottentots, whom he designated "excellent men, and rapidly trained to war, whether on foot or on horseback." Shortly before this (31st December), Tyalie and a band of armed Kafirs had again compelled Mr. Chalmers to be the unwilling medium of conveying a statement of their wrongs to Colonel Somerset and the governor. They dictated a graphic, and, it is to be feared, only too truthful account of their wrongs and sufferings, stating in the following terms their chief grievances:—

"That there were three things which were great in Kafirland:—1st, It is a great thing to kill a chief or to wound him; 2nd, It is a great thing to take land from the Kafirs; 3rd, It is a great thing to seize the real cattle of a chief.

"That the Kafirs cannot say that their chief's cattle were beyond the boundary line, as they consider that the lawful boundary line is the Great Fish River.

"That they (the Kafirs) request payment for the killing and wounding of their chiefs, in the same way as Colonel Somerset made Eno pay 200 head of cattle for the wounding of a British officer."

The communication terminated with overtures of peace,† which Colonel Smith as commanding officer decidedly rejected (as also a similar proposal made by Macomo) through Mr. Chalmers, who conveyed the intimation to Tyalie, on the 15th of January, some days after the kraals of the chief had been destroyed by the troops.

Mr. Chalmers says—"I read the communication of the commander twice to the chief, and after I had finished, he appeared haughtier than ever I saw him. He abused the white people, and tracing back a period of eleven years, he particularized times when herds of cattle were taken from him, and requested me to ask the governor, 'Where is the payment of all

these cattle taken by commandoes? I do not mention small herds seized by patrols. As to restitution, I have no power to make it; but if the governor is desirous of restitution, he must come and take it where he can find it. In the mean time, I order all my people and the other Kafirs to slaughter and eat, slaughter and eat; and to-day I have no desire for corn or milk, but flesh meat alone.'"‡ Soon after this the various missionaries stationed in Kaffraria fled to the colony. Notwithstanding the excited state of the people, not one of them received the slightest injury, some being especially protected by Macomo and Tyalie, others by Sutu, the "great widow" of Gaika, who exerted herself most strongly on their behalf. The Kafir chiefs, Pato, Congo, and Kama, who had been suffered to remain within the colony, evinced their loyalty by escorting thither the missionaries stationed at Wesleyville (about twenty miles beyond the Keiskamma), together with the traders who had fled thither for refuge, to the number of 100 persons. This they accomplished at the express request of the governor, and at considerable risk to themselves. Sutu likewise laboured for the protection of the traders, and so successfully that although upwards of 200 were scattered far and wide over the country of the infuriated Kafirs, only two lives were lost. Several of their converts followed the missionaries into the colony; among others, two sons of Gaika (Matua and Teuta). Jan Tzatzoe, a chief of the Gaika family, who had been in early youth the pupil of Van der Kemp, with his people, including about 400 fighting men, took part with the English. Harassing guerilla warfare continued between the troops and the Kafirs, who took refuge in the dense bush bordering the Fish River, until in the early part of February Colonel Somerset drove the invaders over that stream, and Colonel Smith expelled other parties stationed in the woody fastnesses between it and the Keiskamma. On the 19th, Captain Armstrong's

it had hitherto been. The total annual importation of gunpowder had increased from 29,379 lbs. in 1825, to 67,148 lbs. in 1833, of which large quantities were carried into the interior. Under the Dutch government, gunpowder could be imported only by the authorities at Cape Town. It was then sold at prime cost, on payment of a fee, varying according to circumstances. Earl Macartney confirmed these regulations; but in 1832 an order in council permitted the importation by private individuals, a practice which had been for some time previously in opera-

tion. Colonel Wade and his council proposed restrictions on the importation and sale, by licenses and stamps, and proper supervision: the ordinance was, however, disallowed by the home secretary, in June, 1834, and another substituted in its place, which proved totally ineffective.

* Parl. Papers, June, 1835; p. 130; and 30th May, 1836; p. 4.

† These overtures were suspected by Mr. Chalmers to be merely a *ruse* to gain time.

‡ Parl. Papers, July, 1837.

post on the Kat River was attacked in great force, but without success. It was not until the latter end of March that Sir Benjamin D'Urban having completed his preparations, and disposed commissariat and ordnance stores for a month's consumption, proceeded to invade Kafirland, at the head of 3,000 men, leaving 2,000 for the defence of the frontier, expecting to finish his operations within the period named. No such speedy termination, however, awaited this most unsatisfactory war; the Kafirs, though proverbially fearless of death, were too good tacticians to allow their foe the opportunity of destroying them by thousands in an open field; since chance of what is termed "fair fighting" there could be none between practised riflemen, such as the troops, boors, and Hottentots all were, and naked barbarians, armed for the most part only with assagais. Thus, though a fearful loss of life was sustained* by the Kafirs, it was taken by means most distressing to the manly feelings of British soldiers. For instance, Colonel Smith writes to Sir Benjamin D'Urban so early as the 18th of January—"The savage enemy has already, since the 8th of January, when I acted on the offensive, sustained a loss of 400 warriors killed, and the number of the wounded must be considerable, as the burghers fire with remarkable precision, and use the large shot, which they call *lopers*. I have, besides invading his own territory, driven Eno from his kraal (he himself only escaped by stratagem), killing two of his brothers, one of his sons, and thirty of his warriors, of whom many had fire-arms. Tyalie's kraals have also been destroyed." The attack upon Eno's kraal was made by surprise; all found were shot, the leader of the attack (Colonel Cox) having no discretionary power, but simply orders "to inflict as much punishment upon the Kafirs as possible." Eno escaped in the dress of his daughter, who, taking her father's place at the head of his men, was wounded in the shoulder, and made prisoner.†

To enter into further details of so unequal a contest would be worse than useless; it is sufficient to record its results, and a few of its most striking incidents. The movements of

* The amount of life lost during the war is, however, now believed to have been greatly overstated.

† Her wound was carefully attended to, and she was eventually restored to her father.

‡ Despatch to Lord Glenelg, 19th June, 1835; Parl. Papers, May, 1836; p. 15.

§ Parl. Papers, June, 1837; p. 78.

the army, including the hastily formed levies, were many of them well planned, and executed with a precision and rapidity worthy a better cause than a mission of rapine and desolation. The attacks upon Kafir kraals, and the carrying off immense heads of cattle, afford very monotonous reading; but the leading feature of the war stands out in painful prominence, quite apart from these.

HISTORY AND DEATH OF HINTZA.—It is necessary to go back a little, rightly to appreciate the circumstances that rendered the death of this great Chief an event which even Sir Benjamin D'Urban reluctantly admitted he "would rather, perhaps, had not occurred thus."‡ From the time of the threatened irruption of Chaca, in 1827 and 1828, Hintza had been on the most friendly terms with the colony. So early as December, 1826, the London Missionary Society had requested and obtained the permission of the chief to establish a station within his territories, which they had accordingly done (Butterworth); and although Hintza himself neither was nor pretended to be a convert to Christianity, the pleadings of the missionary nevertheless frequently prevailed with him, to the prevention of war, and were clearly instrumental in producing a partial but decided change for the better among his people.§ For instance, the survivors of the wreck of the *Eole*, a French ship, cast ashore in 1830, near the Bashee River, were so humanely treated by the Kafirs, that Sir Lowry Cole in grateful acknowledgment, forwarded a number of useful presents, which were formally presented by the Rev. Stephen Kay to Hintza. The commando sent into Kaffraria in the same year, and the death of Zeco, however, naturally excited alarm and suspicion in the mind of the Chief; but these feelings were in great measure allayed by the special assurances of good-will made him by the colonial authorities. Doubtless the various seizures of the territory of the Gaikas had renewed his distrust, yet when appealed to at the commencement of the war, 1834-'5, we find him refusing to take part, and even clearly forbidding it. In the middle of March, Sir Benjamin D'Urban states that the tribes in open and avowed hostility to the colony, and who had joined in its invasion, were those of Tyalie, Macomo, Botman, Dushani, Umhala, Zlambie, and some minor ones. In this list he does not include Hintza, but he accuses him of having re-

ceived the plundered cattle into his territory, and of being very desirous of holding off to await the result of the war, and act accordingly. He concludes by a tolerably explicit intimation that hostile proceedings will be adopted against him so soon as the border clans shall have been "disposed of."*

With regard to the first charge brought against Hintza, it must be remembered that he ruled over a very extensive tract of country, reaching from the mouth of the Kei to its sources in the Stormberg mountains, and between it eastwards and the Bashee. Drove of cattle might easily, without his knowledge, have passed a boundary which, according to military men, 3,000 soldiers would be insufficient to guard, or he might very possibly have permitted his brother chiefs to place their property, or what they represented to be such, in a place of safety. That he should be "very desirous of holding off," is reasonable enough. He had no cause of quarrel with the colony, but he knew that his countrymen had; and since he was not sufficiently powerful to act as a mediator between the contending parties, his policy was clearly to maintain a strict neutrality, though he could not be supposed to look on without deep interest at the encroachments of the colonists, between whom and himself the sole barrier seemed about to be levelled.† Hintza's neutrality, whether real or alleged, was very displeasing to the governor, who, left to his own resources, listened, it is to be feared only too readily, to the statements of the war party among the colonists, to whom the fertile country of this chief, rich in cattle, offered a powerful motive for trading him.‡

On the 15th Sir Benjamin D'Urban crossed the Kei, and entered Hintza's territory. On the 17th he encamped on the Gona, near the ordinary residence of the chief, who had retired up the country, and sent a message desiring him to come to the camp within five days, or hostilities would be commenced against him. Hintza not making his appearance within the stated time, war was formally declared, and on the 24th and 25th Colonel Smith penetrated into the mountains, captured two of Hintza's

brothers, very nearly surprised the great chief himself, and carried off about 10,000 head of "beautiful cattle."§ The presence of a powerful force in the heart of his country, and the rapidly extending capture of the cattle, probably forced upon Hintza a conviction of the necessity of coming to terms with the governor, from whom he had received an assurance of safe conduct for himself, and an intimation that no other person would be admitted to treat for him. On the 29th of April he came into the camp with his ordinary retinue of fifty followers, and had an immediate interview with his excellency, who demanded him "to restore" 50,000|| head of cattle and 1,000 horses, half of the so-called restoration to be made immediately, and half a year afterwards; and also to pay a fine of 600 good cattle for the two English traders murdered at the commencement of the war. The "acknowledged chief of Kafirland"¶ was also to lay "his imperative commands, and cause them to be obeyed, upon the chiefs Tyalie, Macomo," &c., instantly to cease hostilities, and deliver up to the troops all the fire-arms they might possess.

Any one acquainted with the laws and customs inherent in every feudal system, whether among Kafirs in the present century, or Celts in a former one, will see at once the injustice of the demands made upon Hintza, and understand how utterly unable he must have been to control the actions, and compel the submission of such chiefs as Macomo and Tyalie.** Nevertheless, he acquiesced, and even appears to have received in silence a peculiarly galling piece of intelligence conveyed to him at the same time. The remnants of certain tribes driven from their country by Chaca, and called F'ingoes, a word signifying beggars or outcasts, had sought refuge in the territories of Hintza, and settled as servants among his people. The Kafirs considered them as their inferiors, called them "dogs," an epithet which the chiefs frequently apply to their own people. They did not treat them as slaves—for slavery, as we understand the word, does not exist among the Kafirs; but they behaved to them with so much harshness, that the F'ingoes, many

* Despatch, dated 19th March, 1835.

† Hintza was much in the position of a man watching the burning of his neighbours' houses, and fearing that his own turn will come next.

|| No less than 20,000 head of cattle had been captured in Hintza's territory, during the five days which preceded this interview.

¶ Thus termed in Parl. Papers, May, 1836; p. 35.

** *Vide* note to p. 66.

of whom had heard at the mission-stations favourable accounts of the British nation, came in large bodies to the governor when he encamped on the Gona, and requested to be received into the colony. Their request was granted without hesitation by Sir Benjamin D'Urban, who considered that receiving them would obviously assist his measures in the present war, and would provide the farmers with "a plentiful supply of excellent hired servants," while their subsistence would bring no burden on the colony, as they brought with them between 20,000 and 30,000 head of cattle, many herds of goats, with corn and other food, and might at once be placed upon and commence the cultivation of the country between the Fish River and the lower Keiskamma.* Thus nearly 17,000 of Hintza's most valuable subjects were to be taken from him, together with any amount of Kafir property they might contrive to carry away; and further to reward their theft and treachery, they were to be placed on the territory wrenched from the Kafirs, against whom they were "moreover well disposed to fight." Hintza and his people, Sir Benjamin D'Urban considered, had well merited this privation, "in addition to the other chastisements prepared for them."

The motives which induced Hintza to acquiesce in the terms dictated to him, were probably much the same as those that led Gaika, sixteen years before, to form another so-called treaty with Lord Charles Somerset. Each chief was, for the purpose of the time being, assumed to possess powers quite foreign to his actual position, and required to exercise them whether he would or not. The chief remained in the British camp as a hostage for the performance of the conditions stipulated, and was joined by his principal son Kreili, and his brother Bookoo. Up to the third day of his sojourn, Hintza's stay was perfectly voluntary, he being expressly told that he was free to depart; but in the course of that day's march news arrived that the Kafirs were massacring the Fingoes. This the governor presumed to be instigated in some mode or other by Hintza, who was forthwith informed, that having broken the treaty, he had altered his position, and that he and all who had accompanied him, were to be held responsible "until every Fingo

was out of their country. Under this impression of personal fear, Hintza despatched speedy messengers to his people to cease further violence against the Fingoes, which were immediately obeyed."†

Two days after this, Hintza was compelled to lay his commands on all the belligerent chiefs, to cease hostilities; but in spite of the previous threat of Sir Benjamin D'Urban in the Fingo affair, that "if he found any subterfuge in the message they sent, he would hang Hintza and Bookoo themselves on the tree under which they were sitting,"‡ the former privately added to his ostensible communication the laconic hint, "Tell Macomo and Tyalie to take care of themselves, for I am fast."§ Five days had been the time given for the payment of the amount of cattle required; this time having elapsed, Hintza was told that certain conditions of the treaty were yet unfulfilled, and that he would be held responsible. He replied that his people had not yet obeyed him, but that they would do so if he appeared among them supported by British troops. Whether he made this proposal in the hope of finding some means of escape, or whether the idea subsequently suggested itself to him, it is now impossible to discover. The governor thought fit to comply with it, and on the 10th of May, Hintza, accompanied by Colonel Smith and a strong detachment, and leaving his son and brother as hostages in the camp, proceeded towards the River Bashce, leading the party to the recent track of numerous cattle. At 12 o'clock on the night of the 11th, they recommenced their march, and continued till eight o'clock next morning, it being evident that the road suggested by Hintza was really that by which the cattle from all the kraals in the neighbourhood had been driven away. At this time the chief began to manifest great anxiety, and at breakfast said to Colonel Smith, "What have the cattle done that you want them? or why must I see my subjects deprived of them?" On reaching the mouth of the Kebaka, the track of the cattle divided, some having been driven up a "stupendous mountain," the other up a very high, abrupt, steep, woody hill. Hintza advised Colonel Smith to follow the track up the hill, which was accordingly done, and the party advanced

§ Parl. Papers, July, 1837; p. 33.

by a narrow path, occasionally passing through the cleft of the rock. When they had nearly accomplished the ascent, Hintza, who was well mounted, attempted to escape by riding off at full gallop, down a gradual descent of land to the river. The guards called out, "Look, Colonel, he is off!" Colonel Smith spurred on his horse at full speed to overtake the fugitive, and coming near him snapped two pistols without effect. Twice during this fearful chase his pursuer succeeded in striking Hintza on the head, first with the butt-end of his pistol, and afterwards by flinging it at him. At length, after a hard gallop of nearly a mile-and-a-half, Colonel Smith gained upon the chief sufficiently to seize him by the kaross (Kafir cloak), unhorse him, and endeavoured to ride over him before he could disengage an assagai from his bundle; but this intention was frustrated by his inability to govern his horse, which rode away with him, while Hintza rose and ran off with great speed, closely followed by one of the guides, to whom Colonel Smith called out, "Fire on him, Southey." The order was obeyed, Southey wounded the chief slightly in the leg, and afterwards shot him through the back. Hintza fell headlong forward, but springing up again, he precipitated himself down a kloof by the Kebaka, where he was followed by Lieutenant Balfour, Colonel Smith's aid-de-camp, and Southey, who again fired, and this time with full effect, for the greatest chief in Kafirland fell down dead into the Kebaka. Nor does this illustration of the horrors of civilized warfare in the nineteenth century end here. Hintza's dead body was lifted out of the water to be—not buried—but *mutilated*; the corpse was flung down again, as if it had been the carcase of a wild-beast, and the ears carried away, and *salted** as glorious trophies. The slaying of a man already desperately and repeatedly wounded, is defended on the ground of his endeavour to throw an assagai, his refusal to surrender, and the danger of an attempt at a rescue by the Kafirs. Colonel Smith dwells strongly on the necessity that had existed for preventing the escape of Hintza, and writing to Sir Benjamin D'Urban, says, "suppose he had escaped from me, what was I to have said to your excellency? the mark of disgrace and dishonour would have been stamped on a brow where heretofore it had not dared to sit." The indignities

* Parl. Papers, March, 1851; p. 13.

committed on the body, and the leaving it a prey to carrion, he passes over in silence.

The above particulars are chiefly taken from Colonel Smith's account of the matter; the actual deathstroke he did not arrive in time to witness; those who did, described it very differently, and the communications made on the subject to the colonial secretary, Lord Glenelg, were so unsatisfactory as to draw from him the following remarks. After commenting on the peculiar position of Hintza, his lordship says—

"I will not pause to inquire whether Hintza was justly detained in your camp as a prisoner, or whether he was really liable to pay with his life the penalty of attempting to escape from the detachment which accompanied him. All this being conceded, there yet remains the question, not hitherto solved, nor, as far as I can perceive, even discussed. He was slain when he had no longer the means of resistance, but covered with wounds, and vainly attempting to conceal his person in the water, into which he had plunged as a refuge from his pursuers. Why the last wound was inflicted, and why this unhappy man, regarded with an attachment almost idolatrous by his people, was not seized by the numerous armed men, who had reached his place of concealment, has never yet been explained. * * * It is said that Hintza refused to surrender, but if the fact be so, of what importance was the refusal of a wounded, helpless, isolated man?"

"It is stated to me, however, on evidence which it is impossible to receive without serious attention, that Hintza repeatedly cried for mercy; that the Hottentots present granted the boon, and abstained from killing him; that this office was then undertaken by Mr. Southey, and that then the dead body of the fallen chief was basely and inhumanly mutilated."—Parl. Papers, May, 1836; p. 67.

At the desire of the secretary of state an inquiry was instituted in the colony, into the circumstances connected with the death of Hintza. The evidence adduced was not made public, but its results are stated by Lord Glenelg to have led him to consider Hintza as having been, if not the fomentor of the invasion, at least engaged in a secret confederacy with its authors, and therefore responsible for the calamity in which he and his people had been involved. "The mutilation of the body," he adds, "is indeed too clearly proved, but the fact has not been brought home to any person."† Concluding this painful episode, we return to the history of the war itself, still far from its termination, notwithstanding the proclamation issued by the governor on the 10th of May, in which, after setting forth the *unprovoked* invasion of the colony, and the alleged defeat, chastisement, and dispersion of the belligerent chiefs and their

† Parl. Papers, July, 1837; p. 270.

tribes, he announces his intention of "removing these treacherous and irreclaimable savages to a safer distance," by extending the eastern boundary of the colony to the right bank of the river Kei, for ever expelling Macomo and his allies from their native land, and treating them as enemies whenever they should be found therein.

The numerous erroneous statements contained in this proclamation are sufficiently glaring. At this very time Sir Benjamin D'Urban was anxiously desiring to make peace with Macomo and Tyalie, and to gain their consent to their banishment across the Kei. Colonel Cox was instructed to endeavour to obtain an interview with the brothers, but they had received Hintza's warning, and positively refused to come to the British camp. Having been eight years on the frontier, Colonel Cox knew Macomo and Tyalie too well to fear treachery on their part; he, therefore, did not scruple to obtain the desired meeting by placing himself entirely in their power.

The gallant officer was well received by the chiefs, who came forward and shook hands with him in the most friendly manner possible, said they were very thankful for the confidence he had reposed in them, and the pains he had taken to make peace, but that they could not accept it on the terms offered. The people would not allow it; they had resolved to die in their own country.

Thus terminated this conference; Colonel Cox, with his single European, and two Hottentot companions, departed from the presence of the chiefs, and about 100 armed Kafirs, all of whom must have been well aware of the importance of taking possession of the person of a British officer of high rank. Yet, though he offered them peace only on conditions to which they thought death preferable, not a threat, not a word of insult escaped these "treacherous and irreclaimable savages." They treated him with the respect and courtesy his trust in them deserved, both parties being in happy ignorance of the miserable scene enacted some few hours before on the banks of the distant Kebaka.

After the death of Hintza, Colonel Smith marched rapidly across the Bashee, to the Umtata River, seized some thousands of fine cattle, and carried them off, together with about 1,000 Fingoes, to the British camp. Sir Benjamin D'Urban, after forming another treaty with Kreili, nearly similar

to that entered into with his father, suffered the chief to depart, and, after much solicitation, his uncle, Bookoo, was likewise released. The governor then returned to Cape Town, leaving Colonels Smith and Somerset to terminate the war as best they might.

Weeks dragged on to months, an enormous daily expenditure was incurred by the British, but poorly compensated by the seizure of oxen, and the wholesale destruction of villages. Still Macomo, sheltered amid the fastnesses of the beautiful Amatola mountains, showed no sign of submission, but continued to maintain a guerilla warfare with the troops, until their horses, crippled with fatigue, became daily less capable of combating a foe to whom a night's march of sixty miles was little more than healthful and accustomed exercise. The proclamation declared the Kafirs for ever banished from Kafirland; but, so far from this, they kept up frequent marauding expeditions along the old colonial boundary, and, during one of the numerous skirmishes which took place, they cut off to a man a detachment under Lieutenant Baillie. The months of July and August passed away, until at length the governor perceiving that the British were losing ground, desired Colonel Cox to seek another conference with the Kafir chiefs, and explain to them the modified terms it was now found necessary to offer them, their expulsion beyond the Kei being manifestly impracticable.

The chiefs who, before the death of Hintza, had been restrained by their people from trusting to the assurances of safety held forth to induce them to come in person to the British camp, were not likely to evince increased confidence three months afterwards; once more, therefore, Colonel Cox, with two or three attendants, went to meet Macomo, who received him at the head of 6,000 warriors. During the long conference which ensued, Macomo repeated very significantly, "Who made the war? We did not begin the war." Colonel Cox considering this a very irritating question, did not discuss it; his object was to bring about peace. In this he succeeded, and on the 17th of September, 1835, a treaty was signed, by which the chiefs and their people agreed to become subjects of the king of Great Britain, and to deliver up all the muskets in their possession; the governor on his part promising to grant certain accurately defined territories to the chiefs. The minor details of the treaty, and the various

contradictory enactments involved therein, need not be dwelt upon, as the British government annulled the whole arrangement in time to prevent the evils that must inevitably have resulted from a system calculated to annihilate the authority of the chiefs, without substituting any sufficient government in its stead.

Before the reversal of the steps taken by Sir Benjamin D'Urban, the confederate chiefs had, however, sworn allegiance to the crown of Britain, within the newly-annexed territory, called the Adelaide Province. The ceremony is represented as having been a very impressive one. Colonel Smith appeared in military pomp, accompanied by several ladies and numerous spectators; Macomo came attended by upwards of twelve hundred cavalry, and his manly bearing, together with the fine person of his brother Tyalie, did not pass unacknowledged even by the naturally prejudiced beholders. Colonel Smith, in addressing the elder chief, said, "Macomo, I have admired your character as a soldier in the bush; you have been a bold and determined enemy, and I have every confidence in the sincerity of your attachment to my king and governor."*

Thus terminated a bloody, costly, and most unsatisfactory war; Sir Benjamin D'Urban, writing to Lord Glenelg, summed up its chief results very briefly:—"In the course of the commissioners' progress in the census of the tribes of Gaika and Zlambie, they have ascertained that their loss during our operations against them, has amounted to 4,000† of their warriors (or fighting men), and among these many captains; ours, fortunately, has not in the whole amounted to 100,‡ and of these, only two officers. There have been taken from them also, besides the conquest and alienation of their country, about 60,000 head of cattle, almost all their goats, their habitations everywhere destroyed, and their gardens and corn-fields laid waste. They have been, therefore, chastised, not extremely, but perhaps sufficiently."§ In this cold, hard summary of a fearful amount of suffering, the number of women and children shot by the troops in mistake for men, and of those who perished of sheer fatigue and hunger, is not mentioned, indeed it would be vain to attempt estimating it; yet, without this addition, the misery

inflicted upon the unhappy frontier settlers, during the ten days' ravage of the frontier, was surely repaid a hundred fold. It is not that the sufferings of the Albany and Somerset settlers can or ought to be lightly regarded. The plain unvarnished, but most pathetic statements contained in the official documents, of a large and fertile tract of country desolated in little more than a week, as if by a locust cloud, and of women rendered widowed and homeless by the fury of barbarians, cannot be read without deep emotion, the more so because these very people had been comparatively innocent of the wrongs which had occasioned the war. I speak advisedly in saying comparatively innocent, for they cannot be acquitted of blame in taking possession of territory to which no government could give them an equitable, though it might a legal title. The right of conquest, let its military advocates say what they will in its favour, is simply the law of the strongest, "they may take who have the power, and they may keep who can." The question of how the Kafirs themselves first acquired possession, is not to the point; we found them in quiet and undisputed occupation, and the allegation of their having previously driven away the Hottentots to lands, afterwards wrenched from these latter by European aggression, is no more excuse for our punishing the present generation of Kafirs for the sins of their forefathers, by driving them back among other tribes, as fierce marauders or miserable fugitives (fingoes), than there would be for their avenging the wrongs committed by our predecessors on the Hottentots, by the total destruction of the colony.

Fair purchase is the only honest mode of acquiring territory; in the end it will prove the cheapest. There is need even when this principle is admitted (which unhappily is yet far from being the case) of much stanch integrity on the part of the buyer. A civilized people purchasing land from a barbarous one, stands precisely in the position of a man bargaining for property with a child who is but partially acquainted with its value; and it therefore behoves the older and wiser party to hold so evenly the balance, that the child, when come to years of discretion, shall acknowledge that he has been justly dealt with.

* Colonel Cox, when questioned by the Committee of the House of Commons, in 1836, concurred in this opinion.—Parl. Papers, August, 1836; p. 348.

† According to Sir A. Stockenström, the actual

number did not exceed 200!—Parl. Papers, March, 1851; p. 13.

‡ Including the colonists who perished during the December invasion. § Parl. Papers, May, 1836; p. 89

No such reasoning as this appears to have had any weight with the majority of the colonial authorities of that day. The few scruples that might have been entertained were easily subdued by the desire of including within the limits of the colony the beautiful and fertile regions of Kafirland, in which it was deemed there would be abundant room for European farmers, notwithstanding the tracts which it was found necessary to reserve for the Kafirs, whose unconquerable determination to die if need be where they were born, had defeated Sir Benjamin D'Urban's first intention of expelling them beyond the Kei. Thus a war, which had cost the imperial treasury nearly £250,000; interrupted a newly-created but rapidly increasing trade, in European commodities, of £30,000 per annum,* broken up all the mission stations, formed with so much labour and cost in the Kafir country; and which a committee of the House of Commons had pronounced, after a protracted and most laborious investigation, to have originated in a systematic disregard of native rights, was to terminate in a fresh seizure of native territory. Nor was it only the border chiefs who were to be mulcted of their finest possessions. Kreili being quite unable to furnish the amount of cattle required by the treaty of May, 1835, in consequence of the number carried away by the Fingoes and the troops, and likewise of an extraordinary mortality which had subsequently occurred among the herds of his people, was compelled, in December, to enter into an arrangement with the governor to forfeit instead a large and very valuable tract of country considerably beyond the Kei.†

REVERSAL OF THE D'URBAN SYSTEM, AND RESTORATION OF THE TERRITORY CEDED BY THE GAIKAS AND KREILI.—The colonists, or at least the majority of them, applauded the governor's proceedings to the skies. The home authorities, and the English public in general, took a different view of the matter, and saw loss and disgrace, where the despatches held forth nothing but gain and glory.

The colonial secretary (Lord Glenelg)‡ on learning from Sir Benjamin D'Urban

the first tidings of the war, the exterminating spirit in which it had been carried on, and the new province acquired by it, required full details as to the causes which had led to the invasion of the colony, before deciding upon the retention or restoration of Kafirland, in which, meanwhile, he specially forbade the granting of farms, or the construction of works of any description. At length, after vainly waiting in the hope of receiving from the governor the desired information, Lord Glenelg, in a despatch, dated 26th of December, 1835, declared that the governor had omitted to supply any clear and comprehensive explanation of the causes which had provoked the irruption of the Kafirs into the colony; and that, deeming a correct understanding of the relations between the colonists and the Kafirs for several years past absolutely indispensable, in order to form a right judgment on the events of the year then closing, he had been led to the study of a large mass of documents, of which some were accessible to the public at large, and others had been brought under his inspection by the voluntary zeal of individuals. The result of these inquiries is thus stated—

"The conclusion, though exhibited in a few general terms, is the fruit of a long and extensive investigation. I abide by it with the greater confidence, because it has been forced upon me by proofs, of which I would gladly have resisted the pressure, but yielding to the conviction which has thus been impressed on my mind, I am constrained to admit that in the conduct which was pursued towards the Kafir nation by the colonists and the public authorities of the colony, through a long series of years, * * * the Kafirs had an ample justification of the war into which they rushed, with such fatal imprudence, at the close of the last year. This justification rests on two distinct grounds:—First, The Kafirs had to resent, and endeavoured justly though impotently to avenge, a series of encroachments upon them, which had terminated in the assumption by Great Britain, first of the dominion, and then of the exclusive possession of all the country between the Great Fish River and the Keiskamma.

"To effect this object we commenced by ascribing to the chieftain Gaika an authority which he did not possess, and then proceeded to punish him for not exercising that imaginary power for our benefit. We held him responsible for the acts of his and our common enemy, and exacted from him and his people a forfeiture of their land, as a penalty for the retaliation made by the chief Zlambie, after the invasion of his country by Gaika and ourselves. We forced on our

private character, were distinguished by rectitude, humanity, and a just appreciation of the rights of the coloured races, whether actual subjects of the British crown, or merely by position brought into contact and collision with European colonists in the transmarine portions of the empire.

* Parl. Papers, June, 1837; p. 74.

† Parl. Papers, July, 1837; p. 15.

‡ Lord Glenelg became secretary of state for the colonies in the year 1835. As Mr. Charles Grant, he had become favourably known from his administration of East India affairs; his public life, as well as

ally a treaty, which, according to the usages of the Kafir nation, he had no authority to conclude, and proceeding on that treaty, we ejected the other Kafir chiefs, who were no parties to it, from their country. The compact thus made was on our side repeatedly infringed. Of the country of which the dominion was acquired, in order that it might be placed as a barrier between the two nations, and which, with that avowed object, had been specially devoted to be thenceforward a neutral and uncultivated waste, extensive tracts were speedily occupied, partly by British and partly by Hottentot settlements.* The Kafirs, imitating our example, endeavoured to resume the possession of some part of their lost country. They were at times driven back at the point of the bayonet, and either shot or flogged if captured to the westward of the Keiskamma. At other times their residence within that frontier was permitted, if not encouraged. But as often as the fluctuating policy of the colonial government led to the disapproval of this indulgence, they were again driven back in large bodies into their remaining lands, with all the rigour of military execution against their persons and property. Harassed by this long series of aggressions, and the victims of successive changes in the opinions and conduct of the local authorities, the immediate motives of their invasion, in December, 1834, would not seem very difficult to be discovered. * * * The Kafirs were stimulated to this war by the belief that they had been unjustly despoiled of their country, and by the hope of regaining possession of it. I am compelled to conclude that they wanted nothing to the completeness of their right except the power to render the assertion of it effectual."

Lord Glenelg considered that the frontier system afforded the Kafirs a second apology for their irruption into the colony.

"They may indeed have been, nor can I doubt that they were, accustomed to harass the inhabitants with their depredations; but driven, as they had been, from their ancient and lawful possessions [so far as the British were concerned], confined within a comparatively narrow space, where pasturage for their cattle could not be readily found, and urged to revenge and desperation by the systematic injustice of which they had been the victims, I am compelled to embrace, however reluctantly, the conclusion, that they had a perfect right to hazard the experiment, however hopeless, of extorting by force that redress which they could not expect otherwise to obtain. * * * I am further constrained to record my dissent from the unfavourable estimate which you have formed of the Kafir character.† Referring to the great mass of evidence which it has been my duty to examine, I find it replete with proofs of a directly opposite tendency. I learn that among this proscribed race, Christian missionaries have passed many

years respected, honoured, and secure. It is placed beyond dispute, that at the very moment when the countrymen of those missionaries were harassing Kafirland with incessant patrols and commandoes, the teachers of religion, relying implicitly on the honour and good faith of the tribes, continued to receive kindness and protection.

"In the midst of all the calamities incident to their situation in our immediate neighbourhood, the Kafirs, under the guidance of their Christian ministers, have built places of public worship; have formed various congregations of proselytes, or of learners; have erected school-houses, and sent their children thither for instruction. In the meanwhile no inconsiderable advance has been made in agriculture, and in commerce. A trade, variously estimated, but not amounting to less than £30,000 per annum, in the purchase of European commodities, had been established on the frontier; and as many as 200 British traders were living far beyond the boundaries of the colony, protected only by the integrity and humanity of the uncivilized natives.

"To such a people the character of 'irreclaimable savages' cannot, with justice, be assigned. Nor indeed, even if well founded, would this reproach come with a good grace from us, unless it can be asserted that we have, as a government, fairly brought to the test of experiment, whether they can or cannot be reclaimed."

Adverting to the spirit in which the hostilities against the Kafirs had been conducted, Lord Glenelg writes:—

"Amongst many passages illustrative of the manner in which the war was conducted by the British troops, I select for illustration the following, from a letter addressed by Colonel Smith to yourself on the 11th of June. 'The enemy, although his traces were numerous, fled so rapidly, that few were killed, and only three shots fired at the troops. The whole of the country has been most thoroughly traversed; upwards of 1,200 huts, new and old, have been burnt; immense stores of corn in every direction destroyed; 215 head of cattle of all sorts captured; several horses, and nearly 2,000 goats, have fallen into our hands. The women were very numerous; and I therefore caused them to be amply supplied with beef and biscuit, and dismissed them with the assurance that the atrocities of their husbands had made them forfeit their homes, and that they must move over the Kye. They all stated that they were anxious to do so. It is most gratifying to know that the savages, being the unprovoked aggressors, have brought down all the misery with which they are now visited upon the heads of themselves and their families; and that the great day of retribution, and the punishment of the unprovoked atrocities committed by these murderous savages on our colonists, had arrived.'

"Reading these statements at this distance from

* In May, 1831, Viscount Goderich, then H.M. secretary of state, considered it advisable that the neutral, or so-called "ceded" territory, should be opened for settlement by Englishmen and Hottentots only; that no inland grants should be made until the whole line of frontier, from the sea to the northern extremity, shall have been allocated, and that the lands should be sold at a given sum for the acre, with a peremptory reservation of forfeiture in case of the introduction of *slave* or compulsory labour. His lordship hoped that such measures would "tend to

the greater security of the colony against the future inroads of the Kafir tribes, and contribute also, under judicious arrangements, to the civilization of those people."—Parl. Papers, June, 1835; p. 57.

† *Vide* proclamation of 10th of May, 1836, cited at p. 80; and Sir B. D'Urban's despatch of 19th of June, 1836, in which he likens the Kafirs to wolves, that when caught young may be brought to an appearance of tameness, to be thrown off so soon as their "instinctive thirst" for blood and ravage should be brought into play.

the scene of action, I must own that I am affected by them in a manner the most remote from that which the writer contemplated. In the civilized warfare of Europe, this desolation of an enemy's country, not in aid of any military operations, nor for the security of the invading force, but simply and confessedly as an act of vengeance, has rarely occurred, and the occurrence of it has been invariably followed by universal reprobation. I doubt, indeed, whether the history of modern Europe affords an example even of a single case, in which, without some better pretext than that of mere retribution, any invaded people were ever subjected to the calamities which Colonel Smith here describes: the loss of their food, the spoiling of their cattle, the burning of their dwellings, the expulsion of their wives and families from their homes, the confiscation of their property, and the forfeiture of their native country. I am, of course, aware that the laws of civilized nations cannot be rigidly applied in our contests with barbarous men; for those laws presuppose a reciprocity, which cannot subsist between parties of whom the one is ignorant of the usages, maxims, and religion of the other. But the great principles of morality are of immutable and universal obligation, and from them are deduced the laws of war. Of these laws the first and cardinal rule relating to a state of hostility is, that the belligerent must inflict no injury on his enemy which is not indispensably requisite to ensure the safety of him by whom it is inflicted, or to promote the attainment of the legitimate ends of the warfare. Whether we contend with a civilized or a barbarous enemy, the gratuitous aggravation of the horrors of war, on the plea of vengeance or retribution, or on any similar grounds, is alike indefensible. Now I must confess my inability to discover what danger could be averted, or what useful object could be attained, by the desolation of the Kafir country, which Colonel Smith has described. The inhabitants had been taught the utter hopelessness of a contest with the British force. They had learnt that, for their injuries, whatever they might be, the redress was not in their own power. As the conviction of their helplessness was thus forced upon them, forbearance in the use of our irresistible means of destruction became still more clearly the paramount duty of the leaders of H.M. forces."

His lordship proceeds to explain the course which H.M. government had resolved upon taking, under the peculiarly difficult position in which they had been placed by the extreme measures of the colonial authorities:—

"First, For the reasons already given, I cannot admit that the British sovereignty over the country between the Fish River and the Keiskamma rests on any solid foundation of international law or justice; yet the relinquishment of that dominion is surrounded by difficulties so many and inextricable, as entirely to forbid such a surrender. It is needless to enumerate or to describe these impediments. The restitution of invaded rights in this, as in many other cases, would involve injuries more formidable than it could remedy.

"Secondly, The claim of sovereignty over the new province, bounded by the Keiskamma and the Kye [or Kei], must be renounced. It rests upon a conquest resulting from a war, in which, as far as I am at present enabled to judge, the original

justice is on the side of the conquered, not of the victorious party. Even if there were the most powerful motives of apparent expediency to recommend this extension of H.M. dominions, which I cannot allow, yet his Majesty would never consent to consult expediency at the expense of justice. You will, therefore, prepare the public mind in the Cape colony for the relinquishment of the newly-acquired province, by announcing that the British occupation of it is temporary and provisional only, and will be resigned by the end of the year 1836. I fix that date, as it will afford a sufficient interval for making those arrangements which will be necessary to enable the colony to recede with safety from the limits assigned to it by your proclamation.

"I place this resolution on the ground of justice, because I should be most unwilling to appear to act on such an occasion on any subordinate motive. But if the conquest could be maintained with indisputable right, I should hold the impolicy of abiding by it equally clear. In this I have the misfortune to differ from you, and I must, therefore, distinctly explain the grounds of that difference.

"You state that this accession of territory will be some indemnity against the expenses of the war. To the assumption involved in this statement, that an enlargement of the British dominion in Southern Africa is a national advantage, I feel myself unable to assent. The territory of the Kafirs, I am well aware, is in itself a fertile and salubrious region, contrasting but too favourably with the prevailing sterility of our own possessions. But the great evil of the Cape colony consists in its magnitude; in the vast space for which it encroaches upon the continent, and the consequent extent of its boundary. We are thus brought into contact with tribes numerous and warlike, and a scale of establishment is required, both civil and military, extensive beyond all proportion to the number and wealth of the inhabitants. In a country containing more square miles than the whole of the British Islands, we have a population of about 150,000 souls. To connect these dispersed settlers by roads, and other communications, to bring them under the protection of magistrates and officers of police, to afford them the benefit of prompt administration of justice, and to shield them by military defence, are duties incumbent on the government, but duties which cannot be performed without imposts so heavy as to excite universal and apparently just complaints, and which, even with such imposts, have never been performed but most defectively. Whence the necessary revenues for defraying the additional establishments, civil and military, are to be extracted, is a question to which your consideration does not appear to have yet been given, and to which I have directed my own in vain."

"But it is said that the defence of the new frontier will be more economical than that of the Keiskamma. Much as I am disposed to rely upon your professional judgment, I must own that upon that point I feel no little hesitation in acquiescing in the accuracy of your calculations. I shall not scruple to explain unreservedly the nature of my difficulties, convinced that you will estimate them with candour, and that you will afford me the benefit of your

* Sir B. D'Urban had in a previous despatch proposed a civil establishment for the newly conquered country, which alone involved an outlay of £16,000 per annum.

experience and professional skill for the more full elucidation of the subject.

"It is evident that the new frontier, being much more distant, is therefore less accessible from the interior than the old. It embraces a larger area, and would therefore seem to demand a longer line of defences. In the absence of any exact military survey of both, the general presumption must seem to be, that in proportion as the frontier is protracted it becomes more readily assailable. Pushing further forward into Afriac, the new line of defences would bring us into contact with new tribes of uncivilized men. Amongst these the exiled Kafirs must be received as intruders, and will form a band of desperate adventurers, at one time seeking subsistence by plunder in the colony, at another provoking war on its borders. Thus we shall again be brought into contact on a new line with African warfare in all its ferocity. New enemies will be acquired; new contests must be achieved; a new frontier must be sought, and we should be engaged in a series of conquests desolating to Africa and ruinous to ourselves. It would be a melancholy acquisition to exchange the neighbourhood of men who have been taught to fear our power, and in some degree to practise our social arts, and to adopt our religion, for that of fresh hordes of barbarians, who, however inaccessible to the arts of peace, may yet prove no unapt scholars under our tuition in the art of war. Nor is it possible to contemplate without emotion, the extinction of the churches which had been planted in Africa, and of the prospects of diffusing Christianity and the other blessings of civilized life in that portion of the globe.

"You state, however, that for the defence of the Keiskamma frontier, the regular troops must be augmented to about 3,000 rank and file, while the increase might be considerably less if the Kye be taken as the boundary.

"Now, even if on a careful and complete survey it should be established, in a military sense, that the Kye is a better boundary than the Keiskamma, still this argument of comparative ease and cheapness of defence may be open to question. Of two lines of defence, the one may by nature be stronger than the other, and consequently, if regarded simply in that view, without reference to other circumstances, may be pronounced the less expensive. But other circumstances may far more than counterbalance the difference. If the stronger frontier comprehend the larger extent of territory; if it be the more remote from the main strength and body of the colony; more remote from the resources on which it must, in case of attack, rely for supplies of all kinds; for men, for provisions, for munitions of war; if in all these respects, therefore, it be in fact the weaker of the two, and if at the same time it be more exposed to attack; if, for example, it should gather and dam up along its whole line a raging mass of savages, tormented by the narrowness of their limits, by famine, and by revenge, and threatening every moment to break over the mound; if these should be the relative circumstances of the two defences, it is very easy to perceive, that with all its natural advantages, the stronger may at the same time prove not only the more costly, but also the more difficult to maintain, and, therefore, be less secure. In truth, however, this argument of comparative expense proceeds on the assumption that the security of the

colony can be assured only by having a force of regular troops, numerically large enough to man the whole frontier. But this, whatever line of defence be chosen, is obviously impossible. The army of England would not suffice to man, in the proper sense of the word, our colonial frontier from sea to sea. For the defence of such a frontier some regular troops are necessary, and the number already supplied is probably all that in justice to the people of this country, and to the great demands of the empire, ought to be allowed for that object. The further military defence must be sought in the enrolment of a local militia force. But even this force in its best state, and in conjunction with a sufficient number of regulars, can never be our exclusive reliance. The surest of all defences, or rather the only sure defence, is to be found in a wise system of border policy. Without this the strongest frontier that nature or art can supply is miserably weak, and with it the Keiskamma is as secure as the Kye. It cannot be too often or too importunately pressed on our conviction as a plain practical truth, that the safety of the colony, which after all is the first object, is to be derived from observing in our dealings with the frontier tribes the most rigid justice, respect for their feelings and prejudices, regard for their real interests, conciliatory kindness when it can be properly shown, and above all, an unwearied anxiety to diffuse among them the blessings of education and of Christian knowledge. Colonies which it is attempted to maintain in the neighbourhood of savage tribes on any other principles, must either be destroyed by that vicinity, or be upheld at a cost utterly disproportionate to their real value.

"It remains to consider what course is to be pursued towards the people with whom we have been brought into contact. And first, in reference to the Fingoes:—

"I must frankly confess, that I am quite unable to perceive the slightest accuracy in the comparison which you have instituted between the liberation of these people and the great national act of negro emancipation. In the one case we liberated the slaves of our enemies at the cost of their owners, in the other case we liberated the slaves of British subjects at the cost of the national revenue. Still the act having been done, is irreversible. * * *

"With regard to the tribes which were driven from those lands, and to those against which our hostilities had been waged, H.M. government cannot think it consistent either with justice or with sound policy, that they should be exiled from their ancient possessions between the Kye and the Keiskamma.

"The restoration of the Kafirs to the conquered territory must, however, be accompanied and preceded by such arrangements as will assign to each tribe its own proper limits.

"For the due regulation of the future relations between the Kafir tribes and the colonists, as well as for other purposes of local convenience, his Majesty proposes immediately to appoint a lieutenant-governor of the eastern districts of the colony. On the lieutenant-governor will be devolved the administration of the executive government within the boundaries to be assigned to his command. It is further proposed to appoint a civil commissioner, or protector of the native tribes, who shall reside within the colony, probably at the seat of the lieutenant-governor's residence. To this officer will be en-

trusted the duty of protecting the borderers on either side against mutual aggressions. It will be his office to inform himself of every inroad and act of plunder committed against the colonists, and of every outrage or injury offered to the Kafirs; to investigate the truth of every allegation of that nature; to report all such occurrences to the lieutenant-governor; and to superintend in person the execution of all measures which may be necessary for obtaining redress; and to take charge of all cases in which the subjects of native chiefs are brought before the colonial courts of justice. It is also intended to appoint a government agent to reside in Kafirland, with the requisite powers to make him an efficient guardian over the rights as well of the natives as of European traders.

"All communications with the Kafirs on what, in the absence of a more simple word, may be termed international subjects, must be carried on through the government agent for Kafirland.

"The following is a statement of the principal rules which it is intended to prescribe to the lieutenant-governor and civil commissioner, for the guidance of their conduct:—

"1. A treaty, fixing the boundaries of the colony, must be made in writing, in English and in the Kafir language, and, being explained to each border chief, must be signed or attested by each. Copies of this treaty must be delivered to each of the contracting chiefs.

"2. A separate treaty must be made, in the English and in the native languages, with the chief of every tribe to which a portion of territory is assigned within the British dominions; defining the limits of his allocation, the degree of his responsibility, and the nature of his relations with the British government; and all other particulars admitting of specification. A copy of this treaty in the native tongue must be preserved by the chief.

"3. A separate treaty must be made in the native and English languages with the chief of every tribe in alliance with us, or in any degree under our protection; defining also in each case all that can be specified in such an instrument. A copy of the treaty must be preserved by each chief.

"4. The rules of mutual restitution, and those which relate to the prevention of inroads, and the redress of the injury occasioned by them, must be particularized in each of the above treaties.

"5. The responsibility of particular kraals, or villages, for the acts of individual Kafirs, must no longer be enforced. But

"6. The chiefs must be called upon to bind themselves to make restitution for plundered cattle, on sufficient proof of the reality of the theft. They must be left to detect the offenders, or to indemnify themselves at the expense of the tribe collectively for such losses as they may sustain by being required to make these compensations. In other words, we must look to the chiefs, and to them alone, and must no longer take upon ourselves to make reprisals upon the people. The chiefs to enter into securities, or pledges, of such a nature as may be deemed sufficient, and not inconvenient for the due fulfilment of these stipulations.

* Despatch from Lord Glenelg to Sir Benjamin D'Urban, 26th of December, 1835; *Parl. Papers*, May, 1836; pp. 69 to 79. The unavoidable length (ten folio pages) of this despatch, prevents its complete insertion, beside which many of the facts therein dwelt upon, have been already noted in the

"7. Fairs for the interchange of commodities should be re-established at convenient places on the frontier.

"8. The wounding or killing a Kafir, or otherwise injuring his person or property, will be made liable to the same punishment as if the sufferer were one of H.M. subjects. This of course would not apply to times of actual war, nor prevent the compulsory removal back into their own territory of any Kafirs who might reappear within the boundaries with purposes apparently hostile or fraudulent, or in opposition to any existing laws. No violence must, however, be used in effecting their removal, which is not strictly required by the necessity of the case, and for the effective execution of the service.

"9. No European or Hottentot, or any others but Kafirs, to be located or allowed to settle east of the Great Fish River. Those Hottentots who were placed in the ceded territory prior to the late war, and all Christian teachers, are exempted from this rule. I may observe here, that in the above rules, under the general name of Kafirs, I include the Fingoes.

"In aid of these general rules, it is proposed to submit, for the approbation of parliament, a law to enable our colonial tribunals to take cognizance of and to punish offences committed by British subjects within the Kafir territory, in the same manner as if they had been perpetrated within the limits of the colony itself.

"I have thus indicated in general terms the measures which it is proposed to adopt, and which are of course liable to be altered or modified on further consideration. The lieutenant-governor will also be the bearer of instructions defining the relative authority and duties of himself and of the governor of the colony. I therefore abstain from enlarging at present on those topics. * * * Sympathising with every just and honourable sentiment of the subjects of the British Crown, his Majesty has commanded me to express his solicitude for the protection of the Aborigines of Southern Africa, and his repugnance to sanction any enlargement of his dominions of which their sufferings would be the price. You are aware that in the session of parliament of 1834, the House of Commons especially invoked his Majesty's protection for these defenceless people, and received from the king an assurance of his Majesty's determination to act in this respect in accordance to their wishes. In the spirit of that assurance I am commanded to issue these instructions; nor will his Majesty regard his pledge as redeemed until he can present to his people the proofs of the establishment of a system of border policy advantageous alike for the Kafirs and for the colony."

When writing the despatch, from which the above extracts are taken, Lord Glenelg was still ignorant of the arrangement made with regard to Kreili. On being informed of it, he desired that the lands taken from that chief, in lieu of cattle, should be forthwith restored; and that, if really unable to course of the narrative. Still, all who are desirous of understanding the complicated question of South African affairs, and especially of frontier policy, would do well to study a state paper, equally sound in principle and elegant in diction. It is much to be regretted that his lordship's tenure of office was so brief.

pay the stipulated amount, he should be entirely acquitted of all obligation on that score. His lordship added, that after the opinion expressed by the governor respecting the peculiar advantages of the Kei, as a frontier of defence, he had not been prepared to expect an additional encroachment on the territory of the Kafirs.* The views and measures of the home government were very unwelcome to the war party among the colonists, and the leading colonial officials not unnaturally evinced extreme annoyance at the total reversal of their policy. Colonel Smith, overlooking the explicit answer furnished beforehand by Lord Glenelg, asked in plain terms the question generally put in a less straightforward manner: "Are the Kafirs, the possessors of this soil by right of conquest, not to be ejected by the same right? Are they alone of all the rest of the aborigines from whom England has wrested her possessions, to be thus favoured?"† Sir B. D'Urban, after ineffectually striving to induce Lord Glenelg to retain possession of Kafirland, so far forgot the courtesy due to his lordship as to address him in a tone and temper which could not be overlooked.‡ The colonial secretary and the governor of the Cape, could no longer continue to maintain their relative positions, and the latter was informed that his services were no longer required by his Majesty.§ However the pride of Sir B. D'Urban might have been mortified by this intimation, it must yet, in some respects, have been a decided relief to him. Notwithstanding the energy with which he applied himself to rule the internal affairs of the colony, and the strenuous efforts of Colonel Smith to *keep down* the Kafir subjects of Victoria Province, matters were yet, both within and upon the frontier, assuming an aspect too threatening to be unobserved by either of these officers; although sensible of their own deep responsibility, they concurred in representing every occurrence in its most favourable light.

EMIGRATION OF THE BOORS.—Soon after

* Parl. Papers, July, 1837, p. 19.

† Colonel Smith would appear to have carried his notions of the right of conquest to a considerable length. In this same communication, dated April, 1836, he speaks of himself as residing on the spot whence the Rev. John Brownlee, whom he describes as an exemplary minister, had been driven during the war. Soon after his departure, the Kafirs burned his house, fearing, they said, that it might be used as a fortified position by the troops. After the termination of hostilities, Colonel Smith, according to Backhouse, "took possession of it, repaired it,

the termination of the war, the disaffection of one large class of H.M. subjects manifested itself in a most unmistakeable manner. The boors, to the number of some thousands, quitted the colony in organized masses, selling their farms for just what they could get; and throwing them up in utter disgust if unable to find a purchaser. The immediate causes of this mania for "trekking," and, especially, for abjuring alike the governance and protection of Great Britain, would seem to have been but partially connected with the motives which had formerly rendered them such ungovernable subjects to their distant government, the Amsterdam "Chamber of the Seventeen."—(See pp. 13, 16, 30.)

Then, it was not that communities migrated, but that they rapidly increased; and growing stronger and more numerous, seized with a bolder grasp the lands of the aborigines, whom they expelled, exterminated, or converted into hewers of wood and drawers of water. The personal importance of each boor depended upon the number of his flocks and herds, and the amount of broad acres over which they roamed. In due time, his family grew up; the sons wanted farms of their own, that is, from 5,000 to 10,000 acres of ground, and they also went forth to dispossess the natives of their finest springs and freshest pastures. The records of the Cape government, and the residencies of Stellenbosch and Swellendam, during the whole of the eighteenth century, teem with painful details of the seizure of the land, and frequently, also, of the cattle belonging both to the Hottentots and Kafirs. The injunctions and threatened penalties of the weak and distant authorities at the Cape, could not restrain the lawless boors, who little heeded the denunciation, by governmental placats, of their aggressive violence, or the misfortunes brought upon the land thereby.¶ The gradual extension of the colony, and the means by which it had been brought about, have been shown, step by step; but

and added to it, arguing against John Brownlee's claim to the site and materials, that it was taken in war from an enemy! In the overruling of the Most High, it has, however, been restored to its worthy owner and his family, with the addition of Colonel Smith's improvements."—*Narrative of a Visit to the Mauritius and South Africa*. By James Backhouse; p. 237.

§ *Idem*, p. 278.

¶ *Vide* Placaat, dated 4th April, 1727.

the following abstracts from official records, taken at a long interval, will suffice to show that the manner in which the farmers first forcibly occupied, and then expected the government to maintain them in secure possession of Kafirland, was precisely the same throughout. Thus:—

In 1771, a boor, named W. Prinslo, took possession of two places beyond Bruintjes-hoogte, contrary to the law of 13th February, 1770, by which colonists were strictly forbidden to intrude on Kafir territory. Scarcity of water and deficiency of grass in the colony induced others to follow his example. These, in an address to the governor, dated Bruintjes-hoogte, 10th October, 1774, stated, that they heard, with great grief, of the many disgraceful complaints which their fellow-colonists made against them, and deprecated the designation of "rebels" which had been applied to them: that they would have gone to the Sneurbergen, but feared that the few cattle and sheep which they possessed would be plundered from them by the Bushmen. Finding the country lying beyond the Bruintjes-hoogte good for grazing and for cultivation, and with abundance of game for food, they settled there, and prayed forgiveness for having made this extension. They entreated that they might be allowed to remain in the country, that it should be added to the territories of the Company, and promised to be, in future, obedient burghers to the government. This document is signed by Krugel, W. Prinslo, Potgeiter, Klopper, and eleven others. Their application was referred by the governor in council to the Landdrost and Heemraden of Stellenbosch, and after consultation with the old Heemraden, Martin Melk, and J. B. Hofman, who had fixed the limits in 1770, it was recommended (30th January, 1775) that the boundary should be extended, to insure pasturage and water, as far as the Fish River on the northern parts, and to the Bushman or Zwartkops River on the southern part; and the northern extremity should extend to the Caugha Mountains. In 1775 (17th March) the Landdrost and Heemraden of Swellendam also recommended to the governor and council at the Cape, that the boundary be extended to the Fish and Zwartkops Rivers, as the increasing families of the colonists required that they should obtain new places for their sons, otherwise they would get poorer and poorer daily. These requests were granted; but, on the 27th December of the same year, the governor and council ordered that none should go beyond the Fish River, on the northern frontier, nor beyond the Zwartkops, on the southern limit; but these boundaries were soon passed. Fifty years afterwards, Lieutenant-colonel Wade, when commenting on the large sale of gunpowder by the regular traders and boors residing within the boundary, added—"But besides these there are also the farmers, who, in defiance of the law and the severity of its penalties, migrate beyond the boundaries, and at the same time that they supply the natives with these means of desolating the colony, unfortunately furnish them also with something of a reasonable pretext for doing so, by dispossessing the weak and unarmed, and occupying all the fertile spots and springs; and it is asserted, upon good authority, not unfrequently disgracing themselves by atrocities hardly less barbarous than those which the banditti inflict within the settle-

DIV. VII.

ment. * * * In the country between the frontier line and the Upper Orange River, and between the latter and the Caledon River, there are, at this moment, upwards of 100 heads of families, with their slaves, thus situated; having seized upon the district that best suited them, without any regard to the right of property of the natives; and it cannot, therefore, be matter of surprise that the latter should seek to retaliate."*

The above instances illustrate the manner in which the boors, during a period of nearly two centuries, gradually extended themselves over an immense amount of land. The causes of the great migration of 1836 must, however, have been very different from the simple desire for more land, since the migrators, so far from advocating the extension of the colonial boundary, sought, by passing it, to cast off their allegiance to British sway. For this desire the chief causes assigned were, first, the slave emancipation, and the unsatisfactory manner in which the compensation, granted by government was paid;† and, secondly, Sir

* Parl. Papers, June, 1835; Part ii., 75.

† The introduction of slaves into the Cape colony was, as we have already seen, commenced by the Dutch, who imported them from Java, from the Guinea coast, and from Madagascar, &c.: some were Malays, others African negroes. The Imperial Parliament decreed the abolition of slavery on the 1st August, 1834. The number and condition of slaves at this period, and the compensation awarded to their proprietors, are thus stated in a return to the House of Lords, dated March, 1838:—

Classes.	Slaves in each Class.	Compensation value.
<i>Prædial unattached:—</i>		
Head people	398	£25,648
Tradesmen	234	14,621
Inferior ditto	107	6,126
Field labourers	5,663	305,951
Inferior ditto	5,325	188,948
Total	11,727	£541,297
<i>Non-prædial:—</i>		
Head tradesmen	1,260	77,396
Inferior ditto	983	40,275
Head people employed on wharfs, shipping, &c. . . . }	20	796
Inferior people ditto	23	937
Head domestics	5,265	245,723
Inferior ditto	9,842	286,638
Total	17,393	£651,788

Children under six years of age on the 1st December, 1834—slaves in each class, 5,732; compensation value, £37,813. Aged, diseased, or otherwise non-effective—slaves in each class, 899; compensation value, £5,087.

Note.—Number of claims having reference to each division—Prædial Unattached, 3,442; Non-Prædial, 4,803.

In order to prepare the slaves for unconditiona

Benjamin D'Urban's attempt to establish a militia in the Cape colony similar to that which existed in British America. The Dutch boors were much indisposed to the project, because it would oblige them to leave their farms. They, moreover, viewed it as a scheme to entrap them into the condition of English soldiers; and this idea strengthened their determination to cross the boundary, and establish a new and independent community.

Most favourable reports had reached them respecting Natal, reports which, it is alleged, had been widely circulated by colonists who took advantage of their known ignorance, and fanned their discontent, hoping to profit by the valuable farms which, in consequence of their departure, would be sold much under their value, if not completely deserted.

After enduring great privations, the migrating boors at length settled down in various localities; some eventually reached Natal, others proceeded towards the north-eastward, and established themselves in the vicinity of the Orange River. The British government, anxious to extend some degree of protection to the natives against these usurping European squatters, passed a law empowering the local tribunals of the Cape to take cognizance of, and punish offences committed by British subjects to the southward of the 25th degree of south latitude. This measure, though well intended, proved almost wholly ineffective, from the difficulty of arresting offenders, of proving whether they were really British subjects, and whether the offence in question had been committed within the specified territory.

THE D'URBAN SUPERSEDED BY THE GLENELG OR STOCKENSTROM SYSTEM.—On the 5th of December, 1836, Kafirland was restored to its native proprietors, as

freedom, they were to be considered as apprentices from 1st August, 1834, to 1st December, 1838, when they became entirely free. It was ascertained that they were then distributed in the several districts of the colony as follows:—Cape Town, 5,702; Cape district, 4,910; Stellenbosch, 9,500; Worcester, 3,489; Clan William, 1,015; Swellendam, 3,137; Beaufort, 571; George, 2,174; Albany, 227; Somerset, 1,760; Graaf Reynet, 2,049; Uitenhage, 4,399: total, 35,933. Thus in Cape Town, and in Cape and Stellenbosch districts, the number was 20,112; and in all the rest of the colony, 15,821. The compensation money was distributed as follows:—Uncontested claims 5,429, £1,001,262; contested cases 743, £246,138: total, £1,246,400. Of this, £824,006 was already paid in November, 1837. The payments were made by orders on commissioners in London. The boors, generally ignorant

also the greater part of the neutral or ceded territory, and the Fish and Kat Rivers became the boundary of the colony. Treaties, formed upon the principles enunciated by Lord Glenelg, in the dispatch above quoted, were formed with the Gaika chiefs; Sandilli (represented by his mother, Sutu), Macomo, Tyalie, Botman, and Enno, and afterwards with the principal Zlambie, Tambookie, and Fingoe chiefs. Although resting solely upon rigid coercion, the D'Urban system, with its martial law and cat-o'-nine tails, its fort building and armed patrols, had proved inefficient to compel the fulfilment of some of the chief conditions of the treaties, while its main object, of gradually undermining the power of the chiefs, was defeated by the strong feudal attachment inherent in the minds of the people.* The error of Lord Charles Somerset, in striving to elevate one chief to a rank to which by the customs of his country he had no claim, was injurious, because its injustice roused the anger of other independent chiefs; but the principle of treating with a free people through an acknowledged head was in itself judicious. At the period of Lord Charles's administration, it would have been comparatively easy to have formed international relations with the Kafirs by means of a few of their most influential leaders. Now the question had become more involved; many of the old chiefs had perished; the clans had split and become scattered; and, moreover, large numbers, deprived by the Europeans of their lands and cattle, had become marauders by profession. For it must be remembered, that there are two distinct classes among this singular people, one owing allegiance to a chief, and possessing land and cattle; the other being literally vagabonds, paupers, and thieves. The latter class had been for

and suspicious, or credulous, according to their feelings, were, in many instances, induced by the misrepresentations of unscrupulous persons, to sell their orders for a fractional part of their real value. They were told that the orders would not be honoured for several years, or that they must go to England; that, in fact, it was doubtful whether anything would ever be really paid: they, therefore, gladly took in cash whatever was offered. This heightened their discontent, and tended to inflame their minds against the government, rather than against the English money-agents, by whom they had been plundered.

* For instance, it was particularly insisted upon by Sir Benjamin D'Urban that the Kafirs should deliver up all their muskets; but he was totally unable to enforce this condition, and it was therefore tacitly abandoned.—Parl. Papers, June, 1851; p. 22.

some years frightfully on the increase; the chiefs, engaged in perpetual altercation with an external enemy, had been unable to maintain the strict curb necessary to check the growing evils of their own communities; beside which their power and "prestige" had been greatly lessened in the minds of the worst portion of their own people, by the false policy of the colonial government. It was, therefore, no easy task to frame a system calculated to meet the present emergency; retrieve, as far as possible, past errors; and form the basis of a better and sounder state of things. Lord Glenelg had indeed sketched, with a masterly hand, the outline of the policy to be adopted; and, in appointing a lieutenant-governor for the Eastern provinces, he took care to select a man whose zeal, ability, and perfect conversance with frontier affairs, promised well for the arrangement of all matters of detail, as well as for the practical working of the whole scheme. Captain Stockenstrom, on the abolition of his office of commissioner-general, had gone to Sweden, intending permanently to settle there, but being summoned thence to give evidence before the select committee of the House of Commons, appointed in 1836, to investigate the condition of the aborigines within or connected with British territories, he came to England, and there fully exposed the cruel and unjust treatment which had provoked the Kafirs to war. The government manifested their sense of the correctness of his views and the uprightness of his character by creating him lieutenant-governor, and leaving him to form the projected treaties. This he did most successfully; the chiefs, one and all, gratefully acknowledged the restoration of their land, and cheerfully entered into the engagements required of them, the principal of which necessarily hinged upon the repression on their part of depredations. This was rendered more practicable by its being decided that no complaint of theft made by a colonist should be admitted by the government as a charge against the Kafir nation or any tribe, unless the owner of the stolen cattle could prove that the property had been duly guarded, that it had been traced into Kafirland, and that notice had been given of the fact to the proper authorities within a specified time. The Kafir chiefs agreed on their part, that, if these points were proved, they would find and restore the stolen property if possible; and if they could not discover it, they bound

themselves to give compensation or an equivalent within a certain time.

It is to be regretted that some steps were not taken at this period to introduce among the Kafirs improvements in their form of government, which, without impairing the power of the chief and his Amapakati, or counsellors, should have paved the way for the increase of civilization, and rendered the suppression of theft more easy. Had an annual stipend, similar to that of £100 per annum, made to Waterboer, been allowed to the leading Kafir chiefs, and a small sum been dedicated to the maintenance of schools, a very beneficial impression might have been speedily made on the minds of both chiefs and people, who would thus have learned to consider their national and individual well-being intimately connected with the friendship of England. Besides omissions, however, serious errors were committed, calculated to endanger the peace of the frontier, of which one indefensible instance was the location of the Fingoe herdsmen in close proximity to the people whom they had plundered and betrayed. The lieutenant-governor vainly implored permission to have them removed farther westward, that they might no longer be an eye-sore to the Kafirs, who complained bitterly of being compelled to witness these "dogs fattening before their eyes upon the flocks of a chief [Hintza], whose memory they held so dear." Those, however, who voluntarily placed themselves under the protection of Macomo and Tyalie, after that part of Kafirland upon which they were located was restored to the Kafirs, were protected and supported by those chiefs.* But even as it was, these treaties were followed by a nine years' peace, during which time the value of frontier property increased enormously, and the colony itself prospered. The Glenelg system succeeded, though worked by officials wedded to the coercive D'Urban policy. Lieutenant-governor Stockenstrom was not long permitted to occupy the position for which he was so well fitted. His public exposition of the conduct of too many of the colonists and local authorities had so embittered them against him, that they at length succeeded in procuring his supersession from Lord Normanby, (who had succeeded Lord Glenelg as secretary of state,) on the sole ground of unpopularity. He was assured of the cordial approbation and

* Parl. Papers, June, 1851; pp. 18-21.

esteem of the government; but though acknowledged to possess more political and moral power over the Kafirs and the Hottentots than any other man in the colony,* his services were dispensed with at the moment they were most needed. A baronetcy and a pension were awarded to him, and Colonel Hare was appointed in his place; but he appears to have given scarcely less dissatisfaction by refusing to countenance the false accusations repeatedly made against the Kafirs, and perseveringly exposing the wilful misrepresentations of the frontier press. Meanwhile, Sir George Napier had succeeded Sir Benjamin D'Urban as governor, and during his six years' administration, peace, broken only by petty depredations, prevailed throughout the frontier. In his evidence before the Parliamentary Committee of 1851, he stated his conviction of the necessity of conducting all affairs with the Kafirs through their chiefs; and he pointed out the large class of colonists who made a great deal of money by war, and whose constant cry was, "have troops over." He resisted the urgent entreaties of the war party, and never fired a shot against the Kafirs, nor the Kafirs against him.† The various costly military works then in progress, and estimated for, such as Martello towers, picquet towers, fortified guard-houses, all of most expensive mason-work, besides one or two forts, he declared to be one and all quite unnecessary as defences against a naked and uncivilized enemy, as yet without artillery or discipline; although (he adds), "a number are well armed with muskets, procured, I am sorry to say, from the very persons most clamorous against the Kafir nation."‡ Sir George Napier put a stop to all the projected military works; travelled through the Gaika country with Lady Napier, two servants, and two orderlies, and "never met with anything but the greatest kindness, although the professed object of his journey was to induce the chiefs to alter a good many of the details of the treaties" in favour of the colonists, in which he succeeded.§ The wisdom of the alterations made by him was more than doubtful, as it materially interfered with some of the most stringent clauses

of the treaties. The guardianship of an armed herdsman was to be no longer requisite to entitle the colonist who had been robbed to the recovery of his property; the restrictions to his pursuing it across the boundary were removed; it was not to be deemed necessary that it should have been immediately followed in order to establish a claim to restitution, and the amount of compensation required was considerably increased.|| The chiefs, on their part, when requested to agree to these new arrangements, pointed out in forcible language the increased facility that would be afforded to the false claims of the farmers, whose oaths would be believed in defiance of evidence. Tyalie declared that three different farmers had claimed a horse belonging to him, and Macomo noticed other instances of perjury and robbery on the side of the colonists,¶ yet they were induced to consent to the governor's wishes. The secret of his great personal influence over them is revealed in a private letter to Lord Glenelg: he says—

"I invariably treated all the chiefs as my equals; as I am convinced the more we hold them up in a respectable light, and as great men, which they are in their own nation, the greater will be their confidence in us, and the more power they will have of keeping their people quiet."*** Sir George Napier, in the same communication, states his conviction, that from all he had seen, heard, and learned, during a protracted sojourn in the eastern districts, he felt convinced that the newly-adopted system was the only sound course to proceed in, and that if steadily and fairly allowed to work, it must and would succeed, in spite of all difficulties; for its basis was justice and humanity.**

Sir George Napier was succeeded by Sir Peregrine Maitland, a benevolent and just man, who, however, suffered himself at the onset to be sadly misled by the popular outcry. Soon after his arrival, in 1844, he summoned the Kafir chiefs to meet him, surrounded the place with the 7th Dragoon Guards, and compelled the chiefs to sign new treaties. Macomo did so, remarking at the same time to Mr. Stretch, the diplomatic agent, "I am forced to this, but I sign for the Stockenström treaties." The other chiefs likewise asserted, that the new governor "smelt of war," and that had they not agreed to everything proposed, they would have had their heads cut off.††

†† *Vide* letter of C. L. Stretch, Esq., Diplomatic agent to the Gaika tribes, published in the *Colonial Intelligencer*, of June, 1852.

There was no excuse for the governor's breach of faith in abolishing the old treaties. Their efficacy was, so late as 1845, formally inquired into by the Cape Legislative Council, and their success was powerfully insisted upon, especially with regard to the important item of cattle stealing. It was then shown that there had been a material reduction in the amount stolen, and a considerable increase in the number restored by the Kafirs. It was also proved that cattle discovered to have been stolen by their people were frequently sent back to the colony, even when they had been taken under circumstances which prevented their being demanded by the strict article of the treaties.* Whereas previous to the Glenelg system, the usual amount of cattle recovered was only one-sixth to one-tenth of the number stolen; the recoveries under the treaties were one-half to one-third during nine years. And to this it should be added, that some of the highest and most impartial authorities at the Cape testified to there being more acts of plunder put down to their account than they were guilty of.† Yet the favourable opinion of the legislature of the Cape Colony respecting the good conduct of the Kafirs in this and other respects, appears to have been insufficient to combat the ruling idea of the governor, that a war-party had grown up in Kafirland. Very probably there was some truth in it: but, if so, nothing could have been worse calculated to increase this than the unjustifiable aggression of the governor, who, instead of checking, suffered himself to be led by the more dangerous war party within the colony. Colonel Hare, alarmed and disgusted by the course adopted by the governor, requested permission to resign his position; Mr. Stretch endangered and ultimately lost his, by vindicating the Kafirs, and it soon became evident that the government were preparing for a fourth Kafir war. Meanwhile two of the leading chiefs, foreseeing the mischief and misery impending, requested permission to come into the colony and settle there, in order to live in peace. One of these chiefs was Macomo; strange to say, his application was disregarded, a passing mention of it in a dispatch being all the notice attracted by so important an offer.

‡ Close to the source of the *Shesago* or *Chisega*, a small stream, flowing into the Kat River.

Sir Peregrine Maitland, though far from recommending a return to the D'Urban system, persevered in reintroducing some of its most vexatious features. By virtue of an article in the old treaties, which had throughout the whole of his predecessor's administration been suffered to lie dormant, he erected "Post Victoria," in the heart of the ceded territory,‡ a proceeding which the Kafirs viewed with extreme suspicion, as a step toward the renewal of war and the re-seizure of territory which they were at this time given to understand they held upon good behaviour. Nothing could have been worse timed than these warlike demonstrations, or more uncalled for than the repeated declaration of the governor, during a time of peace, that "the Kafirs need not think to cope with the English, since even if they could destroy all the troops then in South Africa, England could and would easily send an army sufficient to eat up the whole Kafir nation without trouble."§ Even Colonel Smith, a military man in the strictest sense of the word, recognised the necessity of using moral force in his dealings with the Kafirs, and of utterly refraining from chafing such jealous and excitable natures, by sights and sounds only too congenial to the passions of man in a state of barbarism. Thus, even while keeping so strict a watch during the brief existence of the Adelaide Province, that "not a mouse could move in all Kafirland without his knowledge,"|| he declared that everything depended "upon the mainspring, the chief-magistrate, the superintendent of police, and the non-interference of the military. The latter," he added, "is the thing of all others, to re-animate every feeling of animosity in the minds of the Kafirs."¶

The dearly-bought experience of his predecessors, and the warnings of some of the ablest and most respected men in the colony, failed in preserving the governor from a proceeding which had well-nigh occasioned the outbreak of hostilities before preparations had been made to meet them. He committed what in the eyes of the Kafir nation was nothing less than a direct violation of all the treaties past and present, by the formal occupation of ground for the erection of a fort in Kafirland.

§ "Eating up," in Kafir parlance, signifies the complete seizure and confiscation of property.

|| Parl. Papers, June, 1851; p. 197.

¶ Parl. Papers, July, 1837; p. 265.

When the subject was first mooted, Sandilli appeared disposed to allow it on certain reasonable conditions, such as ground-rent being paid to him, &c.; but he could not grant the required permission without the concurrence of his "amapakati," or counsellors, and they utterly disapproved and rejected the proposal. Nevertheless, through a series of extraordinary mistakes, a party of engineers, attended by a strong military escort, persisted in surveying the land, notwithstanding the indignant opposition of the natives, and the peremptory order of Sandilli for the removal of the tent, flags, stakes, and such like, erected on his territory. Sir Peregrine Maitland considered that desisting from the survey would encourage the war-party among the Kafirs; the frontier authorities happily acted upon the simple principles of justice, and conscious that the survey was both an "unlawful act" and an "awkward mistake," they stopped it, and behaved towards the chiefs with so much prudence and moderation, that hostilities were averted when they seemed on the eve of breaking out, "unprovoked by any act of the Kafir natives." Both the lieutenant-governor, Colonel Hare, and the frontier commissioner, Major (not Sir Harry) Smith, emphatically warned the governor against the course he was pursuing; the former especially entreated him to beware of being misled "by the alarming and exciting rumours that have been wickedly and extensively circulated throughout the border, by persons always ready and desirous for the work of agitation, all of which rumours had no other foundation than a restlessness among the Kafirs in their own country, caused by the grievous sufferings they were then enduring, in consequence of their great loss of cattle, and the failure in their harvests, occasioned by long-continued drought." He assured the governor of his conviction that neither the chiefs nor the people had any hostile feeling towards the colony, and that if not provoked by us, there was no danger of the commencement of war on their side; but," he added, "that any attempt at expulsion would be resisted by every chief from the Fish River to the Buffalo. Nothing short of a clear breach of faith, which should be viewed by the whole nation as a preliminary towards driving them from their country, would induce them to make common cause against the colony; but that measure once decided

upon, could be accomplished only by means of an adequate force sent from England, and at the cost of another million sterling."*

This timely warning was disregarded, and a few weeks furnished the governor with what he deemed a sufficient reason for declaring war against the whole nation. A Kafir, named Kleintje, was accused of having stolen an axe; it was taken from him, and he was suffered to depart; but the following day he was apprehended and taken before a magistrate, who determined to send him to Graham's Town to wait for trial at the circuit court. The chief (Tola), to whose tribe the accused belonged, said, that was contrary to the treaty, that all such offences were to be tried at Fort Beaufort, in the immediate vicinity of the frontier, where both parties could have their witnesses, and the matter might be properly investigated. The magistrate persisted in his determination, and sent the man, with a slight escort of two or three Hottentot policemen, across the Kafir frontier, within sight of his own kraal. As the party were passing, a number of young men rushed out to rescue their countrymen; the constable in charge fired, and shot the brother of the prisoner dead, but the captive himself escaped; the Kafirs, in their rage and haste, ruthlessly murdering the Hottentot to whom he had been handcuffed for security.

The conduct of the chiefs on this occasion sufficiently proved that they had no desire to create a "*casus belli*." Tola, the chief of minor rank, who had before endeavoured to moderate the proceedings of the magistrate, went at once to the diplomatic agent, stationed at Block Drift, to explain the case. He pleaded that the prisoner had been unjustly accused, and hurried off without inquiry. The governor, he hoped, would consider the affair, and leave it as it stood. A Hottentot was dead on one side, a Kafir on the other. Botman, the superior chief, when desired to surrender Kleintje and his rescuers, replied that he could not, they were not to be found, adding, "Kleintje is dead; for his brother has been killed, and that is enough. The governor weeps over the Hottentot, and we weep over our man." Sandilli, on being appealed to, declared that he "did not understand the treaties required small thefts, such as of beads and axes, to be tried at Graham's

* Parl. Papers, February, 1847; p. 60. Their partial expulsion cost more than double that sum.

Town at the circuit court. "I understand," said he, "that stealers of horses and cattle should be sent there, while a short imprisonment at Beaufort would suffice for petty thefts. The governor must not be in haste with forces in this case. Let us speak about it, that we may understand it."*

But the governor was in haste; he considered the unwillingness of the chiefs to deliver up the offenders, as a sufficient proof of their being confederated against the government, and he at once proceeded to the frontier, and proclaimed his intention of summarily punishing them, and crushing the Kafir war-party in general.† Sandilli went to the diplomatic agent (Mr. Stretch) on the 27th of March, promised to deliver up the offenders, and entreated the missionaries and traders not to leave his country, for he had no intention of war;‡ but his representations were insufficient to avert the invasion of his country. On the 11th of April, 1846, the troops took the field, on the 15th they encamped at the Burn's Hill missionary station, and the following morning prepared to storm the Amatola Mountains, where the enemy had assembled in force. Apparently the projectors of this most unjustifiable invasion had entirely forgotten the determined courage evinced by the Kafirs in the last war, and expected them to submit without a struggle. If the existence of an extensive and influential war party had been believed, surely nothing but the most complete infatuation could have induced the sending of so small a force as 1,500 or 1,600 men, part of which moreover consisted of heavy cavalry, accompanied by 123 waggons, to wage deadly warfare against immense hordes of light-footed, athletic, and more or less armed natives, in the stronghold which had heretofore been deemed impregnable. The small invading force evinced perfect discipline, and unwavering courage, even while toiling through steep and wooded ravines, actually red with Kafirs, in all the hideousness of their war paint, who yelled forth their usual defying taunt—"Izāpā! Izāpā!" (come on! come on!) Colonel Campbell, at the head of a body of infantry, a battalion of the 91st regiment, and 180 Kat River burghers, succeeded in forcing an

important pass between the Amatola valley and the heights, notwithstanding the determined opposition of the Kafirs, who advanced to a hand-and-hand encounter, discharging their muskets within a few yards of the troops. But their firelocks were overcharged; they uniformly fired too high, and consequently inflicted little injury, while they themselves suffered severely from the steady fire kept up by the 91st, while toiling up the steep and wooded ascent, at the summit of which they were joined by Colonel Somerset at the head of the second division. The whole force then moved down to the flats at the base of the hills, and bivouacked that night around 1,800 head of cattle, swept off from the open ground at the foot of the mountains. During these operations, serious damage was inflicted by a party of the enemy. The Burns' Hill station was attacked, an officer (Captain Baimbrick) and four privates of the 91st killed; and notwithstanding the artillery of the British, and the employment of those fearful engines of destruction—shells, so skilfully thrown that they exploded in the very midst of large masses of them, the Kafirs advanced undauntedly, and on the morning of the 17th, captured sixty-three of the waggons. The force in charge of the waggons were chiefly Hottentots; they saved the three which contained ammunition, by the exercise of most desperate and determined courage, defending them from eight in the morning until eight at night, by which time succour arrived. Colonel Somerset, with the remainder of the force, then fell back upon Block Drift, the line of march being throughout beset by swarms of Kafirs, pertinaciously striving to cut off his retreat. Meanwhile the governor and his staff had arrived at Post Victoria, where a defensive force had been stationed. The enemy approached at break of day, carried off large numbers of valuable draught oxen, and succeeded in retaining possession of them, after a sharp struggle with the force sent in pursuit. Soon after this it was deemed necessary to abandon and burn Post Victoria, and remove the stores to Fort Beaufort. This most unpropitious opening of the campaign appears to have awakened the governor to a more just

tion of the records of British residencies in native districts from 1835 to 1846, that the Kafir side of the question might be made known. He declares that abundant evidence would be thereby afforded of the excellent working of the Glenelg treaties, up to the period of their alteration by Governor Napier.

* Par. Pap., Feb., 1847; pp. 84-86, 90. † *Id.*, p. 106.

‡ Mr. Stretch, in his character of diplomatic agent, protested strongly against the proposed invasion, at a military council held at Fort Beaufort, on the 8th of April, and has since published a pamphlet, in which he forcibly urges upon the government the examina-

appreciation of the responsibility he had incurred. Addressing the colonial secretary (Lord Stanley) on the 24th of April, he declares that the officers engaged in the last Kafir war were astonished at the resoluteness and skill now suddenly displayed by the Gaikas, and that he had no conception of the extent to which they were furnished with fire-arms, or of the facility with which they used them. Their persevering courage in facing artillery, their combination and expertness in skirmishing in the bush and harassing the troops, were new and startling features in their warfare which rendered them altogether "no contemptible foe."

Although the loss of the British in killed and wounded had been very trifling, the capture of the baggage waggons, the retreat from the Amatola, and the abandonment of Post Victoria, clearly placed the advantage on the side of the enemy. On the 21st of May, forty-one waggons laden with supplies destined for Fort Peddie, were intercepted on their way, and Colonel Somerset himself, at the head of 1,200 men, succeeded only with extreme difficulty in conveying a second detachment of loaded ox-waggons there. The whole of the tribes between the frontier and the Kei united. Macomo, who up to the last moment had evinced the most friendly dispositions towards the colony, by vainly entreating to be received within its precincts, and formally recognized as a British subject, was now compelled by his tribe to join their hostility against the people who had tacitly rejected his offers of friendship. To guard a frontier which, without reckoning its numerous indentures, measured 200 miles, against the inroads of the whole Kafir nation, was manifestly impossible; large

marauding parties entered it at all points, from the Winterberg to the sea, burning houses, carrying off flocks, and holding possession of the forests, the open country, and even of the high roads. Happily but few lives were lost, the farmers having collected themselves in "lagers" or small camps, along the border; sheltering, as they best could, their families and such of their cattle and other property as they had been able to collect.

At this crisis the governor took upon himself the direction of military operations, proclaimed martial law throughout the colony, and summoned a burgher force from every district, to assemble under their field-commandants and field-cornets on the frontier without delay. But here another difficulty occurred; the extensive emigration which had taken place since the last war, had removed the most belligerent class of boors, while those who remained, dissatisfied with the proceedings of the government, showed no inclination to take up arms in its cause. Happily the influence and ability of Sir Andreas Stockenström, though little regarded in time of peace, were still available in this season of danger and depression. He was appointed commandant-general of the burgher forces of the eastern districts, which formed a distinct division of the colonial force, and before the end of May became so efficiently organized, as to completely shield the Cradock and Somerset districts, and the upper part of Albany. In less than one month, without the assistance of engineer, sapper, or miner, the most open and exposed portion of the frontier had been converted into the strongest, by means of a series of well-established posts. Towards the end of June* this division was prepared for offen-

* The only occasion throughout the tedious campaign, in which the British succeeded in surprising the Kafirs, was on the open ground between the Keiskamma and the Fish River. Here, on the 7th of June, about 600 were discovered in a body, and immediately charged upon by Colonel Somerset. For a moment they showed a front, but their serried masses were broken through, and trampled to the dust by the horsemen. Hotly pursued, and hewn down at every step, they still threw showers of assegais, flying meanwhile so rapidly that a large number had well-nigh gained the shelter of the Keiskamma Bush, when Captain Hogg, with a troop of the 7th dragoons, intercepted their flight. Then, no longer attempting resistance or escape, they strove to shelter themselves amidst the scattered clumps of grass and brushwood, while their pursuers, weary of carnage, dismounted to breathe their tired horses. At this moment a part of the Fingoe levies arrived

on foot. Too late for the fight, they were soon enough to vent their miserable malice on the people whom they feared and hated. Lieutenant-colonel Napier (one of the seven staff officers despatched from England, in 1846, to assist Sir Peregrine Maitland in terminating the war) has placed on record a fearful description of "the ferocious eagerness with which they searched among the tall grass and low bushes for their crouching foes; mercilessly, and in cold blood, despatching them when discovered." Some, when they found their retreat completely cut off, committed suicide by severing their own throats with the sharp edge of the assegai, to avoid the ruthless barbarities of the Fingoes. No attempt whatever appears to have been made by the British officers to stop this wholesale slaughter. One eye-witness to this revolting and disgraceful scene, whose testimony is quoted by Lieutenant-colonel Napier, says, "We could not, had we tried to do so, have put a stop to

sive as well as defensive operations, comprising 1,600 men, ready to take the field, and about 1,200 destined to maintain the line of posts above mentioned. Four hundred of the Kat River Legion, under their brave leaders Groepe and Botha, were transferred from the first or Somerset division to the third, and posted in readiness to attack the fastnesses of the Amatola, so soon as the commander-in-chief should order the contemplated combined movement of the whole army, then amounting to about 10,000 men.

This movement, however, succeeded but partially, from the want (it is asserted) of efficient cooperation and combination in the three divisions. That headed by Sir Andreas Stockenstrom was alone completely successful in forcing the Amatola passes, searching every nook and corner, defeating their tenants wherever they ventured to make a stand, and successfully encamping in those strongholds so long deemed impregnable.

The spell seemed broken, and as early as the evening of the 30th of August, messengers were sent by the Gaika leaders to tell the Tambookies (some of whom had lately joined them) that "the Amatola was broken to pieces, that Kafirland was lost, and that the Amakosæ had no longer a place of rest."*

Still the Kafirs were not subdued. Hoping to paralyze further proceedings, they had burned all the grass, and this, together with extreme scarcity of supplies, greatly crippled the movements of the invading army. Notwithstanding these difficulties, it was considered expedient to take advantage of the panic which temporarily prevailed among the western Kafirs, by marching across the Kei, forcing a passage to the very residence of Kreili (who was supposed to have abetted or given refuge to his belligerent countrymen), and dictating to him the course he was to pursue. Kreili, on

this pastime of the Fingoes, for we had all dismounted; both horses and men being dead-beat, and completely done up; and it is likely that, if we could have put a stop to it, there were many present who might probably not have taken the trouble to do so; for, disgusting as was the sight, we were all well aware that the Kafirs, under similar circumstances, would have treated us much worse; and since the Fingoes were the scavengers, some thought it was a good opportunity to get rid of a great deal of foul garbage and filth."—Lieutenant-colonel E. E. Napier's *Excursions in Southern Africa*, vol. ii., p. 268. Thus terminated the action of the Gwanga, in the butchery of a conquered foe, to whose bravery even their most inveterate and prejudiced enemies have borne witness.

DIV. VII.

learning the approach of troops, despatched two of his chief counsellors to disclaim, on his part, all share in the present hostilities, and to entreat a continuation of the peace which he had done nothing to violate. The answer was, that any discussion upon the subject could be held only at the residence of the chief, and thither Sir Andreas Stockenstrom and Lieutenant-colonel Johnstone proceeded, and on the 21st of August held a conference with Kreili and his council, and obtained their full consent to all the required conditions, of affording no countenance to the Gaikas, restoring all stolen cattle that should be brought into his territory, and acknowledging the right of the British government to all the land west of the Great or White Kei, which was now reassumed as the colonial boundary. Sir Peregrine Maitland subsequently refused to sanction this convention, demanding from Kreili 15,000 head of cattle, as reparation for his alleged ill-conduct. Kreili indignantly declared that he thought the white people were seeking occasion to quarrel with him, in order that they might send him after his father [Hintza], who had been killed without the shadow of guilt being proved against him. If it were really so, nothing he could say would have any effect; he could but patiently wait the result.† On his return from Kreili's country, Sir Andreas attacked the Tambookies under Mapassa, killed some 40 or 50 of them, and carried off between 7,000 and 8,000 cattle, after which the burghers, whose presence at their own farms was of great importance, solicited permission to retire, a boon which the governor, however unwillingly, could but grant. The war seemed almost as far from a conclusion as ever. Macomo had come to Fort Cox and sued for peace, in the name of the associate chiefs; he said that he had always desired it, yet that while praying for it his kraal

Colonel Napier himself declares them "to be 'game to the back-bone,' never crying out, however badly wounded, or even demanding quarter, but merely pronouncing the name of their chief ere they give up the ghost." (Vol. ii., p. 337.) Yet this writer can suggest no gentler mode of dealing with the Kafirs than that of *shooting or enslaving* the whole nation (Vol. ii., p. 228), and he declares it to be "pretty generally the opinion, that these brigands should be treated like wild beasts, even to the employment of bloodhounds in tracking them to their lairs." (Vol. i., p. 289.)

* Napier's *Excursions in South Africa*, vol. ii., pp. 209, 211.

† Parl. Papers, February, 1848; p. 16.

had been burned. He was told that it would be granted only on condition of their surrendering their arms, their plunder, and their land. Thereupon Sandilli declared that they would never consent to surrender the arms which they had honestly purchased, and that the cattle had been recaptured, but that he and his people would gladly live under British law. When told that this reply was a fresh declaration of hostility, Sandilli replied that he, for his part, would make no war, but should return to his place, and cultivate his gardens; the soldiers might come and kill him, but he would not fight any more.

In September, money, troops, and stores of all kinds, arrived from England, but the impracticability of conveying supplies to the interior, compelled the governor to vacate his advanced camp facing the poorts of the Buffalo, and fall back upon Waterloo Bay.* The Kafirs again intrenched themselves in the Amatola mountains, and true to their expressed determination, offered nothing but passive resistance, vacating the country whenever it was patrolled by the enemy, and occupying it again as soon as the soldiers had left it. At length, towards the close of November, Macomo voluntarily placed himself and his family in the hands of the British, and Sandilli delivered up the Kafir who, by killing the Hottentot, had been the immediate cause of the war. A large number of horses, sheep, and muskets, and 20,000 head of cattle, were demanded from the Gaikas, who consented to the payment, but entreated that time might be given them. All who brought arms were registered, and tickets given them in token of their being British subjects, and at liberty to settle down in peace. The Kafirs were henceforth to be excluded from the whole of the ceded territory, and likewise from the Chumie Hoek (or corner), and Block Drift. Macomo appealed earnestly against the mandate of expulsion, urging his well-known unwillingness to the war, and his entreaty, before the outbreak, to be taken into the colony. He spoke of the good conduct of his father, who had lived in the fair land in which he himself had grown old, adding, "Here my children have been born. Let me die in peace where I have lived so long." His daughter Amakeya, the belle of Kafirland, as a last resource,

pleaded in most pathetic language for her father, offering, if his sentence of banishment might be rescinded, to be herself the guarantee of his good faith. But it was all in vain, and Macomo was sent to Algoa Bay in somewhat the position of a state prisoner under military surveillance.

Without any specific declaration of peace, war was virtually at an end. The governor considered the Kafirs to have no alternative but starvation or submission, and frankly declared that he dared not resume hostilities, and so prevent them from sowing the little corn which the lateness of the season would yet permit, or destroy that already sown, lest he should bring upon the colony "a nation of savages in the desperation of famine." At this time, November, 1846, he described the frontier as almost, if not quite unmolested by Kafirs; but, taught at last by experience, he complained bitterly against the frontier press, for keeping the country in a state of excitement by promulgating mischievous fabrications and false alarms.†

Colonel Hare at length received the permission to retire which he had so long solicited. His health had given way under the harassing anxiety of the campaign, and he died a few days after his embarkation for England. Sir Andreas Stockenstrom, now advanced in years, again sought the retirement of private life, worn down by excessive mental and bodily fatigue, and doubtless disgusted by the conduct of the governor in refusing to sanction his convention with Kreili. The gradual disbandment of the provisional corps was commenced, the 27th, 90th, and 91st regiments were warned to hold themselves in readiness for embarkation, the registration of the chiefs went on satisfactorily, and martial law was repealed. Sir Peregrine Maitland, however, though misled by the colonial war-party into commencing what he eventually termed a "deplorable war," now entirely forfeited his short-lived popularity by refusing to follow Sir Benjamin D'Urban's example, and grant farms to the colonists in the newly-acquired territory. He decided upon settling coloured people only along the new border, and preventing the thin white population of Albany being reproduced further east in proximity to Kafir tribes, by continuing the Fish and Kat Rivers as the limit of European farms. This he considered the safest means of maintaining the peace, which he now believed

* In addition to other misadventures, a valuable store-ship was wrecked in Waterloo Bay.

† Parl. Papers, February, 1847; p. 198.

fairly established. Not so thought Sir H. Pottinger, who arrived in Cape Town in January, 1847, as his successor in the civil administration, accompanied by Sir G. Berkeley, who forthwith assumed the military command. The new governor's sway lasted only about ten months, but its effects are felt at the present moment. He forthwith decided that things could not be allowed to settle down in their then form, stopped the departure of the troops, planned the extension of the colonial boundary to the Buffalo, because a strong position at the mouth of that river was of vital moment, and declared the future subjugation of Kreili to be a *sine quâ non* to a final settlement.* The question now arose as to how a sufficient force was to be found to carry out these extensive designs. The local levies had been disbanded, and their reformation was found to be impossible, every individual to whom the question was put positively refusing to re-enlist.

Finding it hopeless to attempt the re-enactment of martial law, the governor issued a proclamation asking the colonists to volunteer their aid in attacking Pato (a Zlambie chief who had not registered or surrendered his arms), driving him across the Kei, and following him into Kreili's country. To this appeal the colonists were naturally very unwilling to respond; but Sir H. Pottinger, knowing that the Hottentots were in fact the most efficient troops that could be procured, thought that no ceremony need be observed with them, and decreed that the inhabitants of the Kat River settlement should furnish 900 unpaid soldiers, on pain of the immediate confiscation of their lands.† The threat which enforced this peremptory demand was perfectly unjustifiable. The Kat River settlers were as independent as any of their European fellow-subjects, and held their lands perfectly free from any conditions of military service. Nevertheless, they had ever willingly borne a double share of toil and privation,‡ forsaking their homes at a time when their presence was most needed for their defence, and fighting side by side

with the British troops, whose officers could find no terms of praise too high for these valuable and zealous auxiliaries.

After the peace they returned to their devastated abodes; and, having received no pay, had once more to struggle with the deepest poverty. This they did so effectually, that the property on the settlement in 1845 amounted in value to £65,850, being an average of £330 to every square mile of territory.§ In 1846 they again came cheerfully and readily to the defence of the frontier, and remained there though they thereby lost their cattle and crops, though their homesteads were destroyed, and they themselves half naked and almost starving. They returned to their country after the campaign in Kafirland, exhausted and almost literally naked.

In March, 1847, Sir George Berkeley testified that whereas only 3 per cent. of the European adult population was levied from other districts, the Kat River burghers actually furnished a quota of 90 per cent.; he therefore requested as a matter of favour, that the wives and children of those who, being actively engaged in garrisoning important posts in that district, were unable to attend to agricultural pursuits, or provide for their wives and children in any other way, should be allowed rations. This was granted, but all applications on their behalf for the long promised supplies of clothing were useless. Still they bore their grievances with patience, until their local magistrate, a Mr. Biddulph, who, from his notorious hostility to the coloured races, was signally unfitted for his position, published a most calumnious report, to which Sir Henry Pottinger, to his great discredit, gave credence and circulation. The Kat River settlers vainly demanded inquiry and redress; but the expressions of indignant surprise|| called forth throughout the colony, and the urgent remonstrances of Sir A. Stockenstrom, led to the removal of Mr. Biddulph, who was thereupon appointed to a more lucrative magisterial position in another part of the colony. Mr. Bowker, sufferings of this unfortunate settlement were proportionately greater than those of any other section of the frontier; out of the 100 lives lost on the side of the British, ten belonged to the Kat River community.

§ Dr. Innes' Report; Parl. Papers, August, 1851; p. 413.

|| The *Commercial Advertiser* drew especial notice to the fact, that in three years, 1845, '6, '7, only two clear cases of crime had been proved against the whole Kat River population. One of these was a petty theft, the other an assault.

* Parl. Papers, February, 1848; pp. 12, 74.

† *Idem*, p. 45.

‡ Before the outbreak of 1835, they possessed 624 horses, 5,406 cattle, 8,925 sheep and goats, and had sown 310 muids of wheat, barley, and oats; 70 muids of Indian corn, beans, and peas; and 645 ridges of pumpkins. Of this property they lost nearly the whole; 557 horses, 3,992 black cattle, and 5,460 sheep and goats were swept away; the greater part of their produce was destroyed, and 44 of their dwellings were burnt to the ground. In every respect the

the person selected to fill his place, was equally, if not more obnoxious to the people. His avowed contempt and hostility towards the coloured races had been severely commented on in 1845 by the colonial secretary in the Legislative Council, and on the present occasion he had made himself conspicuous by publishing a letter in a Graham's Town paper, vindicating the statements of Mr. Biddulph.* The placing this man over the settlement, while yet rankling under the ill-treatment of the magistrate who had just been removed, was therefore felt as a deliberate insult. Nor was this all; having no means of repairing their dams and canals for irrigation, having lost their oxen in the war, and being thereby unable to plough, the Hottentots set to work felling timber in the forests of the settlement, cutting it into planks, and conveying it as they best could to markets, distant 60, 80, or 100 miles or more. In a short time they had 90 saw-pits at work. While thus striving to eke out a hard livelihood, they were informed that not only would no remuneration for losses and no rewards for services be given them, but that "all previous privileges or immunities granted or sanctioned, with respect to cutting wood in their own rocky ravines, were now abrogated or annulled," and that for licence to cut each separate load, six shillings must be paid to government.

Surely no more certain way of sowing broadcast the seeds of disaffection among a numerous and well-conducted body of people, could have been adopted, than the ungrateful, not to say malicious, spirit thus evinced towards them.

The course pursued towards the Kafirs was scarcely less impolitic. The theft of some eighteen goats by one of Sandilli's tribe, and the alleged participation of the chief in the plunder, was made the pretext for an attempt to seize him during the night,

* Parl. Papers, August, 1851; p. 414.

† Twenty-four men of the Kafir police formed a portion of this ill-advised expedition. This force had been established partly by the late and partly by the existing governor. In time of peace it answered admirably, in war it proved worse than a failure.

‡ Among the measures adopted at this time was the flogging system, by which all Kafir thieves captured by patrols, or sent in by chiefs, were to be "publicly and soundly flogged."—Parl. Papers, February, 1848; p. 141.

§ Sandilli (through Mr. Brownlee, the Gaika commissioner appointed by Governor Smith) has since given a very different version of this affair, stating that "he was invited by Colonel Somerset, through Major Bisset, to come to Colonel Buller's

a measure which Sir H. Pottinger considered would have "the most salutary lasting effect on all the chiefs and people of Kafirland."† The attempt failed, and Burn's Hill, near which Sandilli's kraal was situated, again witnessed the signal defeat of the invading party. The chief was thenceforth proclaimed a rebel, and his people were denounced for having retained their muskets and used them in his defence. Preparations were made for entering and devastating his country, from which he was to be for ever expelled, and Sir Henry Pottinger, as an encouragement to the burghers to join him, restored the old commando system, and authorized the burghers to appropriate any spoil they could seize.‡ Famine and the sword once again threatened to ravage his unhappy tribe, when Sandilli essayed to stay the uplifted hand by the voluntary surrender§ of himself and eighty of his chief men, including his brother Anta and several of his counsellors.||

This occurred in October (1847): in the following month, Sir H. Pottinger was succeeded by Sir Harry Smith.¶ The first public act of the new governor was, however, little calculated to impress the beholders with an idea of the sound judgment and discretion so necessary at this crisis; nor indeed could it in any way add to the brilliant reputation for personal bravery achieved by the hero of Aliwal during his Indian career. On landing at Port Elizabeth (Algoa Bay), on the 14th of December, his excellency was cordially greeted by the entire population, among whom was Macomo. Sir Harry recognised him, half drew his sword from its scabbard, shook it at him, and stamped his foot on the ground. Shortly after he sent for the chief, who, upon being introduced, extended his hand, in return for which his excellency gave him his foot, collared him, laid him prostrate, put his foot upon his camp to make peace, with the assurance that nothing should be done to him; that on going to the camp, trusting in this assurance, and with the intention of returning at night to his hiding-place, he was made a prisoner, and sent to Graham's Town.—Parl. Papers, March, 1851; p. 41.

|| Sir Harry Smith states that in this "bit of a brush with Sandilli, £56,000 were expended in wagon hire alone."—Parl. Papers, July, 1848; p. 39.

¶ The immediate ground of Sir H. Smith's appointment was probably the statement laid by him before the Duke of Wellington, that with an army of 4,000 men in all, 2,000 for defence and 2,000 for invasion, the Kafirs might be completely subdued in two or three weeks.—Parl. Papers, February, 1848; p. 111.

neck, and then brandished his sword over his head. This part of the story was related far and wide; and the prestige of Sir Harry's name was accepted as an apology for the violation of common decency: but the narrators have generally omitted to add, that Macomo, on rising, looked the governor quietly in the face, remarking—"I always thought you a great man till this day."*

Sandilli and his counsellors were subsequently compelled to go through the degrading ceremony of kissing the governor's foot, who then sent them back to their own people. On the 7th January, 1848, a great assembly was held, at which Sandilli, Macomo, and all the leading chiefs and counsellors of British Kaffraria were present, as also Umterara and Mapassa, the principal Tambookie chiefs; Madoor, the Bushman chief; and a deputation of six or eight counsellors from Kreili. The programme of this meeting, as laid down by Sir H. Smith, excited much surprise. First, a prayer of his own composition, in which the Kafirs were made to express their repentance for having made war upon the English, was translated into the Kafir language, and offered up by a Wesleyan minister, on behalf of these heathens, to the God of the Christians. Then two emblems—one being a very long broomstick, with a brass door-handle at the top, the other a serjeant's halberd—were shown to the chiefs; the first being supposed to designate peace;

the other, war. The stick of peace being chosen with acclamation, the stick of war was thrown away. Sir Harry proceeded to inform the chiefs, that he should form no treaty with them; that he had taken possession of their country; but would permit them to occupy such parts of it as he thought fit, on condition of their annually bringing a bullock, in token of submission. In future, he added, they were to acknowledge no ruler but himself; he, as the representative of the Queen of England, was to be their *Inkosi Inkulu*, or great chief. The Kafirs attempted to remonstrate. Pato boldly stated, that the people would listen to the "word of Sandilli, the son of Gaika, chief of all;" whereupon the governor brandished the stick of war, violently exclaiming, "No Sandilli! I am the great chief." Further to intimidate the Kafirs, a waggon was blown up by means of an electric battery; and they were told that if they ever attempted to attack another, they would be blown up with it. Thus ended this strange scene. The chiefs departed, as they afterwards declared, with "their talk still in their hearts;" for of remonstrance, much less complaint, the governor refused to hear one word. Kafirland was then divided into counties, towns, and villages, bearing English names; its "rich and (in many parts) extensive tracts of fertile land" were publicly announced for sale,† and military villages established in various localities.‡ The

* Parl. Papers, August, 1851; p. 387.

† Proclamation dated 23rd December, 1847.

‡ The state of these villages in June, 1848, is thus shown in the Parl. Papers, of May 3, 1849; p. 16:—

Villages.	Officers.	Non-Com. Officers.	Privates.	Women.	Children.	Total.
Juanasberg	1	5	65	2	2	75
Woburn	1	4	66	—	—	71
Auckland	—	9	54	12	42	115
Ely	—	1	43	3	11	58
Total	2	19	228	17	55	319

To one of these villages a very disgraceful story is attached. The celebrated Gaika chief, Tyalie, died in 1844. Among the common people little attention is paid to the rites or place of sepulture; but the veneration felt for the chiefs is extended even to their dead bodies, and Tyalie (Sandilli's uncle) having been an influential leader, famous for his strength and courage, and fine person, was buried with no ordinary pomp. His people did their utmost to honour and perpetuate his memory. In the grave were deposited the cloak, saddle, assegais, and other articles

considered to appertain peculiarly to the deceased. His hut and all the rest of the kraal were abandoned according to Kafir usage, and from the time of the burial the grave was carefully watched by faithful clansmen with superstitious reverence. After the war of 1846, his widow and children were driven to the opposite side of the river on which the tomb was situated, and forbidden under heavy penalties to return; and on a portion of the land of which the family and clansmen of Tyalie had been deprived, was planted the military village of Woburn,—the disbanded soldiers being purposely located there, to prevent the Kafirs crossing the river to the beautiful spot which had been the great place of the tribe. Their feelings at this expulsion may be easily imagined; as if to exasperate them to the highest degree, the honoured grave of Tyalie was violated, and pillaged of the articles buried with the chief. The *Missionary Record of the United Presbyterian Church*, in which many particulars are related, says that the disbanded soldiers at Woburn "proved to be men of the most worthless character;" and the Rev. H. Renton stated before the Parliamentary Committee of 1851, that "in the whole village there was not a married man, but every man had his concubine." The outrage committed on Tyalie's burial-place was represented to the authorities, and strong disapprobation expressed, but no punishment was inflicted on the perpetrators; and "in its rifled state

English money, so lavishly spent during the war, had not all been bestowed upon the Kafirs in the form of powder and shot; a very large proportion of it was now ready to be invested in the purchase of their land. Thus Sir H. Smith, in making a tour through what he termed British Kaffraria, found "everywhere traders and their followers, adventurers, farmers, and landholders, all vociferous for the purchase of land; all desirous to avail themselves of the present state of things, and the prospect of future security (?) by investing the enormous sums of money which many have amassed in the confusion and disorder which war creates."*

In fact, Sir H. Smith reintroduced the D'Urban system, of taking by force, and keeping by force. The Kafirs, prostrated by the two-fold scourge of war and famine, could but brood over their wrongs, and bide their time. A partial attempt to introduce among them the elements of civilization was made, by agricultural implements being sent from England by the British government, the Aborigines Protection Society, and by the Society of Friends; yet after all it must have seemed little better than a hollow mockery to take the best portion of their land from them with one hand, and give them instruments for cultivation with the other. Here, too, most mistaken notions of economy prevailed. From our very earliest dealings with our warlike neighbours, the same error had marked every step of our proceedings. We never sought to purchase land by the free consent of chiefs, counsellors, and people; to found among them schools in which they should be taught first religious knowledge, the only sure basis of all other, then to the men the rudiments of agriculture and mechanics, and to the women, of housewifely duties. We never strove to induce them to endeavour, by draining, fencing, irrigation, &c., to improve their own land. The well-directed zeal of individuals, self-formed into societies, did something of this kind; but to have full effect, such essays must have the authority and stanch support of government. It cannot be too strongly borne in mind, that a few thousands, judi-

ciously expended, in all human probability would have spared the outlay of as many millions, and with this great difference, that in that case we might have confidently hoped for a blessing on our national efforts.

On taking possession of the country of the Kafirs, the question arose, how to raise a revenue for their government. The large sum obtainable by the sale of their land was not considered sufficient, and Sir H. Smith proposed to introduce a system of direct taxation by the imposition of an annual capitation tax of one shilling per head. The colonial commissioner, Colonel Mackinnon, appears to have procured the abandonment of this measure by forcibly pointing out its impolicy and injustice; declaring that it would be next to impossible to raise it, and that besides, in laying down the law to the chiefs at the great meeting, no mention whatever had been made of any tax to be levied on them. There was the less excuse for such a proposition, because considerable revenue was, in various ways, already derived from the Kafirs. Thus, in all cases of theft, a fine was exacted for the government of double the amount of the cattle stolen, after compensating the owner for the loss; the chiefs, on some occasions, were made to pay for the spoor (trace) of stolen cattle followed to their locations; and all cattle and horses found straying, and unclaimed within a limited time, were confiscated. For the six months ending July, 1848, the fines levied amounted to £419:8s., and Kafir cattle to the amount of £100 was, besides, then in the government kraals.† The consumption of taxed articles was rapidly increasing among the Kafirs, in whose territory no less than thirty-eight general traders were at this time established, each paying £50 annually for a licence; and therefore, it is to be presumed, doing a large amount of business by selling blankets, clothes, handkerchiefs, hoes, axes, spades, beads, copper wire, tobacco, sugar; most of them articles of British manufacture, and paying on their arrival in the colony duties varying from five to twelve per cent. Arms and ammunition, doubtless, formed a large though unavowed portion of the traffic,

the grave remained." A week after the transaction occurred, Mrs. Renton visited the spot, and remarked that "the men who had acted such a part could not expect to come to the grave in peace." Neither did they—a sudden and fearful destruction overwhelmed them all.—Parl. Papers, Aug., 1851; p. 381. *Missionary Record of the United Presbyterian Church, and Colonial Intelligencer*, for February, 1852; pp. 367—8.

* Despatch from Governor Smith, dated January 14th, 1848. In a subsequent communication dated March 23rd, 1848, Sir Harry states that the settlers in the eastern districts "having, generally speaking, acquired large fortunes by the war expenditure," were prepared to pay large prices for the newly annexed land.—Parl. Papers, May, 1849; p. 7.

† Parl. Papers, May, 1849; pp. 18, 19.

and the extraordinary amount which the Kafirs were subsequently found to possess, proved how sedulous and unceasing they had been in their acquisition, during a period when they were described as completely subjugated, though they were in reality kept down by nothing less than the unceasing pressure of a coercive system, scarcely less wearisome and exhausting to the ruling than to the ruled party.

During the temporary cessation of hostilities with the Kafirs, the colony, so far from enjoying internal tranquillity, became the scene of discord and excitement. The cause of this unhappy state of things requires special notice, because it induced the assumption on the part of the colonists of an opposing attitude, and bore the semblance of ingratitude towards the mother country, whose resources had been so freely drawn upon for their defence. Extension of boundary had been constantly deprecated by the home government, whose sanction to each addition had been given reluctantly, and solely in compliance with urgent representations from the colony. Nevertheless, in defence of territory thus acquired, and in most cases freely granted, no cost was spared. Under these circumstances it might have been supposed that whatever temporary cause of dissension should occur, its effects would speedily pass away. And so it is to be hoped they have done, as far as England is concerned, but the stormy epoch at which we now arrive has not failed to leave sad traces of party spirit and disunion among the settlers themselves, and to awaken long dormant prejudices.

THE CONVICT QUESTION.—In consequence of no criminals being sent to New South Wales after the year 1810, and of Van Diemen's Land being overcrowded with them, the subject of transportation had become extremely embarrassing to the British government. The difficulty had been increased by the convictions connected with the agrarian disturbances in Ireland, arising from famine and political excitement. The average number of transports from Ireland had risen rapidly from 627 in 1845, to 708 in 1846, 2,208 in 1847, 2,729 in 1848, and 3,039 in 1849. The prisons throughout the United Kingdom were full, nor could any more be received in the hulks at Bermuda and Gibraltar, where convicts were employed in strengthening the fortifications. The government, instead of founding a new penal settlement in some distant part of the

empire, as suggested with regard to Queen Charlotte's Island in the Northern Pacific, (see Vol. I., page 350,) or at the Falkland Islands in the Southern Ocean, resolved to distribute the convicts among certain of the colonies, under the authority of an act of parliament (5 Geo. IV.), which empowers the sovereign, with the advice of the privy council, to appoint any place in H.M. dominions for the transportation of felons and others under sentence of banishment beyond the seas. Accordingly, in September, 1848, an order in council was passed, whereby the secretary of state was authorized to select such colonies as he deemed advisable for the reception of convicts, especially such as had undergone some punishment and probation, whether in prisons at home, at Bermuda, or at Gibraltar.

A circular was sent by Earl Grey to the governors of several colonies (including the Cape of Good Hope), calling upon them to ascertain the opinions of the colonists as to the reception of convicts, in order that if they desired it, a certain class of these might be sent them.

The proposition to send criminals to the Cape of Good Hope, did not, however, originate with Earl Grey; by Lord John Russell, Lord Stanley, and Mr. Gladstone, when respectively at the head of the Colonial Office, the same idea had been entertained.* Moreover, Mr. Fairbairn and Dr. Adamson, the popular leaders of the anti-convict agitation in 1848-9, had some years before suggested, that English convicts might be beneficially employed in the construction of a breakwater at Table Bay. It is evident from the despatches and private letters of Earl Grey to Sir H. Smith, that the motives of his lordship were benevolent as regarded the convicts, and politic in his opinion as regarded both the State and the colonies. Unfortunately, without waiting to hear the opinion of the inhabitants, a vessel laden with 289 transports, was despatched to the Cape of Good Hope. Some of these were men who had been convicted for crimes in Ireland, which were said to have been, to some extent, incited by the famine and the insurrectionary and treasonable proceedings of John Mitchell, (who was on board the *Neptune*), and his ill-advised colleagues. The prisoners were considered deserving of tickets of leave; and, on landing, were to be dispersed throughout the colony and left to gain their own livelihood. As an inducement

* House of Commons Debate, February 14, 1850.

ment to the Cape colonists to receive them, the governor was informed in a despatch, dated 18th July, 1848,* that parliament had voted a sum of money for the passage of free emigrants in proportion to the convicts, whose wives and children would also be sent out, and that military pensioners would form their guard instead of soldiers from the regiments of the line; such pensioners and their families would thus increase the supply of labour, and contribute to the elements of security and of good order. The emigration of females was also to be specially encouraged, particularly of well-conducted girls, carefully selected from the workhouses in different parts of the kingdom. The colonists were, however, unanimous in rejecting these offers; they assembled in the different districts, in their local boards, or under their sectional religious denominations, and in various forms addressed petitions to the crown, the secretary of state, and the governor, praying that no convicts might be sent to the Cape.

The news arrived that the *Neptune* was actually on her way; and information likewise reached the colony, that European soldiers, transported from the regiments serving in the East Indies, Ceylon, or Mauritius, and whose numbers ranged from twenty to fifty yearly, were, under the provisions of the Mutiny Act, ordered to be located at the Cape. A perfect panic pervaded the colony; everything else was merged in the one idea of the Cape being made a penal settlement, or, as it was said, a "cess-pool" for the expelled vice and pollution of the United Kingdom, and the soldiery serving in the East. Besides this, it was feared, and not without reason, that political and military convicts would soon find their way among the Kafirs and neighbouring tribes, and by their talents render the aborigines more dangerous than ever.

As the colonists lacked the means of expressing their desires, which a representative assembly affords, they established an *Anti-Convict Association*, with branches throughout the country districts, binding themselves, by a pledge, to drop all intercourse with persons, of whatever description, concerned in "landing, supplying, or employing convicts." Banks, insurance-offices, and associated companies of every kind, concurred in this determination. On account of some transactions in preceding periods, the Legislative Council had become

* Parl Papers, January 31, 1850; p. 144.

so unpopular, that a resolution was formed to get rid of it. There being several vacancies, measures were taken to prevent these being filled up, and to remove existing members, "so that no unofficial person should hold a seat."

The governor was necessarily placed in a very difficult position. He appears to have partially sided with the colonists in their resistance, but yet to have made various injudicious attempts to counteract the influence of the agitating party, by offering pecuniary accommodation, from the public-treasury, to men of no public weight, as an inducement to become members of the Legislative Council, and by obscure threats of employing "military measures."

The Anti-convict Association had secured the adhesion to their measures of all contractors employed in supplying any branch of the public service, engaging to indemnify them for all penalties to which they might be subjected by breach of contract. The farmers and dealers of every kind had pledged themselves to refuse supplies to any persons who might be pointed out to them as favouring the introduction of convicts; and thus preparation was made to place the government in a state of helpless isolation, if the obnoxious measure were persisted in.

On the 19th of September, 1849, the *Neptune* and her dreaded freight reached Simon's Bay. When the intelligence reached Cape Town, 24 miles distant, the alarm was given; the bells of the churches tolled, the gong at the town-hall sounded, and great excitement prevailed. At eleven o'clock a letter was sent from the Cape Town municipal board to the governor, informing him that "the people have determined that the convicts must not, cannot, and shall not, be landed or be kept in any of the ports of this colony."† And in order "to remove the cause of the anxiety now prevailing, and to obviate the evil consequences which may result therefrom, and for which his excellency would be responsible," he was entreated to direct that the *Neptune*, after revictualling, should immediately leave the colony. The governor had already refused to accept the consignment of the vessel, or to pass her through the custom-house, directing or permitting that the charge of her should fall upon the naval authorities at Simon's Town.

He now, for the first time since his accession to office, assembled the Executive

† Parl. Papers, January 21, 1850, p. 99.

Council, which approved of all the measures he had taken, but concurred in opinion with him that to dismiss the vessel or change her destination to England, or to any other colony, was contrary to law, and beyond the limits of his authority. His excellency, however, offered a pledge that he would resign his office rather than assist in carrying out any measure for landing the convicts, whereupon a considerable portion of the Anti-convict Association, seeing no farther reason to oppose the local government, desired that the interdict against supplying the navy should be withdrawn, and tranquillity restored. Hitherto the British and Dutch colonists had acted with perfect unanimity, but, in the discussion of this question, there arose a diversity of feelings and purposes likely to have a great effect on the future of the colony. Being outvoted in their endeavours to secure peace, several of the leading members of the British population receded from all further interference with the matter, still, however, keeping aloof from Sir H. Smith, on the plea of want of confidence. The opposing party extended their operations, and included the navy and the whole body of the executive and judicial agents of the government under their interdict. The object of this movement, which was to remove the vessel from her anchorage, failed, and the discomfort and annoyance occasioned to individuals, created alienation in a community hitherto full of friendly feeling.*

When H.M. ministers became acquainted with the disturbed state of affairs at the Cape, orders were forwarded, changing the destination of the *Neptune* to Van Diemen's Island, and directing that any military convicts arriving from India should be despatched to England.

On the 14th February, 1850, the Anti-convict Association was formally dissolved. The funds which had been collected were ordered to be distributed in aid of those on whom fines and penalties had been imposed for the violation of government contracts, and a sum of money was voted to supply the convicts on board the *Neptune* with some comforts previous to their departure from Simon's Bay, where they had been detained 153 days. The surgeon-superin-

tendent, an excellent man, named Deas, had died shortly after his arrival at the Cape, worn out with the anxieties of the voyage, during which seven prisoners had perished, his end being doubtless accelerated by the disappointment of finding the unfortunate prisoners prevented from landing.

The next important event in the history of the colony was Sir H. Smith's assumption, on behalf of the crown, of the sovereignty of an extensive territory situated on the north-eastern frontier of the colony. His proceedings in this matter have been much canvassed, but the evidence at present published is scarcely sufficient to allow of an impartial reader arriving at any satisfactory conclusion. The following facts, derived chiefly from parliamentary papers, show the steps which immediately led to this fresh extension of the boundary:—

THE ORANGE RIVER SOVEREIGNTY.†—Prior as well as subsequent to the establishment of British dominion in Southern Africa, the boors residing on the north-eastern frontier, when suffering from the droughts to which the Graaf Reynet and adjoining districts are subject, were in the habit of driving their flocks for temporary herbage to the northern bank of the Orange River, or, properly speaking, to that branch of it known as the *Nu Gariep*, in contradistinction to the more northerly channel, called the *Ky Gariep*, or *Vaal River*. The country was then thinly inhabited by various native tribes. The miserable remnant of the Bosjesmen derived a precarious subsistence from the uncultivated roots and wild animals which abounded along the valleys of the aforesaid streams and their tributaries. The Corannas, another Hottentot race, but little superior to the Bosjesmen in civilization, likewise dwelt there; but its principal native proprietors were various branches of the great BECHUANA nation, whom some consider closely allied to the Kafirs, while others describe them as occupying a middle place between the Kafirs and the Hottentots, being less intelligent and warlike than the former, but more energetic than the latter. One powerful section of the Bechuanas, named the Bassutos, dwelt in the territory extending between the White Mountains, on the east, and the Caledon (a tributary stream), on the west; while a very considerable tract of country to the south-westward, extending along either bank of the Nu Gariep or Orange River, and also along the Orange River itself, after the junction of the Nu and Ky Gariep, came in process of time to be occupied by the unfortunate mulatto race, called Bastards, of whose origin mention has been previously made. The Griquas are a tribe or section of the Bastards,‡ who, towards the close of the last century, sought refuge from oppression and contumely, among the native tribes beyond the limits of the colony.

* Notes on Cape Affairs: by J. Adamson, D.D.; London, 1851.

† This section is given in small type to save space.

‡ The difference now observable between the Griquas and the Bastards consists chiefly in the pre-

dominance of Hottentot characteristics in the former, and those of the Dutch in the latter. The Griqua features are better defined, the complexion darker, hair more crisp, bearing more manly, with generally less of the mongrel than the Bastard. Both are indolent and apathetic; they speak the same language.

They migrated under the leadership of Adam Kok, a negro slave, who, by dint of industry and labour, had succeeded in purchasing his freedom, and led a wandering life, until induced by the unwearied exertions of the excellent missionary, Anderson, who joined himself to them in the year 1800, to forsake their nomadic habits and establish themselves at a spot called *Klaar Water*. This designation Mr. Campbell persuaded them (in 1813) to change for that of Griqua Town, and to call themselves Griquas instead of Bastards, their new name being apparently an abbreviation of Cherigriquois, the appellation given to a tribe, many of whose members connected themselves with Adam Kok. There is evidence that the Griquas honestly purchased at least some of the land of which they took possession from its Bushmen aborigines.—(Parl. Papers, August, 1836, p. 620.) The subsequent separation of the Griquas, under Waterboer and Adam Kok, and the treaty entered into with the former branch, have been already mentioned, (see page 62), and likewise the increasing aggression of the border farmers.

This evil had augmented with the disaffection of the boors. Thus—"in 1834, there were said to be about 1,500 boors on the other side of the Orange River, and for the most part in the Griqua country. Of these there were 700 boors, for several months during that year, in the district of Phillipolis [the town founded by Adam Kok] alone, with at least £700,000 sheep, cattle, and horses. Besides destroying the pastures of this people, in many instances their corn-fields were destroyed by them; and, in some cases, they took possession of their houses," at the same time declaring, that if the Griquas complained to the government, the result would be, that the country would be entirely taken from them, and granted to the boors.—(Vide Dr. Philip's evidence before the Committee of 1836, p. 626.) The influence of the missionaries, or rather of the Christian principles which they had succeeded in inculcating, alone prevented bloodshed; but some encouragement was afforded the Griquas and other natives, by the enactment of the law which made offences against them punishable as if committed in the colony.

In 1836 the boors commenced quitting the colony in organised communities, intending to settle down at Natal, which they supposed still belonged to the Dutch, the British government having refused to sanction the formation of a settlement there. They were resisted in their attempted occupation by Dingaan, a ferocious ruler of the Zoolus; but having beaten him, they proclaimed the establishment of a Batavian republic. This roused the attention of the British government; the boors were subdued by force of arms, and the sovereignty of England proclaimed over Natal. The invaders then migrated to the westward, passed the Drakenberg range of mountains, and well provided with horses, arms, and ammunition, settled chiefly beyond the Vaal River, on lands which had been laid waste by the Almsiligas Zoolus, belonging to Moshesh, chief of the Bassutos, Sinkonyella, a Mantatee chief, and others. They likewise leased from the Griquas of Phillipolis, under Adam Kok, considerable tracts. Having formed themselves into an independent government, they nominated a chief, landdrosts, field-cornets, and volksraads, and imitated, as far as possible, the institutions of the colony they had quitted.

The Griquas of the Phillipolis district, and the Bassutos, dreading the increasing power of the boors, repeatedly besought the British government

to receive and recognise them as allies; but this was long refused, because it was feared that it might entail the necessity of marching troops for their defence against the emigrants. At length, in 1843, urgent representations were made by the Phillipolis missionaries that the leases of several fountains were about to expire, and that therefore a crisis was at hand. If no treaty were made with Adam Kok, the boors would not scruple to retain forcible possession of the land after the termination of the leases, and the Griquas could not be restrained from going to war to defend their rights. Upon this, the then governor, Sir George Napier, formed treaties with Adam Kok and Moshesh, similar to that entered into with Waterboer. In 1845-'6, the interference of the government became imperative, to prevent a war of extermination between the boors and the Griquas, the former of whom deprecated, while the latter earnestly craved, its mediation. A British resident was placed at Bloem Fontein, and a treaty entered into by Sir Peregrine Maitland with the Griquas, which, after distinctly recognising their right to the lands leased by them to the farmers, declared "a certain portion of the country to be alienable, and the other portion inalienable;" and arranged that the Griquas should receive half the amount of the quit-rent claimed by the government from the farmers, whether occupying one district or the other.

In 1848, Sir Harry Smith visited the Griqua country. He found the emigrant boors in a very uncomfortable position; they deplored the lack of christian and civilized ordinances, whereby they were unable to marry, or baptize the new-born according to the rites to which they had been accustomed; they acknowledged that they were under no defined government, were unprovided with ministers of the gospel, schools, &c., and were rapidly falling into a state of savage life.

Addresses were presented to the governor signed by the inhabitants between the Orange, Modder, and Riet rivers, as also from those around Bloem Fontein, from the Caledon River, and from Winberg and its neighbourhood. In compliance with the general opinion thus expressed, and after consultation with the leading chiefs and their missionary instructors, Sir H. Smith issued a proclamation (3rd February, 1848), (Parl. Papers, July, 1848, p. 63), declarative of the *sovereignty* of the Queen of England over the territories north of the Great Orange River, including the countries of Moshesh (the *Bassutos*), Maroko (the *Barolonges*), Molitsani (the *Batung*), Sinkonyella (the *Mantates*), Adam Kok (the *Griquas*), Gert Taayboosch (the *Corannas*), and other minor chiefs, as far north as the Vaal or Gariep River, and eastward to the Drakenberg or Quathalamba Mountains. The chiefs and their people were not to be deprived of their hereditary rights, but to be upheld and protected from any future aggression on the part of H.M. subjects. The Queen, through the high commissioner, to have exclusive authority in all international disputes as to territory or to any cause tending to interrupt the general harmony. The laws, customs, and usages of the several tribes to be maintained; but all H.M. subjects residing within the aforesaid territories to be governed by the laws, &c., in force in the colony of the Cape of Good Hope, and to be entitled to the rights of citizens as if dwelling in the colony. Quit-rents to be paid by British subjects in fair remuneration to the native chiefs for the lands heretofore held under lease. A

revenue to be raised by a land tax and trading licenses, such revenue to be appropriated for the payment of British resident magistrates, constables, surveyors, field-cornets, clergymen, schoolmasters, &c. A Legislative Council was established at Bloem Fontein, for the management of the affairs of British subjects residing within the sovereignty, consisting of four official, and eight unofficial members (two for each district), elected by the people, the whole presided over by the British resident. This council was empowered to make local laws, and to levy and appropriate taxes. Its authority extended over all people within the sovereignty not members of any tribe under a recognised chief, and over all persons in regard to acts done within such parts of the sovereignty as were not presided over by native chiefs, whose subjects were guaranteed in the full possession of their own laws and usages, when "not repugnant to decency, humanity, or natural religion." Four districts were formed: 1st, Griqua Land, (comprising *Bloem Fontein*, and the *Queen's Fort*;) 2nd, *Winberg*; 3rd, the *Vaal River* (*Vrededorp*); 4th, *Caledon River* (*Smithfield*).—Parl. Papers, May, 1851, p. 3.

Previous to issuing the proclamation of British sovereignty, the governor entered into a fresh treaty (24th January, 1848) with Adam Kok, the Griqua chief, whereby the lands held by the emigrant boors on a forty years' lease were to become freeholds, in consideration of a fixed payment of £300 a-year; and British subjects holding lands in the inalienable territory of Adam Kok were, as their leases expired, to quit their farms, on receiving payment for the value (to be fixed by a commission) of the buildings and improvements made on such lands; failing payment, the lessee to retain possession, subject to an annual rental to be subsequently determined.

According to the statements of the late Rev. J. J. Freeman and others, this new arrangement with respect to land was made wholly to conciliate the boors, at the expense of the Griquas.* Adam Kok and his councillors (among them the famous Hendrik Hendriks) protested forcibly against the breach of faith committed in the abrogation of the Maitland treaty, to which they desired to adhere, and were only compelled to sign the new one by Sir H. Smith's threat of hanging them on the spot if they did not do so.† The £300 per annum they absolutely refused to receive as remuneration for the whole of the alienable territory, complaining, moreover, that while the treaty specified that they were to receive that sum for the farms actually let on a forty years' lease, the government virtually deprived them of all the other farms, likewise including many—say one hundred and fifty out of three hundred—which the Griqua proprietors had either not let at all, or let only for shorter periods, as five, ten, or twenty years.‡ They had other grievances, into which it is unnecessary to enter. Moshesh, on his part, willingly waived his right to his share of the quit-rents due from the farmers who had established themselves in his dominions, declaring, that he was too glad to encourage the resort of the queen of England's subjects; whereupon Sir H. Smith "highly

complimented and thanked the great chief Moshesh, stating, that he was unable to express himself as to which he admired most—his feelings as a man, or his magnanimity as a chief.§ Moshesh would indeed seem to be a very extraordinary individual: he has won golden opinions from men widely different in position and character—soldiers and civilians, missionaries and travellers, speak in high terms of his statesmanlike views and steady rectitude; but none bear stronger testimony than the devoted minister of the gospel, M. Cassilis, whose labours among the people of this chief have been so richly rewarded.

In July, 1848, a Dutch boor, named Pretorius, who had been one of the chief leaders of the great emigration of 1836, and had become well known for his proceedings at Natal, collected a force of about two or three hundred of his discontented and wandering countrymen, with whom he entered the Orange River sovereignty, where by threats, persuasions, and false representations, others were induced to join him, until a force of 1,000 men was collected, who named him their commandant-general. Having heard of the commotions in Europe, and surmising that England was likely to be engaged in war, Pretorius considered this a favourable opportunity for the destruction of British dominion in South Africa. He appears to have imagined that many of the colonists would join in his enterprise, and that he would be elected president of a Dutch South African republic. Panda, chief of the Quabius, commonly miscalled Zoolus, was solicited to co-operate, as were also Moshesh, Adam Kok, and other chiefs. After a fruitless endeavour, on 13th July, 1848, to seize Major Warden, the British resident in the sovereignty, Pretorius encamped within two miles of Bloem Fontein, and invested the place with 400 mounted men. Having only 56 men, and 200 women and children in the place, Major Warden capitulated, and was allowed to retire to Colesberg with the public and private property.

Sir H. Smith heard of these proceedings on 22nd July at Cape Town, and immediately proclaimed Pretorius a rebel, and offered a reward of £1,000 for his apprehension. With great promptitude a military force, consisting of four companies of the Cape corps, three guns (six pounders), two companies 45th, two companies 91st, and two companies rifle brigade, were ordered to march from the east frontier on Colesberg, and the right wing of the 73rd regiment was sent by sea to Natal to reinforce the garrison there, as Pretorius threatened that Panda with his forces would soon accomplish the destruction of British power in that settlement.

On 9th August, the governor reached Colesberg, safely and quickly passed the troops, guns, horses, baggage, and waggons, across the Orange River, there 200 yards wide, and extremely rapid, by means of an admirable invention termed the Pontoon float, which had been sent from Chatham to the Cape, aided by a raft composed of casks, &c. Pretorius did not dispute the passage, but having hastily broken up his camp, he fell back on Winberg, plundering and committing such excesses on the isolated farm-houses, that in one district, Caledon River, 500 fami-

* It has been too much the policy of the colonial government to conciliate the strong at the expense of the weak, the disorderly to the injury of the peaceably-disposed. Even Waterboer, our old and faithful ally, has been recently deprived of a large tract of country.

§ *Vide* a memorandum, dated 27th of January, 1848, drawn up by Sir H. Smith, and signed by him as high commissioner, and by Moshesh.

lies fled in a panic, without attempting to defend their property. Moshesh and other chiefs at once offered to support the British government, but Sir H. Smith advised them to "sit still," as he was desirous of proving to them that the force he had brought with him was sufficient to chastise Pretorius. Being joined by Adam Kok and a few Griquas, the troops, on the 27th August, furnished with thirty days' commissariat supplies, marched from the right bank of the Orange River to Phillippolis, and thence to a small stream (*Visser's Hoek*), where the governor learned that Pretorius, and 1,000 mounted boors, were strongly posted on a succession of hills situated on either side of the Kroem Elboch River, (or Crooked Elbow River), a position well calculated to interrupt the progress of his opponents. Considerable military skill was evinced in the plan of attack; the Cape rifles, unable to withstand the heavy fire from the boors' long guns, were ordered back; a rapid cannonade was opened by our three howitzers, the rifle brigade attacked the enemy on the left, the 45th their left centre, and the 91st their right centre. The boors fought desperately; dismounting and firing over the saddle as a rest. On the right they descended the hills, and advanced rapidly into the plain with a view to turn the British left flank, and attack the commissariat. Sir Harry Smith says, "I have seldom seen a sharper skirmish; their impetuosity exposed their left to the fire of one of our guns, by which they were checked, and the 'gallant Hottentots,' nobly headed by their officers, then drove them back pell-mell into the hills." The boors, driven from one side of the river, endeavoured obstinately, but in vain, to hold a higher position on the opposite bank, and then retreated to a neck in the ridge, from which they were likewise driven, and hotly pursued by the British, until Pretorius sought safety in flight.

Of the boors, forty-nine* were left dead on the field of action, and their wounded were numerous. The British had one officer killed (Captain Murray, of the Rifle Brigade), and six severely hurt. Eight of the regular troops were killed and thirty-nine wounded. Two of the prisoners (one a young Dutch boor, the other a British deserter,) were tried by court-martial at Bloem Fontein, found guilty, and executed; others were pardoned, and resumed their allegiance; a contribution of £6,000 was levied from such of the insurgents as were recognised, to defray the expenses of the war; a fort, with some nine-pounder guns, was erected at Bloem Fontein, and a small detachment of regular troops stationed there to prevent the British resident being again exposed to the necessity of quitting his station on any future outbreak. Pretorius and some of his followers fled beyond the Vaal River, and were joined from time to time by other discontented persons. They have settled down in a fine tract of country, between 20° and 27° S. lat., watered by several streams, and by a large river called the *Limpopo*,

which is supposed to terminate in Delagoa Bay. Here they have established an independent republic, and may probably become a numerous and powerful people, whose sway and influence for good or evil will extend to the fertile and salubrious districts of Central Africa.—[See chapter on Topography.]

WAR OF 1851.—Our information respecting the causes which more immediately led to the present war is vague and insufficient, but the root of the evil was clearly the re-seizure of Kafirland, consequent upon our violation of the treaties entered into in 1836.† About the middle of the year 1850, intelligence reached Cape Town that considerable excitement had been created among the Kafirs, by the eloquence of a fanatic or impostor named Umlanjeni. The chiefs, who daily beheld their influence and revenue dwindling away under the existing system, were accused of encouraging this self-styled prophet, who was widely believed to possess supernatural power, and to be in fact no less a person than the famous Makanna, or Lynx, who had played so conspicuous a part in the war of 1819‡ (*vide* p. 57), returned for their especial protection. In August, Captain Maclean, the commissioner of the Zlambie tribes, ordered Umlanjeni to appear before him to answer the charge of having set himself up for a witch-doctor and rain-maker, a character formerly held in high estimation by the superstitious Kafirs; but the police who were sent to apprehend him forbore doing so on account of the prostrate and emaciated state in which they found him. Umkye, the chief of whose tribe he belonged, declared, that so far from upholding such practices, he was doing a great deal of good by preaching to the Kafirs the evil consequences of witchcraft and murder. Five days after this an attempt was again made to capture the person of Umlanjeni; he could not be found, but the dwelling in which he had held interviews with the Kafir chiefs was destroyed.§

The forbidden meetings being held elsewhere more numerous than before this

* *Vide* Sir H. Smith's dispatch, Parl. Papers.—The number is generally supposed to be greatly overrated.

† So delighted were the frontier colonists at Sir Peregrine Maitland's abrogation, or at least annulment, of these treaties, that, in 1844, Graham's Town was illuminated, and Sir A. Stockenstrom burnt in effigy in every direction.—Parl. Pap., Aug. 1851; p. 257. The change soon came, and this very man was, as we have seen, brought from his retirement to take the lead in repelling the foe who had been made such by the repeal of his judicious measures.

‡ Makanna had repeatedly and boldly affirmed, that though the English might attempt to detain him prisoner, or even to kill him, yet that he would most certainly return sooner or later to his country and kindred. Many of the Kafirs relied so confidently on this prediction, that they could never be induced to credit the account of his death, while others believed that, even if it were so, the grave itself would not long detain him from fulfilling his promise.—*Kay's Researches in Kaffraria*, pp. 46, 275.

§ Parl. Papers, March, 1851; p. 18.

interference, the governor desired Colonel Mackinnon to get possession of Umlanjeni, if possible, and to "give out quietly," that whosoever should secure him would be rewarded; in which case, he added, this "regenerated Mahomet" should "very speedily find himself in Robben Island."* Colonel Mackinnon, however, did not deem it advisable to attempt any such measures, giving as his reasons that their success was very doubtful; that the alleged prophet had moreover committed no overt act which would justify the seizure of his person with a view to removing him from the country; for that at present no better evidence existed of his having excited the Kafirs to war than mere report; and, lastly, that the contemplated procedure would cause great irritation among his countrymen generally, who, though in a state of extreme destitution from excessive drought, nevertheless abstained wholly from marauding.†

In the month of October the governor proceeded to Graham's Town, and there found great agitation prevailing, the colonists "being panic-struck with the fear of a Kafir inroad, while the Kafirs on their side viewed the warlike preparations made by the former as evidence of the hostile intentions entertained against them." Sir H. Smith continued to assure H.M. ministers that they "need be under no apprehension of an outbreak;" but his reliance on physical force seems nevertheless to have been by this time somewhat shaken, for though he boasts of the excellent condition of the military defences, and asks "what are the Kafirs to effect, posted as we are in the midst of them?" he yet proposes, for the first time, what most indubitably ought to have been done long before, to conciliate the chiefs, by making them a yearly allowance as an indemnification for the loss of revenue occasioned by his having so greatly superseded their authority.‡

On the 26th, the governor called a meeting of the Kafir chiefs to discuss the state of affairs; Sandilli could not be prevailed on to attend. Trustworthy witnesses, both European and native, declared that fear alone prevented his obeying the summons, but that he was possessed with the idea that it was intended to seize him. Persuasion and threats were alike useless, and in fact

Sir H. Smith's declaration that if he did not obey his imperative summons, instead of a chief he should be an outcast, and that the whole of his property should be confiscated, only enforced upon the terrified Sandilli the conviction that his destruction was determined upon, and the opportunity of consummating it alone wanting. Besides, he persisted in declaring that he could not trust the promise of a safe conduct, having been entrapped under a similar pledge at the conclusion of the last war.§ (*Vide* p. 100.) The assembly was held without him, and Sir H. Smith then declared Sandilli deposed from the control of his tribe, which was henceforth to be presided over by a British commissioner (Mr. Brownlee.) Respecting this injudicious procedure, there appears to be but one opinion. As Sandilli afterwards declared, the queen of England had not made him a chief; she could make governors, but a higher power had made him chief of all the Gaikas.|| His tribe took the same view of the question, and warmly resented his nominal deposition, while his brother chiefs naturally felt his cause to be their own, since they might at any moment be subjected to similar treatment.

Umlanjeni was supposed to be inciting the whole nation to unite for the protection of Sandilli, and the recovery of their land. Many of the Kafir servants quitted the farmers, without even staying for their wages, and considerable numbers of the border colonists sought safety by quitting the frontier. Sandilli on his part was asserted to have complained that the whole of Kafirland was dotted over with the habitations of the white man, and the surveyors' flags, and to have sent messengers to the various clans, asking them to unite with him, declaring that he had resolved to die fighting in the ranks for the country of his forefathers.¶

On the 14th of December, Sir H. Smith moved forward to Fort Cox (called from its position the key of the Amatola Mountains), and the British forces, amounting, horse and foot included, to 1,900 men, with 400 of the Kafir police, took the field in three columns. The right wing, under Colonel Eyre, occupied the Kabousie Neck at the back of the Amatola range, with the view of preventing any combined movement between

man South Africa, Kafirland, and why did we English wish to undo what God had done?"—Parl. Papers, August, 1851; p. 437.

¶ Parl. Papers, March, 1851; pp. 42-3.

the Gaikas and Kreili. The centre, commanded by Colonel Mackinnon, held Fort Cox; and the left, under Colonel Somerset, was posted at Fort Hare. King William's Town was for several days confided to the care of Jan Tzatzoe and his tribe, supported by a few sappers.*

On the 26th, a proclamation was issued offering a reward of £500 for the capture of the "outlaw" Sandilli, and £250 for that of his brother Anta. Either of these sums would have made a millionaire among the Kafirs, nevertheless the idolized "Prince Charlie" was not safer among his faithful Highlanders than Sandilli, in the midst of the poor and hungry people, whom it is the fashion to speak of as faithless and treacherous savages. A reward was likewise unavailingly offered of a cow to every man who should inform against a kraal in possession of guns; and every such kraal was to give up its fire-arms under penalty of outlawry and "eating up" (confiscation.) On the 19th, the governor held another meeting with the Gaika chiefs. The motive of it was good in so far as it was intended to assure the Kafirs that no hostilities were meant against them as a nation, but only against certain individuals, who had offended in rescuing a few cattle seized by the Kafir police. Another judicious measure adopted in the course of it, was the substitution of Sutu, the mother of Sandilli, as regent of the tribe, assisted by some of the principal councillors in lieu of the English commissioner; and what was still more likely to soothe the feelings of the chiefs, was the positive pledge given by the governor, that he would not send red coats to hunt Sandilli,† though he was ready to give the specified reward to any Kafir who might capture him. Hoping, however, to intimidate his audience, Sir H. Smith is described as having assumed a tone and bearing which totally defecated his really peaceable intentions. Thus, when the Kafirs urged that their chief had not been proved guilty of any act sufficient to justify his deposition, and pleaded in his favour, Sir Harry would not listen to them, but declared that if he "showed mercy to Sandilli the queen would chop off his head;" and he spoke of him and likewise of Macomo, who was present, in very offensive terms, stating that the latter might have been a great chief, but

was now a drunken beast, and had to be turned out of the colony."‡

The Kafirs left the meeting in a state of great excitement, declaring that they saw war was intended, and that the governor's assertion that the red coats were not to be sent after Sandilli, was a pretence, for otherwise, why were so many troops assembled?§ Several missionaries, especially the Rev. H. Renton, and the Rev. R. Niven, the exemplary minister stationed at the Chumie station, strove to calm the excitement by the strongest assurances of the confidence that might be placed on the governor's word; but the people nevertheless watched with jealous distrust the armed patrols which were kept moving about among the mountain gorges. After expressing himself so positively on the subject, it is quite inexplicable how Sir H. Smith could have thought himself justified in sending, only four days after, a body of 600 men, under Colonel Mackinnon, in the direction of the supposed concealment of Sandilli, with the avowed purpose of compelling him to surrender, or fly the country.||

This armed invasion of Sandilli's stronghold was an act which, in the estimation of those best acquainted with the Kafirs, could be looked on by them only in the light of a declaration of war. As such they met it, and succeeded in successfully surprising the troops while passing through a rocky gorge of the Keiskamma. The Kafir police (ninety in number), most of whom were Gaikas, and the Cape Mounted Rifles (about 170), were suffered to pass unmolested; but when the British appeared, a sharp fire of small arms was opened upon them at a few yards' distance. Twelve of our brave men were killed, eleven being left dead on the field; the officers of the 6th lost their horses, and two mules, laden with ammunition, were captured by the enemy, to whom the victory undoubtedly belonged, although the troops eventually forced the pass, and succeeded in bivouacking on the open ground beyond, in the vicinity of the Uniondale mission station. Immediately on hearing of the fatal collision which had taken place, a warning was issued from head-quarters, at Fort Cox, to the colonists generally, to be on the defensive, and martial law was proclaimed throughout the frontier districts. But Kafir messengers are more fleet of foot

than British emissaries, and can thread the rugged precipices, and dense jungle of their mountain fastnesses, safely and rapidly, even in dead of night; so the news spread with them far sooner than with us, that blood had been spilt, that the English had been completely defeated in an attempt to seize the person of their beloved chieftain, and that another desperate struggle for life and land had actually commenced. The missionaries stationed among the natives were placed in a fearful position,—even their own disciples bitterly reproached them for having, up to the last moment, misrepresented and disguised the intentions of the governor; yet in the midst of this excitement, Macomo and Sandilli successively sent messages to them, requesting them to remain, and promising protection to their persons and property; nor do any of them appear to have been placed in bodily fear, with the exception of Mr. Niven, who, accompanied by a discharged soldier, passed through armed bands of strange Kafirs, with his wife and young children; these last, however, proving his best safeguard.*

On the 25th, Christmas-day, the military villages of Auckland, Woburn, and Juannasberg, were pillaged and burnt. At Auckland, twenty-eight men were massacred; at Woburn, sixteen (one only escaping by hiding in the bush); but at Juannasberg the people had happily fled in alarm, at seeing the smoke of the burning houses of Woburn, and three only remained to fall victims to the barbarian foe. The women and children (European and native) were everywhere suffered to escape personally uninjured.

Disaster followed thick upon disaster; about the same time an armed patrol of twelve men belonging to the 45th Regt. being sent out from Fort White, in search of three of their comrades who had been dispatched on escort duty, and were reported, only too truly, to have been massacred by the Kafirs,—were themselves suddenly surrounded and cut off to a man. On the 28th it was discovered that thirty-five of the Kafir police had plotted to desert; an attempt was made to disarm them, upon which they precipitately fled to the mountains. The same endeavour was made at

* The Rev. Robert Niven has given a most interesting account of his flight from the Chumie station, with his family, and of the heroic exertions of a Kafir girl who accompanied them.—*Vide United Presbyterian Magazine*, November, 1851.

† The expense of this force under Sir Henry Pot-

the other posts, but with only partial success, and eventually 365 out of 400 deserted, 140 carrying with them their fire-arms and equipments.† It should be added that these men had repeatedly and openly said, "We are willing to follow spoor [track of cattle] and catch thieves, but we will never *fight* against our own people."‡ Flushed by success, the Kafirs invested Fort Cox, a compact well-built stone fort, forming a square, and situated on a hilly neck of land bounded on three sides by the Keiskamma. Colonel Somerset having been made aware of the critical position of the governor, by means of friendly Kafirs (who creeping silently by night through the wooded country, eluded the vigilance of the foe), vainly attempted to forward thither a few slaughter cattle, escorted by a troop of the Cape Mounted Rifles under his son, Major Somerset. This party having been driven back, Colonel Somerset himself headed a force for the same object, but after four hours' hard fighting, he also was repulsed with the loss of twenty-two killed and seventeen wounded.§ Most painful anxiety now prevailed respecting the governor, cooped up in his mountain fortress. Colonel Somerset sent to entreat him not to think of moving with a column of troops, or he would be lost, but to rush out attended only by the 150 Cape Mounted Rifles who were with him. This project was precisely suited to the daring spirit that for two weary weeks had chafed in such unwonted trammels, and on the morning of the 31st, Sir Harry, wearing the forage cap and uniform of a rifleman, accompanied by Colonel Mackinnon, dashed out of the fortress, and surrounded by the trusty Hottentots, galloped to King William's Town. The distance was twelve miles; the enemy kept up a desultory fire, but probably without suspecting how important a prize was escaping them; besides which, it was the evident determination of the Kafirs to fire upon the white men only, and, if possible, to spare and conciliate all the coloured ones, except their especial enemies, the Fingoes.

Again at the head of the forces, the governor forthwith issued a proclamation requesting the colonists to rise *en masse*,|| and aid tinger, who was chiefly instrumental in its formation, amounted to £22,000 per annum. Sir H. Smith reduced it to one-half.

† *Narrative of Kafir War*, p. 50.

§ *Parl. Papers*, March, 1851; p. 113.

|| With the inducement of unrestrained pillage.

H.M. troops and the reinforcements that were daily expected, not only to expel the Gaikas for ever from the Amatolas, but also "to destroy and exterminate these most barbarous and treacherous savages."* He further sent orders to the governor of Natal to forward a large body of Zoolus to attack the Gaikas in the rear. Happily this expedient, which, tried once before on a small scale, had been attended with much mischief, by causing wrong and robbery to be committed on friendly tribes,† was eventually judged impracticable and inexpedient, although at first the idea was entertained of sending no less than 5,000 men. Considerable levies, both European and native, were hastily raised by the exertions of the able colonial-secretary, Mr. Montagu; but these new soldiers made but poor compensation for the defection of some of the old and tried defenders of the colony. This brings us to one of the saddest features of the war, viz., the revolt and breaking up of the Kat River settlement. Into the whole circumstances of this business, as also into the desertion of a portion of the Cape corps, which had evident connexion with it, searching and impartial inquiry is imperative. So far as we know at present, the leading facts of the case are these:—Hermanus, a Kafir spy, having on various occasions betrayed or pretended to betray the counsels of Macomo and other chiefs, had thereby so seriously incurred their displeasure, that it was thought necessary to provide for his safety and maintenance within the colony. A tract of land was very injudiciously allotted him in the Kat River settlement, the autho-

* After such a declaration as this, it seems very inconsistent to find Sir H. Smith expressing great surprise at "that most diabolical feeling which obtains among the combined rebels, that the period has arrived when the 'black' is to slay the 'white' to extermination."—Parl. Papers, June, 1851; p. 8.

† Parl. Papers, June, 1851; p. 52.

According to the Rev. J. J. Freeman, Sir A. Stockenstrom and others, these people had been the victims of extreme injustice, of which the following is an instance. A number of Kafirs of bad character had squatted on lands included in the settlement, and the Hottentots applied to the local authorities to have them removed. The intruders had interspersed themselves among some thirty families of Gona Hottentots, who had dwelt there since the formation of the settlement, paid their taxes regularly, done patrol duty, fought with the British in two Kafir wars, and rendered themselves especially conspicuous in the latter, under their brave Field-cornets Groepe and Andries Botha, in the attack on the Amatola. Shortly before this, extreme dissatisfaction had been roused by the decisions of the local magistrate (Mr. Bowker), and evidently with reason, since his judg-

ments apparently overlooking the maxim that a treacherous subject to one master rarely proves faithful to another. The offence given to Hermanus was, Sir H. Smith's asking from him, in 1849, a quit-rent of £1 per head for each of his people, numbering 150, and this demand was persisted in, although it was urged that the land had been originally a free gift, and that the people were literally too poor to pay the required sum. Hermanus, who appears to have been a crafty, clever schemer, and certainly a very dangerous character to have been placed among the Hottentots, availed himself of the grievances under which they were then suffering,‡ to ingratiate himself with them and induce them to lay aside the distrust with which they had heretofore regarded him. Misled by his representations, and over-awed by his threats, 200 of the Kat River Hottentots avowedly joined him, in spite of the earnest entreaties of their ministers, the two Mr. Reads, who risked their lives by staying in the settlement, and made every exertion to uphold a loyal feeling.

On the 7th of January, 1851, the rebel leader, at the head of his own Kafir clan, and supported by some Hottentots, attacked Fort Beaufort. The assailants were driven back and fled, leaving behind them the dead body of Hermanus, whose place was forthwith supplied by his son. It was hoped that this signal defeat would have stayed the rebellion in the Kat River, and so perhaps it might have done, but for the coercion adopted to compel the Hottentots in general to serve as levies,§ while no

ments had been reversed, and the heavy fines inflicted by him ordered to be refunded. They were, however, still unreturned, when, by an act which Mr. Freeman observes "looks like revenge," these very men, to whom the repayment was to be made, with all their friends and connexions, their wives and new-born children, were driven out of their homes, in intensely cold weather, by a body of Kafir police, who tauntingly boasted to Botha and others, "you burnt us out of the Amatola, we come now to burn you out in turn."—(Freeman, p. 186.) This disgraceful scene lasted several days. It is asserted to have continued during the whole of one Sunday, in June, 1850, under the special superintendence of Mr. Bowker himself. The whole affair was laid before government; Mr. Bowker was declared in the wrong, and suffered to resign, and the poor sufferers were allowed to return to their desolated homes, but no compensation of any kind was made to them for the injury thus wantonly inflicted. For fuller details, see Parl. Papers, August, 1851; pp. 32—36, 265—267, 417 to 436; and the eighth chapter of Freeman's *South Africa*.

§ According to the local journals, recourse was had to the press-gang, and this at a time when the pro-

such measures were adopted towards the European population, who could neither be induced or driven into bearing their share as volunteers.

The disaffection was considered to be so decidedly on the increase, that on the 27th of January, General Somerset thought it necessary to break up the whole of the twelve or thirteen hamlets comprised under the name of the Kat River settlement. This step is by some alleged to have been justified by the critical state of affairs, while by others it has been censured as decidedly premature, and especially as involving many innocent persons in the punishment due to a comparatively few guilty ones. Certain it is that some of the very people thus suddenly disarmed and deprived of house and home, have since had their weapons returned to them by General Somerset himself, and are now using them in the defence of the colony.*

The storming of Fort Armstrong, in which, after its abandonment by the British on breaking up the Kat River settlement, about 200 Hottentots and Kafirs had taken refuge, and the blowing up of the tower, together with some thirty miserable wretches who refused to surrender, created a great sensation among the coloured classes throughout the colony; and the relation of the painful circumstances connected with it are said to have been the immediate cause of the desertion of a body of the oldest and most valued members of the Cape corps, many of whom were nearly related to the sufferers.† Soon after this the Hottentots of the Moravian missionary station of Shiloh first refused to give up two Kat River fugitives, who had taken refuge among them; and then, by the violent proceedings of a local commandant, were driven into rebellion.‡

Thus commenced that war which Sir H. Smith, immediately before its outbreak, had declared next to impossible. "There will never be another Kafir war. Should there be, it will be the last—ten days will do it, portion of Hottentots serving, over that furnished by any other class, was enormous.—*Cape of Good Hope Observer*, 18th January, 1851, and *Cape Town Mail*, 25th January, 1851.

* Parl. Papers, June, 1851; p. 32.

† Forty-eight men of the Cape Mounted Rifles, that very corps who had been so long distinguished for their bravery and fidelity, and who had recently manifested these qualities so remarkably at the critical period of the Governor's escape from Fort Cox, went off towards Fort Hare, with the avowed determination of attempting the rescue of a large number of Hot-

when we are once fairly at work."§ Nearly twice as many months have elapsed, an enormous daily expense has been incurred, and more British life has been lost than on any former occasion; Sir H. Smith has been superseded by General Cathcart, and yet Sandilli is still at the head of the Gaikas, Macomo and his sons still occupy the Amatolas, Umlanjeni still prophesies destruction to England, and the war seems as far from any satisfactory conclusion as ever. Belief in the loyalty of the main body of the Hottentots seems being gradually restored; but the ranks of the enemy are swollen by portions, at least, of various tribes,|| whose real or alleged grievances demand most careful investigation from the government which has voluntarily assumed sway over them.

CONCLUSION.—The subsequent details of the contest yet raging in Kaffraria are of too recent a date, and too unsettled in their final issue, to afford suitable matter for history. That issue must be prosperous or adverse, so far as policy and practice be or be not accordant with justice and mercy. In the painful narrative of the past there is a lesson and a warning which statesmen would do well to consider. Retribution, in this present life, overtakes nations more surely, or at least more manifestly than individuals; all history proves this, and that of Southern Africa affords no exception to the rule. Having never strenuously endeavoured to prevent its subjects oppressing and plundering the Hottentots and Bushmen, Holland lost its valuable possessions at the Cape. England is not yet in the same position, but a vast expenditure of blood and treasure, and a disorganized and dissatisfied colonial community on the one hand; and on the other, complicated and daily increasing difficulties in her relations with the aborigines, are part of the penalties paid for long-continued injustice to the Kafirs. To suppose that a merciful and all-seeing Ruler will not punish those who employ their superior knowledge and (so called) civilization to tentot prisoners, belonging to the Kat River settlement, who were to be tried by court martial for rebellion, and whose doom they, not without reason, looked upon as sealed.

|| The Tambookies, into our relations with whom careful and impartial inquiry ought to be made, as also into the complaints of Mosheah, and the other native chiefs, whose territory is included in the Orange River sovereignty.—[See Remonstrances of Sir A. Stockenstrom, Parl. Papers, March and Aug., 1851.]

seize on lands not their own, burn crops, destroy cattle, and massacre helpless as well as resisting human beings, would be to deny the attributes of justice and power to the Deity. As a nation sows, it must reap, and a perseverance in the past policy towards the Kafirs can bring neither blessing nor honour to England.

With regard to the settlers, it would be most unjust to cast indiscriminate blame on all the Dutch and British colonists; many of both races have for years been the advocates of a wise, honest, and gentle treatment of the coloured races, while others, alas! have viewed them as little better than wolves, or as suited only to be slaves to the white man. In the voluminous documents* examined for the history of South Africa, many remarkable instances of heroism, of manly spirit, fidelity, truthfulness, hospitality, and clemency towards a foe, are recorded on the part of the aborigines. That the reverse of the picture could be exhibited is undeniable; but surely this cannot excite surprise in any mind acquainted with the barbaric state of Europe before the Christian era. In what did the Britons, at the time of Julius Cæsar, differ from the Kafirs? yet, because our ancestors refused to yield their lands and cattle to the legions of Augustus, there went forth no imperial decree of "extermination," Pagan Rome, in this case, being more just and merciful than Christian England.

But putting aside higher considerations, and examining the question simply as one of mere worldly loss or gain, would it not be better policy for a commercial nation like England to preserve than to destroy her aboriginal neighbours? Every Kafir slain might have been made a consumer of British manufactures; a tithe of the sum spent in one of the Kafir wars, devoted to the extension of Christian civilization, might have converted our fierce foes by the same process so successfully adopted with respect to the New Zealanders,† into peaceful, happy, and prosperous subjects of the British Crown, who, as such, would have formed an invulnerable barrier against the tribes on our northern and eastern frontier. Every motive that can influence individuals or com-

* The Parliamentary Papers printed on South Africa alone amount to 4,770 folio, or about 10,000 octavo pages: the number of volumes in my library on South Africa number upwards of 100 (of which 15 are quarto size), comprising more than 5,000 octavo pages: the quantity of other matter, printed and manuscript, which it has been necessary to exa-

munities, concurs in suggesting that, on the lowest as well as on the highest grounds, it is even now our duty and our interest to preserve and conciliate the Kafirs. Brute force may destroy, but can never civilize barbarians; some (a few) races may be degraded into slaves, and kept so for a time; but others, of nobler nature, prefer death to bondage, or even to ignominious expulsion from the land of their birth. Among this latter class are the Kafirs, who have evinced a repugnance to injustice, a love of freedom, and an indomitable courage, that ought to have procured for them the respect and friendship of the British nation. The gallant troops engaged in these unjust wars have borne high testimony to the martial bearing, patience, and fortitude of the Kafirs. Their intellectual powers are certainly of no ordinary character. One youth, named Teyo, now pursuing theological and general studies at the high school of Glasgow, is striving to win the prize among many hundred thoroughly well-grounded Scottish fellow-students; and his gentlemanly manners and amiable character have procured him general and cordial esteem. And yet there is no reason to suppose him other than an average specimen of his race, but softened and elevated by the genial, humanizing influence of Christian knowledge. Many testimonies might be cited in favour of the much calumniated Kafirs; from these the following are selected, not as the most favourable to them, but as given by perfectly unprejudiced persons in various positions. The ministers of religion, who have lived with and known them intimately, speak in yet higher terms of the good qualities which struggle into light in the breast of a Kafir, even amid the dense mist of heathenism. One gentleman, whose labours have made the zoology of South Africa familiar and delightful to the British public, and who, in the course of those labours, dwelt for fifteen years with or contiguous to the Kafirs, traversed their country, and examined all the Dutch and English records at the different residences in South Africa, personally interrogated the chiefs and people, and sought truth by every justifiable means, thus speaks of this people in his mine, is equivalent to 3,000 pages. This mass of 18,000 pages required careful perusal, and was for the most part noted page by page, in the desire to elicit truth, and present the leading features of the history of this valuable colony to the public in a succinct form.

† See Vol. II. of this work.

valuable evidence before the committee of the House of Commons, in 1851:—

"The Kafirs are an independent and daring people, but I rarely found them difficult to manage when I endeavoured to persuade them by just arguments. They are very quick, and soon see when they have the advantage of you; still I seldom found them unreasonable, and would rather rely upon moral than upon physical force."*

Sir A. Stockenstrom, whose father was killed by the Kafirs (see p. 52), says, "they are certainly not a nation of thieves—there are plunderers amongst them, but I believe there are civilized nations in which the proportion of thieves is greater: they are an agricultural people, and they have also extensive flocks."†

W. Gisborne, Esq., who travelled much among the Kafirs, says, "we frequently experienced kind treatment from them; when we arrived at their kraals, they often immediately killed a bullock, and made a feast for us." "Hospitality is a general rule among them, an unfriendly disposition was an exception."‡

Thomas Philipps, Esq., a Cape magistrate, referred to the *very regular tribunals* for adjudicating equitably upon matters in dispute between an Englishman and a Kafir, as also upon differences among themselves.§

Saxe Bannister, Esq., formerly attorney-general of New South Wales, a lawyer of repute, who visited Kafirland, and examined the people, declares, "I think their state of society approaches much more to the barbarian than the savage; I have no doubt they have fixed laws upon many points; they are perfectly competent to discern between justice and injustice; I think they have among them various systems of rewards and punishments—they have the elements of a civil community."||

Captain C. Bradford of the E. I. Company's service, who visited Kafirland twice, and resided some time there, says, "the absurdity of charging the whole of the Kafirs as thieves, is most apparent, when at the same time we find both traders and farmers going to reside among them, because they cannot obtain, as they state, the protection of the government against them."¶

Lieutenant-colonel Cox, who resided many years on the frontier, and was repeatedly engaged in carrying on hostilities against them, when asked by a parliamentary committee, "Have you formed any opinion in particular as to the manner in which the blessings of Christianity may be communicated to them?" answered,—"The Kafirs are a very jealous and cunning people, but if they are kindly treated by those they have confidence in, they are very correct in their feelings; I think they are a people possessing gratitude, and the better feelings of our nature."**

The Rev. H. Renton, A.M., observes "the Gaika Kafirs are a grave, subtle, and discriminating race;" they are "a people over whom you could exercise a moral influence, if you preserved in their minds the belief that you were acting toward them with justice and good faith;" "there are numerous testimonies regarding chiefs, that, if they had once pledged their word, you might rely on it;—several persons have told me that they never knew Sandilli to break his

word, and the conclusion to which I decidedly come is, that if you could impress them with the belief of our perfect sincerity, and determination to abide by a compact to which they were intelligent consenting parties, not constrained, you might rely upon them."††

My own personal knowledge of the Kafirs is very limited, but the little that I saw of them, inspired me with a very favourable impression of their capabilities of becoming a moral and enlightened people. Some services rendered by venesection and by relieving physical suffering in other ways, were acknowledged most gratefully, and the kindness of my brother officers‡‡ in contributing to their necessities, was repaid with childlike affection.

Oppression, cruelty, and the demoniac passions which war elicits and perpetuates, have wrought their fell work on the Kafirs, and compelled them to resort to the instruments of the weak—to cruelty and dissimulation; but, ere we condemn the recourse to any means of opposing the powerful invaders of their country, let us inquire what would be our own conduct, if an overwhelming French, Russian, or other foreign army should seize and hold possession of the strongholds of Britain,—would any measures be left untried for their utter extirpation? Why should we prescribe one law for ourselves, and another for the Kafirs? Why utter the inhuman cry of "extermination" against several hundred thousand of our fellow-creatures, because they defend themselves to the uttermost against the seizure of their territory and the destruction of their social system? But He who made all men in his own image, will not permit such a triumph to wickedness; the Kafirs are too numerous to be swept away like a handful of Algerine Arabs; they are too firmly united in a common cause, to become an easy prey even to the misdirected efforts of British valour and military strategy.

The Gaika tribe, with whom we are more especially at war, are at present our chief difficulty; the number of men they can bring into the field is roughly estimated at 20,000, but their ranks have been largely swollen by the discontented members of other Kafir tribes, comprising about 40,000 fighting men. It is fearful, therefore, to contemplate the wholesale destruction of life and property that may ensue if the present

‡‡ Engaged in the survey and exploration of Eastern Africa, under Captain (now Admiral) W. F. Owen.

conflict go on involving the inhabitants of a wider circle, until at length the whole of the coloured people, scattered between the colony and the equator, estimated at two-and-a-half to three millions, be drawn into the vortex. This is no mere surmise; indications only too marked, and unmistakeable, show that there is imminent danger lest the present contest should eventually lead, not simply to a war of extermination between the colonists and a certain family of Kafirs, but between the white man and the black. In such a case it is easy to foretell the result of a struggle in which the various Bechuana tribes, the Tambookies, and others whom we commonly include under the name of Kafirs, the people we call Zoolus, and even the Hottentots, should be arrayed against us.

It has been boastfully alleged that if the white colonists were left to themselves, they are in sufficient numbers, and possessed of adequate power, to extirpate the Kafirs, and subdue the whole coloured population. The fallacy of this assertion is self-evident. The number of whites capable of bearing arms in each division of the colony is thus shown by a recent return:—Cape division, 550; Stellenbosch, 700; Worcester, 400; Clan William, 300; Swellendam and Caledon, 1,000; George, 600; Beaufort, 350; Uitenhage, 300; Albany, 500; Somersdorp, 300; Cradock and Albert, 500; Graaf Reinet, 500; Colesburg, 500. Total, exclusive of the whites in Cape Town, Graham's Town, and Port Elizabeth, 6,500. A levy *en masse* would furnish six to seven thousand men, leaving none but aged men, women, and children for the protection of the scattered farms and towns throughout the whole colony. Thirty thousand Kafirs, well armed and led, might devastate the entire colony, from the Great Fish River to the walls of Cape Castle, at Table Bay. To avert so awful a calamity, no time should be lost in establishing, not a hollow truce maintained only by stringent coercion, but a lasting peace, consolidated by equitable measures. Before rejecting this doctrine as enthusiastic or utopian, and falling back upon the idea that the strength of our own arm shall be sufficient to us in this crisis, let us remember, galling as it may be to do so, that we have before been misled by a similar error. During the unjust invasion of Afghanistan, in 1839, it is acknowledged that the wisdom of the invaders was turned into folly, and all precautions and warnings were

no avail; prosperous conquests lured our army to Cabul, and then the sword and the snow became the fearful instruments of a retribution, which ceased not until about 10,000 British troops and their followers were annihilated. In the Kafir war of 1846, signal misfortunes befel us at every turn, so much so that at one period the governor (Sir Peregrine Maitland) is alleged to have declared that Providence itself seemed to oppose us. With far stronger reason might many of the incidents of the present conflict, especially the loss of the *Birkenhead*, a ship filled with troops, apparently by the merest casualty, be adduced in support of a similar conviction. May these premonitions have some effect on our South African policy, and induce the speedy adoption of those Christian principles by which alone tranquillity can be restored, and an amicable and useful intercourse established with the numerous aboriginal tribes bordering our colonial frontier.

If any one should inquire what these principles are, let them examine the policy inculcated by Lord Glenelg, in 1836; or, turning to a somewhat earlier date, peruse the simple and publicly avowed sentiments of our faithful ally, the Bushman-born Griqua chief, Andries Waterboer, (see p. 62), and who, at a meeting held in Cape Town, in 1835, thus stated the rules which he laid down for his own guidance:—

"I feel that I am bound to govern my people by Christian principles. The world knows by experience, and I know in my small way, and I know also from my Bible, that the government which is not founded on the principles of the Bible, must come to nothing. *When governments lose sight of the principles of the Bible, partiality, injustice, oppression, and cruelty, prevail; and then suspicion, want of confidence, jealousy, hatred, revolt, and destruction, succeed.* Therefore I hope it will ever be my study that the Bible should form the foundation of every principle of my government; then I, and my people, will have a standard to which we can appeal, which is clear, comprehensive, and satisfactory; and by which we shall all be tried, and have our condition determined, in the day of judgment. * * * Would governors and governments act upon the simple principle by which we are bound to act as individuals, that is, to do as we would be done by, all would be well. I hope by the principles of the gospel, the morals of my people will continue to improve, and it shall be my endeavour, in humble dependence on the Divine blessing, that those principles shall lose none of their force by my example. Sound education I know will civilize them, make them wise, useful, powerful, and secure among their neighbours; and the better they are educated, the more clearly will they see that the principles of the Bible are the best principles for the government of individuals, of families, of tribes, and of nations."

* Parl. Papers, August, 1836; pp. 626-7.

CHAPTER II.

CHARACTERISTICS OF SOUTHERN AFRICA—BOUNDARIES OF CAPE COLONY—COAST LINE, MOUNTAINS, AND RIVERS—DIVISIONS AND TOWNS—KAFIRLAND—ORANGE RIVER SOVEREIGNTY—GEOLOGY AND CLIMATE—ZOOLOGY AND VEGETATION.

It is difficult to convey a clear idea of the general features of a territory forming a portion of a large continent, whose physical characteristics are very imperfectly known. The great Architect of the universe has made the fitness of each several part necessary to the perfection of all; land and water, mountain and plain, river and lake, were not placed promiscuously on the crust of this globe, but in conformity to those fixed laws alone capable of producing uniform and harmonious results. Ignorance of the geography of central Africa unfortunately precludes the possibility of framing a connected view of the relations between the southern and equatorial regions.

LEADING FEATURES OF SOUTH AFRICA NORTHWARD OF THE CAPE COLONY.—The eastern coast of the African peninsula appears to be more elevated than the western, but it is still doubtful whether either shore is marked by a continuous coast-chain of mountains. Several geographers suppose that irregular and isolated ranges extend from the equator to the southward; that some of these, for short distances, run parallel with the sea-shore, varying in proximity; and that others extend inland, forming or supporting table-lands stretching east and west across the interior. A different opinion is entertained by Mr. Hall, of the Engineer Department, who has recently paid great attention to African geography, and considers it as nearly certain that the chain of mountains in the south, forming the Roggeveld, Nieuweveld, Sneeuwberg, Stormberg, and Quathlamba ranges, runs northward, parallel to the east coast, as far as 20° N. lat., and eventually joins the towering Abyssinian heights. Be this as it may, we know that a lofty mountainous region exists on the eastern side of Africa, near the equinoctial line; one of whose pinnacles (Kilimanjaro) in about 1° S. lat., supposed (by Dr. Krapf and Mr. Rebmann,) to be perpetually covered with snow, is apparently connected with more westerly ranges. Southward and westward of this elevated equatorial region, there would seem to be successive plateaux, with occasional depressions or marshy tracts, which in the wet season become lakes, in whose basins some rivers terminate, and others commence their courses. One lake (Ngami), 2,825 feet above the level of the sea, in $20^{\circ} 20'$ S. lat., $23^{\circ} 30'$ E. long., is of an oblong form, 80 miles long, by 20 miles broad; its banks are ornamented with large trees and luxuriant tropical vegetation. It abounds in pelicans and fish (of which one description, resembling the carp, weighs from 40 to 50 lbs.), and is supposed to be the reservoir of a much

larger lake about 200 miles to the northward, which contains numerous islands.

The *Teoge*, a rapid stream, falls into the north-west angle of the Ngami. The *Zouga*, which flows from the lake, has a course east and south-east for 300 miles, until it is lost in the sands. North and north-west of Lake Ngami, the country abounds with salt-pans; one of these (*Ntswé*) is 100 miles long, by 15 miles broad. Many are covered with an incrustation of salt two inches thick. Beyond the salt-pans the land is perfectly level and hard, clothed with *mapané* and the gigantic *baobab* trees; the soil being characterized by an underlying rock of white tufa, in which numerous springs of good water are found. This region is inhabited by "fine, tall, strapping Bushmen, nearly as black as the Kafirs, who hunt and kill the elephant by day and on moonlight nights."—(Dr. Livingston's and Mr. Oswell's notes in *Journal of Royal Geographical Society*, for 1852.)

In about $18^{\circ} 20'$ S. lat., 26° E. long., a country has been discovered, which appears to be well peopled by a race called the Makololo, ruled by the daughter of Sebitoané, a great chief recently deceased: it includes much rich well-watered land, yielding the sugar-cane, fruit, potatoes, and the usual African grains. For hundreds of miles there is nearly a dead level intersected by numerous deep rivers with adjacent reedy swamps stretching in every direction. The dominion of Sebitoané is stated by Mr. Oswell to have been very extensive, reaching over a circle of 800 to 1,000 miles, and comprising the territories of eighty-two tribes, from each of whom he received tribute. The rivers rise annually; when at their height the natives traverse the country in every direction in their canoes, and even visit their gardens in them. Many large and beautiful trees adorn the landscape; among them are the date, palmyra, and splendid evergreens bearing an edible fruit. Elephants are very common (900 were killed near the Zouga in three months), and there are numerous herds of oxen, which, together with other domestic animals (excepting the goat), suffer greatly, and sometimes even perish in considerable quantities, by the bite of a fly called the *tsetse*. The Sichuana language pervades this large portion of central Africa, and the Bible is now being translated into that tongue.

The *Seshéke* River, found by the Rev. Dr. Livingston and Mr. Oswell in $17^{\circ} 28'$ S. lat., is from 300 to 500 yards wide, with a great volume of water. The natives represent it as coming from an extensive water region termed *Lobale*, distant 400 miles to the north-north-west. On the east coast of Africa several rivers have been of late partially explored, but much yet remains to be done. In the neighbourhood of *Kilua* one of these reaches the shore after traversing a distance of 500 miles. Further north are the *Pangani*, *Ori*, *Dana*, *Jubah*, *Webbs* or

Haines, and other considerable streams. One larger river, the *Limpopo*, is formed by the junction, in about 28° S. lat., of the *Notuani* on the west, the *Meriqua* in the middle, and the *Ori* or *Oli*, on the east. The termination of this fine stream is still unknown; Mr. Hall surmises it to be at Inhamban, on the east coast; Mr. Arrowsmith, at Delagoa Bay.

COUNTRY OCCUPIED BY THE EMIGRANT BOORS.—The territory in which the emigrant boors have settled, and formed the towns of *Potchefstroom*, *Megalesberg*, *Leydensberg*, and *Origstadt*, is called by them the *Emegrente Grensgebied*; it lies between 20° and 28° S. lat., and is for the most part a table-land not unlike that of Central Mexico, favoured with a dry and cool atmosphere and periodical rains. The plateau has for its base the Drakenberg range of mountains, which passes from south-west to north-east, the *Winterberg*, an elevation of 7,000 feet, being one of its peaks. To the northward of Natal the chain diminishes in height, and is joined by mountains lying east and west, which, between *Potchefstroom*, on the *Mooi River*, 20 miles north of the Orange River sovereignty boundary, and *Megalesberg*, on the opposite side of the water-shed that extends east and west, rise in some places to an altitude of 5,000 feet. The country in the vicinity of Lake *Ngami*, is 3,000 feet above the sea, and between the lake and Megalesberg, by the sources of the *Notuani*, in 24° 30', and the *Meriqua*, must be still higher. The slope in the valleys of the *Zouga* and *Limpopo Rivers* is very gradual, and the mountains along the right bank of the former stream attain a considerable elevation. The configuration of the region resembles that of the mountainous country to the north and east of Graham's Town, with deep ravines, abrupt precipices, and an interval of good arable and pasture land, with wide barren patches.* Taken as a whole, it is well watered, and abounds with many descriptions of game. Indeed, the further Eastern and Central Africa are explored, the more interesting are the discoveries made there. I visited the outlets of most of the rivers on the coast between Magadoxo, north of the equator, and Delagoa Bay, and found that after the mangrove swamps and marshes at the mouths of the streams were passed, the banks rose in height, tall trees and grassy plains appeared, and a fine pastoral country with a comparatively cool climate, lay beyond, thinly inhabited by various native races. Valuable gold mines probably exist in the vicinity of Sofala; gold-dust was in several places brought to me for barter, and the emigrant boors now located near the *Limpopo* may, ere long, discover the locality of rich auriferous deposits.

THE NAMAQUA AND DAMARA COUNTRY.—Namaqualand, north of the mouth of the Orange River, is a rugged table-land, with numerous ravines and isolated mountains. The Damara country, further north, appears to be of somewhat similar configuration, and is bordered by a desert tract, thirty to forty miles wide, on the sea coast; more inland a marked character is imparted by the "broadly developed end of that chain of hills and highland which runs parallel and near to the western coast, from the Cape colony, and separates the Fish River from the sea.†

* See *Daily News*, London, October, 1850, for some interesting sketches of South Africa.

† Mr. Galton, an adventurous gentleman of private fortune, made an interesting excursion through the Damara country, in 1849, and added considerably

Groups of hills, deeply scored on their western face by water-courses, diversify the plain. The greatest elevation, *Omatako*, is 6,000 feet above the sea level; from thence the land slopes steadily away on all sides, declining very gently eastwards to the cup-shaped basin, with its lake and anastomosing rivers, which occupies the centre of the African peninsula.

In 19° 20' S. lat., Mr. Galton found a more open plain, with palm trees; further north he came to a luxuriant district, well watered from a long limestone ridge. Extensive grassy savannahs were interspersed with clumps of large trees, "presenting exactly the appearance of the work of an ornamental gardener;" this was succeeded by a perfectly flat, elevated, grassy, but treeless region. From thence a day's journey brought him to the charming country of Ondonga, which lay stretched like a sea before him; the beautifully grouped groves of palms, the dense, magnificent park-like trees, the broad level fields of corn, interspersed with pasture and the orderly villages on every side, giving an appearance of diffused opulence and content to which it would be difficult to find a parallel. This African paradise is very salubrious; the people, called *Orampos*, are orderly, centralized, hard-working, neat, and scrupulously honest. The land is plotted out in small well-farmed holdings of corn and pasturage, each occupied by a family, generally comprising the grandfather, son, and children; every one has the appearance of enjoying comfort; the king (*Nangoro*) rules with patriarchal but despotic sway; his residence is in 17° 58' S. lat.

Walvisch Bay, near the tropic of Capricorn, is the chief port on this part of the coast: the harbour is excellent, but the country in the immediate neighbourhood barren. Two English establishments carry on a barter trade with the Damaras and Namaquas, for cattle, hides, gums, feathers, &c.; and several missionary stations have been formed in the neighbourhood.

This brief outline (derived from the statements of the latest authorities) respecting the country between the present boundaries of the colony and the equator, is given to remove a prevalent impression of the desert character of Southern Africa, which is calculated unjustly to depreciate the commercial value of the Cape of Good Hope.

BOUNDARIES AND AREA OF THE CAPE COLONY.—On the north the Orange or Gariep and Nu Gariep rivers, on the west the Atlantic, and on the south the Great Southern Ocean. The eastern limits have been set forth in successive proclamations, respectively dated 1700, 1739, 1770, 1798, 1819, and 1847. Each time new territory has been annexed, and fordable streams and imaginary lines have, from the nature of the country, formed the necessarily ill-defined line of separation between land-coveting settlers and cattle-coveting Kafirs. By Sir H. Smith's proclamation of 7th December, 1847,† the boundaries are stated to

to the scanty knowledge hitherto possessed of this part of Africa.—See *Journal of Royal Geographical Society*, November, 1852.

† By a subsequent proclamation, an additional piece of territory, east of the Wittebergen, has been

be the Keiskamma River, from its mouth to its confluence with the Chumie, thence up the western bank to the northernmost source of the latter river; thence along the Katberg range to Gaika's Kop; thence to the nearest source of the Klip Plaats River, and down the left bank to its junction with the Zwart Kei; along the Zwart (black) Kei to its union with the Indive River, along the said stream to its source; across the Stormberg to the head of the Kraai River, and thence along the Nu Gariep and Orange Rivers.* Adopting these limits, the extreme breadth of the colony, north and south along the meridian of 21° , is 450 miles; and the length, east and west along the parallel of 33° , 600 miles. This quadrilateral figure or irregular parallelogram, contains a superficies of about 250,000 square miles.

THE COAST LINE extends from the *Orange* or *Gariiep River*, on the west coast, in a southerly direction, to the Cape of Good Hope, a distance of upwards of 400 miles; with the exception of a projection at Cape L'Agulhas, the coast then trends in an easterly course to the *Keiskamma River*, a distance of more than 500 miles. Allowing for indentations and bays, the seaboard of the colony may be roughly estimated at 1,000 miles, forming two sides of an irregular square, the western bounded by the Atlantic, the southern by the South Pacific Ocean. The most remarkable features on the western coast are *St. Helena*, *Saldanha* (which but for a deficiency of fresh water would be the best harbour in the colony), and *Table Bays*; then the towering mass of Table Mountain, the bold rugged promontory termed the Cape of Good Hope, and the still more southerly but low projection called Cape L'Agulhas. Along the southern shore there are the anchorages of *False*, (including *Simon's Bay*; of *St. Sebastian*, the *Knysna*, *Mossel*, *Plettenberg*, *Camtoos* or *St. Francis*, *Algoa*, *Kowie Mouth*, and *Buffalo River*. An extensive bank, termed L'Agulhas, stretches for about 300 miles to the south of the Cape, diminishing in breadth to the westward and southward, with soundings of sixty to eighty fathoms. Along this bank the warmer stream of the Indian Ocean rushes through the Mozambique Channel, and from the coast of Madagascar, to meet the colder waters of the

Atlantic at the Cape of Good Hope. Near the edge of the bank, very heavy seas are generally found, and many local currents, especially close in shore, running in a contrary direction, or at right angles, to the grand current from east to west.

MOUNTAINS.—The various ranges of South Africa may be considered as forming the supporting walls of a series of steppes or plateaux, extending from the coast to the summit of the highest range, whence the country gradually slopes towards the valley of the Orange River.

Towards the south and east these plateaux are well defined; to the north-west they gradually become less clearly marked, and are finally lost in the confused granite hills of the Kamies Bergen (lion mountains), near the embouchure of the Orange River.

The first range lies at a distance of between eight and thirty miles from the coast. Travelling from the north-west round the colony towards the east, this chain forms the ranges of Lange Bergen, Cardouw Bergen, Drachenstein mountains, Hottentots Holland mountains, Zondereinde mountains, Lange Kloof and Outeniqua mountains, and terminates on the sea shore in the promontory of Cape St. Francis. More or less connected with this chain are the mountains of the Cape Peninsula and those near Saldanha Bay, the Picquet Berg, the Paarl Berg, Potte Berg, and many other isolated hills running parallel to the coast.

The forms of this first range are highly picturesque, and some points attain considerable elevation, the loftiest being the Winterhoek Mountain over Tulbagh, which forms a link between this chain and the second one; its altitude is upwards of 6,000 feet. The average height may be taken at 3,000 feet.

The country along the south and east coast, between the sea and the mountain range, is a highly fertile tract, much better watered than any other part of the colony. Along the west coast the country is very barren and sandy; it includes the district of the Hardveld in Clanwilliam, Zwartland, Picquet Berg, Outeniqua land, the Zitsikamma forests, &c. The second chain runs parallel to the first, enclosing with it a tract of country about 1,000 feet higher than the coast. This range consists of the Karroo

included, of about 400 square miles, to the great dissatisfaction of the aboriginal proprietors.

* It is now proposed to make the Kei River the eastern colonial boundary, which would make a coast line

extension, since our conquest from the Dutch, from the Sunday to the Kei River, a distance of about 170 miles. There has also been, since 1806, various annexations of territory on the northern frontier.

Berg, Maskamma, Cedar mountains, Olifants River range, Hex River and Cold Bokkeveld mountains, Great Zwartebergen Winterhoek mountains, and Zuurbergen, and terminates near the mouth of the Great Fish River, in the buttress of the plateau on which Graham's Town is situated. The chief summit in this range is the Grenadier's Cap or Winterhoek Mountain, in Uitenhage, which attains a height of about 6,500 feet; the average altitude may be considered as 4,500 feet. The valleys between it and the coast range, travelling in the same direction as before stated, are known by the names of the Little Bokkeveld Karroo, Olifant's River Valley, Cold and Warm Bokkeveld, Breede River Valley, Kauna Land, Lange Kloof, Bavian's Kloof, &c.; they include a good deal of Karroo soil, but likewise a considerable portion of very excellent grazing country.

With this range we may class the secondary chains of the Warm Water Berg in Swellendam, the Kammanassie and Bavian's Kloof mountains in George, and the Eland's River mountains in Uitenhage.

The third and most important range is the one which connects, in a marked manner, the mountain system of the Cape colony with that of Africa generally. Starting from the rugged hills of the Kamies Bergen, which forms as it were the north-west end of this important chain, we find the Hantam mountains, tabular in form, but generally detached; and then, entering the Roggeveld, arrive at the Roggeveld Bergen, standing like an immense wall on the north-east edge of the Great Karroo (or desert); trending, in a bold course, to the south-east, it continues in the Nicuweveld range to the west border of Graaf-Reynet, when it assumes the name of the Sneeuw-Bergen, and attains its greatest elevation in the Compass-Berg (10,250 feet). The Sneeuw-Bergen here presents as it were a prodigious knot of mountains, which soon, forming an immense loop, divide into two distinct chains, one running in a south-easterly direction, under the names of Bushberg, Great Winterberg (7,800 feet). Kat Berg (6,000 feet), the beautiful Amatola, and the Buffalo mountains, can be traced along the coast of Kaffraria, nearly as far as Natal. The other, and more important branch, trends to the north-east, forming the Rhenoster Berg, Zuur Berg, Bamboes Berg, Stormberg, Witteberg, Quathlamba, Maluti, and Drachenberg mountains, and continues to

be well defined to the north-east, as far as Africa has yet been explored. The average height of this chain may be perhaps estimated at 7,000 feet, while in particular places it reaches the altitude of 10,000 feet. Lying between it and the second chain is the Great Karroo, with an average height of 2,000 feet, and interspersed with several minor ranges of slaty rock, running generally in a direction from north-west to south-east. Towards the east the country improves until every trace of the parched and arid desert is lost in the luxuriant grassy pastures of Kafirland and Natal.

Nearly all these ranges have the distinguishing feature of presenting to the sea an abrupt and steep face, and sloping gradually away inland; in some cases, as in the Roggeveld mountains, they present nearly a perpendicular wall to the southward. While the coast face affords a luxuriant vegetation, and frequently abounds in large forests of fine timber, the inland slopes are nearly destitute of trees, or even bushes; and, generally speaking, the forests are most luxuriant on the highlands nearest the coast.

From the top of the Nieuweveld range the country may be considered to slope in an immense plain down to the basin of the Orange River, intersected by the beds of various periodical rivers, and abounding in detached hills, generally of a tabular form. Of these the most important group appears to traverse this desert track about half way between the top of the Nieuweveld and the Orange River, under the name of the Karrec Bergen.

The same formation is found to extend throughout Bechuanaland and the north portion of the sovereignty, the immense plains of which exhibit much the same character as the north slopes of the Nieuweveld.

It will be seen, that while the third range of mountains maintain their bold and distinctive form throughout the Cape colony, the other ranges decline towards the eastward, and finally lose themselves on the coast. Geologists consider these parallel and successive ranges as marking former coast-lines, and various debris, evidently the remains of old beaches, can in many places be distinctly traced.*

RIVERS.—The rivers of the Cape Colony, with the marked exception of the Orange, are generally small, and some of them

* For the above account of the mountains of the Cape colony, I am indebted to the kindness and research of Mr. H. Hall, of the Royal Engineer Department.

nearly dry during part of the year, their mouths are barred with sand; but the Knysna, Kowie, and Breede, may be considered practicable at their entrance for vessels of 80 to 150 tons burthen.

The streams on the west coast, falling into the Atlantic, are the *Gariep* or *Orange*; *Koussie* or *Rhinoster*; the *Zwartlinjies*, *Bitter*, *Groene* (three periodical streams); *Elephants*, and *Great Berg*; on the south coast the *Breede*, *Gauritz*, *Knysna*, *Kroome*, *Camtoos*, *Zwartkops*, *Sunday*, *Bushman*, *Kowie*, *Great Fish* (with its tributaries the *Kat* and *Kunap*), *Keiskamma*, and *Kei*, with their tributaries.

There are no lakes (properly so-called) within the colony, although, after heavy rains, many tracts in the northern desert assume the appearance of such. Large salt pans are numerous. Of the rivers one only requires particular notice.

THE ORANGE OR GARIEP RIVER takes its rise in the south side of a mountain of the Quathlamba range, near 29° S. lat., and in about 30° E. long. This elevation was named by the French protestant missionaries who first explored it, the *Mont aux Sources*; its height above the sea is about 10,000 feet, and the summit, a table-land, is clothed with the richest verdure. The earth at the spot from whence the water gushes, is of a dark colour, and the hue which the stream thereby assumes has gained for it the appellation of *Noca Unchu*, or "Black River." It flows with a volume increased by small tributaries for about 120 miles to the south-west, through a valley formed by two chains of the Quathlamba. After crossing the thirtieth parallel of latitude, the *Gariep* issues by a narrow pass from the valley, and takes a more westerly direction to Aliwal North, where it is joined by a stream called the *Kraai*. Thence making a bend to the northward, it receives, at Bethulie, the *Caledon River*, which originates in the west side of the *Mont aux Sources*, and has its stream enlarged by the waters of the *Tlotse* and the *Saule*, and by the melting snows of the contiguous mountains. The *Caledon*—in some places a fordable, in others a deep and rapid stream—is about 220 miles long. The *Orange*, to its junction with the *Caledon*, has a course of about 260 miles. Near Bethulie it is 930 feet wide, 2½ feet deep, with banks 25 feet high.

The united streams take a west and north-west course for 160 miles, under the name of the *Nu Gariep*, and are then joined by the *Ky Gariep*, *Yellow* or *Vaal*, near 29½° of S. lat. This last-named river is formed by numerous streams flowing from the more northerly parts of the Quathlamba Range, and the detached mountain spurs and table-land between 25° and 27° S. lat. Among them may be mentioned the *Wilge*, *Elands*, *Mull*, and *Liebenbergs*, which flow from a portion of the west side of the Quathlamba, termed the *Wittebergen* (White Mountain), not far from the *Mont aux Sources*; these passing to the northward and westward, form the

Vaal or *Likwa*, and are joined in about 27° S. lat. by the *Mooi*, and its tributaries the *Chonapas*, *Pogolla*, &c., from the north and north-east country, where the emigrant boers have established their *Grensgebied* (signifying the emigrants' frontier territory or jurisdiction), the chief town, *Patchefstrom*, being situated on the *Mooi River*, in about 26° 35' S. lat. The *Vaal* has thence a south-west course, and is joined by the *Rhinoster*, *Vals*, *Boralla*, *Zand*, *Vet*, *Hart*, and *Riet Rivers*, forming the north and west boundary of the *Orange River Sovereignty*. The length of the *Vaal* is about 400 miles. The true *Orange* or *Gariep* now proceeds in a westerly direction for about 550 miles, entering the sea in 28° 30' S. lat., 16° 30' E. long., and forming the northern boundary of the Cape of Good Hope colony.

Taking the *Vaal* as the commencement of the *Orange River*, the length of the whole channel may be roughly stated at 950 to 1,000 miles. Throughout its entire course, it may be considered a running stream, of unequal breadth and depth; in some places fordable during dry seasons, in others having pools (*gats*) sufficiently deep to float a ship of war. The seaward entrance is so effectively barred with sand as to be scarcely accessible even to boats, and the lower portion of the river is obstructed by falls and rapids, partly caused by the proximity of the mountain ranges to the banks, and partly by the falling of the plateaux forming this portion of Africa, towards the west coast. In its progress along the colonial boundary, the *Orange* receives, on its left bank, the *Visch* or *Hartebeest*, a periodical stream formed by the *Zak*, *Great Riet*, and other torrents which rise in and drain the northern slopes of the *Nieuweveld* and *Roggeveld* mountains. On the right bank, about forty miles from the sea, it is entered by the *Fish*, *Borrodaile*, or *Oup River*, which drains *Damara* and *Namaqualand*.

All who have visited the *Orange River*, above or below its bifurcation, dwell with delight on the beauty of its scenery, the transparency and delicious freshness of its waters, the lofty willow and mimosa trees whose graceful foliage shades its steep banks, the masses of brilliant-coloured rock which border its course, and the picturesque cascades and verdant isles scattered on its surface, as presenting a strong contrast to the wildness of the mountain country, through which it passes in its north-easterly course, and to the arid, rough, and uncultivated aspect of the plains which mark the more south-westerly portions of its progress.*

DIVISIONS.—The colony was, in 1836, divided into two provinces, eastern and western. The latter comprehends the counties or divisions of the Cape, Malmesbury, Stellenbosch, Paarl, Worcester, Swellendam, Caledon, Clanwilliam, George, and Beaufort; the former, those of Albany, Fort Beaufort, Graaf Reynet, Somerset, Colesberg, Cradock, Uitenhage, Port Elizabeth (Algoa Bay), Albert, and Victoria. These divisions have civil commissioners appointed to them, whose duties as such are chiefly of a financial nature; but they Daumas, of the French (Protestant) Missionary Society, translated by the Rev. J. C. Brown, of Aberdeen. London and Aberdeen, 1852. See also the map annexed to the Rev. J. J. Freeman's *Tour in S. Africa*.

* For a detailed and most interesting description of this noble stream and its tributaries, vide *Narrative of an Exploratory Tour to the North-east of the Cape Colony*, by the Rev. T. Arbousset and F.

at the same time act as resident magistrates in their districts, of which there are now thirty in the colony, these being further partitioned into about 275 field-cornetcies, or wards.

THE CAPE DIVISION includes the Cape, Wynberg, and Simon's Town *Districts*, and is subdivided into twenty field-cornetcies. Formerly this division extended from the Cape of Good Hope to Point St. Martin, at the head of St. Helena Bay, a distance of about 125 miles; recently, however, a portion called Zwartland, including Saldanha Bay, has been formed into a division called Malmesbury. The Cape Peninsula, its most remarkable feature, is about thirty-six miles in length, by six to eight in breadth, and is composed of a series of broken mountains, with horizontal or cone-shaped summits, separated by narrow gorges.

CAPE TOWN is situated at the north end, which likewise comprises Table Mountain, Constantia Berg, and other elevations of less note, together with several valuable estates. The peninsula is joined to the main land by a low, flat, sandy isthmus, on whose south-east shores is the large inlet termed False Bay; and on the north-west Table Bay, which, although somewhat protected by Robben Island (eight miles from its entrance), is little better than an open roadstead, affording shelter to shipping during the spring and summer months, i.e. from September to May. A local committee have recently recommended the formation of a breakwater, 2,600 feet in length, and to extend to the depth of forty feet at low water, which would serve also for a pier and a battery; the estimated cost being £700,000. Some measure of this kind is greatly needed, and if undertaken even by a private company, must, if judiciously carried out, eventually prove remunerative. An effective breakwater might be made by rolling down a large portion of the Lion's Hill, as has been done with Killiney Hill, at Kingstown, near Dublin; or spacious docks might be constructed like those of Havre de Grace. Table Mountain, which rises immediately behind Table Bay, has a nearly horizontal ascent of two miles in length. Its summit, 3,582 feet above the level of the sea, comprises an irregular superficies of about ten acres in extent. In front are two buttresses or wings, termed the Devil's Mountain, 3,315, and the Lion's Head, 2,760 feet high, which evidently at one time formed a continuation of the Table, their tops having probably been washed away by oceanic currents. The Devil's Mountain is broken into irregular points, but the upper part of the Lion's Head is a solid mass of stone. The west side of the mountain is rent into deep chasms, forming as it were three sections of a ruined fortress, or resembling a curtain flanked by two enormous bastions.

Robben Island, which was used as the penal settlement of the Cape from the commencement of the colony until 1846, is seven miles in circumference, low, and with a clay-slate formation. Its appearance is arid, except in showery weather, and its only trees are those which have been planted as an orchard. Rabbits are numerous, but they are supposed to have been introduced. The prisoners formerly employed in quarrying slate flags, burning lime, &c., are now all removed and occupied in road-making, and the island is inhabited by lepers.

False Bay is about twenty miles deep from

south to north, with nearly the same breadth; the entrance is formed by the bold promontories of the Cape of Good Hope on the west, and Cape Hanglip on the east, distant seventeen miles. The soundings vary from ten to forty fathoms, and there are few dangers, the *Whittle Rock* and *Seal Island* on the west side being the principal. It is, however, open to all southerly winds, excepting a curve about midway on the west shore, termed *Simon's Bay*, where there is good anchorage in five to ten fathoms for a large fleet, *Noah's Ark* and the *Roman Rocks* forming a breakwater to any swell from the south-east. Three miles to the north of Simon's, is *Fish Hook Bay*, a small inlet, and three to the north-east is *Muysenberg*, about twelve miles from Cape Town. The north part of False Bay has a flat sandy shore, on which there is generally a heavy swell. On the north-east is *Gordon's Bay*, with three to ten fathoms' anchorage; and further south, near Cape Hanglip, is *Pringle's Bay*, with five to nine fathoms. *Hout Bay*, a small inlet between Table and False Bays, affords safe anchorage, except in south-west winds.

Cape L'Agulhas, in 34° 49' S., 20° E., the southernmost promontory of Africa, is an extensive flat surface, with an isolated hill at the extremity, whose elevation is 435 feet above the sea-level. A lighthouse has been erected 180 yards due north of the beach, at Northumberland point, on a slope of the hill which gradually shelves down to the point of Cape L'Agulhas. The lantern is thirty-three feet in circumference; the burners will light 270°, the remaining 90° being the only portion of the lantern obscured. The edifice presents a large front to the southward; height of the focus of light above the level of the sea, 125'; distance on the horizon from which it can be seen, fifteen miles; from the deck of a ship, making the height of the eye fifteen feet, twenty miles and-a-half; from a mast-head 100 feet high, twenty-eight miles. This cape forms part of the coast-line of the Caledon Division.

Cape Town, the metropolis of Africa, is well situated on the shores of Table Bay, on a plain which slopes towards the base of Table Mountain. The city is regularly constructed; broad streets, laid out at right angles, adorned with fine trees, and interspersed with public edifices, substantial private dwellings, and well-arranged squares, give a pleasing and metropolitan appearance. The castle on the left of the town is a pentagonal fortress, with a broad fosse and regular outworks. *Fort Krokke* on the east is connected with it by a rampart called the "sea lines;" further east is *Craig's Tower* and battery. *Amsterdam* and *Chavonne batteries*, on the west side, command the bay; at the entrance of which, near where the *Mouillé battery* formerly stood, there is now a lighthouse. Three or four jetties facilitate the landing of passengers and goods.

The chief public buildings are the *Barracks* (apart from the castle), with quarters for 4,000 infantry and 1,000 cavalry; the *Commissariat Stores*, an extensive new range near the wharf or landing-jetty of Table Bay, and the *Military Hospital*, a noble structure facing the sea. The *Colonial Office*, *Supreme Court*, *Treasury*, *Post-office*, &c., are in juxtaposition, adjoining the government gardens, in which are situated *Government House*, a college for public education, and an infant-school. A spacious public walk, shaded by large oak trees, and cooled in summer by streams of water, imparts beauty and freshness to the scenery. The *Police Office* is centrally situated, and the establishment efficiently

organized on the principle of the London police corps. The *Heeren Gracht*, in the centre of the city, is a noble street bounding the *Grand Parade* on the north-west side; it would be a striking object in any European capital. The *Commercial Exchange* stands on the *Grand Parade*; the *Commercial Hall* is a noble structure devoted to various purposes; the centre room, of spacious dimensions, is used for public meetings, concerts, and balls; in the great rooms the merchants assemble daily to transact business and read the newspapers. The *Library* occupies the north-east wing of the building; it is one of the best establishments of the kind in our colonies, and decidedly superior to those found in many old cities. About 50,000 volumes of the choicest works are gratuitously placed at the service of any visitor, under the regulations of a committee chosen annually from the subscribers.

Among the leading ecclesiastical structures may be mentioned, the *Reformed Church* (Dutch), an extensive building, with a good organ, and capable of holding 2,000 people; *St. George's* (the English cathedral), a handsome edifice, will accommodate 1,000; *St. Andrews* (Church of Scotland), 500. This last has a school-house adjacent for the instruction of the coloured races. The *Lutheran Church*, *St. Stephens* (lately the theatre), now possessed by a flourishing coloured congregation, a spacious building (1,600 seats), was presented to the congregation by the late Mr. Martin Melck; the *Independent, Wesleyan, South African Missionary*, and other temples dedicated to divine service, are an honour to the inhabitants who raised and support them.

The public burial-grounds extend over a sandy flat, near the lighthouse, on the ascent of the Lion Hill. Those belonging to the different christian denominations are enclosed by walls; those of the Mahomedans, &c., are fenced in; but the one in which heathen slaves were formerly interred lies open, and adjoins the place where useless horses were shot, and is infested with dogs and carrion birds. (Backhouse, p. 812.)

To each of the churches and chapels a Sunday-school is attached for the instruction of all classes of the community. The markets are admirably kept, and abundantly supplied with the finest meat, poultry, fish, vegetables, and fruit, at very moderate prices. Warehouses and retail shops exhibit every variety of European and tropical produce; weekly public sales, or rather fairs, take place on the parade-ground, where auctioneers have their respective stands, and all sorts of goods, domestic and foreign, apparel, furniture, eatables and drinkables, carriages, horses, cattle, sheep, &c., are offered for public competition. These Saturday *vendues* bring together a large and motley community.

Cape Town is a municipality, and is divided into twelve districts, each district comprising four wards. Its local affairs are managed by commissioners and wardmasters, elected by the rate-payers. The income of the corporation is about £10,000 a-year, derived from rates, rent, dues, licenses, &c. Among the institutions in the city, may be mentioned the *South African College*, and other educational establishments; *Society for promoting Christian Knowledge*, *Tract Society*, *Auxiliary British and Foreign Bible Society*, *Bible Union*, *Ladies' Benevolent Society*, *Friendly Society*, *Orphan House*, *Private Widows' Fund*, *European Sick and Burial Society*, *Provident Society*, *Poor and Distressed Old Women's Society*,

Literary and Scientific Institution, *Agricultural Society*, *Botanic Garden Commission* (under which a division of the government garden has been laid out as a botanic garden), several assurance companies, *Masonic and Odd Fellows' Lodges*, *St. Patrick's Society*, various banks, a *Gas Company*, &c.* There is an efficient *Royal Observatory*; a handsome obelisk has been erected on the spot where the reflecting telescope of Sir John Herschel stood, during the period so successfully devoted by him to the examination of the stars and nebulae of the southern hemisphere. In Cape Town and its vicinity there are manufactories of hats, soap, candles, snuff, &c., several foundries, tanneries, and breweries, nine steam and several wind and water mills.

The suburbs are very picturesque: the gardens at the base of Table Mountain teem with luscious fruits, and in every direction vineyards, orchards, nurseries, parterres, plots of ground rich in all sorts of European, Indian, and African vegetables, and fields covered with wild flowers, especially the charming heaths (*ericas*), and bordered with geranium hedges, meet the eye. From every slight elevation the city is seen to great advantage, flanked by the spacious Table Bay, dotted with ships and boats; while on the opposite shore lies a fertile country, with bold mountain masses standing majestically in the foreground, or dimly receding in distant perspective.

Green Point, a village or township (possessing a municipality), is built facing the sea, at the foot of the Lion's Hill. Its peculiar situation and refreshing ocean breezes, have rendered it a favourite place of residence for merchants, and others whose avocations require their daily attendance in Cape Town, which is about three miles distant. The *Somerset Hospital*, placed between the city and Green Point, is open to all classes on moderate terms, and is under the control of government, who may order gratuitous aid where circumstances necessitate such relief.

Rondebosch, four miles from the castle, is a pretty suburb, with a neat church and school-house, and an improving country around. The road between *Rondebosch* and *Wynberg* is ornamented by planted woods of oak, stone, pine, and poplar, whose foliage forms a strong contrast to that of the silver tree (*Leucadendron argenteum*) which forms natural woods along the sides of the mountains. This tree is about twenty feet high, and branched like a fir. Its leaves, about four inches long by one wide, are covered with a sort of silvery hair-like down, and form a singular feature in the landscape. At *Wynberg* eight miles, and *Constantia* twelve miles from Cape Town, the country is adorned by lofty trees, and interspersed with handsome villas, fraught with all the luxuries and comforts of English residences. At the little village of *Plumstead*, adjoining *Wynberg*, cottages have sprung up in all directions, around a *Wesleyan chapel* and school.

A local writer (in the *South African Almanac* for 1845,) thus enthusiastically describes this neighbourhood, and my memory bears witness that the picture is correct as well as charming:—"Wynberg is truly the 'Sweet Auburn' of South Africa, and is richly studded with handsome abodes and rustic cottages. Here our Indian visitors generally reside, and breathe the life-giving and health-restoring properties of its *caller* air. The walks and rides about *Wynberg* are magnificent; the spirit is invigorated

* *Cape Town Almanac* for 1845, contains much valuable topographical detail.

by the scenery, the power of beauty is let into the soul by a sense of the loveliness of nature, and insensible must he be in his rambles about this spot, and witnessing the rich deep woods, the matchless mountains, the streams, the verdant earth, the cattle at pasture, and the fertility of the landscape, with the calm of evening spread over the whole, who does not rejoice afresh in His goodness, and exclaim—

“ ‘These are thy works, Almighty father! thine.’ ”

The celebrated Constantia wine is made only at three vineyards; two, if not all three of which, still remain in the possession of old and respected Dutch families.* *High Constantia* belongs to the Van Rienen family; the mansion is large and tastefully constructed, and the grounds well laid out. *Great Constantia* belongs to the Cloete family; the buildings are extensive, and the vineyard, which is the original one, is large and productive. *Little Constantia* is very romantically situated, and here, as at the other estates, the numerous visitors are received with unfailing hospitality, shown the wine-stores and works, and enabled to judge for themselves of the merits of the rare and costly produce.

The mountains extending from Cape Town towards Cape Point, have craggy tops, bushy ravines, and some cultivated spots at the base. The road along the east side of these mountains leads to *Simon's Town*, where there is a naval arsenal, storehouse, dock-yard, admiral's dwelling, seaman's hospital, &c. The town is connected with the metropolis (24 miles distant) by a good road, and prettily situated on a slope between the sea and the foot of a steep mountain. The Episcopal church is a plain building near the beach; the Wesleyan chapel, on an eminence cut in the hill side, is a neat structure with a steeple. There is an hotel, beside several inns and public-houses.

MALMESBURY DIVISION, to the north of the Cape Division, was formerly known by the name of *Zwartland*; and the chief township by that of *Zwartlands Kerk*. It comprises the districts of *Malmesbury* and *Pickelberg*, which latter takes its name from a sandstone mountain, about 4,000 feet high. The village of Malmesbury is forty miles from Cape Town, and may be reached in a horse-waggon in about eight hours. There is a church, a school, and public offices. The well-built houses, and the open square, in the centre of which the church stands, have a pleasing effect, but otherwise the general appearance of the place is not interesting; the bleakness of the situation, combining with a deficiency of water, to prevent the inhabitants from cultivating gardens to any extent. Near the parsonage is a warm spring, impregnated with sulphuretted hydrogen, and containing lime, soda, and magnesia—temperature 92° to 96°. The supply of grain is so large from this district, that it has received the appellation of the “granary of the colony.”

This division includes the bays of *Saldanha* and *St. Helena*. The former is one of the most extensive, secure, and beautiful havens in the eastern hemisphere. Its north point is in 33° 3' S. lat., and 17° 49' E. long., a little more than seventy-five miles north

of the southern extremity of the Cape. It is about fifteen miles in length, in the direction of north and south, with an entrance (through a ridge of granite hills) of nearly three miles broad. On the south-west side is *Jutten Islet*, with two small peaks, and on the north shore is *Madagas Island*; *Marcus Island* divides the entrance into two channels, of which the southern is the wider and safer. South of this island are two small bays, in either of which there is good anchorage in three to seven fathoms, having *Meewan* and *Shopen Islands* to the south. Westerly gales cause a heavy sea to break far out on the eastern shore, but in *Hoetjes Bay* (the northern arm of the bay), vessels can anchor in three to seven fathoms close in, free from danger in all weathers. The “river,” as part of the bay is termed, extends seven miles, to some salt pans, in a south-east direction. Unfortunately fresh water is not found in sufficient quantity near the bay for the supply of shipping, but this defect is not considered an irremediable one. (*Cape Almanack* for 1851, p. 211.) *St. Helena Bay* is well sheltered from the south and east, but exposed to the north. It has good anchorage, and a creek on its south side may be safely resorted to as a harbour for small coasting vessels. The *Berg* (mountain) *River*, which has its source in the sandstone and slate mountains of *Drakenstein* (Dragonstone) enters the bay, but its mouth is obstructed by the sand-bar, common to South African streams. Backhouse states that when he visited the country in 1840, a few hippopotami preserved by a boor residing near the entrance of the *Berg River*, were so tame as to come near the house of their protector.

STELLENBOSCH AND PAARL DIVISIONS, to the east of the Cape Division, abound in picturesque scenery, have a rich soil and mild climate. The town of *Stellenbosch* (one of the oldest in the colony, having been founded as early as 1681) is beautifully situated along the north bank of the *Eerste River*, at the head of a valley almost surrounded by mountains, and shaded by groves of magnificent oak trees. The charming village, named the *Paarl* (pearl), is sheltered to the eastward by the isolated eminence from which it takes its name. The best view of it is to be obtained from the *Paarl Klip* (stone), one of the three great granite rocks which lie on the top of the mountain. The farms are small, compared with those of other districts, and the farmers are chiefly employed in the cultivation of the vine, in which they are peculiarly successful. The rising village of *Wellington* is about nine miles distant, a little to the eastward of which the excellent new road to the interior districts crosses the first great range of mountains, by a pass called *Bain's Kloof*.

WORCESTER DIVISION comprises the districts of *Worcester* and *Tulbagh*. The *Cold Bokkeveld* (Buckfield) forms an interesting part of this division. The climate in this elevated country is very sharp during the winter season, but pleasant in summer. In winter the farmers remove their flocks to the lower and milder Karroo plains, which are, however, reckoned of so little value, that 10,000 acres may be rented from government for £1 per annum. (*Vide* Bishop of Cape Town's *Visitation Journal* of 1850, p. 6.) The *Warm Bokkeveld* is a valley of minor elevation, which appears to have formed the basin of an ancient lake. Fruit thrives well here. The whole of the *Bokkevelde* are excellently adapted for the produce of grain, but the expense of transport has hitherto prevented its extensive cultivation. The town of Worcester contains several regularly

* Estates change hands very frequently at the Cape, in consequence of the equal division of property on the demise of the head of a family,—the old Dutch law, though no longer compulsory, having merged in an established custom.

planned streets of whitewashed brick houses, and is built at the foot of some low slate hills, upon a plain about ten miles across, intervening between the rugged mountains of the Cold Bokkeveld and the Goudine. It is well supplied with water from the Kei River. The Breede River likewise passes through this extensive division, of whose twenty-three field-cornetcies or wards, that named *Tulbagh* is the most populous and fertile. The pretty town or village of *Tulbagh*, built of white houses in the Dutch style, is so completely shut in by mountains on three sides, and so far up a long vale, that it is hardly likely to increase in size or importance.

CLANWILLIAM DIVISION.—The town or village of *Clanwilliam* is about 168 miles north of Cape Town, and is situated near to the junction of the Jan Dissel with the Oliphant River; it being abundantly supplied with water by a streamlet out of the former river. The situation is picturesque, being between two ranges of mountains, but the place is uncomfortable in summer, as it is built on a sandy flat, from which the heat is strongly reflected. With few exceptions, the whole of this, the largest division, is subject to severe droughts, which compel the farmers to migrate with their flocks.

The most interesting ward is that commonly called the "*Mouth of the Oliphant River*." Most of the places below the junction of the *Doorn* (thorn) *River*, have an extent of low land along the borders, which, when the river overflows, becomes extremely fertile, from the vast quantity of alluvial karroo mud carried down and deposited on it. The river is navigable with boats for upwards of thirty miles, at which distance it is regularly affected by the tide. The mouth is barred by a reef of rocks, extending from south to north, and by a sand-bar running from north to south, but between the two bars a channel is left always open, through which whalers' boats are in the habit of coming up the river to take in water and provisions. On the north side of the mouth is a small inlet or bay, with a sandy bottom, where ships may drop anchor under certain precautions.

At about thirty miles east of Clanwilliam are situated the lofty and imposing *Cedarbergen*, or Cedar Mountains, which derive their name from the number of cedar trees found scattered over them. Many Hottentots obtain a livelihood by felling the timber, which, when sawn into planks, is drawn upon sledges over the rugged mountain passes, and brought into the village, where it meets a speedy sale. A wood resembling ebony is likewise abundant here.

Lambert's Bay, thirty or forty miles west of the village, is available to small coasters, and has proved very useful, considerable quantities of grain being annually brought up to Cape Town from thence. The greatest part of this generally barren division consists of grazing country; grain being only produced in small quantities for home consumption, except where the neighbourhood of a bay affords an outlet to Cape Town. Good tobacco and some rice are also grown here, and are readily bought and consumed on the spot. In the village two hat manufactories have been carried on for several years, the coarse hats which are made here being extensively used by the farmers. In the neighbourhood there is a fine chalybeate and likewise a hot spring, much resorted to for rheumatic complaints and cutaneous disorders. Beyond the Kamiesberg considerable quantities of copper have been found as early as the year 1751, but the estimated expense of work-

ing the mines and transporting the article it is feared would exceed its marketable value.

CALEDON DIVISION, to the north-east of Stellenbosch division, includes the villages of *Caledon* and *Breda's Dorp*. At the former of these, there are two valuable warm springs, containing muriate of soda, whose waters are used both internally and for bathing. To the northward of Caledon, on the southern confines of Worcester Division, is the celebrated Moravian mission station of *Genandendal*, prettily situated in a broad valley among mountains, from whence several streams descend, fertilizing the gardens and other grounds. Twenty-two miles south of Caledon, near the sea-shore, is the village called *Hemel en Aarde* (heaven and earth), devoted by the government to the use of lepers. The patients are chiefly Hottentots. The frightful disease with which they are affected, destroys the fingers and toes, which drop off without pain. This species of leprosy is not considered contagious, but it is hereditary. Large quantities of grain and wool are produced in this division, the rearing of merino sheep making considerable progress among the farmers. The produce is for the most part exported coastwise by local speculators, through *Struys* and *Walker's Bays*, the farmers finding it more profitable and convenient to dispose of it thus, than to bring it up to Cape Town themselves.

SWELLENDAM DIVISION comprises the districts of *Swellendam* and *Riversdale*. The climate generally is very salubrious. In winter the mountains are frequently covered with snow nearly to their base, the low lands have frosty nights, and in many parts every species of live-stock thrives well during winter; but often during the summer months severe droughts prevail, to the injury of the crops and stock.

The village of *Swellendam* is one of the most cheerful-looking in the colony. It has a good church, parsonage, town-hall, gaol, and other public buildings; and its neat white houses, some in the English and others in the old Dutch style, are interspersed with trees and gardens watered by a mountain streamlet. It is situated in a hilly and verdant tract called the *Gras Veld* (grass field), which lies between the *Langebergen* (long mountains) and the coast. There is a government school in Swellendam, as in most of the colonial towns. A reading-room and library have been long established here. When visited by Backhouse, in 1836, the librarian was a Mantatee, who, having been carefully educated, was as well fitted for his post as if born in civilized society. *Riversdale* is a rising village, in the neighbourhood of which there is some fine land watered by the *Vet* stream.

On the line of sea coast within this division is situate *St. Sebastian's Bay*, now called *Port Beaufort*, into which the Breede River flows. Vessels drawing about twelve feet enter the bay, and go up the river about forty miles, past *Malagas Kraal*, as far as *Michael's Kraal*. A very considerable export of wool, aloes, skins, hides, feathers, &c., has taken place from this port to England, and of grain, butter, cattle, mules, &c., to the Mauritius, and to Table and Algoa Bays. Two mineral springs, one containing muriate of soda and the other carbonate of lime, and a salt pan, are found in this division.

GEORGE DIVISION comprises the districts of *George* and *Mossel* (mussel) *Bay*. Its chief productions are wool, butter, aloes, grain, cattle, and salt, this latter being procured from a few saline lakes situated

close to the mouth of the *Gauritz* (rapid, rustling) and *Kleine Brak* (small saltish) Rivers. Several beautiful and extensive woods are interspersed among the grassy hills of this part of the country. The trees are large and much overrun with climbers and parasitical plants of the *Orchis* tribe. *Laurus Buttata* (stink wood), which is allied to the bay, and *Podocarpus elongata* (yellow wood), are the kinds chiefly cut; the latter resembles the yew, and is the prevailing tree in the forests and on the banks of rivers on the eastern side of South Africa. It is generally "draped" with a long, shaggy, green lichen. Baboons, monkeys, bush bucks, spotted hyenas, leopards, buffaloes, and elephants, inhabit these woods; the two latter animals are, however, now scarce, and when a leopard is discovered, it is hunted unremittently till destroyed.

The little town of *George*, situate about seven miles from the sea-shore, contains English and Dissenting, Dutch, and Roman Catholic places of worship; unhappily, it has also a more than proportionate number of "canteens," or retail spirit stores. Three miles from *George* is the London Missionary station of *Pacaltsdorp*. The surrounding district has good pasturage for cattle during the summer months. Several small rivers of fresh water run through it; and the soil is well suited for the culture of pulse, principally beans, of which two crops can be reaped from the same ground in each summer season.

Mossel Bay, after *Simon's Bay* the safest on the east coast of the colony, is, from its local situation, well adapted for the seaport of *George* and *Beaufort* Divisions. Boats can always land with safety. The water is wholesome, and every kind of refreshment easily obtainable. A whale-fishery was formerly carried on here with success. Several kinds of fish are caught in the *Great* and *Little Brak Rivers*, which disembogue in *Mossel Bay*.

Plettenberg Bay is a fine portion of the district of *George*, and the excellent pasturage, and abundance of fish in the bay, together with the contiguity of an extensive and valuable forest, seem to invite the particular attention of small capitalists. The bay is open to the south-east, affording a safe anchorage in eight, nine, and ten fathoms water, and it offers shelter during strong north and north-west gales to vessels intending to make *Table Bay*. It is exposed to the south-east, but is roomy, and presents no formidable danger, as vessels can get out readily, if necessitated to do so by one of the sudden changes of wind to which this coast is peculiarly liable. Boats may be "beached" there with ease and safety. Vessels are frequently chartered to bring wood from this place to *Table Bay*.

The *River Knysna* is situated between *Mossel* and *Plettenberg Bays*. It has a bar, but instead of being a sand-bar, which all other rivers have on this coast, it is of rock, and is covered with water to the depth of fourteen feet, at ebb tide. The entrance is, unfortunately, only about 180 yards wide, between perpendicular rocks of some hundred feet high. There is a large lake-like basin inside, capable of holding a great number of vessels, and the river is navigable for small vessels, to a distance of ten miles. Its banks abound with large timber. The *Knysna* can always be entered, except in very strong winds, by vessels drawing not more than fourteen feet water; but at flood tide vessels of larger draught may enter. It is, however, less easy to get out than to get in; but a small tug-steamer might

be stationed there to tow vessels out at very little expense, for fuel, which is the chief requisite, can be procured at a low price. The neighbourhood of the *Knysna Harbour*, formerly called *Outeniqualand*, is picturesque and imposing in a high degree; the striking outline of the lofty, rugged mountains, crested with clouds, and clothed with majestic forests, seeming almost as ancient as the rocks which frown above them, and the vast ocean swelling at their base, form a scene of extreme grandeur.

In the *Zwarteberg* (black mountain) range, which separates the division of *George* from that of *Beaufort*, are the famous *Cango Caverns*, which, for beauty, height, and extent, are probably unrivalled. They were discovered by a boor in 1780, but have been only partially explored. The road to the caverns lies through a precipitous mountain defile, forming the *poort* or pass of the *Grobbelaar River*, which flows in a serpentine direction, here gently, there precipitously, through the dense jungle that skirts its banks. Subterranean convulsions have created wild and magnificent scenery. The rocks, broken into the strangest forms, are for the most part covered with vegetation; graceful mimosa trees, crimson geraniums, large and splendid plants of *palma Christi*, and a kind of strong-scented lilac, imparting their own peculiar charm to a prospect which would otherwise be calculated to appal rather than delight the traveller. The entrance to these "crystal palaces" is through a noble arch, about twenty feet in height; from whence an irregular vestibule, 200 feet in length, leads to a descent of about thirty feet, which (being accomplished by means of a ladder) opens upon a series of spacious saloon-like vaults. One, 600 feet long by 100 broad, and 60 high, is adorned with millions of stalactites, sometimes assuming the shapes of curiously carved flower-wreaths, cascades, pulpits, animals, drapery, and grotesque figures of every description; at others, forming fluted pillars of amazing height, and resembling at some distance immense cathedral organs, or primeval trees. Niches, columns, cornices, and fretted work, adorn the sides and roofs; some of the stalactites are white and glittering, others transparent. A very singular portion of this palace, not made with hands, is termed "the Bath," because it contains curious natural cisterns, forming marble basins, filled with cool and limpid water. Crystallization is still going on extensively in many places, but in others it has given place to the opposite process of disintegration. The so-called "sand-room" is strewn with fine sand, probably consisting of the decayed crystals of decomposed stalactites.

The extensive inland DIVISION OF BEAUFORT is singularly devoid of lakes or running streams. The *Gouph* is an extensive tract of undulating country, interspersed with extensive flats, lying between the *Zwarteberg* and *Nieuweveld* mountains. Its breadth varies from 60 to 100 miles. The *Dwyka* (rhinoceros) River separates it from the division of *Worcester*, and the *Karega* and *Salt Rivers* from that of *Graaf-Reynet*. It is chiefly used as a sheepwalk, and is commonly known by the name of *Karoo* or *Kanneland*, from its producing a bush abounding with soda called *Kannabosch* (*Caroxylon Salsofa*). There is very little grass, except in remarkably fine seasons, when it produces abundance of the most luxuriant kind; and in such seasons the fattest oxen in the colony are to be seen here. A deficiency of water is its prevailing defect. The strange atmospheric illusion, termed the *mirage*, often cruelly disappoints

the thirsty traveller, presenting to him the appearance of lakes and streamlets in the most arid localities, besides causing the mountains to appear as if they were cut off by the base and raised in the air, with other unaccountable phenomena. The pretty little town of Beaufort is situated upon the open karroo, about 360 miles east of Cape Town, and 144 miles west of Graaf-Reynet. It is watered by two copious springs, which give its gardens an extraordinary degree of fertility, and its streets are bordered with mulberry, pear, melia, and weeping willow trees.

The *Nieuweveld* (new field) commences at a range of mountains extending from the *Dioyka* (rhinoceros) River, on the Worcester side, to Salt River, on the Graaf-Reynet frontier. Its northern boundary extends to the *Kareeberg*. It is rather a hilly country. The grazing consists of heath and grass, but principally of the former,—the lower parts of the country being covered with heath, and the sides and tops of the mountains with grass.

The *Zuurleberg* field-cornetcy is famed for dried fruits of a superior quality. Some grain is raised there. Skins and ostrich feathers are sent in considerable quantities to Port Elizabeth for exportation. There are cold mineral springs in various parts of this division, whose waters are considered very efficacious in rheumatic complaints.

The greater part of the EASTERN PROVINCE was, at the beginning of the present century, in the possession of the Kafirs. It now contains the following divisions or counties:—

ALBANY DIVISION, though small, is important, as being more populous than any portion of the colony except the neighbourhood of Cape Town, and containing *Graham's Town*, the chief place in the Eastern Province. The northern district, called *Upper Albany*, affords the best pasturage; the southern, called *Lower Albany*, is the tract of country formerly known as the *Zuurveld* (sour field), allotted to a large proportion of the 4,000 British settlers of 1820, whose high raised expectations, its sour and rank herbage, humid atmosphere, yet deficiency of water for irrigation, great distance from Cape Town, and indeed from anything like civilized life, must have cruelly disappointed. At the time of their arrival GRAHAM'S TOWN was but a little village, which had risen up around the site of a military station, formed by the officer whose name it bears, with twenty-two houses, and 150 inhabitants. It has now an almost exclusively English population of 4,000, about one-sixth as much as Cape Town. In appearance it is cheerless and uninviting, being situated on a flat, surrounded by low rocky sandstone hills, on which grass has taken the place of the thorny minosa thickets, long since cleared away for firewood, but devoid of trees, except in the kloofs or ravines, which have some large timber, and exhibit very picturesque scenery. From one of these kloofs issues a small but perennial streamlet, which meanders along the outskirts of the town, and forms the principal branch of the *River Kowie*, and in the distance a single white conical hill, named the *Lynx Kopjie* (head), forms a conspicuous object, and is celebrated as being the spot from whence Makanna directed the attack on Graham's Town, in 1819.

The township is large and straggling, and the streets, though well laid out, wide, and regular, remain unpaved, and full of ruts and inequalities. In some of them there are rows of fine oak trees

facing the houses, occasionally varied by the handsome *Kafir Boom* (*Erythrina*). In addition to the public buildings common to provincial towns, few, if any, of which claim special regard, there are various others connected with the military, whose presence has so greatly contributed to the rapid increase of the town. Places of worship are numerous and creditably built; of these the great majority belong to the Wesleyans and Independents, who constitute by far the most influential section of the community. The town is governed by a municipality, composed of six commissioners, elected by the householders generally, and eight ward-masters, chosen by the inhabitants of the respective wards.

There is no port in this division except the *Kowie Mouth*, which is unfortunately barred by so large an accumulation of sand as to render its entrance hazardous even to small vessels. Persevering attempts have been made to effectually deepen the channel, by the proprietor of the adjacent land, but with scarcely any success.

PORT BEAUFORT DIVISION.—*Fort Beaufort* has been recently elevated from a mere military post, to be the chief place of a division, which, though small, is valuable, from comprising some of the finest sheep and grain farms in the colony, several of which, notwithstanding their contiguity to the Kafirland, were considered, at the close of 1850, worth from £4000 to £5,000.—(See *Van de Sandt's Cape Almanack* for 1851. It is situated on a small peninsula formed by a bend of the Kat River, and contains various substantial dwellings and stores, as well as extensive military buildings. The neighbouring country affords excellent grazing ground, and is of a pleasing character, the absence of trees being to some extent compensated by abundance of low shrubs entwined with flowers of various kinds, especially a sweet-scented jasmine, and several species of geranium.

A few miles above *Fort Beaufort*, keeping the course of the river, the road leads through a narrow poort, or defile, to a stream called the *Blinkwater*, to the right of which lies the devastated *Stockenstrom District*, more generally known as the Hottentot or Kat River Settlement. In September, 1851, the population amounted to about 5,000, the great majority of whom were connected with the London Missionary Society. The chief stations were those of *Philipton*, *Balfour*, and *Blinkwater* or *Tidmanton*; there were also eleven out-stations, namely, those of *Buxton*, *Lushington*, *Bruceton*, *Vanderkemp*, *Mancazana*, &c., occupying altogether an extent of about 160 square miles. This tract may be described as a basin, surrounded by lofty mountains, whose rugged sides are in many places clothed with magnificent timber of the most useful description. The lofty ranges of the *Winterberg* form the northern boundary of the district. The smaller spurs sloping gently down to the lovely valleys at their base; the larger separating the various settlements already mentioned. Very interesting views are obtained from several of these heights, whence copious streams descend, and after irrigating the lower grounds, run off into the Kat, which is itself a tributary of the Great Fish River.

Immediately before the outbreak of the last war, art and nature seemed to have each done their utmost to adorn the prospect, for the eye feasted not only on the sublime scenery of the mountain, with its forests, ravines, and cataracts, but on the soft undulating surface of the cultivated land beneath. The corn springing up luxuriantly over acre after

acre, the orchards well stocked with the peach, nectarine, and apple; the humble cottages, and their native owners, all clad in European clothing, and possessed not only of sheep and goats, but also teams of oxen, horses, and waggons, then afforded ample evidence of the determined industry evinced by the settlers, who, after being twice reduced to beggary, had undauntedly commenced rebuilding their houses, and ploughing their land. Before the war of 1846, they had about 3,000 draught oxen; and poultry and pigs abounded; but all these perished. (Freeman's *South Africa*, pp. 154, '5, '6, '7.)

GRAAF-REYNET DIVISION contains the district bearing its name, and another called Richmond, which together comprise the first tract of country occupied by Europeans in the eastern province. It was formed into a district in 1806, by Governor Van de Graaff, and named after him and his wife Reynetta. The town or village of *Graaf-Reynet* is one of the most pleasing and regularly laid out villages in the colony. It is situated in an angle of the *Sneeubergen* (snow) Mountains, on the left bank of the *Zondag* (Sunday) River, from whence water is led out by a canal, yielding a plentiful supply. Its streets are spacious, intersecting each other at right angles. Most of them are planted with lemon trees, interspersed with the acacia, oleander, and the lilac-coloured syringa, the Kafir broom, and some very fine weeping willows. Almost every house has a garden abounding with the fig-tree, peach, vine, mulberry, pear, orange, pomegranate, apricot, &c. A handsome Dutch church is well placed in the centre of the town; there is an excellent market-place, and what is called the "Boers' place," a convenient open spot where the farmers unyoke their oxen and put up their waggons on coming to church. The public offices, court-house, and other buildings, are of a very substantial description, and the shops and warehouses well stored. The prosperity of the town is greatly attributable to the indefatigable exertions of Captain (now Sir Andreas) Stockenström, while holding the position of its chief magistrate. Its principal produce consists of dried fruits, oranges, wine, and brandy.

The division consists of upland and lowland, and the soil varies much, but is in general extremely rich, especially where watered by the Sunday River. The pasturage is diversified, and suited to various descriptions of stock,—the horse thriving in the upland, and fine-woolled sheep in the lowland, which latter abounds with a valuable shrub called *spekboom*, that affords excellent food for sheep and goats. Large tracts are entirely destitute of wood, and the farmers dig cowdung out of the kraals, cut it into square pieces, and stack it for fuel, as is the case in many parts of India. Game of all kinds is plentiful, sometimes superabundant, as herds of *springbok* and other animals, when driven by drought from the interior, migrate into the colony, and entirely consume the herbage. Landed property in this division has of late years greatly increased in value.

SOMERSET DIVISION is very diversified in its soil and character; a considerable portion of it is occupied by the *Great Fish River*, which completely drains it (receiving nearly every smaller stream by which it is watered), and flows through a valley in many parts several miles in width. In dry seasons it is extremely arid, but after rains abounds in pasture of the best description.

The village of *Somerset* is a pretty but straggling place, plentifully supplied with water from the eminence named the *Bushberg*, at whose foot it stands. To the southward of it a fine open country stretches for many miles; a little to the northward lies the mountain basin (*Zwagers Hoek*), from whence issues the *Little Fish River*. This tract is very valuable, although from its alpine character the climate in winter is often extremely severe. It contains some good grain farms, and is famous for the rearing of cattle and horses. The region extending from the right bank of the Koonap River, and from thence to the *Mancazana* and *Baviaans* (baboons) Rivers, is occupied by British emigrants, some of whom possess immense flocks of fine woolled sheep.

COLESBERG DIVISION is bounded on the north by the Orange River for a distance of 200 miles, and owes much of its importance to the circumstance of the main-road leading to the fording-place on the river, and from thence to the Griqua and Bechuana countries, passing directly through it. *Colesberg* village is situated in a kind of valley between two rows of barren broken rocks, and was established by Sir Lowry Cole, in 1831. The manner in which the land was obtained, or rather seized from the Bushmen, is alleged to have been extremely discreditable. (*Vide Backhouse's Narrative*, pp. 344, '5.)

The general appearance of the surrounding country is dreary and monotonous, there being always great scarcity of wood, and frequently of water; but much has been done to remedy this latter defect by the construction of dams. Sharp frosts and violent snow-storms are common; yet in cattle and sheep this division is considered to be the richest in the colony, and the field-cornetcy of *Umtam* is remarkable for a hardy breed of horses.

CRADOCK DIVISION lies between Somerset, Graaf-Reynet, and Colesberg, and is like them exclusively inland. It contains some valuable and productive farms, but the greater part consists of Karroo land, which, though prolific where well watered, is arid and sterile in the extreme in recurring seasons of drought. Corn and fruit are largely produced in *Brak* (salt) River District; the *Achter* (little Sneeuwberg) is famous for fine cattle, and the Tarka district for sheep. *Cradock* village is situated on the left bank of the Great Fish River, and in consequence of the high road to the north passing through it, is a place of considerable trade. It has a Dutch church, Wesleyan and Independent chapels; but the members of the Church of England, who are in the minority, use the court-house as a place of public worship. Cold and tepid chalybeate springs exist close to the village.

UITENHAGE AND PORT ELIZABETH DIVISIONS are watered by the *Zwartkops* (black heads), *Zondag*, *Kromme* (crooked), and *Gamtoos* or *Chamtoos* Rivers, of which only the first, which falls into Algoa Bay to the north-west of *Port Elizabeth*, is navigable. This may be entered by small craft, and is deep and free from impediments for some miles up, but its mouth is obstructed by a bar of sand, upon which at spring tides there is about twelve feet of water; outside, the anchorage is said to be very good. *Uitenhage*, a neat and flourishing town, is built on the left bank of the *Zwartkops*, on the declivity of a hill distant twenty miles from *Port Elizabeth*. The streets are spacious, and intersect each other at right angles. The gardens are numerous, abounding with fine fruit trees, among which some rare kinds may be observed, and well irri-

gated by means of a streamlet, which rises in the eastern extremity of the *Winterhoek Mountains*, at a distance of some six miles from the town, and never fails even in the driest seasons. The celebrated mission station of *Bethelsdorp* (village of Bethel), about eleven miles to the south-east of Uitenhage, consists of a square of whitewashed, red tiled, stone buildings, including the chapel and schoolhouses, and several other houses and cottages arranged in little streets. The various natural disadvantages of the place, so bitterly complained of by Dr. Vanderkemp, its unfitness either for grazing or agriculture, and great deficiency of water, have proved an irremovable bar to its progress. In fact the people could not have subsisted on the lands belonging to the institution, which, however, fortunately for them, include a shallow lake, of about four miles in circumference, constituting a large natural salt pan; the salt, which forms a crust or deposit under the water, of about a quarter or half-an-inch in thickness, is scraped together in heaps, carefully washed, and sold for home consumption, manure, or for exportation. The price is 1s. 6d. per muid (containing four measures of a foot each), which, considering the amount of labour employed in preparing it, and the expense of conveyance by ox-waggon, affords but scanty remuneration. Hewing and carrying wood for fuel, &c., from the adjacent forests, have likewise proved a means of support to the Hottentots, as has the collection of the drug called aloes, the plant from which it is obtained growing abundantly in and about Bethelsdorp, as also in the poor, stony, and bushy tract lying between this place and Port Elizabeth, about nine miles distant.

Port Elizabeth has proved very useful, being the only anchorage between Cape Town and Natal really useful and available for commercial purposes at all seasons. I visited Algoa Bay in H.M.S. *Leven*, as long ago as 1823, when its value was but little understood, and during a heavy gale we rode in perfect safety, with a chain bent on to a hemp cable; the vessel absolutely rode by the weight of the chain without straining the anchor. The bay has, however, its disadvantages for shipping. The south-east wind creates a tremendous surf, and cuts off communication between the vessels and the beach. Greater facilities for loading and unloading, are much required; but these are difficulties which enterprise and science will probably eventually overcome. There are now generally from twenty to thirty sail of merchantmen lying at anchor in the roadstead. On Cape Recife, forming the western limit of Algoa Bay, a lighthouse has been lately erected by the colonial government at a cost of nearly £20,000; it is a handsome octagonal building of cut stone, exhibiting a fixed light visible to a radius of ten miles. Fort Frederic, an old Dutch fort, commands the anchorage, but it is in a very dilapidated condition. The town, founded in 1822, by Sir R. Donkin, is rapidly rising into importance, and contains now between 5,000 and 6,000 inhabitants. It possesses a bank, three newspapers, numerous stores, military and commissariat establishments, and good handsome places of worship belonging to the church of England, Roman Catholic, Wesleyan, and Independent congregations. Landed property of every kind is very valuable, and house-rent exorbitantly high. On a hill rising immediately above the town, there is a monument to the memory of the Lady Elizabeth Donkin, whose name it bears.

The chief advantages of the above divisions, but

DIV. VII.

more especially of Uitenhage, are, capabilities for rearing black cattle and fine-wooled sheep. The land varies greatly in quality; that bordering the sea receiving sufficient moisture, without irrigation, for the production of wheat, barley, rye, and oats. About ten miles from the shore the soil in many places consists of a clayish mould well adapted for horticultural purposes; at the same distance from the sea, towards Uitenhage, there are large beds of sea-shells and fossil shell-fish, which, when properly calcined, afford excellent lime.

ALBERT DIVISION.—The territory now designated by this name was annexed to the colony by Sir Benjamin D'Urban, in 1835; but, by order of the home government, the newly-assumed power was speedily renounced. In 1848, Sir H. Smith again included it within the limits of the colony, omitting, however, the only measure which could justify this step, viz.:—registering the number and claims of the native inhabitants, and securing a certain portion of inalienable territory for them. The Dutch farmers, whose aggressive and lawless state was the plea for this fresh widening of the boundary, were better cared for, farms averaging 6,000 acres each being surveyed, and legal titles granted them by the colonial authorities. Albert Division extends in an angular form between the sovereignty and Kafirland, and includes the country sloping down from the north-west of the Stormberg Mountains, to the Orange River; it is bounded on the east by the steep and lofty Wittebergen (white mountains), which may be considered as an offshoot nearly at right-angles to the Stormberg range, near its junction with the Quathlamba. It contains a superficies of nearly 8,000 square miles, very partially watered by the Great Orange, the Kraai, and several minor streams. The chief drawback is the absence of springs. Excepting in the immediate vicinity of the above-mentioned rivers, the water employed in irrigation and for the use of cattle, consists almost exclusively of rain collected in tanks, or procured by means of dams formed in the rocky gullies.

Many of the farms here are very cold, and wood for fuel or building is generally extremely scarce, except near the banks of the Orange and Kraai Rivers. Traces of coal and other minerals have been observed, and fossil remains in great numbers are found in the Wittebergen.

The seat of magistracy, *Burghersdorp*, on the Stormberg Spruit (water-course), is a desolate-looking place, built in a swamp, and surrounded by a very bare and uninteresting region. It has, however, a handsome church and parsonage, the former of which already shows signs of decay. One of the chief roads to the Sovereignty passes through Burghersdorp, and crosses the Orange River near where the Stormberg Spruit falls into it. The whole of this division is traversed by good natural roads, which may easily be kept in repair. The site of a new town called *Alival North*, has been fixed in a fine plain about four miles west of the Kraai River, near some celebrated hot springs called *Buffalo Vlei* (fountain). Lions and the larger antelopes are still common in the wild country at the head of the Kraai River. The Wesleyans have one or two mission-stations amongst the native tribes residing near the Wittebergen.

VICTORIA DIVISION comprises about a million acres of land, and is formed by nature into two distinct portions, of which the southern includes the

territory between the Fish and Keiskamma Rivers, celebrated in frontier history under the name of the neutral ground; and the northern, that part of Tambookie-land annexed by Sir H. Smith in 1848, bounded by the Claas Smidt River, and the Black Kei on the west; the Stormbergen on the north; and the Indive, White Kei, and Klip Plaat River, on the east and south. The Great Winterberg, Katberg, and Amatola Mountains, separate North and South Victoria, the prominent eminence named *Gauka's Kop* (head), 6,400 feet high, in which the Chumie River has its source, forming as it were the central point (like the narrow part of an hour-glass,) between the two divisions.

North Victoria is distinguished by the bare and rocky characteristics of the higher plateaux. Many of its mountains attain a considerable elevation. *Hanglip* rises 6,800 feet, and the Stormberg range has an average altitude of between 6,000 and 7,000 feet. It is well supplied with pure water by the numerous and overflowing streams which unite to form the Great Kei, including the Black and White Kei, and others before mentioned.

A village named *Whittlesea* has been commenced about five miles from the confluence of the Klip Plaat's with the Great Kei River, and an extensive coal deposit is alleged to exist in the neighbourhood. Two miles south of Whittlesea is the site of the deserted Moravian mission village of *Shiloh*.

South Victoria comprehends a sea-line of about thirty-five miles, and possesses the broken and bushy features common to the coast regions of the colony. Its only important streams are those (the Fish and Keiskamma) that respectively constitute its eastern and western boundaries, between which it forms a high, and in many places, very beautiful table-land, intersected with numerous deep kloofs and ravines, forming on the west side the most inaccessible part of the Fish River Bush. *Alice*, on the Chumie River, is laid out as the chief town, and occupies the spot where the kraal or residence of *Gauka* stood, when Dr. Vanderkemp visited him in 1799, and established the first mission in Kafirland. The military post of *Fort Hare* lies close by, but is included in British Kaffraria.

Fort Peddie, situated nearly in the centre of South Victoria, is the residence of a magistrate. The military villages of Ely, Auckland, Juanasburg, Woburn, and Kempt, destroyed at the commencement of the war, were placed along the right bank or in the vicinity of the Chumie stream. About 6,000 Fingoes are located in the neighbourhood of Fort Peddie; and 2,000 or 3,000 friendly Kafirs, part of the tribe of the exemplary Christian chief *Kama*, reside on the Oxkraal River, on the northern face of the Kat Mountains.

The tract known as Madoor's country, and occupied by a small and semi-civilized tribe of Bushmen, is situated in North Victoria, between the Black and White Kei. Madoor, the Bushman chief, has named his principal native village *Freemanton*, in grateful acknowledgment of the endeavours made by the late Rev. J. J. Freeman to procure a mitigation of the harsh measures pursued by the local government towards him. The great error connected with the increase of boundary so far as North Victoria is concerned, appears to have been not the assumption of sovereignty over it, which might have been, and probably was the sole means of checking the growing power of the boors over the weak and scattered aborigines, but the selling the best portions, regardless of the rights of its

native proprietors, every one of whom ought to have been registered, and land legally allotted amply sufficient for their maintenance, before an inch could be honestly sold or granted as crown property. In South Victoria the case was widely different: there were no boors there; the only plea for taking possession was the obtainment of a more defensible boundary, and the manner in which the soil already occupied and cultivated by large tribes has been sold to (in many cases absentee) holders, without any reservation or provision in favour of those to whom it had descended from father to son, admits of no excuse.*

KAFIRLAND (British and Proper) may be said to include the whole territory between the *Keiskamma* and the heads of the *Great Kei* streams on the east, and the *Umsimculu* on the west, which divides it from Natal, being separated from the *Bechuana Country* by the lofty range of *Quathlamba Mountains*, running nearly parallel to the coast, at an average distance of about 100 miles. In Kafirland the same terrace-like formation may be traced, although perhaps not so readily as in the Cape colony. Numerous ranges of hills of minor elevation, rising by the side of the principal range, form as it were the steppes of different plateaux or plains. The principal of these plains is the immense tract lying between the Quathlamba and Matuana mountains, watered by the great western branches of the *Umsimvooboo*, the *Tsitsi* and *Teua* rivers. It is a well watered and fertile country, affording good pasturage, but very cold in winter, devoid of wood, and at present almost uninhabited; nor is it likely that the Kafirs, whom we are now endeavouring to drive across the Kei, will ever willingly occupy it. Nearer the coast the country becomes better wooded, but extremely rugged and difficult of access; the numerous torrents rising in the different mountain ranges flow in deep beds, with frequent subsidiary ravines. The extent of some of these river valleys may be judged from the fact that, starting from the high ground on one bank of the *Umbashee*, it takes three or four hours to gain the opposite side. The country about the mouth of the *Umsimvooboo* is particularly rugged, and towards the sea two high mountains appear nearly to close its channel, leaving however a pass known by the name of the "Gates." Large forests exist along the shore, and on the declivities of the high lands near the coast. The mountains of Kafirland may be considered as prolongations of some of the colonial ranges. Very striking and bold features are presented by the *Matuana* and *Ukalo Mountains*, near the sources of the *Umbashee* and *Umtata Rivers*, and to the eastward near the Natal frontier. Various offshoots of the Quathlamba chain give a peculiarly wild and inaccessible character to the country. The average altitude of the Quathlamba may be estimated at 8,000 feet above the sea, or 4,000 higher than the great plateau that extends to their feet. The principal rivers are the *Great Kei*, and its tributaries the *T'Somo* and *Indive*; the *Umbashee*, *Umtata*, *Umsimvooboo*, and *Umsimculu*; none of them are navigable or of much importance, although often swollen by rains into for-

* The chief sources from which the topography of the divisions has been derived, are *Van de Sandt's Cape Almanack* for 1852, the *Bishop's Visitation Tours*, and the works of *Freeman*, *Buckhouse*, and *Chase*; aided by my own recollections, and the valuable assistance of Mr. Hall, Dr. Adamson, and other gentlemen well acquainted with the Cape.

midable torrents. The region between the Kei and Keiskamma, which forms the province of BRITISH KAFFRARIA, and is divided by the Kei from Kreili's country, in its general features resembles the rest of Kafirland. The formidable and far-famed *Amatola* are a continuation of the Katberg range; they present a steep and well wooded face to the southward, full of deep and almost impregnable ravines, and to the northward a high table-land called the *Bontebok Flats*, formerly a great haunt of lions and the larger game. Sir H. Smith, when he, in December, 1847, annexed British Kaffraria to the Cape colony, divided it into the following districts:—North of the *Amatola*, *Northumberland* and *Sussex*; west of the *Buffalo River*, *York*, *Middlesex*, and *Lincoln*; east of that stream, *Cambridge* and *Bedford*; but it is not likely that these divisions will ever be recognised either in a geographical or political point of view.

King William's Town, situated on the left bank of the *Buffalo River*, about forty miles from its confluence with the sea, is the head quarters of the troops, and at the mouth of the *Buffalo*, the town of *East London* has been founded, as the port of the province. The latter is at present a very small place, with but few natural advantages. The holding-ground is good, but there is no shelter whatever for vessels, the shore is rugged, and the surf heavy even without wind. At *Forts Hare*, *Cox*, *White*, *Murray*, and *Pato*, military posts are established. Fort *Murray* is the residence of a civil commissioner for the tribes of *Zlambie*; Fort *Cox*, of the commissioner for the *Gnikas*. The *Amatolas* to the eastward merge into the *Buffalo Mountains*, and gradually diminish towards the coast, terminating near the mouth of the *Kei River*.

THE NORTHERN OR ORANGE RIVER SOVEREIGNTY comprises an area of about 60,000 square miles, lying between the two great branches of the *Orange* or *Gariep River*, and the *Quathlamba Mountains*, which separate it from *Kafirland* and *Natal*. It consists of a large plateau, gently sloping from the mountain range towards the river valleys, and, except near the *Malutis*, or *Blue Mountains*, may be described as one vast grassy plain, destitute of trees, and abounding in immense herds of game. Its future value will probably be based on its peculiar adaptation for sheep farming. The country on the eastern border is rugged in the extreme, and there is hardly a practicable pass across the mountains from *De Beer's Pass*, leading into the *Natal* country, to the *Wittebergen*, a distance of more than 200 miles. These mountains, which form the line dividing the great *Bechuana* and *Kafir* families, in some places attain a height of 9,000 or 10,000 feet. The *Malutis* (peaks) form a parallel chain to the *Quathlamba*. They enclose the rocky and unexplored upper valleys of the *Orange River*, and present scenery of the most grand and picturesque character. Their native name is derived from the form of many of their summits, contrasting with the tabular tops common to South African mountains. The country is tolerably well watered, and supplied with permanent springs. The principal streams, besides the two branches of the *Gariep*, are the *Caledon* (rising in the *Maluti* chain, and, after a course of about 180 miles, joining the *Orange*, a few miles east of *Colesberg*), the *Modder*, *Riet*, *Vet*, *Zand*, *Valsch*, and *Eland Rivers*. The great plains are covered with numerous basaltic hills, generally 300 or 400 feet in height. The forms of many of these are very striking, and will be found well exemplified in the graphic sketches of this part

of South Africa, made by Mr. Bain. There are no chains of any importance except that already mentioned. The average height of the sovereignty above the sea-level may be estimated at 5,000 feet. Timber is very scarce, being found only beside the watercourses. Immense herds of both the larger and smaller species of antelope range the plains; and the lion, as a matter of course, is seldom absent. The elephant and rhinoceros are no longer to be met with south of the *Vaal River*; hippopotami are numerous in the *Vaal*. In the mountains there are leopards, hyenas, the scarce roan antelope, and hartebeest. Ostriches are very common, but will, it is to be feared, be soon extirpated. The curious manis or scaly ant-eater is often met with. The smaller game, such as partridges, pheasants, guinea-fowl, &c., are in great profusion near the rivers. The districts formed by Sir Harry Smith have been already stated (see p. 107), and likewise the positive compulsion used to obtain from the *Griquas*, for a very inadequate price, lands of which portions sold at small quit-rents, have already realized large sums. Thus the bishop of *Cape Town*, writing in 1851, mentions that at *Bloem Fontein*, "the capital and only [British] village in the sovereignty, where the population is nearly exclusively English, £1,400 have already been paid to government for erven" [building allotments.]

Bloem Fontein, the seat of government, is a very regular and well-built little town, containing about 200 houses, and places of worship for the Church of England, Wesleyan, and Roman Catholic communities. It has a military post called the *Queen's Fort*, mounting six guns, guarded by two companies of infantry, and a troop of cavalry. It is situated near the upper part of the *Modder* (or mud) *River*, and has some decided disadvantages, being absolutely devoid of wood, and very scantily supplied with water. But it is centrally situated in the heart of the region of which it is the capital, is midway between *Graham's Town* and *Port Natal*, being about 400 miles distant from each point, and is assuming a good deal of importance as a sort of entrepôt for the trade carried on between the colony, the emigrant boers, and the natives of the interior. The great road from the *Cape* to *Natal* traverses the sovereignty by a very circuitous route, owing to the difficulties of the country, and enters *Natal* by the *De Beer Pass*, not far from the newly commenced town of *Harrismith*, situated on the *Eland River*, near the eastern edge of the *Drachenberg*, which there presents the usual steep face towards the coast. *Winburg*, on the *Laay Spruit* (water-course), and *Smithfield*, on the *Caledon River*, are each the residence of a magistrate, but otherwise of no importance. The European population, amounting probably to 10,000 or 12,000, was at first composed almost exclusively of Dutch farmers, but latterly a large infusion of English settlers has taken place. The farms generally average 6,000 acres, and at present command very high prices. But little corn is grown, sheep and cattle farming being the principal occupation of the settlers.

The climate, although warm in summer, is healthy. Owing to the elevation of the country, the cold in winter is intense, the want of sheltering groves of timber, and even of bush for fuel being severely felt; yet the vine thrives well, as also the peach, and other European fruits. Snow lies on the peaks of the *Malutis* for some months in the year. Heavy thunder storms are common. Droughts are frequent

and severe, and hot winds, blowing from the Kalihan desert, occasionally exercise a destroying influence on vegetation.

No mineral deposits have been discovered in the sovereignty, although copper is believed to exist in large quantities in the mountain ranges, and several traces of coal are said to have been observed. Agates, amethysts, blood-stones, steatite, &c., abound in the beds of the Caledon and Orange River. The aborigines occupy the hills and the country along the Orange River; the remainder is in the possession of the white man. On the west side, the sovereignty embraces a large tract of country, partly taken from the natives under various arrangements, and partly found as unoccupied territory, having been bereft of its inhabitants either by internal wars, or by the aggression of the boors.

The tribes governed by their own chiefs are distributed as follows:—the Griquas under Adam Kok, occupy country along the northern bank of the Orange River; the Bassutos under Moshesh, and the Mantatees under Sinkonyella, dwell on the slopes of the Maluti Mountains; the Barolongs under Moroko, the Batlapi under Lepui, the Corannas under Gert Taaybosch, the Bastaards under Piet Davids, and the Bataung under Molitsani, inhabit territory west of the Caledon River. Besides these, numerous hordes of wandering Bushmen, Corannas, and poor Bechuanas, are scattered over the sovereignty; the whole population, white and coloured, possibly amounting to about 120,000 souls.

The most important tribe is that of the Basutos, whose chief, the remarkable Moshesh, can, it is said, bring 10,000 men into the field. His residence is a very singular spot, being on the summit of an isolated eminence named *Thaba Bossiou*, or the "mountain of night," accessible only by five ravines, which are capable of being easily defended against a native force. The plateau at the top of the mountain is nearly a league in circumference. On it there are three separate villages. Moshesh has two tolerably well-built and handsomely furnished stone houses. The mission premises, situated in a gorge near the base of the mountain, lend a peculiar charm to the landscape. The neighbouring French Calvinistic mission-station of *Morija*, is under the superintendence of M. Arbousset. Its neat and appropriately constructed buildings, surrounded with numerous native huts of the beehive shape, are interspersed here and there with more or less successful attempts at square houses, which, but for the scarcity of wood, and the consequent difficulty of procuring suitable roofs, would be more numerous.

M. Daumas, the companion of M. Arbousset in the memorable tour which resulted in the discovery of the source of the Orange and other rivers, is established at *Makquathin*, the native village of the chief Molitsani, and here also some Christian converts have built themselves houses after the European fashion, with nice gardens walled in and abounding in fruit trees—walnut, plum, lemon, and orange—introduced by the missionaries.

Thaba-Unchu, the chief place of the Barolongs, is a really well-constructed native town, containing about 2,000 round dwellings, built of clay and thatched, each environed by a low stone wall, forming a kind of court.* The inhabitants are said to be very rich in cattle and horses, some individuals possessing as much as 1,000 head of cattle and 100 horses. The Wesleyans have a station here.

* Bishop of Cape Town's *Journal*, 1850; p. 24.

Phillipolis, the capital of Adam Kok's territory, is a tolerable sized village, with a single row of neat cottages, a number of huts, and a stone chapel and school established by the London Missionary Society, whose Christian efforts on behalf of this people have been already referred to. The want of timber for building, which has to be brought a distance of 200 miles, has been a serious drawback to the improvement of the town. The people possess a large number of oxen and waggons. The territory of the other portion of the Griquas, under the Christian chief Waterboer, lies beyond the sovereignty to the westward; the country is fertile, but subject to long-continued and severe droughts. *Griqua Town* has about 400 inhabitants, and is situated at the edge of an extensive limestone plain, and at the foot of a range of low hills of silicious schistus, containing yellow asbestos. For the last few years, the town, its gardens, and adjacent grounds, have been desolated by drought, the fountain which formerly supplied it having been dried up.

Within the sovereignty, between the country occupied by the Barolongs on the west, and the Bassutos on the east, is a tract occupied by a tribe of Bastaards who still retain that name. They formerly inhabited a dry and open spot of ground in about 28° S. lat., 26° E. long., and there the Wesleyan missionaries laboured among them for twelve years. The name, *Plaatberg* (flat mountain), was descriptive of the locality; but when towards the end of 1833, the people migrated to a more fertile district, they applied to their new location the appellation of the old one, which chanced to be singularly inappropriate, as the chapel and parsonage of *New Plaatberg* stand on the brow of a narrow ridge of hills, in front of which the little village stretches in one long street, bordered by numerous kitchen-gardens watered by a pretty mountain stream, and walled in by an immense bank of rocks, whose towering and deeply indented crest commands the whole plain. Besides those above referred to, the London, Wesleyan, Paris, and Berlin missions, have stations among the Corannas, Bushmen, &c.

[For a more detailed description of the people and districts comprised in the sovereignty, see the *Exploratory Tour* of Arbousset and Daumas, the Bishop of Cape Town's *Journal*, and the works of Freeman, Backhouse, Harris (*Wild Sports*), and other travellers.]

INTERNAL COMMUNICATION.—Since 1843, most successful efforts have been made to remove the great barrier to the rapid progress of the colony, opposed by the difficulties of transit, either for individuals or merchandise, from one town to another. The extremely rugged nature of the country seemed to set road-making at defiance; but it has, in the end, only served to heighten the triumph of skill and perseverance. The employment of convicts on the roads, in compliance with the suggestion of the able colonial-secretary, Mr. Montague, was a most judicious measure; the only wonder is, that it had not been before adopted.

A great central road now connects Cape Town with Swellendam and Fort Beaufort,

George and Mossel Bay, Uitenhage and Algoa Bay, Graham's Town and Port Frances, and the eastern frontier generally. There are several excellent bridges on this line, including three of considerable span over the *Eerste, Louren, and Bot Rivers*, in Stellenbosch Division. A hard road twenty-four miles long, has been constructed across the sandy desert known as the *Cape Flats*,* *Montague Pass*, which crosses the Cradock Mountain, in George Division, is formed through a kloof 8,393 yards long. The former precipitous track lay 850 feet higher than the new route. The plan of this gigantic work would do honour to the genius of Telfair or Stephenson; its cost to the colony has been £36,000; the single item of gunpowder amounting to £1,753, as the solid rock had to be blasted for a distance of five-and-a-half miles. Several other important undertakings of a similar nature have been recently carried out, and new ones commenced. The *Mitchell Pass* (thus named in compliment to the late scientific surveyor-general of the colony), through the Mosterts Hoek, in Worcester Division, is now traversed by loaded waggons, when formerly, produce could only be conveyed in small quantities on horses. A fertile tract of 100,000 acres, termed the Warm Bokkeveld, which was effectually closed, has lately had its resources opened up. The distance from Cape Town to Worcester is reduced thirty-six miles by *Bain's Kloof*, which is ten miles in length; and on the line from the Karroo Poort to Cape Town, by Hottentots' Kloof, a saving of seventy-eight miles will be effected on a total of 171 miles. The produce of Somerset and Cradock, and the districts towards the Orange River, finds access to Port Elizabeth by a road over the Zuurberg Mountains, twenty-three miles long (steepest line gradient 1 in 17), constructed at a cost of about £20,000. Lines cut in the face of stupendous mountains, tunnels (one 336 feet long,) bored in decomposed clay slate, and cuttings, some,

* In 1848 a serious discouragement met the active "Board of Commissioners," arising from an extensive drift of sand suddenly covering about three-quarters of a mile of the main road, between Cape Town and Simon's Town, to the average depth of three feet. To remedy this evil, which it seemed probable would increase rapidly, most effective means were forthwith taken, by placing two screens, one 1,056, the other 784 feet in length, and both 12 feet in height, nearly parallel, but about 484 yards asunder, to the eastward of the road, to prevent any further accumulation upon it; the sand was then cleared away, and as soon as the wet season set in, the whole of the unreclaimed space,

fifty feet deep, with ponderous breast walls and stone culverts, attest the magnitude of works by means of which a coach-and-four may be driven where recently a goat could scarcely scramble.

CLIMATE.—The seasons are very nearly opposite to those of England; December, January, and February, being summer, and June, July, and August, winter. The temperature varies with the latitude and elevation above the sea. Generally speaking, the fine and dry summer of the western province is more agreeable than that of the eastern, which is apt to be wet and stormy, but favoured with a clear and bracing atmosphere in winter; whereas that of the western is then often inclement and disagreeable. On the whole, the climate is a temperate one,—the north-west winds, which prevail in winter, losing much of their sharpness in traversing the scorched plains of the interior; and the boisterous "southeasters" cooling the hot summer air with fresh breezes from the wide expanse of the fathomless Antarctic Ocean. The highest temperature may be taken at 80°, the lowest at 50°; and the mean of the year at 67°, Fahrenheit. At Albany the mean, during the three summer months, is 72°; that of the three winter months, 60°; the maximum mean of June, 75°, and the minimum mean of February, 57°. In the mountain districts, and on the elevated plateaux of the interior, the heat of summer and the cold of winter are, of course, proportionately greater. Sudden changes of temperature are common to the whole colony, but appear to exercise little or no injurious effect on the health of the community. Hot winds occasionally blow over the interior, but rarely affect the coast districts.

Earthquakes, though not (comparatively speaking) of a dangerous character, occur occasionally; and thunder-storms are frequent and violent in the interior, towards the tropics.† The inland districts are all more or less subject to droughts; but a good comprising about 2,000 acres, planted with the Hottentot fig, so that the once arid desert, the cutting drift from which, even in traversing the road was painful, is now converted into a garden very pleasant to look upon. And here it would be wrong to pass over in silence, the consistency and earnestness with which Mr. Fairbairn, in the pages of the *Commercial Advertiser*, had, month after month and year after year, urged the importance of improving the highways of the colony, and especially of forming a hard road over the Cape Flats.

† In July, 1822, the colony was visited by a terrific and most devastating storm of wind and rain. At

deal has already been done to remedy this grievance. The following meteorological table for the Cape district, shows the climate of that locality:—

Date.	Barom. correct-ed.	Thermometer.		Depth of Rain.	Rainy Days.
		Highest temp.	Lowest temp.		
1850.	Inches.			Inches.	
October . . .	29.984	76.7	47.1	3.435	8
November . . .	30.010	72.0	40.0	1.863	7
December . . .	29.965	75.0	54.5	.414	2
1851.

Ann. mean	30.030	Sum for the year . . . }		22.805	73

The salubrity of the Cape cannot be better illustrated than by the following comparative statement, showing the health of the troops in various parts of the empire; the annual ratio of mortality per 1,000 among them from every description of disease; the proportion attacked by pectoral complaints; and the average number of deaths resulting from these latter insidious maladies.

Place.	Annual ratio of Mortality.	Number of men attacked.	Average number of deaths.
Cape of Good Hope . . .	15	98	3.0
Australia	11	133	5.8
New Zealand	8½	60	2.7
Mauritius	30	84	5.6
Malta	18	120	6.0
Ionian Islands	28	90	4.8
Gibraltar	22	141	5.3
Canada	20	148	6.7
Bermuda	30	26	8.7
United Kingdom	14	148	8.0

Note.—The mortality among officers serving at the Cape is 1½ per cent., and in the East Indies 4½ per cent.

Tulbagh every building, public or private, was either totally destroyed or rendered uninhabitable, the bridge blown up, and the roads around made quite impassable. At Stellenbosch, 94 buildings were injured; at the Paarl, 69; at Wagonmaker's Valley (now Wellington), 40; at Hottentots' Holland, the new church and parsonage were quite destroyed; at Caledon, the public and private buildings, mill, and bath-house, were materially damaged; at Groene Kloof, the beautiful church and the gardens were ruined; at Simon's Town, the barracks gave way; and at Cape Town, there were upwards of 100 cases of damage; and eight vessels out of sixteen were wrecked

DISEASE.—It cannot be said that there are any disorders peculiar to the colony. Fever is of rare occurrence, but dysentery sometimes affects new comers, and severe rheumatic complaints are very prevalent. The Hottentots often die of consumption, and present occasional cases of leprosy; but the Kafirs are a peculiarly healthy race, and the colonists, both Dutch and English, are, generally speaking, singularly exempt from constitutional maladies.

GEOLOGY.—The peninsula of Southern Africa has evidently been formed by vast subterranean upheavings, and by the subsidence of the surrounding waters. A broken coast fringe of the oldest rocks (crystalline gneiss or clay-slate, here and there penetrated by granite, and surmounted by sandstone) surrounds the western and eastern shores. These primeval strata dip inland, and are overlaid by the most ancient fossiliferous formations. A vast central basin, now occupied by the Great Karroo, lies within the coast ridge, and at some distant period must have formed a marshy or lacustrine country. In it are found fossils, and saurian remains, together with the relics of some peculiar and gigantic quadrupeds.

During the last few years much has been done to develop the position, extent, and constituents of the fossiliferous rocks of South Africa, from the lowest up to the Triassic period, by the labours of Mr. Bain. Other geologists have likewise described small cretaceous deposits in the eastern districts of the colony, so that these regions now take rank among the most interesting geological provinces of the world. Between Graaf-Reynet and the Tropic, trap and the granitic series constitute a large portion of the structure; there are extensive limestone formations, with a distinct stratification, and abounding in caverns.

MINERALS.—The available deposits of coal said to have been discovered in Victoria Division and Kafirland, have been

at the anchorage. The deluge of water washed away the vineyards from the hill-sides, and the corn lands were seriously injured.—(Parl. Papers, May, 1827; pp. 17, 18.) The governor, Lord Charles Somerset, proposed to Earl Bathurst the negotiation of a loan of £100,000 in England, at five per cent. interest, on the security of the land revenue, such loan to be appropriated for the repair of the damage done; H.M. government promptly acquiesced, and Lord C. Somerset was authorized to draw, upon H.M. treasury, for £125,000; £100,000 to be applied for the relief of the settlers, and £25,000 for the restoration of churches, barracks, and other public buildings.

already mentioned in the geographical account of these regions, as also the traces of the same valuable mineral met with near the junction of the Caledon and Nu Gariep River, apparently extending to Natal; ores of copper are found at the mouth and at the sources of the Gariep, and elsewhere, in or near the colony; lead has been worked near Algoa Bay, and manganese occurs in conjunction with the granite of the west. The Dutch had a strong impression that silver was obtainable, and I am, from various geological indications, inclined to entertain the same opinion.

ZOOLOGY.—Africa has long been famed for the unparalleled magnitude and variety of its animal kingdom. The elephant, rhinoceros, hippopotamus, lion, leopard, panther, buffalo, zebra, nilgha, gnu, wolf, hyena, jackall, baboon, and monkey; almost every species of deer and antelope, from the cameleopard or giraffe, of seventeen feet high, to the elegant blauwe bok of thirteen inches high, are, or at least were, found in the colony, until the advance of cultivation banished some, and exterminated others. The domestic animals, such as cattle, sheep, and dogs, were all possessed by the aborigines at the time of the discovery of the Cape. The tiger,* bear, horse, and a few species, such as the kangaroo, and others peculiar to certain regions, form the exceptions to the extensive catalogue of indigenous mammalia found in South Africa. I have unfortunately no space to devote to this interesting subject, and can but point to the elaborate volumes of Dr. Andrew Smith,† where those who love to study the varieties of form and colour, of "habitat" and character, in birds, beasts, and fishes, may find an almost inexhaustible fund of delight, as well as of scientific information. Le Vaillant, Harris, the redoubtable Cumming, and other sportsmen, on a gigantic scale; beside numerous intelligent naturalists and travellers, among whom may be named Barrow, Lichtenstein, Burchell, Sparrman, Paterson, Steedman, Thompson, Moodie, and the intelligent and truthful Backhouse, have recorded much interesting detail respecting South African zoology. The introduced animals, such as the European ox, horse, mule, sheep, goats, and swine, thrive well, and multiply very quickly.

* The animal to which the name of "tiger" was applied by the Dutch, is the true leopard, *Felis leopardus*; what they termed the leopard was the cheta, or hunting leopard, *Felis jubata*.

The old Cape or Barbary sheep, with hairy fleece and large fat tails, are now being rapidly supplanted by the fine woolled Merino breed. To the former description the Dutch farmers long remained attached, the much prized tails being regarded as an indispensable article in cookery. Several attempts were vainly made by the Dutch East India Company to introduce a better description; one of these efforts, though but partially successful as far as the Cape was concerned, proved an immense boon to Australia, for the Merino flock sent out as a present to colonel Gordon, the commander of the forces, was at his death in 1793, sold to some settlers touching at the Cape on their way to New South Wales, and thus fell into the hands of the enterprising John M'Arthur.—(See volume on Australia, p. 533.) The British settlers of 1820 brought with them some superior flocks, but many of these perished either from unsuitable pasturage or careless tending; and it was not until some years later that the rearing of fine woolled sheep became an important item in the industrial resources of the colony. Horses are reared in great numbers, and great pains have been taken in improving the breed, especially by the late Lord Charles Somerset. They are now of a very useful description, being capable of undergoing almost incredible fatigue; a journey of 120 miles in two consecutive days, being a common occurrence.‡ Oxen are still used by the Kafirs for riding as well as draught. The beef is good, and forms excellent sea-stock.

Among BIRDS, there are varieties of the ostrich, eagle, vulture, kite, pelican, flamingo, crane, ibis, owl, geese, duck, teal, snipe, bustard, partridge, turtle-dove, loxia, kingfisher, woodpecker, and several species peculiar to this portion of Africa. Proximity to the Cape, in the South Atlantic, is recognised by the abundance of albatrosses, blue petrels, and the beautiful fantailed Cape pigeon. The absence of permanent lakes render swimming birds and waders rare inland; but some of this class are singularly beautiful. Food for soft-billed birds is scarce during the prolonged dry season, and the smaller species are not generally numerous, though they collect in considerable flights in cultivated districts,

† *Illustrations of the Zoology of South Africa*, published by Smith, Elder, and Co., London, 1839.

‡ *Cape of Good Hope*, by J. C. Chase, edited by J. S. Christophers; p. 157.

where fruit is abundant. Those kinds are more common which feed on hard-shelled insects. On the whole, the African birds are remarkable rather for their handsome form and matchless brilliancy of plumage, than for sweet voices, none bearing a comparison in this respect with our homely English songsters—the nightingale, lark, or linnet. All kinds of poultry are good and plentiful at the Cape.

REPTILES, including numerous descriptions of alligators, snakes of all sizes, venomous and harmless, from the boa-constrictor, the cobra capella, and the puff-adder, downwards, exist in South Africa, as also chameleons and lizards; toads and frogs abound.

INSECTAL life is equally varied and prolific with the larger forms. Ants are very numerous; some nests have a circumference at the base of twelve feet, and are six in height. Locusts occasionally migrate in almost incredible numbers, devastating whole tracts of country by literally devouring every blade of grass. They then deposit their eggs and die, leaving their dry shelly carcasses to decay, and in decaying, contribute an element of fertility to the desert they have created. Their young come forth, and either swarm off or die. This plague has latterly diminished in frequency and severity. It is a strange sort of retaliation for the mischief done by the devouring red locust, that not only the natives, but also all carnivorous animals, use it for food, as do also domestic fowls, pigs, and even horses.

FISH.—The shores of South Africa teem with life, and the great *Agulhas Bank*, which skirts, or, more properly speaking, is a submarine continuation of the south-eastern shore from Cape Town to beyond the Great Fish River, is a mine of wealth, scarcely, if at all inferior, to that of Newfoundland.

The western shores of the colony likewise abound with fish, from the larger inhabitants of the deep—whales, porpoises, and seals—to the innumerable variety of smaller species. The Cape forms the point of separation between two distinct marine zoological provinces, which are again subdivided, several sorts being peculiar to certain bays or inlets.

Of the numerous kinds available, uncured for home consumption, or salted for exportation, few are identical with those of Europe, although so far resembling them as to be called by the same names: thus there are the perch (or Roman-fish), herring,

macarel, sardinia, skate, sole, stockfish, crab, crayfish, prawn, and shrimp; besides many others with purely colonial names, such as the dageraad, galleon, geelbek, stompneus, steenbrass, snoek, and silver fish. The eggs of penguins and other seabirds are brought in from the islands on this coast in great numbers. Turtle is occasionally found in the bays, and the water-tortoise, which abounds in the rivers, is edible. There are numerous varieties of shell-fish, including delicious rock-oysters, mussels, cockles, and perriwinkles.

VEGETATION.—The varied and beautiful productions of the Cape Colony have been a source of delightful investigation to botanists since the day when Linnæus, in thanking a friend for a large number of specimens sent from thence, remarked, "You have conferred on me the greatest pleasure; but you have thrown my whole system into disorder." And to the present hour, new varieties are perpetually arising to charm and puzzle the botanist, while flowering plants of the loveliest description are still frequently added to the long list of pelargoniums, ericas, &c., which adorn the parterres and conservatories of Europe. Indigenous timber is scarce, though found in certain localities in luxuriant abundance. About fifty kinds are available for agricultural and domestic purposes. The native trees have, however, been almost wholly neglected, either because they have been found difficult to rear, or on account of the slow growth of the more useful kinds. The oak, stone-pine, and azederach—all three foreign—are planted throughout the colony, and the Australian gum-trees and casuarinas are spreading everywhere. An immense variety of the fruits and vegetables of different countries, from the strawberry and cherry to the melon and jambos or love-apple, have been acclimated in various parts of the Cape of Good Hope.

There would appear to be several distinct botanical districts in the colony. In the western province, *ericas*, *proteas*, *pelargoniums*, *diomeas*, *polygalas*, *cheronias*, *rogenas*, *stapelias*, *mesembryanthemum*, *cacti*, *indigoferæ*, and *acaciæ*, are found in great luxuriance. In the eastern districts of the colony, the *euphorbia*, *coralodendron*, *laurus*, *podocarpus*, *aloe*, *zamia*, *jessamine*, *brionia*, *erythrina*, and *strelitzia*, prevail. The cerealia all thrive; and large crops of maize and millet are produced, even by the imperfect agriculture of the natives.

CHAPTER III.

POPULATION—GOVERNMENT, MILITARY DEFENCE, LAWS—REVENUE, TARIFF, EXPENDITURE, MONIES, WEIGHTS, MEASURES, BANKS—COMMERCE, IMPORTS, EXPORTS, SHIPPING—LIVE STOCK, CULTIVATION, PRODUCE, LAND APPROPRIATED AND COMPARATIVE VALUE IN EACH DIVISION—WAGES OF LABOUR—RELIGION, MISSIONS, EDUCATION, PRESS, CRIME—GENERAL VIEW AND PROSPECTS OF THE COLONY.

WHEN the Cape was first visited by Europeans, the neighbouring country was apparently thickly peopled by the various tribes of a race whose generic name was Quæquæ, but to whom the Dutch applied that of Hottentots. The gradual subjugation of this people has been set forth in preceding pages. Of their numbers at any period there is no trustworthy record; it is only certain that they rapidly diminished after the establishment of European intercourse, and are still on the decrease. Intermarriage with the Malay, negro, and other slaves introduced by the Dutch, has contributed greatly to thin the ranks of pure

Hottentots; while, as we have seen, a more disgraceful intercourse has mingled their blood with that of the European, degrading both, and producing a race of mulattoes, who, under providence, were by the devoted exertions of the missionaries Anderson, Melville, and others who have followed in their steps, alone prevented from becoming the pests, as they were already the outcasts of society.

The following is a return of the white and coloured inhabitants, in the several districts of the eastern and western divisions, and also of British Kaffraria, taken from the census of May, 1849:—

Divisions.	Estimated area in square miles.	Whites.		Coloured.		Total.		Total, Male and Female.	Total.	
		Male.	Female.	Male.	Female.	Male.	Female.		Births.	Deaths.

Notes.—¹ In the return furnished by the municipality no distinction has been made between the white and coloured population of Cape Town.—² Excluding Victoria and British Kaffraria, of which the area is not stated, there are 175,804 mouths on 118,256 square miles, or about 420 acres to each individual. The majority of the above returns must be regarded as merely approximative. Very little reliance can be placed upon the statements of births and deaths.

The community by which the aborigines were supplanted, increased at first but slowly (see pp. 13, 18), and in 1773 comprised less than 24,000 souls. Its gradual augmentation (exclusive of troops and the native

heathen inhabitants), from the date of British permanent occupation, may be traced in the following table, which likewise illustrates the numbers of the slaves, from the same period up to that of their emancipation :—

Years.	Christians.		Free Blacks.		Negro Apprentices.		Slaves.		Total.
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	
1807	13,624	11,990	529	605	—	—	18,990	10,313	56,051

1849	—	—	—	—	—	—	—	—	—

Note.—Total population, including Hottentots, Negroes, Kafirs, and Fingoes, 285,279. Under the denomination of Christians there are free coloured people as well as whites.—In the year 1833 there were alleged to be about 15,336 male, and 15,313 female Hottentots, within the colonial boundary.

The motley population of the Cape includes English, Irish, Scotch, Germans, Danes, French, and other Europeans; Hottentots, Kafirs, Fingoes, natives of Mozambique and different parts of Africa, Malays, Chinese, &c., together with the offspring of intermarriages among the various colonists, and between the coloured races.

The British and their descendants possess the usual characteristics of their nation, leavened by a "colonialism" which it is easier to perceive than to describe. The Dutch and Germans are of a large and powerful build, often indolent and impassive, unless roused by strong excitement, and then energetic and determined. Their respect for the ordinances of religion is invariable, as is their hospitality. When educated they evince considerable, and in some instances, even extraordinary talent; but the less informed class are extremely prejudiced, and easily misled. They seem better adapted for pastoral than agricultural pursuits, and now that they have at length been induced to direct their attention to the rearing of fine-woolled sheep, will probably become very wealthy.

The French, who came hither on the revocation of the edict of Nantes, settled down on the *Breede* (broad) *River*, in what is now the Worcester Division, near a spot still known as the *French Hoek*, or *Corner*, and engaged in the cultivation of the vine. But their numbers being very small, they soon, in consequence of deaths and intercolonial marriages, ceased to form a distinct section.

The Hottentots are like the Chinese in

their habits, as well as in their complexion and cast of features; they delight in cultivating small plots of ground, and in tending cattle and sheep. When treated justly and kindly, and encouraged by judicious measures, they have proved active, brave, and worthy of the fullest confidence. Their number is not given in any authentic document, but the whole coloured population, exclusive of Kafirs and Fingoes, but inclusive of Negroes, Malays, Chinese, &c., is loosely estimated at between 80,000 and 90,000.

The Fingoes resemble the Kafirs in appearance, and in the love of cattle, but are decidedly inferior in manliness of deportment and of character. Since their naturalization as British subjects, they have learned the value of money and other property, and diligently labour for its acquisition and increase. Their number is supposed to be about 25,000.

The portion of the Kafirs over whom the British, at the conclusion of the war of 1846, claimed sovereignty, by right of conquest, occupied (before the present outbreak, 1852), the country between the Keiskamma and the Kei Rivers, and comprised the Gaika tribes under the young chief Sandilli, and his uncles Macomo, Botman, &c.; the T'Slambies or Zlambies, under Umhala, Toise, Siwani, and Jan Tzatzoe; and the Amagonubies under Pato and Cobus Congo. These belong to the great Amakosæ family, of which Kreili is the senior chief. There are, beside, the Tambookies under Mapassa, Umgeka, &c., who inhabit country along the Kei River.

The population located in the Zlambie

and Gaika districts of British Kaffraria, in December, 1848, was estimated by Lieutenant-colonel Mackinnon as follows:—"In the Gaika district, under Sandilli, 14,915; Tebe (?), 4,867; Macomo, 2,066; Botman, 1,455; Tola, 1,487; Sonto, 672; Tzatzoe, 1,717;—total, 27,179. In the Zlambie district, under Umhala, 10,018; Pato and Cobus, 8,527; Toise, 7,481; Siwani, 2,773; Stock, 3,342; Scyolo, 2,161; Tabai (?), 877;—total, 35,179. Grand total, 62,358." Mr. Brownlee, the assistant Gaika commissioner, calculated that about 20,000 to 25,000 of the Gaikas were then absent in consequence of the scarcity of food, large tracts having been overrun by the troops during the war of 1847, at the period of the sowing season.*

Eastward of the Kei River, the country is inhabited by the *Amagaleke*, a large branch of the Amakosæ, under Krcili, Bookoo, &c., who dwell between the Kei and the Umtata Rivers. The *Amatembu*, under Fadana, Tooi, and other petty chiefs, live in the neighbourhood of the sources of the Bashce and Umtata Rivers. The *Amaponda*, under Faku, occupy the country between the Umtata and Umsimeulu and the Amambaxa; various minor clans under petty chiefs reside in the territory beyond that of the *Amaponda*, on the Natal frontier.

Dr. Andrew Smith, in 1830, estimated the people of the following chiefs thus:—Gaika, 45,000; Zlambie, 35,000; Eno, Congo, and Botman, together about 20,000; Hintza, 40,000; Tambookies, 40,000; Umyeki, 15,000; Quanda, Depa, and minor tribes, 15,000; Fuku, 45,000; Kapai, 15,000; various scattered tribes, 10,000—making altogether, 280,000. Bassutos, 15,000; Mantatees, 10,000; Thaba Unchu tribe, 10,000; and the Lepui tribe 10,000. The proportion of fighting men, who could be spared from guarding the cattle, he calculated at one in six.†

At the close of the war of 1836, the total number of the aforesaid tribes was stated by Mr. Godlonton, the editor of the *Graham's Town Journal*, at 395,000.

The late Rev. J. J. Freeman thus estimates the amount of the tribes between the colony and Natal, exclusive of a "very numerous population," by which the country 300 miles east of Lake Ngami is occupied:—Amakosæ and Tambookies, 250,000; Amapondas and other tribes to Natal, 150,000; Zoolus and others in Natal, * Parl. Papers, 1849; p. 37-8. † *Idem*, 1851; p. 275.

100,000; independent Zoolus, at least, 500,000; Bechuanas, Mantatees, Basutos, and other tribes between Lattakoo and Natal, 300,000; the Matabele and other tribes, from the Zoolus to the lake tribes, 500,000; to these "conjectural calculations," he adds, 200,000 for other tribes east and west, making up, in all, "two million of the Kafir race now well known to us."‡

The Kafir character has been previously noticed (see p. 115). In symmetry and strength of limb, in manly bearing, martial spirit, and stoical endurance of suffering, perhaps no people in the world, savage or civilized, have ever surpassed them. The cast of their features is rather Asiatic than African; the nose is frequently aquiline, and the forehead lofty. The following remarks, contained in a letter recently addressed to me by the Rev. Robert Niven, who, with his family, resided many years in the heart of Kafirland, affords a graphic and concise view of the condition and habits of this people, and also, it seems to me, a triumphant refutation of the alleged impracticability of converting them by just measures into valuable friends, instead of dangerous and harassing foes, one of which they must be for at least some years, since the work of extermination can evidently be but a slow process.

Adverting to the harsh opinions promulgated respecting the Kafirs, that they are so stereotyped in paganism, so devoted to heathen practices, and so strongly bound by their attachment to their ancient feudal system, as to be hopelessly impervious to the influences of christian civilization, Mr. Niven writes:—

"What are the Kafirs then? Infidels! as their name imports. So the Mahommedan Arabs would have it, who gave the race this epithet of reproach for their resolution in declining the faith and practice of the Koran. There is character indicated by this very fact—that they, a race of African shepherds, should have advanced from north to south, with step firm and slow, along apparently two-thirds of the eastern side of the continent; predominate by conquest, and, at times, by paction and purchase, on the Hottentot soil, east of the Gamtoos; and only be arrested in their march to the Cape of Good Hope by a formidable European colony, reminds one of the shepherd kings of Asia, whose history became European. And although their martial bearing has not given law to the British, the fact that a people who never brought more than 6,000 warriors into the field, armed chiefly with spears, should in thirty years stand up in six wars against a civilized government with increasing deadly effect, disconcert able generals, involve the recal of three out of four successive governors, within a period of eighteen years; and in the ‡ *A Tour in South Africa*, London, 1852; pp. 198-9.

present campaign, one leader alone, at the head of 1,000 or 1,500 men, resist successfully an army three times that number,—the fact that the insurgent chief, Sandilli, with scanty precarious resources, and some 4,000 or 5,000 undisciplined barbarians, should be able for eighteen months to perplex double that number of troops, and when he sued for peace, should have still the confidence, ill-judged and impolitic I think, to refuse the promise of life, without soil or cattle, and, with his followers, prefer 'to die on their fathers' graves,' surely indicates a race of no common stamp. A firm believer in the unlawfulness of war by avowed Christians, cannot, in justice, withhold approbation from Kafir belligerents at least, when they retain sufficient international virtue to respect the truces dictated by our commanders, and display an assumed characteristic of civilization—humanity in war—for which they are not indebted to their superiors in knowledge and arms. They were not the first to mutilate the remains of the fallen warrior, and reduce to ashes the deserted homestead. They have not followed our example, of thirty years' standing, in destroying harvested grain and growing crops; and while we have negligently shot women and children, they have systematically, and in every instance save one of accident, saved these unoffending victims of war. At Woburn, on the second day after the outbreak, the Kafir besiegers began by collecting the women and children, whom they ordered away to the Chumie station for protection. In the afternoon of the same day, at Auckland, where they are said to have surprised ten of the military settlers, they stopped the siege on the fortified barrack, whither the inhabitants had repaired, to separate the women and children, whom they took out of the building, through an aperture at the top of the wall, and directed them away down to the same mission station, where their wants were supplied, and whence they were safely escorted to the nearest garrison. A fine opportunity occurred at Waterkloof, in the last assault made on that natural stronghold by Sir Harry Smith, to show how a British commander can requite such generous martial bearing in a rude pagan enemy. Macomo had retired before our advance, and left a body of Tambookies, headed by Qweshia, at the camp, called by the ex-governor, Macomo's Den, where the women and children were collected. An indiscriminate fire was opened on the inmates of this natural rendezvous, and did appalling execution on the helpless sex and their offspring, which shocked the bravest men in our ranks, and stained indelibly our humanities in the eyes of our more scrupulous and chivalrous foe.

"A nearer insight into the native character will not be found inconsistent with these exponents in the field. After the most careful scrutiny, on an extended view of fourteen years' intercourse, the most intimate possible for an European, the Kafir claims to be regarded as a person of frank and affable manners; he is unassuming, yet self-possessed; and retains a respectful unembarrassed demeanour even in the presence of pomp and state. Cool, collected, and cautious in conversation, especially with strangers, he dexterously answers questions which may commit him, by asking others of similar compass. He is penetrating and acute in his observations on others, yet tractable and confiding when his honour is trusted, and is neither vindictive nor malicious in the popular sense. Capable of restraining his feelings until a fitting occasion, he is equally successful in the manly concealment of the keenest bodily suffering; pursues resolutely his object, and only relapses into inaction

when it is achieved. A model of hospitality, but no less decidedly covetous, he yet is grateful for favours, however slow to evince his gratitude by acts of self-denial. Frugal in the use of his slender means, he is equally concerned for the steady increase of his property; and to get and keep cattle, which is the standard wealth of his race, he lets out the baser elements of his character—those moral stains of our tainted humanity, such as dishonesty, cunning, deceit, and falsehood. This latter trait has often reminded the writer of the test a friend once gave him of the men of his own county:—'You will never know a Yorkshireman,' said he, 'until you buy a horse of him;' nor, it may be added, a Kafir before you have dealings with him in cows, which need not be of rare occurrence, as contracts for service are usually paid in cattle. The native credulity in rain-makers, and the magician tribe generally, is quite reconcilable with a quick perception of professional imposture. Tyalie, a firm believer in 'doctors,' witnessed an European conjuror bear to be shot at, with what seemed a loaded gun; 'let me have one shot at him with my long rifle,' said the chief, coolly, 'and he will not stand another.'

"The social character of the Kafir race, is just that of the individual generalized. 'They are not mere wanderers,' to adopt the language applied to a different Ethiopian race, 'over an extended surface, in search of a precarious subsistence; nor tribes of hunters, or of herdsmen [merely], but a people among whom the arts of government have made some progress, who have established, by their own customs, a division and appropriation of the soil; who are not without some measure of agricultural skill, and a certain subordination of ranks and usages, having the character and authority of law.' Their government is feudal. Chiefs claim authority on the principle of the divine right of kings, and hold an absolute property in their vassals. Every kraal, or hamlet, has its head; every glen, or river, its representative; every clan its chief; and the separate clans their paramount lord. Pato, a chief of 10,000 people, said to his Excellency Sir H. Smith, at an aggregate meeting, held in January, 1848, immediately after the assembled chiefs had gone through the ceremony of swearing subjection to our queen, 'wherever the great chief (Sandili, he afterwards explained) churns his milk, there will the little chiefs be to eat the butter.'

"The Kafirs have their local forms of justice and superior courts of appeal, and persons to fulfil the duties of judges, lawyers, and advocates, and several orders of the healing art—who are paid, the one when he brings off his client, the other when he restores his patient. Bad success, either in law or physic, is delicately marked by a trifling acknowledgment. The farm, managed by women chiefly, and the dairy, by men, with the results of the chase, supply the standard means of subsistence. They are a domestic people, fond of their wives and children, and, like all feudalists, despots at home, with many softening deductions, which do honour to their affections. Polygamy is prevalent, and purchase of wives, but neither is compulsory in the legal sense. Rain-makers, in a country subject to periodical droughts, and magicians, assume the place of darkened nature's priesthood, and minister to the antecedent belief in a supernatural power pervading all things, and affecting for weal or woe all their race. It is the notion simply of a diffused divinity, a sentiment derived from a vague perception of Providence, which the Kafirs never gathered up into the abstract idea, which we

represent by the collective term—God. Their repugnance to the touch of a dead body, and partial ablution after burial of it; observance of sacrifice to avert calamity, and meat-offerings in seasons of plenty; stations for prayer and thanksgiving, connected with critical enterprises; and the prevalence of the rite of circumcision at the age of puberty, accompanied by formalities emblematic of a moral transition in the subject of it, are notable religious facts, however unmeaningly perpetuated, which proclaim the ancestral antiquity of the Kafirs, and a remote connexion with the descendants of Ishmael, if not with the seed of Abraham in North Africa, where the Gallas and Somaulis, a portion of the parent stem, perhaps, of the same race, are found at the present day."

The total population of the "sovereignty" is estimated at 120,000, of whom about 12,000 are whites. In the territory of the emigrant boors beyond the Vaal, the settlers are stated to be from 10,000 to 15,000. But of the numbers of the coloured races comprised within its limits, I have been unable to obtain an estimate.

The Namaquas, a people of Hottentot origin, inhabit the west coast from the Orange River mouth towards Walvisch Bay. So late as 1820, they were scantily clad in skins, lived in rude huts of boughs and mats, and had some cattle, on whose milk, together with the flesh of wild animals killed by pitfalls or poisoned arrows, and the gum of trees, seeds, and roots, they managed to support life. Through the efforts of missionary societies, their temporal as well as spiritual condition has been materially improved, and most of them are now partially, at least, provided with European clothing. Although still a nomadic people, some have begun to cultivate the ground, others possess ox-waggons, and many have firearms.*

The Damaras, dwelling further to the northward, are a striking race; tall, upright, models for sculptors: facial angle about 70°, fine manly open countenances, and often beautifully chiselled features; their whole appearance highly imposing. Of the number of the Namaquas and Damaras, or of the other native races contiguous to the frontiers, we have no statistical information.

GOVERNMENT. — During the period of Dutch rule, the civil administration was conducted by a governor and council appointed by the directors of the Dutch East India Company at Amsterdam. The colony was divided into drostdies or districts, each having a Landdrost or civil magistrate, with an Heemraden or council. On our conquest in 1795, a military governor was placed

* Cape Town Mail, 23rd August, 1851.

at the head of affairs. After the restoration of the colony to Holland, the states-general proposed to establish a representative assembly, chosen by the people. Before this plan could be carried into effect, the Cape again came beneath the sway of England, and from 1806 to 1836, the chief authority was vested in governors sent from England, who were almost invariably military men. In 1837–8, a legislative council was formed, composed of the leading executive officers of the colony, and five unofficial members. This arrangement lasted until the anti-convict dissensions in 1849 unsettled everything. The colonists then "agitated" for a representative assembly and a constitution. This has been granted upon the basis of *two elective chambers*, with a high property qualification for the members of the upper house. The details have been left to the settlement of the colonists themselves, and are now in course of adjustment; the chief difficulty consisting in determining the franchise, one party desiring it to consist of a property valued at £50 per annum, their opponents of one valued at £25 per annum. The friends of the coloured race are strongly in favour of the latter, in order that the Hottentots and others may possess an interest in the government under which they live.

LAWS. — The "statutes of India," collected by the Dutch government towards the end of the seventeenth century, were applied to the Cape in 1715. The civil law has been modified by various colonial ordinances, or, where these have been found deficient, by the *corpus juris civilis*. Since our occupation, the severity of the Dutch criminal code has been greatly mitigated, and torture abolished. Criminals are tried by a jury of at least seven persons; and, where the offence is capital, a majority must agree in the verdict.

The tenure of land differs. The most ancient system is that on which *loan farms* are held, where the lease is perpetual so long as the stipulated rent is paid. *Gratuity lands* are customary copyholds, for which about the same price is paid as for "loan farms." Quit rents are demanded for the use of waste lands lying contiguous to an estate. Freeholds are now becoming general, especially in the eastern districts. Transfers or mortgages (except in the case of the bond called *schepens*) are legal only when registered in the debt-book at the colonial office, Cape Town, where commis-

sioners sit to superintend such matters. No sale or transfer can be made till after a settlement of all bonds, either by the mortgagee consenting to continue his loan on the securities of the new purchaser, or by repayment; a fresh transfer is then made, and the purchaser is placed in possession of a complete title, without the possibility of fraud, of claims withheld, or mortgages concealed, at an expense of a couple of sheets of paper, and a trifling payment—thus avoiding a ponderous mass of conveying.

There is usually an equal division of property among children on the demise of a parent. The Dutch language and forms are now superseded in the courts of law by those employed by the English at Westminster.

A supreme court at Cape Town holds yearly four civil and three criminal sessions, and is presided over by a chief and two puisne judges. Twice a year a judge of this court makes a circuit for civil and criminal business through the principal towns of each division. There is a high-sheriff for the colony, and deputy-sheriffs for each district.

The civil commissioner in each district is a resident magistrate, as also a financial officer; he is aided by a stipendiary magistrate, who holds frequent courts for the administration of criminal justice in petty matters, and for the recovery of small debts; the commissioner holds a matrimonial court for the settlement of conjugal differences, and the granting of marriage licences.

A court of vice-admiralty sits for the trial of offences committed on the high seas, and for the adjudication of maritime disputes. The commissioners appointed by letters patent under the great seal, dated 13th March, 1832, are the governor, or lieutenant-governor, members of council, the chief and puisne judges, the commander-in-chief and flag-officers of ships of war, and also the captains and commanders of ships of war.

The attorney-general, *ratione officii*, is the public accuser and prosecutor, and all suits in the court of justice, on the part of the government, are conducted by him.

The *Bar* is not numerous; several solicitors, as in Canada, practise as barristers: litigation is expensive on account of the numerous forms, and heavy stamp-duties. There is an insolvent and bankruptcy law in

force. By statutes 6 & 7 William IV., the authority of the British government in South Africa was extended for the maintenance of justice and the punishment of crime to all places without the colony as far as the 25° of south lat., "for the protection of native subjects of that country, as well as of H.M. subjects residing there." The mode in which the local affairs of the Orange River sovereignty is administered has been previously described.

The Trans-Vaal boors have established a republic in the *Grensgebied*, and their independence has been formally recognised by the British government. On the 16th of January, 1852, a conference was held at the *Zand River*, between H.M. Assistant-commissioners, Messrs. Hogge and Owen, for settling the affairs connected with the east and north-east boundaries of the Cape Colony; and Commandant-general Pretorius, Landdrost Lombard, Commandant-general Joubert, Commandant Kruger, and twelve other leaders of the boors. At this meeting the British government guaranteed in the fullest manner to the emigrant farmers beyond the Vaal River, the right to manage their own affairs, and to govern themselves, without any interference on the part of the Queen's government, by whom no encroachment should be made on the territory north of the Vaal River, and no alliances contracted with any of the coloured natives north of the said river. Slavery is not to be permitted or practised in the Trans-Vaal territories. Mutual facility to be afforded to traders on both sides. Ammunition-trade with the native tribes prohibited; the boors to purchase their ammunition in any of the British colonies or possessions in South Africa; certificates by a British magistrate to accompany all ammunition and fire-arms coming from the south side of the Vaal, and the waggons containing the same to be, under the jurisdiction of the emigrant farmers, admitted by permission of their nearest frontier magistrate. Criminals and other guilty parties flying from justice on either side, to be mutually given up, if required. Courts of law on both sides to be open for all legitimate processes, and attendance of witnesses to be compelled. Certificates of marriage among the boors to be held valid in the colony. All persons but criminals or debtors to be allowed to sell their property and remove from the British colony to the Trans Vaal territory, and *vice versa*. This convention

was signed by both parties, and duly ratified the 13th of May, 1852, by Governor Cathcart, who expressed a hope that "the freedom which the emigrants are thus permitted to assume, may result in lasting peace among themselves, and in fast friendship with the British government, neither entertaining past prejudices, nor adopting former causes of quarrel." The governor further assured them of his desire to contribute to their welfare, if in his power, by promoting religion and education amongst them.

MILITARY DEFENCE.—The disturbed state of the frontier has always been considered to necessitate the maintenance of a considerable force at the Cape, even during times of comparative tranquillity. Thus, in 1831, there were three regiments of infantry, detachments of artillery and engineers, and a very efficient corps of about 400 Cape mounted riflemen, composed principally of Hottentots. The military stations on the Kafir frontier were eight in number, and garrisoned by 474 men, while 366 were stationed at Graham's Town. Now (1852), upwards of 10,000 regular troops, including dragoons, lancers, artillery, engineers, rifles, and infantry of the line, are employed there in harassing and unsatisfactory war. Simon's Bay is our naval station for this part of the globe; it is under the command of a rear-admiral or commodore, whose authority extends along the east coast of Africa, and to Mauritius and St. Helena.

FINANCES.—The revenue of the Cape is fully adequate to its civil expenditure. Its increase, since 1795, is thus shewn:—1795, £22,252; 1828, £128,971; 1835, £133,417; 1848, £234,375; 1849, £237,805; 1850, £245,785. Within the last two years the revenue has been augmented by land sales, especially of the neutral territory, or Victoria Division. In 1849, the land fund yielded £8,880; in 1850, £16,575; these sums being chiefly obtained from the sale of country seized from the Kafirs.

The amount derived from the principal taxes in 1850, was, customs, £102,273; transfer dues, £24,928; land revenues, viz. quit-rents, £22,267; stamps and licences, £20,086; auction dues, £17,079; postage, £11,541; incidental receipts, £20,284. There are other items of minor amount.

GUANO.—A considerable but temporary accession to the local revenues, accrued from the granting of licences for the collection of a concentrated manure

called guano, from several rocky islets of the coast. In three months of the year 1845 nearly £29,000 were realized for licences granted at the rate of twenty shillings per ton, the selling price in Great Britain being from £10 to £15, and even £20 per ton. So great was the desire, both in Europe and in America, for this fertilizing agent, that in 1845-6, between 300 and 400 vessels might have been seen at anchor round the Ichaboe islet, near the mouth of the Orange River, loading or waiting to load; while some, in despair at the long period that must elapse before their turn could arrive, returned empty as they came. From Ichaboe alone 200,000 tons are supposed to have been obtained, the rock being, in a few months, scraped as clean as a well-kept pavement. The bird named the gannet, from which the African guano is chiefly derived, is about the size of the common domestic goose. Its exuviae, reduced by time to a fossil state, and found in hardened strata like shells in limestone rocks, consists of urate, phosphate, oxalate, and carbonate of ammonia, with a few earthy salts. Whether the effects of this powerful stimulant of the soil be wholly beneficial, time and experience alone can prove; but suspicions are entertained of its having increased the disease called rust in corn; and it is a singular fact that its introduction into Europe was contemporary with the commencement of that fearful, and, it would appear, permanent plague, the potatoe blight.

TARIFF.—Free warehousing ports:—Cape Town (Table Bay), Simon's Town, Port Elizabeth (Algoa Bay), and Port Natal. Sub-collectors are stationed at Port Beaufort, Mossel Bay, and East London (Buffalo Mouth), for the purpose of entering or clearing all vessels arriving from, and departing for the United Kingdom, or any of H.M. possessions abroad. **Import Duties.**—British goods, inclusive of British possessions abroad, 5 per cent., *ad valorem*; foreign goods, 12; by order of H.M. in council of 24th April, 1847. **Rated Articles.**—British coffee, 5s. per cwt.; foreign, 10s.; foreign fish, of all sorts, 12 per cent. *ad val.*; foreign wheat flour, 3s. per barrel of 196 lbs.; gunpowder, 3d. per lb.; British meat, 1s. 3d. per cwt.; foreign, 3s.; foreign oil, £3 per 252 gals. imp. measure; sperm, £7 10s.; pepper, 4s. per cwt.; rice, 1s. 6d.; sugar, (not refined, British possessions,) 2s. 3d.; foreign, 4s. 6d.; British, refined or candy, 3s.; foreign, refined or candy, 6s.; spirits, of all sorts, not exceeding the strength of proof by Sykes' hydrometer, and so in proportion for any greater strength, 2s. per imp. gal. (By H.M. order in council, dated 31st October, 1848, one gallon of spirits is allowed to be imported *duty free* for every ten gallons of Cape wine exported, or deposited in the bonded warehouse for exportation.) Tea, 4½d. per lb.; tobacco, unmanufactured, 12s. per cwt.; manufactured, 20s.; cigars, 5s. per 1,000; wine, bottled, 6 to the gallon, 4s. per dozen; ditto, 12 to ditto, 2s.; in wood, 1s. 6d. per imp. (Except at Port Natal, where the duties are the same as above upon foreign, but only *one-half* upon wine from British possessions.) Unmanufactured mahogany, rosewood, and teakwood, 3d. per cubic foot; all other foreign, 2d. Foreign articles, re-exported from the United Kingdom, without any drawback of duty, are admitted upon the same terms as British goods, viz., 5 per cent. *ad val.*; foreign goods, imported from bonded warehouses of the United Kingdom, or, upon which the duties there paid have been drawn back, are charged the duty upon British goods, with three-fourths of the difference (if any) between such duty

and that charged upon foreign goods added thereto; being equivalent upon manufactures, to 10½ per cent. *ad val.* Free.—Bottles, of common glass, imported full; bullion; oaks, staves, hoops, and coopers' rivets; coin; diamonds; horses, mules, asses, sheep, cattle, and all other live stock and live animals; seeds, bulbs, and plants and specimens illustrative of natural history. *Prohibitions and Restrictions.*—Gunpowder, arms, ammunition, or utensils of war, are prohibited to be imported, except from Great Britain, or some British possession. Base or counterfeit coin; books, such as are prohibited to be imported into the United Kingdom, are likewise prohibited to be imported here.

EXPENDITURE has kept pace with increase of revenue. The salaries of public functionaries at the Cape, and various other disbursements, are as follows:—

Governor, £5,000; colonial secretary, £2,000; chief justice, £2,000; first puisne judge, £1,500; second ditto, £1,200; attorney-general, £1,200; treasurer, £1,000; collector of customs, £800; master of supreme court, £800; auditor-general, £700; surveyor-general, £700; post-master, £600; high-sheriff, £600; superintendent of police, £600; superintendent-general of education, £500; chief commissioner and commandant, British Kaffraria, £500. There is a civil commissioner, and also a resident magistrate, in each district; the salaries of the former vary from £100 to £200 a year, those of the latter are £300 per annum. The civil establishment (including the above salaries) amounts to about £120,000 per annum. The pensions on the civil list of the colonial revenue in 1850 amounted to £10,087. The allowance for ecclesiastical establishments is about £16,500; for educational, £5,000; medical,

£3,500; police and prisons, £16,000; judicial, £11,000; and administration of justice, £3,800. Divisional courts, £16,000; for aborigines, £6,500; of this the Kafir police for 1850 was placed at £5,355. The presents to Kafirs, rations, &c., amounted only to £586; the allowances by treaties and engagements to native chiefs, £457; contributions towards a botanic garden, £300.

The amounts expended by Great Britain in the colony, during 1850, for military purposes, were:—royal artillery, pay and allowances, £5,470; royal engineers, £1,386; royal sappers and miners, £5,925; ordnance and artillery labourers, stores, &c., £11,516; barrack and commissariat, £16,936; supplies, military allowances, ordinary and commissariat services, £303,276: total expense by Great Britain, £344,511. The government contract for supplying the troops with food, is 6d. per day for each man; the rations consist of 1½ lb. of good meat, 1 lb. of excellent bread, and groceries according to dietary table. During peace, government makes a profit of 2d. to 3d. on each ration, but probably loses in proportion during war.

BANKS.—Ten joint-stock companies are in operation, most of them issuing notes for £5, and upwards, over which issues government has no control; the amount of their paper in circulation in 1851, was about £135,000. The state of the Banks and other companies, in 1851, is thus shown:—

Name of the Company.	Established.	Number of shares.	Subscribed value.	Amount Paid up.	Price.	Last Dividend.
Exchange Buildings	1819	159	£37 10s.	£37 10s.	£20 0 0	£2 0 0

Note.—The £200 marked thus (*) was paid £10 in cash and £190 by bond.—The dividends marked thus (†) are paid half-yearly.

MONIES of account, English. — British coin in circulation, about £600,000. The quantity imported from 1825 to 1849, inclusive, has been £1,226,522; exported, £482,605.

WEIGHTS AND MEASURES.—For government purposes, the English standard is used; for private dealings, the Dutch standard is still in operation. The following table shows their relative proportions:—

Weights.

91 $\frac{1}{10}$ lbs. Dutch (92 nearly) . = 100 lbs. English.
1 lb. Dutch, nearly . = 1 lb. 1 $\frac{1}{4}$ oz.
1 lood, = $\frac{1}{4}$ oz.

Liquid Measure.

A leagner = 152 Dutch gal., or about 126 $\frac{7}{10}$ imp. gal.
A pipe = 110 do. " 91 $\frac{1}{11}$ "
An aum = 38 do. " 31 $\frac{1}{2}$ "
An anker = 9 $\frac{1}{2}$ do. " 7 $\frac{1}{4}$ "

Corn Measure.

A schepel = 744 imp. bushel.
A muid = 4 schepels = 2 $\frac{976}{1000}$ "
A load = 10 muids = 29 $\frac{72}{100}$ "

Land Measure.

1,000 Rhyndland feet = 1,033 English.
1 Rhyndland rood = 12 Rhyndland feet = 144 Rhyndland inches.
144 square inches = 1 square foot Rhyndland.
144 square feet = 1 square rood.
600 square roods = 1 morgen.
1 morgen = nearly 2 English acres.
49 $\frac{72}{100}$ morgen = 100 English acres.

STAPLE PRODUCTS, EXPORTS, IMPORTS, AND SHIPPING.—Corn, wool, wine, aloes, hides and skins, tallow, whale oil, ivory, gums, provisions, live-stock, feathers, &c., constitute the principal articles of traffic. The export of some of these items is thus shown at different periods:—

Year.	Ivory, in lbs.	Number of Hides.	Number of Skins.	Aloes, in lbs.	Wine, in gallons.	Wool, in lbs.	Tallow, in lbs.
1800	1,500	300	—	71,834	—	—	—
1820	9,510	—	—	348,000	—	—	—
1830	25,497	264,105	—	375,736	1,548,085	33,280	13,333
1840	12,359	29,250	311,491	485,574	952,000	911,118	15,444
1849	38,367	52,223	449,938	348,814	443,245	5,024,946	68,832
1850	54,061	26,513	419,121	227,612	374,803	5,912,927	25,308

The augmenting value of trade and tonnage, inwards, is stated in the annexed table, at intervals, since 1836:—

Year.	Imports.	Exports.	Shipping, Inwards.
			Tons.
1836	£541,038	£362,280	134,875
1840	732,494	775,060	184,442
1849	944,535	594,920	204,049
1850	1,277,101	637,252	224,126

The shipping visiting the Cape has largely increased. The tonnage, inwards, of each port, is thus shown:—

Year.	Table Bay.	Simon's Bay.	Algoa Bay.	Total.
	Tons.	Tons.	Tons.	Tons.
1824	19,525	1,300	—	20,825
1829	66,736	2,206	4,274	73,216
1844	171,599	16,096	19,626	207,311
1848	172,577	15,268	24,900	212,745
1849	166,063	13,279	23,291	202,533
1850	175,228	17,896	29,626	222,750

No'e.—East London Port had inwards, in 1849, 1,417 tons.

There is a considerable coasting-trade, which has of late years augmented. In 1835, the coasting tonnage, inwards, was, tons, 11,313; in 1844, 30,000. Steam-vessels are now being brought into operation, which will promote the trade from Walvisch Bay, on the west, to Delagoa Bay,

DIV. VII.

on the south-east shore of Africa. In 1850, there were thirty-nine vessels, including one steamer, registered in the colony as colonial property; their aggregate burthen was 4,940 tons, giving an average of nearly 130 tons for each vessel.

The commerce of Algoa Bay, Port Elizabeth, has risen rapidly into importance.

Year.	Imports.		Exports.	
	Vessels.	Value.	Vessels.	Value.
1822	—	£13,000	—	£5,200
1832	46	20,000	44	90,304
1842	95	162,252	92	94,674
1844	114	135,919	113	118,860
1849	134	253,685	137	193,794
1850	155	354,749	146	294,905

The declared value of British manufactures exported from England, in 1849, to the Cape of Good Hope, was, £520,896; and of other articles, £52,535. Of the manufactures, there were cottons, 6,200,000 yards; woollens, 260,000 yards, and 17,400 pieces; linen, 442,000 yards; soap and candles, 483,000 lbs.; hats, 4,000; hardware, £24,280; iron and steel, £36,500; lead and shots, 200 tons; leather, 164,400 lbs.; saddlery, £10,300; earthenware, 347,700 pieces; glass, 6,488 cwts.; haberdashery, £82,233; beer, 2,390 brls.; coals, 7,261 tons.

U

146 PRODUCE OF EASTERN AND WESTERN PROVINCE; VALUE OF LAND.

The mercantile progress of the eastern, as compared with the western province of the colony, is shown in the following comparative table of some of their staple exports:—

Western Province.

Year.	Value of Wool.	Wool, in lbs.	Hides, Value.	Skins, Value.	Total.
1838	£16,555	286,246	£8,178	£16,639	£41,372
1839	19,257	377,639	8,794	18,168	46,219

1850	—	4,323,650	—	—	—

Note.—The wool was shipped from Table Bay for the Western Province, and from Algoa Bay for the Eastern Province.—In 1833 the exports of fine wool were, from Table Bay, 73,324 lbs., and from Algoa Bay, 39,753 lbs.

LANDS.—About two-fifths of the whole colony, comprising, without the recent additions, about 120,000 square miles, or 76,000,000 acres, are supposed to consist of mountain ranges and arid plains, almost entirely unfit for agricultural or pastoral purposes. The quantity of land granted to December, 1848, was 43,276,504 acres; of the remainder ungranted, some is held by farmers on loan tenure, included in the Kat River settlement, or appropriated for missionary stations, town commons, &c. It is estimated that of the ungranted lands, no more than five million acres are in any degree fit for cultivation. The average price, per 100 acres, for land in the western province, is £12 to £15; in the eastern, £21 to £22. The quit-rent charged, averages 6d. per 100 acres; this may be

redeemed and land converted into freehold, on payment of fifteen years' purchase.

In 1844, about 549,000 acres were held under lease at 3s. 10d. to 13s. 3½d. per square mile; the quit-rents extended over 44,420,350 acres, at ⅓ of a penny per acre.

The value of *landed* property, not including government, military, municipal, or recently acquired territory, is thus stated in 1851:—Cape Town, Cape, and Malmesbury Divisions, £1,905,087; area in square miles, 3,593; value (in round numbers) per square mile, £550.

Divisions.	Value.	Area, in square miles.	Value, per square mile.
Western Province:—			
Stellenbosch . . .	£630,447	2,280	£276
Swellendam . . .	572,820	7,616	75
George . . .	284,522	4,032	65
Clanwilliam . . .	192,462	22,111	9
Worcester . . .	253,272	20,000	12
Beaufort . . .	162,196	13,050	12
Total . . .	2,095,719	69,089	—
Eastern Province:—			
Albany . . .	530,535	1,792	300
Uitenhage . . .	348,625	8,960	39
Graaf-Reynet . . .	276,641	8,000	34
Colesberg . . .	145,647	11,654	12
Somerset . . .	179,366	4,000	45
Cradock . . .	184,940	3,168	60
Total . . .	1,665,754	37,574	—

The grand total of the whole is £5,666,560 sterling. The value of the assessed immoveable property in the colony, is, under the divisional road board's assessment, £5,822,390; municipal, £2,028,620; total, £7,851,010. The number of rate-payers in the municipalities, is 5,591; in the divisional road board's assessment, 17,474.

Land is sold, in freehold, by public auction, at an upset price of 2s. per acre; the cost of survey is added to the sale price.

Wages.—Domestic, 15s. to 60s. per month; farm, 45s.; tradesmen, 3s. 6d. to 7s. 6d. per day.

Provisions are very cheap; meat, 1d. per pound; bread and other necessities of life in proportion.

The colony affords a good opening to labouring-men and mechanics of steady habits and sober character, and an opportunity of becoming proprietors and employers of labour. The voyage between England and the Cape is now performed in thirty to thirty-six days, by the monthly packets of the *Screw Steam-Ship Company*.

Live Stock, Animal Productions, Agriculture and Agricultural Productions, in the Cape Colony, for the year 1849, collected and arranged from the Blue Book for 1850:—

Note:—The Cape Division does not include Cape Town, for which there are no returns.—In 1836, there were in the whole colony 6,301 horses, 224,549 cattle, 1,510,194 sheep, 306,785 goats. The quantity of land in cultivation was 57,813 acres; the produce was,—wheat, 463,299; barley, 218,400; rye, 34,258; oats, 241,186; maize, 7,333; peas, beans, &c., 9,254; potatoes, 8,945 bushels; wine, 16,683; brandy, 1,282 leaguers, of 162 gallons each.

RELIGION.—The following abstract of the latest ecclesiastical returns, shows the numerous denominations of Christians included in the colony, and their distribution :—

Divisions.	Dutch Reformed.	Scottish Presbyterians.	Church of England.	Lutherans.	Independents and Congregationalists.	Wesleyans.	Moravian, Rhenish, and other Protestant Missions.	Roman Catholics
Cape Town and Cape Division	18,834	1,145	7,300	1,500	994	2,325	5,058	2,000
Stellenbosch	8,277	—	100	—	—	890	700	—

Total	64,033	1,145	11,510	1,500	6,826	9,752	16,573	3,580

Note.—No return has been made of the number of Jews, Mahomedans, Heathens, and others not included in the above table. There are probably about 6,000 Mahomedans in Cape Town, but their number is small in other parts of the colony.

The proportion per cent. of the Christian population, in connexion with the principal denominations, has been thus estimated :—

Denominations.	White.	Coloured.
Church of England	9.36	.55
Dutch Reformed	63.12	6.45
Presbyterian92	3.58
Wesleyan	5.31	6.46
Independent	1.49	11.30
Moravian04	5.93
Lutheran	1.45	5.56
Roman Catholic	4.34	.14

The Dutch Reformed Church in the sovereignty and in the republic beyond the Vaal River, is extensive and increasing; in the former there are five pastorships, and two in the latter. The Church of England* is presided over by a bishop (Dr. Gray), who was consecrated in 1847, to the see, which had been mainly formed through the munificence and piety of Miss Burdett Coutts. There are about forty clergymen distributed over the deanery of Cape Town, and the archdeacons† of George and Graham's Town. The Dutch Church is governed by a synod composed of the officiating clergy

* For twenty years after the permanent occupation of the Cape by Great Britain, no place of worship was erected for the celebration of the services of the Church of England. Even now the colony is but scantily endowed with English churches, though the untiring energies of Bishop Gray have been successfully directed to the establishment of a larger number.

† The venerable N. J. Merriman, archdeacon of

and elders of all the parishes in South Africa. A moderator, assessor, actuaries, scribes, and quæstor, form the executive. There are thirty-seven clergymen. The Evangelical Lutheran Church (St. Martin's) is ruled by a minister, elders, and deacons, as is also the Scottish Church. The Roman Catholics have a bishop, two apostolic vicars, and nine priests. The Mahomedans‡ have three mosques in the colony, presided over by moollahs or priests.

CHRISTIAN MISSIONS.—It would require a fair-sized volume to set forth adequately the magnitude of the efforts made by various dissenting Christian communities to gladden with Gospel light the heathen darkness of South Africa, or to describe the devoted labours of individuals who have forsaken home and country, renounced the habits of civilization which had become a second nature, and braved death by violence, by starvation, and disease, with almost apostolic zeal.

The opposition which early missionary exertions met with from the Dutch government has been already related. At length, in 1792, permission was with great difficulty obtained for the establishment of a Moravian mission at Genandendal. The British, on assuming the government, in 1795, gave decided encouragement to the propagation of religion, and General Dundas especially evinced great interest in the labours of Vanderkemp and others. The Dutch, during their second brief period of dominion, made some change in the narrow and unchristian policy which they had previously dis-

Graham's Town, is one of the most self-denying and exemplary pastors in the colonial church.

‡ Mahomedanism was introduced into the colony, by the slaves imported from Malacca, and gained ground through the kindness shown by the priests to the coloured people generally. It was also favoured by the Dutch, because its disciples refrained from wine and strong drink.

played. Kicherer, and several other missionaries, despatched by the Rotterdam society, were, by a proclamation or ordinance, dated February, 1805, authorized to proceed to the interior, for the purpose "of teaching and promoting religion and civilization amongst the helpless heathens." The institutions or schools were however to be formed so far beyond the colonial boundary, as to leave no possibility for persons connected with them having "daily communications with the frontier inhabitants, much less with the inhabitants or original natives living within the boundaries." Other clauses of this proclamation indicate that the authorities, instead of viewing the promotion of Christian civilization as their first duty, regarded both spiritual and secular instruction with alarm. The same suspicious distrust was evinced towards the missionaries within as without the colony; they were allowed to pass its limits only by the express sanction of the governor, were forbidden to teach writing to the natives, save in certain exceptional instances; and, were directed to inculcate, "as far as the intellects of the natives would permit," the first ideas of social order, "as it was established in Holland and in the colony."

Upon the re-establishment of British power, less stringent restrictions were imposed upon the missionaries; but they were not destined again to receive the cordial support afforded them in the time of General Dundas. Many of the leading authorities, and of the best class of colonists, showed them the respect and countenance due to their holy calling, and exerted their best influence to support and sustain them; others, on the contrary, cherished and excited most unjust prejudices against them.

Amongst so large a body as the South African missionaries, it is more than possible that individuals may have erred in conduct and in judgment. Some may (as is alleged) have exhibited indiscreetly their sympathy with the sufferings of their coloured brethren, and even overstepped the bounds of their ministerial functions in striving for the concession of civil rights to the members of their flocks; but no impartial person, endowed with a right perception of the inestimable value of Christianity, and of its humanizing and ennobling influence, can, after a careful examination of the records of the colony, and the events connected with its past painful history, deny that, with the exception of slave emancipation

and the 50th ordinance (see p. 61), the missionary proceedings form almost the only redeeming features of European intercourse with the Hottentots, Bushmen, Kafirs, and other African tribes. Nor must it be forgotten that the 50th ordinance, that inestimable boon to the Hottentots, was itself the fruit of missionary pleading, especially of the labours of one honoured member, the late venerable Dr. Philip, whose intercourse with Fowell Buxton, and other members of the anti-slavery party, was directly instrumental in its obtainment and ratification.

The track of the white settler has been too generally marked by usurpation of territory, by the introduction of noxious spirits, by demoralization, by strife, and by bloodshed; the missionary has gone alone, unarmed, unprotected by man, but relying upon God, with the Bible in his hand, and its pure and elevating doctrines on his lips, and has found a home among the barbaric races who had only known his countrymen as the "Bedouins of the sea," the usurpers of their land, and the destroyers of what little domestic happiness heathenism and polygamy could suffer them to enjoy. Christian societies in England, Scotland, the United States of America, France, Germany, and Holland, have sent forth their emissaries. The Roman Catholics came late into this vast field of missionary labour; the Church of England has not entered it all; but, without doubt, many of her members contribute indirectly to the good work carried on there.

The missionary stations in South Africa, without the colony, as marked in Mr. H. Hall's recent map, are in number as follows:—Wesleyan, 36; London Mission, 26; United Presbyterian, 6; Moravian, 11; French, 12; Rhenish, 18; Berlin, 8; Americans (in Natal), 2; Norwegian, 1: total, 114.

The Moravian "Missions of the Church of the United Brethren," have the high honour of having made the first effort to evangelize South Africa, and have here, as elsewhere, accomplished much good. Established in 1732, and originally employing as missionaries, artisans or husbandmen of simple manners, few wants, and for the most part inured to toil and hardships, their zealous efforts were judiciously directed to the promotion of the physical, as well as the spiritual welfare of their converts. The following statement of their position is derived from the returns for 1850:—

Date of Establishment.	Name of Station.	Locality.	Under Instruction.	In Church Fellowship.	Communicants.	Baptised Adults.	Baptised Children.	Candidates for Baptism.
1792	Genadendal . .	Caledon . . .	2,846	2,283	949	423	911	563
1808	Groenekloof . .	Malmesbury . .	1,341	1,129	345	226	558	212
1818	Enon	Uitenhage . .	304	278	92	66	120	26
1823	Leper hospital .	Robben Island .	1,214	850	308	173	369	364
1824	Elim	Caledon . . .	45	29	13	12	4	16
1828	Shiloh	Victoria . . .	762	348	86	60	152	464
1839	Clarkson	Uitenhage . .	323	210	89	25	96	113
1848	Mamre	Kaffraria . . .	100	—	—	—	—	—
1849	Goshen	"	—	—	—	—	—	—

Note.—There are no completed returns for Mamre or Goshen.

Of the foregoing, 6,935 are Hottentots who have generally manifested loyalty to the British government; nearly 900 men belonging to the missions at Genadendal, Groenekloof, and Elim, are now encountering the privations and hazards of a Kafir war, and have gained the cordial approbation of their superiors by bravery in the field and good conduct in the camp. Shiloh, one of the most promis-

ing of the above stations, from whence 335 men joined the British forces in January, 1851, was positively driven into rebellion, as stated at p. 113. The missionaries have, for the present, at least, been obliged to abandon Shiloh, Mamre, and Goshen, to the sacrifice of most of their little property, and to the great detriment of the people among whom they laboured.

Statistics of the Wesleyan Missions in South Africa, 1852:—

Note.—* Abandoned on account of the war.

The above table shows the wide sphere of usefulness occupied by the Wesleyans, whose annual expenditure in South Africa is £15,000; aggregate expenditure, since 1816, £286,036 : 15s. : 4d.

The French protestant "*Société des Missions Evangelique*," was founded in 1822, and maintained a college for the instruction of young men destined for missionaries, until the month of March, 1848,

when its useful labours were interrupted by the outbreak of the revolution; but it is to be hoped they may now be again resumed. A singular circumstance induced the selection of the Bechuana country (now comprised in the Orange River Sovereignty,) as the chief field of its operations. In the year 1830, the three first missionaries (Rolland, Lemue, and Pellisier), on their arrival at the Cape,

Note.—There are two Printing Offices belonging to the Mission, one at King William's Town, and one at Plantberg, in the Sovereignty.

were told that the powerful Bassuto chief, Moshesh, urgently desired that missionaries should be sent to instruct his tribe. The new-comers proceeded to his country, and on arriving near Thaba Bossiou, received a forcible proof that their presence, though unlooked for, would be welcome, by meeting a large herd of oxen proceeding to the colony by order of Moshesh, there to be disposed of in exchange for

a missionary. From that day to this, the Bassuto chief has protected and upheld the ministers of the gospel; but though he listens attentively and with reverence to their teaching, he has not yet been prevailed upon to avow himself converted to a creed which would require the renunciation of polygamy, and consequently of forty-nine out of the fifty wives he is at present reported to possess. (Freeman, p. 311.)

152 FRENCH, LONDON, RHENISH, AND GLASGOW MISSION STATIONS.

There are now twenty French missionaries in South Africa, all of whom, with the exception of the single station at Wellington, near the Cape, are distributed among the Bechuanaas, but chiefly among the Bassutos; almost all are married, and, with their families, number about ninety persons. They have founded the stations of Béthulie, Carmel, Beer-sheba, Morija, Thaba Bossiou, Béréé, Hebron, Hermon, Cana, Mekuatleng, Bethesda, and Motito. The total number of communicants connected with them is about 1,000; the number baptized about twice as many. Bechuana labourers are much esteemed in the colony, especially such as bring with them recommendations from mission stations. From Morija alone more than 300 labourers went into the colony

during 1851, all of whom had received religious instruction. The missionaries have translated the four Evangelists, the Acts, the Psalms, and other portions of the Bible, into the widely-disseminated Sichuana tongue, concerning which one of them (M. Casalis) has published a remarkable work. The yearly expenditure of the society upon its African missions is £3,000. (For the above particulars I am indebted to M. le Pasteur, J. H. Grand Pierre. The efforts of the London Society (Independents) are second only to those of the Wesleyan in extent and importance; their stations in South Africa are shown in the following table: their annual expenditure there is £7,000, and their aggregate outlay, since 1812, has been £266,154 : 16s.

Station.	Com- menced.	Popula- tion.	Language.	Congre- gation.	Church members.	Scholars.

Note.—¹ Broken up and abandoned in consequence of the war.—^a Including out-stations.

The Rhenish Missionary Stations in the colony and Namaqualand have wrought much good, as have also, though on a smaller scale, the *Berlin*, and especially the *Glasgow* missionaries, whose labours among the Kafirs have been so sadly interrupted by the renewal of war. In the course of the foregoing pages, many missionaries have been incidentally mentioned in connection with their writings and public labours. To enumerate these, and add to them the names of those who have distinguished themselves by their exertions in the same cause, would indeed offer a long and glorious list, from which, however, even then many omissions might be made from ignorance. It only remains to pay a passing tribute to the valuable labours of the late Rev. C.

J. Latrobe, of the Moravian; of Campbell, Moffat, and Livingston, of the London; of Shaw, and others of the Wesleyan; and of Niven of the Glasgow Mission.

EDUCATION was formerly much neglected; in one district, in 1812, only 100 children in 3,400 were under instruction; and it is to be feared the rest of the colony was as badly provided for. Schools are now numerous; those receiving some aid from government, comprised, in 1850, 6,350 male, and 5,576 female scholars; the contributions by government, fixed and contingent, amounted in 1851 to about £7,000. Each district has a government free-school.

A *South African College*, founded in 1829, and ably superintended for several years by Dr. Adamson, is in operation, but awaits the restoration of

internal tranquillity for its establishment on a broader basis. The bishop of Cape Town has purchased a house, with fifty acres of adjoining land, for the erection of a Collegiate Institution, in connection with the Church of England. Dr. Gray, the present diocesan, has spared no exertion to administer to the spiritual and educational wants of the members of his church, and recently made a tour of 4,000 miles to make himself acquainted with its condition and necessities. The hardships incurred in this remarkable journey, prove that the diocese is beyond the powers of any one pastor. Natal will, it is understood, be formed into a separate see.

NEWSPAPERS.—Nine at Cape Town, three at Graham's Town, three at Port Elizabeth, one at Cradock, and one at Bloem-Fontein, in the Orange River sovereignty. There are several monthly and annual periodicals; one, *The Cape of Good Hope Almanac*, contains useful statistical information.

CRIME.—The number of male convicts in the colony, sentenced for various crimes to imprisonment with hard labour, was, for the five years ending 1848, 1,089. Annual average 224, or 1 in 893 of the colonial population. Of the foregoing 11 were for murder, 30 for culpable homicide, 2 for assault with intent to commit murder, 88 for assault, 16 for rape, &c.; 155 house-breaking, 16 robbery; 711 cattle, horse, and sheep stealing; 6 forgery, 4 perjury; 13 military desertion, 6 drunkenness and military insubordination. The police returns of Cape Town for one year (ending June, 1850) show that of 1,329 male convicts, 1,157 could neither read nor write, and but 39 could read and write well. Of 276 female convicts, 244 could neither read nor write. Mr. Montague, on assuming the office of colonial secretary in 1843, laid down, and successfully carried out, a just and humane system of prison discipline, which has tended to check crime, to promote reformation, and to make the labour of the prisoners conducive to the public weal by employing them in the construction of roads, where, on an average, about 500 men are daily occupied at a cost of £12,000 a-year, which is about the value of their labour. No violent coercion is used; and criminals are encouraged to return to a life of industry and virtue by a judicious system of rewards.

CHRONOLOGY OF LEADING EVENTS.—Diaz doubled the Cape of Good Hope, 1486; occupation by the Dutch E. I. Com., 1652; Gamtoos River declared the E. boundary, 1770; E. boundary extended to the Fish River, 1780; British take possession on behalf of the Prince of Orange, 1795; Sir James Craig made gov., 1795; Earl of Macartney (gov.), 1797; Sir Francis Dundas (lt.-gov.), 1798; Sir George Young (gov.), 1799; Sir Francis Dundas (lt.-gov.), 1801; colony ceded to Batavian government, 1803; Gen. Janasens (gov.) 1803; conquest by Great Britain, 1806; Sir David Baird (gov.), 1806; Hon. H. G. Grey (lt.-gov.), 1807; Earl of Caledon (gov.), 1807; Sir F. Cradock (gov.), 1811; first Kafir war, 1811-'12; Lord C. H. Somerset (gov.), 1814; Col. Brereton's commando, 1818; second Kafir war, 1819; extension of colony to the Keiskamma, 1819; Sir Rufane Shaw Donkin (act.-gov.), 1820; four thousand British emigrants arrived, 1820; Lord C. H. Somerset (returned from England), 1821; Sir Richard Bourke (lt.-gov.), 1828; fiftieth ordinance enacted, 1828; Sir Galbraith Lowry Cole (gov.), 1828; expulsion of Macomo from his land on the Kat River, 1829; Hottentot settlement formed on the Kat River, 1829; Lt.-col. F. F. Wade (act.-gov.), 1833; Sir Benjamin D'Urban (gov.), 1834;

slave emancipation, 1834; third Kafir war, 1834-'35; Hintza slain, May, 1835; colony extended to the Kei, Sept., 1835; great emigration of the boors, 1835-'36; Sir A. Stockenström appointed gov. of the Eastern Province, 1836; country between the Kei and Keiskamma restored, and treaties entered into with Kafirs, 1836; Sir G. T. Napier (gov.), 1838; Sir Peregrine Maitland (gov.), 1844; alteration of Kafir treaties, 1844; fourth Kafir war, 1846; Sir Henry Pottinger (gov.), and resumption of hostilities, 1847; Sir H. G. W. Smith (gov.), 1847; assumption of Orange River Sovereignty, 1848; anti-convict agitation, 1849; attempt to seize Sandilli, and fifth Kafir war, Dec., 1850-'51; Gen. Cathcart (gov.), 1852; recognition of independence of boors in the Grensgebied, 1852; representative constitution conceded to the Cape Col., 1852.

CONCLUSION.—The peninsula of Africa, with its southern cape midway between Europe and Asia, and also between England and Australia, communicating with the Atlantic on the west, and with the Indian Ocean on the east, occupies a maritime position of the highest importance. In addition to a vast extent of upland soil, park-like downs, and sheltered vales; a climate well adapted to the English constitution, and so fine and dry as to necessitate no winter provender or shelter for sheep or cattle,—it affords suitable temperature for an endless variety of culture, by means of proximity to the ocean on either shore, and by the diversified elevation of its lofty mountains and immense plateaux; here wheat (bringing nearly the best price in the London market) may be grown to an incalculable extent; there two crops of maize or millet may be annually reaped. The vine flourishes over large tracts, and where the grape ripens, the olive and mulberry will thrive; animal food of the best quality abounds, and the fishery on L'Agulhas bank is scarcely inferior to that of Newfoundland. The sugar-cane, tea and coffee plants, flax, and cotton, may be eventually added to the present staple colonial products; minerals of several descriptions are known to exist, and gold will, I doubt not, be obtained in several localities. Enjoying these and other advantages, the material prosperity of this fine colony seems to depend, under providence, upon the adoption of a conciliatory and just system towards the aboriginal races. No greater benefits could accrue to the colonists than would be derived from the steady progress of the frontier tribes, while their civilization would doubtless rapidly spread to more distant nations, and aid directly in the extension of those Christian doctrines by whose holy influence Africa can alone be relieved from the curse under which she has groaned for ages.

BOOK II.—NATAL.

CHAPTER I.

HISTORY AND OCCUPATION AS A BRITISH COLONY.

THE territory thus designated from the discovery of the inlet of Port Natal, by the Portuguese, on Christmas-day, 1498, is situated on the south-eastern coast of Africa, to the north-eastward of the Cape of Good Hope. (The leading features of its history are given in small type to economize space.)

In October, 1689, the governor and council of the Cape ordered the commander of an expedition (despatched in the galliot *Noord*, to explore the south-eastern coast, as far as Delagoa Bay), "to buy from Ingese, the chief, the Bay of Natal, and the adjacent country, for beads, copper, cutlery, or what might please the natives, to the value of 29,000 guilders.* In December, 1690, the purchase was made for merchandise to the alleged value of 20,000 guilders. The extent of the land acquired is not stated.† The Directors of the East India Company then declared Natal a dependency of the settlement of the Cape of Good Hope. An expedition left Cape Town 14th of February, 1721, to establish a trading post there, but being unable to find the place, settled at Delagoa Bay instead. No other attempt at occupation appears to have been made by the Dutch from this period to the 19th of January, 1806, when Governor Janssens surrendered to His Britannic Majesty "the whole of the settlement of the Cape of Good Hope, with its dependencies, and all the rights and privileges held and exercised by the Batavian government." England evinced no desire to take possession of Natal; but the reports of shipwrecked persons and traders drew attention to the place, which Dampier had described, in the 17th century, as a very eligible position. Captain (now Admiral) W. F. W. Owen, during his survey and exploration of the eastern coast of Africa, in 1822-5, advised the establishment of trade with this part of the coast.

In 1823, I met, at the Cape of Good Hope, a Lieutenant Farewell, R.N., who was very sanguine in his expectations of becoming a great chief at Natal. On proceeding thither, in September, 1823, he found that Chaka, the celebrated Zoolu leader, had conquered the country, destroyed or driven away the native inhabitants, and formed his military station within 100 to 150 miles of Port Natal. Farewell, who was favourably received by Chaka, returned to the Cape, and obtained permission from Lord C. Somerset to endeavour to establish commercial intercourse, but was told that the acquisition of territorial rights could not be sanctioned except after full examination of the circumstances under which they might be offered, and were intended to be received. He then, accompanied by a Mr. Fynn, several

Europeans, and some Hottentots, returned to Natal, and, on the 14th of September, 1824, informed Lord C. Somerset that Chaka had expressed great pleasure at his coming to reside there; and had made him "a sale and grant of a part of his country in that neighbourhood" (amounting, it is said, to about 2,000,000 acres), and freely given a number of cattle for the support of his party.‡ The territory thus bestowed had, however, just been ravished from its native owners, of whom some hundreds appear to have still remained.

Messrs. Farewell, Fynn, and King (the commander of a trading brig), made great exertions to establish a British community; but their efforts were not only coolly received, but even ungenerously checked. On one occasion they built a small vessel at Natal out of their scanty resources—their own ship having been wrecked at the entrance of the harbour. The new craft was named the *Chaka*, freighted with ivory, &c., and sent to Algoa Bay, where it was seized by the authorities, and left to rot on the beach, *because she had no register*!§ The little band, persevered, nevertheless, in their proceedings; and being thus prevented from holding communication with the colony by sea, opened up a route by land, between Natal and Graham's Town.

In one of the early attempts made to establish this line of communication, Lieutenant Farewell and his party were murdered by a treacherous chief, a little to the eastward of the Umzimvoobu River, in 1829. This was a melancholy termination to the career of one who had proved a useful pioneer in the foundation of a promising settlement.

Chaka had perished shortly before, having been stabbed in his own kraal, in September, 1828. The latter acts of his life had been a series of atrocities, which, if one-half of them be true, give to this heathen tyrant a fearful pre-eminence over a Nero or Domitian in the amount of suffering inflicted. A few months before his assassination, Chaka sent about 30,000 fighting men to the eastward and northward of Mozambique, for the express purpose, as it is supposed, of weakening his own tribe, and exercising upon them more than his usual brutality. This force marched with provision only for the advance, and with orders not to fight until it was expended. The tribe against whom they proposed to war, drove off the whole of their cattle, and having surprised and cut to pieces a detachment of about 8,000 Zoolus, necessitated the remainder to retire. The invading force was subsequently so reduced by famine and casualties, that not more than 10,000 are supposed to have returned to their country. Chaka, on learning their ill success, ordered the massacre of 2,000 of the wives of the defeated warriors, at the rate of 300

* Parl. Papers, 1st June, 1835; p. 95. † *Idem*.

‡ Parl. Papers, June, 1835; p. 96. § *Idem*, part ii., p. 97

a day. These and other almost incredible excesses led to the formation of the conspiracy against him, headed by his brother Dingaan, the fatal result of which has been stated.

Such is the account given by Sir Lowry Cole, on the authority of Lieutenant Farewell, of the conduct of Chaka, and the circumstances which led to his death. But more intimate acquaintance with native character and customs affords reason for doubting its authenticity. In the first place, Chaka is described, by later authorities, as having been popular among his own subjects, the Zoolus or Amazoolus, whom, from a very small and insignificant tribe, he had rendered a powerful and dreaded people. Like most great conquerors and slave owners, he was utterly reckless of the value of human life, except as a means necessary to the accomplishment of his own ends; and an abundant supply of "bone and sinew" never failed him, since he had only to make war upon some small neighbouring clan, slay the chiefs, or degrade them to the position of cowherds, and incorporate their people, (whose very name was thenceforth obliterated) among his own tribe. So perfectly unfettered was this South African tyrant by any humane scruples in the accomplishment of his purposes, that, on a sudden demand for ivory, he would order out large bodies of his warriors, and compel them to rush in upon a herd of elephants while grazing, though these attempts frequently involved the destruction of several hundred lives. Still he is said not to have been bloodthirsty, and therefore would scarcely have put 2,000 unoffending women of his own tribe to death. The story, again, is incredible, because, among the Zoolus, *married men* composed a sort of trained militia, and were never sent out on commandoes or warlike expeditions, except in cases of extreme emergency. For these and other reasons, it seems probable that the fate of Chaka was immediately caused by the ambition and treachery of Dingaan, who slew him, and procured himself to be named his successor by a majority of the chiefs. Dingaan was less bold and talented than his brother, but far more crafty and cruel. Dr. Andrew Smith, who resided about a week in his kraal, in 1830, declared that he saw "portions of the bodies of eleven of his own wives, whom he had only a few days previous put to death, merely for having uttered words which annoyed him." The same witness attests the fact of his "murdering, torturing, and destroying hundreds of his own subjects in the course of a day."* Dingaan, however, professed great friendship to the English, and desired the formation of a trading post, for a very obvious reason. Ivory, the chief article sought for by traders, was, according to Zoolu law, regarded as the exclusive property of the king, who, consequently, as the principal dealer, was solicitous for the continuance and increase of a profitable traffic.

Captain Campbell,† the civil commissioner of Albany, strongly advised the British occupation of the Natal territory; but no heed was paid to his representations, or to those of several English settlers, who knew the value of the country, having been residing there since 1824.

In 1830, the Americans opened a trade with Natal, and landed a quantity of muskets, cutlasses, gunpowder, and salt; and a rumour was circulated that the government of the United States intended to form a settlement on this part of the coast.

In June, 1834, the merchants and other inhabitants of Cape Town addressed a memorial to the king in council, praying that measures might be taken for the occupation of Port Natal and the depopulated country in its vicinity. This was sent by Sir B. D'Urban to Mr. Spring Rice, at that time Colonial Secretary. The memorial was supported by an able, conclusive, and statesmanlike document, drawn up by Dr. Andrew Smith, then staff-assistant-surgeon in South Africa, who had recently returned from an exploratory tour in Natal. The prayer of the memorial was rejected, on the ground that the finances of the Cape colony could not bear any additional expense; although all that was required was, the stationing of a magistrate, and a few police or soldiers to maintain order, ample funds for which would have been furnished by the gradual sale of territory in moderate allotments, even after the deduction of liberal reserves, both in land and money, for the sustenance of the few and scattered native proprietors.

In 1834-5, Captain Allen F. Gardiner, R.N. (whose Christian sufferings and death on the inhospitable shores of Terra del Fuego, in 1851, are so well known), proceeded to South Africa, with a view to the introduction of Christianity among the Zoolus and other native tribes.‡ He was well received by Dingaan, who, on the 3rd of May, 1835, entered into a convention with him and about fourteen resident Englishmen, by which he waived all claim to the person and property of any native who should have deserted from him to reside with the Europeans at Port Natal. It is alleged that Dingaan then made an extensive grant of territory (7,000,000 acres) to Captain Gardiner, inclusive of that which Chaka had previously presented to Lieutenant Farewell. General D'Urban signified to Dingaan, in writing, his approval of the convention, and promised to send an officer, on the part of the king of England, to reside at Natal in the absence of Captain Gardiner, who had proceeded to Europe.

The British traders and residents, now considering themselves securely established, commenced the laying out of a town, which they called D'Urban. They set aside 3,000 acres of land for the endowment of a clergyman of the Church of England, and collected subscriptions for the construction of a church; selected a site for the erection of a free school, and appropriated 2,000 acres for its support, and 3,000 for the formation of an hospital. A town committee was organized, and the rudiments of municipal government introduced. Cultivation was extended, and trade increased; still the British government refused to recognise the existence of the small but prosperous settlement, planted by its energetic subjects. Circumstances, however, compelled that which principle and policy ought to have dictated. The boers, on the frontier of the Cape Colony, having resolved to *trek*, or migrate, in search of new homesteads and fresh pastures, sent out an exploring expedition to ascertain the most eligible location. The favourable report brought back by their agents respecting Natal; the exaggerated reports circulated within the colony, respecting its really considerable natural advantages; and the tacit refusal of the government to acknowledge it as a British settlement, induced the migration of about 1,000 boers, with their wives, children, servants, waggons, horses, oxen and flocks, under the guidance of Pieter Retief, Maritz, and Uys. On

‡ *Narrative of a Journey to the Zoolu Country*, by Captain Allen F. Gardiner, R.N. 8vo. London: 1836.

arriving, in October, 1837, within a few days' journey of Dingaan's kraal, the party encamped, and their leaders had an interview with the crafty chief, who agreed to grant land to them, provided they recovered some cattle for him from his enemy Sinkonyella, a Mantatee ruler. This they appear to have done. They were then suffered to remain unmolested, offering alliance and friendship to the English settlers at D'Urban. Dingaan granted to the new comers the land between the Umzimcoolu and Tukela Rivers, which had been previously given to Farewell and Gardiner; and invited Retief, on the 6th of December, 1837, to witness a sham fight, requiring however, that he and his body-guard should attend unarmed. Maritz and others advised Retief not to go; but in vain. At a pre-concerted signal, Retief, and all his attendants, 100 in number, were massacred; and a strong party of Zoolus was sent to surprise the Dutch camp, which was done effectually; and many of the inmates perished. The numbers slain are stated to be 120 boors, 55 women (their wives), 191 children, and 250 Hottentots and other servants.

After this, the English settlers joined the boors against Dingaan, sent a commando into his country, and brought off about 4,000 head of cattle, and 500 women. The Zoolus retaliated; attacked the English settlement; killed about 13 Europeans; obliged the remainder to flee; and seized all the property in D'Urban.

Maritz, who succeeded Retief, had still with him 640 white men fit to bear arms, 3,200 women and children, and 1,269 blacks. His camp consisted of about 1,000 waggons, 3,000 horses, 40,000 cattle, and 30,000 sheep.

Animated by a strong desire to revenge the death of Retief and their friends, the boors met and fought the Zoolus with great fury, and after a series of contests, defeated them with much slaughter. Their leader sued for peace, restored some prisoners and horses he had taken, and assigned over the whole territory of Natal to the conquerors.

In a subsequent conflict, Dingaan was supposed to have fallen with a body of his men, in a ravine where he was hemmed in and fired upon by the boors; but it has since been asserted that he escaped and proceeded to the northward, and eventually perished in a contest with a petty native chief. After his downfall, some of the various tribes, forcibly comprised by Chaca under the denomination of Zoolus, again separated under chiefs of their own. The principal of these were the Quabies, over whom their chief, Panda (whom Chaca had made one of his cow-herds), resumed authority.

In December, 1838, the governor of the Cape resolved to despatch a small military force by sea to Natal, for the restoration of order, and to take possession of the place in the Queen's name. The troops were sent under the command of Major Charteris, but recalled to the Cape, after being a few months at Natal, without having effected any object whatever. The boors were then absent, and engaged up the country in warfare with Dingaan, which having brought to a satisfactory conclusion, they returned, and finding that the British troops had quitted the place, they took possession of the deserted buildings at D'Urban, settled down unmolested, and founded their town under the name of Pieter-Maritzburg, the present capital of the colony. Towards the end of 1839, Maritz, the president, and seven members of the assembly, entrusted with the management of their

affairs, put forth a manifesto, stating the causes which had brought them to Natal; declaring that the soil had been bought with their blood; that they would hold it until subdued and slain; and that emigrants arriving without their consent should be treated as enemies. A correspondence was commenced between them and the governor at Cape Town, but led to no definite result.

In the beginning of 1841, the governor sent from Graham's Town, by land, under the command of Captain Smith, a force consisting of 150 men of the 27th regiment, 50 of the Cape mounted rifles, and a small detachment of artillery and engineers with two or three guns, to take up a position on the Umgazi, near the Umzimvoobu River, for the purpose of protecting the native chiefs in that quarter against the attacks of the Natal immigrants, who, about this time, formally declared that they had renounced their allegiance to the British government, were an independent state, and were establishing diplomatic relations with European powers. To permit the formation of a hostile settlement at the only port between Algoa and Delagoa Bays, and the high road from the coast to the interior of Southern Africa, was manifestly impossible; Captain Smith was therefore ordered to push forward with his detachment from the Umzimvoobu to Port Natal, which place he reached in May, 1842. The boors did not at first forcibly oppose British occupation, but commenced seizing their cattle and herds, and closing around their encampment. Their leader then ordered the English to retire from the place. Captain Smith refused to withdraw; and having failed in a night attack, a desperate contest ensued, in which he was defeated, with a loss of killed, wounded, and prisoners, amounting to one-third of his few soldiers, and a considerable proportion of guns and stores. He then entrenched his men within a rude barricade of waggons and a breast-work of earth; and by means of a bold and trustworthy messenger named King, forwarded to Graham's Town an account of his position. The boors are said to have had 130 killed and 70 wounded; but this is probably much beyond the truth. They closely besieged the English troops; cut off all communication by land: seized two vessels that were in the bay; and kept up an almost unceasing assault on the small but resolute force, who defended themselves bravely, refusing all terms of capitulation, though reduced to eat horseflesh, or anything that would sustain life. The governor, on receiving intelligence of these disasters, forthwith despatched a frigate and troop-ship, with a strong reinforcement of the 25th regiment, under Colonel Cloete. The boors were unable to withstand the fire of the heavy guns of the frigate, and the rockets, and, after an ineffectual attempt to prevent the landing of their opponents, fled in confusion; the troops disembarked, and were received with grateful cheers by their brave comrades, at length set free, after a long month of peril and privation. The British flag was permanently hoisted, and Colonel Cloete granted an amnesty to all the boors who would surrender, except three of the leaders. This was by some accepted; but the majority fled across the Drakenberg range, and joined their countrymen on the Vaal River. No alternative now remained but to establish the actual sovereignty of England over Natal.

On the 31st of May, 1844, letters patent were issued, annexing the district to the Cape Colony. By subsequent letters patent dated, 31st of April, 1845, Natal was made a distinct and separate government;

but power was still entrusted to the authorities of the Cape colony to make laws for the new province, should it be deemed necessary. On the 2nd of March, 1847, a royal charter was conceded, whereby the power granted to the Cape legislature was revoked, and vested in the officer administering the government of Natal, and in certain public functionaries, who were to constitute a legislative council.*

Dissatisfaction arose for want of timely arrangements with respect to the farms which the remaining boors claimed; and in January, 1848, they quitted Natal in large numbers. Sir H. Smith says: "I was almost paralyzed to witness the whole of the population, with few exceptions, *treking* (emigrating), exposed to a state of misery which I never before saw equalled, except in Massena's invasion of Portugal, when the whole of the population of that part of the seat of war abandoned their homes and fled." The ruins were then extremely heavy, and the country was intersected by considerable streams, which were frequently impassable. Three or four hundred fathers of large families assembled, and, with tears, represented their grievances to the governor. They alleged that they had abandoned their houses, the gardens planted with their own hands, and the standing crops, to seek a home in the wilderness, because they were refused a title to land, or even permission

to purchase it. Sir H. Smith promptly appointed a land commission to investigate their grievances; and nominated, as one of the members, A. W. J. Pretorius, the leader of the emigrants, who was then greatly excited in consequence of having vainly proceeded from Natal to Graham's Town to place the position of his countrymen before the then governor, Sir Henry Pottinger, who unwisely and ungraciously refused him an audience. Sir H. Smith ordered that farms, not exceeding 6,000 acres, should be given to such of the original emigrants as had strong and peculiar claims to this indulgence; or, in ordinary cases, that they should be allowed to purchase the same extent of land. This measure but partially checked the emigration movement towards the Vaal River, as the boors had become exceedingly averse to the British government;† while the lavish grants made in consequence, could scarcely fail to retard the progress of the infant colony, by injuring its first resource, the land-fund.

Between March, 1848, and December, 1850, a large immigration took place: 35 vessels, containing 3,812 emigrants, and 12 vessels from London and Liverpool, whose passengers are not stated, having arrived at Natal within that period. The settlement is now fairly established, and is desirous of obtaining a Representative Government.

CHAPTER II.

POSITION, AREA, PHYSICAL FEATURES, DIVISIONS, TOWNS—CLIMATE, GEOLOGY, SOIL.—GOVERNMENT, LAWS, POPULATION, LANDS, REVENUE, COMMERCE, AND GENERAL VIEW.

THE COLONY OF NATAL lies between 27° 10' and 30° 40' S. lat., and between 29° and 31° 10' E. long. It is bounded on the eastward by the Indian Ocean, on the westward by the Quathlamba, Kathlamba, or Drakenberg range; on the north and north-east by the Buffalo, or Umzinyati, and its prolongation, the Utukela, or Tugela River; and on the south by the southern branch of the Umzimkulu, or Umzimkuluana, which separates it from the territories of the Kafir chief, Faku. The length from north-west to south-east is about 200 miles, the breadth between the coast and the mountains varies from 60 to 120 miles; the area is estimated at 18,000 square miles. The coast-line extends in a north-east and south-west direction for 200 miles, affording sheltered anchorage only at Port Natal, which is situated about midway.

PHYSICAL FEATURES.—A marked character is imparted to Natal by the lofty and table-topped

Quathlamba chain, which forms a background from whence numerous offshoots stretch out, generally from west to east, in some instances approaching the sea-shore and dividing the country into distinct portions. From the main range, as well as from the lateral spurs, numerous streams descend by short and generally direct courses to the ocean, affording never-failing supplies of water, and extraordinary facilities for irrigation. The land exhibits successive terraces rising from the coast to the mountains, occasionally broken by rocky gorges and steep ravines.

Dr. Andrew Smith, who traversed this region in 1830, declared the principal part of it to be well fitted either for grazing or agriculture, and added, "such an effect was produced upon one of my party (a Dutch farmer), on our entrance into this beautiful country, that for several days he could scarcely give utterance to anything but, 'Almighty! I have never in my life seen such a fine place. I shall never again reside in the colony, if the English government make this a drostdy.'" The more westerly portion presents numerous extensive flats, thickly covered with luxuriant grass, and abounding in watercourses. The middle and eastern districts exhibit a broken and undulating surface, dotted

* Parl. Papers, July, 1848.

† Parl. Papers, July, 1848; pp. 212-14.

over with low knolls, in some places clustered together, in others separate, connected by rich meadows, in many of which water is seen oozing out in every direction, so that what the traveller in other parts of South Africa watches for with anxious solicitude, here constitutes a positive inconvenience. Some of the rivers whose sources are far in the interior, are of considerable size, and commonly run in deep channels with rather precipitous banks. Timber trees exist everywhere in sufficiency, but are most plentiful towards the eastern and western boundaries, in which situations considerable forests are met with free from the great proportion of underwood found in those of the Cape Colony. (*Vide* Dr. Smith's memorandum, Parl. Papers, June, 1835, part ii., p. 99.)

MOUNTAINS.—The Quathlamba, or, as they are here called, the Drakenberg Mountains, are considered by Dr. Stanger, the surveyor-general of Natal, to consist of two distinct ranges, differing in geological structure and direction; the Great Drakenberg constituting the western, the Lesser Drakenberg, the north-western boundary of Natal. The average altitude of the latter is 5,000 feet above the sea, and about 1,500 feet above the general level of the country at its base. The outline is in general round and soft, presenting some remarkable features, and occasionally high table-lands with precipitous sides. These mountains are composed of beds of sandstone cut through by veins of trap; according to Dr. Stanger, they diminish in height as they advance towards the north-east, until at some distance beyond the source of the *Umzimvati* River, they appear to terminate in low hills. They are traversable in various places by horses and cattle; but De Beer's Pass, in $28^{\circ} 20' S.$ lat., $28^{\circ} 52' E.$ long., is the only one in common use for waggons. There is another near Bezuidenhout's farm, in $28^{\circ} 33' S.$ lat., and $28^{\circ} 44' E.$ long., which is just practicable, and is sometimes, though rarely, resorted to by farmers or travellers, in ponderous unmanageable waggons, with their teams of twelve to eighteen oxen. Timber abounds in the kloofs, and on the south-eastern side of these heights. On the north-west the country forms a plain of considerable elevation.

The Great Drakenberg joins the Lesser Drakenberg ten or twelve miles to the south-west of Bezuidenhout's farm, and is much loftier, and quite impassable, presenting a rugged outline and bold precipitous escarpments, and being apparently of granitic formation. The summit of the Drakenberg is a table-land which extends for about 500 miles; in travelling from the Orange River Sovereignty, towards the mountains, there is an undulating country with occasional hills, giving no indication of a lofty plateau; but suddenly, on arriving at the top of one of these ridges, the whole country of Natal is seen below, with an apparently perpendicular descent of several thousand feet.

The RIVERS of this part of South-eastern Africa may be conveniently classed under three heads, according to the distance of their sources from the ocean, and elevation above its level; unfortunately, none of them are navigable, but all more or less barred at the mouth. The first class includes the *Utukela*, the *Umzimkulu* or *Umzimcoobu*, and the *Umzimvati*, which either through their own channels, or those of their tributaries, drain the Drakenberg mountains. Of these, the principal is the *Utukela*, whose chief source, the *Buffalo*, or *Umzin-*

yati, which bounds Natal on the north, rises at the base of the Small Drakenberg, and pursues a south-eastern direction to its confluence with the *Utukela*, entering the Indian Ocean in $29^{\circ} 18' S.$ lat., after a course of about 150 miles. Among the tributaries of the *Utukela* are the *Blue Kranz* or *Umsuluzi*, the *Bushmans*, the *Mooi* or *Impafane*, and others which join it on either bank, forming a considerable volume of water. The *Umzimkulu*, on the southern boundary, is a much smaller stream, about eighty miles in length.

The second class of rivers, such as the *Umtoti*, the *Ungeni*, and the *Umkomazi*, have shorter courses, and drain a country having an elevation of about 2,000 or 2,500 feet. The third, and most numerous class, rise at a height of 1,500 feet, or less, above the sea-level, and are very inconsiderable in size. The abundant irrigation of this coast may be understood from the fact, that in travelling from the *St. Lucie River* on the north of Natal, in about $28^{\circ} 30' S.$ lat., to the Great Kei River of Kafirland, in about $32^{\circ} 40'$, there are more than 150 rivers or watercourses to be crossed.

DIVISIONS.—The explored portion of Natal has been divided into six magistracies, and sites for towns and villages have been selected by the local authorities, (Dr. Stanger the surveyor-general, Mr. Shepstone the diplomatic agent to the native tribes, and Lieutenant Gibb, R.N.,) from whose report the following statements are chiefly derived:

D'Urban Division includes the township of D'Urban, the seaport of the province, which is built on the shores of Port Natal. The town is laid out for 450 allotments, and when visited by the bishop of Cape Town, in 1850, was rapidly increasing in the number of its buildings and population (*Journal* for 1850, p. 51.) There are many extensive stores, and a large amount of business is carried on. The bay of Natal, which is about three miles long, by two and a-half broad, is easy of access for vessels not drawing more than eight feet of water for the last of the flood tide; on its bar there are eleven feet at high water spring tides, and occasionally a greater depth. Vessels of 400 tons cross the bar, and find good holding-ground outside until the tide serves. Inside the harbour is perfectly sheltered from all winds, and sufficiently large even at present to contain a considerable fleet, with soundings of nine to eleven fathoms, sandy bottom.* It has been proposed to deepen the entrance by a steam dredger, as has been done at the harbour of Adelaide, South Australia. M. Delargorgue suggests rendering the entire port a wet dock, by erecting tidal lock-gates, which, when opened, would cause the water to force a deep passage over the bar. Dr. Stanger advocates a process founded on a somewhat similar principle. He argues that the bar being formed by the tide in ebbing out of the bay, meeting with the coast current, and its velocity being thus diminished, and, consequently, its transporting power causing the deposition of sand, a stream dredger would be inefficient unless constantly kept at work. The only way to permanently remove the bar, he considers to be by increasing the velocity of the ebb tide to such an extent that, on coming in contact with the current, it might either mingle with or force a passage through it, and thus, by its increased transporting force, carry the sediment out to sea. This object might be accomplished by diminishing the outlet of

* See Mr. S. Christopher's work on Natal, published by E. Wilson and Trelawny Saunders.

the bay, straightening the channel within the bar, and deepening the inner bay. A steam tug would most materially assist the transit of ships across the bar, and is indeed essential to the prosperity of the port. A lighthouse on the Bluff, which forms the western head of the harbour, is also of great importance.

The scenery around D'Urban is pleasing; a dense bush runs parallel with the sea-shore, generally extending down to the sand. In some places this forest is composed of large trees, in others of thick underwood, consisting of a variety of shrubs, intertwined with creeping parasitic plants, adorned with gaudy flowers. After two hours' ride through the bush the country becomes undulating and studded with clumps of trees. At twenty-five miles from D'Urban there is a bare and very hilly tract, varied occasionally with pretty spots, and at thirty miles the country becomes undulating, continuing so to Pieter-Maritzburg, fifty-one miles distant from D'Urban, by a road which is naturally good throughout, with a few exceptions, where the hills are very steep, but these places are now in course of improvement. Cotton has been planted in the vicinity of the Bay, and yields a superior and abundant produce. The sugar-cane and indigo plants thrive here as elsewhere, and the coffee tree has been introduced, and grows well; but time is required to show whether it can be successfully cultivated. The soil is rich, and favourable to the growth of barley, oats, &c., as well as of most descriptions of vegetables, especially beans, which form a valuable article of export to the Mauritius. The grass is at present rank for want of use, and the prospect for agricultural appears better than for grazing purposes. Mangrove is the chief building timber found in this division, but valuable hard wood for waggon making is obtained in a few localities.

Pieter-Maritzburg Division includes the town of the same name, which is the seat of government, and the head-quarters of the military. The town is finely situated; the ground sloping away from a hill crowned by a fort towards the Little Bushman's River, which winds almost entirely round the hill, and is a constantly running stream, while a fine background is formed by a chain of high hills rising gradually at a short distance, dotted with bush and forest timber. The plan of the town is a parallelogram, extending about a mile and-a-half in length, and a mile in breadth, divided by nine parallel streets, intersected at right angles by five others, each seventy-five feet wide. There are 400 building lots (many of which are still unoccupied), but there are already above 2,000 European or colonial inhabitants. Streams or water-courses are conveyed through all the streets, and many trees, chiefly syringas and willows, are planted in front of the houses. There are several good stone or brick buildings, including a town-hall, extensive barracks, Wesleyan chapel, and a large government school. A commodious English Episcopal church, and other structures, are in course of erection. Maritzburg Division is throughout abundantly watered, and capable of irrigation to almost any extent. Vegetation is very rapid in this and all the other districts; the grass, consequently, grows rank and strong, so as generally only to admit of the larger description of stock, such as cattle and horses, being depastured upon it with advantage in summer. Valuable timber, adapted for building purposes and furniture, is found in several localities.

Umvoti Division, to the north of D'Urban (on the

coast), comprises some of the finest land in Natal. The capabilities of the south-eastern portion of it are similar to those of D'Urban; but cattle thrive better. The locality stated by Dr. Stanger, the surveyor-general of Natal, to be best adapted for a European settlement, is the country on both banks of the *Umvoti* and *Nomoti*, and as far south as the *Tongati*, and the intervening space of about eight miles, for a distance of ten or twelve miles from the sea-coast. The land is not thickly covered with brush-wood, but abounds in large plains, with occasional clumps of thorns: along the banks of the small streams, which are numerous, masses of the useful timber, called *waterboom*, are found. The bed of the *Umvoti* is a rich alluvial deposit of great fertility; that of the *Nomoti* not so good.—(Parl. Papers, 14th August, 1850; p. 70.)

Impafane Division, to the north of Maritzburg, inland, was the favourite location of the boers before they quitted the province, being regarded by them as the best adapted for cattle. Sheep have also thriven well in certain tracts, and although generally less abundantly watered, and therefore perhaps not so capable of sustaining a dense population as the three former divisions, it is quite able to compete with them in many parts even in that respect; for instance, at the village of *Weenen*, and along the banks of the *Mooi* and *Bushman Rivers*. Wheat and oats have been grown largely, and with success. The soil of *Weenen* is particularly fertile; the vine, fruit trees, vegetables, &c., thriving well; but the place has made, and is likely to make, little progress, being situated off the main road in a basin, the approach to which is very difficult on all sides. Small quantities of coal, of inferior quality, have been seen along the banks of the *Bushmans' River*, near the surface. Building timber is procured at the base of the *Quathlamba*.

Upper Tsekela and Umzinyati Divisions are both inland, and lie to the north of *Impafane*, which they much resemble in character. Cattle thrive well here; and sheep in certain portions. Yellow wood abounds near the mountains; and anthracite coal, of good quality, is found in various localities, especially in the ravines near the *Umzinyati*.

Two additional magistracies, *Umsimkoolu* and *Umbezana*, will probably be formed in the extensive tract situated between the *Umkomanzi* and *Umsimkoolu Rivers*, which is described as an open hilly country, well watered, and in parts wooded with fine timber. The Bishop of Cape Town, during his recent long and hazardous episcopal visitation, passed from Pieter-Maritzburg to the *Umsimkoolu River*, at a distance of about thirty-five to forty miles from the coast, and found a very difficult route, with precipitous mountains and steep defiles.

To the westward of the country above described, and between it and the *Quathlamba* range, lies a mountainous, grassy, and well-watered tract, considered well adapted for both sheep and cattle. Two further divisions (*Drakenberg* and *Ingali*) are likely to be formed here. The country to the southward of the colonial boundary, extending between the *Umsimkoolu* to within a few miles of the *Umsimvoobu* or *St. John's* (which latter is navigable for small vessels) is reported to be extremely fertile. The Kafir chief, *Paku*, holds the greater part of it by treaty, as about 10,000 of his people do by birthright, having very recently returned here, after the final defeat of their enemy *Dingaan*.

GEOLOGY.—Very little has been noted on this head. The rocks examined by Dr. Stanger con-

sisted of granite, basalt, and members of the trap family, slate, sandstone and shale; the two latter prevailing in the northern portions of the province. Basalt, greenstone, porphyritic and compact felspar, cut through the sandstone and shale in many places, and sometimes form stony ridges extending along the surface of the country for a great distance, and at others rise in small hills. No minerals, with the exception of anthracite and slightly bituminous coal, have yet been found. The latter occurs in a bed six feet thick, near Biggar's Berg, in 28° 7' S. lat., 29° 25' E. long. It is of good quality. In July, 1852, a seam of good coal was discovered in the cliffs overhanging the sea, about forty miles from D'Urban. Limestone has not been discovered, but sea-shells and concretionary lime furnish the necessary supply. Building materials are obtainable in most places, and in some, excellent freestone is abundant. Fossil silicified dicotyledonous wood is found on the surface of the country throughout the whole of the north-west portion of the colony, occasionally imbedded in sandstone.

The SOIL is divided by the natives into two descriptions:—the *first*, by its name, signifying mimosa, or *thorn* land, occurs on the banks of all the principal rivers, and is generally rich and strong, adapted for grazing purposes, fruitful in good seasons, but easily affected by drought: the *second* comprises forest and open, as well as table-land, more exclusively adapted for agricultural purposes, where droughts seldom occur, and where there are great facilities for irrigation. Cattle do well on this description of land for nine months in the year. The sea-coast belt, for about five miles inland, where the soil and productions are peculiar, and which seems well adapted for cotton, is not included in the above-mentioned classification.

CLIMATE.—The annual range of the thermometer on the the coast, is from 47° in July, to 88° in January. Winter temperature, 50° to 60°; summer average, 76° Fahrenheit. The following table shows the mean temperature of each month in the year 1849, at 9 A.M., and the number of days in which more or less rain fell at Pieter-Maritzberg, about 1,800 feet above sea-level:—

Months.	Mean Temperature.	Days in which Rain fell.
January	73.5	15
February	80.5	14
March	71.0	13
April	67.5	6
May	62.5	4
June	57.5	2
July	55.0	0
August	60.0	3
September	66.0	2
October	72.0	14
November	67.5	22
December	73.5	12

The rainy season begins the first week in September, and ends in March, comprising the summer months of the year; during this interval thunder-showers are of almost daily occurrence. In May, June, and July, refreshing winds blow; hot blasts are rare, as the Quathlamba range affords a cooling medium. Long droughts are almost unknown. On the coast the seasons are not so well defined

as in the interior. The climate is, on the whole, extremely salubrious.

GOVERNMENT AND POPULATION.—There has been an organized administration at Natal since 1845-'6, under two successive lieutenant-governors, yet no annual "Blue Book" has been forwarded from thence, and the archives in Downing Street are totally devoid of any statistical returns respecting the condition of this province. The white population may be about 6,000; the coloured race are supposed to be about 115,000, and consist of the remains of numerous tribes broken up by Chaka, a few of whom maintained their position, while some have returned to Natal, and others have taken refuge thither from the sway of Panda, a Quabie chief subdued by Chaka, and by him reduced to a cow-herd, who, since the destruction of Dingaan, has in some measure succeeded him in authority over the heterogeneous mass comprised under the name of Zoolu, or Amazoolu Kafirs.

The native government in Natal is very simple, and apparently very efficient. The British diplomatic agent (Mr. Shepstone), who evidently fills his difficult position with much tact and judgment, is looked up to as the paramount chief, and is assisted by a body of councillors, sixty in number, who are chosen for their intelligence; a few of these men are in constant attendance. "Every day, sitting cross-legged on the ground, they hear cases. Their decision is generally a very sound one, and almost always confirmed by the 'Kose.' There is no lack of litigation. They are very fond of going to law, and plead acutely, and almost interminably. The process is very tedious. They begin from the beginning, and mention every circumstance, whether relevant or irrelevant. If you cut them short, and tell them to get to the point, they will begin all over again. It is of no use being impatient, you cannot hurry them. A Kafir can always talk against time. Every morning a knot of suitors may be seen sitting on the ground round the chief's house, awaiting his appearance."—(*Bishop's Visitation Tour*, 1850, p. 67.)

LAWS.—The *Roman Dutch* code, as in the Cape of Good Hope, modified by the English law. As in the older colony, there are small debt courts, similar to those more recently established in England. There is trial by jury in criminal, but not in civil cases. Lands are held as freehold, and at a quit rent, redeemable on payment of fifteen years' rent in one sum. The same mode of transferring landed property is adopted as in the sister colony: for the following clear view of this important subject I am indebted to a practising lawyer at Cape Town, Mr. J. A. Merrington:—"Transfers of landed property are effected in a very simple and cheap, yet efficacious manner, before an officer called the registrar of deeds. The transfers are prepared by conveyancers for a small fee, and the whole expense of transferring the most valuable property rarely exceeds £10, including stamps, and every other charge. A dispute as to the title to property seldom arises, the system being so complete as almost to obviate the possibility of this. Mortgages are also passed before the registrar of deeds, whose duty it is to see that a memorandum of the mortgage is endorsed on the title-deed of the mortgage property; and a debt register is also kept in his office, in which every mortgage is regularly entered; so that an intending purchaser of property can, on payment of a small fee, in a few minutes learn whether the property he

wishes to buy is free from incumbrances; a precaution which is usually adopted when an instalment of the purchase-money is payable in advance and before transfer; because no transfer can be made of any property until after the settlement of existing mortgages, either by payment, or by the consent of the mortgagee to adopt the purchaser as his debtor. Their consent is usually given on condition that a new mortgage bond is to be passed at the time of transfer; and thus the purchaser is placed in possession of a complete title without the possibility of fraud, and the rights of the mortgagee are fully secured. The ordinary rate of interest on mortgages is six per cent. per annum. On the demise of a parent the joint property is divided into two equal parts; one half is the property of the survivor, the other half forms the estate of the deceased. In the event of intestacy the property of the deceased is divided among the children; but either parent has a right of disposal of his or her property by will, as he or she may think fit; except as to the 'legitimate portion' of the children, which, if there be four or more, consists of one-half, and under that number of one-third of the estate of the deceased parent. Of this portion children can never be deprived, except for grave offences against the parents, which the law defines. There is no right of primogeniture, all the children sharing alike."

LAND.—Before the British government was established at Natal, the average market value of unoccupied land, among the European settlers, was two-pence per acre, and it subsequently increased to four-pence per acre. Now the upset price by auction is four shillings. For each £100 deposited with H.M. Emigration Commissioners, the depositor is authorized to name seven qualified emigrants, independent of the land to which he will be entitled for this sum. A Mr. Byrne has recently expended large sums in promoting emigration to Natal; he availed himself of the above-mentioned regulation of the commissioners, and for £10 promised every emigrant a free passage to Natal, and twenty acres of land. Mr. Byrne and his associates paid £14,000 into the Bank of England, as a guarantee for the fulfilment of their promises, and spared no pains to induce the British public to consider Natal an El Dorado. Unfortunately, as in the case of the New Zealand Company, the emigrants were badly proportioned, the labouring being far too numerous for the capitalist class; in eighteen months 3,500 emigrants, principally of the poorer order, proceeded thither; they suffered much hardship; were unable for months to procure the twenty acre allotments promised, and when they did obtain them, found them quite insufficient for their support. The local government then added twenty-five acres to their respective allotments. Some quitted the colony, others have struggled against circumstances, and it is to be hoped are now beginning to reap the fruit of their toil, privation, and perseverance. New villages are springing up; the land, which yields two crops of maize in the year can scarcely fail to supply the rude elements of existence, and though wealth may be unknown, poverty is absent. In addition to English, Irish, and Scotch, there are about 300 Germans, introduced by a Mr. Bergtheil, who has formed a small settlement, called Little Germany. He is said to have invested a capital of nearly £10,000 in the undertaking, and to have scrupulously abided by his contract with the emigrants. The lavish grants of territory made by Sir Harry Smith and the land commissioners ap-

pointed by him, have completely upset the calculations of Messrs. Bergtheil, Byrne, Christopher, and others, and, it is to be feared, will long and materially obstruct the progress of the settlement. The endeavour to retain the boors was in itself beyond doubt a wise one, but the means taken have almost wholly failed. While land has been thus profusely squandered on the white-coloured man, the rights of the native proprietors have been, as usual, disregarded. I allude here not to emigrant Zoolus, or rather Kafirs, but to those comparatively few aborigines who had been enabled to hold their own against barbarian, but could not withstand civilized encroachment. In illustration of this may be quoted the case of Umneni, the chief of a small tribe comprising about 6,000 souls, who dwelt in the neighbourhood of the Bluff, a projecting hill of about 300 feet high, which runs out into the sea, and forms the western bank at the entrance of Natal harbour. Respecting "this chief and his people, the bishop makes the following entry in his journal for June 9, 1850:—"I have heard to-day from a lady who lives in the neighbourhood, that the chief Umneni, of whom I have before spoken, removed from his lands on the Bluff last Friday. He came to bid her farewell before he left; for they had been kind neighbours to each other. 'It was not without sorrow that he quitted his birthplace, where he has resided all his life, and withstood in his fastnesses the victorious troops of Chaka, who conquered the whole country, and brought into subjection all the native chiefs except this one and another. But now we want his land. It is important for our growing settlement at D'Urban that it should be in our possession; therefore he must go. He is weak, and we are strong.'" The writer adds emphatically—"If we are to pursue the system which we have already in some degree adopted towards the native tribes, the same judgments from a just God which have already overtaken the boors for their cruelties and injustice towards the poor heathen will assuredly come upon us. I fear we are treading in their steps."—(*Visitation Tour*, p. 58.)

But it is not only proprietors by birthright whose names, ages, &c., ought to be registered and their rights secured, while it is yet possible, without any fear of causing strife or rebellion on the part of usurpers; steps ought to be forthwith taken for the permanent appropriation of land to the use of the remaining and much larger portion of the coloured population, who at present squat very much where they please, paying a hut-tax to the British government. Lord Grey, some years ago, forcibly urged upon the local authorities the settlement of the natives in clearly-defined locations, but this has not yet been done, and they are still quite uncertain as to the proper boundaries of their reserves. The report of the committee appointed for locating them, dated so far back as March, 1847, strongly recommends that all lands set apart for their use should be vested in trustees. The bishop, adverting to this recommendation, makes the following excellent remarks: "I believe this to be a point of deep importance. Unless it be done, the natives will be gradually deprived of their land. No local government will be able to withstand the restless and insatiate demands of the white man, even if its own wants did not tempt it to sell, from time to time, under various pretences which will always be forthcoming, property which has no legal owner, and is in the hands of government. The question is one which demands imme-

diate attention, and should not be postponed. The Zoolu has now a great respect for the English. He hates the Dutch for their injustice. There is now a saying which is becoming very common amongst them, which is, I think, a very affecting one; when he sees or feels a wrong, he is in the habit of saying, 'I should say it was wrong, if it was not done by an Englishman.' His reverence for the English will not allow him to believe that they would willingly do a wrong; and yet he cannot altogether stifle his convictions. How long will this last?"

The following return, with which I have been favoured by Dr. Stanger, the surveyor-general, shows the estimated quantity of land granted under the proclamations of 1843 and 1848, and the quantity comprised in the Kafir or Zoolu locations, at the end of the year 1850; also the estimated number of acres in the province of Natal:—Acres granted under proclamation of 1843, 1,708,000; acres granted under proclamation of 1848, 1,232,500; acres in Kafir locations, 1,000,000; total acres in Natal, 11,520,000.

FINANCE.—The income and outlay of the colony is thus stated in a recent Parliamentary Paper:—

Year.	Net Revenue.	Expenditure.
1846	£5,194	£6,960
1847	8,317	8,527
1848	9,268	10,101
1849	14,331	16,440

For the following statement I am indebted to Dr. Stanger:—*Revenue and Expenditure in 1850*—REVENUE:—Balance in treasury, on 1st of January, £1,469; advances, unrecovered on 1st of January, £1,459; customs, £11,200; pilotage, £177; land sales, £11,813; land revenue (quit rent), £410; transfer dues, £1,625; auction dues, £712; licences, £1,349; stamps, £936; taxes paid by aborigines (1s. 6d. for each hut), £9,251; postage, £355; fines, forfeitures, and fees of court, £273; fees of office, £646; advances refunded, and sale of presents, £350; interest of monies due to government, £9.—Total (sheep and produce excluded), £42,040. EXPENDITURE: Establishments, £8,126; pensions, £15; revenue services, exclusive of establishments, £6; administration of justice, £43; charitable allowances, £9; educational, exclusive of establishments, £123; hospitals, ditto, £125; police and gaols, ditto, £724; rent, £493; transport, £576; conveyance of mails, £335; works and buildings, £1,819; roads, streets, and bridges, £740; miscellaneous (advances for journeys, printing, &c.), £1,873; aborigines, inclusive of establishments, £3,654; immigration, £11,002; loans repaid, £3,000. Total, £32,698.

COMMERCE.—There are few details yet collected for three years it stands thus:—

Exports and Imports.	1847.	1848.	1849.	1850.
Imports . . . £	41,958	46,981	46,204	—
Exports . . . £	15,146	13,674	10,866	—
Ships entered . tons.	3,528	3,226	4,166	—
Exports of Produce—				
Sheep Wool . lbs.	4,206	4,389	2,927	—
Cotton . . lbs.	1,740	5,824	13,931	—
Ivory . . lbs.	24,022	18,507	29,321	—

The falling off in the exports is accounted for by the Dutch migrating from the colony into the interior.

Of the state of RELIGION, EDUCATION, and CRIME, there are no official returns. As regards the latter, Mr. Cloete, the recorder of Natal, stated in June, 1849, that for fifteen months there had not been a felonious case among 100,000 natives (British subjects), requiring the intervention of a jury.

The efforts made in the cause of religion by the Wesleyan Society, have been shown at pp. 150-1; much good has been wrought by them among the peaceable and well-disposed Zoolu Kafirs, especially by the labours of the Rev. Mr. Alison and his wife. The American Board of Missions is actively engaged in the same cause, and sustains about twelve missionaries in Natal, and the Berlin Society have a station in New Germany, about ten miles from D'Urban, partially supported by Mr. Bergtheil. So late as 1849, there was no clergyman of the Church of England in the colony; but in 1851, there were three, one of whom was sent out by the *Society for the Propagation of the Gospel*. The number will probably soon greatly increase, as Natal, as has been before stated, is about to be formed into a separate see, distinct from that of Cape Town.

GENERAL VIEW.—Every new field for emigration opened to the British public, seems doomed to run the gauntlet between unqualified praise and exaggerated censure. Natal has been no exception to this rule; it has been puffed up as an earthly paradise, precisely suited to the wants of every intending emigrant, and it has been cried down as a barren wilderness fit only for savage life. For my own part, judging from all that I have seen, heard, and read, I am inclined to think that the first of these two extremes approaches nearest to the truth. The verdant beauty of its coastline is all that I can speak of from personal knowledge, but the statements of several intelligent and perfectly disinterested witnesses concur in attributing to this new colony many elements of wealth and progress, combined with a delicious climate and charming scenery. Among the foremost of these may be named Dr. Andrew Smith, a wary, dispassionate observer, some of whose remarks have been already quoted. He expressed himself as early as 1830, in the strongest terms respecting the capabilities of Natal for the support of a large population.* Sir Harry Smith, addressing Earl Grey, in 1848, described the country in the most glowing terms. A recent visitor, the lamented J. J. Freeman, thus records his impression of the province as he found it in 1850:—"I saw much beautiful land, rich soil, numerous streams, and extensive forests. I found the air salu-

* Vide Parl. Papers, June, 1835; pp.

brious and pleasant, and I witnessed the rising prospects of many families. I often said to myself, as I passed through the colony, 'Were I now proposing to emigrate, I would choose Natal as the sphere of my enterprise.'" Both this writer and the Bishop of Cape Town, in describing the country they had traversed, speak especially of the neighbourhood of the Umgeni River, which forms probably the finest cascade in South Africa, the whole volume of water falling at once over a perpendicular precipice of yellow sandstone, into a wooded valley about three hundred feet below. The varied character of the indigenous vegetation lends a peculiar charm to the scenery, and the formation of the country in successive terraces rising from the sea-shore, favours the growth of productions requiring different soils and climate: thus cotton, (said to have been introduced from the Morley Mission Station,) coffee, sugar, tobacco, indigo, and hemp, thrive on the sea-belt; wheat, maize, and all the cerealia, on the second slope; while the third is more adapted for pastoral purposes. But few wild beasts now infest the inhabited districts, although the tiger, wolf, and wild-dog, are occasionally met with. Herds of elephants still range the wooded heights near D'Urban; but they have been so much hunted lately, that they will probably be soon exterminated. Further inland, and along some parts of the coast, are found the lion, buffalo, leopard, hyena, many kinds of antelope, and the wild-boar; the hippopotamus is common at the mouths of the larger rivers, as also the crocodile. The smaller description of game, comprising varieties of deer and antelope, and feathered fowl, abound on most farms.

The English settlers now established at Natal appear to belong to the energetic and persevering class, alone calculated to pass successfully the ordeal of labour and privation which, in a new colony, is the almost invariable introduction to success. The same remark applies to the three hundred Germans, whose frugal and sober habits deserve praise and imitation; and the remaining Dutch families, from their experience and friendly connexions with their brethren in the Cape Colony, the Sovereignty, and the Grensgebied, are likely to contribute materially to the peace and prosperity of the settlement; the more so because it is now generally believed that since the slave emancipation their sentiments and conduct

towards the coloured races have become much more favourable.

The treatment of the large and increasing coloured population, numbering, it is supposed, from 100,000 to 150,000, is a matter of vital importance. They are universally described as a mild, tractable, and thoroughly trustworthy race, and are employed as domestic or farm servants throughout the colony; their labour being obtained by the European settlers, at the rate of 5*s.* a month in money, and food, which costs about 5*s.* more. The remuneration being so trifling, it is not to be wondered that the natives now shrink from the self-denial necessary to continuous exertion; but by careful training, kind treatment, and the increase of wages in proportion to the increased quantity and improving quality of the work performed, this fitfulness and indolence may be removed, and the influences of civilization in inspiring new wants will lend the strongest incitement to industry. To develop the manifold resources of the colony, capital, skilled labour, and an exportable product, commanding a good price in England, are necessary. The latter is found in cotton, of which various qualities succeed perfectly, and bring a price at Manchester varying from 9*d.* to 1*s.* 6*d.* per lb. If wealthy Lancashire capitalists would appropriate £100,000 to insure a fixed and remunerative price for Natal cotton during the next three years, the twelve to fifteen millions sterling now paid to foreign countries for a raw product essential to British manufactures, might be disbursed within the limits of the empire among our fellow-subjects, who receive those manufactures at mere nominal duties, whereas their sale in the United States and elsewhere, is impeded by duties of 30 to 40 per cent. By such encouragement Natal might be made the lucrative cotton plantation of Lancashire, while its neighbour, the Orange River Sovereignty, promises to become the wool farm of Yorkshire and Somerset. No better policy could be devised for the general welfare, than to unite by the ties of reciprocity the wide spread domains of the British Crown. England cannot afford to neglect the welfare of any one of her colonies. Each one has its own distinctive and peculiar value; each one, if wisely and liberally governed, will do its part in rendering the mother country independent of the capricious regulations, or hostile tariffs, of foreign lands or rival states.

BOOK III.—WESTERN AFRICA.

CHAPTER I.

EUROPEAN POSSESSIONS—HISTORY—RISE AND PROGRESS OF THE SLAVE TRADE.

SEVERAL European nations possess forts and factories scattered along the western coast of Africa, between the tropics of Cancer and Capricorn. Colonies, considered as fields of emigration for the white man, there are none; the climate of the whole coast-line incapacitating him for labour, and proving, after a few years' residence, permanently injurious to health, if not destructive to life.

The names and situations of the various mercantile stations are as follows:—

ENGLAND.—Beginning from the north we have *Bathurst* at the mouth of the Gambia, positions on the main land, and trading posts on the river banks. One hundred and fifty miles to the south-east *Bulama*, one of the Bijuga or Bissagos Islands, between the estuaries of the Grande or Jeba and the Bulola river; 160 miles further to the south-east, the *Isles de Los*; sixty-five miles to the south, the peninsula of *Sierra Leone*, extending to the *Sherboro River and country*, and the *Banana Islands*. From thence in a south-easterly and easterly direction, for a distance of about 650 miles, there is no British settlement, until we arrive at the Gold Coast, where there are several forts and stations, viz., *Cape Coast Castle, Accra, (Fort James,) Dix Cove, Annamaboo, Winnebah, Quittah, Pram Pram, Appollonia, Tantamquerry*, and others, temporarily abandoned, or at present little used. In addition to these there are the newly-acquired stations at *Accra, Tasie, or Tessing, Temma, Ningbo, Atoko, Adda, Akropong, and Quittah*, including *Forts Christianborg, Augustaburg, Friedensburg, Konigstein, and Prinzenstein*, together with large tracts of country on the Guinea or Gold Coast, purchased by Great Britain from Denmark for £10,000, in August, 1850. About 200 miles to the eastward of Cape Coast Castle, is *Whydah*, situated on the northern shore of the Bight of Benin, on which we had a factory forty years ago.

FRANCE occupies *St. Louis Island*, near the Senegal River, on whose banks she has

several trading stations; the strongly fortified *Island of Goree*, near Cape Verd; various posts on the *Casamanza River*; a factory at *Albreda*, on the Gambia River; *Grand Bassam* and *Assinee*, on the Ivory Coast; and a position on the Gaboon River.

HOLLAND has its principal fort at *Elmina*, the earliest European settlement formed on this portion of Africa, situated a little to the north of Cape Coast Castle. She likewise possesses several smaller stations.

PORTUGAL has factories at *Cacheo, Bissao, St. Paul de Loando* (Angola), *Nova Redonda, Benguela*, and *Mayumba* or *Little Fish Bay*; the *Cape Verd Islands*, on the N.W. coast, and those of *Princes* and *St. Thomas*, to the southward of *Fernando Po*. SPAIN claims the island last-mentioned, and occupies the beautiful *Canary Islands* near Cape Bojador.

LIBERIA.—The settlement thus named, formed by manumitted slaves and coloured Africans from the United States of America, extends along the sea-coast border between the Gallinas River, and Cape Palmas, a distance of about 350 miles, with an inland breadth of about 40 miles.

HISTORY.—The progress of African discovery has been briefly stated at the commencement of this volume. Its annals from the earliest period of European intercourse, are written in blood. Its fair and fertile soil has eluded the grasp of civilized man, for fever and pestilence forbade his approach, and while occasionally scourging even the aborigines, visited with relentless fury every European attempt at permanent occupation. And then, when nations and individuals, professing to place all their hopes in this world and the next, on the mercy of Him whose death and incarnation had no other end than to impart to fallen man "the glorious liberty of the children of God," in place of the foul and oppressive yoke of sin—found that these poor heathens who had on their first arrival

kindly welcomed them, were strong and healthy, they with one consent determined upon turning these advantages to their own ends. And this, not by introducing the arts of civilized life, and sedulously turning the attention of an abundant population to the development of the natural resources of a territory capable of growing in luxuriant perfection those tropical products which find an ever-increasing market in colder climates; but, by an inhuman, fiendish practice, which it is scarcely possible to believe, was, in the open face of day, formally commenced by the most polished nations of Christendom, so late as the fifteenth and sixteenth centuries. Yes—kidnapping became a recognised trade, human flesh and blood an avowed article of traffic, and civilized governments fostered the noxious plant until it grew to an enormous stature, overshadowing like a deadly upas tree, the prospects of many lands.

In 1807, England renounced the traffic, and has ever since striven earnestly to protect the wretched Africans; but up to that time, their history is all comprised under the head of the—

SLAVE TRADE.—An indelible stain rests upon the fame of Prince Henry of Portugal, which his high reputation for science, and his love of adventure and discovery only render the more painfully conspicuous: his name has descended to posterity as the first promoter of the slave trade. His original intentions were at least professedly honourable towards the aborigines of the coast newly discovered by the navigators employed in his service, whom he especially urged to bring home some of the natives that he might have them baptized, educated, and sent back, so that the Portuguese might by their means open a commerce with their countrymen. In 1442, the desire of the Prince was gratified by Gonzales Baldeza, who, after a voyage of two years, returned, bringing with him ten negroes and some gold dust. Henry presented the captives to Pope Martin V., who, at his request issued a Bull, by which he granted to the Portuguese nation an exclusive right to the possession of all the territory which they might discover between Cape Bojador and the continent of India.*

In the following year, Nunez Tristan sailed on an African expedition; reached Arguim in 20° 30' N. lat., and meeting with some small boats close in shore, seized them and brought back their crews, amounting to fourteen persons, as slaves. An association was immediately formed for the express purpose of carrying on a trade in gold and slaves, in the profits of which a share was allotted to the prince, who eagerly promoted the transportation of the wretched Africans, though he endeavoured to mitigate the excessive atrocities connected, even at that early period, with their capture. In 1444, two hundred

slaves were brought to Portugal; and, very speedily, the annual average importation increased to 700 or 800, ("teste di schiavi, head of slaves.") The early and most distinguished of these men-stealers were not long permitted to continue their course of rapine and bloodshed. Swift and utter destruction, such is often the doom of those who take the initiative in some glaring sin, overwhelmed them in the very act. Gonzales was slain in 1445, while attempting to carry off some unoffending natives, and Nunez Tristan perished the following year in a similar manner.

From these and many other facts, handed down to us from this period, it appears that the natives did not then sell their countrymen, but resisted the nefarious attempts of their ruthless enemies, even to the death. Gradually, the Portuguese, by exciting the covetousness of the chiefs, induced them first to barter the bodies of their foes and then to make war upon weak tribes, for no other end than to gratify that desire of trading with Europeans which, honestly directed, might have proved the source of commercial prosperity alike to Africa and Portugal, while the slave trade has been an unmitigated curse to both.

The effect of the strong stimulus to cupidity and revenge held out to the heathens of Africa was terrific. The land became the arena of ferocious contests for the supply of the slave-dealers, who drafted the victims of their avarice by thousands to a distant land, there to toil like beasts of burthen, to perish like them when the power of labour had ceased, and to be replaced by fresh cargoes of wretched beings, whose very offspring were condemned to endure the same hopeless bondage, unless their parents, impelled by despairing love, dared the vengeance of their cruel taskmasters, and destroyed their children to preserve them from the rayless existence to which they were themselves condemned.

About the year 1460, the Spaniards seized as slaves some of the inhabitants of the Canaries, to which islands they laid claim.

In 1497, the Portuguese commenced what was called the "carrying trade;" that is, after supplying their own country with as many as were required, they transported them elsewhere, and in 1503 introduced a limited number into St. Domingo to supply the place of the unfortunate Indians who were rapidly perishing from the hard labour in the mines, and the excessive barbarities to which they were subjected by the Spanish settlers. In 1511, large numbers were imported by the formal permission of Ferdinand the Catholic. After his death, the celebrated Las Casas, Bishop of Chiapa, proposed to Cardinal Ximenes (regent during the minority of Charles V.) the establishment of a regular commerce in Africans, with a view to saving the remnant of the feeble and inoffensive American and West Indian aborigines. Ximenes refused, declaring that he considered it wholly unlawful to consign innocent persons to slavery, or to deliver one unoffending race from a state of suffering by reducing another to the same position. Ximenes died; Charles V. came into power, and was induced to permit the resumption of the slave trade,† which increased excessively, from 10,000 to 12,000 slaves being sold annually about the year 1539, in the slave market, established at Lisbon under Papal sanction.‡ Charles becoming aware of the iniquity and cruelty he had rashly authorized, forbade any

‡ *Edwards*, vol. iii. p. 202.

further importation of slaves, and ordered that all then in bondage throughout his American possessions should be set free. On his retirement to a monastery the traffic was revived, receiving occasionally some slight check from the indignant denunciations of such men as Leo X. and others.

The attention of England had been early turned to Africa as a field for legitimate commerce; and her merchants had endeavoured to open a trade during the brief reign of Edward VI., but were deterred by the Portuguese, who claimed the exclusive right in virtue of the Papal decree before alluded to. Portugal was not, however, long permitted to retain the power which she had so fearfully misused. In 1580, King Henry (the cardinal) died, leaving no heir; and Philip II. of Spain, on seizing of the vacant throne, was too much occupied with European affairs to be able to preserve intact that African trade which Portugal had spent years of unremitting exertion in establishing. Other European nations eagerly availed themselves of the opportunity thus afforded, and founded forts and small trading settlements on various parts of the coast. The English settled chiefly at Cape Coast Castle; the French at the Senegal River; the Dutch on the Gambia River; and the Danes at Christianborg. At each of these places strong fortresses were built, mounting fifty to sixty pieces of cannon; and with each several subordinate posts or stations were connected.

France appears to have engaged in commerce with Africa about 1556: in 1626 a Rouen Company existed, who soon after that time pursued the slave-carrying trade. The Dutch commenced voyaging thither in 1595; and following up the traces of the Portuguese with great ardour, soon supplanted them in all their objects of trade, including that of slaves, and took possession of their factories and forts, in addition to which they constructed some new ones. In 1588, Queen Elizabeth granted a patent to a company for the obtainment from the neighbourhood of the Gambia and Senegal Rivers, hides, gums, ivory, grains, ambergris, rice, ostrich feathers, and gold, all of which they succeeded in procuring. There is no reason to suppose that they intermeddled with the slave-trade; and most assuredly their queen would not have given them even tacit allowance, had they been so inclined; for when Captain (afterwards Sir John) Hawkins returned from his first voyage, during which he had conveyed slaves from Africa to St. Domingo, she sent for him and expressed her concern lest any of the Africans should be carried off without their free consent, declaring that "it would be detestable, and call down the vengeance of heaven upon the undertakers.*" Hawkins promised to comply with these injunctions, but, reckless freebooter as he was, repeated twice more the same lawless enterprise; and in the second attempt perished miserably, as his sovereign had predicted, in 1588.

In 1618, James I. granted a charter to Sir J. Rich and others who were bent on "adventuring in the golden trade." The company erected forts and factories at the Gambia and elsewhere, but their officers indignantly refused to buy "any that had their own shapes." (*Some Account of the Trade in Slaves from Africa*, by J. Bandinel, Esq., Foreign Office, London, pp. 39 and 42.)

In 1631, Charles I. granted to a second company, composed of Sir B. Young, Sir K. Digby, and others,

a charter for trade with Africa, under the provisions of which, in 1641 (passing over the solitary instance of Hawkins), Englishmen, incited by the want of labour in the British West Indies, first commenced taking part in the accursed thing, by transporting thither small numbers of Africans from the Guinea Coast.

Cromwell gave no encouragement to the slave-trade; but, on acquiring possession of Jamaica, took means for peopling it with British subjects only.

Charles II., immediately after his accession, granted a charter to a third African company, of which his brother, the Duke of York, afterwards James II., was a member. This company undertook to supply the British West Indies with 3,000 slaves annually; but although, like its predecessors, protected by patents and exclusive privileges, it failed like them.

In 1672, a fourth English African company was established. They enlarged Cape Coast Castle, built forts at Accra, and at five other places, imported large quantities of dye stuffs, ivory, wax, and gold, and supplied the British colonies with slaves. Their exclusive privileges were annulled by the "Declaration of Rights," in 1688, and African commerce was thrown open by Britain to all her subjects; but the company continued to exist, and in 1713 entered into a formal agreement with the Spanish government, which has become famous in history by a name formed of two words of the same signification, *Assiento Contract*, the company being called *Assientists*. It was signed by the King of Spain himself, and ratified by an article of the Treaty of Utrecht. By its provisions, during the ensuing thirty years, the English company engaged to supply Spain with 144,000 slaves, or 4,800 per annum, and in return for this privilege they agreed to advance to the Spanish monarch 200,000 crowns, to pay a duty of 33½ crowns for every slave, and, moreover, to allot to the sovereigns of Spain and of England each one quarter of the profits of their nefarious enterprise. They were to be at liberty to import into the Spanish West Indies as many slaves above the stipulated number as they could find a market for, and to sell them all for the highest price they could get, except at the ports of Santa Martha, Cumana, and Maracaybo, where the price was never to be raised above a certain sum, as it was considered desirable to induce the colonists at those places to introduce slaves on their own account.

The company were especially privileged to send an English ship of 500 tons burden, once a year, to the Spanish West Indies, with an assortment of general merchandise. For twenty years (up to 1733) the *Assientists* annually transported about 15,000 slaves from Africa to the West Indies, and for the following twenty years about 20,000 per annum. But this disgraceful traffic proved in the long run as unprofitable to the English as it had been to the Portuguese, French, and other nations;† and in 1739, the company were in debt to the king of Spain to the amount of £68,000 sterling. The outbreak of war interrupted the working of the contract. By the peace of Aix la Chapelle (1748), its renewal for four years was stipulated for, in consequence of its compulsory suspension; but by the Convention of 1750, the king of Great Britain, upon receipt of £100,000 in lieu of being allowed to send the annual trading ship, renounced, on behalf of his subjects, the stipu-

the treaty of Pardo, January, 1849.—*Vide Bandinel on Slavery*. London, 1842; p. 59.

lated prolongation of the Assiento contract. The slave-carrying part of the undertaking had been all along a losing trade—the prospect of profit having rested solely on the merchandise imported by the company, who, so early as 1729, applied to parliament for assistance to keep up their forts and factories in Africa. Occasional grants of money were thenceforward made them, amounting, up to 1749, to £80,000, when, finding themselves hopelessly indebted to sundry creditors in the sum of £107,262, they offered to surrender their charter, forts, and other property, if parliament would pay their debts and give the proprietors £25,000.

The first, and it would appear only the first, of these conditions was acceded to. They were enabled to pay their debts, the association was dissolved, and a “regulated” company, in which each member traded individually on his own capital, was formed, and entrusted with the command of the forts and settlements on the African coast; but the commerce itself was declared free and open to all British subjects, from South Barbary to the Cape of Good Hope.* The new company received large Parliamentary grants for 57 years, viz. from 1750 to 1807, at the rate of £13,431 per annum; and from 1807 to 1821, when it ceased to exist, at the rate of £23,000 per annum.

It is actually appalling to look back upon the judicial blindness which could have allowed the sovereign, both houses of parliament, and the people and press of Great Britain, in the middle of the eighteenth century, formally and fully to aid and abet the wholesale commission of a heinous crime, explicitly denounced by the Divine Law, for “he that stealeth a man and selleth him, or if he be found in his hand, he shall surely be put to death.”—(*Exodus*, xxi., 16.)

As corruption in one part of the body corporate speedily communicates its deleterious influence to the distant and most vital parts of the frame, so crime tolerated in a remote portion of an empire soon spreads to the metropolis; is first connived at, then openly practised, and finally stalks abroad in all its hideous deformity. Those who defend slavery, are in a fitting state of preparation for being themselves deprived of, at least, political liberty; and the nation once made aware of the fearful sin it sanctions, must, if it continues the same course, sink into an abyss of vice, and become the victim of its own criminality. Into this state England was being dragged by the slave-trade.

Even so late as the reign of George III., the London newspapers contained advertisements respecting the sale of slaves, to be sold either by themselves or in the same lot with horses, carriages, or any other stock of the proprietor. As illustrations, take the following:—“At the Bull and Gate, Holborn, a chestnut gelding, a tim whiskey, and a well-made, good-tempered black boy.”—(*Gazetteer*, 18th of April, 1769.) “To be sold a black girl, the property of J. B., eleven years of age, who is extremely handy, works at her needle tolerably, and speaks English tolerably well; is of an excellent temper, and willing disposition. Inquire of Mr. Owen, at the Angel Inn, behind St. Clement’s Church, in the Strand.”—(*Public Advertiser*, 28th of November, 1769.)

In 1745 the British government proceeded so far as to grant lands to its subjects in Jamaica, on the stringent condition that a certain number of slaves should

be settled thereon. In 1760, 1765, and 1774, the colonists, alarmed at the increasing number of slaves, endeavoured to impose a duty on their further importation; but the home government contravened their measures, on the ground that the inhuman traffic was beneficial to the nation!† Thus fostered and upheld, the slave-trade increased to an almost incredible extent—civilized states vied one with another in a career of wrong and robbery, in which, to her disgrace, England gained the undoubted pre-eminence. Austria, in 1782, set the example of ceasing to do evil, by abolishing the trade as far as she was concerned; but there then appeared little prospect of its being followed by other states.

In 1788 there were 450,000 slaves in the British West Indies alone, and the annual exportation from Africa was 100,000, the distribution being—English, 38,000; French, 31,000; Portuguese, 25,000; Dutch, 4,000; Danes, 2,000; and the same aggregate amount is stated to have continued annually up to the year 1805.‡ This estimate is considered below the truth. The waste of life, even after the slaves had reached the West Indies, was enormous. Up to 1787, the “number consumed by Europeans was computed by Mr. Cooper at 10,000,000.”§

But the darkest hour was the nearest the dawn, and the very excess of the evil tended, under Providence, to its abolition, at least with regard to England. A spirit had long been gaining ground in the nation, which led individuals to investigate the practical working of a system, the principle of which they felt to be indefensible.

The act *per se* of one nation, or one man enslaving another, had been indignantly reprobated by the most eminent writers, whether moralists, statesmen, or poets, from the time of Milton. Godwin, a clergyman of the Established Church; Baxter, the celebrated Nonconformist divine; and George Fox, the venerable founder of the Society of Friends, towards the end of the seventeenth century, protested loudly against the slave-trade, as did likewise Montesquieu in his *Esprit des Loix*, in 1750; Adam Smith, in 1759, in his *Wealth of Nations*, and elsewhere; Hutchinson, in his *Moral Philosophy*; Postlethwaite, in his *Commercial Dictionary*; Bishop Warburton, in a powerful sermon delivered in 1766; Robertson, the Abbé Reynal, and Paley, between 1776 and 1782; Sir Richard Steele, Pope, Thompson, Savage, Shenstone, and Sterne; and lastly, Cowper, Johnson, Hannah More, the Rev. John Newton (who before his reformation had himself been a slave dealer), did their part in inducing the public to view favourably the exertions of the Quakers and Wesleyans in England and America, commenced by the former body (including Anthony Benezet) in 1761, and by John Wesley, Whitfield, and their Christian followers, in 1762, for the abolition of this detestable traffic.

In 1765 Granville Sharp commenced drawing aside the thick veil of ignorance and indifference which had long hidden from the eyes of the British government and nation the hideous and revolting cruelties perpetrated under the direct sanction of the law. In 1772, in the case of James Strong, an African slave brought to England by his master, who endeavoured to seize him forcibly, and convey him thence to Jamaica, Granville Sharp obtained the

§ *A Cry from the Middle Passage*, p. 5.

glorious decision, that "as soon as ever any slave set his foot upon English territory he became free." In 1783, he brought before the public, in illustration of the wanton and wilful destruction of life perpetrated in the slave carrying trade, the complaint of certain underwriters against the captain and officers of the ship *Zong*, whom they alleged had thrown overboard 132 sickly slaves, in order to defraud them, on the plea of the lives having been lost by casualty, not disease. The only extenuating circumstance offered on behalf of the captain (Collingwood) was that the vessel was short of water, and that he had missed his port, but even this wretched plea was shewn to be untrue.—(Clarkson, p. 81.)

In 1776, the good Bishop Porteus came forward in the same cause. In 1784, Dr. Gregory produced his "Essays," and circulated in them much information respecting the slave trade; against which a public petition was addressed by the people of Bridgewater to parliament in the following year; this was the second on this subject, a previous memorial having been presented in 1783 by the Quakers, who, having learned that the officers of the African Company were to be forbidden from exporting negroes, prayed that the same restriction might be extended to all persons whomsoever. Lord North declared that the request did credit to "the most benevolent society in the world," (Clarkson, p. 93,) but regretted that "the slave trade had, in a commercial point of view, become necessary to almost every nation of Europe." In 1786, Mr. Clarkson, one of the most disinterested, persevering, and devoted of the early opponents of slavery, commenced his labours by publishing a work against it. In 1787, Clarkson, Granville Sharp, Mr. Hoare, Mr. Wilberforce, and nine others, formed themselves into a private committee, with the object of procuring the abolition of the trade, and were soon joined by distinguished men of various religious persuasions and political opinions. In 1788, Mr. Pitt, after a searching investigation into the effects of the trade on Africa, on the West Indies, and on the crews employed in it, declared himself decidedly inimical to its continuance. By the examination of vessels then at Liverpool, he ascertained that the space given to a slave was five feet six inches in length, and sixteen inches in breadth; the deck was from four to five feet four inches in height. It was proved by evidence that the slaves were chained hand and foot to each other, and fastened besides by ringbolts to the deck; that their allowance was a pint of water a day each, and their food yams and horsebeans; that they were made to jump in their irons for exercise, and flogged if they refused to do so. The mortality among both the slaves and the crews was found to be enormous, so that the trade, instead of being a nursery for seamen, was in reality a grave.—(Bandinel, p. 81-2.) Mr. Wilberforce, in describing the effects of the slave-trade on Africa—"quoted orders given to British slave agents settled on the coast, to encourage the chieftains by presents of brandy and gunpowder, to go to war to make slaves. Youths came with vegetables to sell, families came to pay a friendly visit—one and the other were seized and sold. The country was made a field of warfare and desolation, a wilderness in which the inhabitants were as wolves preying on each other."—(Bandinel, p. 94.) In his evidence

before the privy council, he detailed the horrors of the carrying trade, the state of suffocation of the slaves, their eating by compulsion, their despair, insanity, their throwing themselves into the sea, and, in drowning, waving their hands in triumph, exulting that they had escaped from their tyrants. He mentioned a Captain Fraser, who, finding a man would not eat, caused hot coals to be held to his mouth to compel him to swallow nourishment wherewith to sustain a life of slavery.—(Vide Bandinel, pp. 94-'5.) Lord Grenville, Fox, Burke, and subsequently Lord Wellesley, Canning, Romilly, and other men of note, shared the views of Mr. Pitt; yet, so powerful was the interest of the West Indian party, that notwithstanding this auspicious commencement, the abolitionists gained their noble end only after a struggle of twenty years' duration.

In April, 1791, a motion for the abolition of the trade was lost in the house of commons, although supported most ably by Pitt, Fox, Burke, Sheridan, Grey (afterwards Earl Grey), Wilberforce, Martin, Ryder, Lyttleton, Thornton, Burgoyne, Montague, Banks, Elliott, Courtenay, Francis, Scott (Sir William), and Lords Apsley, Bayham, Arden, Carysfort, Muncaster, Barnard, North, and Euston. The minority, including the above illustrious names, comprised only 88 members; the majority, 163. The debate was remarkable for perhaps the most wonderful display of eloquence ever heard, even in the House of Commons of 1791. Lord Wellesley, who sat beside Pitt during his long speech, has frequently told me that it was like inspiration. Fox, also, is described as having surpassed himself; and though defeated, these worthy champions of a most righteous cause declared they would never cease to be its advocates until they ceased to live. Both nobly redeemed their pledge. Pitt would probably have carried the abolition through during his own brilliant administration, but for the strong opposition of two powerful members of the cabinet, Lord Chancellor Thurlow and Lord Liverpool; and the more dangerous because less open hostility of a third, Mr. Dundas (afterwards Lord Melville).

At this period, the Dutch alone successfully rivalled the English in the slave-trade. According to Edwards, forty forts were then established on the African coast, of which fourteen belonged to England, fifteen to Holland, four to Denmark, four to Portugal, and three to France.

In 1792, the King of Denmark prohibited his subjects from purchasing, selling, or transporting slaves in or from Africa or any other foreign place; and in 1794, the Americans passed a law to prohibit the carrying on the slave-trade from the United States to any foreign place or country. Slowly, but surely, a conviction of the abominable nature of the trade gained ground; and from this date almost every new member of eminence joined the Wilberforce* party, as did nearly the whole of the 100 Irish members who took their seats in parliament after the union of Great Britain and Ireland, in 1800.

In 1804, the Abolitionists' Committee added to a list, already famous for worth and talent, the names of James Stephen, Robert Grant, John Thornton, and William Allen; and were at the same time enriched by the brilliant genius of Henry Brougham, and the unwearied research of Zachary Macaulay.

* The various successive attempts made by Mr. Wilberforce, from 1788 to 1817, and the manner in which they were received by parliament, are detailed

in my previous works, viz., the *History of the British Colonies*, in 5 vols., published in 1834, and the *Colonial Library*, in 2 vols., in 1836.

Pitt died in January, 1806; Fox succeeded him in power, but only for a brief period, his own demise occurring in the following October. Conscious of his rapidly declining strength, he devoted his last energies to the cause in which he had long and earnestly laboured, and which engaged his last earthly thoughts. "Two things," said he, on his deathbed, "I wish earnestly to see accomplished—peace with Europe, and the abolition of the slave-trade. But of the two I wish the latter." The exertions of the dying patriot had contributed largely to both these objects. The second, so far as England was concerned, he had all but accomplished, with the aid of Lords Grenville, Henry Petty, Holland, Ellenborough, Lauderdale, Stanhope, Westmoreland, Grosvenor, Spencer, Sidmouth, and others.

Three acts of parliament had been passed for the regulation of the slave-trade. In January, 1807, Lord Grenville introduced a bill into the House of Lords for its complete abolition. The Duke of Gloucester supported, the Dukes of Clarence and Sussex opposed the bill, which was carried by a majority of 16; sent down to the House of Commons, where it was passed by a majority of 108; and received the royal assent on the 25th of March; forming the closing ministerial act of the Whig administration.

This parliamentary enactment declared that no vessel should clear out for slaves from any port within the British dominions; that no slaves should be landed in the colonies after the 1st of March, 1808; and that from and after the 1st of May, 1807, all dealing, purchasing, or barter for slaves on the coast of Africa should be utterly abolished, and unlawful; vessels found engaged in the traffic were to be forfeited, and bounties were held out for the capture of persons who had been seized as slaves. This act, however, was found insufficient; and in 1811, through the exertions of Mr. Brougham, another was passed, making it felony for any person to engage in the forbidden traffic.

Addresses were presented by both houses to the king, praying that measures might be taken to solicit the co-operation of other nations in what Lord Grenville emphatically declared to be "the most glorious measure that had ever been adopted by any legislative body in the world."

In March, 1807, the United States passed a law, forbidding the importation of slaves into any place within the jurisdiction of the Union. They had, as has been already mentioned, prohibited their foreign slave-trade in 1794.

Having gained this vantage ground, the abolitionists of the British slave-carrying trade turned their energies against slavery itself. With this branch of their labours we are not now concerned; it belongs to the history of the West Indies. Here, then, it would be well if the sad story of wrong and suffering connected with West Africa might be brought to a close; leaving the reader to suppose that the European nations, who had vied with England in wrong, would be induced to follow her example of repentance and reformation. But the truth may not be withheld. Africa is still convulsed with strife and bloodshed, though England takes rank now as her most powerful defender, instead of her greatest persecutor. International jealousies have arisen, which have favoured the continuance of the slave-trade. The United States and France have objected to con-

cede the right of searching vessels carrying their respective flags, although the same privilege was offered by the British government to their ships of war. Through the exertions of the Prince Regent and Lord Castlereagh, the assembled sovereigns, at the congress of Vienna, branded the slave-trade as "a scourge which had long desolated Africa, degraded Europe, and afflicted humanity." The diplomatic records of England during the last forty years, attest the untiring energy with which its foreign ministers have striven for the complete abolition of this great social crime; Viscount Palmerston, in particular, deserves cordial commendation for his long-continued and able negotiations with European powers, with a view to forming treaties which should prevent their flags being used by the buccaneers, whose merchandise is man.

Several parliamentary committees have sat in England of late years, to investigate the existing state of the slave-trade; and the evidence adduced has been, throughout, of the most painful and harrowing character. It is difficult to express in few words the facts connected with this revolting subject, and yet more difficult to find language wherewith to express a just idea of its horrors, from which the reader shall not turn away in utter abhorrence; but as the traffic still exists, and might, on the slightest encouragement, or by the diminution of our present exertions be renewed, even by Englishmen, with tenfold activity, it is necessary to enter into some details respecting that evil which Great Britain yearly devotes no inconsiderable portion of her revenue to suppress.

The state of society in a vast country, where a small but powerful class is constantly engaged in making war on scattered hamlets with intent to seize the people and sell them into slavery, may be conceived. Weeks and months are devoted to pillage and murder; sometimes the villages are attacked at mid-day—more frequently at midnight—when all that offer resistance are sacrificed on the spot. In these dreadful scenes death may be viewed in all its forms: here the warrior, expiring as he had fought for his hearth and home, conquered, but not enslaved; there a woman, with a child in her arms, staggering from her hiding-place which the flames of the burning village had reached, and perishing in a last effort of maternal tenderness to save her infant; while around are the shrieks of despair, the groans of the wounded, the fiendish shouts of the armed and often mounted captors, rising above the piteous moans and supplications of the young women reserved for their brutal lusts. Powerful chiefs, or kings, as they are termed, frequently set forth on these "slave hunts," in which the destruction of life is enormous in proportion to the number captured. In five such expeditions of the Chief of Bornou, at least 20,000 human beings are computed to have been slaughtered before three-fourths of that number had been obtained as slaves. (*Denham and Clapperton's Travels*, p. 214.)

Laird, during his ascent of the Niger, in 1832, states that scarce a night passed but the screams of the captured victims might be heard, and describes the advance of the robbers as having been marked by the smoke of the burning villages, five or six being in a blaze at once. (*Vide Laird and Oldfield's Narrative*.)

The manner in which the unhappy slaves are driven to the coast is equal in ferocity to their mode

* See *History of the Rise, Progress, and Accomplishment of the Abolition of the African Slave* DIV. VII.

Trade, by the British Parliament; a remarkable work, written by Thomas Clarkson.

170 HORRORS OF THE "MIDDLE PASSAGE" ACROSS THE ATLANTIC.

of capture. Attached to a long hide rope or chain, they are driven like cattle by the miscreants whose thirst for blood is stimulated by European gold, along a route which may be tracked by the whitened bones, or newly mangled carcasses of their victims. The whip and the goad are unsparingly used to hasten their speed; children are forced over stony paths until their little footsteps may be traced by blood; women, in a state unfit to travel, give birth to infants on the road; and, according to M. Mendez, five-twelfths of the whole perish on the journey from their sacked villages to the coast. (*Buxton on the Slave Trade*, p. 87.) Here new sufferings await the survivors; if not immediately embarked, they are kept, scantily fed, within the miserable sheds called barracoons, all huddled together in filth and misery. The cruelties, often wantonly practised by the keepers of these loathsome prisons, are too fearful to record. To avoid the expense of keep in case of a dull or overstocked market, the sickly, old, and infirm, are taken, says Lander, (describing what he saw at Badagry,) into the middle of the river, pinioned, weighted, and drowned.—(*Lander's Records*, Vol. II., pp. 241, 250.) The practice of destroying the unsaleable portion of the captives does not seem to have been at all an uncommon one. Several travellers allude to it: among others, Mr. Leonard says that, about 1830, a number of slaves who were unsaleable at Loango, were conveyed to the side of a hill beyond the town, and knocked on the head in cold blood; and this, as the simplest matter of course, to save the cost of maintenance.—(*Leonard's Voyage to Western Africa*, p. 147.)

We now come to the shipment, and the horrible interval commonly called "the middle passage." It being the interest of the skipper to land as many slaves as he can, he pursues, according to Captain Matson, R.N., the following inhuman course. If a vessel, moderately crowded, will carry 300, he crams 450 in her for the sake of testing the strength of the slaves, as those who are not likely to cross the Atlantic, sicken and die during the early days of the voyage. Directly any poor creatures show signs of weakness, they are put on one side on the deck—no food or water is given them, they are left to perish, and then thrown overboard to the sharks, who, in numbers, follow the slave ship during its entire voyage.—(Parl. Committee, 1st Report, 1848, p. 102.)

J. E. Cliffe, M. D., who had himself been engaged in the slave-trade, in his evidence before parliament, in 1848-'9, described the diabolical cruelties he had witnessed in the course of transporting from home and country these unfortunates, who might well envy the fate of convicted felons. "Boys," he says, "are laid parallel on their sides. If they do not lie so, a plank is put upon them, and a sailor will get upon it, and jam it down, so as to make them fit compact." He further states, "Slaves are packed in upon their sides; laid in, heads amongst arms and legs, so that it is very difficult frequently, till they have become very much emaciated, so as to leave a little room, for them to get up alone, without the whole section moving together; when some have died, that of course makes room for the remainder." According to this witness, three tiers of slaves are stowed away upon their sides in a space of six feet, viz., eighteen inches for each tier; the timbers of the ship occupying the rest of the room. Their sufferings from thirst are so intense that it is believed if brought on deck the mere sight of salt water would induce many to spring overboard.

This account, incredible though it seems, is confirmed by much good authority. Commander Montreson states (Sugar Committee, 1849,) "In the vessel I took with the *Cygnat*, the first man was placed against the side of the vessel with his legs pinioned, and another man was put between his legs, and another between his legs, and so on; and then on the other side of the deck, other men were placed, pinioned in the same way."

One witness (Hook, 2nd Report, 3,913) describes the packing of the slaves as being "like herrings in a barrel;" another (Hoare, 3rd Report, 6,099) "as more like a box of figs and raisins than anything else." Mr. Smith (2nd Report, 3,788) likens the position of the slaves on board to "a swarm of bees settled on the bough of a tree, and looking like one black mass."

Imagine a tropical climate, a narrow hatchway to admit air, thermometer 120° to 130° Fahrenheit, a short supply of water, various diseases and ulcers afflicting more or less every individual; no cleansing, no removal of filth, and an indiscriminate mingling of the comparatively healthy, the dying, and the dead; the putrifying corpses being left untouched sometimes for three or four days, and forming a dense mass of corruption, and there is a faint picture of that Gehenna of the waters, a slave ship. It can excite no surprise that half of those embarked never reach the intended port. Mr. Bandinel, after detailing one fearful case to the committee of 1848, in which an eye-witness could not "by any stretch of imagination, conceive how the powers of human existence could have supported twenty days in this floating hell;" yet he added that there were "quantities of such cases."

There is, I fear, no reason to doubt the exact truth of these horrible statements. When a very young man, I witnessed all the stages above mentioned, and can never think, even now, of any one of them, without a shudder of deep disgust. I have seen the unhappy negroes driven to the coast, pent up in barracoons, jammed together in that awful Middle Passage, sold as slaves, and finally worked to death in the few or many years their masters might think most profitable; and I am fain to use the words of other witnesses in describing scenes, at which my memory sickens, losing all power of conveying the details of a traffic which seems to have the direct effect of rendering all concerned in it, either as sufferers or sinners—lower than brutes, or worse than fiends.

Fearful, however, as are the pictures furnished by the slave-trade, even at the present moment, they do not awake any longer the unmixed horror they formerly did. It is unhappily only too true that the sufferings of the negroes in the Middle Passage are even enhanced by the necessity of concealing these now contraband cargoes; but is it nothing that the black night of despair is broken to the unfortunates by the fact that friendly vessels are watching to release them, and that some thousands are annually rescued from intolerable bondage? In such a cause, will not God be with us? Few that have witnessed the capture of a slave-ship will fail to rank the sight as the most exciting, the saddest, and yet the gladdest of their lives. One such scene I remember vividly: the boats of the frigate in which I served gave chase to a slaver; the commander (a ferocious-looking brigand) finding escape hopeless, and our fire beginning to affect his crew, set all sail and endeavoured to beach his vessel. As soon as she

struck, the slaves who crowded the decks were flung overboard in the hope that they would swim to the beach, despite the numerous sharks awaiting to intercept their passage. At length the commander and his crew, hard pressed by the rapidly advancing fire of our marines, themselves plunged into the surf, where several perished from the musketry, and by the sharks. When the ship was boarded, the stench was intolerable; notwithstanding the numbers who had been on deck, the hold was filled with slaves, jammed so closely together, that the flesh on many of their sides had mortified; and from being so long kept in a crouched sitting posture, few were able to stand upright. Some, on being released from their noisome dungeon, limped to the ship's coppers, where their daily scanty food was being cooked, and thrust their skinny arms into the boiling fluid, in their eagerness to obtain a handful of the scalding grain, which was devoured without cooling, with an avidity which, together with their famine-stricken appearance, told its own sad tale. Ophthalmia, and diseases without name or number, were rife among them; all were carefully nursed, but many were beyond human aid, and sunk, despite of medical attendance, and every restorative means. The remnant, when recovered from the idiotic stupor to which they had been reduced by brutal treatment, clung to the feet of our seamen, wept, cried, laughed, danced, alternately, and exhibited the most affecting indications of gratitude to their deliverers. I verily believe that there was not a man of the whole crew who would not have risked life and even liberty in their behalf; and if ever the shedding of blood be lawful, surely it must be when it is spilt in a struggle to "undo the heavy burdens, let the oppressed go free, and break every yoke."—*Isaiah lvi., 6.*

Would England, then, be justified in tamely sitting by to witness the commission of such atrocities, as she well knows to be of necessity involved in the slave-trade; and if she did, how long could she expect to retain that great maritime power—those unrivalled resources—which, together with her insulated position, peculiarly fit her to be the mediator between contending parties, and the defender of the oppressed. True, it is not a light work that she has undertaken; her best and most devoted sons strove for twenty years for the abolition of the slave-trade, opposing British virtue against British covetousness. Their efforts at first seemed only to add fuel to the fire they so ardently strove to extinguish, while it brought upon them a heavy burden of reproach and calumny. And precisely the same effects which then attended individual, now follow national efforts. The spoiler clutches more fiercely than ever the prey about to be wrenched from him, and avarice grasps eagerly the unholy gains of a traffic which has at length been denounced as criminal by every power in Europe, and every civilized power in America. The extent to which it is still carried on is amazing. It is scarcely credible that any country should have supported the incessant drainage of her population, of which Africa has now been the victim for nearly three centuries, without becoming an absolute desert.

The annexed table will afford some idea of the state of the slave-trade during the life-time of the present generation. It is framed from the statements prepared in 1849 by the late Mr. Bandinel, who for thirty years was chief in the slave department in the Foreign-office, Downing-street. The calculations are of course only approximative. From the date of its commencement, the total number of African victims is believed to amount to twenty million.

Number of Slaves annually Exported and Imported westward from Africa, from 1788 to 1840 inclusive.

Date.	Slaves exported.	Slaves imported.	Spanish Colonies.	Portuguese Colonies.	Other Countries.	Captured by Cruisers	Average Casualties on Voyage.	
							Average Proportion.	Amount.
1788	100,000	86,000	25,000	18,000	44,000	—	14 per cent.	14,000
1798 to 1805	85,000	73,000	15,000	20,000	38,000	—	14 "	12,000
1805 to 1810	85,000	73,000	15,000	25,000	33,000	—	14 "	12,000
1810 to 1815	93,000	80,000	30,000	30,000	20,000	—	14 "	13,000
1815 to 1817	106,600	80,000	32,000	31,000	17,000	—	25 "	26,600
1817 to 1819	106,600	80,000	34,000	34,000	12,000	—	25 "	26,600
1819 to 1825	103,000	77,200	39,000	37,000	—	1,200	25 "	25,800
1825 to 1830	125,000	94,000	40,000	50,000	—	4,000	25 "	31,000
1830 to 1835	78,500	58,900	40,000	15,000	—	3,900	25 "	19,600
1835 to 1840	135,800	101,900	29,000	65,000	—	7,900	25 "	33,900
1840	64,114	48,086	14,470	30,000	—	3,616	25 "	10,028
1841	45,097	33,823	11,857	16,000	—	5,966	25 "	11,274
1842	28,400	21,300	3,150	14,200	—	3,950	25 "	7,100
1843	55,062	41,297	8,000	30,500	—	2,797	25 "	13,765
1844	54,102	40,577	10,000	26,000	—	4,577	25 "	13,525
1845	36,758	27,569	1,350	22,700	—	3,519	25 "	9,189
1846	76,117	57,088	1,700	52,600	—	2,788	25 "	19,029
1847	84,356	63,267	1,500	57,800	—	3,967	25 "	21,089

This table, it must be recollected, does not include the victims carried off by the Mahomedans to Morocco, Tunis, Tripoli, Egypt, Turkey, Persia, Arabia, and the borders of Asia, who may be estimated at about 50,000 per annum.

Sir Fowell Buxton, in his valuable work on the slave-trade and its remedy, published in 1839, calculated, from the most authentic sources of informa-

tion, that the number of slaves imported annually into Brazil, in South America, then amounted to 78,331; and into Cuba, the largest of the West India islands, to 60,000. Besides these, he estimated the number rescued annually from slave ships, on their way to either of these settlements, at 8,294; and of those who were lost, from various casualties on the passage, such as shipwreck, suicide (which is very

common), or being thrown into the sea during a chase, a failure of provisions or water, he supposed the number would reach at least 3,375; thus making a total of 150,000 annually conveyed from Africa. The mortality consequent upon the slave-trade he reckoned at 125 per cent., viz.: capture, march and detention, 100 per cent.; middle passage, 25; after landing, and in the seasoning, 20: so that for every 1,000 negroes alive at the end of a year after their deportation, and available to the planter, 1,450 had been sacrificed.—(Pp. 26, 168.)

It has been before stated, that to nations and to companies the trade, even in a pecuniary sense, has proved a losing one; with individuals the case has been different; and enormous gains are now reaped, principally, it is to be feared, by those who secretly supply, in some form or other, the capital for this iniquitous traffic, of which they share neither the danger, the horror, nor the obloquy, though they cannot escape a double portion of the guilt.

The average cost price of a slave is £4; but it is fully ascertained that only one-third of the annual cargoes are obtained by barter. (*Church Missions in West Africa*, by A. Walker, 1845; p. 40.) The net profits were estimated by Mr. Maclean, the governor of Cape Coast Castle, at about 180 per cent.; and, in support of this opinion, the following instance is quoted by Buxton of the cost and value of a slave cargo, as given by Commissioner Macleay. (Parl. Paper, No. 381, p. 37.)—First cost of cargo taken at 28,000 dollars; provisions, ammunition, wear and tear, &c., 10,600; wages, 13,400:—total expense, 52,000: total product, 145,000; leaving a clear profit of £18,640.

The expenses incurred by Great Britain, in her efforts for the abolition of the traffic, have been very large: the charges for the five commissioners appointed to adjudicate on captured slave ships, were, from 1819 to 1841—at Sierra Leone, £135,410; Havanna, £79,507; Rio de Janeiro, £54,316; Surinam, £53,300; London, £42,998: total (shillings and pence excepted), £365,732. Sums paid to foreign powers for their co-operation (principally Spain and Portugal), £2,237,077; bounties, from 1808 to 1840, £1,060,536; support of liberated Africans, £1,372,057; expenditure in and for Sierra Leone, £1,678,724; Gold Coast and Fernando Po, £763,130; pensions, &c., £563,060; for illegal captures, &c., £196,891. Military expenditure, 1808 to 1840, £1,779,357; ordnance and commissariat, £156,205; naval squadron on coast of Africa, from 1808 to 1840, £12,224,000: total, £22,396,753. To bring this expenditure down to 1852, we may add for the above items, excepting naval squadron, £2,000,000; and for the naval squadron, at the rate of £500,000 per annum, £6,000,000: making a grand total of £30,396,753, irrespective of £20,000,000 paid for the liberation of slaves in the West Indies.

The various European and American powers have entered into conventions for the suppression of the slave-carrying trade, which they respectively abandoned at the following periods:—Denmark, 1792; United States, 1807; Great Britain, 1807; Sweden, 1813; Netherlands, 1814; France, 1815; Spain, 1820; Buenos Ayres, 1824; Columbia, 1825; Mexico, 1826; Brazil, 1829; Sardinia, Portugal, 1836; Hanse Towns, Tuscany, Bolivia, and Peru, 1837; Naples, 1838; Hayti, Venezuela, Chili, and Uruguay, 1839; Texas, 1840; Austria, Prussia, and Russia, 1841. Spain, Portugal, and Brazil have, however, violated every treaty, convention, and pledge

given by them for the prevention of this unhallowed trade. The two former states, who owe so much to England, who lavished her blood and treasure in their defence, have made a mockery of all remonstrance; and after obtaining large sums of money from her exchequer as a compensation for the losses they might sustain by abolishing the slave-trade, shamelessly renewed their flagitious course, aided by the very money which they had received on condition of its abandonment.

Despite the vigilance of a considerable force of English and French vessels of war, and the large rewards offered for the capture of slave-ships, the trade, until within the past year or two, has been carried on with fearful activity from the east as well as the west coast of Africa, and is said to be diminished only because the Brazilian market is overstocked, and strong fears have arisen of a slave insurrection. The traffic will flourish probably just so long as it continues to be profitable; that is, until every slave barracoon found on the coast be destroyed; and the crime itself declared by all civilized nations as piracy, and treated as such. By act 5 Geo. IV. c. 77, (31st March, 1824,) British slave dealers are declared to be guilty of piracy, felony, and robbery, and on conviction to suffer death without benefit of clergy, and to lose lands, goods, and chattels. By 1 Vic., c. 91, the punishment of death was commuted to transportation. *Wherever* a British subject commits this crime, he is liable to the punishment. Not so with other nations. Thus, when slave vessels are captured by British cruisers, no punishment is inflicted on the captains or crews, who consequently are no sooner released than they recommence their old trade with an increased stock of experience. The inconsistency of this practice is self-evident. An eminent Brazilian, the late Marquis of Barbacena, told our chargé d'affaires (Mr. Gore Ousley) that he could point out a ready, effectual, and economical method of putting an end to the traffic, at least as far as Brazil was concerned. Being pressed to explain himself, he replied, "The first vessel you take that affords a good reason, whether by resistance, killing your men, throwing their Africans overboard, or some such acts, hang the master, mates, supercargo, and crew, at the yard-arms, and let the vessel come into Rio Harbour some fine day thus ornamented."—(*Notes on the Slave-trade*, by W. Gore Ousley, Esq., late minister-plenipotentiary to the States of La Plata.) There is, however, another, and I believe a better, resource, which has been too much neglected, though Buxton and others have ably advocated it. Instead of endeavouring to compel or persuade Spain and Portugal to renounce their most profitable but most abhorrent staple of merchandise, let us rather direct our efforts to the encouragement of commerce on the long desolated African shores; and, by showing the tyrants who supply their European tempters with flesh and blood, that a more profitable revenue might be obtained, as Burke finely expressed it, by eating the fruit, than by destroying the root of man's labour, induce them to unite for the abolition of the traffic; show the chiefs how to obtain a better revenue by honest means than they now do by flagrant cruelty, their co-operation is certain, and a fair field will at the same time be opened for the spread of those religious principles, without which no real progress can be anticipated. One zealous effort of this kind has already been made in the Niger expedition, to which we shall have occasion to allude

when describing the commerce of Western Africa, and the varied and rich capabilities of the soil. Meanwhile, let those who abhor slavery, cease as individuals to consume its products; let this righteous principle be sustained and manifested by the payment of a temporarily enhanced price for colonial or free-labour produce, in preference to the somewhat cheaper sugar, coffee, cotton, rice, and tobacco, cultivated at the cost of blood and tears.

For myself I believe that the planter who uses slave-labour must eventually be undersold by the employer of free men. To this end we must look less to government measures and protective tariffs, than to the improving moral feeling of the nation, which, joining a true sense of the inherent iniquity of the system, to the horror inspired by its loathsome and cruel results, may, if wisely directed, be instrumental in procuring its complete abolition.

CHAPTER II.

BRITISH SETTLEMENTS IN WESTERN AFRICA—THE GAMBIA—SIERRA LEONE—THE GOLD COAST—THEIR ORIGIN, POPULATION, COMMERCE, &c.

THE western coast of Africa, between the Straits of Gibraltar and the Cape of Good Hope, is bordered by the Northern and Southern Atlantic for a distance of about 7,000 miles. The British possessions in this extensive region consist of isolated forts or stations on the intertropical portion termed the *Windward Coast*, from the direction of the trade winds. These are divisible into three sections, which, though perfectly distinct and under separate governors, are alike in their administration; in the almost complete absence of white colonists; in the nature of their commercial products; and in their civilizing influences on the millions of the African race distributed in numerous petty kingdoms all around them. It does not come within the limits of this work to enter into much detail respecting a country not adapted for the occupation of the Anglo-Saxon race: the present chapter is therefore intended to afford only a brief sketch of the respective history, character, and trade of the British settlements, whose general commerce, and success in advancing Christian civilization, through the well-directed labours of missionary societies, will be subsequently shown in a general view.

THE GAMBIA.

HISTORY.—The first record of European intercourse with the country in the vicinity of the Gambia, is dated 1486, when the navigator, Cadamosto, by order of Prince Henry of Portugal, visited this great river, and found that even then the Portuguese were in the habit of landing at night, surprising some of the populous villages on its banks, and carrying the inhabitants into slavery. (Bandinel, p. 19.) From this period we know little of the proceedings at the Gambia, beyond the fact of the Dutch having supplanted the Portuguese, until the time of the refusal of the English Captain Jobson, in 1620, to purchase slaves there, and his attempt to establish a trade in less exceptionable commodities.

The Company (chartered by James I.) on behalf of whom Jobson acted (see p. 166), proceeded to form factories for the prosecution of a traffic in gold and

drugs. A small islet, 250 yards long and 50 broad, about 30 miles from the mouth of the Gambia, where it is nearly eight miles wide, was strongly fortified, and termed *James Fort*. Another position was occupied at *Joar*, 100 miles farther up the river, which was explored in 1618-20 as far as Tenda, by George Thomson, a Barbary merchant, in the service of the association, and in 1723, by a Captain Stibbs, under instructions from the Duke of Chandos, one of the directors of the African Company established in 1672. Repeated contests had meanwhile taken place between the English and French, and James Fort was destroyed in 1688. At length it was agreed that we should maintain the exclusive commerce of the Gambia, and France of the Senegal. This arrangement was confirmed by the treaty of Paris, in 1814, whereupon Fort Louis, at the entrance of the Senegal, which we had captured in 1809, and the island of Goree, were restored. On this understanding, England and France now occupy their respective stations on these rivers, but the latter holds on sufferance a *comptoir* or trading post at Albreder or Albrida, near Jillifree, which is almost opposite to James Island. At the close of the last European war, the British Government, with a view to the prevention of the slave trade, and the promotion of legitimate commerce, resolved to form a new settlement at the mouth of the Gambia; for this purpose the island of St. Mary was obtained by purchase from the native king or chief of the adjacent territory, called Combo, and an annual payment of 100 dollars was guaranteed to his successors. A town, named Bathurst, was founded in 1816. In 1818 a similar purchase was made on the opposite bank of the river from the King of Barra, which comprised a tract of country extending one mile inland, and about thirty-six miles along the river, to the west and east of Barra Point. The king of Barra was then the most powerful chief in this neighbourhood, and levied a tax of £20 on each vessel that entered the river. In 1849 we purchased another tract of territory, near Baccow, which extends south-west from Cape St. Mary about five miles, and then trends to the eastward, and reaches the Gambia.”*

Sir Charles McCarthy, when governor of Sierra Leone, acquired by purchase, from the King of Cattabar, McCarthy's Island, distant about 175 miles up the Gambia, by the windings of the river. There are several other stations and places on and near the river, belonging to the Crown, or to the merchants of England.

* *Dr. Madden's Report*; Parl. Papers, 5th August 1842; part ii., p. 178.

TOPOGRAPHY.—The country in the vicinity of the Gambia, for many miles from the sea-shore, is flat, but diversified by fine park-like scenery. The mouth of the river, in $13^{\circ} 30' N.$ lat., is about nine miles wide, between *Bird Island* on the north, and *Cape St. Mary* on the south. The depth of water is so great, that a ship drawing eight feet may proceed, at any period of the year, to a distance of 360 miles; and smaller vessels may navigate to the Barraconda Falls, 400 miles, by the windings of the stream, from the Atlantic. Here a ledge of rocks, which nearly crosses the river, impedes further passage; but during the rainy season the water rises nearly thirty feet over the rocky barrier; boats can at all times penetrate to a considerable distance, as was proved by Governor Macdonnell in January, 1849. The river is extremely tortuous, especially above the falls, with banks not in general more than forty feet high. Its sources are not known to Europeans: it was long supposed to be an anastomosing branch of the great Niger, until the fallacy of this conjecture was shown by Mungo Park. The total length of the river must exceed 900 miles. A fine agricultural country appears to extend inland, improving in quality as it recedes from the river banks.

St. Mary's Island, on which the chief town is built, is little more than a sand-bank, five miles in length, with a breadth varying from a few yards to half a mile. It is situated about three miles from Cape St. Mary, on the southern side of the entrance of the Gambia, and separated from the main land by *Sarra* or *Oyster Creek*, a narrow strait a few yards wide, so called from the excellent oysters which are found abundantly on the mangrove bushes, as is not unfrequently the case on other tropical coasts. A small portion of the dry land on the island has been reclaimed by embankments, and the sandy nature of the soil contributes greatly to the salubrity of Bathurst, as it prevents any large deposit of vegetable matter in a state of decomposition. The mangrove swamps in the immediate vicinity of the town are covered twice by the tide in every twenty-four hours, and appear to exercise little noxious influence, the type of fever being more fatal in the interior, to which the mangrove-bush does not extend—a fact contrary to popular notions on this subject.

Bathurst is built on the east side of the island, on a point, whose chief recommendations were its suitability for the site of a strong battery, and the excellence of its deep and fine harbour. The town is well laid out; there are two large streets, consisting of substantial stone and brick houses; the government-house, on which £15,000 has been expended since 1816, is now a commodious residence, and the native inhabitants have clean and tolerably good dwellings: the island itself is also gradually becoming a more salubrious residence. Governor Macdonnell has made successful efforts to promote drainage and cleanliness, by establishing an annual rate of 4 per cent. on all real and landed property at Bathurst, the proceeds of which are expended by the inhabitants themselves on local improvements.

Cape St. Mary, on the lee-shore of the mouth of the Gambia, is sixty feet above the sea level, the soil a dry loam, superincumbent on a bed of clay. The country, for several miles along the coast, is almost clear of wood; the land descends in a gentle slope from the sea for some distance towards the interior, where a creek carries off the drainage to the ocean. There are no swamps or pestilential effluvia; but, on the contrary, a fine sea-breeze and cool land air.

Here the chief town ought to have been formed, and been connected with the harbour at St. Mary's, by a road and bridge over the Oyster Creek. The home government, in conformity with the suggestion of Mr. Macdonnell, have authorised the acquisition of about ten square miles of contiguous country, for the establishment of a military post, and the formation of an agricultural settlement, of which the colonists stand in much need.

There is another settlement at the Gambia, about 175 miles (following the windings of the river) from St. Mary's on M'Carthy's island, which is about five miles and a-half long by one broad, and so low that, during the rainy season, a considerable portion of the land becomes a swamp. It has a military post, termed Fort St. George, and three or four stone houses belonging to mercantile establishments, with a Wesleyan chapel and school; and its valuable position has already rendered the place of some importance. The other islands in the river, claimed by Great Britain, called *Elephant*, *Deer*, *Dean*, and *Kayaye*, are all low, swampy, and inconsiderable.

The country between the Gambia and the Senegal rivers is chiefly comprised in the kingdoms of Lalum, Bondou, Barra, and Woolli; it is 600 miles in length, and contains about 1,000,000 of inhabitants, who are generally Jolloffs, Foulahs, or Mandingoes. There are also several small flourishing chiefdoms on the south bank of the Gambia.

CLIMATE AND DISEASES.—No British settlement, with the exception of Sierra Leone, has for many years been supposed to possess a climate so fatal to Europeans, as the Gambia. Its character in this respect has much improved of late, and its medical statistics, as given in the returns of the Army Medical board, and the public Registrar's books at Bathurst, show an annually decreasing mortality. The extremely bad reputation of the climate was principally occasioned by the appalling mortality which overwhelmed a corps of white troops sent to the African coast in lieu of other punishment, and stationed at the Gambia, in May, 1825. From the official statement prepared by Colonel Tulloch, it would appear, that in nineteen months, 234 soldiers out of 420, fell victims to the climate. Governor Macdonnell, however, remarks, in his report on the Blue Book for 1851, that "no parallel can be drawn between the Bathurst of that day and of the present period," and perhaps justly considers that there is as little ground for surprise at the mortality in question occurring in a corps of the most depraved and dissipated character, stationed, literally in a swamp, as Bathurst then was, as there would be "at death ensuing from a draught of poison, or a bullet." There certainly is no room to doubt the improved sanitary condition of the town. Staff-surgeon Kehoe, an officer of considerable reputation and experience on the coast, whose evidence is given at full length in the Governor's report, published in 1850, states that the number of deaths from all causes amongst the resident European population, during five years ending December 1849, was only 4.40 per cent.; whilst the deaths of military officers at Bathurst during the same period, amounted to 11.11 per cent.

The changing annually the officers employed on the coast is now looked upon as exposing a superfluous number of unacclimatized persons to the risk of the "seasoning" fever. The deficiency of accommodation for both officers and men has recently been made the subject of serious remonstrance, and will, it is understood, be speedily remedied by the erection

of barracks, as before-mentioned, at Cape St. Mary, between which place and Bathurst a military road is now in course of formation.

It may not be uninteresting to remark, that during several months, both at Bathurst and at Cape St. Mary, the thermometer seldom reaches the elevation which it attains in the East and West Indies. From December to the beginning of May, there is not unfrequently actually cold weather, the thermometer ranging from 54° to 58° in the morning, and attaining an average height at noon of from 66° to 74°—at Cape St. Mary not more than 68°.

The temperature at M'Carthy's Island is much higher; the thermometer there frequently reaching 110° in the shade, and the rainy season is of longer duration than nearer to the mouth of the river. The

rains at Bathurst last from about the 10th of July to the 20th of October.

GOVERNMENT.—The settlements are presided over by a Governor, aided by Executive and Legislative councils, under letters patent, dated June 24, 1843.

MILITARY DEFENCE.—Detachments of the West India regiments, to the number of about 280 rank and file. There is a "Royal Gambia Militia," having three companies of eighty men each; two of infantry, and one of artillery. There are military stations at Bathurst, Fort Bullen on the Barra shore opposite Bathurst, Cape St. Mary, and M'Carthy's Island.

POPULATION.—The number and classification of the inhabitants of St. Mary's Island was at three periods as follows:—

Class	1823.			1826.			1833.		
	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.
Europeans . . .	37	8	45	28	2	2	31	5	36
Mulattoes . . .	29	50	135	{ 47	44 }	122	51	75	126
Ditto children . .	20	26		{ 17	14 }		—	—	
Blacks . . .	428	467	1,204	{ 679	624 }	1,577	1,399	1,179	2,578
Ditto children . .	140	169		{ 112	162 }		—	—	
Sailors . . .	152	—	152	131	—	131	—	—	—
Strangers . . .	293	10	309	7	—	7	—	—	—
Ditto children . .	2	4		—	—	—	—	—	
Total . .	1,101	744	1,845	1,021	846	1,867	1,481	1,259	2,740

The population of all the settlements on the 31st of March, 1851, was as follows:—

Class.	St. Mary's.	M'Carthy's Island.	Barra Point.	Cape St. Mary.	Total.
<i>Whites—</i>					
Males . .	167	8	1	1	177
Females . .	13	0	0	1	14
<i>Coloured—</i>					
Males . .	2,192	637	101	35	2,966
Females . .	1,890	526	74	16	2,506
<i>Total—</i>					
Males . .	2,559	645	132	37	3,173
Females . .	1,903	526	74	17	2,520

Births at St. Mary's, in 1851, 144; deaths, 185; marriages, 26.

The annexed table gives the number of acres in crop and pasture, and the quantity of live-stock, in 1851:—

Description.	St. Mary Island.	M'Carthy's Island.
Acres in crop . . .	8	600
Pasture	40	514
Horses	120	60
Horned cattle . . .	160	200
Sheep	50	50
Goats	100	100

RELIGIOUS ORDINANCES and EDUCATION have been for several years under the charge of the Wesleyans, whose zealous exertions will be subsequently shown. As regards CRIME, no other statement appears in the Blue Books than that forty-four prisoners had been confined in the gaol at Bathurst during the year 1851.

REVENUE.—In 1830, £1,513; 1840, £4,543; 1850, £7,057; 1851, £8,484; of which the customs yielded £7,720. The Governor has £1,000 a-year, and an al-

lowance of £200 for table money. He is moreover entitled to certain fees as Ordinary, amounting on an average to £100 per annum. The parliamentary grant, in aid of the revenue, is now £5,000 a-year; the military expenditure for 1851, amounted to £15,798.

TARIFF and TAXES.—an import duty of 4 per cent. on all British and foreign imports; a farthing per lb additional on all tobacco not prize. Four per cent. on all sales by auction of prize goods (prize tobacco 6d. extra); 1s. per ton on vessels; 6d. per gallon on wine and spirits. Licences for sale of liquors, £10; for auctioneers, £25 per annum. *Monies, &c., English.*—There is no paper money; the coin in circulation is of various denominations, and is estimated in value at £7,000.

COMMERCE.—The following table, illustrating the financial and commercial progress of the settlements on the Gambia, during the last twelve years, is derived from a comprehensive return, prepared by the late energetic governor, R. G. Macdonnell, C.B. One extraordinary item will be remarked, by means of which large tracts of land have been brought into cultivation; and as the demand for the nut as food in the United States, and for the manufacture of oil in France and other parts of Europe, seems to be greatly increasing, it is difficult to conjecture to what extent the commerce may be carried.

One important fact has been already proved by this new traffic—viz., that the native African is glad and willing to cultivate the soil when assured of a fair return for the produce of his labour; and security and protection for his life and property. At the present time one-third of the produce exported from this settlement is raised by the "tilliebunkas" (*men from the East*) and other labourers, who travel from distances of 500, and even 700 miles in the interior, to visit the Gambia, along the banks of which they hire, from the various chiefs in whose territories they settle, small tracts of land, which they cultivate,

paying their landlords a portion of the proceeds. After remaining, perhaps two or three years, until they have earned sufficient to purchase those goods, the desire for which had induced them to leave their homes, they form themselves into parties of from 20 to 100 in number, and return, to spread among their countrymen the good news of a safe market for agricultural produce. With the increased demand for ground nuts there has been a proportionate augmentation of the supply, nor is there any reason to doubt that the latter will continue to keep pace with the former, while it continues to offer remunerative employment to the vast amount of native labour, which needs no other inducement than a fair market, to employ its energies on the uncultivated acres of fertile wilderness which bound for several hundred miles the great water road of the Gambia. A few years ago it would have seemed highly improbable that the export of one article, till then almost unknown, should have reached the value of £145,000; there is much more ground to anticipate, at the present time, that in some ten or twelve years it may

rise to a million sterling. "Already," says Governor Macdonnell, "a community of commercial interests has begun to bind together the various tribes which people the banks of the Gambia, for a distance of 400 miles from its mouth." New thoughts and desires have arisen to vary the monotony of savage life, and the dangers and excitements of war can be no longer indulged in without the sacrifice of many things which in the first marked step towards civilization have from luxuries become necessities; for the Gambia chiefs, if not themselves employed in the trade, have a new interest in the soil, and cannot engage in war and disturbances without driving away the profitable tenants, whose pursuits require that they should have more than five months of unmolested leisure for tilling the soil, gathering and disposing of the produce.—(*Blue Book*, 1852.)

It is indeed most fortunate, or rather, providential, that this new article should have arisen, the more so as several others, such as bees' wax and mahogany, which used to form the chief items in the export list, have much diminished:—

Years.	Revenue.	Imports.	Exports.	No. of Vessels entering.	Tonnage Inwards.			No. of Seamen.	Ground Nuts Exp.	
					British.	Foreign.	Total.		Tons.	Value.
1840	£4,543	£105,441	£124,587	255	7,087	6,922	14,009	2,023	1,211	£15,209
1841	3,563	96,708	144,610	200	7,508	8,051	15,559	1,622	2,540	29,766
1842	5,932	111,153	146,939	290	9,218	8,893	18,111	2,515	2,169	27,639
1843	6,486	85,827	108,404	306	6,900	9,496	16,396	2,655	2,608	31,900
1844	5,257	96,152	136,753	261	6,934	10,978	17,912	2,085	3,425	43,581

1846	6,006	95,403	164,805	214	6,905	12,750	19,655	1,878	5,996	74,635
1847	6,886	90,706	178,090	216	5,618	19,769	25,387	2,145	8,236	99,937
1848	6,560	68,960	158,590	217	9,063	15,253	24,316	1,991	8,636	103,778
1849	5,391	73,410	107,802	221	6,494	11,545	18,039	1,873	—	72,237
1850	7,057	86,036	142,366	212	5,376	14,331	19,707	1,676	6,009	52,175
1851	8,484	107,011	186,404	239	3,895	21,596	25,491	2,071	11,094	133,133
Total .	72,730	1,135,994	1,754,151	2,872	82,248	153,466	235,714	24,645	55,951	736,260

In 1851 there were exported from the Gambia settlements, wax, 153 tons; value, £25,699; hides, 61,947; value, £12,389; palm oil, 12,281 gallons, value, £1,944; gum, value, £1,361.

A considerable portion of the trade is carried on from the upper part of the Gambia with Bondou on the Senegal river. In 1844 Governor Macdonnell travelled, not without peril from climate and robbers, from Fattatenda through Woolli, across a large forest to Boolibamy, in the kingdom of Bondou, and entered into arrangements with the Albammé or Mahomedan sovereign of Bondou, and with the king of Woolli, for the protection of travellers and merchants passing through their territories to the Gambia, on condition of receiving certain annual presents. In a subsequent journey made early in the year 1850, the governor, with a few of the officers of the colony, proceeded in boats, 150 miles beyond the rocks of Barraconda, and 450 miles from Bathurst. Game was abundant, several elephants and hippopotami were shot, and deer and guinea-fowl amply supplied the party with food during the journey: they all returned to the steamer *Dover*, at Barraconda, in perfect health, after bivouacking for fifteen nights in the woods. Near a river which flows into the Upper Gambia from the north, the governor was met by a deputation of the inhabitants of a town called *Jallacoota*. They expressed a strong desire that traders should visit their country,

as they had more corn and ground nuts than they could use, but had no means of bartering them for goods. From this and other circumstances it appears probable that if the British flag were hoisted at the Barraconda Falls, and a small trading post established there, a large, lucrative, and, in all respects, beneficial traffic would be speedily created.

BULAMA.—Between the Gambia and our territory of Sierra Leone and its dependencies, we claim, though we do not occupy, the island of *Bulama*, near the entrance of the *Rio Grande*, and about thirty miles to the southward of the Portuguese fort and factory of *Bissao*, formerly a stronghold of the slave-trade.

ISLES DE LOSS.—Nearly midway between *Bulama* island and *Sierra Leone*, 400 miles to the southward of the Gambia, and sixty miles to the northward of *Sierra Leone*, are the *Isles de Loss*, in 9° 16' N. lat., and 16° W. long. They are five in number, and were ceded to the British crown in 1818, by *Dalla Mahomedu*, in consideration of a small annual payment. They are distant from the main land five or six miles. The principal are named *Tamara*, *Factory*, and *Crawfords*; the first, which is the largest, is five miles long by one mile broad. They were supposed to be more healthy than the mainland, in consequence of their elevation, the rocky nature of the ground, and the total absence of vegetation and marshes; but this idea has not been sus-

tained by experience. One hundred and three picked men of good character, exemplary conduct, and with little inclination to inebriety, were landed on the centre island by General Turner on the 23rd of February, 1805. Of these, sixty-two died within the space of eighteen months, exclusive of twenty-one invalided to England. The remaining twenty men who survived were scarcely fit for any duty.

The chief coast feature between the Gambia and Sierra Leone, irrespective of the above-mentioned islands, is the *Rio Grande*, so named from its appearing to its discoverers a river of magnitude; but Captain Owen, on examination, found it to be a mere inlet receiving some inconsiderable streams. Along the heads of the Grande lies the kingdom of *Foota Jallon*, which is said to extend over a region 350 miles long by 200 broad, inhabited by the Foulahs, a semi-civilized people professing for the most part the Mahomedan religion. The *Nunez River*, about 300 miles to the southward of the Gambia, is an important stream; a vessel drawing twelve feet water may go up to *Kakundy*, a large town about sixty miles from the coast. This district has been a great slave emporium, but as the country produces excellent coffee in abundance, it is hoped the traffic in man will be soon superseded by a more righteous commerce. There are several English and French traders established here; the latter export ground-nuts from the *Nunez*, also from the *Casamanza River*, where they have trading posts, and from the Portuguese settlements at Bissao, Cacheo, and elsewhere.

SIERRA LEONE.

ORIGIN AND HISTORY.—This peninsula probably obtained its name from the Portuguese discoverers of 1463, in consequence of being the resort of lions (*Sierra Leone* signifying *Lion Mountain*). In 1652, the notorious Sir John Hawkins landed on the adjacent coast, devastated the country with fire and sword, and after perpetrating great atrocities, succeeded in capturing several hundred natives, whom he conveyed in his vessels to the Spanish West Indies for sale. Several European nations established slave-factories here; the English had one at *Banee Island*, in the *Sierra Leone River*, and the Portuguese another in the neighbourhood.

Towards the close of the eighteenth century, the attention of Christian philanthropists was awakened to the necessity of providing a home in Africa for the numerous poor and destitute negroes who had been brought by their masters to England, and liberated in consequence of the celebrated decision of Chief Justice Mansfield, which declared that they had thereby ceased to be slaves. Their numbers were subsequently increased by many negroes who, during the United States war of Independence, served in the British army and navy with fidelity and courage. Upon the restoration of peace, some were taken to the Bahamas, others to Nova Scotia, and the remainder were disbanded with the troops and seamen in England. Having no claim for parochial relief, they might have perished but for a number of humane gentlemen, who organised a committee "for relieving the black poor." Granville Sharp and Dr. Smeathman (who had resided some time in Africa,) simultaneously proposed the formation of a free settlement on the west coast, and sketched out their respective plans. Dr. Smeathman named Sierra Leone as the most eligible spot, and was encouraged in the idea by many of the negroes having been

originally carried off from this part of the country. The government, considering the poor blacks as a nuisance in the streets, agreed to transport them to Africa, and to supply them with necessaries during the first six or eight months of their residence. The vessels, with more than 400 negroes, and about 80 white people, chiefly women, accompanied by a chaplain, the Rev. Mr. Frazer, sailed from England, in the spring of 1787. On arriving at Sierra Leone, Captain Thompson, R.N., who had charge of the emigrants, purchased for them a tract of the peninsula, comprising twenty square miles of territory, from a native chief, known by the soubriquet of "King Tom," and the bargain was afterwards confirmed by Naimbanna, the king of the country, who resided at the small island of *Robanna*. The expedition was altogether badly planned, and especially as to the season of arrival on the coast. Many died while the vessels were detained in the channel, and also during the voyage; others perished from landing in the rainy season without shelter, some deserted, so that in the course of the first year the population was reduced by one half.

The town was laid out on a beautiful eminence at the south side of the river, and 360 lots, of one acre each, were drawn for and appropriated, 12th June, 1787. Unhappily the government allowed the negroes rum both during the voyage and on landing; the temptation to drink was too great for them and for the white women (many of whom were known to be of immoral character) who were most improperly allowed to accompany the expedition. In September, 1787, there remained 276 settlers; in March, 1788, there were only 130. Mr. Sharpe, apprehensive of a total failure of the project, sent out a brig (the *Myro*) at his own expense, laden with various articles urgently needed, and bearing thirty-nine white and black passengers to the settlement. In 1789, the colonists were compelled to quit their half-finished homes by a neighbouring chief, who resolved on burning their town in retaliation for a similar injury which his own capital had experienced from some English and American seamen. The chief allowed them three days to remove their goods, and at the expiration of that time he fulfilled his threat. Ruin to the whole scheme seemed inevitable. But the benevolence of Granville Sharp was grounded upon principles which forbade him to weary or despair even under the most discouraging circumstances. Seeing that there was little aid to be expected from the government, he organized an association, called the *St. George's Bay Company*, who, in September 1790, sent out a Mr. Falconbridge to examine and report on the state of the colony, and to afford relief to the distress that had arisen. The agent arrived about twelve months after the flight of the settlers, collected and brought them, sixty-four in number, to a new settlement, which he termed *Granville Town*, situated above *Foura Bay*, and two miles further than the former site had been from the town of the chief who had invaded them. The British legislature subsequently sanctioned the humane efforts of the friends of Africa, and at the close of the session of 1791, an act of parliament was passed for the incorporation of the *Sierra Leone Company*.

In October (19th), 1791, the company held its first meeting—its direction including the honoured names of Granville Sharp, Wilberforce, Clarkson, and Thornton. A capital of £250,000 was raised; and active efforts made to re-organize the settlement.

The negroes who had been landed at Nova Scotia at the close of the American war greatly desired to find a home in their fatherland. The government agreed to defray the expense of conveyance; and 1,135 of them reached Sierra Leone, 65 having died during the passage. The whole of the colonists were now placed on a new site, to which the appropriate name of "Free Town" was given; a fever, however, which the negroes brought with them, caused great mortality, and half the European settlers perished. The colony next year recovered the blow, and was advancing rapidly to prosperity, when its progress was again stopped by the barbarous proceedings of a French squadron (consisting of two frigates, two brigs, and a cutter), in October, 1794. Officers and men plundered the settlement; broke, destroyed, or burned all within their reach; pillaged the church; tore up all books, especially those that bore any resemblance to bibles; and set fire to the church and the other buildings; thus causing the company a loss of about £50,000. The English ship, *Harpy*, with passengers and goods to the value of £10,000 was seized, and two other vessels were subsequently taken. All this misery and ruin was accomplished despite the pledge of the French government (then at war with England), that neither the ships nor the company engaged in carrying out so noble a design should be injured by the republican arms of France.

It seems, however, very doubtful whether the government of France really sanctioned this disgraceful business. The squadron approached, painted, and made to look like English-built vessels, manned by English-dressed sailors, and with English colours flying. They were mistaken for such by the colonists, until the shots were fired into the town: the British colours were immediately hauled down, but the cannonade still continued. It was reported at the time that the expedition had been equipped by certain private individuals, some of them slave-traders and owners of privateers, who hoped, by these buccaneering proceedings, to prevent the establishment of a free settlement in Africa, which they foresaw would ultimately lead to the destruction of their nefarious traffic. The Sierra Leone Company immediately sent out two vessels, with an assortment of necessaries, for the relief of the unfortunates, again reduced to destitution, and once more commenced the re-organization of the settlement, this time successfully; for, in 1798, Freetown contained about 300 houses, laid out with great regularity, besides many public buildings, three warehouses, a government house, protected by a palisade, and six pieces of cannon. The inhabitants numbered 1,200, of whom 300 were heads of families. One half supported themselves by farming, the other followed various occupations, labouring as shopkeepers, fishermen, seamen, &c. From one to two hundred natives daily visited the settlement to trade in British manufactures. It is alleged, and it is to be feared with truth, that faith was not kept with the immigrants from Nova Scotia as to grants of land; some of them broke out in rebellion, and attacked the government house; but their seditious efforts were quelled by the timely arrival of a transport, the *Asia*, with 550 maroons (including women and children) from Jamaica, *via* Nova Scotia, and a detachment of forty-five rank and file, and two officers of H. M.'s 24th regiment. The insurgents were speedily routed, two killed on the spot, and thirty-five made prisoners, of whom three were tried and executed. On the 18th of November, 1801, the colony was attacked at day-break by a body of Tim-

manee natives, headed by ten of the former rebels. After some loss on both sides, the assailants were repelled; and in March, 1802, a truce was made with them. Some additional troops were sent from Goree (then a British post), and the peace of the colony was supposed to be restored: the settlement was, however, again attacked by 400 natives, including eleven of the banished Nova Scotians. The colonists vigorously repulsed them; but many becoming dispirited by these attacks, abandoned their farms; and the idea of evacuating the settlement became pretty general.

• The pecuniary affairs of the Sierra Leone Company were seriously embarrassed by these misfortunes, and its power weakened, notwithstanding that a charter had been granted in 1800, increasing the powers of the government and council, and arming them with legal authority to enforce their decrees. The legislature suspended its annual grants, a parliamentary inquiry was instituted in 1803, and it was recommended that a transfer of the civil and military authority in the colony should be made to the crown. A bill was therefore introduced, and received the royal assent, on the 1st of January, 1808, whereupon the settlement of Sierra Leone was surrendered to the crown; and the philanthropic association withdrew from their beneficent enterprise.*

Before they resigned their trust, a treaty of peace had been finally arranged with the neighbouring native chiefs: the fortifications were so far advanced as to impart a sense of security; internal order had been restored; and reviving prosperity was manifested in the building of good houses, the extension of cultivation, and the healthiness of the community. Schools, places of worship, and the habits of civilized life had been introduced among the colonists, who, in 1807, numbered 1,871 souls. In fact, the foundation had at length, with much toil and trouble, been firmly laid; and it is not easy to predicate how much good may yet result, and indeed is even now resulting, from the perseverance of a few good men, in spite of seeming checks, through evil report and good report, in establishing a nucleus for freedom and Christian civilization in the centre of enslaved, degraded, heathen Africa. Additional territory has been purchased from time to time from the neighbouring chiefs.

In 1819, an accession of population was made by some rebel negroes, eighty-five in number, sent from Barbadoes. In 1827, a further increase was made by the disbanded pensioners of the African corps and of the 2nd and 4th West India Regiments, who, to the number of 947, had lands assigned them near the different villages. The population has been further augmented by the captives rescued from slave-ships taken on the coast of Africa. Up to 1819, the number liberated by the decisions of the Vice-Admiralty Court of the colony, was 11,278. In 1819, a Mixed Commission Court was established, for the adjudication of prize slavers, and from that year to 1850, 64,625 have been set free in the colony.

BOUNDARIES AND PHYSICAL ASPECT.—The boundaries are now stated to be, on the north, the *Mungo River*, or *Little Scarcies*, in 8° 50' N. lat.; on the south, as far as the line which separates the King of Sherboro's territory from that of the Gallinas, including the estuary of the *Sherboro* and its tributaries; on the west the Atlantic; and on the east an imaginary line imperfectly defined. It is supposed that the actual colony is forty miles in length

* *Wesleyan Missions in Western Africa*, a valuable work by the Rev. W. Fox; pp. 157—172.

from north to south, and thirty from east to west, exclusive of the *Banana* and other islands. The peninsula, from *Cape Sierra Leone* to *Cape Shilling*, extends about thirty-three miles along the Atlantic; it is connected with the main land of *Quia* and *South Bulloms* by an isthmus of about a mile and a-half in breadth: *Yawry Bay*, an inlet of the ocean, washes its southern shore: the Sierra Leone estuary and the *Bunce River* form its northern and eastern boundaries. It is traversed in every direction by ranges of rocky and almost precipitous hills, varying in height from 500 to 2,500 feet above the sea. On the eastern side the mountains recede from the shore at distances varying from half a mile to three miles, and leave a belt of level ground of about twenty-four miles in length; on the south-east the country presents a plain surface of some extent; with these exceptions, there is little flat country in the settlement. The general appearance is that of an irregular congeries of conical mountains, with intervening ravines, which expand as they approach the sea, forming numerous valleys of inconsiderable extent. The river, or rather estuary, on the north, which derives its name from the adjacent territory, is about ten miles wide at the entrance, but narrows at *Kissing Point* to five miles. Timber and other vessels of 400 to 500 tons, can ascend for lading twenty-five miles above Freetown. One arm, containing the islands called *Tusso*, *Bunce*, *Pentillar*, and *Batt*, or *Yerracalliam*, stretches to the northward. Another of less size, termed the *Bunce River*, flows to the south-east, and receives the *Waterloo Creek*: the length of this portion of the estuary is about ten miles, that of the former about twenty miles. The south-eastern portion of the peninsula is drained by the *Calmont Creek*, which flows into *Yawry Bay*; the whole area is abundantly supplied with water; many streams descend from the hills; several are concentrated in a large basin, called the *Bay of Funkia*, which is considered the best watering place along the entire line of coast. A new town (*Kosoo*) is now forming here. The *Rokelle River*, which flows into the Sierra Leone estuary, has its navigation intercepted at *Rocon*, fifty or sixty miles from Freetown; its source is stated to be within thirty miles of *Fallaba*, at a distance of 200 miles from Freetown. The *Kates River*, which flows into the Atlantic to the southward of the peninsula, is navigable for boats upwards of seventy miles.

Free Town, the capital, is built on the southern margin of the Sierra Leone estuary, about five miles from the Cape, which marks the entrance. The town is regularly laid out upon a gentle acclivity which rises from the water's edge towards a semicircular sweep of wooded mountains, with an elevation of 1,200 to 1,500 feet, running in an east-south-east and west-north-west direction, and distant from the haven from a mile to a mile-and-a-half. Behind the centre of the town is the fort; then a large military hospital; and in the rear, about 200 feet above the town, a range of barracks, built in a superior manner, both as to style and convenience. The view of the sylvan amphitheatre, with *Free Town* stretching from the base of *Tower Hill*, towards the anchorage, varied by numerous buildings, cultivated spots, and rugged undulations, is very striking.

The principal streets are fifty to sixty feet wide, have regular convex carriage and foot-ways, with broad channels at either side for water-courses. The central thoroughfares contain the principal

government and private houses. The latter generally consist of two stories, erected on stone or iron pillars, of six to nine feet in height, and are built of a red claystone, which abounds in the vicinity. The rooms are large, lofty, and mostly contain fire-places for the comfort of their inhabitants during the chilly damps of the rainy season, while the intense heat of the sun is warded off by verandahs, the lower part closely boarded, the upper having strong jalousie blinds. The kitchens and other domestic offices are detached from the dwelling-house. Many such abodes belong to the coloured citizens, some of whom have been liberated from the slave-ships, the first object of desire among them all being the possession of a large stone house, as an incontestable mark of a respectable social position. The foundation is not unfrequently laid when the owner is quite unable to proceed further, and progress is made from time to time as his pecuniary means will admit. The second class of tenements are termed frame-houses, and are built of wood, either on stone pillars, or on a wall of some feet in height, which enables the proprietor to convert the basement into a store or warehouse. These, like the first class, are protected by verandahs, and stand in a yard or garden, of greater or less size, so as to afford a free circulation of air. In the suburbs the habitations are chiefly composed of stakes, wattles, and clay, and consist of two apartments, divided by strong coarse matting. There are convenient landing-wharves, and four good roads from the town, all available for carriages except the one that leads to the mountains. Dr. Madden, who was sent out by government as commissioner to report on the state of our settlements in Western Africa, in 1841, says—"I was forcibly struck with the largeness of the scale on which the public buildings were constructed; the wideness of the streets, and the regularity of their lines; the number of stone houses, and the excellence of the roads; the abundance in the markets, the multitudes of well-dressed negroes in these places, the variety of stalls and shops in their own quarter well supplied with British goods; the cleanliness and the comfortableness of their small abodes, the size and structure of the principal church, and the numerous chapels and schools in the town and suburbs, and, though last not least, the admirable order that seemed to prevail amongst the negro population, without any apparent exercise of magisterial rigour or severity of political restraint to repress or to control the people."

The number of stone houses of the first class belonging to the natives, in St. George's parish (*Free Town*), in 1850, was 350; of frame, 2,184; of wattle, 1,873. The number throughout the colony of these three denominations was 436, 2,156, and 9,703. Many of the coloured citizens are wealthy, and employ considerable capital in trade. They vie with the white inhabitants in their houses, dress, and expenditure, and contribute liberally to the support of religious ordinances and education.

The colony is divided into five districts, and subdivided into parishes and villages (see *Population* section), *Free Town* contains the few European residents; the *Nova Scotians* (as the negroes who arrived from thence are termed); *Maroons*; discharged soldiers from the *West India* regiments; and *Kroomen*, (a superior class of labourers who come from the neighbourhood of the *Grain Coast* for hire.) The country population consists chiefly of liberated Africans.

The villages facing the sea are the most healthy,

owing, it is supposed, to being screened by the mountains from the malaria, which is blown to the peninsula from the adjacent low Bullom shore. The mountain villages are next in point of salubrity; those in the river district are the most unhealthy, as they are contiguous to mud and mangrove, and unrefreshed by sea breezes.

There is a lighthouse on Cape Sierra Leone, which is distant about five miles from Free Town; it is a round tower, fifty-three feet in height, with a diameter of nineteen feet at the base, and fourteen feet at the summit. The light is fixed.

THE BANANA ISLANDS, a dependency of the colony, in 8° 30' N., separated from Cape Shilling by a narrow strait, are about twenty-seven miles distant from Free Town. They are two in number, but the larger being nearly intersected by the sea, they have the appearance of forming three islands. They are supposed to have been thrown up by submarine volcanic action. *Great Island*, the nearest to the main land, is about three and three quarters of a mile long, by one mile broad. It lies nearly east and west; the eastern part, called *Dublin*, which faces the main, consists of an extremely gradual ascent of unbroken table-land, but little varying in its breadth, to an extent of about two miles; a hill or mount (*Leven*) then occurs, with a height ranging from 500 to 750 feet above the sea. The western extremity of the island is less elevated than the eastern portion. The greater part is under cultivation. The soil on the table-land consists of a deep, rich, dark loam, with occasional patches of red clay. The western island is smaller and less elevated; its characteristics are the same. A deep channel, about 200 yards, separates the two Bananas, which contain at least one good harbour; both are said to be salubrious.*

GEOLOGY AND SOIL.—The soil in the vicinity of Sierra Leone, consists chiefly of a slight stratum of brown gravel on a semivitrified rock of the same colour, containing a large portion of the oxide of iron. This is what is called the *brown* iron stone; the *red* iron stone is also found in extensive strata, but the *brown* appears to prevail. Both these varieties of hæmatites are cellular throughout their entire substance, strongly indicating volcanic origin; they are intersected with yellow streaks, and kidney-shaped segments. Magnetic iron ore, in small detached masses, is observable on the mountains, some of which are chiefly composed of granite, and large granitic blocks stud the surface of the plains. No limestone has hitherto been discovered in the colony, but fortunately there is an abundance of fossil shells. Altogether the soil is calculated to dishearten the inexperienced African agriculturist; and it is surprising how he has been enabled to rear his various crops.

Governor Norman Mac Donnell thinks that from the peculiar geological conformation of the country, minerals probably exist in the mountain ranges.

CLIMATE AND DISEASE.—The thermometrical range is very slight, the diurnal variation rarely exceeds 10°; the average height of the mercury throughout the year is about 82° Fahrenheit. The quantity of rain is excessive. From July to December, inclusive, it has amounted to 144 inches; on two days in August (22nd and 23rd) more has fallen than the annual average in England. The countries which may be compared with Sierra Leone in

excessive humidity are—Maranhao, in Brazil, yearly, 280 inches; Cayenne, in February alone, 160 inches; Arracan, in two months (July and August), 103 inches; coast of Malabar, 169 inches. The wet season extends from May to November; for a large part of this period the hills are wrapped in dense fogs, and the rain falls in torrents; it is ushered in by violent tornadoes from the eastward, accompanied by vivid lightning and awful thunder. The dew point ranges from 69° to 72° in June, July, August, and September. The sky is then extensively overcast by clouds; thus, dividing the visible horizon into 100 parts, the proportion obscured in four months of 1848, was, June, 78; July, 84; August, 86; September, 86. The Harmattan, a north-east wind of extreme siccidity, generally blows in December, January, and February. The air is then impregnated with an almost impalpable sand, which is exceedingly irritating to the nostrils, eyes, ears, and all susceptible parts with which it comes in contact. It causes coughs and fatal pulmonary complaints to the natives. There is a regular daily succession of sea and land breezes; the former, in the morning, from the west-north-west, is always cool and pleasant; the latter, setting in at evening from east and south-east, is generally heated and laden with humid exhalations from the low and swampy ground over which it passes. Such a climate, as might be expected, has proved very fatal to European constitutions. From February, 1825, to 1832, four governors, General Turner, Sir Neil Campbell, Colonel Denham (the distinguished traveller), and Colonel Lumley, sank under it; and its influences were equally injurious to the white troops, notwithstanding the care evinced in placing them in good barracks on a conical hill, 400 feet above the sea. During eighteen years, ending in 1836, it has been ascertained by Colonel Tulloch, that nearly half the forces perished annually; indeed, in 1825 and in 1836, three-fourths died. Many European seamen employed in the timber ships, while loading in the Sierra Leone estuary, are suddenly attacked with illness, from which few recover. The most fatal disease is remittent fever, the proportions of deaths to admissions into the hospital being as one to two. Dysentery and inflammation of the liver, acute and chronic, are prevalent. The mortality among the black troops is in a far smaller proportion; during eighteen years, ending in 1836, it was about thirty-two per thousand. Eruptive fever, and diseases of the lungs, stomach, and bowels, were the principal maladies. The low Bullom shore, a vast swamp which it is said to be impossible to drain, is the focus of the malaria which scourges the inhabitants of the peninsula. Like other tropical countries, Sierra Leone enjoys periods of salubrity, during which it is exempt from any peculiar malady; but sickness reappears without warning, and desolates the land, frequently at intervals of three or five years. It is considered that a permanent improvement has recently taken place in the climate; if so, it is probably owing to the increase of cultivation, to improved dwellings and drainage, while the prevalence of temperate habits must necessarily have greatly diminished the dangers which surrounded European life in Sierra Leone a few years ago.

THE POPULATION, at the commencement of the settlement, has been stated in a previous page (178). The resident inhabitants, in 1818, numbered 9,667; in 1820, 12,521; in 1822, 15,081; in 1833, 29,764; in 1836, 37,463. During the last three years it is thus shown under the heads of the five districts into

* Boyle's *Medico-Historical Account of the Western Coast of Africa*, 1831, pp. 65, 7.

which the colony is divided. The western district includes the villages of Dublin and Rickets, in the Banana Islands—

Districts.	1849.	1850.	1851.
St. George's Freetown	18,551	16,679	18,027
First Eastern District	5,498	5,302	5,351
Second Eastern "	8,884	8,878	7,827
Western	4,885	5,159	5,287
Mountain	8,551	8,454	8,009
Total	46,369	44,472	44,501

In 1851 there were—males, 23,794; females, 20,704. The disparity between the sexes is less than might have been expected, considering that nearly half the inhabitants have been rescued from slave ships, where men always largely predominate.

In an official report the population is thus classified—*According to Trade, or Occupation*:—Government officers (of all grades), 289; merchants and clerks, 258; petty traders, hawkers, and pedlars, 1,719; farmers, farm labourers, and market people, 17,421; grumettas, predial labourers, and house servants, 3,000; fishermen and native seamen, 1,989; mechanics, 1,801; miscellaneous—including washerwomen, sempstresses, &c., 4,614; transient traders, 594; school children, 9,819; infants, 2,997: total, 44,501. *According to Race*:—Europeans, 89; Maroons, 15; Nova Scotians, 49; liberated Africans, 6,898; native creoles, 7,565; West Indians, 90; Americans, 121; Kroomen, 560; native strangers (Timmanees, Sherbros, Foulahs, Mandingoes, &c.), 1,292: total, 16,679.

Among the liberated Africans, many have shown themselves very industrious and enterprising, and their exertions have materially tended to the advancement of the colony. Several among their number have amassed wealth, and become large importers of British manufactures, and exporters of colonial produce.

Acting-governor Pine, writing in 1849, bears high testimony "to the orderly and peaceable manner in which they conduct themselves in the colony, and to the zeal and alacrity which the more influential among them have, upon many occasions, displayed in lending support to the government when for any purpose it was required. This conduct is the more remarkable when we consider that they are composed of tribes, many of which, in their own countries, bore towards each other intense hatred and animosity; and that they have been subjected to all the moral degradation which slavery brings in its train."

The Kroomen occupy a distinct part of Free Town, called by their name. They come to the colony from their own country on the Grain Coast, to seek employment, and are in great request as domestic servants, and likewise in other capacities. They are often confounded with the Fishmen, although, according to the Hon. Captain Denham, there is a broad line of demarcation between them; the Kroomen occupying the interior of the country more than the Fishmen, who reside entirely upon the coast, and are much more numerous. Both are, however, remarkable for voluntary emigration in search of opportunities whereby they may acquire, during the vigorous years of life, the means of buying wives, and eventually settling down in comfort in their own land. They leave home when mere boys, and generally come to Sierra Leone in the capacity of apprentices to some

of their more experienced countrymen, who are considered as headmen or masters, and who, according to their birth and influence, have a proportionate number of youths under their charge. On board a man of war a headman will be employed, with generally twenty men under him, the connexion being purely voluntary. The Kroomen are distinguished by some striking superstitious observances; they resist every attempt at conversion to Christianity; to this latter painful characteristic there have been exceptions, but they are very few.

The Rev. Mr. Koelle, a member of the Church Mission to Sierra Leone, has formed the following list of the African tribes, numbers of whom he has met with among the liberated negroes, in his endeavours to collect information respecting the still uncounted number of African languages. Mr. Koelle commences with those from the centre of Africa, about Lake Tchad; thence westward to the Niger, the eastern bank of which he follows until it reaches the sea. He then traces the coast upwards to Senegambia, and thence eastward to the point where the Niger changes its course from north-east to south-east, near the country of the wild and warlike Wasulus. Re-commencing on the southern half of this vast continent, he enumerates the tribes along its eastern shore, from ten degrees south to the Cape, who are represented in the colony, and completes his labour with those from the country between the banks of the Coanza (?) and the Cameroons. The information thus afforded is doubly interesting, as showing not merely the vast number of African tribes represented in the colony, but as mapping out also, in a very clear and comprehensive manner, the enormous tract of country over which slavery and the slave-trade have extended their poisonous influence.—"1 Shoa, African Arabs, east of Bornu; 2 Bagarmi, east of Bornu; 3 Bornu or Vianuri, on the southern banks of the Lake of Tchad; 4 Tubo (Tiboo), in the Zahara, north of Bornu; 5 Mandara, south of Bornu; 6 Kandin, south of the Zahara, near Hausa; 7 Pika or Phika, south-west of Bornu; 8 Wadai, 9 Margi, near Bornu; 10 Bode, west of Bornu; 11 Gezere, south of Bode; 12 Karakarei, west of Gezere; 13 Hausa, between Bornu and the Niger; 14 Munio, or Manga, north-east of Hausa; 15 Gube, north-west of Hausa; 16 Kambali, west of Hausa; 17 Dshuku, north-west of Hausa; 18 Gbali, or Gaoli, south of Hausa; 19 Eregba, called Kurorofa by the Hausas, Assa by the Nufes and Ibos, and Koana by the Kanuri, south of Hausa; 20 Nufe, on the eastern banks of the Niger, about Rabba; 21 Eg-bira, by the Nufes called Egura; 22 Idshumu, or Ekiri, eastern banks of the Niger; 23 Basa, eastern banks of the Niger, and will be distinguished from the Basa, near Liberia; 24 Igala, or Gala, eastern banks of the Niger, and will be distinguished from the Gallas, in the east; 25 Agbale, eastern banks of the Niger; 26 Kupa, eastern banks of the Niger, near Egga; 27 Wefa, 28 Ibo, eastern bank of the Niger; 29 Atam, east of Ibo; 30 Kalaba, 31 Benin, 32 Bayong, 33 Okuloba (Bony), near Ibo; 34 Bine, between the Old and New Calabar; 35 Yoruba, 36 Egba, closely allied; on the west of the Niger; 37 Adsha, called Popo by foreigners; 38 Dahome, 39 Hwida, 40 Mahhi, who speak three different dialects of the same language; 41 Gurma, 42 Kutakori, 43 Barba, 44 Dshelanga, north of Dahomey; 45 Ashanti, 46 Fanti, near Cape Coast; 47 Grepso, 48 Kru, closely allied; about Cape Palmas; 49 Basa, south of Monrovia; 50 Mano, 51 Gbarena, or Gbase,

east of Basa; 52 Dawoin, north of Monrovia; 53 Vei, from Cape Mount to the Gallinas; 54 Gura, or Gola, 55 Gbandi, 56 Buse, 57 Mani, 58 Toma, 59 Bala, 60 Bunde, 61 Mande, called also Koso and Nonguba, 62 Gise, or Kise, east and north-east of Vei; 63 Kirim, by foreigners Kittim, north of Vei, on the coast; 64 Bulom, north of Kirim and south of Sherbro; 65 Sherbro, between Bulom and Sierra Leone; 66 Timne, 67 Londoro, by foreigners Loko, 68 Limba, 69 Susu, north-east of Sierra Leone; 70 Baga, 71 Bidshugo, 72 Mandshako, 73 Bulanda, or Balanta, on the coast between Sierra Leone and Senegambia; 74 Nalu, 75 Padshar, 76 Pepel, 77 Buramu, 78 Biadada, by foreigners Dahola, 79 Fulup, on the coast, between Sierra Leone and Senegambia; 80 Wolof, 81 Fula, 82 Mandingo, in and near Senegambia; 83 Bambara, on the upper course of the Niger;

84 Wasulu, south-east of Timbuctu. SOUTH AFRICA—85 Masambik (Mozambique), 86 Sofala, 87 Nyamban, 88 Marawi, 89 Kriman, on the eastern coast, between about lat. 10° and the Cape Colony; 90 Bengara (Benguela), 91 Angola, on the south-west coast; 92 Kongo, 93 Muse Kongo, 94 Mantiaf, 95 Kimbala, empire of Kongo; 96 Motaka, 97 Mupama, east of Kongo, in the interior; 98 Orungu, about Cape Lopez; 99 Diala, on the coast, about 2° north; 100 Tsuwu, by foreigners sometimes Bumbé, on the Cameroons River. Although the tribes, Nos. 99 and 100, are a little to the north of the equator, their languages show that, in an ethnological point of view, they are to be considered as South African."—(Parl. Papers, 1851; pp. 186-'7.)

The distribution of the population in 1851 is shown in the following table:—

Districts.	Parishes.	Coloured Population.		Total.	Area, in Acres.
		Males.	Female.		
Free Town	St. George . .	9,355	8,574	17,929	—
<i>First Eastern District:—</i>					
Kissy	St. Patrick . .	1,385	1,792	3,177	31,000

Total		23,703	20,673	44,376	—

Note.—White inhabitants, 94 males and 31 females; births for the year, 1,180; deaths, 472; marriages, 320; employed in agriculture, 17,261; in trade, 14,064; infants and school-children, 12,816.

A considerable number of the liberated Africans have emigrated from Sierra Leone to our West India colonies. Between April, 1841, and 31st December, 1850, 14,113 persons proceeded thither. Since the establishment of the settlement in 1787, about 85,000, persons of both sexes have been landed there, yet the resident inhabitants do not now exceed

45,000; it is therefore manifest that there must have been excessive mortality, or a very large migration by sea and by land from the colony. The latter is most probable, although many of the liberated slaves die soon after they were disembarked, owing to the cruel treatment endured on board ship.

GOVERNMENT.—A governor, aided by an execu-

tive and a legislative council of seven or more members. The latter comprises the chief-justice, colonial-secretary, queen's advocate, and one or two merchants. The council sits with closed doors, and its members are sworn to secrecy. As the coloured people now present an educated and proprietary class, who pay taxes to the amount of about £20,000 per annum, it would be well to grant a representative assembly to the colony, in order that the negro population might be initiated into habits of civilized self-government, and thus set an example to the surrounding kingdoms. There are civil and criminal courts, according to the provisions of the charter of justice of 1821; and courts of chancery, vice-admiralty, ecclesiastical or ordinary, and quarter-sessions, and also one for the recovery of small debts, from forty shillings to ten pounds.

MILITARY DEFENCE.—There are no white troops now in Western Africa; the head quarters for the coast is at the Gambia, and the number of men in the command in 1851 was 557 rank and file, and a due proportion of commissioned and non-commissioned officers of the first, second, and third West India regiments, which are recruited on the western coast of Africa from different nations of the negro race, some of the liberated slaves enlisting in the service. There were in Tower Hill barracks (Sierra Leone) in 1851, commissioned officers, 11; non-commissioned ditto, 10; drummers, 4; rank and file, 214. The negroes, officered by Europeans, make good soldiers, are clean, sober, orderly, and, on several occasions, have proved steady under fire. The Sierra Leone militia comprises 250 men-at-arms.

RELIGION.—The number of persons comprised under different denominations is as follows:—Episcopalians, 13,863; Presbyterians, 5; Wesleyan Methodists, 13,946; African Methodists (seceders from the Wesleyan connexion), 5,134; Baptists, 462; Lady Huntingdon's connexion, 2,849; Roman Catholics, 46; Jews, 3; Mahomedans, 2,001; Pagans, 6,192. The efforts of the Church, Wesleyan, and Baptist missions for the whole coast, are shown in a subsequent page. The religious services of the various churches and chapels are well attended. Sierra Leone has recently been made a diocese of the Church of England, and Dr. Vidal, an eloquent divine, consecrated to the see, with jurisdiction over the Episcopalians in Western Africa.

The only government church in the colony is that of St. George, at Freetown, where the colonial chaplain officiates. Some portion of the liturgy is chanted in a very creditable manner by the (coloured) school children. The *Church Missionary Society* has nine clergymen, and churches in almost every important village in the settlement. The structures are of stone, and equal to the ordinary run of country churches in England. Acting-governor Pine (the present Lieut.-Governor of Natal) in his official report to Earl Grey, 27th October, 1848, says—"The clergymen belonging to this society are as a whole a well-educated body of men, and well adapted to their peculiar vocation. Some of them are possessed of talents and learning which would command respect even in the church at home. The efforts of the *Church Missionary Society* have been, upon the whole, very successful, and the colony is under deep obligations to it for its exertions in the cause of religion and education. The Wesleyan Mission has four ministers in the colony besides several native lay preachers. They possess fifteen chapels, seven in Freetown, the others in various villages about the

colony. The members sent from England are generally zealous and excellent men, and have undoubtedly done a vast deal of good. There are at least thirty chapels belonging to the other sects of Christians. Their ministers are persons of colour, engaged in some secular occupations; two of the most esteemed of these are pilots. I feel great pleasure in stating that the clergymen and ministers of these several denominations generally manifest towards each other the most friendly and Christianlike feelings." The same authority then estimated the number of Mahomedans in the colony at 2,000, a large number of whom were Mandingoes, Soussoos, and other people from the adjacent country. Many of them were liberated Africans, principally of the Akoo tribe, who had been converted in their own country by Mandingo or Foulah priests. The Mahomedans generally reside together in the suburbs of the town, and except in the way of trade, hold little intercourse with their fellow-citizens. I noticed a similar segregation in various Asiatic towns. Mr. Pine estimated the number of Pagans in the colony in 1847, at twelve to fifteen thousand. A large number of these had but recently arrived, bringing with them the superstitions of their own lands. The intercourse of such immigrants with the resident population checks the progress of missionary labour by reviving in the minds of partial converts to Christianity the recollection, and with it the love, of that form of superstition which, having been instilled into them during childhood, is naturally very difficult to eradicate. A native of the Gold Coast (Mr. Quaqua), who was partially educated in England, and for nearly fifty years government chaplain at Cape Coast Castle, believed in "*Fetiches*," or in other words, in evil or good spirits, generally dwelling in corporeal forms, and, it is said, that even amidst a considerable number of the professing Christians at Sierra Leone, as well as among nearly the whole of the Pagans and Mahomedans, a belief in the powers of witchcraft and magic, and in the efficacy of charms and philtres, is still prevalent. There are numerous sects of idolaters. "Among them," says the acting-governor in the despatch before quoted, "the worshippers of thunder and lightning are remarkable. They adore these phenomena as direct emanations of Deity, and, during the storms which at certain seasons disturb the tropical night, the stillness which prevails in the intervals between the peals of thunder is broken by the wild chants with which these mistaken people celebrate the honours of their god. The followers of this superstition are principally Akoos, a portion of which tribe are addicted to it in their own country; though the majority of them in the colony have been converted to Christianity, not a few persons in the community, and some of them professing Christianity, believe that these thunder worshippers, and indeed the Akoos generally, hold some mysterious communion with the lightning, by which they are enabled to direct its course against their enemies; and, upon a recent occasion, when the house of a Maroon was struck by the fluid, and the man himself killed on the spot, I heard several persons attributing the disaster to "those bad Akoo men." Some also of the Pagan inhabitants worship serpents and other reptiles, whom they feed with the greatest care. There are, moreover, some who openly worship the Devil. They convince themselves of the necessity of this practice by the same wild arguments which have satisfied savages following a similar persuasion in other parts of the world. Although they believe in

the existence of a God, the author of all good, they also conceive that he is not omnipotent, but that his authority is disputed and controlled by the spirit of evil. Persuaded that God, prompted by the beneficence of his nature, will bestow every blessing in his power without solicitation, their only anxiety is to appease, by prayer and sacrifices, the wrath of the enemy of mankind.*

EDUCATION.—There are fifty-eight schools, attended by 6,795 scholars of both sexes. Most of these establishments are under the zealous and efficient care of the Church, Wesleyan, and Baptist missionary societies. The *Fourah Bay* institution, under the Rev. Edward Jones, of the Church Missionary Society, affords the highest class of instruction, including Hebrew. Some of the pupils are sent to England to be perfected in their education, with a view to their ordination as ministers of religion. The *Freetown* grammar-school is ably superintended by the Rev. Mr. Peyton, who has resided fourteen years in the colony. The boys in the *higher class* are taught Algebra, Euclid, English, Greek, Latin, geography, music, lineal drawing, mensuration, singing, and exercised in writing themes. A traveller, who visited the colony at the end of 1851, says—"A class of black boys, under a black usher, worked some problems in algebra as readily as though they had been of the pure Caucasian breed." Mr. Peyton considers them "quite as intelligent as English boys of the same class;" and his opinion is amply confirmed by their progress in difficult, not to say superfluous branches of knowledge. The school is nearly self-supporting, the income from pupils being about £270 per annum.

CRIME.—The following return shows the number of convictions in fifteen years:—

Year.	Murder.	Other Felonies.	Misdemeanor.
1837	3	40	5
1838	1	58	4
1839	—	47	8
1840	3	42	10
1841	—	77	8
1842	—	65	—
1843	—	85	7
1844	—	73	3
1845	2	51	2
1846	2	60	1
1847	—	99	18

Considering the mixed character of the population, and the recent removal of a large part from utter barbarism, the foregoing return is a satisfactory one, especially as the class headed felonies includes the very pettiest description of offences now summarily punishable before the presiding police magistrate. Although drunkenness was formerly very prevalent, there is at present an almost total absence of that vice, which the governor attributes to the beneficial influence exercised by the missionaries over the labouring classes.

REVENUE AND EXPENDITURE.—In 1812 the customs duties collected amounted to £1,992, in 1820

* *Report on Blue Books for 1847 laid before Parliament in 1848, p. 201.*

to £6,153, in 1830 to £6,839. From 1840 to 1850 the whole local revenue has been as follows:—

Year.	Gross revenue from all sources.	Portions levied by the customs.	Obtained from other local sources.
1840	£17,332	£12,609	£4,722
1841	11,137	9,071	2,065
1842	9,779	7,584	2,195
1843	12,603	10,226	2,376
1844	16,842	11,032	5,809
1845	20,953	16,119	4,833
1846	20,695	11,749	8,945
1847	24,180	16,371	7,808
1848	21,910	13,816	8,094
1849	20,399	12,840	7,559
1850	17,836	12,974	4,861
Gross Total for eleven years	193,671	134,397	59,273
Average annual revenue . .	17,606	12,217	5,388
1851	19,830	10,217	3,613

In addition to the local revenue, the parliamentary grant of 1851 was £4,465; the expense of the liberated African department, paid from the British exchequer, £3,545. The commissariat disbursements for the same year were as follows:—Army and medical departments, £16,724; navy, £23,610; ordnance, £3,994; barracks, £389 = £44,717. Gross total, £52,727. The total civil expenses amount to £28,002, of which, as above shown, nearly £20,000 is derived from colonial resources.

MONIES, WEIGHTS, AND MEASURES.—English.—There are no public banks and no paper money in circulation. Three-penny and three-halfpenny pieces have been sent from England. The foreign coins in circulation have a fixed value assigned them by royal proclamation, viz., doubloon, 64s.; dollar, 4s. 2d.; twenty franc-piece, 15s. 10d.; five franc-piece, 3s. 10½d.

COMMERCE.—The trade of the colony has fluctuated; its value at different intervals is set forth in the annexed table—

Year.	Imports.	Exports.	Tonnage Inwards.
1825	£77,974	£58,965	23,479
1830	87,251	71,076	26,343
1835	69,301	66,903	17,453
1840	73,989	65,888	19,920
1845	114,475	103,384	23,434
1850	97,890	115,139	26,436
1851	103,477	80,366	40,416

It is to be feared, that until very recently many of the goods imported into Sierra Leone, and our other settlements on the coast, were, by a circuitous channel, employed in the purchase of slaves.

The gross total of imports from 1840 to 1850, inclusive, was £1,010,530, giving an average for each year of £91,867. The imports from Great Britain for this period amounted to £786,777; to West Indian colonies, £6,288; to North American colonies, £19,238; other British colonies, £56,612. To United States, £93,213; other foreign countries, £48,402. The imports from England consist principally of India goods, white and printed cottons, hardware,

spirits, ale, wine, &c. The exports for the same period of eleven years, amounted in the aggregate to £1,074,552, of which £696,193 were sent to England, £1,126 to West Indian colonies, £4,171 to North American colonies, £79,748 to other British colonies, £114,723 to the United States, and £178,591 to other foreign states. Average annual value of exports during the time aforesaid, £63,290.

The state of the trade of the settlement in 1851 is thus shown:—Imports from Great Britain, £85,563; West Indies, £3; other British colonies, £1,848; United States, £14,600; other foreign states, £1,462. Total, £103,476; shipping inwards, 40,416 tons. Exports to Great Britain, £43,068; British colonies, £12,882; United States, £13,351; other foreign states, £11,064=£80,366. Among the items exported were—palm oil (gal.), 212,577, value, £16,838; pepper, 79,467 lbs., £1,809; ginger,

965,529 lbs., £7,833; ground nuts, 81,063 bushels, £6,491; ground cake, 29 tons, £109; ground oil (gal.) 5,080, £861; hides, dried, 417,200 lbs., £7,100; hides, salted, 850 packages, £200; ivory, 5,445, £746; copal, 18,851 lbs., £747; coffee, 4,723 lbs., £105; camwood, 247 tons, £3,094; bees' wax, 19,056 lbs., £963; bené-seed, 1,678 bushels, £458; arrow root, 45,860 lbs., £497; timber, 6,075 loads, £22,298. Cotton is now being added to the list of exports; it grows indigenously, is bought from the natives for 1½d. and sells in Manchester for 7d. per lb. The Church Missionary Society, aided by a philanthropic manufacturer at Manchester, [Mr. Clegg,] are successfully endeavouring to increase the quantity, and improve the quality of the cotton exported.

AGRICULTURAL PRODUCTS.—The crops and actual produce saved in the colony between the 31st December, 1850, and the 31st December, 1851, was—

Produce and Live-stock.	St. George's, Freetown.	First Eastern District.	Second East- ern District.	Mountain District.	Western District.	Total.

The *Indigenous Fruits* are banana, cocoa-nut, orange, pine-apple, guava, pomegranate, lime, papau, and African plum.

Fruits that have been introduced.—Mango, shaddock, Avocado pear, custard apple, sour-sop, grenadilla, tamarind, Mammee-apple, water-melon, rose-apple, bread-fruit, almond, bread-nut, date, Barbadoes cherry, and grapes.

Indigenous Esculents, &c.—Yam, plantain, Indian corn, sweet potatoe, okro, pumpkin, cassada, and spinach.

Esculents, &c., which have been introduced.—French beans, cucumbers, peas, lettuce, radishes, and cabbage.

Many of the fruits that have been naturalized, such as the tamarind, mango, and sour-sop, were introduced some years ago, and are now extremely plentiful in the colony; others have been imported at a later period, and are only to be met with in the gardens of government officers and others.

The introduction of several of the choicer species is due to the intercourse which has of late years arisen between the West Indies and the colony in consequence of emigration.

The esculents enumerated have for the most part been brought from England; they all thrive well in the colony, especially French beans and cabbage, which are tolerably abundant.

DIV VII.

FISHERIES.—About 200 canoes are employed, and afford occupation for 1,000 to 1,500 men. The boats, scines, lines, &c., are generally the joint property of the captain and the crew, or of some individual who receives a proportion of the proceeds of the fishery. One branch of the pursuit carried on at the Isles de Loss, by liberated Africans, who proceed thither from the Colony in small joint-stock associations, appears to be a profitable speculation; about £4,000 being annually realized by the persons engaged.

Among the fish caught may be named the barracouta, crocus, cavalla, flounder, grouper, greenjar, jewfish, mullet, mackarel, rock-cod, snapper, skynose, soles, skates, shrimps, turtle, ten-pounder, white bait, crayfish, &c.

MANUFACTURES.—Boat-building is carried on to a considerable extent; those employed in the fisheries are carvel built, and admirably constructed; several small-decked vessels have been recently launched. Leather dressing is carried on to a small extent. There are eight or ten manufactories for crushing the ground nut, and preparing oil therefrom. It can be sold at 4s. to 4s. 6d. per gallon. When cold-drawn by powerful machinery, it is scarcely to be distinguished from olive oil.

WAGES AND PRICES.—Agricultural labour, 7d. to 9d. predial, labour of any other description, 9d. to 1s. Horses cost from £10 to £40; horned cattle, 30s. to

100s.; sheep, 7s. to 15s.; goats (milch), 15s. to 20s.; pigs (porkers), 10s. to 30s.; poultry, 6d. to 1s. per head.

THE GOLD COAST SETTLEMENTS.

HISTORY.—The precise date is not known when the English began to trade with this portion of Western Africa, which extends from the Assinee River to Cape St. Paul, forming the intermediate territory between the *Ivory* and the *Slave* coasts, and comprising the kingdoms of Ashantee and Fantee.

The prospect of trafficking in gold, as well as in slaves, early drew the attention of European nations to this region. The Portuguese formed the first settlement at Cape Coast Castle in 1610; they were, however, soon dispossessed by the Dutch, who took great pains to strengthen the fortifications. In 1661, Admiral Holmes captured the castle; the conquest was confirmed to England by the treaty of Breda, in 1672, and has since then, despite of attacks from the Dutch Admiral De Ruyter, in 1665, and from the French in 1757, remained in the occupation of the English.

Several smaller forts were established on the coast subordinate to the chief station, and placed under the management of the different African companies and associations, which, from time to time, were formed in England—Parliament voting a sum of money annually for their support, until 1807, with a view to the encouragement of the slave trade; and since then, with the opposite desire of preventing that traffic, and promoting legitimate commerce. By the concurrent testimony of all the witnesses before the parliamentary committees of the houses of lords and commons, in 1848-9, it appears that the slave trade has now entirely ceased along this coast for a distance of 280 miles, where it was formerly most rife; and this mainly in consequence of the occupation of the Castle and the adjacent forts by an anti-slavery power.

The area of the extensive territory now under our control is not precisely known. Acting-governor Fitzpatrick, in March, 1850, stated to Earl Grey, that "with the exception of a few sea-side towns, the vast district extending from Assinee to Pram Pram, and back to Ashantee, is all under the jurisdiction of the British authorities." The population of this territory is estimated at 288,500, and is continuously and steadily increasing. This is exclusive of the considerable additions recently purchased from Denmark.* Including these annexations, the distance from Assinee to Pram Pram, by the coast, is about 230 miles, and from the latter to Quittah about 50 miles, giving a total length of 280 miles.

The chief feature in the British history of the Gold Coast is formed by our hostilities with the Ashantees, respecting whom it is necessary to give a brief account. Considerable interest attaches to them, from their being believed to be the first African people who refused to embrace the Mahomedan religion, and were driven by its propagandists from their original inheritance, in the immediate vicinity of the Kong Mountains, to the forests of Wangara, the Mahomedan name for the part of Africa they now possess, which comprises a portion of that immense region called by Europeans, for some forgotten cause, by the name of GUINEA. The fugitives spread over the land, down to the margin of the sea,

peopling, as has been conjectured, some countries which heretofore lay desolate like the forests of Fantee and Assin, and others whose primitive inhabitants were not adequate to the defence of their towns. According to Dupuis, the Fantees and Denkerans are branches of the same family. Other writers suppose these and various smaller tribes to have formed distinct migrations, having at different times, and impelled by various motives, settled in the tract between Ashantee and the sea. Be this as it may, it appears certain that under their early sovereigns, while the Arab influence yet existed on the Niger, Joliba, or Quorra, and Ghulby rivers, the Ashantees, although firm and compact as a nation, were unsettled in their habitation, and the seat of government was removed from place to place, until it was firmly established, about the year 1700, by Osai Tutu, at *Coomasie*, or *Kumasi*, which is more than 130 miles from Cape Coast Castle in direct distance, but much further by the pathway through the forest. It is a very considerable place, surrounded by numerous thickly-peopled towns and villages. According to Beecham,† the entire population of the kingdom, with its dependencies, is estimated at upwards of 4,000,000. The martial exploits of this people have been ever their distinguishing characteristic. In the earlier part of the seventeenth century they, with their allies, were able to send into the field 60,000 warriors, armed with bows and arrows, and a very few muskets; and their courage and ferocity rendered them at error to surrounding tribes.‡ About 1720 the Dutch governor-general took part with Bosiante, king of Denkeria, in a quarrel between him and Osai Tutu, which had arisen in the following manner.—(*Bosman's Description of the Gold Coast.*)

Bosiante, a young prince who had obtained a high character for valour, sent some of his wives on a complimentary embassy to the king of Ashantee, who gave them a courteous welcome and many presents, and soon after despatched a number of his own wives on a similar errand to Denkeria. One of these was shamefully abused by Bosiante, which so incensed Osai Tutu, that, disregarding the offer of several hundred marks of gold in propitiation for the wrong, he made immediate preparations for war by raising a strong army, and purchasing large quantities of gunpowder on the coast. While he was thus engaged Bosiante died, but the Ashantees took the field, and after two dreadful battles, in which 100,000 warriors perished, Denkeria was subjugated, the body of its deceased ruler was disinterred, and the decaying flesh given to be devoured by serpents, while the skull and thigh-bones were preserved as trophies. The Denkerans, who had largely engaged in the slave trade, were assisted by the Dutch governor-general with two or three small cannons and a few soldiers. The cannon were captured by the Ashantees, and placed in triumph at the top of one of the streets in Coomasie, where they still remain. Osai Tutu perished soon after during some hostilities with the people of Akim, whom his brother Osai Apoko, who succeeded him in 1731, completely conquered, and obtained possession of the celebrated "Notes," given by the first English African company, which, in establishing forts and factories upon the Gold Coast, did not obtain any territory by purchase, but merely hired sufficient for its immediate uses, giving promissory notes to the native chiefs for the regular payment of the sti-

* Report on B. Book for 1849, laid before Parliament in 1850, Part I., p. 93.

† Introduction to Freeman's *Ashantee Journal*.

‡ Dupuis' *Residence in Ashantee*, p. 225.

pulated rent. The other European companies held their land on the same tenure, and on the subjugation of the different small coast states of Asin, Akim, and Bouromy, by the king of Ashantee, their notes fell into his hands, and he claimed and received, by right of conquest, the rents for the Dutch fort at Elmina, and the English, Dutch, and Danish forts at Accra.—(Bowdich's *Mission to Ashantee*, p. 234.)

The irruption of the Ashantees into the Fantee country first brought them into collision with the British, in 1807. The invasion originated in a dispute between two of the principal chiefs of Asin, which, since the time of Osai Apoko, had remained a dependency of Ashantee, and was situated immediately contiguous to Fantee on the north. The grave of a Caboecer or noble, a subject of Amu, who ruled over the eastern half of Asin, had been plundered by a near relation of Apoutai, joint ruler with Chibbu of the other half of that country, and the offender having made his escape, Amu applied to Chibbu for redress, which being refused, he appealed to the court of Coomassie. Osai Tutu Quamina, the reigning monarch, decreed that Apoutai should make compensation to the relatives of the deceased for the stolen property. This the chief refused to do, and the result was that both he and Chibbu broke into open revolt, murdered the royal messengers sent to them on an embassy of peace, and suspended their mutilated bodies upon trees on the borders of the province. Forbearance on the part of the king was at an end; he advanced into Asin at the head of a powerful army, and defeated the rebel chiefs, who took refuge in the Fantee country. The Fantees upheld them, and barbarously massacred the messengers sent to demand their surrender. The united forces of Asin and Fantee were defeated by Osai Tutu Quamina, who appears to have been desirous even then of coming to terms, but the opposing powers behaved very treacherously towards him (*vide* Meredith's *Account of the Gold Coast of Africa*), and retreated towards the south, persuading themselves that he would not dare to prosecute the campaign among the large towns, and especially those placed under the guns of the British and Dutch forts: the sequel proved them woefully mistaken. The king, excited to the highest pitch of indignant feeling, took "the great oath," that he would never sheath his sword, or return to his capital, until he had obtained the heads of Chibbu and Apoutai, and commenced a desolating march, carrying with him destruction by fire and the sword, and sparing neither age nor sex, till the advanced guard of the army reached the town of Cormantine, which was destroyed, and the Dutch fort (Armstrong) taken possession of. The near approach of the Ashantees excited uneasy apprehensions at Annamaboo (three miles distant from Cormantine), which was then the largest town upon that part of the coast, and where the chiefs had been received after the destruction of Abrah, the capital of Asin. Mr. White, the governor of the castle, vainly endeavoured to mediate between the contending parties; the king presented himself before Annamaboo, and found the inhabitants assembled to oppose him, but they soon gave way, and were pursued to the walls of the fort, from whence one or two great guns were discharged with a view to deter the advancing troops, who, incited rather than daunted by the havoc thus made in their ranks, approached the very muzzles of the cannon, and soon rendered them useless by their own well-directed fire, so that before the close of the day, the

efforts of the little garrison were exclusively confined to the defence of the gate, which the enemy attempted to force or burn. At least 8,000 of the natives perished in the contest, and Mr. White was severely wounded. After two or three days the king prepared to renew the attack upon the fort with 6,000 picked men, but in the morning of the day on which he had vowed to seat himself, "by the help of his gods," in the governor's chair, a flag of truce was lowered from the walls. A negotiation ensued, and the governor-in-chief, Colonel Torrane, went over from Cape Coast Castle to the royal camp, and concluded a treaty of peace, formally acknowledged that the whole of Fantee belonged to the king, and paid the arrears of rent then due for the ground on which Annamaboo Fort and Cape Coast Castle stood. Apoutai made his escape, but Chibbu, to our great disgrace, was delivered up, and after suffering the most agonizing tortures, in the rejoicings at Coomassie on the return of the victorious army, his head became one of the principal decorations of the death-drum of the king.—(Dupuis, p. 262.)

In the year 1811 the Dutch governor of Elmina appealed to the Ashantee monarch for protection against the Fantees, and 4,000 men were immediately sent to his aid, and 25,000 more for the defence of Accra. In 1817, Fantee was again ravaged by the Ashantees; the British, by interfering to protect their neighbours, rendered themselves obnoxious to the invaders, who sat down before Cape Coast Castle, and continued to blockade it with such determined perseverance, that the government found it necessary to advance a large sum of money which the king demanded from the Fantees, to induce him to withdraw to his own capital. These repeated incursions produced so great a feeling of alarm and insecurity, that it was judged advisable to send an embassy to the court of Ashantee, with a view to conciliate its powerful ruler, and negotiate an extension of commerce. Quamina received the British embassy very favourably, but a misunderstanding arose respecting the Fantee notes, concerning the value of which he justly suspected that he had been deceived through Governor-general Smith, who, according to his own statement, had himself been misled by the Fantees into writing other notes, which enabled them to defraud the king by reserving for themselves a portion of the rent, while they pretended to resign the whole. Mr. James, the governor of Accra, could not deny that there had been deceit somewhere, and the king became much enraged. Mr. Bowdich, a nephew of the governor's, interfered, and proposed an appeal to Cape Coast Castle. The result was that Mr. James was superseded by Mr. Bowdich, and the demands of the king were acceded to, two other notes for four ounces of gold per month being given to him; whereupon a friendly treaty was concluded, by virtue of which a British resident was stationed at Coomassie, while an Ashantee captain was placed at Cape Coast. This arrangement was thought so important in England, that H.M. ministers deemed it advisable to send a consul to Ashantee for the furtherance of trade. Mr. Dupuis, whose long residence in Barbary had contributed to qualify him for the office, was selected, and arrived in Africa at the close of the year 1818. On his arrival he found that the king of Ashantee was engaged in hostilities with one of his vassals, that the British President had retired to the Castle, and that though a considerable traffic with Ashantee had resulted from the recent nego-

tations, it was to a great extent monopolized by a few leading servants of the company, who viewed his appointment as consul with much jealousy, and appeared willing to risk even a rupture with the king for the purpose of checking the large and general trade contemplated by the British government.—(Dupuis, Introduction, p. xiii.)

Whether this were the case or not, the Cape Coast people, both European and native, behaved very unwisely. A rumour having been circulated that the King of Ashantee had been overthrown, they showed great signs of rejoicing; and when this was contradicted by the arrival of two messengers with news of his success, the natives treated them with violence and insult, for which the Castle authorities, when expressly appealed to, refused redress. Shortly after this, the Ashantee resident, who had repeatedly complained to his sovereign of the disrespect with which he was treated, died suddenly, it was suspected from poison. A crisis was evidently approaching. The king sent down a messenger, bearing a gold-hilted sword, to complain of the treatment his ambassadors had received, and the answer sent back being unsatisfactory, if not purposely insulting, he despatched one of his principal subjects, accompanied by a large retinue, with the treaty, for the purpose of discussing the article by which he (the king) had agreed not to go to war with the natives under British protection without first seeking redress at the hands of the governor-in-chief. By the mediation of Mr. Dupuis personally with the Ashantee ruler, tranquillity was restored, and a new treaty negotiated with the king, who prepared numerous presents, which he placed in the hands of some Ashantees of rank to deliver to the Prince Regent.

The local authorities refused to confirm the treaty; and Sir George Collier, the commander of the British squadron, stationed on the coast, in compliance with their wishes, declined to convey the Ashantee ambassadors to England; whereupon Mr. Dupuis proceeded thither himself to lay the true state of affairs before the home government, first sending an urgent message to the King of Ashantee, entreating him to be patient and await the result.

At this time an important change took place in the administration of affairs on the Gold Coast, the company being abolished, and its powers and possessions transferred to the Crown, by an act of parliament passed in 1821. Sir Charles McCarthy, who had for some years ably conducted the government of Sierra Leone, was appointed to the command at Cape Coast Castle, and arrived in March, 1822. He found matters in a very bad state. Prince Adoom, the Ashantee ambassador, after quietly awaiting communications from England two months longer than the time specified by Mr. Dupuis, had withdrawn with his retinue to a short distance from Cape Coast Town and placed it in a state of blockade; and the whole of the trade with Ashantee had been transferred from that place to the Dutch settlements. The policy pursued by Sir Charles McCarthy is quite indefensible. Overlooking the fact that the King of Ashantee had established the right of a conqueror over the Fantee country, and that the British had clearly acknowledged that right in the persons of Governor Torrane and Governor Smith, he determined to uphold the Fantees, who hailed him joyfully as their deliverer. The name of McCarthy rung along the coast from Cape Appollonia to the mouth of the Volta, while the King of Ashantee, stung by the sudden revolt of his hitherto acknowledged subjects,

was yet more incensed at the neglect of his authority and dignity on the part of the British in not sending to him a complimentary embassy announcing the change of government.

The explanation of Sir Charles McCarthy's conduct at this period is probably to be found in his ignorance of the actual state of affairs. The servants of the company just abolished by act of parliament, had apparently entered into a contract, not to accept office under or hold any communication with him; and Mr. Dupuis had failed to meet his earnest wishes for full information.—(Vide Dupuis' own statement, p. 212.) Thus he was left to explore the way as well as he could, and not understanding the difficulties in which the King of Ashantee had been placed by the unhappy disputes between the company's servants and the British consul, and consequently not seeing the importance of placing the national character before the barbarian sovereign in its true light, he seems to have at once decided that the claims of the king in vindication of his honour and in maintenance of his authority, could not be consistently conceded, and that, moreover, it was useless or inexpedient to attempt to open a friendly negotiation.

A considerable period elapsed before hostilities actually commenced. The king anticipating that the new governor would pursue a different line of policy from that of his predecessor, remained passive until its general bearing became manifest. Then he commenced his preparations for war, with the accustomed human sacrifices, and consultation of the national deities, and while these were going on, the oath-draught, it was understood, was administered to the traders coming down from other parts of the coast, enjoining them to entire secrecy as to what was taking place in Ashantee. A dead silence in consequence ensued, which the governor viewed as a sign that the king was overawed, and dared not attempt to carry his warlike threats into execution. Believing tranquillity restored, he left his own station on a visit to Sierra Leone, whence he was soon recalled by the intelligence that the Ashantees had commenced hostilities by carrying off a negro sergeant in the British service, from the great square at Anamaboo, on the plea of his having spoken disrespectfully of their king. The man was conveyed to a town, named Donqua, about eighteen miles inland from Anamaboo, and was detained there with an intention of proving (as was afterwards ascertained) how the English would act in the matter. This occurred in August, 1822. Sir Charles was quite undecided as to his course; Captain Laing requested permission to proceed on an embassy to Donqua, but was refused permission from a fear of his personal safety. At length the uncertainty was terminated by news that the sergeant had been beheaded on the 1st of February, 1823. The Ashantee monarch, through his emissaries, then forwarded various threatening messages to the Fantees and other tribes who sided with the British, sarcastically advising one to arm the fishes of the sea; intimating to another his intention of invading his country with such terrific sounds that they should awaken his father in his grave; while Sir Charles McCarthy received an assurance that his head would soon ornament the great war-drum of Ashantee.

Before proceeding to extremities, the king however made another attempt at a peaceful communication, by transmitting, through the Dutch governor at Elmina, a statement of his grievances, which, according to Captain Laing, contained much truth;

but this pacific overture proved abortive, and the war commenced in earnest.

At first, detachments only of the enemy made their appearance, over which Captain Laing gained some decided advantages; but these, so far from discouraging the Ashantee monarch, only led him to make more zealous preparations for the struggle. He called upon his chiefs and vassals for a further augmentation of the troops, and sacrificed eight or ten virgins daily to his "fetishes," or gods, to propitiate them in his favour.* At this juncture, Sir Charles seemed disposed to attempt to stay hostilities by entering into negotiation; but fatal counsels prevailed—the power and character of the Ashantees were underrated, the golden opportunity suffered to pass, and the news arrived at the camp at Djuquah, that the forces of the enemy were rapidly advancing, and the allied natives precipitately retreating before them to the coast. The governor instantly determined to meet the enemy, and, without waiting the arrival of the troops who were with Major Chisholm at the camp at Ampensas, he pushed forward with the small force he had with him at Djuquah, and a body of natives under their own captains. Having crossed the Prah River, he waited a few days at Assamacou, and sent his secretary, Mr. Williams, to inform the retreating natives that succour was at hand. These were, with much difficulty, induced to halt and encamp on the bank of a small river, where they were joined by the governor on January 21st, 1824, and soon after his arrival the horns and drums of the approaching enemy were heard.

Sir Charles having been led to believe that many of the Ashantees were disposed to come over to him at the first opportunity, ordered the bugles to sound, and the band of the royal African corps to play "God Save the King," to which the Ashantee chiefs responded only in warlike strains, as they marched their divisions down to the opposite bank of the river. The Ashantees are distinguished in battle by their own peculiar military airs, and on this occasion a native of Coomassie, who was in the British camp, was able, on hearing the music, to tell the name of every chief as he advanced.

The battle commenced with great spirit on both sides, and a heavy firing was kept up across the river, until the troops under Sir Charles's immediate command† had nearly exhausted their ammunition. The enemy then attempted to cross the river, but were repulsed at the point of the bayonet with great slaughter. A large body having, however, at an earlier part of the day, forded the stream higher up, for the purpose of preventing the retreat of the British party, now attacked them on the flank and in the rear, and literally cut them to pieces. The governor, who had himself received several wounds, seeing all was lost, retired to that part of the field where the vice-king of Denkerah and his people were still bravely holding their ground. A field-piece was discharged among the Ashantees, but failed to arrest their progress, and the Denkerans were compelled to give way, while Sir Charles, and some of his officers,

vainly endeavoured to retreat through the woods, but were soon overtaken by a party of the enemy, by whose fire the governor had an arm broken, and was wounded in the chest. Mr. Williams fell stunned by a ball, but recovered his senses on the application of an Ashantee knife, which would have instantly terminated his existence but for the timely interference of a captain, who recognised in him a friend from whom he had formerly experienced kindness, and gave command that his life should be spared.

On looking round Mr. Williams beheld the appalling sight of the headless trunks of Governor M'Carthy, Mr. Buckle, and Mr. Wetherall; and during the whole of the time he remained in the Ashantee camp, he was regularly shut up every night in the same place with the heads of his unfortunate companions, which, by some peculiar process, were kept in a state of perfect preservation. That of Sir Charles presented nearly the same appearance as it had done in life; as to his body, it is stated that his heart was eaten by the principal captains, that they might be inspired with his bravery, and his flesh having been dried was divided, together with his bones, among the chief warriors, and worn by them as charms for a similar purpose.

At the execution of any of their prisoners, Mr. Williams was placed on one side of the great death-drum, while they decapitated the unfortunate victim on the other. One of the prisoners, Captain Raydon, of the Cape Coast militia, having received five wounds before his capture, was specially sacrificed to the fetish, five being in such cases the sacred number.

Captain Ricketts and Mr. De Graft, the linguist or interpreter to government, then acting as lieutenant of militia, succeeded in escaping from the field of battle, and meeting Major Chisholm, who had set out from Ampensas to reinforce the governor, informed him of his defeat, whereupon the Major retired to Cape Coast Castle, and was joined there by Captain Laing, who had meanwhile been engaged in another direction. Great exertions were made to strengthen the castle, and collect a force to meet the enemy; but although 30,000 natives had at first taken arms in the common cause, so much dismay had been produced among them by the recent disasters, that but few appeared willing again to take the field.

The Ashantees on their part, instead of following up their complete victory by an attack upon Cape Coast, though well prepared to do so, again made overtures of peace through the Dutch governor Last, of Elmina, offering to withdraw immediately, provided Kojuh Chibbu, the vice-king of Denkerah, and the chiefs of Tufel and Wassaw, who had revolted from their sovereign, were delivered up. They positively denied that the king had ordered the execution of the serjeant at Donqua, declaring that the deed was perpetrated by Fantees, then acting in unison with them. In token of their sincere desire for peace, Mr. Williams was given into the hands of the Dutch governor, uninjured in life or limb, but in a state of nudity, with his hands tied behind him.

This attempt at peace only furnished a new incentive to war. Kujoh Chibbu, naturally fearing that he, like Asin Chibbu, might be delivered up as a peace-offering, although assured that his fears were groundless, resolved upon crossing the Prah, and attacking the enemy, which movement, being supported by the British, had the direct effect of

* *Vide Bell's Geography*, vol. iii., part ii., p. 504. The term "fetish" is applied not only to the national deities, but also to the act of worship per in their honour, and appears to have much the same signification as the "Obi" of the West Indies.

† The European soldiers could have been but few in number, as the whole force then stationed on the Gold Coast amounted only to about 120.

arousing the Ashantees again into action, and inducing them to fight their way down into the neighbourhood of the castle.

At this juncture a new turn was given to affairs by the arrival of Lieutenant-colonel Sutherland with a body of troops; the marines were landed from the squadron to garrison the castle, and the whole of the military proceeded to attack the enemy before the arrival of the king, who, it was understood, was on his way to join them. A hard-fought contest took place, which was not followed by any decisive result; and on the following day Osai Ockoto (the brother and successor of Osai Tutu Quamina, who had died a natural death at Coomassie about the period of the outbreak of war) sent a message of defiance to the castle, and advanced so near it as to be distinctly seen on the adjacent heights. The British were opportunely strengthened by the arrival of a ship of war, with men and officers of the Royal African corps. Another general engagement took place, and was terminated only by the darkness of night. It was expected that the action would be renewed the following day; but the dreadful ravages of small pox and dysentery, and the want of provisions, had produced such misery among his army, that the king deemed it prudent to withdraw.

The same causes were at the same time producing yet more fearful effects in Cape Coast Town, and in the castle, within whose walls many thousands of native women and children were cooped up to preserve them from the fury of the enemy. The scene was most distressing, and, but for the timely succour afforded by a partial supply of provisions from Sierra Leone, and some cargoes of rice sent by England, famine must have swept off what disease had spared; for the invaders had reduced the surrounding country to a perfect wilderness.

About two years after this period, in the month of September, 1826, another, and, as it proved, decisive, battle was fought near the village of Dodowah, twenty-four miles north-east of British Accra, between 10,000 Ashantees, and 11,000 British Fantees and other natives. The Ashantees were the assailants, and fought with desperate bravery. About the middle of the day, they were driving back the centre of the allied army; when Colonel Purdon brought up the reserve, and met them with discharges of rockets and grape-shot. The rockets, in a great measure, decided the contest. The Ashantees, having never before witnessed the effect of these formidable engines of destruction, were thrown into confusion; and, although they continued the battle through the day, they were not able to rally again. Many of their principal chiefs were killed; and the whole of their camp and baggage fell into the hands of the allies. Among the trophies was a human head, enveloped in a silk handkerchief, and a paper covered with Arabic characters; and over the whole was thrown a tiger skin, the emblem of royalty. On the supposition it had belonged to the unfortunate Sir Charles McCarthy, it was afterwards sent to England by Colonel Purdon; but it was really the head of Osai Tutu Quamina, which the new king carried about with him as a charm. It is said, that, on the morning of the battle, he offered to it a libation of rum, and invoked it to cause all the heads of the whites to come and lie near it; and it is further stated, that, during the day, when intelligence was brought to him of the death of any of his principal officers, he immediately,

in the heat of the battle, offered human sacrifices to their shades.

After this action, the conquerors lay on their arms all night; the Ashantee king having been seen at the close of the day walking in front, as though meditating some desperate enterprise; but, instead of renewing the attack, he withdrew the remainder of his army, and returned to Coomassie. The native allies of the British manifested no disposition to pursue their powerful foe, but retired to Accra with the booty which they had obtained.

In a few days, the new governor, Sir Neil Campbell, who had succeeded General Turner, landed at Cape Coast Castle; and one of his first acts was to send for Kujoh Chibbu, who had greatly distinguished himself in the battle, and the other principal native chiefs, to thank them for their brave and successful exertions, and to propose to them that peace should be made with the Ashantees. Independently of higher considerations, this was the truest policy which he could possibly adopt; for it was obvious, that native assistance could not be depended upon for the continuance of the war. Major Ricketts confidently asserts, that had the Ashantees delayed for a few weeks their attack upon the allied forces, their overthrow could not have taken place; for the Fantee union would have melted away, and the Ashantees would have been left in undisputed possession of the country.

The chiefs strenuously objected to proposals of peace being made to the King of Ashantee, although the governor assured them that no treaty would be concluded, except on the condition that their safety and interests were secured. At length, he told them that the orders which he had received from the king of England to put an end to the war, were peremptory; and, dismissing them, made arrangements to send messengers immediately to Coomassie with a view to improve the recent victory by negotiating an honourable and lasting peace: but this conciliatory plan was defeated by the continued opposition of the chiefs. At length, however, by a combination of favourable circumstances, Major Ricketts succeeded in opening a negotiation; when the terms proposed to the king, with the approbation of Kujoh Chibbu and the other native leaders, were, that he should lodge four thousand ounces of gold in the castle at Cape Coast, to be appropriated in purchasing ammunition and arms for the use of the British allies, in case the Ashantees should again commence hostilities; and that two of the royal family of Ashantee, whose names were mentioned, should be sent to Cape Coast as hostages.

To these terms the king of Ashantee, although manifesting a great desire to be at peace with the British, was evidently unwilling to accede, and the negotiation languished for years; until, at length, in the month of April, 1831, the king sent down to Cape Coast Castle one of his own sons, named Quantamissah, and Ansah, son of the late king, as hostages, with six hundred ounces of gold to be lodged there as a security for his future good conduct; and thus virtually abandoned the claim which, on the ground of admitted conquest, he had previously urged against the natives upon the coast.—(Dr. Beecham's *Ashantee and the Gold Coast*, pp. 68—80.)

At the end of six years the gold was returned; and the present king, Quako Duah, who had in the mean time succeeded his brother, Osai Ockoto, consented that his nephews, who had been given up as hostages, should be sent to England for education. This was

done; they were placed under the care of the Rev. Thomas Pyne, a clergyman of the Established Church, and in 1841 were restored to their native land in charge of the expedition dispatched to the Niger in that year. Both are described as promising young men; but Ansa has especially devoted himself to carrying on the work of Christian civilization among his countrymen, ably commenced by the Wesleys in 1834.

It is a pleasing sequel to this, for the most part painful narrative, to record the gratifying reception which the King of Ashantee gave to Sir William Winniett in October, 1848, when that officer proceeded to visit him as the representative of the queen to convey various presents, and to endeavour to induce the Ashantee monarch to abolish human sacrifices. The governor was accompanied by Captain Powell, and a company of the 1st West India regiment as a guard of honour, and 160 men, consisting of the band, hammock-bearers, servants, &c. He reached Coomassie ten days after leaving the coast, having lodged several nights during his route at the Wesleyan Mission school-houses, and was hospitably entertained for eighteen days at the spacious Wesleyan mission-house in the Ashantee capital. The king welcomed his visitor in right regal style; salutes of musketry were fired at every village as he traversed the kingdom; and on his arrival at Coomassie, at least 80,000 people had assembled. His reception is thus described by Governor Winniett:—

"At 8 A.M. we reached Karsi; and, after breakfast, prepared for our entry into the capital. Here I was waited on by the king's messengers, who were sent to conduct us into the town. * * * At a distance of about a mile from the town, a party of messengers, with gold-handled swords of office, arrived with the king's compliments. After halting for a short time, we proceeded to the entrance of the first street, and then formed in order of procession. Presently, a party of the king's linguists, with four large umbrellas, ensigns of chieftainship, came up to request me to halt for a few minutes, under the shade of a large banyan tree in the street, to give the king a little more time to prepare to receive me. After a brief delay of about twenty minutes, during which a large party of the king's soldiers fired a salute about 100 yards distant from us, we moved on to the market-place, where the king and his chiefs were seated under their large umbrellas, according to the custom of the country, on the reception of strangers of distinction. They, with their numerous captains and attendants, occupied three sides of a large square, and formed a continuous line of heads, extending about 600 yards, and about ten yards in depth. Under each large umbrella, and towards the back of the line, the umbrellas being placed about thirty yards from each other throughout the whole line, a chief was seated on a native chair, decorated with round-headed nails of brass, silver, or gold, according to his rank, with a narrow space left open among his people in the foreground, that we might see him distinctly as we passed, and, according to the custom of the country on such occasions, wave the right hand in token of friendly recognition. After we had passed along about three-fourths of the line, we found the king surrounded by about twenty officers of his household, and a large number of messengers, with their gold-handled swords and canes of office. Several very large umbrellas, some consisting of silk velvet of different colours, shaded him and his suite from the rays of the sun. The king's chair was richly decorated with gold; and the display of golden ornaments about his own person and those of his suite was most magnificent. The lumps of gold adorning the wrists of the king's attendants, and many of the principal chiefs, were so large, that they must have been quite fatiguing to the wearers.

"The King of Ashantee is about six feet high, stout,

and strong built, and appears to be about from fifty-two to fifty-six years of age. He is a man of mild and pleasing countenance, and quite free from any of those shades of native ferocity which are so disgusting to the taste and feelings of an European.

"We occupied about an hour in moving in procession from under the banyan tree, where we had rested on entering the town, over a space of about a mile and a half in length, to the end of the line formed for our reception; after which, we proceeded to an eligible situation in an open space at some distance from the market place, and there took our seats, according to the etiquette of the country, to receive the complimentary salute of the king and his chiefs in return. At 3.15 P.M. they commenced moving in parties, in procession, and occupied the ground before us from five to ten deep, until 6 P.M., a period of two hours and three quarters. Those whom we first saluted in the market place passed us first in order, maintaining the greatest regularity; each chief was preceded by his band of rude music, consisting chiefly of drums and horns, followed by a body of soldiers under arms, and shaded by a large umbrella; those of the highest rank stopped before me, and danced to their rude music, by way of testifying their satisfaction at seeing me, and their good-will towards me. The king was preceded by many of the officers of his household, and his messengers with the gold-handled swords, &c., and other officers of the household followed him; some of his favourite wives also passed in procession. When the king came opposite me, he first danced, and then approached me, and I took him cordially by the hand. After the king, other chiefs, and a large body of troops, passed in due order, and at 6 P.M. the ceremony closed. During the whole of the day the greatest excitement prevailed in the town, the population of which was swelled by strangers called in by the king, or detained after the close of the recent Yam custom, on account of my visit, from the usual amount of about 25,000 to upwards of 80,000.

"Coomassie is very different in its appearance from any other native town that I have seen in this part of Africa; the streets are generally very broad and clean, and ornamented with many beautiful banyan trees, affording a grateful shade from the powerful rays of the sun; the houses looking into the streets, are all public rooms on the ground floor, varying in dimensions from about 24 feet by 12, to 15 feet by 9: they are entirely open to the street in front, but raised above its level, from 1 to 6 feet, by an elevated floor, consisting of clay polished with red ochre; they are entered from the street by steps made of clay, and polished like the floor. The walls consist of wattle-work plastered with clay, and washed with white clay; the houses are all thatched with palm leaves, and, as the eaves of the roofs extend far over the walls, the front basement of the raised floors, which is generally covered with rude carvings of various forms, have their beautiful polish preserved from the effects of both sun and rain. This mode of building gives to the streets a peculiar aspect of cheerfulness. Each of these open rooms is connected with a number of rooms behind it, quite concealed from public view, which constitute the dwellings of the people, and there may be connected with each public room, in the manner above described, from 50 to 250 inmates. Immediately after the procession had closed, we repaired to the Wesleyan mission-house, where we found comfortable arrangements made by the Rev. Mr. Hillard, the missionary resident in Coomassie, for convenient quarters during our stay.

"Greatly as I had been interested with the manner in which the king received me, the appearance of such a vast number of uncivilized men under such entire control, the new style of building exhibited, and its pretty contrast with the ever fresh and pleasing green of the banyan trees, I was equally interested and excited at the appearance of the Wesleyan mission-house,—a neat cottage, built chiefly with the teak or edoom wood of the country, containing, on the second floor, a large hall, and two airy bed-rooms, entirely surrounded by a spacious verandah; and, on the

first floor, a store-room and a small chapel, or preaching room; in the front, looking into one of the finest and most open streets in the town, is a little garden, planted with orange, lime, bread-fruit, and fig trees (the two latter having been recently introduced from the coast), and behind the house, a spacious court-yard, planted with the sour-sop tree, and surrounded by rooms consisting of servants' and workmen's apartments, so simply constructed, and yet so spacious, as to afford room, without any inconvenience, for quarters for the whole of the men consisting of the guard of honour. As I sat down in the airy spacious hall in the cool of the evening, after all the toils and excitement of the day, and contemplated this little European establishment, planted in the midst of barbarism, 200 miles into the interior of Africa, exhibiting to thousands of untutored pagans the comforts and conveniences of civilized life, and the worship of the true God, I could not but think deeply and feelingly on the great triumph thus achieved by Christianity and civilization."

The first royal present sent to the embassy consisted of two bullocks, four sheep, six pigs, turkeys, ducks, guinea-fowl, poultry, pigeons, yams, rice, plantains, eggs, honey, oranges, ground nuts, sundry vegetables, &c. The present was conveyed by 550 men, accompanied by several officers of the king's household and their retinue, amounting to not less than 300 men, in order to mark the good will of the king, and his sense of the gracious notice of the British Queen.

Respecting human sacrifices, his majesty said—"the number had been greatly exaggerated: attempts had thus been made to injure his name; and he hoped that reports flying about the country would not be believed," adding:—

"I remember that when I was a little boy, I heard that the English came to the coast of Africa with their ships, for cargoes of slaves, for the purpose of taking them to their own country and eating them; but I have long since known that the report was false; and so it will be proved, in reference to many reports which have gone forth against me." To which the governor answered, that he believed his majesty, and he hoped the king would not forget, that in every life which he saved from sacrifice, he would be considered as conferring a favour upon the Queen of England and the British nation."

The country palace of the monarch is called *Eburasu*, distant three and a-half miles from Coomassie, by a good road kept in excellent order; and the king drives about in a beautiful and well-appointed phaeton, which was presented to him by the Wesleyan Mission in 1841, and which is evidently prized, by the care with which it is kept. The premises at *Eburasu* cover four acres; the ground is high, and the country open. A sumptuous entertainment was given at this residence to Sir W. Winniett, who thus describes its interior, and the feast set before him:—

"Many of the rooms around the squares were occupied with neat bedsteads of European manufacture, dressed with silk hangings, and decorated with mirrors, pictures, time-pieces, fancy boxes, chandeliers, and many other articles of European manufacture. After passing through and examining the principal apartments, we entered a square where the table was set for dinner, under the shade of some large umbrellas, about ten feet in diameter, and the king immediately entered, and engaged freely in conversation with us; in a short time dinner was placed on the table, in a manner quite consistent with English table, and it was really very nicely served up; it consisted of soup, a sheep roasted whole, a sheep dressed in joints, a turkey, fowls, a variety of vegetables, plum-pudding, oranges, ground-nuts, &c., ale, wine, and liqueurs. The king excused himself from actually sitting and eating at table, on the ground of his inability to use, with ease, a knife and fork like an European, but he sat opposite me,

and looked on with great interest, took wine with me and the gentlemen of my suite, and talked with great freedom on ordinary topics of conversation. At all our previous interviews he has generally been dressed in a rich cloth, but on this occasion he wore an officer's uniform. After dinner the king took us to the apartments of the ladies of the court, and introduced me to them, declaring that no Ashantee, not even a favorite chieftain, had ever been introduced to that part of the palace, or to the ladies occupying it."

The king expressed throughout the most friendly feelings towards the British nation. Independent of the advantages derivable from his alliance for the suppression of slavery and barbarism, our mercantile classes will perceive that this extension of civilization in the interior of Africa must largely benefit our commerce, nor should it be forgotten that the progress already made is due almost exclusively to the disinterested and devoted labours of missionaries and missionary societies.

PHYSICAL FEATURES—TOPOGRAPHY.—The seashore of the district to which the attractive name of "The Gold Coast" has been given, on account of the considerable quantities of the precious metal found in its alluvial soil and in the channels of the water-courses, extends between the Assinee River and Cape St. Paul, for a distance of about 286 miles. Viewed from the sea, it is chiefly characterized by a considerable projection at *Cape Three Points*, which is situated about 66 miles from the northern, and 220 from the southern points above named. The beach throughout is sandy, with occasional rocky prominences, on which there is generally, with the south or west wind during the rainy season, a heavy swell and high surf. The shore affords little shelter or safe anchorage; there are no navigable rivers; and a great dearth of harbours and good roadsteads; even Accra and the Rio Volta having merely boat entrances. In addition to these disadvantages to the prosecution of maritime commerce, is a scarcity of wholesome fresh water.

For nearly 200 miles from the Assinee to Accra, the coast region is marked by gentle elevations, rarely exceeding 500 feet in height; it is thickly wooded with low trees, and intersected by rivers or rivulets, in whose vicinity are many marshes and salt lakes, which dry up during the months of December, January, and February. A deep rich clay predominates in the lower land.

In the neighbourhood of Accra the country is more level; the light, dry, and sandy soil rests on horizontal strata of primary sandstone; vegetation is exuberant; and the native towns are numerous and well populated. The scenery in some parts is pleasing; consisting of extensive plains, interspersed with clumps of trees. In the interior the land frequently rises into lofty mountains, and presents extensive and unexplored forests, tenanted by elephants, tigers, jackals, &c., and many kinds of venomous reptiles. The sea border, eastward to the Rio Volta, continues somewhat similar in appearance, but inferior in fertility. Towards the river it is more thickly wooded, and abounds in game.

The various forts and settlements at present or formerly occupied, and in either case still claimed by England, may perhaps be best shown by beginning with the most northerly, and describing them in the order in which they occur along the coast, noticing, in passing, the Dutch commercial stations (occupied and unoccupied) in their vicinity.

* Copies of Despatches, &c., Parl. Papers, 14th of June, 1849; p. 169.

Cape Appolonia lies about thirty miles to the south-east of the Assinee River, in $5^{\circ} 10' N.$ lat., $2^{\circ} 36' W.$ long. The African company had formerly a small fort and settlement here, but the trade was not extensive, or deemed likely to become so, while the anchorage was bad and the spot unhealthy, from its low and moist character of rank vegetation, and vicinity to a marshy lake of some miles in circumference.

About twenty miles beyond Appolonia is the River Cobre, with the town of Axim, and a Dutch fort and factory on the eastern side of it. The fort is built on a small rocky promontory, and is accessible only on one side. The landing-place is good, but the tract is unhealthy, and the river navigable merely by canoes, but rich in gold dust, which is borne down by its current from the interior. The land is low and wet, but the negroes successfully and industriously cultivate both rice and maize. (Boyle's *Western Africa*, p. 322.) On the more hilly and elevated coast, towards Cape Three Points, is a smaller Dutch fort, called Brandenburg Castle. The cape derives its name from presenting to the sea three points, between which are two bays with sandy bottoms, good anchorage and lading; on the shores of the more easterly the Dutch have a now abandoned fort, at a place called Arquidah. Twelve miles from Arquidah is the British settlement of *Dix Cove*, which is far better situated for commercial purposes than any of the stations before mentioned. It is situated sixty miles to the westward of Cape Coast Castle, and is the only place on this part of the coast where vessels of even thirty tons can enter. There is an abundant supply of refreshments, and of wood and water; the anchorage and landing-place are safe and tolerably convenient, but the surf is at all times considerable, and communication with the shore sometimes impracticable for the space of two or three weeks. The fort, which is large, in good repair, and mounts about twenty-four pieces of cannon, is built on an elevated prominence, forming the extremity of a considerable creek, accessible only to boats, being barred by coral reefs. The place derives its importance from its vicinity to the great pathway to the inland districts of Tuffero and Warsaw. Between Dix Cove and the River St. John, in $5^{\circ} 10' N.$ lat., and $10^{\circ} 28' W.$ long., which is navigable by boats nearly twenty miles, there are several small commercial stations; and at one of these, *Succondee*, there were two small and abandoned forts, one Dutch and the other English; as also in the district of *Commenda* or *Kommani*, which extends about fifteen miles along the coast beyond the St. John. The Dutch and the British forts stand near together, the former on a little mount known by the name of the Gold Hill. *Succondee* has a good landing-place, the country behind it and *Commenda* is fertile, and the people are quiet and tractable. About eight miles to the eastward of *Commenda* is *St. George del Mina*, or *Elmina*, on a small river, which affords considerable accommodation for coasting craft. This, the earliest West African station of the Portuguese, and now the chief Dutch settlement, with its commanding and well-built fortifications, still presents a very formidable appearance, though it has been of late years much neglected. The town is long, irregularly built, and thinly inhabited: it stands on a low and flat peninsula, bounded by the ocean on the south, the River Benja on the north, the Castle Mina on the east, and *Commenda* on the west. This once powerful and valuable commercial

DIV. VII.

station is now of comparatively small importance. Ten miles to the eastward of it lies the principal British settlement on the Gold Coast.

CAPE COAST CASTLE, in $5^{\circ} 6' N.$ lat., $1^{\circ} 10' W.$ long., distant from Sierra Leone 1,100 miles, is built upon an insignificant eminence, about fifty feet in height. The cape itself, called "Cabo Corso" by the Portuguese, is a low angular point of sandy land, jutting out into the sea. The anchorage is but indifferent, and there is no river either for the supply of the shipping or the town with water. The castle (see Map) is an irregular figure of four sides, with bastions at each angle, mounting in all from 80 to 100 guns. An extensive line of buildings, three stories high, runs north and south, dividing the fort into two nearly equal parts, and comprises the government house, &c. A structure, similar in height, extends eastward, and occupies a triangular space of considerable extent.

The garrison is chiefly supplied with water by means of tanks constructed for the reception of all the water that falls on the different roofs of the buildings in the castle.

A large tract of adjacent country, formerly covered with wood, has been cleared, and is now under cultivation. At a distance of about two miles to the eastward, a chain of hills, forming an irregular amphitheatre 160 feet above the level of the sea, commences and runs in a semicircular direction, approaching the castle at some places within a quarter of a mile, and terminating on the shore a mile to the westward of it. There are no mountains within several miles of the Cape, the highest land not rising above 200 feet; nor are there any plains of great extent; clumps of hills, with their corresponding valleys, are however everywhere to be seen. The soil near the coast is considered sterile, but about four miles inland it is rich, unusually deep, fit for most descriptions of tropical produce, and generally covered with dense jungle, very beautiful to the eye, but fearfully inimical to health. Governor Winniett, during a mission to the king of Ashantee, in October, 1848, before adverted to, traversed a large extent of fine country; at six to twelve miles from Cape Coast Castle, he found a fertile tract, studded with silk cotton trees, palms, and plantations of the plantain and banana. As he proceeded further inland the region became more populous; and between the sea-coast and the *Prah River* (distant 100 miles from Cape Coast Castle), which forms a boundary of the Ashantee kingdom, he passed through forty-eight villages (many of recent creation), whose population was estimated at 17,760. The Prah, at the ferry where he crossed, is about eighty yards wide; from bank to bank about 100; current, three miles an hour. The scenery is rendered very attractive by the elegant and varied foliage of the trees.

The native towns on this coast are generally built close to the walls of the European forts; the dwellings are principally constructed of clay (*swish*), covered with Guinea grass, and so crowded together as to render it almost impossible to pass through the spaces allotted for streets; ventilation is of course very imperfect, and the villages are consequently too often productive of disease, not only to their inhabitants, but also to the Europeans who reside near them.

To this description, Cape Coast Town, and some others, are, however, exceptions. About five miles north-west from the castle is a small river, running

in a southerly direction, and emptying itself into the sea within two miles of Elmina, forming the boundary between the Dutch and British possessions.

At *Annamaboo*, eleven miles to the eastward of Cape Coast Castle, we have a good fortification, mounting about twenty pieces of cannon, built in a quadrangular form, on the very margin of the shore, the sea washing the base of the southern boundary wall. The anchorage is tolerably good. A considerable native town surrounds the fort in the form of a crescent, beyond which inland the country rises into hills, and is densely covered with underwood, and some large trees. The Dutch had a military post (Fort Amsterdam), now abandoned, about six miles further to the eastward, separated from that of the English by the little river *Cormantine*. A bold coast extends for about fifteen miles from Fort Amsterdam to *Tantamquerry Point*, near which there are two deserted British and Dutch forts; a short distance beyond is the town of *Winnebah*, where the British had a strong fort, abandoned in 1812. From *Winnebah* to *Accra* there is an irregular sea-line of about nineteen miles.

Accra lies in about $5^{\circ}33'$ N. lat., and $0^{\circ}5'$ W. long., about 100 miles to the north-east of Cape Coast Castle. The view from seaward is picturesque, the houses white and regularly built, stand in an extensive grassy plain, studded with "bush," or groves of varying foliage, presenting the appearance of an extensive park. As the voyager advances towards the river *Succomo* the prospect widens, and is finally bounded by high lands, whose slopes yield excellent sheep pasturage. The country round is in general a fine, open, and level land; the soil differs, presenting a sandy, reddish, or black rich mould, suitable for agriculture, and in many parts for the cultivation of the sugar-cane and of the cotton-tree, which grows spontaneously. There are three forts at *Accra*; that named *Crevecoeur*, belonging to the Dutch, is in a very dilapidated state. *James' Fort*, belonging to England, within a cannon-shot of *Crevecoeur*, has been recently rebuilt, and has barracks for seventy-five men and three officers, an hospital for thirty patients, and mounts about thirty pieces of cannon.

The third fort is the most westerly, and likewise the most important of those recently purchased by England from the king of Denmark. *Christianborg Castle* is a fortification of considerable extent and strength, and when transferred, in March 1850, had forty guns mounted on its battlements. The officers' quarters are good, and the suite of apartments occupied in past times by the Danish governor, spacious and convenient. There is a martello tower a few hundred yards to the westward of the castle; it will mount twelve guns, has two upper rooms, and store rooms underneath, and is surrounded by a substantial brick wall. The town, built on rising ground, has in it an immense tank, constructed by the Danes. About a mile from the beach is the government property of *Fredericksborg*, comprising two large and excellent stone houses, also made over to us. Among the stores in the castle there were 60 cannon of different sizes, including two brass field guns, with ammunition carriages and four rocket guns, complete. *Tasie* (where there is a small half ruined Danish fort), *Temma* and *Pona*, near the mouth of the River *Elae*, are native villages on the coast, which were passed, with the other dependencies of Denmark, to England. A few miles to the eastward of *Elae* is the thriving British station named *Pram Pram*, and

seven miles further is the *Ningo River*, at the mouth of which there is a town, with about 1,000 inhabitants. It has some factories, and like *Pram Pram*, carries on a considerable trade in palm oil. A beautiful plain then skirts the coast for many miles, bounded to the north by the lofty *Siai*, *Krobbo*, and other mountains, one of which, called *Ningo Grande*, towers above the rest in the form of a sugar-loaf. The Danish, now British, fort (*Friedensburg*) at this station, is in ruins.

The country between *Ningo* and the *Rio Volta*, distant about 40 miles, is very low, an extensive belt of flat open country stretching between the beach and a wide expanse of marshy ground, which is under water during the rainy season, and in dry weather presents the appearance of small shallow lakes, surrounded by a scanty vegetation, on which herds of majestic deer find pasture. Here and there near the shore are some bee-hive formed huts, whose rude and diminutive appearance testifies how little art has done for the comfort of the inhabitants; and contrast strikingly with the abundant natural store of "bullocks, sheep, goats, turkeys, ducks, fowls, &c." with which Sir Wm. Winniett found them supplied in 1850. The mouth of the *Volta* is deep, and about half a mile wide, but has a dangerous bar, a short distance within which the stream expands into a basin two to three miles broad, which contains several islands covered with brushwood. The banks are low, of thick black mud, in most parts swampy, densely overgrown with mangrove bush and other aquatic shrubs and plants; and, together with much of the adjacent country, overflowed during the rains. *Fort Adda*, or *Koningstein*, is situated on the right bank of the *Volta*, about ten miles from its entrance. The river is here half a mile wide, and of considerable depth, but its navigation is interrupted by shallows.

The fort is in some parts dilapidated, but there are three available rooms for officers, and nine for troops and stores. *Atoko*, with about 3,000 inhabitants, and another adjacent village near it, with an equal number, are situated a few miles to the eastward of the *Volta*. The dwellings are, with few exceptions, of the usual bee-hive form. Mr. Baeta, a Portuguese merchant, has resided here for ten years.

Augna, seven miles to the eastward, is the chief town of the district, and of similar appearance to *Atoka*. At these as well as at the other places, the leaders, or "headmen" readily acknowledged the transfer of the sovereignty to Britain, as did the few Danish residents, throughout the ceremonies attending the change of flags, though these last, especially in *Accra*, could not but look on the proceeding with natural regret. The *Augna* country comprises the territory from the eastern side of the *Volta* to *Quistah*, a distance of about forty miles; it is quite flat, unbroken by a single hillock. At a few miles from the coast it is skirted by a shallow lagoon of some miles wide, containing several islands, which have on them many villages and plantations, but the largest towns are on the plain. The soil is light, sandy, and moist—very productive of grass and all kinds of vegetables, and abounding in magnificent groves of cocoa-nut trees, beneath whose shade the native habitations are frequently constructed. Fine droves of bullocks graze in every direction; turkeys, ducks, and all kinds of poultry, are plentiful, while the palm-tree adorns the scenery, and contributes to the wealth of the industrious people. This rich country

furnishes nearly all the live stock consumed by the European and respectable native residents along the sea border we have now been examining. Cape St. Paul, to which the Gold Coast is sometimes considered to extend—other geographers considering the Volta the boundary—is a very low, projecting point, about fifteen miles further to the eastward. *Quittah*, thirteen miles beyond Cape St. Paul, has a Danish (now British) fortification of considerable strength, in good repair, on which twenty guns may be conveniently mounted. It contains six officers' rooms on the battlements, five large store-rooms underneath, and six other rooms, affording space for the permanent residence of at least fifty soldiers. It stands on a narrow neck of land, about midway between an extensive lagoon and the beach of the Bight of Benin, and entirely commands the plain, which at this place is not a quarter of a mile wide. The once flourishing town of *Quittah* was destroyed by the fire from the fortress some time since, in consequence of a dispute between the Danish authorities and the natives, who now propose to rebuild their habitations, under British protection. The country around was conquered by the local government of Christianborg, at considerable expense, in 1788-9, in consequence of the Augna people kidnapping and selling into slavery, traders and other persons from the west side of the *Volta*.

The tract of country to the westward of the Rio Volta, formerly belonging to Denmark, now to England, is extensive, and stretches some way into the interior. The portion near the lower part of the river is uninhabited; further west it consists of lofty isolated hills, with verdant plains, studded with myrtle, palm, and other trees.

Akim, the most inland of our new possessions, borders on the Ashantee country, and is about 100 miles from the coast. The soil is very fertile, the country extensive, and occupied by one of the largest tribes in this part of Africa. Farther to the eastward, bordering on the Volta, *Kripang Tujeng River*, and their numerous tributaries, are the Aquambus, Crepees, and other tribes, who held Danish flags, and recognised the authority of the Danish crown. From the late Sir W. Winniett's recent tour, we derive some acquaintance with the territory inland between the *Sakumo-fo River* to the westward of Christianborg and Pram Pram. The country is watered by several fine streams, which descend from the Aquapim Mountains, or from Siai, Krobbo, and other hills. Krobbo, to the northward of Siai, is of considerable elevation, and has villages perched on its summit, amongst immense blocks of granite, and handsome trees and shrubs, so that, at some distance, it is difficult to distinguish the houses. Three miles from the foot of Krobbo Mountain there is a low well-watered tract stretching to the *Aquapim Mountains*, and very thickly studded with palm trees. In the centre of this fertile plain, the chief of Krobbo has established a palm oil factory, and in the midst of the oil-pits, with all the movements of busy industry going on around him, he received Sir W. Winniett as the representative of his sovereign.

Akropong, the chief town of the Aquapims, is situated on the summit of the Aquapim Mountains; it has a population of about 1,000 souls; and under its control and influence are sixteen villages scattered for many miles along the crest of a ridge of hills in an extremely fertile district. The Aquapims are, in manners and customs (save in that of human sacrifices, which the Danes prohibited) very like the

Ashantees. The chief of *Akropong*, accompanied by his headmen and a number of attendants, received the British Governor, on 20th March, 1850, with a salute of musketry. After conversing in a satisfactory manner with Governor Carstensen on the subject of the transfer of the settlements, he and his headmen, each in order from the lowest to the highest, took a sword by its point, held it almost at arm's length, with the handle towards Sir William Winniett, and vowed, according to the fashion of the country, fealty to the Queen of England. The ceremony was very interesting, and took place in the Mission premises belonging to the Basle (Swiss Missionary) Society. The station is prettily situated in a grove composed of noble orange trees, with a few fine West Indian mangoes. It contains four dwelling-places for the missionaries and their families, five cottages occupied by West Indian families brought over in 1842, a school-room, carpenter's and blacksmith's shops and other offices; and about ten out of forty acres adjoining the buildings are under cultivation, chiefly coffee trees and arrow-root. There are some seventy children in the school, and twenty natives of *Akropong* are members of the little church.

The Aquapim country is considered to be well adapted for agriculture. The Danish Governor of Christianborg (M. Schionning) says, "as to beauty of prospect, pleasing variety, and local advantages, I never saw any thing equal, nor can I compare any part of the world, where I have been, to it."—(Beecham, p. 142.)

There is also another settlement in the mountains, named *Abodi*. *Frederiksgar*, which has a convenient government house, a grove of orange trees, and a coffee plantation, is situated at the base, twelve miles from Christianborg.—(Parl. Papers, July, 1850.)

YORUBA AND ABBEOKUTA.—British influence is now paramount in a portion of the ancient kingdom of *Yoruba*, lying due north of the Bight of Benin, between 6° 10' N. lat., and 2° 6' W. long. *Abbeokuta*, the chief town of the Egba province of Yoruba, contains 50,000 inhabitants, and is situated on the river Ogu, which is navigable for about fifty miles down to the sea at the island of Lagos. European missionaries (Church of England) first visited *Abbeokuta* in 1845, and have succeeded in establishing there one of the most successful missions on the Guinea Coast. The Egba chiefs are characterized by their aptitude and desire for lawful commerce; and their markets are frequented by traders from the Niger, and the interior of Africa. They are entirely opposed to the slave trade, and have lived for years in constant dread of the slave hunts and hostilities of their powerful neighbours, the tyrant ruler of, or "leopard," of Dahomey, and a slave dealing chief named Kosoko, who usurped his relative Akitoye's authority over that stronghold of the West African slave trade, Lagos Island, which commands the mouth, and consequently the commerce of the Ogu River. About 3,000 liberated Africans have proceeded to *Abbeokuta* from Sierra Leone, accompanied by several members of the society, including the Rev. Samuel Crowther, an ordained minister, of negro origin, possessed of great zeal and considerable talent; who has published a valuable grammar and vocabulary of the Yoruba language.

Towards the end of 1850, it became evident that the various parties interested in the continuance of the slave trade had resolved upon making a combined effort to crush the rising Christianity and commerce of *Abbeokuta*, expel the missionaries, and reduce the

inhabitants to slavery. In March, 1851, the king of Dahomey sent a powerful army to attack the town. Masses of trained warriors, male and female, estimated at from 11,000 to 16,000, well armed with muskets, advanced upon the low mud-wall of Abbeokuta, and fought with desperation, but were completely routed, leaving 1,209 dead on the field of battle. The signal success of the Egbas, and their subsequent unusually gentle treatment of their prisoners, exercised a very beneficial result on the surrounding nations. Their security has been further promoted by the reduction of Lagos by the British, under Commodore Bruce, in December, 1851, the restoration of Akitoye, and the formation of a treaty with him for protection to missionaries, freedom of commerce, abolition of slave trade, and human sacrifices. It would be, of course, unreasonable to expect all this at once, but the influences of religion and commerce are operating in various ways, and inclining even the more warlike tribes to keep faith with Great Britain.

CLIMATE AND DISEASE.—A nearly vertical sun for the greater part of the year—excessive rains brought by the westerly winds from the Atlantic—a rank vegetation, and extensive marshes, produce here, as elsewhere, a *malaria* or *poisonous air* which is destructive of human, and especially of European life; two out of every five Europeans having been estimated to die of the seasoning or remittent fever which all new comers experience. Latterly an improved therapeutical system has been adopted; venesection abandoned, and large doses of quinine have successfully checked the fever, instead of being administered only when the crisis had passed. Several individuals, by moderation in diet and care, have enjoyed good health on this coast; and the mountainous country behind Accra would doubtless be found salubrious.

The rainy season commences at the end of April, or beginning of May, and continues with severity until July or August. Dense humid fogs succeed, and prevail till October, when the sky clears, and the dry or healthy season begins. The average temperature is about the same range as that of Sierra Leone. There is a regular sea and land breeze along the coast; but the latter, which sets in about 5 P.M. from the south-east, is so laden with moisture as to cause a sensation of chillness beyond what the thermometer indicates. During the Ashantee War, 1823 to 1826, it was found necessary to send white troops to garrison the forts; a part of the Royal African Corps, which had been disbanded at the Cape of Good Hope, was re-embodied, and strengthened by commuted punishment men from regiments serving in England. They were a degraded class, and a noxious climate acts with peculiar severity on men with depressed minds. Two-thirds of the corps died annually; and in 1824 the deaths nearly equalled the mean strength of the garrison. Few lived to complete one year in the command. In 1828 the surviving white soldiers were removed to Fernando Po, and none have been employed at Cape Coast since. The mortality of the black troops employed there is only from two to three per cent. per annum.

GEOLOGY AND MINERALOGY.—The geological characteristics of the country are almost unknown. Gold is extensively distributed. The late President McLean informed me he had seen large districts where the soil was entirely impregnated with fine particles of the precious metal; there are, therefore, probably extensive deposits in the mountains, of

which portions are comminuted, and washed down into the lowlands by the rains. That brought by the natives for barter, is obtained by washing the sands of rivers, and other places, where the metal is known to be diffused.

GOVERNMENT.—The British forts on the Gold Coast were, the reader will remember, erected by, and long remained under the control of the different African companies, the last of which received annual grants from Parliament for its maintenance from 1750 to 1821. When the company was abolished, several of the forts were abandoned, and the remainder surrendered to the Crown, and subjected to the authority of the Governor of Sierra Leone. In 1827, the retained forts were placed under the management of a London committee of African merchants, to whom was confided the disbursement of the small annual parliamentary grant, amounting to about £4,000 a-year.

The chief authority is now vested in a Lieutenant-Governor, aided by a small council, and subject to the orders of the government at Sierra Leone. A judicial assessor, or assistant of the native chiefs, appointed by the Queen, holds an open court at Cape Coast Castle every Monday, Wednesday, and Friday, when all "*palavers*," as trials are termed by the natives, are publicly held. His duty is to maintain the due authority of the chiefs, to civilize their judicial proceedings, to mitigate their punishments, and to substitute for a barbarous and cruel tyranny the principles of humanity and justice. His jurisdiction is of undefined extent; and, indeed, his position appears anomalous; but the appointment has nevertheless been productive of very beneficial results. Acting-Lieutenant-Governor FitzPatrick, in a despatch to Earl Grey, dated 10th March, 1850, says, "There is scarcely a public or private wrong which he (the assessor) is not called on to remedy, or a right of the greatest magnitude as well as of the most trifling nature which he has not to establish and maintain. On one day he has to pass judgment on a powerful chief who travels through the country for ten or twelve days, surrounded by his armed followers, to lay his wealth, his liberty, and it may be his life, at the disposal of a judge whom he has never seen, but whose justice he confides in, and whose power he fears, from the character of the country which employs him. And on the next day he is asked to decide the amount of compensation that should be paid to an injured husband, one of whose numerous wives has had her garment rudely touched by a stranger."

According to the same authority there is not a chief, however powerful, within the limits of British jurisdiction, who does not feel, that if he persecutes, extorts, tyrannizes, or commits any crime against the weakest of his people, he is sure to be brought to account for it. There are resident magistrates who are also commandants at Annamaboo, Dix Cove, and Accra, and the judicial assessor visits their courts twice a-year to hear appeals, and to review the magisterial business.

There is no jurisdiction whereby a white man can be tried for felony on the Gold Coast; he must be sent to Sierra Leone, or to England.

MILITARY DEFENCE.—About eighty soldiers of a West India Regiment, and a local force, 100 strong, termed the *Gold Coast Corps*, are, owing to the respect paid to the British name, enabled to preserve tranquillity along this coast. There is also a militia available in case of war. The pay of the

local corps is, per man, 25s. a month. Their character and conduct is good.

POPULATION.—The British territories on the Gold Coast have been for some years free from the evils of the slave trade, war, pestilence, or famine. Population is therefore increasing, and is loosely estimated at 400,000 souls, scattered over an area of about 8,000 square miles. There has been no census taken of the inhabitants of the territory newly acquired from Denmark. The total white population is thirty-three, of whom three are females. The Gold Coast natives are a large and finely-formed race, possessed of great physical strength; and in intellect they prove, when educated, in no respect inferior to Europeans. The habits of the people are greatly improved; they have abandoned human sacrifices; and alleged criminals, instead of being arbitrarily put to death by their chiefs, are now sent to Cape Coast Castle, to be tried by the English authorities.

RELIGION.—The Established Church of England has no representatives here; but the Wesleyans have exerted themselves nobly; and at every fort, and in each large village, they have a clerical or lay teacher, and a school-house. The Basle Missionary Society are also labouring worthily among the natives. There are no official returns on the subject; and, indeed, until very recently, neither local or general governments seem to have considered the state of religion, or its ordinances, as in any manner connected with the welfare and progress of the people committed to their charge.

EDUCATION.—There is a government establishment for the instruction of 150 boys within the fort at Cape Coast Castle, and schools for males and females at the several missionary stations. The Wesleyans alone spend £5,000 annually on the coast. Many of the coloured children exhibit much quickness and intelligence; several have already become shrewd merchants, and now import from England annually, on their own credit, goods to the value of £20,000 to £30,000. The native merchants were so gratified by the results of a public examination of the government and Wesleyan schools in 1851, that they made a donation of £50 towards their funds; and, together with all their countrymen under British protection, have cheerfully agreed to the imposition of a moderate tax for educational purposes, by which means instruction will be imparted to the natives farther in the interior.

Many of the adults of the newly-raised *Gold Coast* corps are now being taught in a regimental school, and when stationed at the different forts, their example and conduct will, it is hoped, tend greatly to the abolition of the barbarous "fetish" system, with its idolatrous worship, and human sacrifices; and also of polygamy, but this last change, desirable as it unquestionably is, ought not, perhaps, to be insisted on too peremptorily at first. The initiative, in a very important measure, has been adopted by the Rev. T. B. Freeman, a coloured gentleman of great talent, who has laboured successfully, since 1841, on this coast, and in different parts of the inland country. He states, in a valuable report forwarded by Governor Hill to the secretary of state, in July, 1852, that experience had convinced him that a system of education, unconnected with manual

labour and useful industry, however partially valuable, could not furnish that large number of youths, possessing Christian knowledge, blended with those habits of steady industry, without which civilization in Africa could never be healthy and progressive.*

Mr. Freeman saw, also, that petty trading, associated as it generally was with an extensive retail traffic in ardent spirits, produced an injurious effect on many youths who had received an ordinary English education; and he rightly judged, that the cultivation of the soil, and the rearing of new and valuable products, would be a powerful instrument for effecting permanent moral, social, and commercial progress. He therefore established an agricultural school, in July, 1850, at *Beulah*, eight miles from Cape Coast Castle. The area under cultivation has been gradually extended; and in February, 1852, it consisted of a tract 400 yards long by 300 broad, traversed by pathways or roads, lined with cotton and coffee plants, which, in addition to arrow-root, the olive and vine, corn and vegetables, constitute the staple products. Strange to say, the vine thrives admirably; and in one year after planting, as mere cuttings, yielded bunches of fine ripe grapes. They are planted along a trellis-work, 244 yards in length, made with the stem of the wild date, palm-tree, and wild cane. The cotton plants are of the perennial kind, and yield two pickings yearly. The coffee is equal to the best West Indian produce, as is also the arrow-root. Corn and vegetables supply the scholars, who are divided into three classes, and work on the farm in the forenoon, aided by a few labourers to do the heavy work of clearing the land, grubbing up trees, &c. On the plantation there are cottages for the lay teachers and scholars, for the overlooker, and also a chapel. It is to be hoped that the rational policy so successfully initiated by Mr. Freeman on the Gold Coast, will be extended to all other missionary educational establishments, not only in western, but in southern Africa, and wherever the laudable endeavour is being made to Christianize and civilize the heathen. To set forth manual, and especially agricultural labour, in its true light, as an honourable employment, made essential by the Creator to the support and happiness of man, is the sole means of divesting it of the opprobrium naturally connected with it by slaves or savages; for free, intelligent, and reasoning Christians can alone appreciate its dignity and its uses.

CRIME.—The number of felonies throughout all the stations in 1851 was only 90, and the misdemeanours 32. The total number of prisoners during the year was 158. Murder or acts of personal violence are very rare, and it is stated, fewer than amongst an equal number of any European people.

REVENUE IN 1851.—Taxes, £947; customs, £443; fines, £370; light-houses, £38; sundries, £32; total, £1,830. An income might readily be raised by the imposition of a duty on spirits; of these, about three million gallons are annually imported, which, at one penny per gallon, would yield £12,500 per annum. At present the custom duty levied is merely one-half per cent. *ad valorem*, on all imports.

EXPENDITURE.—The cost of the forts on this coast formerly amounted to very large sums, derived from the African companies or from parliament:—From 1800 to 1828 inclusive, the sums in pounds sterling voted by parliament were, 40,000, 20,000, 18,000, 16,000, 18,000, 20,054, 20,138, 18,000, 23,000, 23,000, 23,500, (1811, no return),

* A similar remark had been made some years before, by Mr. A. H. Hanson, the chaplain at Cape Coast Castle, and recently H.M. consul at Liberia.

35,000, 25,000, 25,000, 30,000, 23,000, 23,000, 28,000, 28,000, 25,000, 25,800, 26,742, 17,500, 52,354, 29,500, 36,996, 41,000, and in 1828, 12,000. From 1829 to 1831, £4,000; from 1832 to 1839, £3,500; and from 1840 to the present date, £4,000 per annum. In 1851 the total expenditure for the forts was £6,657, viz: £4,282 for the civil department, and £1,031 for the Gold Coast local corps. The commissariat expenditure for a detachment (80), of the West India regiment and for the forts, was in 1851, £4,287. The total cost to the British treasury in that year was £8,287. The lieutenant-governor has a salary of between £600 and £700 per annum.

COMMERCE.—The aggregate for ten years ending and including 1840, according to Dr. Madden's report, was—exports, £1,691,303; imports, £2,272,654. Excess of imports over exports, £581,351. During the last two years its value has been as follows:—

	Imports.	Exports.	Tons Inward.
1850	£88,656	£259,432	11,758
1851	84,880	219,050	13,935

The exports in 1851, comprised gold dust, 64,000 ounces, value £175,600; palm oil, 13,000 tons, value £39,500; gum, 64 tons, value £1,900; ivory, 13 tons, value £1,500.

Manchester cloths, clothing, provisions, rum, wines, gunpowder, muskets, iron and lead bars, flints, cowries, beads, pipes, tobacco, hardware, brassware, earthenware, glass, soap, umbrellas, &c., form the principal articles of import.

MONIES OF ACCOUNT AND COINS.—As in England. Gold-dust is the principal currency: all large payments are made in it, at the value of £4 per ounce.

Cowries. — A small, compact, univalve shell, is employed as currency to the eastward of Cape Coast Castle, and large quantities form the hoarded wealth of some of the richest natives. Forty cowries are deemed equal in value to one penny English; and about 150 tons of these shells, valued at £80 per ton, are annually imported.

CULTIVATION AND LIVE-STOCK.—The official records contain no tables; it is merely stated, that both are rapidly increasing. About 53,000 acres are estimated to be under cultivation, consisting yearly of fresh land. Maize, millet, guinea-grains, ground-nuts, and coffee, are among the products. Around our forts it is calculated there are about 1,000 horned cattle, 5,000 sheep, and 4,000 goats. At least 1,000 canoes are employed in the fisheries, which are industriously prosecuted.

LIBERIA.—The negro settlement before referred to, situated between Sierra Leone and the Gold Coast, originated with a few American citizens, who in 1816 formed a *Colonization Society*, to promote the migration of free people of colour from the United States to Africa. Two clergymen were sent in the following year to examine and report on the most eligible part of the west coast; and in February, 1820, a body of eighty-six coloured and three white persons, proceeded thither. They first settled on the island of Sherboro, near Sierra Leone, where an intelligent free negro, named Paul Cuffee, had established himself. The position proved ineligible and unhealthy; all the white and three-fourths of the coloured colonists died, and the remainder temporarily removed to Sierra Leone, whence (after being joined by thirty-three fresh emigrants) they proceeded in 1822 to a small island (Providence) near the mouth of the Mesurado River,

and selected the adjacent main as the site of their future capital, named *Monrovia*.

From time to time further migrations took place, and tracts of land were purchased from the native chiefs, so that now, according to a statement kindly furnished me by President Roberts, on the 3rd of November, 1852, "the government of Liberia have extinguished the native title to the whole coast lying between the *She Bar River*, on the north-west, and the southern boundary of Grand Cess, near Cape Palmas, on the south-east; excepting about four miles of the Kroo Coast, about two miles of the Gallinas territory, and perhaps six miles joining the *She Bar*." Of these spots the political jurisdiction and preemptive right of the first two have been ceded to Liberia, and a treaty is now in progress with the chiefs for the other. For the purchases they have been enabled to make, the Liberian government are materially indebted to the liberality of Samuel Gurney, one of the most distinguished members of the worthy Society of Friends, who in 1848 devoted £1,000 to that purpose. Liberia has a coast-line of 350 miles, extends inland for some 40 miles, and comprises an area of about 13,000 square miles. The immigrant population, principally emancipated slaves and their descendants, number about 7,000; the aborigines, who have crowded about the free settlement, amount to perhaps 150,000. A few coloured colonists from Maryland, United States, have settled at Cape Palmas. The money hitherto expended in purchasing territory, and conveying settlers to Liberia, has been about £200,000.

In July, 1847, a republican constitution was adopted. There are two houses of parliament, the *representative* and the *senate*. The elective franchise for the former is a real estate of \$150 annual value, in the possession of a citizen twenty-three years of age. Three members are elected for Montserado county, three for Grand Bassa county, one for Sinoe county, and for every 10,000 inhabitants who may be added to the republic, one representative will be admitted. The election is biennial. The senate consists of two members for each county, elected every four years; franchise, a real estate valued at \$200 annually. A president and vice-president are chosen every two years. Bills passed by both houses, are sent to the president for approval; if he objects, reasons must assigned; if, notwithstanding, the bill be again passed by two-thirds of the members in both houses, it becomes a law. The executive is confided to the president, aided by departmental secretaries of state.

The revenue is raised under a legislative act of 28th January, 1848, which imposes the following taxes:—Regular custom duty, 6 per cent.; woollen, cotton, and linen clothing, 12 per cent.; boots, shoes, hats, and bonnets, 10 per cent., and molasses, 12 per cent.; coffee and soap, each one half-penny per lb.; direct consignments from abroad, 2 per cent. extra; seeds and books, free; commission merchant's license, \$15; retail dealer, \$12; auctioneer, \$16; wine and spirit seller, \$50 per annum. The tariff is therefore far more liberal than that of the United States of America, or of any European nation in commercial intercourse with England. The revenue of £6,000 per annum, barely covers the expenditure. The military defence consists of a militia and a few armed vessels. The face of the country is undulating; at a little distance inland it becomes hilly, and is well watered. Three ports are available for vessels not drawing much water, viz., *Monrovia*, *Edina*, on the St. John's River, and *Bassa Cove* and *Grenville* on the Sinon River.

CHAPTER III.

POPULATION OF WESTERN AFRICA—PROGRESS OF CHRISTIANITY—CHURCH AND WESLEYAN MISSION STATIONS—COMMERCIAL PRODUCTS AND PROSPECTS.

OUR ignorance of Western Africa, beyond its mere coast line, reflects little credit on European science, and is, in a great measure, the result of a career of crime and injustice, which good men of all nations must now deplore, and for which England at least has endeavoured to make some atonement. And yet it is a country calculated to reward most amply the investigation of the geographer, and the naturalist, the attention of the statesman, and the zealous labours of the Christian philanthropist. On no other shore of equal length are there so many navigable rivers, as are comprised within the limits of the *Senegal* on the north, and of the *Congo* on the south, of the equator. Of these immense terrestrial arteries we know comparatively little, and some of them only by name, yet they are believed to drain regions of exquisite beauty, and undoubted fertility, teeming with every variety of animal and vegetable life; and they offer a means of access, together with their innumerable tributary streams, to many kingdoms in different stages of civilization, whose aggregate population is estimated at thirty million souls.

Into the physical geography of these countries, even were our information on the subject less fragmentary than is actually the case, my limits, and the nature of this work, forbid me to enter. It remains, therefore, only to sketch briefly the characteristics which distinguish the leading nations of Western Africa; and the efforts now making for their evangelization, which efforts, it will be seen, are intimately connected with their temporal progress, by tending to develop the varied resources of the country, and to foster its growing commerce. In doing this I am again reluctantly obliged, from press of matter, to have recourse to smaller type.

Three great negro races inhabit the more northern part of western Africa, south of the Senegal River. First, the *Foulahs*, who are the same race with the *Fellatahs* of central Africa, dwell near the banks of the Senegal, Gambia, and other contiguous streams, and occupy the large kingdom of Fouta Jalion to the north-east of Sierra Leone. They have neither the deep jet colour, the flat nose, or thick lips,

which characterize the extreme negro features; their skin is of an olive hue (*footu* signifying *white*) and the expression of their features agreeable. They have generally embraced the Mahomedan religion, having probably received it from the Moors who dwelt on the north side of the Senegal River; but they are devoid of the bigotry which usually marks the followers of the false Prophet. In manners they are peculiarly courteous and gentle; they practise the most liberal hospitality, and relieve the wants not only of their own aged, but those of pagan tribes, who are scattered in different parts of the territory which they inhabit. Their pursuits are chiefly pastoral, and their internal government republican; that is, by chiefs of their own choosing. Such is their good conduct and industry that a blessing is said to rest on any territory which contains a Foulah village.

The *second* race, termed *Mandingoes*, are much more numerous than the preceding—more decidedly negro, both in form and disposition; and more diversified in their character and appearance by subdivision into tribes with distinct names. They are capable of great occasional exertion, but are devoid of the orderly habits and continuous industry of the Foulahs. Their occupations are chiefly agricultural and piscatory; but they also conduct large "Kafilahs" or trading expeditions into the interior, which they do the more readily, from their language being well understood in all commercial places.

They are inquisitive, cheerful, and so gay, that they will dance for hours to no other music than the beating of a drum, or "*tom-tom*." Poetic improvisation forms one of their favourite amusements. This people occupy the elevated region termed *Manding*; they are also widely diffused over the highlands, at and near the head-waters of the Gambia, the Niger, and adjacent streams.

The *third* and least numerous nation are the *Jollofs*, who occupy the inland territory between the Senegal and the Gambia; though of a deep black colour, and decided negro features, they are considered a handsome race. They boast of being a very ancient people, and, in some respects, excel their neighbours; for instance, their language is softer, and more agreeable; they manufacture finer cotton cloths, and give them a superior dye; in horsemanship they are fearless and expert, and rival the Moors as hunters. Their computation is by fives instead of tens, and they have no written language. Scattered among these three large distinctive classes, there are various tribes of which we know comparatively little; the *Feloops*, a wild and rude people, inhabit the shores to the south of the Gambia, and the *Timmanees*, and the *Sherboro* natives border our colony at Sierra Leone. The *Vei*, or *Fey*, *Dey*, *Bassas*, *Sinon*, *Fishmen*, and other tribes, who inhabit the extensive district contiguous to the Liberian Republic, the Ivory Coast, and the Kong Mountains, are little known to us; they are very numerous, enterprising, and warlike.

The *Ashantees* have been mentioned in the history of our possessions on the Gold Coast. They are of

powerful form, bold, ingenious, and with dignified manners. They build large houses, smelt metals, and manufacture excellent cotton cloths. The Fantees, are, probably, a branch of the Ashantee family, but are, in several respects, inferior to their warlike neighbours. The *Dahomians*, to the east of Ashantee, are a bold race, and have subjugated the effeminate *Whydans* who dwell along the Slave Coast at the head of the Bight of Benin. Of the numerous races to the southward of the Bight of Biafra, and thence to the Namaquas and Damáras, who are located north of the Orange River, we know positively nothing. They must have been very numerous, and like the negro race in general very prolific, to have escaped the utter annihilation which the ravages of the slave trade for three centuries, and the demoralizing influence, example, and government of the Portuguese settlements on this coast, were calculated to produce. But the little of them seen by Captain Tuckey, during his expedition up the Congo, was so favourable, as to warrant the hope, that British commerce might be successfully extended in this direction. At present we have no maritime, mercantile, or missionary post, between the Bight of Benin and Walvisch Bay, a distance of more than 2,000 miles.

The foregoing remarks, brief and insufficient as they necessarily are, may yet afford some idea of the vast field open to Christian and commercial enterprise. Happy is it for Africa, but happier far for England, that these two can now go hand-in-hand, and that England can look for a blessing on her efforts, whether directed to the extension of her religion, or of her trade, since both the one and the other appear directly conducive to the permanent benefit of a people whom she has contributed, not slightly, to injure and degrade. We now proceed to notice the efforts of the various missionary associations.

CHURCH MISSION.—The labours of this Society at *Sierra Leone* and other points of the *Guinea and Gold Coasts*, form an important feature in the past history and present state of Western Africa, and are intimately connected with its future prospects of development. This institution early turned its attention to the condition of the native population in the year 1804, when the slave trade was at its height. Its first agents were settled among the Susu tribes, on the bank of the Rio Pongas, about 100 miles north of *Sierra Leone*; but after a few years' labour there, amidst many trials from the ungenial climate, the mission establishments were, at the instigation of the slave dealers, destroyed by fire, and the missionaries forced to take refuge within British territory. A station was formed in 1812 on the border of the colony; but even here it could not be sustained above six years.

The missions were then visited from England, and the result of the inquiry was the concentration of the society's efforts on *Sierra Leone*, where an extensive sphere of usefulness had been opened. Great Britain was then commencing her efforts for the suppression of the slave trade. Slave ships captured at sea were brought to *Sierra Leone* for condemnation; there the captives were liberated, to the amount of several thousands annually. The society at once undertook their instruction in social and religious duty. They were transferred, in all their barbarism, to various settlements within the colony; schools and churches were established amongst them with remarkable success; and no less than sixty-eight native agents, three of them ordained,

are now (1852) employed in the service of the mission in the twelve parishes into which the colony has been divided. The Christians, of all denominations, in *Sierra Leone* number 36,458, out of a population of 45,472.

Educational measures have been carefully suited to the peculiar wants of the various classes in the colony. There are *village schools* in which the pupils are trained in regular and industrial habits. By the children of the *Gloucester School*, about twenty acres of land, before covered with impervious bush, have been thoroughly cleared, and the whole planted with cotton of different kinds.

The society has also established a *Central Grammar School* at *Freetown*, which is now self-supporting, excepting the salary of the missionary at the head of it. The number of pupils in 1851 was fifty-three, of whom twenty-three are boarders. The education is of a sound Christian character, designed especially to fit the pupils for mercantile pursuits. Two of the most advanced, who had studied navigation there, have been since received on board one of H. M. steam-ships to perfect themselves in practical seamanship. The industrial system has been successfully introduced. A cotton plantation of about six acres is mainly cultivated by the pupils, who daily work three cotton machines, by which 1,400 lbs. of seeded cotton have been cleaned during the past year.

An Institution at Fourah Bay provides, under the principalship of a negro clergyman, assisted by another ordained African and an European missionary, a still higher style of education, intended chiefly for candidates for holy orders. The average number of students is now nineteen, and the original languages of the Bible form a part of the instruction imparted.

The Rev. O. E. Vidal, D.D. was consecrated at Lambeth by the Archbishop of Canterbury, on Whitsunday, 1852, as first Bishop of *Sierra Leone*. Several native candidates will be ready to be presented to him for ordination upon his arrival in his new diocese; and there is every reason to expect that a foundation will be at once laid for the permanent support, by the internal resources of the people themselves, of a settled native ministry.

Sierra Leone, however, assumes a still higher importance when viewed as the basis of missionary operations in Western Africa. Individuals of at least one hundred different tribes have been deported thither, re-captured by British cruisers, from almost every point of the compass. These people have been Christianized and civilized, but retain as strong a love of their fatherlands as ever. The *Niger Expedition* in 1841, disastrous as it proved in most respects, afforded the exiles from the Bight of Benin more certain information as to the feasibility of their return to their old homes, and thus gave no little impulse to that remarkable reflux which is now going forward amongst the members of the Yoruba tribe in that locality. At least 3,000 Yorubans have thus revisited the chief town, *Abbeokuta*. A grammar and dictionary of their language, exhibiting much richness and flexibility, together with translations of parts of the Bible and Prayer Book, have been prepared by one of their own tribe, now a clergyman of the Church of England, the Rev. S. Crowther. The Christian converts there have stood firm under a severe persecution. An assault by the King of *Dahomey*, on this brightening focus of peace and good will, has been successfully repelled by the in-

STATISTICS OF CHURCH MISSION IN WEST AFRICA, 1852. 201

habitants of Abbeokuta themselves. The destruction of Lagos by the British squadron, has overthrown the last stronghold of the Brazilian slave traders on that coast. And the prospects for the progress of Christian civilization, together with the development

of the rich material resources of the region, are full of promise and hope.

A statistical view of the present state of the Society's missions, is presented in the subjoined table:—

Yoruba Mission . . . 12,830

£234,253

The annual disbursement is more than £10,000.

These successes have been obtained in the face of difficulties and discouragements more than enough to depress, or rather utterly to cast down, the energies of men, striving for merely selfish and temporal ends. Besides the hostility of the slave dealers, to which reference has been made, the climate of West Africa was then far more fatal than it has proved, since increased cultivation has somewhat checked the exuberance of tropical vegetation, and experience has taught the best sanitary precautions. Of seventy individuals who landed in Sierra Leone, during the twenty years commencing February, 1815, thirty-four were either removed by death or compelled to return home on account of ill health, in less than a year after their arrival in the colony. "In the year 1823," according to one of the Society's documents, "out of five who went out, four died within six months; yet two years afterward six presented themselves, three being English clergymen, for that mission. They went to Africa, and two fell within four months of their landing, while a third was hurried away in extreme illness. In the next year three more went forth, two of whom died within six months, so that in the course of four years fourteen men had gone out, of whom more than half had died within a few months of landing. Yet fresh labourers willingly offered themselves on each succeeding year, to the full extent of the ability of the Society to send them out." Between March, 1804, and August, 1825, there arrived at Sierra Leone 89 church missionaries, of whom 54 died in the colony, and 14 returned to England with shattered constitutions. It has been well remarked—"God has buried the workmen, but continued the work."

In the year 1842, a Committee of the House of Commons bore the following testimony in favour of the operations of the Church and Wesleyan Missions: "To the invaluable exertions of the Church Missionary Society, more especially—as also, to a considerable extent, as in all our African settlements, to the Wesleyan body—the highest praise is due. By

their efforts nearly one-fifth of the population of Sierra Leone—a most unusually high proportion in any country—are at school: and the effects are visible in considerable intellectual, moral, and religious improvement—very considerable, under the peculiar circumstances of the country."

WESLEYAN MISSION.—The Society has stations on the Gambia, Sierra Leone, the Gold Coast, and Badagry, on the Bight of Benin. The mission at Sierra Leone was commenced in 1796; on the Gambia, in 1821; and on the Gold Coast, in 1835. In Sierra Leone, at present, the colony is divided into three circuits, having thirty-one chapels, mostly built of materials taken from condemned slave ships. There are about 6,000 communicants, and the late census gives 13,000 as the portion of the population who consider themselves under the spiritual care of the agents of this Society. Twenty-one day, and twenty-two sabbath schools are in operation; while three natives are labouring as ministers, six as catechists, and ninety-four as local preachers. At the native training institution a higher order of education is given than is attempted in the ordinary schools, the pupils being intended to labour among their countrymen as catechists, teachers, or ministers, according to their qualifications. At the last examination (1852) they were examined in theology, Latin, Greek, mathematics, English grammar, and geography.

Many of the liberated Africans, especially of the Housas, have returned to their own country, bearing with them the knowledge of Christianity, and evincing pleasing effects of its moral influence.

The stations on the Gambia bring the missionaries into contact with tribes more strictly in their barbarous state than at Sierra Leone; and that river offers a better opening to the interior than any other point occupied on the western coast. The principal stations are at Bathurst; Barra, on the mainland, opposite St. Mary's; and McCarthy's Island. The deadliness of the climate has ever been the chief obstacle; each missionary who has not been pre

maturely cut off by death, being, in the course of two or three years, so reduced in strength as to be compelled to return to England, leaving his work to be followed up by a successor, having everything to learn. Of forty-one missionaries employed at Sierra Leone since 1811, there died within about a year after their arrival in the colony, fifteen; two died at sea, on their passage home, and one soon after his arrival in England. Twenty-six were obliged to return to Europe, or were removed to other missions. There are 720 scholars in the schools, and about 1,500 persons regularly attend public worship. The Gospels have been translated into the Mandingo language by the Rev. R. M. Macbrair, one of the missionaries, and already about 800 individuals are regular communicants.

The missions on the Gold Coast are extended over the whole of the country held as British territory, and also reach into the independent barbarous state of Ashantee. Of the eight missionaries employed on these stations only one is of pure European descent, all the others being more or less intimately connected with Africa by blood. Besides these, twelve native catechists, and fifty-four school teachers, are

spreading light among their countrymen. The missionary at Coomassie is the nephew of the reigning king, being one of the two princes who came to this country, as hostages, after the close of the Ashantee war. Throughout the country occupied by these missions, the native superstitions are of a singularly cruel and debasing character; human sacrifices, to a fearful extent, being habitually practised in Ashantee, but the missionaries have obtained firm footing, nevertheless. They count about 1,000 members and communicants in the native churches, and about 5,000 as regular attendants on public worship, with more than 1,000 children in schools. These results of fifteen years' labour in a climate so fatal, are highly encouraging, especially taken in connexion with the most recent advices, which go to show an extensive movement in the minds of the natives, preparatory to an abandonment of their ancient superstitions. The station at Badagry has been sustained amid serious hindrances from war and from the slave trade; and only last year the town was nearly reduced to ashes by contending parties, and the mission premises barely escaped. The annexed table shows the general statistics of these missions:—

Statistics of the Wesleyan Missions in Western Africa, in 1852.

Details.	Missions.			
	Sierra Leone.	Gambia.	Gold Coast and Ashantee.	Total.

Attendants on Public Worship	9,716	1,550	4,700	15,966

Note.—The expenditure on these missions, from the commencement, has been about £145,248; the present annual disbursement is £8,427.

The BAPTIST MISSION comprises one station at Fernando Po, with sixty-nine communicants, established in 1841; one at the Cameroons River, with twenty communicants, established in 1843; and one at Bimbia. It is, I believe, now a principle with the various Christian missionary societies not to interfere with each other in any chosen field of operation, but rather to seek, where means or opportunity afford, new spheres for their meritorious labours.

The BASLE MISSIONARY SOCIETY commenced in 1836 at the then Danish settlement of Accra; where there is a substantial chapel; the society has also a

flourishing mission at Akropong, and another at Abodi, in the Aquapim Mountains.

In 1847, a GERMAN MISSION was founded in the Creepee country, some way in the interior beyond the Basle stations, on the higher branches of the Volta and the Kripong-Tojeng rivers.

A glance at the map of Africa will show how few are the impinging points of Christian warfare on the numerous and formidable strongholds of infidelity and barbarism. Nevertheless great results have already been accomplished; on the Gold Coast especially, and for upwards of 100 miles in the interior, where, so late as the end of the last

century, nine-tenths of the slaves exported were obtained, where internal wars never ceased, and human sacrifices extensively prevailed, we now witness a glorious change; the nefarious traffic in man, for deportation to foreign lands, has not only ceased on this coast, but also on the greater part of the territory west and north-west as far as the Senegal River; and England, who had been the most cruel enemy of Africa, is now, under Providence, the instrument of blessings, which those only who have personally witnessed the evils of slavery, and the abominations of idolatry and heathenism, can fully appreciate.

WEST AFRICAN COMMERCE.—In aid of missionary efforts, it is very desirable that there should be a simultaneous effort to increase the vegetable products of Africa; for, as has been already stated, when the chiefs find that they can obtain a larger revenue by employing the labour of their people in the cultivation and preparation of articles required in foreign countries, than by exporting those labourers as slaves, or employing them in war, they will, instead of hindrances, become our most effective auxiliaries in the permanent suppression of the slave-trade. The king of Dahomey declared to Mr. Cruickshank, in November, 1848, that he would willingly renounce the obnoxious traffic provided he could be assured of obtaining the same income of 300,000 dollars from any other source. It is obvious that war cannot ravage, and agriculture enrich, the same country at the same moment, and that no legitimate trade requiring continuous industry, can be carried on by men engaged in constant internecine strife, for the purpose of supplying victims to that African Moloch, before which, until within the present year or two, more than 1,000 victims have been daily sacrificed! Thus, when European nations were, with one accord, engaged in the slave-carrying trade, the exports from Africa were very small, and consisted of gold-dust, elephants' teeth, and a few other articles not requiring either habitual labour or skill for their attainment. A brighter day is now dawning, and certain portions of the coast, being, by the zealous care of England, maintained as central spots for the diffusion of freedom, and of the arts and customs of civilized life, are largely instrumental in promoting and sustaining native industry, that powerful lever for the moral and social elevation of Africa. During the past year (1851) the trade carried on at three British stations only, was, in value, as follows:—

Station.	Imports.	Exports.	Total.
Sierra Leone .	£103,477	£80,366	£183,843
Gambia . .	107,011	186,404	293,415
Gold Coast .	84,880	219,050	303,930
Total . .	295,368	485,820	781,188

It is estimated that in 1852 the aggregate of our commerce at these settlements will be equal in value to £1,000,000 sterling; it is still, however, almost in its infancy, and Western Africa is likely to become (if generously and judiciously encouraged) very speedily one of the largest and most profitable markets for the consumption of British manufactures, and for the supply of the raw materials, which England so largely demands. In illustration of this latter assertion it will be necessary to mention a few products of the country. *Palm Oil.*—This valuable oleaginous substance is derived from the pulp which

covers the hard shell of a fruit resembling a miniature cocoa-nut, growing in bunches near the top of a tree belonging to the palm tribe. About April the men begin to climb the trees to cut down the nuts, which the women and children expose on mats to the heat of the sun; they are afterwards pounded in wooden mortars, or in mills, to separate the pulp, which is placed in a large iron pot containing hot water, and boiled and stirred for a few minutes; the fire is then withdrawn, and by the time the water has cooled, the oil is floating on the surface, whence it is skimmed off with small calabashes, and set aside to be bartered for merchandise. Its various uses for machinery and mechanical purposes, for lamps, candles, &c., are well known; it is also largely employed on account of its peculiarly cleansing and softening qualities in making soap for factories, and the kernel, containing a delicate oil, is eagerly bought up by the French for the purposes of the toilet. This product may be obtained from every part of Western Africa; but its principal mart, at present, is in the countries contiguous to the rivers flowing into the Bights of Benin and Biafra. It is brought from a distance of 150 miles in the interior in small quantities, and sold to the traders on the coast. The following table illustrates its increased importation into the United Kingdom at six decennial periods:—

Year.	Tons.	Year.	Tons.
1790	129	1830	10,673
1800	223	1840	15,723
1810	1,237	1850	21,722
1820	5,124	1851	29,223

In 1852, the quantity will, probably, be about 35,000 tons, which, at the present price of £30 per ton, will give a value of more than *one million* sterling. It is probable that France, the United States, Holland, and other countries, receive half the amount of England, raising the aggregate value of the trade in this article alone to one-and-a-half million sterling. The supply will, no doubt, keep pace with the remunerative demand, because the article, unlike ivory or timber, is obtained by a process in no manner destructive, or even injurious to the source from which it is derived.

This item, it will be noticed, has greatly augmented since the slave-trade has been checked; and we have already examined the change made in the condition of the countries near the Gambia (p. 176), by the addition of a new branch of trade arising from the cultivation of *Ground-Nuts*.—This singular article is formed by the seed of a Papilionaceous plant, the pod of which is produced like that of a common vetch or field-pea, in the open air, but at a certain period turns downwards, and forces its way into the loose soil, in which it delights, and there arrives at maturity. A few years ago, the pea, or nut, was known only as an article of food, used by the natives; and so late as 1835, the total quantity exported from the Gambia and Sierra Leone was only forty-seven tons. The exportation has increased annually; and the amount for 1852, exported from the Gambia alone, will exceed *twelve thousand tons*. The cultivation was originally promoted by purchases to supply mills erected in England for the obtainment of oil from seeds, and by a demand arising in the United States, where they are grown and eaten, roasted like chesnuts, under the name of pea-nuts. To this was presently added a great con-

sumption in France, where "Arachides," as they are there termed, were favoured, when heavy and discouraging duties were imposed on other oil-seeds; and France now takes a quantity so great as to employ fifteen or sixteen thousand tons of shipping in its conveyance. The oil is applicable to nearly all the same purposes as sperm; it is used also in the manufacture of soap, and in the various arts in which oleaginous substances are required. The annual value of the whole of the shipments probably exceeds £300,000. The trade is capable of great expansion, there being abundance of land adapted for its growth, while the light and easy labour required for its culture is peculiarly adapted to a people just emerging from barbarism, and who, consequently, like children, must be gradually and gently initiated in the habits of patient toil, necessary to their welfare and progress.

The Gum now exported is obtained principally from the extensive forests bordering the vast solitude, or sea of sand (Sahara), which extends east and west between Galam and the Atlantic, and north and south between the Senegal and Morocco. It is obtained chiefly by the Moors from a pastoral tribe termed the "Trazars," whose favourite locality is the gum forest of Sahel, situated about 100 miles from the small haven of Portendic or the Giaour's Port, in 18° N. about midway between Cape Blanco and the mouth of the Senegal. This haven has often been the scene of hostilities between the English, French, Portuguese, and Dutch; and although now open to us by treaty, yet the French, by seizing our vessels in 1834-'5, and by other measures, such as forbidding the entrance of English ships into the Senegal, and prohibiting the export of gum from the river except to France, or to a French colony; have established an almost entire monopoly in the trade, which is of considerable value. The gum being very mucilaginous, was largely used in England for calico printing, and in the fabrication of silks, gauzes, ribbons, lawns, cambrics, and hats; also in varnishing and gilding, the composition of painters' colours, and in various other ways. The French proceedings have however so enhanced the price as to cause the substitution of torrified starch, termed British gum, to a considerable extent, in place of the African product.

Gold is found in various parts of Western Africa, but is obtained in the greatest purity in the *Bouréh* country, at the confluence of the *Tankisso* with the *Jolibah* rivers, about 220 miles north-east from Teemboh in Foutah Jallon. The Mandingoes who visit this territory to trade with the Soossoos, declare that the whole soil is auriferous, and that the precious metal exists to a depth of twenty to thirty feet below the surface. The entire population is employed in digging or washing the earth, which is so richly impregnated that a stranger is not allowed to sweep the floor of the hut assigned to him for a lodging, the sweepings belonging to the landlord.* The gold-dust is exchanged for bullocks, sheep, rice, and other commodities brought to Bouréh from the agricultural district of Wassalon, by the caravans of the wealthy Serakolet traders. The Mandingoes from Sierra Leone are obliged to travel together in numbers and well-armed, from the insecurity of the long route they have to traverse between Free Town and Bouréh.

* Notes on the Commerce of Sierra Leone, a brochure, by B. Campbell, Esq.; printed at the Wesleyan Mission Press, Free Town, in 1850.

The gold is generally bartered to French or American traders.

Timber.—Several valuable woods abound; hitherto mahogany has been obtained from the Gambia, and teak from Sierra Leone, whence they are imported for our ship-builders. In 1851 the quantity of teak entered in the custom-houses of the United Kingdom was 9,295 loads, which at £9 to £10 per load, gives a value of nearly £90,000.

Bees-wax is produced in large quantities, and its abundance affords some indication of the floral beauty of the interior country. The amount exported has decreased in consequence of the various substitutes now used in place of wax for candles. The import from Western Africa (principally from the Gambia), in 1850, was, however, upwards of 5,000 cwt., the estimated value being from forty to fifty thousand pounds sterling.

Hides and Skins are principally taken by the Americans; they are of excellent quality and well cured; I cannot ascertain the aggregate quantity.

Among other articles exported may be named coffee, ginger, red pepper, guinea grains, or "grains of Paradise" (used, it is said, for imparting an acrid hot taste to gin), arrowroot, gum copal, and bené or sesame-seed (which yields a fine salad oil). Tobacco, indigo, and dye woods, are at present comparatively small items, but are capable of almost indefinite extension.

Cotton.—Africa is peculiarly suited for the growth of this important article. I observed different varieties of it growing wild in various places; in one spot, a beautiful *gossypium* creeper adorned the river banks, and shed its downy wool on the adjoining bushes. Indigenous cotton is now imported from Sierra Leone and the Gold Coast, and its culture has been commenced. The alluvial soil of the Gambia appears well adapted for the description termed "sea-land." The quantity exported from Western Africa to England, during 1851, was about 5,000 lbs.; this year there will be a large increase. The staple is liked at Manchester, and the price given is remunerative to the grower. Gins, for separating the seed from the wool, have been sent out by the Church Missionary Society; and the celebrated engineer, Mr. Nasmyth, has invented a cheap and easily-constructed machine for compressing the cotton into a space which will cause a reduction in the cost of freight from 4d. to 1d. per pound. The importance of this subject to England can scarcely be overrated.

It appears that the crop of the United States, in the years 1851-2, amounted to 3,015,029 bales, of which 603,029 were consumed in America, and 2,443,646 bales exported to foreign countries; viz., to England, 1,668,749; to France, 421,375; to northern Europe, 168,875; to other parts, 184,647 bales; leaving only 91,176 bales as stock in hand.

It is indispensable to the security and stability of our manufacturing industry at Manchester, Glasgow, Belfast, and other places, that there should be a large and certain supply of cotton at a low price. To accomplish this, our dependence should not be on one country, one soil, one season—as is now the case: we ought, also, to be guaranteed from the interruption which popular caprice, slave insurrections, internecine hostility, or national wars would quickly cause. Even without such incentives the many who abhor the use of slave-grown produce will rejoice to encourage the cultivation of African cotton by native landed proprietors, set on foot by the exertions of the Church and Wesleyan societies.

SUMMARY.—The foregoing pages contain a brief enumeration of facts bearing on the present condition of Western Africa, which, taken as a whole, afford an encouraging prospect that Christianity, freedom, and civilization, have at length taken firm root, and are even now leavening the character of the people, and developing the natural resources of their country. Soon, perhaps, the Niger and other great rivers will be explored, and rich cultivation adorn their banks, without the aid of model farms and naval expeditions, such as that planned in 1839-'40, by the benevolent Fowell Buxton, and generously supported by H.R.H. Prince Albert. I am far, however, from attempting to depreciate such projects;—the Niger Expedition was laudable in itself, and undertaken from the purest and most disinterested motives, and probably would have succeeded but for the fatal imprudence committed in the protracted tarry of the vessels in the delta of the Niger, within the sphere of the most deadly climatorial influences.

In the last ten years great changes have taken place; Britain and Africa have been brought into closer intercourse by more extensive exchange of their respective products. The monthly steam-packets* plying between the two countries will probably soon tempt Englishmen to gratify their inherent love of travel, by visiting, during the healthy season, the western shore of a vast region which has been an object of wonder and inquiry for centuries; and they can hardly fail to take an interest in promoting that social improvement which Africa, it would appear, cannot generate among her own sons, but must, like other countries, receive the impulse, direction, and animating spring from nations hitherto more favoured.

It is not meant by this remark to disparage the mental powers of the Africans, or to express any sympathy with the popular view which recognises in negroes no distinctions, but stigmatises all as an inferior race, fit only for servitude. There are more remarkable diversities among the inhabitants of Western Africa than among those of Europe; and their comparatively low scale of civilization, or in other words, their distance from the advanced stage of improvement which centuries of Christianity, and the knowledge of letters and arts have advanced other nations, is no proof of their original or

permanent inferiority. They have been subjected to the greatest disadvantages; hemmed in by the advancing Moslems on the one side, and on the other by a more terrific foe—the European slave-dealers—it is surprising that West Africa has not, like America and other countries, been entirely deprived of its original population. There must have been some innate principle of strength to enable them to withstand, for so long a period, the assaults of such formidable adversaries. But more than this, despite the most degrading antecedents, and under circumstances to the last degree discouraging, men of the pure negro type have distinguished themselves as divines, statesmen, philosophers, mathematicians, and soldiers;—they have proved intelligent, affectionate, faithful, generous; and in patience under privation, endurance of physical suffering, and constancy of purpose, they are unsurpassed by any other portion of mankind.

England, therefore, in the prosecution of her glorious mission—the diffusion of Christianity over the globe—has a vast and promising field of enterprise in Africa: true it is that much precious missionary blood has already been shed there; and it may be in the Divine purpose that more must be sacrificed; but if we can spare soldiers in thousands to fight our national quarrels in the deadliest climate, we can surely find also some hundreds of the Church Militant, who, in the name of their God, are ready to hazard life in a nobler struggle, to save souls. And this contest will proceed and stay not until it eventually triumph. Victory may be slow, yet it will be sure; the strongholds of paganism, the domain of Satan, the natural depravity of man, can no more withstand the assailing power of Christian truth, than darkness can shut out the overpowering effects of light. Africa is now witnessing the rising of that Sun whose bright beams will penetrate the most hidden recesses; and Britain, on every ground—religious, commercial, and social—will reap a rich reward for the efforts now making to christianize a people, whom at one period she helped to degrade, debase, and enslave, but whom she now anxiously desires to elevate, enlighten, and enfranchise, through the perfect knowledge of that Gospel which declareth in more senses than one, that “where the spirit of the Lord is, there is liberty.”

* Steam-vessels, with the post-office mails, leave England monthly, calling at Goree, Bathurst, Sierra

Leone, Liberia, Cape Coast Castle, Accra, Lagos, Whydah, Badagry, Bonny, Old Calabar, &c.

BOOK IV.—ISLANDS OF ST. HELENA AND ASCENSION.

CHAPTER I.

LOCALITY, AREA, POPULATION, REVENUE, EXPENDITURE, AND GENERAL CONDITION.

POSITION AND AREA.—St. Helena (celebrated as the prison and the grave of Napoleon Buonaparte), is situate in the Southern Atlantic, in $15^{\circ} 55'$ S. lat., and $5^{\circ} 44'$ W. long., 1,200 miles from the coast of Africa, 2,000 from that of America, and 800 from the island of Ascension. Its extreme length is ten miles and a-half; breadth, six and three-quarters; circumference, twenty-eight miles; and area, about 30,000 acres.

DISCOVERY AND HISTORY.—The island was first seen by Juan De Nova Castella, a Portuguese navigator, on the 21st of May, 1502, and named by him in honour of the day of its discovery, *Saint Helena*.

The island was then uninhabited, covered with forest, and its shores abounded with turtles, seals, sea-lions, and various sorts of wild fowl. Its settlement, in 1513, is attributed to the debarkation of a Portuguese nobleman, who had been condemned by Albuquerque for crime committed in India, and sent away in disgrace. This gentleman, Fernandez Lopez by name, prevailed on the captain to set him on shore on this uninhabited isle, that he might avoid the life of ignominy he was destined to lead in Portugal, and his wishes being complied with, and abundant supplies forwarded to him by his commiserating friends, he quickly brought some spots under cultivation, and imported hogs, goats, domestic poultry, partridges, and wild fowl, besides various sorts of fruits and vegetables, all of which increased and thrived exceedingly. Fernandez was removed by orders of the Portuguese government in about four years, and the Portuguese mariners preserved the secret of the existence of St. Helena from other nations until 1588, when it was discovered by Captain Cavendish, on his return from circumnavigating the globe. He states that the Portuguese had built a town and a church; possessed abundance of goats, pigs, and poultry, with game, wild fowl, and various

kinds of fruits and vegetables. The settlement was afterwards frequently visited by English, Dutch, Spanish, and Portuguese ships; the salubrity of the air, and the abundance of fresh provisions invigorating their exhausted crews.

It sometimes happened that ships of nations at war with each other visited St. Helena at the same time—accordingly we have accounts of various sea-fights between the Dutch and Spaniards at the anchorage, who are, moreover, accused of wantonly destroying the plantations, lest succeeding visitors should profit by the supplies which had proved so beneficial to them. The island was abandoned by the Portuguese, when they acquired possession of settlements on the eastern shores of Africa, and for some years continued desolate, owing to the wanton excesses which had been committed; however, about the year 1613, two Portuguese vessels being wrecked here, their crews got safe to land, and once more stocked the place with cattle, goats, hogs, poultry, &c. In 1645 the Dutch took formal possession of St. Helena, and established a colony, which they gave up when settling the Cape of Good Hope in 1651.

The homeward-bound English East India fleet touching here at this period, took possession, and the East India Company obtained a charter for its occupation from Charles II. ten years after. Under the superintendence of Captain Dutton, the first English governor, a fort was erected and called Fort James, in compliment to the Duke of York, the king's brother. Settlers were encouraged to emigrate thither, and slaves were imported from Madagascar to work in the plantations. Its population was shortly after increased by many, who had been reduced to penury by the great fire of London, seeking refuge in the island.

In the latter part of 1672, the Dutch, through the treachery of a planter, succeeded in landing in the night 500 men

from an expedition which had been repulsed the same day; the fort being thus attacked in the rear, the governor thought it but prudent to abandon it, and retired, with his garrison and principal effects, on board some ship in the roads, taking, however, the precaution of placing a sloop to cruise to windward of St. Helena to warn British vessels of its capture, and a squadron arriving soon after (in May 1673), under Captain Munden, he succeeded in regaining the island, and, by keeping the Dutch flag flying after he got possession of the forts, decoyed six Dutch East Indiamen, as well as a ship from Europe, having a governor and reinforcements for the garrison on board, into the roads where they were seized. Having formed a British garrison by detachments from the ships, Captain Munden sailed for England with his prizes, and was knighted.

St. Helena remained in the possession of the East India Company until the last renewal of their charter in 1833, when the island was given up to the crown, it having been retained by them so long merely as a maritime station for refitting their ships, &c., which they no longer required, after the suspension of their commercial privileges.

PHYSICAL ASPECT.—When first seen at sea, St. Helena presents the appearance of a small barren rock, nearly perpendicular on its northern side, but gradually shelving to the south. On approaching, its eminences appear more broken, and the central ones are covered with verdure. The shore is protected by a girdle of inaccessible precipices of basaltic rock, some of them rent to the base, exhibiting extensive chasms, and the most fantastic shapes. The only anchorage is at James' Valley Bay, on the north-west or leeward side of the island. James' Town, the capital, is situated in a narrow valley between two lofty mountains, and presents a pleasant and refreshing appearance, from the trees being generally in full leaf.

There is good anchorage in from eight to twenty-five fathoms; the tide rising to the height of five feet at times; the surf upon the shore is generally strong, but about Christmas tremendous. The principal inlets by which the island can be approached are Lemon Valley, James' Town, and Rupert's Bay on the north-west side, and Sandy Bay on the south-east; all these, however, are strongly fortified. Even the

small ravines, where it might be possible to effect a landing, are also defended.

Throughout the whole length of the island there are only two plains, the largest that of Longwood, comprising 1,500 acres of fertile land, sloping to the south-west. The island is divided by a ridge of hills, running nearly east and west, but bending in a curved direction to the south, at each extremity, and from this chain numerous valleys and ridges branch off, generally at right angles. The *Plantation*, or Government-house, is like a beautiful English country residence; it is embowered in woods, with a green valley sloping towards the sea, above which it is elevated about 2,000 feet. The highest point in the island is Diana's Peak, which rises 2,700 feet above the level of the sea; from its summit the whole island lies under the view, no point intercepting the horizon. The other remarkable eminences, the altitude of which have been ascertained by Major Rennell, are Flag Staff, 2,272, and Barnscliff, 2,215, nearer the coast, and overhanging the sea; Alarm House, 1,260, in the centre of the island; High Knoll, 1,903, to the southward of Ladder Hill, and the official country residence of the Governor; Longwood House, 1,762; most of the heights were formerly covered with timber and shrubs, consisting of the cabbage tree, redwood, stringwood, dogwood, &c., and the greenwood was likewise to be found in great abundance, but, at present, few of these trees are to be seen, except about 1,500 acres of irregular forest at Longwood, preserved by order of the East India Company.

Clear and wholesome springs abound in every direction; those issuing from the sides of the hills frequently form picturesque cascades. Roads have been constructed in a zigzag direction, with great labour, which now afford easy access to the interior.

After the battle of Waterloo, Napoleon Buonaparte was sent to St. Helena by the allied sovereigns as a prisoner of war. He arrived in the island in October, 1815, and died there on the 6th May, 1821. His remains were removed a few years since to Paris.

GEOLOGY.—St. Helena is probably of volcanic origin; or it is the lofty peak of some vast range of mountains, whose base is beneath the ocean. Limestone is plentiful in some situations, as well as iron ore, and there are indications of gold and copper.

208 CLIMATE, POPULATION, REVENUE, OF ST. HELENA.—ASCENSION.

THE CLIMATE of this island is not ill adapted to the European constitution; indeed it has been found congenial to the crews of vessels that have been kept for a long space of time on salt provisions, and without vegetables. The thermometer seldom rises above 80° in James Town, and the heat is only excessive when it is reflected from the sides of the valley in calm weather; in the interior of the island the temperature is more even, never so cold as in England, and scarcely so hot. The average temperature throughout the whole year has been found to be at Longwood from 56° to 68°, at James Town from 66° to 78°, and at Plantation House from 61° to 73° Fahrenheit. The atmosphere is remarkably clear. Thunder and lightning are rare.

The healthy condition of the inhabitants was visible to me in their cheerful manners, and active rural industry, the cultivation of the soil being their principal occupation.

In 1848, out of nearly 7,000 inhabitants, there were only seventy-nine deaths, and thirty-four were upwards of seventy years of age. There are about three births to each death among the resident inhabitants.

Inhabitants according to Census of 1850.

Locality.	Houses.	Males.	Females.
James' Town . . .	190	1,860	1,562
Country	195	1,113	955
Total	385	2,973	2,517

Note.—H.M. troops, 450; women and children, 153; East India Company's invalids, 32; grand total, 6,125.

The population includes British Africans, Chinese, Malays, and seamen, landed from ships, and their descendants. Many slaves are now liberated here: between June 1840, and June 1850, 15,076 were landed; of these 4,760 died, and all the remainder, except forty, migrated to Jamaica and other British West India colonies.

GOVERNMENT.—A military officer, aided by executive and legislative councils.

REVENUE.—About £17,000 per annum; of which £10,000 is derived from custom duties.

The military charges are now £17,000 per annum.

SHIPPING.—The annexed table gives the imports, exports, and specie exported, during three years:—

Particulars.	1849.	1850.	1851.
Imports	£68,533	£66,219	£81,624
Exports	3,856	12,572	5,846
Specie exported	8,845	8,526	11,446

Ships entered inwards in 1851 (exclusive of vessels of war and whaling ships), 950; tons, 439,494; viz., British ships, 583; tons, 289,313; French ships, 71; tons, 22,663; Dutch ships, 110; tons 63,330; American ships, 58; tons, 28,825. The remaining tonnage comprises eleven other foreign flags. A duty of one penny per ton is levied for the support of an excellent hospital for seamen.

RELIGION AND EDUCATION.—St. Helena forms a part of the diocese of the Cape of Good Hope, and has four Church of England clergymen. There are eleven schools, of which three belong to government, four to the Baptist Mission, and four to the Benevolent Society.

CULTIVATION.—About 160 acres are under crop;

7,500 acres of pasturage are adapted for tillage, and 25,000 acres are available for the grazing of sheep and goats. Considerable quantities of live stock, obtained from Africa, are kept in readiness for the supply of vessels touching for refreshments.

Most kinds of tropical or European fruits ripen here, particularly in the sheltered valleys. Vines, oranges, citrons, lemons, figs, pomegranates, mulberries, tamarinds, mangoes, cocoa-nuts, sugar-cane, pine apples, &c. thrive well; apples have succeeded tolerably, but the climate is not congenial to cherries, currants, or gooseberries. The common blackberry increased to such an extent after its introduction in 1780, as to necessitate an order for its extirpation. Three successive crops of potatoes are often produced in the year, and garden vegetables, such as cabbages, beans, peas, &c. are raised in abundance.

Fish are numerous, and more than seventy different kinds have been caught on the coast. Amongst the most prized is the coal fish, which is very delicate but scarce: those commonly taken are jacks, congers, soldiers, mackarel, albicore, bulls' eyes, &c.

St. Helena is during peace a valuable haven, where the people of every nation, on their long voyage across the Atlantic, may recruit: during war it is an important garrison for the protection of British commerce, and one of the means by which England maintains her supremacy on the ocean. The island is so well fortified that, properly defended, it may be considered impregnable.

ASCENSION.

ASCENSION, in lat. 7° 55' S., long. 14° 25' W., is a triangular-shaped island of volcanic origin, eight miles long, by six broad at the west end, the surface consisting of barren rocks, almost destitute of verdure. It is well fortified at every accessible part (the sea breaks on the coast with tremendous violence) and garrisoned by a detachment of marines and marine artillery. The highest summit is estimated at 2,870 feet in elevation above the sea. A shaft has been sunk in one of the mountains, whence abundance of excellent water is conveyed to the anchorage by means of iron pipes. The beach, at first thought to be composed of sand, was found to consist of very small fragments of shells; in some places exhibiting compact masses, formed of several layers, the size of the fragments differing in each layer; they are broken and burned for lime. Red volcanic ashes prevail on several hills. Of the vegetable kingdom, the euphorbia is found growing in small tufts among the rugged lava; and attempts have been made to introduce various European vegetables. Sea fowl are very numerous, and there are three handsome species of butterflies on the island, beautiful objects among such barren scenes.

Ponds are kept stocked with turtle, weighing from 200 to 800 lbs. each. Abundance of fish and marine birds are obtainable. The eggs of the sea-swallows, which are of a dirty white with dark red spots, and about the size of a crow's egg, are collected at certain seasons of the year in thousands, and considered delicate eating.

Moorings are laid down in the roads, and vessels in want of refreshments supplied at moderate prices.

A coal depôt has been established in consequence of the increasing number of steam vessels traversing the Atlantic, in their passage to and from the Cape, India, and Australia.

N.B. The islands of Mauritius and Seychelles will be given with Ceylon and other possessions in the Eastern Seas.

BRITISH POSSESSIONS IN THE WEST INDIES, AND IN SOUTHERN AND CENTRAL AMERICA.

BOOK I.—WEST INDIA ISLANDS.

CHAPTER I.

EARLY DISCOVERY BY SPAIN—DESTRUCTION OF THE ABORIGINES—INTRODUCTION OF SLAVES FROM AFRICA—BRITISH ACQUISITIONS—NAMES, AREA, ORIGINAL AND PRESENT OCCUPATION OF EACH ISLAND.

THE important discoveries made in Africa by the Portuguese, in the middle of the fifteenth century, rendered geography the favourite science of that epoch. The prospects it offered of wealth and renown, nay even its dangers and excitements, had powerful charms for adventurous spirits, and many such flocked round the court of Prince Henry, whose learning, munificence, and enterprise, had won for himself and his navigators, a world-wide reputation, and raised his country from insignificance to a commanding national position.

In 1470, three years before the death of the Prince, a visitor arrived, who, although of humble origin, the son of a wool-comber, had been remarkable, even from childhood, for his addiction to cosmographical pursuits, and his skill in navigation, the practice of which he had commenced when about fourteen years of age, under the auspices of a distant relative—a veteran admiral in the Genoese service, who had acquired considerable celebrity by his daring and somewhat piratical exploits. Christopher Columbus, when he first came to Lisbon, was in the prime of manhood; tall, well-formed, with light-grey kindling eyes, and hair, which at thirty years of age, the then hazardous seafaring life of the Mediterranean, and his restless efforts for geographical information, had already changed to perfect white. Simple in his habits, grave and gentle in demeanour, his distinguishing characteristics were enthusiastic piety, rigid and almost austere observance of the ritual of the Church of Rome, and that indomitable energy which (humanly speaking) has so often enabled great minds to endure long years of suspense and discouragement, and finally to accomplish their ends by, seemingly, the most insufficient

means. It does not appear that Columbus attracted the notice of Prince Henry, or in his lifetime put forward his view of the existence of a western route to India, but it is certain from his correspondence with the learned Florentine cosmographer Toscanelli, that he entertained the idea so early as the year 1474.

The spherical form of the earth was considered by Columbus as a fundamental principle, and the circumference from east to west was divided, in accordance with the theory of Ptolemy, into twenty-four hours of fifteen degrees each, making 360 degrees. Of these twenty-four hours, he imagined that eight, or one-third of the earth, remained unexplored. This space might, in a great measure, be filled up by the eastern regions of Asia, which possibly extended so far as nearly to surround the globe, and to approach the western shores of Europe and Africa. But even if Asia should prove of comparatively small extent, still Columbus considered that the tract of ocean intervening between these two countries must be less than was generally surmised: in this particular he was influenced by the conclusions of Alfraganus, the Arabian, who, by diminishing the size of the degrees, gave the earth a smaller circumference than other cosmographers.*

These two happy errors, the imaginary extent of continental Asia, and the supposed size of the earth, were undoubtedly the chief grounds upon which Columbus arrived at the conviction that a successful voyage of discovery might be made by venturing boldly into the vast expanse of ocean, and following

* *Discovery of America by Christopher Columbus*: written by his son, Don Ferdinand. Published in *Kerr's Collection of Voyages and Travels*, vol. iii. also in *Churchill's Collection*, vol. ii.

steadily a western course. The idea seems now simple enough—then it was new and startling; for the laws of specific gravity and central gravitation were yet unascertained, by which, granting the rotundity of the earth, the possibility of making the tour of it would have been manifest. There was, however, a circumstance of recent occurrence calculated to encourage adventurers in ploughing unknown seas, viz., the application of the astrolabe to navigation (since improved into the modern quadrant and sextant), enabling the seaman by the altitude of the sun, to ascertain his distance from the equator; and reports, some true, some false, reached Columbus, which led him, step by step, to the conviction that there was land in the Western Ocean, within a practicable distance; that it was fertile; and finally that it was inhabited. Among the most remarkable incidents noted down by Columbus in his memoranda, is the testimony of his brother-in-law Pedro Correa, and other mariners, who had picked up pieces of wood curiously carved, but evidently not with an iron instrument, on the island of Porto Santo, and likewise 450 leagues to the westward of Cape St. Vincent, after a long continuance of westerly winds. Trees of unknown kinds, huge pine trunks, and large-jointed reeds, had been wafted to the Azores, and upon the island of Flores two dead bodies of men, whose colour and features were distinct from any hitherto known race, were cast on the shore, and a singularly wrought canoe was driven on the same coast.

Having, after long and patient investigation, satisfied himself respecting the reasonableness of his project, Columbus proceeded to seek assistance in carrying it out. His first proposal (according to his son Don Ferdi-

nand) was made to John II. of Portugal, who approved of the undertaking, but refused to comply with the terms stipulated for in case of success; and was so ungenerous as to use the detailed plan laid before him, and privately dispatch a ship on the proposed expedition, employing the projector meanwhile in deceitful negotiation. The attempt failed completely; for the pilots, after steering westward for several days, alarmed by the stormy weather they encountered, and the apparently boundless waste of waters which lay before them, turned back in despair.

Columbus, fired by the unworthy treatment he had received, declined all the subsequent offers of King John, quitted Portugal in disgust, and proceeded, in the words of his eloquent biographer, "to beg his way from court to court, to offer to princes the discovery of a world."*

He sent his brother Bartholomew to England, to make proposals, in his name, to Henry VII. Bartholomew was taken captive by pirates on his voyage, and not heard of by his brother for ten years, eight of which Columbus was himself destined to consume in fluctuating and most perplexing intercourse with the court of Spain.† At length, wearied out with fruitless exertions, he resolved to quit Spain, and seek support elsewhere. In the beginning of February, 1492, he took leave of his friends, sallied forth from Santa Fé, pursued his lonely journey across the Vega, and had reached the bridge of Pinos, about two leagues from Granada, when he was overtaken by a courier from the illustrious Queen Isabella, who summoned him to return forthwith.

Her enthusiasm had at length been

* Washington Irving's *Life and Voyages of Christopher Columbus*; a work not only valuable as one of the most charming biographies ever written, but also as containing much interesting information respecting the discovery of the western world.

† In 1486, by the desire of Ferdinand, a council was held at the university of Salamanca, to discuss the feasibility of Columbus' project; on the whole its opinion was unfavourable, though many of the most learned men were convinced by his reasoning. Among the arguments adduced to confute him, were some drawn from the writings of Lactantius and St. Augustine, who were considered as almost evangelical authority. The passage cited from Lactantius is in a strain of ridicule unworthy so grave and learned a theologian. "Is there any so foolish," he asks, "as to believe that there are antipodes, with their feet opposite to ours; people who walk with their heels upward, and their heads hanging down? That there is a part of the world in which all things are

topsy-turvy; where the trees grow with their branches downward, and where it rains, hails, and snows upward? The idea of the roundness of the earth," he adds, "was the cause of inventing this fable of the antipodes, with their heels in the air; for these philosophers, having once erred, go on in their absurdities, defending one with another." The objections urged on the authority of St. Augustine were of a graver nature, and shew the danger of wresting the words of Holy Writ to a purpose they were never intended to fill, by founding upon them arguments respecting the physical conformation of the earth. This renowned writer, though no less famous for profound erudition than for child-like piety, committed the great error of dogmatically pronouncing, that to assert that there were inhabited lands on the opposite side of the globe, was to discredit the Bible, by maintaining that there were nations not descended from Adam, it being impossible for them to have passed the intervening ocean.—(Irving, p. 39.)

roused, and overruling the scruples of her cool and wary consort, Ferdinand, whose coffers having been literally drained by the Moorish war, then just brought to a favourable conclusion, was averse to entering on the proposed adventure—she exclaimed, "I undertake the enterprise for my own crown of Castile, and will pledge my jewels to raise the necessary funds." This sacrifice was not, however, necessary.

For his undertaking Columbus required, in the first place, only 2,500 crowns to fit out a fleet, and was willing to, and did actually bear, one-eighth of the attendant expenses, on condition of receiving an equal share of the profits; he likewise stipulated, that he should be styled Don, and appointed "high-admiral of the Ocean Sea," and perpetual viceroy and governor of all the lands and continents which he might discover in the yet unexplored waters. (Irving, p. 62). The means of success at length rewarded the patient energy of the man, who, for eighteen years, had untiringly striven for them in the teeth of poverty, neglect, and ridicule. Columbus was now in his fifty-sixth year; but time, trials, and experience of the misery of dependence on the favour of princes, had rather increased than abated his lofty hopes, matured his intellect, and deepened his trust in Providence. On Friday, the 3rd of August, 1492, he quitted the Port of Palos, accompanied by the three brothers Pinzon, navigators of great ability, in command of three small vessels, of which his own was decked, while the other two were light barks, called caravels, with no deck in the centre, but built up high at the prow and stern, with forecastles and cabins for the accommodation of the crew. The character of the vessels employed is not the least marvellous part of this daring enterprise.

Three days after starting, a new cause of delay occurred; the rudder of one of the caravels, the *Pinta*, being broken, it became necessary to anchor at the Canary Islands, while a new one was made, which being accomplished, Columbus set sail on the 6th of September, steering for the unknown regions of the west.

The variation of the needle, a hitherto unknown phenomenon, soon created exces-

sive alarm in the minds of the sailors, who, during the whole voyage, gave way to fits of despondency, viewing every strange occurrence in the most unfavourable light; while Columbus, on the contrary, would acknowledge nothing but favourable omens, whether in the strange birds that settled on the rigging, the large patches of herbs and weeds that drifted from the westward, or the bland and genial softness of the atmosphere, the serenity of the sky, and the singular clearness of the air at night, which latter peculiarities, in common with other voyagers who have sailed along this track, I can attest as affording exquisite delight. Another novelty, the influence of the trade-wind, which, following the sun, blows steadily from east to west between the tropics, and sweeps over a few adjoining degrees of ocean, although it favoured their progress, afforded a new source of alarm to the mariners, who imagined that the winds in these seas always blew from the east, and that every day which took them farther from their beloved Spain rendered their return more hopeless.

In vain Columbus strove, by keeping two reckonings, one true, the other false, to conceal from them the real distance they had attained; he could not disguise the fact, that they had sailed farther west than any were known to have proceeded before, and that, already beyond the reach of human succour, they were daily pressing onward into a mysterious and apparently illimitable abyss.

As they advanced, the ocean became covered with sea-weeds, so as to resemble, at a distance, an inundated meadow; and when these marine plants (which seem to derive their sustenance from the atmosphere), became dense and matted, so as to present some impediment to their little barks, they not only feared being in the neighbourhood of lurking shoals and rocks, but also that they might at last be completely hemmed in.*

Despondency and impatience ripened into a mutinous disposition, which the firmness and sagacity of the Admiral with difficulty enabled him to restrain from developing itself in open violence. On the 25th of September, Martin Alonzo Pinzon mounted the

* The alarm which these immense masses of seaweed excited in the minds of the Spanish mariners, will appear natural enough to those who have witnessed similar incidents. A large steamer, in which I proceeded to the West Indies, was several days pass-

ing through mile after mile of this singular marine plant, which probably comes from the numerous reefs and banks in the Gulf of Florida, and then drifts along with the current, for the most part in regular parallel lines.

stern of his bark, crying, "Land! land!" Columbus immediately fell on his knees, and offered up his thanks to Him who rules the tempest and the ocean, while Martin repeated the *Gloria in Excelsis*, in which he was joined by his own crew, and that of the admiral.*

The fancied sight proved, however, to be what seamen term "Cape Fly-away"—an evening cloud—bearing the appearance of land, and not unfrequently an indication of its vicinity. Many such illusions occurred, exciting the hopes of the adventurers only to depress them the more deeply.

On the 7th October the vessels had traversed 750 leagues, and still the same wild waste of waters lay before them; but flights of small sea-birds were seen going towards the south-west, a circumstance which induced Columbus, in compliance with the wishes of the Pinzons, to change his course from west to west-south-west. After sailing thus three days, the manifestations of land became more evident; a pelican, heron, and duck, were seen; fresh herbage floated by, and tunny fish played about the smooth sea. All these good omens were regarded by the crew as so many delusions, and when they beheld the sun set once again on a shoreless horizon, they threatened to throw Columbus overboard if he did not yield to their desire of turning homeward. Perceiving the vanity of all attempts to pacify them by promises or expostulation, their indomitable leader took a decided tone, and assured them that their opposition was useless, for the expedition had been sent by the sovereigns to seek the Indies, and happen what might he was determined to persevere, until, by the blessing of God, he should accomplish the enterprise. Happily, unmistakable signs of proximity to land presented themselves on the following day; a branch of thorns, with berries on it, a reed, a small board, and above all, a staff, artificially carved, were picked up by the sailors, whose gloom and mutiny then gave place to sanguine expectations. In the evening of the 11th October, when, according to invariable custom, the *salve regina*, or vesper hymn, had been sung to the Virgin, Columbus made an impressive address to his crew, pointed out the goodness of the Almighty in conducting them, by soft and favouring breezes, across a tranquil ocean, and cheering them onward continually with fresh signs.

He thought it probable they would make

* Journal of Columbus.

land that very night, and therefore ordered a vigilant look-out to be kept from the fore-castle, promising a doublet of velvet to the person who should first descry the shore, in addition to the pension of 10,000 maravedis guaranteed by the sovereigns. The greatest excitement prevailed, and not an eye on board the little squadron was closed on that eventful night. The breeze freshened, and the vessels were ploughing through the waves at a rapid rate, when the Admiral, seated on high and scanning the western horizon, in deep anxiety, thought he beheld a light glimmering in the distance. Fearing that it was but a vision conjured by his eager hopes, he called to Pedro Gutierrez,—a gentleman of the king's household—who saw it likewise. The transient and uncertain gleams soon disappeared, and all was again doubt, until 2 A.M., when Martin Pinzon, who was a-head of the admiral, in the *Pinta*, fired a gun,—the joyful signal that land was in sight. The vessels shortened sail and lay to, awaiting the dawn; Columbus, his officers and seamen, remaining meanwhile in a state of tumultuous delight which no other persons have probably ever experienced.

With the morning light, the voyagers beheld for the first time a portion of the western world, a level thickly-wooded island, several leagues in extent, with numerous inhabitants, perfectly naked, and gazing with astonishment on the vessels. Dressed in scarlet, and bearing the royal standard, he hastened on shore, fell on his knees, kissed the earth, and returned thanks to God with tears of joy. His example was quickly followed by his companions, who, recently so mutinous, now thronged around him, embraced his feet, and bursting into the most extravagant transports, gave themselves up to unbounded joy.

The aborigines, on first perceiving the ships, supposed them to be monsters which had issued from the deep during the night, or descended from the sky; the more so when they beheld them moving about by means of huge wings (sails), shifted or furled at pleasure. But when the boats were lowered, and strange beings, clad in glittering steel armour, or in bright raiment of various colours, approached the shore, they fled affrighted to the woods. Meanwhile, Columbus commenced the perpetration of the first act of injustice in the New World. He drew his sword, unfurled the royal standard, and assembling his captains, the notary who accompanied the armament.

and others, he gave the name of *San Salvador** to the island, and took possession of it in the names of the Spanish sovereigns. Little thought the natives, when recovering from their terror, they emerged from the woods, and watched with eager and admiring eyes the ceremonies of taking possession, that those apparently harmless acts would prove as the signing of a death-warrant to them, their wives, and children. Happy in their ignorance of the swiftly-coming future, they approached the Spaniards with great awe, frequently prostrating themselves, and making signs of adoration; as their fears abated they touched the beards (of which they were said to be deficient) of the strangers with astonishment, and admired exceedingly their white faces and hands. They were well made, of a copper hue, and had long black hair, broad and lofty foreheads, remarkably fine eyes, and pleasing features, although obscured and disfigured by paint. Their canoes, some capable of containing forty-five men, were dexterously managed with paddles; they had no iron, their lances being pointed with flint or fish-bone; and few objects of barter, except tame parrots, large balls of cotton-yarn, and a kind of bread called cassava, prepared from a large root named "yuca," which they cultivated. The avarice of the Spaniards was quickly roused by the sight of small gold ornaments worn by some of the natives in their ears and noses; on inquiry these latter intimated by signs that the precious metal was to be found in abundance in the south, and also that savage men frequently made marauding incursions upon them, and the numerous neighbouring islands, from a country in the north-west, endeavouring to carry them off, and many showed the scars they had received in battles with the invaders.

All he heard confirmed Columbus in his previous belief that he had arrived among the islands described by Marco Polo, as lying opposite Cathay in the Chinese Sea; the rich region to the south could, he thought, be no other than the famous island

* Then called by the natives *Guanahani*, now known as one of the *Lucayos* or *Bahama* group, which belong to Great Britain, and generally supposed to be that termed *Cat Island*.

† Neither Don Ferdinand Columbus, Washington Irving, or the other authorities respecting the proceedings of the admiral, state whether these seven natives accompanied the squadron willingly or by compulsion. Notwithstanding the kindness with which they were usually treated, and which their gentle and confiding conduct, as described by Colum-

bus himself, amply merited, it would appear that they were either forced or duped into quitting their native island; for one of them, a few days afterwards, on seeing a large canoe filled with Indians, plunged into the sea, and swam to it. A boat put off instantly in pursuit, but could not overtake the light bark, whose crew, on reaching the land, fled to the woods, leaving their canoe to the sailors, who very dishonestly took possession of it.—(Washington Irving p. 84.)

The next island taken possession of by Columbus was *Santa Maria de la Concepcion*, another of the Bahama islands; from thence he proceeded to the westward, and landed on a larger island, which he named *Fernandina* (now *Exuma*). The inhabitants were similar in every respect to those of San Salvador and Concepcion, excepting that they appeared more ingenious and intelligent. They were equally anxious to propitiate the Spaniards, whom they regarded with awe and admiration; offering them the fruits of their fields and groves, and leading the sailors, when in quest of water, to the coolest and sweetest springs; filling their casks, rolling them to the boats, and seeking in every way to gratify their supposed celestial visitors. Meanwhile the admiral reposed beneath the luxuriant shade afforded by the most beautiful trees, some of which had the appearance of being engrafted, as they had leaves and branches of four or five different sorts. The women wore mantles and aprons of cotton, and their beds were formed of nets of the same material, slung between two posts, which they called "hamacs," a name since in universal use among seamen. Their habitations were constructed in the form of a pavilion or high circular tent, of branches of trees, reeds, and palms. They were kept with a degree of cleanliness and neatness, very creditable to the native women.†

bus himself, amply merited, it would appear that they were either forced or duped into quitting their native island; for one of them, a few days afterwards, on seeing a large canoe filled with Indians, plunged into the sea, and swam to it. A boat put off instantly in pursuit, but could not overtake the light bark, whose crew, on reaching the land, fled to the woods, leaving their canoe to the sailors, who very dishonestly took possession of it.—(Washington Irving p. 84.)

† *History of Columbus*, by his son, p. 80.

Leaving Fernandina on the 19th of October, the adventurers proceeded to an island called *Saometo*, which Columbus named *Isabella* (now known as *Exumeta*, or *Isla Larga*), and described as more beautiful than any yet seen, the land being higher, with a verdant hill; and the coast a fine sand gently laved by transparent billows. "Here are large lakes," says he in his journal; "and the groves about them are marvellous; and here, and in all the island, everything is green as April in Andalusia. The singing of the birds is such, that it seems as if one would never desire to depart hence. There are flocks of parrots, which obscure the sun, and other birds, large and small, of so many kinds, all different from ours, that it is wonderful; and, besides, there are trees of a thousand species, each having its particular fruit, and all of marvellous flavour." The fish which abounded in these seas afforded, in turn, new objects of wonder and delight. They rivalled the birds in tropical brilliancy of colour, the scales of some of them glancing back the rays of light like precious stones, as they sported about the ships; while the delicate flying fish springing into the air, or diving into the sea, to avoid their enemies in either element; the changing hues of the captive dolphins, and other sights still beautiful, even to eyes accustomed to behold them, must have exercised an extraordinary fascination, when suddenly presented to the explorers of a new world.

No animals were seen in these islands excepting two species of dogs—one resembling mastiffs, the other beagles—neither of which barked; and a kind of coney, or rabbit, called *utia* by the natives. There were numerous lizards and guanias, which last were regarded with fear by the Spaniards, who supposed them to be noxious serpents; but they were found afterwards to be perfectly harmless, and their flesh esteemed a great delicacy by the Indians.

Notwithstanding the beauty and fertility that greeted the wanderers on every side, one thing was still wanting, without which they well knew all that they had achieved would be coldly viewed by the needy and covetous Ferdinand.

The shining yellow trinkets worn by the natives, and either freely given, or else thankfully exchanged, for the newer or more ornamental baubles offered by the Spaniards, were small and of little value; and to the oft-repeated question as to

whence the gold of which they were fabricated was obtained, reply was invariably made by pointing to the south. Hearing repeated mention of an important island in a somewhat similar direction, called Cuba, and becoming more and more convinced that it must be the Cipango of Marco Polo, Columbus resolved to sail in quest of it. After three days' navigation, in the course of which he touched at a group of seven or eight small islands, termed by him *Islas de Arena*, (supposed to be the present *Mucaras Islands*), and crossed the *Bahama Bank* and *Channel*; he arrived, on the morning of the 28th of October, in sight of the magnificent island of Cuba, whose bold coast-line, rich in harbours, promontories, and headlands, with a back-ground of stately forests, lofty mountains, and pleasant valleys, interspersed with extensive plains, watered by fine clear streams, offered to his delighted eyes a prospect surpassing in promise anything he had yet beheld. No wonder that "Cuba broke upon him like an elysium." (Washington Irving, p. 91.) On landing, there were various indications of more art and civilization than had heretofore been observed; the dwellings were better built, and contained rude statues and wooden masks, carved with considerable ingenuity; implements for fishing; and large stores of cotton, wrought into yarn, or nets for hammocks. The fields were cultivated with the agi or sweet pepper (pimento), maize, or Indian corn; a species of lupin or pulse, the before-mentioned yuca, the sweet potato, and other vegetables and fruits.

Columbus would have thought it strange indeed could he have been told that a custom, which he and his sailors here watched with astonishment, as a singular, unaccountable, and even nauseous practice, would become common among every civilized nation. They saw several Indians going about with firebrands in their hands, and certain dried herbs, which they rolled up in a leaf, and lighting one end, put the other in their mouths, and continued exhaling and puffing out the smoke. A roll of this kind they called "a tobacco," a name since transferred to the plant of which the rolls were made.

About this time, after close conference with Martin Alonso Pinzon, who, like himself, had studied deeply the deluding volume of Marco Polo, and consequently appears to have misinterpreted the signs of the Indians into accordance with previously formed opinions, Columbus began to consider whether

he had not been mistaken in believing himself to have reached the island of Cipango, and at length was persuaded by Pinzon that Cuba was not an island at all, but that they had actually arrived at the mainland of Asia, or, as they termed it, India, and could be at no great distance from Cathay, the much desired limit of their voyage, and the residence of the great Khan, to whom the admiral forthwith dispatched an embassy, whose errand of course proved fruitless in its primary object, and was even unsuccessful in procuring information sufficient to render manifest the utter falsity of the premises upon which such illusory expectations had been founded.

Soon after this disappointment a worse trial awaited Columbus, in the desertion of Pinzon, with whom he had had several disputes during the voyage. With his own vessel, and the remaining caravel, he continued, notwithstanding, to prosecute his enterprise; and, as if to cheer him, the beautiful island of *Hayti*, with its lofty mountains, spacious harbours, and luxuriant vegetation, rose before him, its charming scenery enhanced by the transparent purity of a tropical atmosphere. Columbus erected a cross on a commanding eminence, and called the island *Hispaniola*; it was afterwards known as *St. Domingo*, but is now designated by its original native name. Its productions presented no fresh novelty. The people are described in the most favourable terms, as a well-formed race, fairer and handsomer than those of the other islands. The accounts given of them by their earliest visitors, as recorded and attested by contemporary writers, concur in offering a picture more nearly approaching the peaceful but very animalized felicity generally understood as the characteristic of a golden age, than perhaps can be paralleled in history, since the inhabitants of Hayti, and indeed of the Leeward Islands generally, appear to have been exempt from the gross sensuality which so often marks the milder class of savages (the Tahitians for instance). They lived in peaceful though indolent enjoyment, under the patriarchal rule of kings or chiefs, whom they termed "caciques," whose authority was hereditary, descending, in the event of the death of a cacique without children, to those of his sisters in preference to those of his brothers, for a very obvious reason, which however reflects more credit on the sagacity of the islanders than upon the chastity of

their women. Few traces of idolatry were found among them, and vague ideas of the existence of a God and the immortality of the soul were prevalent; almost their only subject of anxiety arose from the incursions of the Caribs, the inhabitants of a neighbouring region afterwards explored and designated the *Windward Islands*.

The following quotations, the first from a letter addressed by Columbus to Luis de St. Angel, an officer in the Spanish court, who had materially favoured his suit to the sovereigns; the second from the valuable work of Peter Martyr, who derived his information from conversations with the admiral; testify how pleasing an impression was made on the mind of their discoverer by the manners and customs of the natives. Columbus writes:—

"True it is, that after they felt confidence, and lost their fear of us, they were so liberal with what they possessed, that it would not be believed by those who had not seen it. If anything was asked of them, they never said no, but rather gave it cheerfully, and showed as much amity as if they gave their very hearts; and whether the thing were of value or of little price, they were content with whatever was given in return. * * * In all these islands, it appears to me that the men are all content with one wife, but they give twenty to their chieftain or king. The women seem to work more than the men; and I have not been able to understand whether they possess individual property, but rather think that whatever one has all the rest share, especially in all articles of provisions."—(*Navarrete*, tom i., p. 167.)

"It is certain [says old Peter Martyr] that the land among these people is as common as the sun and water, and that 'mine and thine,' the seeds of all mischief, have no place with them. They are content with so little, that in so large a country they have rather superfluity than scarceness; so that they seem to live in the golden world, without toil, living in open gardens, not intrenched with dykes, divided with hedges, or defended with walls. They deal truly one with another—without laws, without books, without judges. They take him for an evil and mischievous man who taketh pleasure in doing hurt to another; and albeit they delight not in superfluities, yet they make provision for the increase of such roots whereof they make their bread, contented with such simple diet, whereby health is preserved and disease avoided."—(*P. Martyr*, decad. i., lib. iii.; translation of Richard Eden, 1555.)

Of the disinterested kindness of the people of Hayti, the Spaniards had especial evidence on the night of the 25th of December (Christmas-eve). The sea being calm and smooth, and the ship almost motionless, the admiral and crew retired to rest, upon which the steersman, in direct violation of a standing order, gave the helm in charge to one of the ship boys, and went to sleep. The remainder of the night-watch followed his example, and all were

buried in profound slumber, when the boy aroused them by a wild cry of terror. The treacherous currents, which run swiftly along this coast, had carried the vessel upon a sand-bank, where her keel was firmly imbedded. Every effort to float her off was in vain; the shock had opened several seams, and the swell of the breakers, striking her broadside, left her each moment more and more aground, until she fell over on one side. The officers and men took refuge on board the caravel, and sent a message to a powerful cacique, named Guacanagari, who ruled over this portion of the island, to inform him of the shipwreck. Guacanagari instantly despatched his people with all the canoes, large and small, he could muster, to the assistance of the admiral; and went himself with his chieftains, relatives, and friends, to console and cheer him. He appropriated three of his best dwellings to the reception of the Spaniards and their effects, in removing which from the wreck not the slightest attempt to pilfer was made, even amongst the lowest ranks. Columbus could not find words to express his grateful feelings. "So loving, so tractable, so peaceable are these people," he writes, "that I swear to your majesties, there is not in the world a better nation, nor a better land. They love their neighbours as themselves; and their discourse is ever sweet and gentle, and accompanied with a smile; and though it is true that they are naked, yet their manners are decorous and praiseworthy." The demeanour of the cacique, he described as betokening the inborn grace and dignity of lofty lineage, and his liberality as most princely. He placed a golden coronet on the head of the admiral, and encouraged his subjects in bringing gold and gold-dust, for barter, from the interior—this they did in such considerable quantities, as to reconcile Columbus to his disaster, and even to lead him to look upon it as a providential interposition in his favour, enabling him to penetrate the secret wealth of the country, instead of simply examining its coast-line. Yet his sanguine spirit was sadly deceived, for this shipwreck shackled and limited all his after discoveries, and linked his fortunes to an island, which for the remainder of his life proved a fruitful source of care, disappointment, and humiliation.

At the request of Columbus the cacique despatched a canoe in search of the *Pinta*, which was reported to have been seen at

anchor in a river at the eastern extremity of the island; but this and another expedition failed of discovering any trace of her. The admiral then determined upon establishing a small Spanish garrison with a portion of the sailors who, from the loss of his own ship and the desertion of Pinzon, he was unable to take back to Spain in the small caravel which alone remained to him. Many of his crew were anxious to be left behind, and the cacique and his people were delighted at the project, which they were informed was devised for their especial protection against the Caribs. They lent ready and efficient aid to the construction of a small fortress called La Navidad, the materials being afforded by the wreck, and joyfully assisted in mounting the guns, and forming a wide ditch around the strong wooden tower, little thinking how soon all these preparations would be used not in the endeavour to defend, but to enslave and murder them.

On the second of January (1493), after gratefully thanking Guacanagari and his people for their kindness, and emphatically warning the little Spanish settlement, consisting of thirty-nine persons, to be orderly among themselves, just and gentle towards the natives, and, above all, discreet in their behaviour towards the Indian women, Columbus set sail for Spain, and on the 6th, to his great relief, was joined by the *Pinta*, whose commander endeavoured to excuse his desertion by pleading stress of weather; whereas the admiral was privately informed that he had absented himself in hopes of being the first to discover and benefit by a golden region of which he had been told by one of the natives on board his caravel. Columbus, however, appeared to receive Pinzon's explanation as satisfactory, not venturing to risk an open breach with him on account of the powerful party of relatives and townsmen who had accompanied him in the armament; but finding, a few days after, that Pinzon had violently carried off four men and two girls from a river of Hayti, called Porto Caballo, he compelled their immediate restoration, well clothed, and with many presents, as amends for their forcible seizure.

In the middle of February, the little vessels encountered a fearful storm, and the *Pinta*, from the weakness of her foremast, being unable to hold the wind, was obliged to scud before it. Thus, once again the caravels parted company; and after encountering successively much peril on their

respective courses, both arrived safely on the same day, March the 15th, 1793, in the little port of Palos. Their reception was very different: Columbus was hailed with tumultuous applause, and peals of triumph were still ringing from the towers when the *Pinta* entered the river. Doubting whether the admiral had survived the tempest, Pinzon had written to the sovereigns requesting an audience, to acquaint them with the results of the expedition. The answer was a humiliating refusal, which so chafed the spirit of the proud Spaniard, already worn down with fatigue and anxiety, that he died a few days after. Doubtless he had erred, but he and his family had been the mainstay of the enterprise from first to last, and it was a melancholy ending to the career of one so skilful and daring.*

Columbus was received in Barcelona with great acclamation; his progress through the streets, bearing with him six Indians strangely painted and decorated with their national ornaments of gold; forty live parrots of various kinds; specimens of cotton, amber, rare plants and fruits, &c., resembled a Roman triumph. Ferdinand and Isabella awaited his arrival, seated on thrones under a rich canopy of cloth of gold, surrounded by the chief nobility of both kingdoms. Columbus, after expatiating on the probable wealth and magnitude of the lands he had discovered, presented the Indians to their majesties, with high encomiums on their goodness, gentleness, and intelligence, and concluded by declaring, that "God had reserved for the Spanish monarchs not only the treasures of the New World, but a still greater treasure, of inestimable value, in the infinite number of souls destined to be brought over into the bosom of the Christian Church."

His deep and solemn enthusiasm communicated itself to his hearers; the king and queen sank on their knees, in a transport of gratitude and delight; the whole assembly followed their example, and remained kneeling while the anthem *Te Deum Laudamus* was chanted by the choir of the royal chapel. The subsequent rapid and cruel destruction of the Indians by the Spaniards, and the neglect and ill-treatment of Columbus him-

* A sad fate, according to Oviedo, attended the sailor who first beheld land from on board the *Pinta*; for the promised pension being adjudged to Columbus, the disappointed expectant renounced his country and his faith, went to Africa, and turned Mussulman.

† Columbus himself expected to acquire such immense wealth, that he made a vow to furnish, within

self, in painful contrast to this opening; but it should be observed that amid all the bright hopes of national and individual wealth entertained by the Spaniards, they appear, one and all, to have contented their consciences, from the first, with the notion of converting the natives, without any idea of confirming their territorial rights, or raising their social position. On the 25th of September, 1493, the admiral quitted Cadiz roadstead, and proceeded again to the westward, in command of a fleet of seventeen vessels, laden with horses and other domestic animals, seeds, plants, &c. (including the sugar-cane), with a view to the establishment of a permanent colony. Thirteen priests accompanied the expedition, supplied by the queen with ornaments and vestments from her own chapel.

Desiring to fall in with the islands of the Caribs, of which he had heard such wonderful reports, Columbus steered considerably more to the southward than he had previously done. On Sunday, 3rd November, the fleet arrived at the extensive group, called the *Caribbee*, or *Windward Islands*,† which extend, in a semicircular direction, between the eastern extremity of Porto Rico, and the Gulf of Paria, forming a kind of barrier between the main ocean and the Caribbean Sea. The name of *Dominica* was given to the first island seen. *Mari-galante*, *Guadaloupe*, (where the pine-apple was discovered,) *Montserrat*, *Redonda*, *St. Martin*, *Antigua*, *Santa Cruz*, and the cluster of the *Virgin Islands*, were successively met with. At Santa Cruz, the Spaniards received a painful proof of Carib courage. On landing, they found a village deserted by the men, but inhabited by a few women and boys. There a most unequal contest took place. A canoe filled with Indians, among whom were two females, approached the shore, and was intercepted by the Spaniards, who succeeded in upsetting it: the crew swam off, shooting their arrows meanwhile, and assembling upon a rock, covered with water, both men and women defended themselves resolutely; one of the latter flung her dart with such force that it inflicted a mortal wound on her assailant. An Indian was slain, the rest of the party were taken

seven years, an army, consisting of 4,000 horse and 50,000 foot, for the rescue of the Holy Sepulchre, and an equal force within the five following years.

† In map of West India Islands, this chain is divided into *Leeward* and *Windward*, but the former term is more generally applied exclusively to the four large islands of Cuba, Jamaica, Hayti, and Porto Rico.

prisoners, placed in chains, and the chief personage among them, to whom the rest, even in their mutual bondage, paid great deference, was, with her son, sent to Spain, a very unjust and iniquitous proceeding. After this commencement it is no great wonder that the Spaniards, already prejudiced from the accounts they had previously heard, should have become inveterate against the whole of the Carib race. It is therefore necessary to make due allowance for the exaggerated and highly-coloured reports given of their cannibalism and ferocious barbarities. Their appearance must certainly have been calculated to inspire fear and aversion, from the unnatural contour of the head, flattened in infancy between two pieces of wood; the many-coloured feathers stuck in their long black hair; and the hideous painted scars which disfigured their faces. In some instances, a fragment of tortoise-shell or a fish bone was thrust through the cartilage of the nose (*septum narium*), and the arms and legs were decked with circlets made of the teeth of their enemies slain in battle. Columbus appears to have considered them as cannibals by habit, practising this unnatural crime as a sensual luxury; but Labat, who resided in the West Indies, at a period when some of the islands were still in the possession of the Caribs, declares his belief that it was never done except in an ebullition of rage and revenge; and confidently denies their ever making excursions to the larger islands for the purpose of seizing their inhabitants to gratify any such demoniac desire. Bryan Edwards, upon the authority of Rochefort and Du Tertre, describes them as being among themselves faithful, friendly, and affectionate; jealous beyond measure of their independence; and apt to consider all strangers as enemies: but their confidence once gained, equally staunch in friendship as implacable in hostility. To the inhabitants of the Leeward Islands they entertained an hereditary antipathy, for which there appeared no cause save the very insufficient one of difference of descent, attested by their respective languages, traditions, and customs.

On the 25th of November, the admiral revisited Hayti, where a terrible shock awaited him. The little fortress of La Navidad was in ruins, and the garrison had all perished, some having been slain in disputes with their own comrades, others in war with the subjects of Caonobo, a cacique who ruled in the interior of the island, in

consequence of the brutal manner in which they had acted towards their women, and their outrageous proceedings in seizing the golden ornaments and other property of the aborigines.

The friendly cacique, Guacanagari, had done his utmost to protect the Spaniards; and, in striving to defend them against an expedition headed by Caonobo, he had himself been wounded, and his village destroyed. Thus the precise results Columbus had anticipated when he warned his countrymen against indulging in their fierce and brutal passions had actually taken place. Happy would it have been for him and his present companions had they been convinced by this event of the sure punishment which sooner or later attends all injustice, whether committed avowedly for the gratification of some selfish end, or perpetrated in accordance with that bigoted and cruel spirit which so often, (especially in that age,) has dared to arrogate the holy name of religious enthusiasm; and which, while it afforded a convenient cloak for the designs of the crafty and worldly-minded Ferdinand, narrowed and clouded the gentle and benevolent views of the pious though priest-ridden Isabella, and sadly misled Columbus by persuading him to follow the doctrines of ambition and expediency under the guise of duty. Thus we find the admiral sending back by the return fleet several men, women, and children whom he had captured in the Caribbee Islands, and proposing to establish a trade in Carib slaves, with Spanish merchants, in exchange for live stock, a duty to be levied on each slave for the benefit of the royal revenue. This project he professes to justify as a means of saving souls, and an advantage to the more peaceable tribes, but Isabella entirely disapproved, though even she was subsequently induced to consent to scarcely less iniquitous measures, urged under the same pretext; in particular, the exaction of compulsory labour from the natives. Wanton cruelty certainly formed no part of the character of Columbus, but he nevertheless systematically violated aboriginal rights, in a manner for which the contumely, injustice, and neglect that suddenly obscured his fame, even in its meridian splendour, and surrounded his later years with gloom and bitter disappointment, formed no unfitting retribution. By disregarding the welfare of the Indians at the onset, he opened a door he could not shut, and he was compelled to be the unwilling

spectator of the most cruel excesses perpetrated on the gentle race, who had kindly welcomed and generously befriended him in his hour of need. He founded the city of Isabella, in the northern part of Hayti, with the motley population (about 1,200 in number) who had accompanied him from Spain in the fallacious hope of at once finding mines of gold, and making speedy and immense fortunes. Disappointed in their expectations, and totally unprepared for the toil and hardship inevitably the lot of early colonists, they vented their spleen in virulently reproaching Columbus, and cruelly illtreating the unoffending natives, who, wearied with their unceasing importunity for provisions and gold-dust, shrunk away in fear and dislike, seeing them in many respects following in the steps of their predecessors at La Navidad.

The admiral vainly strove to control the colonists; and the natives, at length driven to despair, and seeing fortifications and settlements springing up in various directions, resolved to resist their oppressors. All the caciques in the island confederated, except Guacanagari, who remained to the last the firm friend of Columbus,* and determined to make a desperate stand for their lives and liberties. Their peaceful habits had completely unfitted them for such a struggle, and the admiral and his brother Bartholomew, at the head of 200 infantry, twenty cavalry, and twenty large bloodhounds, completely routed a force said to consist of 100,000 natives,† who fled at the first fire, closely followed by the cavalry and dogs, and fearful havoc ensued. The prisoners taken were condemned to slavery; and 500 of them were sent by Columbus to Spain, with a suggestion that they should be sold at Seville.‡ Caonabo, the powerful mountain cacique, who had destroyed La Navidad, remained unsubdued. He had formerly been a celebrated Carib leader, whom the people of Hayti had propitiated,

by offering the sister of one of their caciques, the beautiful and richly endowed Anacoana, to him in marriage, if he would come and live among them as their friend. This he had done, and, in the present emergency, was the main stay of the people among whom he had become naturalized. He had looked from the first with a jealous eye on the intrusion of the white people, and was especially exasperated by the establishment of a fortress (St. Thomas) in the very centre of his dominions, which he unsuccessfully endeavoured to reduce. The commander, Alonzo de Ojeda, a bold and reckless cavalier, quite devoid of the inborn chivalry, which formed a conspicuous feature in the character of his foe, ungenerously played upon it as a means of ensnaring him. With ten companions he made his way to a populous town where the cacique then was, pretending to have come on an embassy from the admiral, who he said was desirous of entering into a friendly alliance with him. Caonabo willingly consented to accompany him to Isabella, but was attended by so large an escort that Ojeda dared not attempt his forcible seizure; and, therefore, had recourse to stratagem. Producing a set of manacles of burnished steel, which glistened like silver (a metal which, for its rarity and beauty, the natives prized far above gold), Ojeda informed Caonabo that they were regal ornaments worn on great occasions by Spanish monarchs. He invited him to put them on, and suffer himself to be placed on his (Ojeda's) steed. The unsuspecting cacique cheerfully complied, and was mounted behind the treacherous cavalier, who, putting spurs to his horse, galloped off with his victim, and delivered him into the hands of Columbus, by whom he was sent on board ship, that he might take his trial in Spain, his offence being that he had bravely defended his adopted country.§ When Columbus, with his tenderly loved brothers Diego and Bartholo-

* The fate of Guacanagari was a very sad one. Upbraided by his countrymen for deserting them, and disgusted by the ill-conduct of the beings whom he had thought little less than divinities, he retired into the woods and died, desolate and unhonoured. It is evident that strong personal attachment to the admiral alone dictated his adherence to his cause, for so great a dislike had he imbibed towards the Spaniards, that when Columbus, on his arrival in the island after the destruction of La Navidad, desired to suspend an image of the Virgin about his neck, the cacique long refused to receive any symbol of a faith whose professors were so cruel and licentious.

† Southey's *History of the West Indies*, vol. i., p. 39.

‡ The sale of unransomed captives, of all ranks and ages, had been largely practised by Ferdinand in his wars with the Moors of Granada; and after the reduction of Malaga, no less than 11,000 persons are stated to have been suddenly thrown into a state of slavery.

§ The vessel in which he was embarked foundered on her homeward passage, and all on board perished. His unhappy widow, who, upon the death of her brother, succeeded him in authority, and was greatly beloved by her subjects, eventually fell a victim to Spanish cruelty, being treacherously captured, and then publicly hanged, by order of Ovando in 1505.

mew, some six years after, was, upon various pretexts—among which may be named cruelty to the natives, urged by the very men whose outrages he had striven to repress—sent across the Atlantic in chains rivetted upon him by the hands of one of his own menial servants; he must have had leisure to think remorsefully on the injuries he had helped to inflict on the caciques and their unhappy people.

The Indians, after the capture of their favourite leader, courageously but vainly endeavoured to revenge his loss, and retain their liberty. They were rapidly subjugated; where, as in the case of Caonobo, force failed, treachery was called to its aid.

The subsequent well-known history of Columbus cannot here be detailed; his proceedings, so far as they were connected with the British West Indies, will be noticed in the description of the respective islands; now little more need be stated than that exploratory expeditions were dispatched in different directions, Columbus still fancying himself in the Chinese seas, and believing Cuba,* after coasting along it for a considerable distance, to be a portion of the Asiatic continent, in which mistake he remained to the day of his death.

On the 2nd of May, 1494, Jamaica was discovered; Trinidad on the 31st of July, 1498; and on the 1st of August in the same year, the admiral made the main-land of America, and named it *Tierra de Gracia*, and on the 12th of August the island of *Grenada* was seen. Thus the Spaniards

* While exploring the coast of Cuba, Columbus (July 7th, 1494) went on shore, erected a cross, and celebrated mass, as was his custom in newly visited localities. While thus employed, a cacique and some Indians approached, who, at the termination of the ceremony presented the admiral with a calabash filled with fine fruit, and one of them, a venerable old man, made an oration after the manner of his country. "This which thou hast been doing," said he, "is well, for it appears to be thy manner of giving thanks to God. I am told that thou hast lately come to these lands with a mighty force, and subdued many countries, spreading great fear among the people; but be not therefore vain-glorious; know that, according to our belief, the souls of men have two journeys to perform, after they have departed from the body—one to a place dismal and foul, and covered with darkness, prepared for those who have been unjust and cruel to their fellow-men; the other pleasant and full of delight, for such as have promoted peace on earth. If then thou art mortal, and dost expect to die, and dost believe that each one shall be rewarded according to his deeds, beware that thou wrongfully hurt no man; nor do harm to those who have done no harm to thee." This speech was translated to the Admiral by his Lucayan interpreter, Diego Colon—(Washington Irving, vol. i., p.

gradually extended their investigations over the whole of these seas, and gave the different islands and groups the several designations they now generally bear; founded colonies at Cuba, Jamaica, Trinidad, &c.; and, proceeding from the islands to the main-land, conquered and settled Mexico, Peru, and other places. The newly-discovered territories were all densely peopled; the islands alone must have contained several million inhabitants, who, in the first instance, as previously stated, had everywhere received the Spaniards with hospitality and friendship. They were, however, speedily converted into enemies; and their destruction was swift and terrible. The evidence on this point is irrefutable. According to Las Casas,† the Leeward Islands possessed a population of no less than six millions, "abounding with inhabitants," as an ant-hill with ants." Benoni states, that there were two million natives in the island of Hayti alone; Oviedo reckons them at one million; and Peter Martyr, at one million two hundred thousand. Taking the lowest computation, the slaughter must have been terrific which, in fifteen years, reduced the number to sixty thousand;‡ in forty-three years to five hundred, and soon ended in their complete extermination. In this butchery Columbus led the way, not so much in actually aggressive warfare, as in wrongfully enforcing compulsory labour by claiming from them tribute, which he, coming in the peaceful guise of a discoverer, not a conqueror, could have no shadow of right to 231.) The same speech, differing only in a few unimportant particulars, is recorded by Herrera, Don Ferdinand Columbus, Peter Martyr, Cura de los Palacios, Bryan Edwards, and others.

† This good man, so distinguished in the annals of the New World, accompanied Columbus during his first voyage, and was so favourably impressed by the gentleness of the Indians, that he became an ecclesiastic in order to devote his life to their conversion. The cruelties exercised upon them by his countrymen, excited his lively indignation, and he was continually hurrying from one hemisphere to the other in his endeavours to procure redress for the wrongs, or to solace the sufferings of the unhappy natives. The hope of checking the licentiousness and cruelties of the Spaniards, induced Las Casas to accept the bishopric of Chiapa, in Mexico; but finding his new dignity ineffectual to enable him to accomplish the good he had anticipated, he resigned the Episcopate, and endeavoured to enlist the sympathies of humane and unprejudiced minds in favour of the Indians, of whom he declared, in his treatise on the tyranny of the Spaniards in America, *fifteen million had been wantonly destroyed*.—Raynal, vol. ii. p. 295.

‡ In consequence of the rapid decrease of the Haytians, 40,000 Lucayans were forced or decoyed into filling their place and sharing their fate.—(Robertson.)

demand; and by compelling them to work in the gold mines, a species of employment for which their former easy mode of life, and delicate though healthy frames, nourished almost exclusively upon vegetable diet, completely unfitted them.

Beyond all question, Columbus was deliberately instrumental in the establishment of slavery in the West Indies; and that, too, in opposition to his royal patroness, who ever recommended him most earnestly to watch over the welfare of the Indians, and who, when she heard of his distributing them as slaves, exclaimed indignantly—"what right has the admiral to give away my vassals?" and ordered all who had been brought from Hayti, to be restored to their homes, including both prisoners-of-war and others who had been transported to Spain by private individuals. At this juncture, a letter of Columbus was on its way, advising the continuance of the system of slavery instituted by him as a measure of policy, necessary to the welfare of the colony.*

Las Casas, Montesinos, Ximenes, Boyle, and the whole of the Dominican missionaries who were contemporaries with Columbus, remonstrated against the enslaving of the natives in any degree, and especially against the system of repartimientos or distributions, by which the natives were divided among the Spaniards, "and even," says Robertson, "refused to absolve or admit to the sacrament such of their countrymen as continued to hold the natives in servitude."

The taxes imposed by Columbus immediately after the defeat of Caonabo and the other caciques, on the people, were most

* The pertinacity of the admiral, in continuing to make slaves of all captives taken in war, and the assertion of some of the malcontent colonists, that he entered into hostilities with that view, was the main reason which induced Isabella to consent to a commission being sent out to investigate his conduct, and if necessary, to supersede him in the command.

† The settlements soon lost their *prestige*. The sufferings of the early adventurers, from the disappointment of their hopes, and from virulent diseases, for the most part caused by their own excesses, had given a very unfavourable character to the islands; so much so, that in 1497 Ferdinand and Isabella issued a proclamation stating, that as all the persons whom they had ordered to embark for the Indies were not sufficient to form a colony "such as it behoves for the service of God and our service," it was expedient that others should go and live there at their own expense; they therefore decreed "that all and every person, men and women, who may have committed *any murders and offences whatsoever*" (except heresy and certain other crimes) should at pleasure have their punishments commuted to tem-

severe. Thus, in the vicinity of the gold districts, each individual above fourteen years of age was expected to pay every three months the measure of a Flemish hawk's-bell of gold-dust, equal in value to about five dollars of that epoch, or to fifteen dollars of the present time. The caciques were compelled to furnish a much larger amount; and each individual, on rendering his tribute, received a copper medal, which he was obliged to wear as a certificate of payment; those who were found without these tokens being liable to arrest and punishment. Guarionex, one of the five leading caciques, who severally governed the island at the period of its discovery, complained of this unreasonable and grievous system of taxation. His richly fertile plain yielded no gold; and though the mountains on his borders contained mines, and the torrents washed down the glittering dust into the river beds, yet his subjects were "unskilled and unfit for the laborious work of collecting it; he therefore proffered, instead of the tribute required, to cultivate with grain a band of country stretching across the island, from sea to sea, "enough," says Las Casas, "to have furnished all Castile with bread for ten years." This offer, which, if accepted, might have tended to the rapid development of the agricultural resources of the country simultaneously with its mineral wealth, was rejected; nothing could be accepted in the stead of gold. To aggravate the misery of the natives, the most depraved criminals were sent among them as free colonists; and these newly-released convicts from the dungeons of Castile,† on arriving in Hayti, assumed the airs of grand porary banishment to Hispaniola (Hayti); thus, it condemned to death they were to maintain themselves there for two years instead, or for one if they had incurred any minor punishment, even though it amounted to the loss of a limb. They were, moreover, promised a free pardon for every crime committed up to the day of the publication of the proclamation. Magistrates were at the same time desired to make banishment to Hispaniola the most frequent penalty for crime. To these miscreants "lands, mountains, and waters" were to be granted in perpetuity.—(Southey, vol. i., p. 47.) This pernicious measure was suggested by Columbus himself, who lived long enough to witness its effects. In a letter written to the king after his return to Spain, he says, "I am informed that since I left this island [Hayti], six parts out of seven of the natives are dead, all through ill-treatment and inhumanity; some by the sword, others by blows and cruel usage, others through hunger. The greater part have perished in the mountains and glens, whither they had fled from not being able to support the labour imposed upon them."—(Irving, vol. ii., p. 245.)

14 EXTERMINATION OF NATIVE WEST INDIANS BY SPANIARDS.

cavaliers; men who had come out as miners, labourers, and scullions, would not go a furlong from their houses except they were borne on palanquins; each kept several concubines, seizing for this purpose the daughters and sisters of caciques, and had two or three slaves to serve them.

Columbus, in his dispatches, complained bitterly of the conduct of the colonists, declaring that "they robbed the Indians; abused the women in the most shocking manner; and lest their hands should get out of practice, used, for pastime, to try who could most dexterously strike off the head of an Indian, so that it should fly clean from the body to the ground;" yet he follows up his exposition of the cruelties practised by his countrymen, with a declaration that "one evil only must be borne for some years; that the Spaniards should be permitted to use the Indians, made prisoners of war, as slaves:" (*Southey*, vol. i., p. 59,) overlooking the fact, that the solitary evil he deemed it inexpedient to abolish was alone sufficient to account for and originate every other.

The oppressions of the natives greatly increased during the brief sway of Bovadilla, who, trusting to obtain the favour of the sovereigns, by amassing, no matter at what cost of blood and suffering, a large amount of gold, divided the aboriginal population into classes, and then distributed them among the colonists, suffering these latter to inflict upon their wretched victims blows and lashes, and even death itself, according to their own wicked wills. Isabella, on hearing of these proceedings, indignantly ordered the recal of Bovadilla,* and the release of the natives, who immediately left the Spaniards, and deeply disgusted with their previous conduct, could not be induced to labour for hire, or to receive from them religious instruction. This latter fact weighed deeply with Isabella, who unhappily gave her consent to the renewal of the compulsory system, to the end that they might be brought within the pale of the Romish church, but specially urged that they should all be well paid and gently treated, particularly those who should become Christians. Ovando, the new governor, availed himself of this permission, and distributed the na-

* On the 1st of July, 1502, he set sail with a fleet of thirty-two sail, for Europe, richly laden with ill-gotten gold, twenty sail of which, with all on board, including Bovadilla, the unfortunate cacique Guariónex, and others, perished in a storm within twenty-four hours of their departure from Hayti.

tives among his favourites, giving fifty to some, and one hundred to others. This was done by virtue of a writing called a *repartimiento*, which ran thus—"To you —, we entrust so many Indians under such a cacique, and you are to have them instructed in our holy Catholic faith." At first they were to work in the mines for six months. Afterwards the term was increased to eight; and as they died off rapidly, Ovando supplied his favourites with more to keep up their complement, instead of giving repartimientos to others. This plan he pursued all the time he remained governor of the island, and it afterwards became general throughout the West Indies and South America. Both natives and colonists suffered severely from famine, in consequence of the neglect of cultivation, and from various new diseases, one in particular arising from the promiscuous intercourse of the Spaniards with the Indian women, became fearfully contagious, and spread havoc and alarm among the colonists; their joints swelled, their blood became as it were poisoned, their noses, hands, fingers, and toes, putrified and dropped off, their bones rotted, many died raving mad; others returned to Europe, hoping their native air would cure them; there they spread this horrible and heretofore unknown malady, which, on its first manifestation amongst the Spanish and French armies, inflicted wide-spread destruction, and spread an almost universal panic, as recorded in the works of early medical writers on this loathsome subject. To return to the Indians:—the death of Queen Isabella, in 1506, removed the only check which had partially restrained the ferocious cruelty of her subjects, who now gave loose to the most demoniacal excesses: bets were made during their drunken revels, who could soonest cleave the skull of an Indian, and divide him at a single blow; their dogs were fed with the flesh of their victims, and it was not unusual to borrow a quarter or a limb of a human being, from a neighbour, for the use of the blood-hounds, promising a similar return on the ensuing day. In the search for gold, towns and villages were laid waste, and burned; the slightest resistance was avenged by indiscriminate slaughter—the caciques were murdered in cold blood—the women who tempted the lust of the invaders were reserved for their sensuality; tortures of the most barbarous nature were resorted to for the purpose of forcing a discovery of that gold for which the Spaniards

thirsted with such insatiate desire—those whose lives were spared were kept as slaves, and sent to work in the mines, where they perished rapidly: while such as escaped to the mountain fastnesses and forests in the several islands, perished of hunger; and many destroyed themselves to avoid the cruel torments to which they would have been subjected by their persecutors. The eloquent Las Casas, and other eye-witnesses, have related deeds of horror enacted by these fiends in human form, which almost exceed belief, and are frequently of a character too fearful and disgusting to be dwelt upon. It was with a view of saving the remnant of the miserable Indians, that the importation of Africans was proposed by Las Casas, his overwhelming sympathy for the suffering he witnessed leading him to overlook the cruel injustice of serving one people at the expense of another. Eventually negroes were introduced, but it was not to save, but to supply the place of the unfortunate race who had been swept from off the face of the earth. Thus crime begets crime; and man, left a prey to the guilty passions of his unregenerate nature, goes on in his awful career until the cup of iniquity is full.

For many years the other nations of Europe did not interfere with the Spanish monopoly of the West Indies. The first English vessels seen there were two ships of war under Sebastian Cabot and Sir Thomas Pert in 1516. The earliest trader visited the islands two years later; she was fired on by the colonists at St. Domingo, and the Governor was blamed for not sinking her, and thus preventing any additional information being conveyed to England. In 1536, the French began to molest the Spaniards in their new acquisitions; as did the English soon after under Hawkins, Drake, Duddeley, Raleigh, Baskervil, Saville, the earl of Cumberland, Sherley, and others. At the commencement of the 17th century, the English, French, and Dutch, began to form settlements on the islands and parts of the main-land not pre-occupied by Europeans. Disputes soon arose as to the rights of first location; but in some instances the subjects of two nations (as, for instance, English and French at Montserrat) partitioned an island between them. The Spaniards, however, long endeavoured to maintain exclusive possession of the West Indian seas, and even of those islands which they were unable to colonize. Hostilities were carried on against the ships

of all nations, attempting to navigate any part of the newly discovered hemisphere, and the most barbarous cruelties were practised on all persons found there; even shipwrecked mariners, when their lives were spared, were doomed to the terrible slavery of the mines. This led to depredations on their colonies, and attacks on their annual "plate-fleet," by Buccaneers, Flibustiers, Corsairs, and other adventurers, and to a desultory warfare on the part of the English, French, and Dutch, against the Spaniards, even when their governments at London, Paris, the Hague, and Madrid, were at peace. Despite these proceedings, and notwithstanding the absence of any protection from the crown, many Englishmen located themselves on different islands, colonized Barbadoes, and commenced a traffic with the Spanish Main, as the coast of southern America was then called.

The Spaniards did not quietly submit to these encroachments on their assumed exclusive jurisdiction. In 1629 they seized 600 English settlers at St. Christopher's, and condemned them to subterranean bondage in their mines. In the following year (15th of November, 1630) a treaty was signed at Madrid, between Charles I. of England, and Philippe IV. of Spain, which was a renewal of that entered into in 1604, between Queen Elizabeth and Philip II., but no notice was taken of the possessions which the English had, in the interval, acquired in the West Indies; the Spaniards consequently deemed themselves at liberty to pursue their determination of exterminating all interlopers; they attacked the English settlers at Tortuga in 1638, at New Providence in 1641, and at Santa Cruz in 1650, massacred indiscriminately men, women, and children, plundered the settlements, burned the habitations, and then left the islands. These and other atrocious proceedings, which Charles I. was unable to prevent or punish, checked the early attempts made by British to settle peaceably in the west. When, however, Oliver Cromwell had decided on keeping peace with France, he resolved on punishing the flagrant perfidy of Spain, diminishing its exorbitant pretensions, and increasing the resources and influence of his own country, by gaining possession of the West Indian colonies, which then poured such wealth into the coffers of the Spanish monarch.

With these views, and probably also with a desire to get rid of General Venables, who

was plotting the restoration of monarchy, the Protector determined to seize Hispaniola. He therefore despatched an armament thither, composed chiefly of the inmates of the various goals, then crowded with petty delinquents and partisans of royalty. The fleet and troops, under the joint command of Admiral William Penn and General Robert Venables, sailed from Portsmouth early in 1655; rendezvoused at Barbadoes, where they were joined by numerous volunteers, and on the 13th of April, 7,000 infantry and a troop of horse were landed, with three days' provision, ten leagues to the westward of the city of St. Domingo. On the 15th, three regiments disembarked two leagues to the westward of the city. Both detachments met with unforeseen difficulties; were attacked vigorously by the Spaniards and negroes, and completely routed, owing to their cowardice and want of discipline.

Of 9,700 men landed, only 8,000 re-embarked on the 3rd of May;—when Venables directed the 7th of May to be kept as a day of humiliation, and issued an order, that in any future contests, whoever should be found to turn his back to the enemy, and attempt to flee, should immediately be run through the body by the officer in the next rearward division; who, if he failed to perform this duty, was himself to suffer death without mercy. The fleet proceeded to Jamaica, and captured that island, as will be stated in the ensuing chapter.

The demand in Europe for sugar, coffee, and other tropical products, and the suitability of the soil and climate of the West Indies for their growth, together with the proximity of these islands, rendered them important as affording means for the rapid acquisition of wealth. The slave trade on the African coast, supplied, as has been previously stated, the wretched victims, by whose blood and sweat, sugar and coffee were raised; and to the millions of Indians who had perished in the search for gold—was now added millions of Africans, torn from their homes, and condemned under the torture of the whip and the goad, to cultivate the land for their European taskmasters, and to enrich the coffers of England, France, Spain, Holland, and other states, who all vied with each other in their haste to grow rich, at the expense of suffering humanity.

Life—so far as the negro was concerned—was a mere question of money; it was long

a moot point of political economy among the planters, whether it was most profitable to work a gang of slaves to death rapidly, and replace them by fresh importations, or by less severe labour, to extend the duration of existence over a longer period. Many, in the very recklessness of brutality, adopted the latter opinion; they separated husband and wife, permitting no intercourse between them, and this, together with the inequality of numbers between the sexes, and the licentiousness, as well as cruelty of the colonists, occasioned such an enormous waste of life, as to require in the middle of the eighteenth century, an annual supply of about ninety to one hundred thousand Africans.

The amount of sin and suffering, national and individual, perpetrated and inflicted in the West Indies, is appalling. England rushed madly onwards in a career of crime and oppression; she put forth all her strength to become the mistress of these blood-stained islands. When war arose in Europe, it was carried on in the New World with a bitterness and fury outvying that manifested in the Old; and hostile fleets for years incarnadined the tranquil western seas with the blood of thousands, in the attempt to retain or acquire possession of these sugar fields for their respective countries. In a mere pecuniary view, the expenditure of men and treasure must have been enormous. The wealth which England squandered in this contest* largely contributed to swell the National Debt. A so-called "West India Interest" was gradually formed, which became a source of great evil, not only by blinding the nation to the wrongs which were being committed, morally and socially, but also by establishing a monopoly in the supply of tropical produce, and usurping to itself exclusively the title of *Colonial Interest*, and thus throwing into the shade all our other transmarine dominions, preventing the occupation of valuable islands like Java, and causing the immense territories of the British crown in the East Indies to be underrated and neglected. The purchase of parliamentary nomination boroughs by the wealthy owners of sugar plantations; the acquisition of similar estates by members of the peerage; the common cause made by, and complete organization of, the whole body of

* It terminated in 1810, by her conquest of nearly every European possession in the West Indies, though some of the most valuable were afterwards restored to their previous owners.

THE WEST INDIA ISLANDS—AREA, OCCUPATION, AND POSSESSION. 17

planters and proprietors, gave a political power to the West Indian interest, which made its co-operation effective in the perpetration of any job, enabled it to resist for twenty years the efforts of Pitt, Fox, Wilberforce, Grenville, Wellesley, and others, for the suppression of the slave-carrying trade; and from 1807 until 1834, prevented the abolition of slavery in the West Indies.

Truly is it remarked by the pains-taking and faithful recorder of West India annals, from the period of their discovery in 1492 to 1816, that their "history presents little more than a melancholy series of calamities and crimes. The islands have been laid waste by hurricanes and visited by pestilence; but the sufferings which have arisen from natural causes, are few and trifling in comparison with those which moral and political circumstances have produced."*

The annihilation of the Indians, the introduction of slavery, the ferocious proceedings of the Buccaneers, the sanguinary inter-colonial wars, the ravages caused by yellow-fever, and the destruction which earthquakes and hurricanes have produced, find, happily, no parallel in the annals of mankind. To

some of these painful subjects it will be necessary to advert in the history of the several possessions of Great Britain; but the chief objects of the writer are, rather, to afford an exposition of their present state, to set forth the intrinsic value of their yet very partially developed resources, and to investigate both the antecedents and the results of the still recent measure of emancipation on the condition, character, and prospects of the coloured and white population.

The following table shows the name, area, date of occupation by European powers, &c., of the chief islands or groups of islets included under the general term of the West Indies. To those named therein as belonging to England, may be added some territory on the South American Main, called British Guiana, which comprises Demerara and Berbice; and the settlement of Honduras in Central America. The Bermudas in the Atlantic cannot with propriety be designated West Indian islands, but they are commonly viewed as such, and were, until 1834, officially included among the western slave colonies; their description will, therefore, be comprised in the present Division.

Name of Island.	Area in square miles.	When first occupied.	By what People.	To whom belonging.
Jamaica and the Caymanas	6,400	1509	Spaniards	Great Britain.
The Bahamas	5,500	1672	English	Do.
Virgin Islands (Tortola, &c.)	250	1648	Dutch Buccaneers	Do.
Trinidad	1,700	1535	Spaniards	Do.

DIV. VIII. D

CHAPTER II.—JAMAICA.

POSITION, AREA, SPANISH OCCUPATION, BRITISH CONQUEST, HISTORY OF THE ISLAND, EFFECTS OF SLAVERY, EMANCIPATION, MISSIONARY LABOURS, AND THEIR RESULTS.

JAMAICA, called *Xaymaca* by the aborigines, in consequence, it is supposed, of the abundance of wood and water found there, is situated in the Caribbean Sea, to the southward of the eastern extremity of the island of Cuba, between the parallels of $17^{\circ} 40'$ and $18^{\circ} 33'$ N. lat., and the meridians of $76^{\circ} 12'$ and $78^{\circ} 23'$ W. longitude, 4,000 miles to the south-west of England, and 600 miles to the northward of Chagres on the isthmus of Panama. The island extends in an east to west direction about 143 miles, the breadth diminishes at either end, and in the centre measures 40 to 45 miles. The area is estimated at about four million acres.

HISTORY.—The blue mountain-tops of Jamaica were first seen by Columbus on the morning of the 3rd of May, 1494, during his second voyage. A large party of Indians offered some resistance to his attempt at landing on the northern shore, near the headland named by him Santa Maria; he therefore proceeded somewhat further, and anchored in a harbour about the centre of the island, to which, from the great beauty of the surrounding country, he gave the name of Santa Gloria. Attempting, on the following day, to enter a more sheltered haven, where his ship could be careened and caulked, as it leaked considerably, he was again opposed by the natives, among whom he forcibly landed, slew several, put the rest to flight, and let loose a powerful dog* trained to attack human beings, which pursued them with sanguinary fury, and from their previous want of acquaintance with savage beasts of any kind, terrified them beyond measure. Columbus proceeded to take formal possession of the island, where he remained for ten days, but having learned from the natives, whom he had conciliated by presents, that no deposits of gold were known to exist, he returned to Cuba, and for eight years after Jamaica remained unvisited by Europeans. At the expiration of that time the Admiral, during his fourth and last voyage

in search of a western passage to India, sought refuge for himself and his companions, when in imminent danger of foundering at sea, by beaching his two shattered caravels,† in a small haven of Porto Santa Gloria, which still retains the name of *Don Christopher's Cove*. Here the worm-eaten vessels were securely shored up, close along-side one another, and covered over from stem to stern, the water being almost up to the deck. The Indians evinced the most generous forgetfulness of the injuries they had formerly received from Columbus, who obtained from them ten canoes, two of the larger of which, called *piraguas*, he despatched under the charge of Mendez and Fiesco, accompanied by twelve Spaniards and twenty Indians, to inform Ovando, the governor of Hayti, of his situation. The undertaking was extremely arduous, the distance being forty leagues, and the sea turbulent, but it was successfully accomplished. Ovando, on the plea of having no ships of sufficient burden at hand, to enable the admiral and his crews to leave Jamaica, allowed them to remain eight months longer in their painful and wearisome position, neglecting even to furnish them with supplies of food, and leaving them dependent on the natives, who, from their desultory mode of labour, were ill able to meet the large and long-continued demand for provisions which had so suddenly arisen.

The difficulties of Columbus were enhanced by extreme personal suffering from gout, and by the mutinous conduct of some of his own people, whose proceedings excited the anger and distrust of the natives, and even led them to refuse holding further communication with the party on the wrecks. The prospect was really alarming, for the sickness of many of the sailors, and the idleness and discontent of nearly all, had prevented their making any attempt to raise food for themselves. In this emergency, the admiral took advantage of an approaching eclipse of the moon to terrify the Indians into compliance, persuading them that it was a special interference of Providence in his favour, and a token of the sure destruction which would overwhelm them, if they failed to supply him abundantly with provisions. This they promised, and were then told that intercession had been made for them, and that the threat-

* These fierce creatures would spring upon a man and tear out his bowels: all the early documents prove that they were extensively and systematically used by the Spaniards in their cruel warfare against the aborigines. A large dog, named Bezerillo, did more execution than any soldier, and was allowed in consequence the pay of a cross-bow man, and a share and a half of prize-money. Southey, who records the circumstance, does not attempt to explain in what shape Bezerillo received his revenues, but adds with all gravity that "he was killed in battle by an arrow." (vol. i., p. 113.)

† He had previously lost two of the four vessels attached to his expedition, partly through damages sustained in the hurricane in which Bovadilla perished (see note to p. 14). Remarkable indications of the

coming gale, he had entreated Ovando to permit his ships to enter the harbour of St. Domingo, and to detain the fleet then about sailing for Spain. Both these requests were scornfully refused. By keeping close in shore he weathered the storm, his vessel being the only one uninjured of the whole fleet; and the consummate seamanship of his brother Bartholomew (the adelantado, or lieutenant-governor), enabled him to keep afloat a vessel which had been before considered scarcely seaworthy. Among the treasure lost on this occasion, was the famous mass of virgin gold, said to weigh 3,600 castellanos, which had been discovered by an Indian girl in a brook, to the great delight of the miners, who, to express their joy, roasted a pig whole, and carved it upon the gold, boasting that no monarch ever ate off so costly a plate.

ened danger was averted. It is remarkable that Columbus, while thus profanely wresting the great laws of creation, and misinterpreting them wilfully for his private ends, was actually believed by many of the sailors to be deeply versed in necromancy;* nor was his own mind free from a similar superstition, for in a letter written from Jamaica, he assures the sovereigns that the people of Cariari (Central America) were great enchanters, using magic powders and other charms; and he adds that his seamen attributed all the delays and hardships experienced on that coast to the influence of witchcraft.

After remaining above a year, cooped up on the stranded vessels, Columbus was relieved through the indefatigable exertions of Diego Mendez, who, despairing of obtaining assistance, had hired and victualled a ship at the expense of his commander, and was about despatching it alone, when Ovando, whose conduct had been severely commented on by the San Domingo colonists, thought to avoid the reproach of having utterly neglected his duty, by sending a caravel at the same time.

On the 28th of June, 1504, Columbus quitted Jamaica, and proceeded to Hayti, whose state then afforded an appalling contrast to its condition at the time of its discovery only ten short years before. The five great caciques—the sovereign princes of the island—had all fallen victims to Spanish cruelty, and their tribes, which had peopled the mountains and valleys, and rendered by their towns and tracts of cultivation, the rich levels of the interior so many “painted gardens,” had been nearly swept away, the remnant being condemned to life-long and most oppressive bondage.

After unsuccessfully pleading that the natives might be less cruelly treated under the unjust system of slavery which he had himself instituted—at least as regarded the so-called prisoners of war—Columbus, in deep sorrow and disgust at the ruthless brutalities he witnessed, sailed for Spain, and after a tempestuous voyage, arrived there, thus terminating his last and most disastrous expedition. But his personal trials were far from being ended; it yet remained that he should descend in sorrow to the grave. When he reached Seville, suffering intensely from bodily infirmities, his noble-minded patroness lay upon her death-bed, sinking under the effects of a deep and incurable melancholy which had undermined her constitution, and given fatal acuteness to her bodily ailments. The death of her only son, her grandson, and a beloved daughter, together with other severe domestic trials, had outweighed the triumphs of a brilliant reign, and her last moments were embittered by a knowledge of the cruelties inflicted on the Indians, and especially of the fate of the beautiful and gifted Anacoana, the widow of Caonabo (p. 11). With her dying breath she exacted a promise from Ferdinand, that Ovando should be immediately recalled; but this was not done until four years after; the avarice of the king being meanwhile gratified by the revenues so mercilessly extorted.

Columbus urgently solicited the discharge of the arrears due to his seamen; for himself he sought less for pecuniary indemnification than for the restoration of the offices and dignities for which he had ex-

pressly stipulated in the first instance. Ferdinand met his demands by the most unworthy evasions, and his old and faithful servant expired on the 20th of May, 1506, his body, worn out by sickness and hardship, and his mind cankered by ingratitude and neglect. After his death, his son, Diego, claimed as his lawful and acknowledged heir, the long-withheld concessions, and wearied with vainly importuning his sovereign, instituted a memorable process against him before the Grand Council of the Indies, at Seville; and this court, with laudable integrity, adjudged his claims to be well founded, and declared him hereditary viceroy and admiral of all the territories discovered by his father. Ferdinand, however, could only be brought to confirm to him the title and authority of viceroy and governor, and admiral of Hayti. Diego, whose interest had been strengthened by his marriage with Maria de Toledo, proceeded to Hayti, attended by a brilliant retinue—he bearing the much desired titles, and his wife, who accompanied him, being styled the vicereine. To his mortification, he soon learned that the king had invested in two other persons, Alonzo de Ojeda† and Diego Nicuessa, not only separate and distinct governments, which comprehended all the adjacent continent as far as it had been discovered by Columbus, but had also included the island of Jamaica, as a joint appendage, to be used as each pleased, either as a garden for the production of food, or a reserve whence to procure slaves to work in the mines.

The newly appointed governors quarrelled respecting the partition of Jamaica, upon which, Don Diego stepped in, asserted his prior claim, and in November, 1509, sent thither, as his representative, a Castilian, named Juan de Esquimel, with about seventy men, to found a colony on the shores of the haven, where Columbus had been detained so long. Shipwreck and various calamities overwhelmed both Ojeda and Nicuessa; neither were able to offer any resistance to Esquimel, who landed at Porto Santa Gloria (now St. Ann's Harbour), and founded on its shores the town of Sevilla Nueva, afterwards called Sevilla d'Oro, from the circumstance of some gold ornaments having been obtained from the Indians. Herrera, in describing the early colonization of Jamaica, says, “the affairs of the island went on prosperously; because Juan de Esquimel having brought the natives to submission, *without any effusion of blood*, they laboured in planting cotton and raising other commodities, which yielded great profit.” Long, however, in his *History of Jamaica*, gives a different account of its first occupation; declaring that “the lieutenant-governor, soon after landing on the island, began to parcel out and distribute the country and inhabitants among his followers; which the Indians disliking [as well they might], betook themselves to the mountains, and stood on their defence; but Esquimel, after several engagements, in which the dogs he had brought with him were almost as destructive as his musketry, found means at length to cut off the chiefs or leaders of the malcontents; the rest submitted; and after being divided according to his original plan, they were employed in planting cotton and provisions.” This writer adds, “that Esquimel, perceiving the Indians more tractable than he had

* *History of Columbus*, by his son, p. 287.

† This Ojeda was the capturer of the unfortunate Guaronex (see p. 11); he was eventually reduced to extreme poverty, and, according to Harris, actually died of want. Nicuessa also perished miserably,

being forced by the turbulent Darien colonists to put to sea in an old rotten bark, with about seventeen of his men, who, it is supposed, were all drowned.—(Kerr's *Collection*, part ii., book ii., chapter iv., pp. 297–403.)

expected, soon won them over to subjection by the moderation of his government, without further effusion of blood." (Appendix, vol. iii., p. 959.)

Unhappily, the administration of this comparatively gentle ruler was, before the lapse of many years, terminated by his death. His successors appear to have been either unable or unwilling to prevent the same horrible carnage from spreading here which was rapidly desolating Hayti. In both cases, the tractable character of the people left their exterminators equally without excuse. Had their disposition been belligerent, inhospitable, or vindictive, they would have had little difficulty in sinking the miserable barks in which Columbus made his second visit, or in coping with his jaded, diseased, and almost starving crew; nor did he fail to acknowledge the mercy of Providence in conducting him, under such trying circumstances, to a place where provisions were abundant, and the inhabitants so well disposed. All who have written respecting them have reiterated the same favourable opinion, describing them as "a tractable, docile people, equal to any employment; modest in their manners; of a quick and ready genius in matters of traffic, in which they greatly excelled the neighbouring islanders; more devoted, also, to mechanic arts; more industrious; and surpassing them all in acuteness of understanding. They dwelt in cottages; and the island was so populous, that it appeared to Columbus to be full of villages. These consisted of several houses; and the buildings must have been extensive, since the custom was for a whole generation to live together in one house." (Long's *History of Jamaica*, Appendix to vol. iii., p. 951.) They cultivated various grain, roots, vegetables, fruits, and cotton, in large quantities;—some of their habitations were furnished with chairs of highly-polished ebony; and none were deficient in varieties of earthen and wooden utensils, curiously wrought. In the total absence of animal food, fish, both salted and fresh, was eaten extensively; the lines and nets employed were of bark. From the immense trunks of the cedar, or the cotton tree, they formed flat-bottomed canoes, or the much deeper and larger vessels, called *piraguas*; the latter were employed for sea voyages, and in carrying on trade with their neighbours, had raised gunwales and sharp keels. In customs, religion, historical songs, and in their agricultural tools, domestic utensils, and warlike weapons, the natives of Jamaica resembled the rest of the Leeward Islanders. Their attachment to their chiefs was unbounded and inviolable. Too generous to be revengeful, they frequently refrained from destroying the Spaniards when they had them in their power, although their ferocious cruelties might in the eyes of pagans have fully justified the most vindictive retaliation. They were, unquestionably,

says Long, "the most generous of foes, and their national disposition truly amiable, benevolent, and noble."—(App. vol. iii. p. 957.) Such were the people who in a few short years were utterly exterminated by Europeans, professing to be Catholic Christians.

The Indians of Jamaica did not, however, perish without some desperate struggles for life and liberty, if, as is alleged, the depopulation of the city of Sevilla d'Oro was occasioned by its Spanish inhabitants being cut off in native warfare—as also those of the small village of Melilla—situated about thirty-three miles to the eastward, at the harbour now called Port Maria.

Two other reasons have, however, been assigned for the desertion of the northern portion of the island in the early part of the 16th century. Sir Hans Sloane, who visited the ruins of the city in 1688, and beheld the remains of an unfinished cathedral, within whose stately walls timber trees upwards of sixty feet in height, were growing; and other costly fabrics, abandoned while still in course of erection, relates as the cause of this desolation, a plague of ants, whose innumerable swarms completely devastated the provision grounds.—(Sloane's *History of Jamaica*, vol. i. p. 66.) It is a singular coincidence that Oviedo should record, in 1519 and the two succeeding years, a similar visitation as having nearly depopulated the whole of Hayti. The other alleged reason is, the incursions of the "fibustiers," or French pirates, who about the year 1528 commenced making frequent descents upon the northern coast.

Possibly all of the above circumstances concurred in causing the overthrow of Sevilla d'Oro, in the very midst of its growing wealth,* while its resources were being developed, plantations of cotton and the sugar-cane rapidly extending; the vine being brought into cultivation; immense herds of cattle multiplying rapidly on the neighbouring pastures, and every thing seeming to prosper in the hands of the invaders, who had set at nought the rights of the natives, even to the enslaving of their persons.

The town of St. Jago de la Vega (of the plains) now commonly called Spanish Town, was founded by Diego Columbus, shortly before his death, in 1525, or the beginning of 1526.† It grew rapidly to importance, by means of the labours and sufferings of the natives; whom, however, the short-sighted avarice of the colonists speedily placed beyond the reach of oppression. Equally minute records of the barbarities which they commonly practised here, as in Hayti and the Spanish Main, have not descended to posterity, but there is abundant testimony that they were no less tyrannical, licentious, and—for no other word will express it—fiendish.‡ In 1558 the aborigines were almost wholly exterminated, more than sixty thousand

* A striking illustration of the power and influence which Jamaica had rapidly obtained, is afforded by the then Governor Garay having been able to fit out an expedition in 1523, comprising nine ships, and two brigantines manned by 850 Spaniards, accompanied by numerous Indians, with a view of founding a settlement on the American continent, near the river Panneo.—Southey, vol. i. p. 152.

† Edwards, *Hist. of the West Indies*, vol. i. p. 173.

‡ Many instances recorded by Las Casas, who, it should be remembered, published his account of the scenes he had witnessed, while the actors were yet living, are so horrible as to surpass the belief of those who have yet to learn the strength of the in-

centive to evil afforded by entrusting men with irresponsible power over their fellows, especially where the restraints of civilised society are by common consent thrown aside, and obligations of more constraining character unknown. To such minds a narrative like the following, distressing as it is, may not be without its use. Several writers have quoted it, among them Bryan Edwards, vol. i. p. 111, who cites the edition of Las Casas, published at Antwerp in 1579: "I once beheld," says the venerable ecclesiastic, "four or five principal Indians roasted at a slow fire; and as the miserable victims poured forth dreadful screams, which disturbed the commanding officer in his afternoon slumbers, he sent forth word

having perished in about sixty years. Mountain caverns, sheltering ground covered with human bones and skulls, preternaturally compressed, attest the fate of multitudes of wretched Indians who chose to encounter the agonies of famine rather than fall into the hands of their unrelenting persecutors. Gage (the earliest English historian of the West Indies, whose work* was greatly instrumental in directing the attention of Cromwell to this Archipelago), says, "Women as well here as on the continent [of America] did kill their children before they had given them birth, that the issues of their bodies might not serve so cruel a nation."

By the marriage of Isabella, the lineal descendant and sole heiress of the family of Columbus, its rights and titles became vested in the royal house of Braganza, and was from thence eventually transferred to the Spanish monarchy.

On the union of the crowns of Spain and Portugal, the people of the latter country emigrated in numbers to Jamaica, which had before been exclusively colonized by Spaniards. A bartering trade arose in provisions, cacao, hides, and lard; sugar and ginger were also partially cultivated; but national jealousies and distrust impeded the progress of commerce, and in 1605 left the capital an easy prey to Sir Anthony Shirley, a British admiral, who, while cruising in the neighbourhood with a fleet of five ships, a galley and pinnace, attacked and plundered the island, and then retired. About forty years after, a descent was made from the Windward Islands by a force of about 500 men under Colonel Jackson, who is said to have been bravely but unsuccessfully opposed by the inhabitants. After losing forty of his men, he entered St. Jago de la Vega (Spanish Town), sword in hand, exacted a heavy ransom as the price of its preservation, and returned with his booty, uninterrupted to his ships.

From this period up to the time of its capture by England, no important feature marks the history of the island. The colonists sank into a state of poverty through their own apathetic indolence, and in 1655 the whole white population numbered only from 1200 to 1400; of whom about 500 were in arms to meet the enemy. The negroes imported from Africa, and the mulattoes, were about equal in number to the Europeans. Of the aborigines not a single descendant existed.† The attacking fleet (see p. 16) was not perceived until a few hours before it came round Careening Point (Port Royal); it advanced directly up to Passage Fort, the only fortification that defended the capital, and the troops were landed under cover of the galley which conveyed the commanders to the shore. After a feeble struggle, the colonists were driven back upon St. Jago de la Vega, which was only six miles distant. Instead of pursuing them, and attacking the town forthwith, General Venables repaired on board ship to take his repose—the soldiers remained under arms all night, and were not suffered to march until late the next morning;

that they should be strangled; but the officer on guard (I know his name, and I know his relations in Seville) would not suffer it; but causing their mouths to be gagged, that their cries might not be heard, he stirred up the fire with his own hands, and roasted them deliberately till they all expired. I saw it myself."

* *The English American, his Travail by Sea and Land, or a Survey of the West Indies*, published in 1648.

the inhabitants, meanwhile, busily employed themselves in removing all articles of value, together with their women, children, and negro servants, some little distance in the country. After a week's negotiation, articles of capitulation were signed by Governor Sasi, by which the colonists were bound, either to remain subject to English laws and institutions, or to quit the island; in the latter case surrendering their slaves and effects to the discretion of the conquerors. Most of the Spaniards refused to abide by these conditions, and fled to the interior, where they were followed by the British. The higher, or "hidalgo" class, contained only eight families, among whom nearly the whole island had been apportioned in as many "hatos" or districts; these found means of escaping to Cuba, whither they were followed by Sasi, leaving behind them some of their poorer brethren, and the chief part of their negroes, whom they charged to guard their properties as far as possible until succour should arrive. These directions were obeyed, and Jamaica being, as Peter Martyr had said long before, "a rugged theatre for military operations," the new occupants had great difficulty in meeting the guerilla warfare maintained by the wary refugees, to whom the name of "Maroons"‡ was subsequently applied.

The dearth of provisions, resulting from the imperfect and limited state of cultivation, and distempers contracted from the exposure to heavy rain and other hardships which had attended the unfortunate attack of Hayti, had reduced the troops to so miserable a condition, that Penn determined to return to England with great part of the fleet, represent their condition, and seek succour. Venables, on the plea of failing health, accompanied him; both were severely reprimanded by the Protector, and ordered to the Tower. Major Sedgewicke was sent out as commissioner, with extensive powers; and Colonel D'Oyley, the senior field-officer, was appointed president of the military council then formed. Sedgewicke who bore the reputation of a judicious and honest man, brought with him abundant stores of provisions; but the soldiers, both officers and men, notwithstanding their recent sufferings from want, systematically thwarted his plans for preserving the present supplies, and being desirous either of obtaining their recall to England, or employment in military operations against the opulent Spaniards, in which they might obtain plunder, could neither be forced or persuaded into planting corn for a bare subsistence, but essayed by every possible waste and carelessness to create a perpetual demand for necessaries, and thus compel the Protector to relinquish his design of forming permanent settlements in this part of the world, by wearying him with their expense and unproductiveness. Sedgewicke complained bitterly of their unprincipled conduct, in seizing all the land about the town, and neither cultivating it themselves, nor permitting the planters to do so; and of their wanton destructiveness and perverseness in refusing to assist

† Southey, vol. ii., p. 6.

‡ The derivation of this word is disputed. According to Long, it signifies hog-hunters, and was applied in consequence of the fugitives subsisting chiefly on the flesh of the wild boar, with which the woods abounded; but it is elsewhere explained as being a corruption of a Spanish word, signifying monkey, which was applied as a term of reproach to the runaways.—(Edwards' *History of the West Indies*, vol. i., appendix, p. 523.)

in strengthening the fortifications. Cromwell was exceedingly annoyed at their ill-conduct; but so far from being deterred by the obstacles thrown in the way of his project, applied himself only the more vigorously to its execution, by adopting various measures for the settlement of the island. He encouraged the wives of the soldiers to join them, desired his son Henry, then major-general of the forces in Ireland, to engage two or three thousand persons of both sexes* to proceed from thence as settlers, and corresponded with the chief authorities in Scotland, and with the governors of the American colonies and the British Windward Isles (then very populous), respecting the best mode of promoting emigration to Jamaica. He interested himself most warmly respecting the welfare of the army, severely reprimanding their immorality as being fatal alike to their temporal and eternal welfare.† Unfortunately the exhausted state of the treasury compelled him to leave them in long arrears of pay,‡ and the disaffection thereby created, aided in inducing them to continue deaf to his remonstrances, and to a great extent to defeat his plans, by gaining for the place so bad a name as materially to check the immigration he so strongly desired. Notwithstanding the good conduct and steady labour of the sailors belonging to the ships left to guard the island, who, in addition to constructing a battery at Careening Point, and repairing the tower at Passage Fort, also formed a plantation; a scarcity approaching to a famine was the result of the avowed determination of the troops rather to starve than work; the most unwholesome substances that could be used to sustain life, were eagerly devoured; a fearful epidemic dysentery ensued; and for a considerable time 140 men perished weekly;§ Sedgewicke himself sinking, less from bodily disease than from the painful responsibilities of a position for which his amiable and gentle disposition was ill adapted. Upon his death the chief authority devolved undivided on Colonel D'Oyley, who took severe measures to bring the army into a better state of subordination, by dismissing considerable numbers of the most unruly, executing the ring-leader of an attempted revolt, though a man of rank and influence,|| and portioning out plots of land to the private soldiers, with the assurance that they should cultivate and employ them, unmolested by their officers.

To encourage trade there, Cromwell, in 1655, issued a proclamation, that all adventurers should be exempt from payment of excise or duty on any goods which they should transport to Jamaica, for seven years from the Michaelmas of that year: also, that no tax should be levied on any commodity, the produce of the island, when imported into the dominions of the Commonwealth, for the space of ten years: and further, that no embargo or hindrance, upon any pretence whatsoever, should be laid upon ships or adventurers bound to Jamaica. In 1659, the foundation of the celebrated "Navigation Laws"

was laid by an enactment of the Commonwealth, that no goods should be imported into, or exported from, the plantations, but in British-built ships, wholly owned by British subjects, and navigated by crews three-fourths of which were also British.

In 1657 and in the following year, two desperate attempts were made for the recovery of Jamaica, by the Spaniards, who landed and occupied the northern part of the island; but after a second complete defeat, in which they lost 380 privates, several officers, and two priests, and the English only twenty-three privates and four officers,¶ no other attack of any importance was made. The few remaining Spaniards were not long in quitting the island, but the Maroons remained, and became, as Sedgewicke had truly predicted, a thorn in the side of the conquerors. Their sudden and unlooked-for emancipation, bestowed by no generous impulse, or deliberate act of high principle, but simply resulting from circumstances over which neither slaves nor slave-holders had any control, produced its natural results. The inestimable prize of freedom they resolved to hold at all hazards, and though a portion of them accepted the offers of pardon and freedom made by the English, the majority viewed all friendly overtures in the light of treacherous endeavours to entrap them again into bondage. They and their descendants maintained, for nearly a century and-a-half, their position among the mountain fastnesses, whence, with occasional intervals of peace, they harassed the settlers by predatory expeditions, often attended with bloodshed, undeterred by the cruel punishment which attended them if captured in open hostilities, or tracked to their caves by bloodhounds. These latter auxiliaries were frequently employed in chasing the original Maroons, as well as runaways from the negroes imported by the new colonists, by whom their numbers were subsequently augmented. An order preserved in the State Paper Office, proves their use as early as August 1669: it directs "Mr. Peter Pugh, treasurer, to pay unto John Hoy the summe of twenty pounds sterling, out of the impost money, to pay for fifteen dogs, brought by him for the hunting of the negroes."

The death of Cromwell, in 1658, and the restoration of monarchy, made no change in the policy pursued towards Jamaica. Charles II. confirmed the previous measures, carried out the Protector's intention of forming a civil administration, conferred on Colonel D'Oyley the office of Governor, and ordered that the troops should be disbanded and settled throughout the country.

In 1662, a municipality was formed, judges of session and magistracy were appointed, a militia organized, the island divided into seven parishes, and land granted on free soccage tenures. A royal proclamation issued at the same time for the encouragement of the planters, declared, "that all the children of our natural born subjects of England, to be born in Jamaica, shall, from their respective births, be

* The endeavour of the Protector to maintain a due proportion between the sexes, was a praiseworthy feature in his colonial policy.

† Seven ministers of religion accompanied the armament when despatched from England, but the majority perished from the climate. Among the records in the State Paper Office is an order dated August 14th, 1656, and signed, Edward D'Oyley, for the distribution to the army of 1,701 Bibles!

‡ The charge to the Commonwealth of England

for the forces maintained in Jamaica, according to an account rendered to the House of Commons, 26th March, 1659, amounted to £110,228 11s. 3d. The annual issues afterwards, until the Restoration, were about £54,000.—(Southey, vol. ii., p. 31.)

§ Edwards, vol. i., p. 206.

|| Major Throckmorton was tried by court martial, and executed the very next day. Colonels Raymond and Tyson, for a similar offence, were shot in 1660.

¶ Long, vol. i. p. 276.

reputed to be and shall be, free denizens of England, and shall have the same privileges to all intents and purposes, as our free-born subjects of England." The population was increased by various individuals of note, connected with the Parliamentary party, who took refuge here, and whom Charles II. wisely suffered to remain unmolested, and some wealthy planters emigrated from Barbadoes; in 1684, the persons convicted in England of participating in the "Rye House Plot," were sent out for the period of ten years; in 1686, an extensive immigration of Jews gave a stimulus to commercial prosperity, and added another distinctive feature to the motley character of the inhabitants. African slaves were exported from time to time.

In January, 1664, the first legislative assembly, consisting of thirty members, was elected; and for a period of sixty-four years was engaged, with little intermission, in carrying on a contest with the Crown respecting the right of taxation, and in resisting the imposition of a tax of four-and-a-half per cent. on the gross produce of the island.

Previous to its disbandment, disease had fearfully thinned the ranks of the army, notwithstanding the reinforcements sent out under General Brayne, in 1656; for the entire population, in 1662, was stated to amount only to 4,355 persons, including 552 negroes, 1,600 settlers from Nevis established under General Stokes, and other immigrants. During the latter part of the administration of Colonel D'Oyley, a rapid tide of wealth set in, the source being neither more nor less than a system of legalized piracy, in which under the name of retributive and protective policy, the first rulers of Jamaica bore no inconsiderable share. After the second endeavour on the part of the Spaniards to regain their lost dominion, D'Oyley thought it best to carry the war into the enemy's country, by making a descent upon the Spanish Main, destroying the town of Tolu, and burning two galleons, bound from Carthagena to Porto Bello. Several rich captures had been before made by the squadron, and many others succeeded. Such examples were not likely to be lost upon a population of whom the minority were respectable planters, and the great majority men of disorderly habits, who, if they had not been positively convicted of offences against society, were at least regarded as bad subjects, whom the authorities in the parent state, or in the colonies, as the case might be, were glad to be rid of. The Spaniards themselves had tempted aggression, by endeavouring to monopolise the navigation of the American seas, and had incensed the merchants of other nations, by treating as pirates the crews of all trading vessels encountered by them in these regions.* The consequence was, that they were in turn deemed fair plunder; the class of men termed buccaneers, sprung up and rapidly increased, and England and Spain being then at war, their enterprises were authorised by D'Oyley and his successors as a means of relieving the former power from the expense of maintaining a large fleet for the defence of the island, and compelling the latter to abandon its exclusive policy, and enter into a solid and durable peace. The Jamaica privateers, from very small beginnings, mustered at last 3,000

fighting men, and thirty sail of well-equipped vessels. Reckless of hazarding or destroying life, improvident beyond measure, and constantly requiring new supplies, they were terrible foes to the Spaniards, being ever on the alert to intercept ships returning from Mexico, laden with the gold and silver, jewels and spoils of the western world; boasting that they avenged the wrongs perpetrated on the wretched natives, and though they did not dare to attack the assembled fleet, they waited—rarely without success—for any straggler detached by stress of weather or other circumstances. The demand for provisions, especially in the neighbourhood of Port Royal, the favourite resort of the buccaneers, gave a great stimulus to farming and agriculture; hence it happened that the planters and settlers, even when possessed of allotments of land not exceeding thirty acres, were able to maintain themselves comfortably by attending to the production of some one or other of the numerous smaller articles for which a ready money market was constantly open. The history of Morgan, the most remarkable of the buccaneers, forms a marked feature in the annals of Jamaica, but his character and conduct have been so variously represented, that it is difficult to form a correct estimate of either. This at least seems certain, that he was a bold and unscrupulous adventurer, essentially a man of war, whose abilities the English were glad to employ against the Spaniards, sanctioning his daring exploits, rewarding the political ends gained thereby, and wilfully ignoring the barbarity, licentiousness, and greediness of gain, by which they were accompanied.

Morgan and his followers were the dread of the Spanish Americans, not only by sea but by land, their settlements, as well as their vessels, being frequently the prey of these desperadoes, whose most extraordinary exploit was the capture of Panama, the great depot for the merchandise and treasure of Chili and Peru. It was assaulted by Morgan, at the head of 1,200 men, in August, 1670; and although defended by a force much superior in point of number and resources, the invaders entered the city sword in hand, and after a fearful interval spent in slaughter, rapine, and pillage, they set it on fire, and in a few hours reduced it to ashes. The costly and magnificent public buildings, and the houses, 7,000 in number, were all destroyed. Laden with an immense booty, the buccaneers returned in triumph to Jamaica, to lavish in the wildest, maddest debauchery, the spoils of the sacked city, and the heavy ransoms of its impoverished people, flinging away in reckless prodigality the wealth they had hazarded life to gain. In this respect they did not follow the example of their leader, who had always carefully husbanded his gains, and who, upon the proclamation of peace with Spain, immediately after his return from Panama, and the consequent endeavours of the English government to suppress buccaneering, settled down as a planter, and was subsequently created a knight, and appointed Lieutenant-governor of the island, in which position he continued until 1674.†

Jamaica had at this period made marvellous progress in respect to population and agricultural resources, but in a moral point of view its condition

* In the course of the negotiations entered into by Cromwell soon after he assumed the Protectorate, the Spanish ambassador is stated by Thurlow to have declared, that "to ask a liberty from the inquisition and free sailing in the West Indies, was to ask his mas-

ter's two eyes, and that nothing could be done in these points but according to the practice of former times."

† By some writers Morgan is said to have died peaceably in Jamaica, by others to have perished in an English prison.

was truly deplorable. The strife, vice, and misery attendant on slavery, became early manifest; the attempts of the wretched captives to regain their freedom, and the predatory incursions of the Maroons, even then scourged the colonists. Port Royal itself, united to more than regal opulence, the worst vices, and the lowest depravity that ever disgraced a seaport; nor could any thing else be expected in a city whose most honoured denizens were buccaneers, most welcome visitors, slave traders.

It scarcely needed the inspiration of a prophet to foretell that so much wealth and so much wickedness conjoined, would have a fearful ending; nor could any believer in a superintending providence, be surprised at the series of calamities which overwhelmed Port Royal at the time when its seeming prosperity had attained its climax. The doom went forth, and a fearful earthquake engulfed the scene of splendour and profligacy, burying in the ruins 3,000 individuals. The catastrophe was equally sudden as appalling. On the morning of the 7th June, 1692, the Governor and Council were met in session, the wharves laden with bales of the richest merchandise, the markets and stores displayed the glittering spoils of Mexico and Peru, and the streets were thronged with people; when the clear and serene sky became overshadowed by partial darkness, broken by faint gleams of red and purple, and a tremendous roar, like that of distant thunder, broke from the base of the mountains, and reverberated through the valleys to the beach, while the sea, impelled by the same mighty convulsion, rose in a few minutes five fathoms deep over the houses of the devoted town.

The scene was appalling beyond description, shrieks and lamentations rent the air, mangled corpses floated on the waters, or were flung upward by the violence of the shocks. Although there was no wind, billows rose and fell with such violence that the vessels in the harbour broke from their moorings, and one of them, the *Swan* frigate, was forced over the tops of the sunken houses, and afforded a means of escape to many persons. Several individuals were wonderfully preserved, being swallowed up during the awful concussion, and thrown back again through an aperture quite distinct from that which had yawned to receive them, without sustaining any material injury. Of the whole 3,000 houses, about 200, with the fort, remained uninjured: amidst the destruction of so much property, not the least was the irreparable loss of all the official documents and records. The whole island felt the shock and shared the disastrous effects of a visitation which happily stands alone in the annals of Jamaica; no other, before or since, having been known to compare with it. Chains of hills were riven asunder, new channels formed for the rivers, mountains dissolved with a mighty crash, burying alive the people of the adjacent valleys, whole settlements sunk into the bowels of the earth, plantations were removed *en masse*, all the sugar works destroyed; in fact, the whole outline was drawn afresh, and the elevation of the surface considerably diminished. The sentence of desolation was, however, yet but partially fulfilled; a noxious miasm, generated by the shoals of putrifying bodies that floated about the harbour, or lay in heaps in the

suburbs, slew 3,000 of the survivors. As if that so fearful a warning might not be forgotten by posterity, the sunken houses of Port Royal remain permanent memorials of divine justice, being in calm weather still visible beneath the surface of the ocean; in striking contrast, relieving the deep melancholy of the scene, is a monument erected at Green Bay, on the opposite side of the harbour, which commemorates the preservation of Louis Caldý, a native of Montpellier, in France, who left his country on account of the Revocation of the Edict of Nantes, and, after having been swallowed up during the earthquake, was, by the great providence of God, flung into the sea by a second shock, where he continued swimming until rescued by a boat, and lived forty years afterwards.

The colonists attempted to reconstruct a portion of the walls of their desolated town, but their efforts were defeated by a hurricane. They had hardly time to rally from the prostrate and ruined condition to which they were reduced, when the alarming intelligence arrived, that the French were preparing to take advantage of their deplorable state, by making a descent upon the island. Accordingly, on the 17th June, 1694, a fleet of three men-of-war and twenty privateers, having on board 1,500 land forces, commanded by General du Casse, the Governor of Hispaniola (Hayti), appeared off Cow Bay, where 800 of the soldiers were landed, with orders to desolate the country as far as Port Morant. These instructions were obeyed with fearful precision. They not only set fire to every settlement they came to, but tortured their prisoners in the most shocking manner, and murdered great numbers in cold blood, after making them behold the violation of their wives by their own negroes.* These disgraceful outrages were committed with impunity, the militia having been drawn off this part of the country to guard the capital; but when the invaders—having plundered and destroyed all the plantations within reach, and returned to their ships—subsequently attempted to land at Carlisle Bay, they were gallantly resisted by a much smaller force, who kept them at bay, and by the aid of reinforcements of militia, dispatched by the Governor, Sir William Beeston, from Spanish Town, drove them off with considerable loss. It is asserted, that the English lost 100 killed and wounded, and the French upwards of 700; but that the latter succeeded in carrying off considerable spoil, and about 1,300 slaves.†

To carry on in minute detail the history of Jamaica, from this period to the present time, would be to record a melancholy series of calamities, dissension, and misrule, the latter mainly occasioned by the vices or incapacity of the individuals appointed to the office of Governor, who, though generally of high rank, appear to have been selected with a view rather to the benefit their drained resources would receive from the handsome salary attached thereto, than from any good the island was likely to derive from their services. Their respective characters and administration are detailed at some length by Long† and Bridges, in the works already quoted in these pages. The first of these historians is strictly trustworthy, though from his position as a large hereditary land

* Edwards, vol. i., p. 231.

† Bridges' *Jamaica*, vol. i., pp. 322-'3.

‡ "A faithful description of our provincial governors, and men in power, would be little better than a portrait of artifice, duplicity, haughtiness, violence, rapine, avarice, meanness, rancour, and dishonesty, ranged in succession;

with a very small portion of honour, justice, and magnanimity, here and there intermixed, to lessen the disgust which otherwise the eye must feel in the contemplation of so horrid a group."—*The History of Jamaica*, in three volumes quarto: London, 1774; introduction, p. 4.

and slave-holder, naturally not unprejudiced; the second wrote his clever volumes under the direct patronage and pecuniary aid of the House of Assembly during its most stormy period of opposition to the emancipating policy of Great Britain; and even his facts, much more his inferences, must be received with caution. The main feature in the history narrated in many respects so ably by the above authors, is, however, passed hastily over by the one, and too often wilfully mistold by the other; and certainly their readers would be little likely to form from their statements a just idea of the workings of slavery in Jamaica, or of the extent of internecine strife and moral degradation which characterized alike its wealthiest, and its most impoverished condition.

Edwards, though himself a planter and slaveholder, has furnished much valuable detail on this subject, as have also the indefatigable Captain Southey, R.N., and the worthy Dr. Coke; but the best information is contained in the ponderous mass of documents published by various parliamentary committees during the last half century. From these and other incidental sources, I have framed the following sketch of the establishment and growth of a system, which being founded on wrong, and maintained by oppression, never could produce any other results but sin and suffering to all concerned in it. The alternate visitations of earthquake and pestilence, war and famine, hurricanes and conflagrations, which have desolated one of the loveliest spots in the world, were nothing more than the counterpart of the moral plagues of extravagance, cruelty, and licentiousness, which, long before the slave trade was abolished, had involved the inhabitants in hopeless insolvency.

SLAVERY IN JAMAICA.—There is no complete record of the total number of negroes brought into the island from the period of its conquest, in 1655, to the abolition of the carrying trade, in 1807-8. For the first seven years of British rule, the importation was comparatively insignificant, but on the establishment of a civil government in 1662, it increased largely, by means of the Chartered African Companies, patronised by royalty; and subsequently through the working of the infamous Assiento contract. The destruction of the public records in 1692 prevents any correct estimate of the extent of the importations up to that period, but it must have been considerable, for in 1698 Governor Beeston reported the population at 47,365 souls, of whom 40,000 were blacks. In the ten following years, ending June, 1708, 44,376 negroes were introduced, or on a yearly average, about 4,437, and though some of these were exported to other islands, the growing preponderance of the bond over the free inhabitants, was deemed so alarming, that in 1704 an act was passed obliging the planters to maintain fourteen white servants for every 300 negroes.* From 1709 to September, 1775, annual returns give a total of 472,761. The number imported during the entire year 1775 was no less than 18,648; at this time Governor Keith, on the authority of the rolls of the respective parishes, stated the population at 12,737 whites, 4,093 free negroes, and 192,787 slaves, adding that these latter were underrated by at least 10,000, "as there were many 'jobbers and others' who did not give in their negroes."†

According to an aggregate return, between 1655 and 1787, 676,276 negroes were imported. I can find no record of the numbers introduced during the ensuing four years. The annual average, from 1791

to 1807 inclusive, was upwards of 9,000. If to the numbers officially stated to have been imported during the entire period of British rule, we could add returns for the aforesaid four years—and procure anything approaching a fair estimate of the Africans surreptitiously brought in, the aggregate amount would probably exceed one million.

After making large allowance for the proportion of slaves re-exported and emancipated, the amount of life which remains to be accounted for is truly appalling, when it is considered that, notwithstanding the vast immigration continued during a period of a century-and-a-half, the slaves, with their descendants, at its close numbered only 319,351.

The market value of a slave varied from £30 to £50, and this excessive cheapness of labour, together with an apparently unlimited supply, rendered it in the eyes of the planters a more profitable business to buy than to rear slaves. The working of this policy on the oppressed class was most disastrous; it removed the protection with which self-interest would have surrounded them, had healthy and strong frames been less easy of replacement, in the event of death or disease; and it fearfully aggravated the breaking-up of all social ties among the slaves, which, had their offspring been a matter of regard to their masters, would have been of necessity to some extent respected. During the seven years preceding the abolition of the carrying trade (1807), the *excess of deaths over births* was 41,772. In the above-named year, an act which had been passed for a limited period granting a premium of £3 to overseers of plantations in which the births should be found to exceed the deaths, was allowed to expire from the terrible nature of the facts it revealed. The evils of the system under which so many thousands perished, are rendered the more striking from the fact that the climate itself agrees well with the African constitution. Sir Hans Sloane bore witness, "that when he was at Jamaica, in 1688, he knew blacks of 120 years old, and that 100 years was very common among such of them as were temperate livers"‡ They were decimated by the direct effects of cruel usage, and insufficient food. How many perished by actual violence, it would be useless to inquire—no Las Casas has portrayed the deeds of the West Indian colonists in the eighteenth century, or the extent and ferocity of the public and private butcheries then committed; but we have at least partial records of the sanguinary codes of English and French jurisdiction, and they alone may suffice to teach us rather to deprecate the odium and the punishment incurred by the Spaniards in a former age, than to censure with virulence, conduct which is perhaps far from being unparalleled, even in our own annals.

Again, it behoves all unbiassed searchers after truth to judge leniently of the frail and sinning oppressors, and not to allow sympathy for their victims to overpower with indignation all temperate feelings. Never is this caution so necessary as in the case of slavery, that blighting curse, which more or less deadens the affections, warps the judgment, and pollutes the morals, of all under its influence. In Jamaica it poisoned every phase of society, and its effects were visible in the general state of demoralization, and in the terrible incertitude consequent upon the energies of a comparatively small section of the population, being all directed to the unjust subjection of a far more numerous, and, physically speaking, more powerful class.

MAROON WARS AND SLAVE INSURRECTIONS.—The conduct of the negroes left in the island by the Spaniards, was a significant token of the danger and difficulty attendant on attempting to enslave a race so fond of liberty, and so ready to endure extreme hardships, and hazard life in its defence. But the planters appear to have imbibed not a little of the buccaneering spirit, which drowned all forethought in the cup of immediate gain or enjoyment; and provided they could secure the temporary cultivation of their sugar and coffee estates, were quite heedless of the ulterior consequences of the means employed. Coercion, in its most bloody form, armed with the whip and the goad, with instruments of torture and mutilation, almost without number; with the cross, the faggot, and the gibbet, would, it was considered, strike terror into the boldest heart, and prove, with all-convincing arguments, the inborn right of the white race to use coloured men as useful and domesticated animals, if they could tame them; or to shoot, hunt, and destroy them like fierce beasts, if they could not. Still, notwithstanding all their resources, their sanguinary slave code, backed by regular troops, a trained militia, and large packs of blood-hounds, the slaves were often too strong for them, and many a murdered family and ruined homestead served to throw a light upon the depth of the abyss which frequently threatened to engulf them. The very year (1556) after the conquest, the Maroons succeeded in revenging some trifling successes by the defeat and slaughter of a detachment of forty men. In 1663 and 1664, being already reinforced by fugitive slaves, they maintained possession of the interior, so that no colonist dared settle any considerable distance from the coast, as they slew, without distinction of sex or age, every white person who came within their reach. "In this way," says Edwards, "they continued to distress the island for upwards of forty years, during which time forty-four acts of assembly were passed, and at least £240,000 expended for their suppression.*"

An eye-witness describing the general state of society in 1722, says—"the English subjects are computed at 7,000 or 8,000, the negroes at 80,000; a disproportion that, together with the severity of their patrons [masters], renders the whole colony unsafe. Many hundreds of them have at different times run to the mountains, where they associate and commit little robberies upon the defenceless and nearest plantations, and which I imagine they would not have done but for the cruelty of their usage, because they subsist very hard and with danger, by reason of parties continually sent out by government against them, who have £5 a head for every one killed, and their ears are a sufficient warrant for the next justice to pay it: *if the negro be brought in a prisoner he is tormented and burnt alive.*"†

In 1730, the Maroons, under a very able leader named Cudjoe, had grown so formidable, that it was considered necessary to strengthen the colony against them by two regiments of regular troops, which were afterwards formed into independent companies, and

employed, with other hired parties, and the whole body of militia, in their reduction. In 1833, it was stated in one of the legislative acts, that they "had within a few years greatly increased, notwithstanding all the measures that had been concerted and made use of for their suppression;" and several barracks, fortified by bastions, and strongly garrisoned, were erected as near as possible to the enemy's favourite haunts. "Every barrack was also furnished with a pack of dogs, provided by the churchwardens of the respective parishes."‡ In 1734, Captain Stoddart attacked one of their chief villages, called Wanny, situated on the top of a high mountain, and having succeeded in bringing up some portable swivel guns unperceived, he fixed them on a small eminence commanding the huts in which the negroes were asleep, and fired so effectively that many were slain in their habitations, others were made prisoners, and several threw themselves headlong down the precipice.§ Notwithstanding this and other disasters, the Maroons still proved so far superior to their antagonists in bush-fighting, that the Assembly in 1737 thought fit to enlist (as they had done on a previous occasion) 200 Mosquito Indians from the coast of Central America, to assist them in the war.|| Even with their aid so little substantial advantage was gained, that the colonists, wearied out with the harass and expense of a contest in which they had everything to lose and nothing to gain, induced Governor Trelawney to make overtures of peace, which were gladly accepted. Two distinct treaties were formed with the principal chiefs, Cudjoe and Quao, of which the main article was the settlement the insufficient tract of 1,500 acres on the followers of the former, and 1,000 on those of the latter, to be possessed by them and their descendants in perpetuity. On their part they were required to deliver up all slaves who should henceforth take refuge among them; and as it was sufficiently evident that if they had any spark of kindly or national feeling, they would be very unwilling to hinder their countrymen from obtaining the freedom they prized so highly themselves, laws were passed by the Assembly, decreeing most severe penalties against all who should venture to harbour the wretched fugitives, and offering a premium of £3 per head for their apprehension. With all these precautions it was nevertheless a dangerous experiment to distribute a body of nearly 600 persons who had snatched their liberty by force, in the midst of a slave-holding community, fixing them at five different points, (Trelawney Town, Accompong Town, Scots' Hall, Charles Town, and Moore Town,) more especially as no endeavour whatever was made to civilize or convert them. Mr. Long, though strongly prejudiced against the negro race, felt the impolicy of this neglect, and urged that they would probably prove more faithful allies and better subjects, if pains were taken to instil into their minds a few notions of honesty and religion; and he recommended the establishment of schools, and the erection of a chapel in each of their towns, as measures of indispensable necessity.¶

Jamaica colonists, that, in 1741, the Assembly passed an act prohibiting their further importation, but not interfering with what Mr. Bridges styles "the property already obtained." In 1764, Governor Lyttleton compelled the magistrates to make returns of the number of Indian slaves, and prosecute the offenders, in consequence of which just and vigorous measures, many were restored to liberty, but some were privately retained, whose descendants may yet be traced by their long hair and features.

§ *Idem*, p. 525.

|| Upon the renewal of peace, these Indians were sent back to their homes with their stipulated rewards, and many protestations of friendship, but these latter were so badly kept, that their shores were often visited for the sake of carrying them off as slaves; and to such an extent was this traffic carried on, and fostered by the ungrateful

These suggestions were disregarded, the Assembly ostensibly contenting themselves with excuses for the omission of an obvious but onerous duty, resembling those of the Rev. Mr. Hughes, who thought it not unbecoming his holy calling to declare, in allusion to the whole of the negroes, that although to bring them in general to the knowledge of the Christian religion, was undoubtedly a great and good design, yet, "for reasons too tedious to be mentioned," he believed the difficulties attending it were and ever would be insurmountable.* Unhappily it would appear that this opinion was shared by a large proportion of the Church of England clergy then in Jamaica, and it is to be feared that their character and conduct were in general little calculated to remove the lamentable and almost contemptuous indifference commonly evinced in respect to religion.

It would occupy too much space to record in detail the long series of struggles made by the negroes. The dates of the more extensive insurrections and conspiracies are as follows:—1678, 1684, 1686, 1691, 1702, 1717, 1722, 1734, 1736, 1739, 1740, 1745, 1758, 1760, 1765, 1766, 1769, 1771, 1777, 1782, 1795, 1796, 1798, 1803, 1807, 1809, 1824, 1832.

Besides these there were many minor outbreaks on single plantations, occasioned by the wanton cruelty of overseers appointed by absentee proprietors. The leaders and originators of the wider and more deeply-laid plots were almost invariably found to belong to the class called "Coromantines," which comprised the warlike natives of Ashantee, Fantee, and Akim; and these, when first imported, rarely failed to form concerted plans for obtaining their liberty, taking as a first step the "great oath" of secrecy (see *African Division*, p. 188), so rarely if ever violated, even under the influence of extreme torture.

In 1760 a conspiracy was projected, in which almost all the Coromantines in the island are supposed to have been concerned. Sixty white persons perished, and about 1,000 negroes were either killed in action, died by their own hands, were executed, or transported.† The cost of this single rebellion is stated by Long at £215,000, viz., the suppression £15,000; making good the losses sustained, replacing the slaves, &c., £100,000; erecting parochial barracks in consequence, £100,000. Their losses infuriated the colonists, but could hardly palliate, much less justify, the vengeful atrocities perpetrated by them upon the captured negroes. The Rev. Mr. Bridges, a popular minister in the Established Church at Jamaica, and the avowed champion and apologist of the planters, thus describes some of the scenes enacted. "The records of crime and punishment can hardly equal or excuse the horrible barbarities and exquisite tortures which were inflicted by and upon these condemned rebels. Some of them were burned, some were fixed alive on gibbets; one of them lived 210 hours, suspended under a vertical sun, without any sustenance or even a drop of water; yet they all behaved to the last moment with a degree of hardened insolence and brutal insensibility which drowned compassion, and almost authorized their doom; and the reader will probably feel far more for the fate of these wretched sufferers than did the most humane of those who witnessed their expiring agonies."‡ Perhaps most readers will be inclined to attribute admirable fixedness of purpose,

and unalterable courage to the victims, and "brutal insensibility" to the ruthless bystanders. Other writers have given further details respecting these enormities, and the perfect self-possession, or, as Long also terms it, the "hardened insolence" of the victims. Richmond, the sufferer who survived so long, is described as having on the morning of his death been convulsed from head to foot; on being opened after his decease the lungs were found adhering so tightly to the back, that it required some force to disengage them. (Long, vol. ii. p. 458.) Those destroyed by fire suffered even fiercer though less prolonged tortures than their crucified associates, for the burning was performed by making the victim sit on the ground, the body was then chained to an iron stake, and the fire gradually applied, beginning with the feet. Bryan Edwards, describing the conduct of one of the Coromantines who was thus consumed, says—"he uttered not a groan, and saw his legs reduced to ashes with the utmost firmness and composure; after which, one of his arms by some means getting loose, he snatched a brand from the fire that was consuming him, and flung it at the face of the executioner."§ Numbers upon learning the fate of their confederates destroyed themselves, for "parties of militia frequently came to places in the woods, where seven or eight were found tied up with withes to the boughs of trees; and previous to these self-murders they had generally massacred their women and children."—(Long, vol. ii., p. 461.)

The conduct of the Maroons during the conflict was afterwards the subject of much discussion, some parties considering them to have done good service to the colonists; others declaring them to have been favourable to the negroes, against whom they took no part until their cause had become manifestly hopeless; an assertion which seems sufficiently probable. After the defeat of a body of the insurgents at a property called Ileywood Hall, a detachment of Maroons, who subsequently arrived at the scene of action, were ordered to pursue the fugitives, and incited to commit as much slaughter as possible by the promise of a considerable reward for every pair of ears they should produce. Whether from desire of gold, or fear of being deemed traitors if they came back empty-handed, the Maroons soon returned with a sackful of the frightful trophies demanded by the colonists, who thus put a premium upon murder, since the aged and the defenceless, however innocent, were the most likely to fall the victims of the savage and destructive spirit thus fostered in the breasts of these barbarians. In this case, however, no additional blood, guilty or innocent, was shed, the Maroons having, as it was afterwards discovered, obtained their loathsome credentials by mutilating the bodies of the unfortunate negroes left by the conquerors in unburied heaps. The same device they frequently resorted to, and perhaps if Englishmen had, by a similar artifice, succeeded in escaping the two-fold danger of capital punishment, or confiscation of land, on the one hand; and risking life to slay those with whom they sympathized, on the other; they would have been more praised for their cleverness than censured for their insincerity.

Connected with this insurrection, an anecdote is recorded, which is interesting as illustrating the illiberality with which the Jews were treated at this

* Long, vol. ii., p. 429.

† Six hundred were transported to the British settlement at Honduras, the logwood cutters gladly purchasing

the outcasts, notwithstanding their antecedents, because "they cost so little."—(Long, vol. ii., p. 462.)

‡ Bridges, vol. i., p. 99.

§ Edwards, vol. ii., p. 79.

period—although, in a commercial point of view, extremely valuable citizens; it likewise affords evidence of the reasoning powers of an uneducated African. "One of the rebel leaders," says Long, "having been taken prisoner in Westmoreland, was confined in irons in the barrack of Savanna la Mar to wait his trial. It happened, that on the night after his captivity, a Jew was appointed to stand sentry over him: about midnight, the rebel, after reconnoitring the person of his guard, took the opportunity of tampering with him to favour his escape. 'You Jews,' said he, 'and our nation (meaning the Coromantines) ought to consider ourselves as one people. You differ from the rest of the whites, and they hate you. Surely, then, it is best for us to join in one common interest, drive them out of the country, and hold possession of it to ourselves. We will have a fair division of the estates, and we will make sugar and rum, and bring them to market. As for the sailors, you see they do not oppose us; they care not who is in the possession of the country. Black or white, it is the same to them; so that after we are become masters of it, you need not fear but they will come cap in hand to us, (as they now do to the whites,) to trade with us.' Though backed by the promised revelation of a hidden treasure, the Jew was either 'too honest or too unbelieving' to be induced to set his prisoner at liberty, and the next day reported what had passed to his superior officer."

Shortly before the outbreak, the Assembly of Jamaica had increased the severity of the slave-code by an act, decreeing the punishment of death to any slave having gunpowder or weapons without a licence, and forbidding, under heavy penalties, their being allowed two successive days as holidays, suffered to dance to their national music, the tom-tom or drum, or to enjoy their accustomed diversions. After the insurrection was put down, yet more stringent and severe restrictions were enforced. No slave was suffered to quit his plantation without a ticket of leave; if found playing at any sort of game, to be scourged through the public streets; and every proprietor who "should suffer his negroes to beat a drum, blow a horn, or make any other noise" on his estate was to be fined £10. Every free negro and mulatto was to wear a blue cross on his right shoulder, on pain of imprisonment; and none allowed to hawk or sell anything except fish and milk: and an act was passed to prevent grants and devises from white persons to negroes, by which, all real estates, though bequeathed to them, were to go to the heir-at-law, and personal estates to be included under the Statute of Distribution. Mulattoes, unless born in wedlock (of which there was scarcely an instance), were incapacitated from purchasing property exceeding in value £2,000 currency; and any devise made them, even by their own parents, above that value, was declared void.†

In 1765, an insurrection broke out in the parish of St. Mary, which was not suppressed without the loss of many valuable lives, and the expenditure of a vast treasure, which the colony could ill afford. In the following year another outbreak occurred, in which nineteen white persons, in the space of one hour, fell by the knives of a few Coromantines. "Conspiracies" says Bridges, "were daily developed; insubordination and alarm reigned universally; the gaols were crowded with dangerous criminals;" and all this in defiance of the "sanguinary punishments"

to which this writer states, apologetically, the "harassed planters were provoked."‡

Mr. Long, writing in 1774, gives an account of the Jamaica "Code Noir" of that period, by which it appears that ten distinct offences—including the reception of stolen goods, the possession of fire-arms or offensive weapons; running away into the woods; attempting to escape in any ship or boat, and harbouring a fugitive slave—were punishable with death or dismemberment, such as amputation of the toes, which was the punishment of fugitives. There was no trial by jury; the planters made the laws, pronounced the sentences, and were the executioners thereof. Thus, by an enactment of 1760, any body composed of two justices of the peace, and three freeholders, were empowered to inflict capital punishment on *Obeah* men, pretended conjurors or priests, or any negroes found with arms in their hands.

Protection for life and limb there was in reality none; for though, in 1751, a law was passed "to prevent the bloody, inhuman, and wanton killing of slaves," which provided that any person so offending should be adjudged, on the first offence, to suffer imprisonment for a term not exceeding twelve months: yet it was next to impossible, even had it been desired, to procure evidence of the crime committed, since the testimony of a slave against a white man could not be received, but only against one another. Deliberate murder might therefore be committed with almost complete impunity, for a plea could never be wanting while *any person* was authorized to kill a negro "in the act of stealing, or running away, or found in the night out of his owner's or employer's estate, or on the road and refusing to submit," without becoming "liable to action or damage for the same." And, further, the several parishes were compelled to pay the value of all slaves who should be executed within their respective jurisdictions; so that a proprietor with an unmanageable, diseased, or unsaleable slave, had nothing to do but to accuse him of some one or other out of the long list of capital offences, and receive the blood-money wherewith to purchase a more profitable victim, or to appropriate in any other manner he might think fit.

Long, even while endeavouring to vindicate this sanguinary slave-code, admits that the punishments it decreed were arbitrary and ill-defined; that the slaves were in general quite ignorant of the penalties they incurred, and "might as well be condemned on the laws of Japan or Crin Tartary,"§ and that the law as it then stood, plainly taught the negro—"If a white man murders a white man he ought to die for it, but if a white man murders a black man he ought to be acquitted!" adding—"Is not the negro led to espouse the very same principle and creed, *ex converso*?"|| "The early West Indian planters," he says, "thought it no greater sin to kill a negro than to knock a monkey on the head." His own statements would lead the reader to doubt whether their descendants had made much progress in humanity, since he vainly urged, even as a matter of policy, that wanton murder, when proved, though committed by a white man upon a black, should be judged worthy of death; wanton maiming or dismemberment, of fine and imprisonment; and if perpetrated by the master upon his slave, the latter to be manumitted. All punishments by mutilation should, he considered, be utterly abolished and prohibited as "scandalously cruel; not warranted by necessity, nor justified by

* Long, vol. ii., p. 460.

§ Long, vol. ii., p. 488.

|| *Idem*.

utility;" and punishment by whipping should be brought within some limits; and as the degree of correction so the instrument should be regulated, and none permitted which might lacerate or disfigure the body.* Interference in this matter was certainly very necessary; for though the law forbade the infliction of more than a certain number of lashes *at one time for one offence*, the spirit of the injunction was of course susceptible of the most direct violation, even while the words were closely abided by. Among the innumerable hardships under which the negroes laboured was, liability to be seized for bond and simple contract debts, and hurried from one part of the island to another, which, says Long, "renders their servitude more bitter and intolerable; and produces a very great annual loss to the public, by the mortality which it occasions."

The above paragraph, by the strong though indirect proof it affords of the frequency of insolvency, leads naturally to the consideration of the commercial and social condition of Jamaica at this time, before the abolition, even of the slave-carrying trade was mooted—and that condition once understood, affords a clear explanation of the sure destruction in which the landed proprietors were rapidly becoming involved. The testimony of Mr. Long is invaluable, as being incidentally given by a slaveholder and planter, the representative of one of the oldest and most respected families in the island. Though blinded by hereditary prejudice to the inherent curse attendant on slavery, he remonstrated forcibly with his countrymen upon the mad career of dissipation which many of them were pursuing; and in so doing has unwittingly exposed a state of things which, if described by the pen of an abolitionist, would have been deemed gross calumny and misrepresentation.

The mischiefs attending absenteeism, he showed to be incalculable;—large estates, lying in different parts of the island, being often entrusted to the charge of a single agent, who could not possibly reside upon, or even visit them frequently. The superintendence, therefore, devolved upon the overseers, whose chief aim being to raise large and immediate profits, forced the negroes to labour beyond their abilities, heedless of the waste of life thus occasioned; while the absentees, who had judged of the condition of their properties by the increased remittances sent them for a year or two, and were ignorant of the heavy losses sustained in their production, suddenly found both property and income largely abridged, and then having overshot the bounds of economy, too often endeavoured to extricate themselves by hopelessly exhausting their resources, either by overworking their remaining slaves, or purchasing others. "The purchase of new negroes," says Long, "is the most chargeable article attending these estates, and the true source of the distresses under which their owners suffer; for they involve themselves so deeply in debt to make these inconsiderate purchases, and lose so many by disease, or other means, *in the season*, that they become unable to make good their engagements, and are plunged in law-suits and anxiety." The absence of any regular increase of population by natural means, is abundantly accounted for—the relative number of the sexes being disproportionate in the extreme—there being "upon some estates as many as five men to one woman" and by the overworking and flogging of the women, especially on the sugar plantations. The afternoon of Saturday was usually allowed them to labour on their own

provision ground; the whole of Sunday was applied in a similar manner, no religious instruction of any kind being extended to them, and thus the weary frames that had laboured during the week, from sunrise to sunset,—stimulated by an incentive more powerful than the lash—renewed their toil with such ardour as to produce more in one day's labour for themselves, than the worth of a fortnight's hire."† Simply in a pecuniary sense, as a means of preserving their strength, it would have been better for their masters to have inculcated the value, and shared with them the privileges of a Christian Sabbath, prohibiting the system of Sunday markets, even at the cost of surrendering a week-day's labour. But at this time the very entrance to a share in religious ordinances, might be said to be barred against them—the baptismal fees payable for each negro being no less than £1 3s. 9d.

In reference to the character and conduct of the clergy of the Established Church, Long remarks: "I shall say but little. There have seldom been wanting, some, who were equally respectable for their learning, piety, and exemplary good behaviour: others have been detestable for their addiction to lewdness, drinking, gambling, and iniquity; having no control but their own sense of the dignity of their functions, and the censures of the Governor." "Some labourers of the Lord's vineyard have at times been sent [by the Bishop of London], who were much better qualified to be retailers of salt fish, or boatswains to privateers, than ministers of the gospel."‡

After referring to the "infatuated attachments" formed by the white colonists to black women, "in which not one in twenty can be persuaded that there is sin or shame," he remarks on the fashionable detestation in which marriage was held, the expense of keeping up the necessary establishment, being pleaded in excuse by men who lavished their fortunes on coloured women of the lowest class, and became the abject dupes of their artifices, thefts, and infidelities. His account (vol. ii. p. 328-9) of the immoral lives led by the most wealthy planters, cannot be transferred to these pages. He alludes also to the notorious and disgraceful circumstance of strangers, on first arriving in the island, being "shocked at seeing a group of white legitimate, and mulatto illegitimate children, (the latter generally slaves) all claimed by the same married father, and all bred up together under the same roof," adding, "habit, however, and the prevailing fashion, reconcile such scenes, and lessen the abhorrence excited by their first impression."—(vol. ii. p. 330.)

The inevitable results of intemperance and immorality did not fail to send numbers, in the pride of manhood, to their graves, so that the proportion of young widows formed a marked feature in society. Governor Lawes, in allusion to this fact used to say, that the female art of growing rich quickly in Jamaica, was comprised in two short words, "marry and bury." As to the overseer class, and indeed the white servants in general, they were largely composed of the very dregs of the three kingdoms, who had commonly more vices, and much fewer good qualities, than the slaves over whom they were set in authority. Their masters, with an inconsistency by no means rare, expected to find in the same person strict honesty and gross immorality; they did not desire, and in most cases would not employ, married men as overseers. To check the shameless and disgrace-

† *Idem*, vol. ii., p. 491.

‡ *The History of Jamaica*, vol. ii. (4th edition), p. 238.

ful policy observed in this respect, Long advised the recognition by the legislature, of the freedom of all mulatto children, thereby making it the interest of the planters to check, instead of foster, illicit intercourse with their slaves. But this suggestion was disregarded, being quite contrary to the tone and feeling prevalent in the Assembly.

Such a state of things as the above paragraphs reveal, seems almost incredible in a British colony, at a period comparatively recent: but something yet remains behind which makes the picture more repulsive—viz., the common practice of producing intoxication of a peculiarly demoralising kind, by means of laudanum; the planters, their wives and concubines, wresting its valuable medicinal uses by taking it for the same purposes for which its crude preparation, opium, is employed by the Chinese.

"I have known," says Long, "a whole company of men in Jamaica, at table, pledge one another in this liquor. The women, in general, are more moderate in the quantity they take at once, but although they sip it drop by drop, it is repeated so frequently that the whole they take in a twelvemonth is pretty near as much as what others drink who recur to it seldom, but in larger doses at a time; and its effects in both cases are equally fatal. Some ladies are never without a bottle of it in their pocket; * * * they pretend it is absolutely requisite for their comfort and happiness," and by this practice are at times "deprived of their reason, and driven into the most incoherent ravings in their conversation, and the wildest extravagancies in their conduct, thus sacrificing sense, beauty, health, fame, and even virtue, to this pernicious habit." * * * To the excessive use of laudanum, Long attributes the drawing faltering speech so frequent among the colonists, and says: "this notorious vice has ruined, and still ruins, the beauty of many a fine woman in this island, both in complexion and constitution, for it so poisons the whole corporeal mass as to render the lips of a deadly pale or livid hue, and the face cadaverous. After frequent repetitions of it, so importunate and strong are its solicitations as to admit of no denial, till in the end it constrains even debauchees to abuse it."* The historian then gives some personal illustrations of the operation of this deleterious drug, which correspond exactly with what I myself witnessed in China, (as stated in my report on the opium trade,) and with the descriptions given in official documents published by the Chinese authorities, respecting its ruinous effects on the moral character and physical structure of man.

In truth, the extensive use, or rather abuse, of opium in Jamaica, explains not only the immorality and crime which pervaded the island, but also, viewed in conjunction with slavery, accounts for the mercantile affairs of the planters having become so hopelessly involved. It is well known in China, that when once a merchant becomes a confirmed opium smoker, his business goes rapidly to ruin, and he becomes bankrupt in fortune, as well as in health of body and soul.

The victim of this devilish vice has his natural sense of right and wrong completely perverted; licentious indulgence absorbs every faculty; the exercise of cruelty becomes a delight; the slightest opposition calls into fearful activity the most violent passions; when strength is wanting, cunning is resorted to as an instrument of malice; intense selfishness prevails; and, until the corporeal strength

fails, man is converted, not into a brute, but into a demon.

In 1792 a Consolidated Slave Act was passed, for which the Jamaica Assembly took to themselves great credit, and whose modified provisions would, they probably hoped, check the growing feeling of sympathy for the enslaved Africans, and blind the British public to the numerous and cruel laws which remained unrepealed by the present enactment. Mutilation, or dismemberment, was prohibited, and made punishable by a fine not exceeding £100, and imprisonment for a term not exceeding twelve months; wilful murder was declared a capital offence; "iron collars, with projecting bars or hooks," were no longer to be fixed at the owner's pleasure round the neck of any slave, or his body or limbs to be loaded with chains, irons, or weights of any kind, "other than such as are absolutely necessary for securing the person of such slave." These were certainly mitigations, if carried out; but while no coloured person was allowed to give evidence against any white person, and the testimony of every coloured person was received against his fellow, the chance of the oppressed race being able to obtain a verdict against a planter, from planter judges, was poor indeed, even supposing no suborned or compulsory perjury to be resorted to in the matter. One very important clause in this act was that which enjoined every proprietor to plant in the proportion of at least an acre of land to every ten negroes, with ground provisions, in addition to the appointment of a sufficient quantity of land for every slave, and time to work the same, in order to provide for his own maintenance. This was a most necessary decree; the neglect of the cultivation of food had been already attended with fearful results, for in an island which, in the time of its occupation by a handful of Spaniards, had afforded animal food in the greatest abundance, and which was capable of producing an almost incalculable amount of vegetable supplies, 15,000 negroes are stated to have perished in a period of little more than six years (between the latter end of 1780 and the beginning of 1787), either from famine, or diseases contracted by scanty and unwholesome diet.† The planters attributed the scarcity to the prohibition of foreign supplies by Great Britain, and to the destructive hurricanes by which the island had been visited; but the true cause was the insufficient ground, and yet more insufficient time for labour, apportioned to the slaves. The planters had, from an early period, found it to be their interest to compel the negroes to maintain themselves, which they did with the exception of a small quantity of salt provisions dealt out to them weekly. All that they could raise, beyond what was necessary for their own consumption and that of their families, they were allowed to sell, and hence arose the system of Sunday markets, held by them and the Jews, which so long disgraced Jamaica. The time generally allotted them to provide for their own sustenance, was the afternoon of Saturday (except in crop time, when the labour was continued day and night), three days at Christmas, two at Easter, and two at Whitsuntide; to which the act of 1692 added a day in every fortnight. The slaves of Jews were better off, having the whole of every Saturday as well as Sunday at their disposal. The incitements to labour, even on their own account, were however few, and the discouragements very heavy.

No law guaranteed to slaves the possession of property they must have striven so diligently to earn,

* *History of Jamaica*, vol. ii., pp. 545-'7.

† Southey, vol. ii., p. 15.

the master might at any time seize it, and his slave would have no remedy. The highest and most honourable object, the purchase of his freedom, of that of his wife, or his children, was in most cases quite beyond his reach; he could not demand it on payment of any reasonable sum. Cattle, horses, mules, asses, &c., they were forbidden to acquire, under pain of confiscation. In fact, the condition of the negro depended almost entirely upon the character of his master, or more frequently upon that of the overseer, to whom little less than irresponsible power was delegated.

To check the decrease occasioned by the extortion of excessive labour, wanton mutilation, and the infliction of whipping and other punishments, the justices and vestry of every parish were formed into Councils of Protection, and directed to investigate any case of the kind with which they might become acquainted, and bring the offenders to justice.* This measure does not, however, appear to have produced much, if any, mitigation of the deep-rooted evil it was professedly designed to remedy. Another cruel hardship, which could not but damp the energy of the negro, and lessen the pleasure he might otherwise take in cultivating his small allotment of land, was the uncertainty of its continued possession, for even under the kindest master, the most considerate of overseers, his position was yet fraught with cruel uncertainty. He might have spent years of unremitting anxiety, toiling still, when almost wearied out with labour, for his master, upon his own cherished spot of ground; he might have built himself a house, obtained a wife, and become surrounded by a young family, but he was at any moment liable to be sold by his master's creditors, and made subject, in a course of administration by executors, to the payment of all debts, both of simple contract and specialty. However irreproachable his conduct, he might be seized on by the sheriff's officer, dragged to public auction, purchased by a stranger, separated from his wife and children, and perhaps sent to terminate his miserable existence in the mines of Mexico.

The parliamentary act authorizing such proceedings, passed in the reign of George III., for "the more easy recovery of debts," was repealed in 1797, and the Assembly were directed to adopt measures to remedy so crying a grievance, but they paid not the slightest heed to this intimation. The extent of misery which must have originated from this source alone, may be partially understood from a statement made by the House of Assembly, in 1792.

"In the course of twenty years, 177 estates in Jamaica have been sold for the payment of debts; 55 estates have been thrown up, and 92 are still in the hands of creditors; and it appears from a return made by the Provost-Marshal, that 80,121 executions, amounting to £22,563,786 sterling, have been lodged in his office in the course of twenty years."

LAST MAROON WAR.—It has been already stated that no endeavour whatever was made by the colonists to introduce among the Maroons the rudiments of Christian civilization. It was taken for granted that they were incapable of receiving any such instruction; and the only species of good conduct expected from them, and to which they were incited by the hope of reward, was the capture and betrayal of fugitive slaves; and as they were useful in this respect, and as a body, inoffensive in others, they were suffered to remain unmolested. This state of

things was disturbed by the bloody revolution which broke out in Hayti (San Domingo) in 1790; the smouldering flame of rage and despair, having been fanned by the declaration of the National Assembly of France, that all men were free, the negroes and mulattoes flew to arms, and, after a desperate struggle of several years, succeeded in obtaining their liberty, and ultimately acquiring from France (by the payment of a heavy ransom) the recognition of their independence, and undisturbed possession of the island. Such proceedings as these were not likely to be viewed with indifference by an insulated slaveholding community, not ninety miles distant. The idea of a possible coalition between the slaves and Maroons readily suggested itself, and was followed by an endeavour to increase the aversion already existing between them. This was done by an act passed in 1791, which admitted without reserve the testimony of slaves against the free people, who had often, pursuant to legal requisition and encouragement, captured and brought them home, when attempting to escape to the woods. Such a measure was, under the circumstances, nothing less than a direct invitation to revenge.† The Maroons had increased considerably since the pacification of 1739. Though nominally confined within the liberties of their respective towns, they were really allowed to wander through the country; many employed themselves as pedlars, and, in spite of the ill-feeling sedulously fostered between them and the slaves, an intercourse sprung up, which was cemented by the alliance of blood, if not of interest. The legislature considered such connections dangerous, because likely, according to Bridges, "to interfere with the active pursuit of deserters, the occupation most congenial to the temper of the Maroons, and most serviceable to the country;"‡ and therefore proceeded with their usual tyranny and violence, suddenly to confine the people within the precincts of their towns, to remove their captain or superintendent (to whom they were enthusiastically attached) on account of his alleged laxity of discipline, and to place another person in his stead.

At this crisis the Earl of Balcarres arrived as Governor. Impetuous and prejudiced, he appears to have taken for granted that all the coloured population were ready to follow the example of their brethren in San Domingo; he was consequently on the watch for the slightest demonstration from any quarter that could be construed into rebellion, that he might crush it in the bud. This readiness with regard to the Maroons helped to produce the very disasters it was intended to prevent; the imprudent chastisement of two of them for the theft of some pigs, by the hands of a negro slave, created great discontent, and led them to dismiss, but without violence, the new superintendent, to whom they attributed the ignominy with which they were now treated. The earl at once proclaimed martial law, declared them rebels, marched up large bodies of troops, and surrounded Trelawney Town with an armed force of 1,200 men. Their aged leader, named Montague, with thirty-seven of his best marksmen, surrendered unconditionally, declaring that his countrymen only waited to see how they would be treated, to do the same. Lord Balcarres had them bound hand and foot, and cast into prison, but afterwards released two of them, and sent them into the woods, to hasten the submission of the rest. Their report, as might have been expected, produced an opposite

* Edwards, vol. ii., p. 173.

† Southey, vol. iii., p. 49. ‡ Bridges, vol. ii., p. 223.

result; the main body, indignant at the treatment received by their leader, instantly set fire to their scattered abodes, collected all their strength, fled to the woods, and there, for four months, a body alleged to have comprised only 300 fighting men, held their ground against 1,500 European troops, and more than double that number of colonial militia. Well acquainted with every cavern and footpath, they made the most of the natural advantages offered by the impenetrable character of the country, and defended themselves so skilfully as to generally lose but one man where their trained and well-armed assailants were deprived of thirty.*

Lord Balcarres' plan of clearing the woods, enclosing the besieged people by a cordon of troops, and starving them into submission; even if practicable, must have been very slow in its operation. Christmas was approaching; and the brief season of relaxation then universally allotted to the negroes was much dreaded, lest they should be tempted to join the Maroons. It was therefore of great importance to terminate speedily a war which had already cost many valuable lives, including those of Colonels Sandford and Fitch. The latter officer, by the influence of his personal character, had endeavoured to pave the way for peace, which the enemy, without doubt, earnestly desired; but having no authority to make terms, he proposed a temporary truce, and permitted two of them to pass through his lines and visit their imprisoned comrades. These had been placed on board ship for security, which the deputies concluded to be a preparatory step to their transportation, and probably enslavement, in some distant place of punishment, such as they well knew was the doom of rebellious or ill-conducted slaves. They returned to their den; at once renounced all further friendly intercourse, and prepared for a death-struggle. Artillery was brought; the outposts of the army were advanced; and Colonel Fitch, habitually careless of danger, pressed forward with a few followers, into the deep and pathless forests, with a view of examining the most defensible and advantageous positions. His more wary guides, alarmed by finding in various places the dying embers of Maroon fires, entreated him to return; but, heedless of their warnings, he continued his progress though mountains of great height rose before him, and the prospect at every step became more gloomy and forbidding. At length, when about to enter a narrow track, scarcely to be called a path, a voice near him commanded him to return, for no white man had ever passed that boundary. Fatally daring, Fitch still kept onwards, but had not proceeded many yards when a volley of musketry† was poured upon him from among the surrounding rocks, and he fell mortally wounded.

The governor had returned to the capital before the death of Colonel Fitch. General Walpole succeeded to the command, for which, both from skill, discretion, and humanity, he was well adapted. Fresh troops were ordered up, the horrible resource of shells was used to destroy the lives and habitations of the Maroons; and all these means, added to immense superiority of numbers, proving insufficient, a body of chasseurs and trained bloodhounds were sent for, and actually arrived from Cuba. Happily, in time to prevent this last atrocity of hunting men,

women, and children like wild beasts, the wise policy of the general procured their voluntary surrender on the simple terms, "that they should on their knees beg his majesty's pardon; that they should occupy in peace and subjection *whatever land the governor might think proper to allot them*, and that they should deliver up all the slaves who had deserted to their standard."‡ The second condition clearly implied that territory would certainly be allotted them; but the Maroons, naturally distrustful, and, as the event proved, with only too much cause, insisted on receiving the personal pledge of the general, who engaged, by a solemn oath, that if they submitted immediately, they should not be banished the island. He was in fact only too glad to end hostilities so easily, having shortly before assured the governor that "there seems but little chance of any but a Maroon discovering a Maroon." "Dogs (he adds) cannot scent but on a recent step, and I fear the Maroons are now so deep in the woods, that no expedition can be supported against them, without risking a failure of food and water for those animals; with a great probability, even if it could be sustained, of never finding the enemy. The die is cast, and it is now too late, unless they discover themselves; for I am told that the Spaniards say, that they could live in these woods for ever; that they never saw such woods for sustenance anywhere."

The governor hastened to the spot, but the apprehensions of the Maroons, the real difficulty of collecting their scattered body, and the time required to communicate the information to each other, detained them beyond the day appointed for their surrender. Heedless of the remonstrance of General Walpole, that the time allowed was too short, and that he had given assurance to the Maroons, who were delayed by sickness, of a little longer indulgence to come in with their families, Lord Balcarres ordered the dogs into the woods; and although the terrified people came as speedily as possible, he took advantage of their temporary failure to excuse the infringement of the very article which they had so specially insisted upon, and transported all who placed themselves in his hands, on the ground of the non-fulfilment to the very letter, of a condition which can hardly be considered to have formed a part of the treaty, but was rather superadded as a convenient plea for the violation of a solemn pledge. General Walpole indignantly appealed to the Assembly, who refused to hear him; he then addressed both public and private communications to the governor—declared that the Maroons had come in on the faith of the promises given, for that before the last expedition (with the dogs) had been sent against them, they had proceeded more than half-way, with loads on their back of clothes and children." The opinions of the field-officers, he said, had never differed; all agreed that unless the Maroons had been induced to capitulate by the offer of favourable terms, treble the number of troops would not have brought in so many in twelve months more. The general's just arguments were quite unheeded, but the legislature voted him a splendid sword in token of their sense of his services: he refused it, and declared his intention of resigning the command, and quitting the service, stating that he would make public the facts, and leave the world to judge how far he ought or ought not to be impli-

ration, sufficed to counterbalance the temptation of large profits, and prevent the sale of fire-arms and gunpowder by the small traders to the natives.

‡ Journals of the House of Assembly, vol. ix.

* Bridges, vol. ii., p. 235.

† In Jamaica, as in the Cape of Good Hope and other colonies, neither regard for life and property, restrictive duties, prohibitory laws, penalties, or any other consid-

cated in the guilt and infamy of such a proceeding.*

Upwards of £500,000 were spent, long before the conclusion of the war, and after it the sum of £25,000 was devoted to the transportation of the captive Maroons, 600 in number,† to Nova Scotia. To wilfully expatriate a people under such circumstances was an act of flagrant injustice, but to expose negroes whose sufferings from the slightest coldness of temperature were known to be intense,‡ to the rigours of a North American climate, was the very refinement of cruelty.

Probably, the energetic and disinterested conduct of General Walpole alone preserved them from being condemned to that lowest depth of suffering and degradation, the mines of Mexico. He vainly pointed out the *expediency even* of retaining them in Jamaica, indicating how useful the abilities they had evinced might be made, and showing that they really wanted nothing but judicious treatment to become contented and valuable subjects. That he was right was sufficiently proved by their conduct in Nova Scotia. Notwithstanding the trying temperature, they were cheerful and contented. Measures were instantly taken for instructing them in Christianity, teaching the youths and children to read, write, and cipher, and leading them to adopt the more simple usages of civilized life. "I have no doubt," says Governor Wentworth, "but that these will be a useful and happy people. * * * Last Sunday I attended public worship in their chapel, at opening the church. The Maroons were particularly attentive, decent, and most exceedingly delighted. Next Sunday many are to be baptized, and the remainder in due course. They are solicitous for this duty, and appear desirous of instruction, from whence civilization will naturally result." Eventually, through the exertions of Granville Sharp, they were removed to the free African settlement formed at Sierra Leone, where their descendants are now fulfilling Governor Wentworth's prediction, by proving useful and happy citizens.—(See Div. vii., Africa, p. 178.) These active mountaineers must have doubtless been very displeasing to the assembly of Jamaica, whose members could ill brook the sight of coloured men in possession of even personal, much less civil and religious liberty.

The planters probably foresaw that the enlightenment of the mind could scarcely long co-exist with

* Southey, vol. iii., p. 105.

† The Maroons of Trelawney Town were principally concerned in the outbreak. As Bridges states that the Maroons had increased from 600 (their number in 1739) to 1,200, it would appear that about 600 must have remained in different parts of the island, having never been engaged in the contest; but the records on this head are so imperfect, that it is difficult to understand clearly the state of the case. Reports were circulated, some of which have been recorded by Mr. Dallas in his *History of the Maroon War*, of indignities supposed to have been perpetrated on the dead bodies of British officers and soldiers—but all these were eventually proved to be wholly without foundation.—(Bridges, vol. ii., appendix, p. 479.)

‡ Edwards says that "when the mornings are chill and foggy, as frequently happens even under the zone, the sensations of the negro are distressful beyond the imagination of an inhabitant of frozen regions;" and he mentions that those who do not come with sufficient speed to their work, to which they are summoned before daybreak and not released till after sunset, are punished for their sluggishness by the driver's whip.—(Edwards' *History of the British West Indies*, vol. ii., p. 158.)

§ The excessive severity of decreeing the punishment of

the enslavement of the body; they therefore sedulously discouraged every species of instruction which should raise their victims above the degraded and brutalized state in which they desired to keep them. Devoid of any fixed religious principle themselves, it was of course useless to reason with them respecting the benefit which they would derive from the improved morality of their slaves; nor could they be expected to understand how completely sound Christian teaching counteracts the spirit of strife and sedition, which knowledge without piety rarely fails to rouse in the breasts of either white or coloured men.

In Jamaica and in too many other West Indian Islands, the experiment was fully tried, of whether human beings might not be so completely bowed down by the yoke of slavery, so spirit-broken, as to endure, not in the strength of that Christian fortitude which wins the martyr's crown—but from mere brutish indifference, to labour on through life, with no other incentive than the cart-whip, until the time should come when, physical power ceasing, dust should return to dust. Meanwhile, so utterly was the image of the Creator expected to be blotted out, that none of those vents were allowed through which even the most barbarous savage implores the mercy or deprecates the wrath of the, to him, unknown God. Every manly impulse was to be nipped in the bud, and how could this have been more ably attempted than by preventing the formation of marital and parental ties, encouraging animal instincts, and smothering every better feeling by compelling men to witness tamely, and even to inflict cruel and indecent punishments on their own children, and on the mothers of those children? But the impious endeavour failed, numerous and increasingly dangerous insurrections proved that the negroes were men, and not a superior kind of ape,|| and a conviction of the fact began to dawn upon the unwilling minds of their masters. In vain they quoted the examples of various nations in support of a system as impolitic as it was sinful; they could not or would not see the difference between the cases they cited and their own. Slavery especially, in a very mild form, might exist for ages under a despotic government among a semi-civilized race, whether engaged in the peaceful pursuits of husbandry, or living in constant warfare; but its prolongation among a free and uneducated people, whose political and social rights formed the never-wearying theme of public and private discussion, was death against any one who should assume the character of an Obeah-man, or sorcerer, was excused by the planters on the plea of their frequently administering poison to the subjects of their spells. Wilberforce, in his admirable *Appeal on behalf of the Negro Slaves in the West Indies*, shows that this was not the view taken of the proceedings of the Obeah-men. The colonists, he says, preferred employing "the devilish instrument of persecution" to root out pagan superstition, rather than the mild but efficacious instrument of Christian knowledge (p. 29). But besides this, a leading motive doubtless existed in the jealous distrust with which slaveholders would naturally view the influence acquired by a slave over his followers, even when beneficially used.

|| Long does not scruple to express his acquiescence in the "common known proverb, that all people on the globe have some good as well as ill qualities, except the Africans," and, remarking upon the narratives of ouran-outangs carrying off negro women to the mountains, he adds, "ludicrous as the opinion may seem, I do not think that an ouran-outang husband would be any dishonour to an Hotentot female."—(Vol. ii., pp. 353-364.) The conduct of the European colonizers of the Cape of Good Hope, contrasts strangely with this opinion.

an impossibility. The field negroes were indeed in great measure out of the reach of this powerful influence; treated like beasts of burden,* they might learn to think themselves created for no other purpose; but the domestic slaves, occupied in personal attendance on their master's household, could hardly be expected to listen unmoved to the doctrine of resistance to oppression, which they heard so frequently enunciated and applauded. Under such circumstances it was evident that sooner or later the negroes would become leavened with a desire for freedom, and probably for vengeance, the knowledge of their numerical superiority would quickly follow, and then the issue of a struggle between some 300,000 enraged blacks and 30,000 whites could not long be a matter of doubt. Religious instruction, however contradictory the assertion may at first sight appear, was the only efficacious means of rendering them peaceable and orderly slaves, or qualifying them to receive, without danger to themselves or others, the inestimable boon of freedom. I know it is not the general, and is very far from being the popular view of the subject, but a long and totally unprejudiced course of inquiry, reading, and reflection, has nevertheless impressed upon me the conviction that Jamaica was saved from the fate of St. Domingo mainly through the instrumentality of the persecuted missionaries. It is a painful confession for a member of the Church of England to make, but the testimony of both friends and foes proves that with some exceptions her unworthy representatives confined their efforts, such as they were, to their white congregations, and openly declared that their ministrations were not designed to extend to the negroes.

The "Establishment" was liberally, if not lavishly provided for, but the clergy were completely under the control of those who annually voted their stipends in the House of Assembly, with whom in other respects their interests were closely identified, for most of them were slave-owners, many of them openly kept concubines,† and some, having formerly been overseers of plantations, had renounced the office, but not the feelings of the slave-driver. Under such circumstances it is not to be wondered at that the few who really valued religious teaching, should seek for it through a less corrupted channel, and by this means awaken the degenerate clergy to some sense of the deep responsibility attached to the functions they were so grossly neglecting, and bringing into disrepute. Jamaica is far from being the only arena in which the zeal and self-sacrifice of non-conformists have taught the Church of England a humiliating but salutary lesson.

The first labourers in the wide field of negro con-

* Dr. Pinckard, who visited Jamaica in 1797, incidentally adverts to the manner in which slaves were there treated, as unlike anything he had seen in the Windward Islands; he observed, in Kingston, "sixteen or eighteen negroes, linked in a sort of harness, and forming a regular team, drawing an immense trunk of mahogany, conducted by a driver with a cart-whip, who went whistling at their side, and flogging them on, precisely as an English carter does his horses."—(*Notes on the West Indies*, 2nd edition, 1816; vol. ii., pp. 371-2.)

† Vide Long's remarks on the state of the clergy, quoted at p. 29; Dr. Coke's *History of the West Indies*, vol. i., p. 416; and the Rev. P. Duncan's *Wesleyan Mission to Jamaica*, p. 8.

‡ On Dr. Coke's second visit to Jamaica, he was treated even more disgracefully than before. "The persecution [he says] which we have experienced in this place, far, very far, exceeds all the persecutions that we have met with in the other islands, unitedly considered. Mr. Hammett's

version in this island, were the United Brethren, or Moravians; three members of that society being sent out, in 1754, mainly at the expense of a few proprietors, who set a good example by themselves attending the ministrations of the missionaries. Their proceedings being confined to a very few estates, attracted little attention, and they might probably have been long suffered to remain unmolested, had not the rebellion of 1760 broken out. They then refused to carry arms, and thus excited the indignation of the freeholders of the parish of St. Elizabeth, who presented a petition against them to the House of Assembly, but without result; the circumstance of no negro connected with them having taken part with the insurrectionists, but, on the contrary, having been remarked for their fidelity, possibly being a strong plea in their favour. A body of Quakers, principally from Barbadoes, who had at an earlier period settled near Kingston, had been driven from Jamaica by the obligation imposed by the militia laws on all males capable of bearing arms. Their doctrines carried them farther than the Moravians, because they not only refused to be personally concerned in war, but also to contribute to its pecuniary charges, to which the latter sect appear to have offered no objection.

Notwithstanding its promising commencement, the mission made little progress in Jamaica for more than half a century; meanwhile the Wesleyan and Baptist Societies entered the lists. So late as 1789, the immense mass of heathenism remained almost wholly unbroken, the Moravian brethren acting chiefly as chaplains on the estates to which they were attached; and although some members of the Baptist denomination had arrived from America at the close of the revolutionary war, their circle of influence was very limited. The visit of Dr. Coke,‡ the representative of the Wesleyan body, marks the commencement of a new epoch. After preaching four times in a private house at Kingston to increasing congregations, a Roman catholic gentleman offered him the use of a more convenient apartment, which had frequently been employed as a public concert room. Gladly availing himself of the opportunity, Dr. Coke addressed an assembly of 400 white people, and about 200 negroes, there being no space for more; choosing for his text, "Ethiopia shall soon stretch out her hands unto God." He had scarcely commenced when he was rudely interrupted by a number of white persons, calling themselves gentlemen, who pressed towards him, calling out "Down with him! down with him!" The intrepidity of a lady (Mrs. Smith),§ who, at no light peril to herself, stepped between the preacher

life was frequently endangered. Mr. Bull several times narrowly escaped being stoned to death, particularly one night, when he eluded the vigilance of the rioters by being disguised in a suit of regimentals. We forbear to record specific instances of brutality and wickedness, or to mention the names of those whose sons shall blush their fathers were our foes."—(*Coke's West Indies*, vol. i., p. 421.)

§ Mrs. Smith was born in the United States, but came to Jamaica about the time of the war of independence, and was one of the eight persons (three whites and five free blacks) who formed the first "Methodist Class," as it was termed: shortly before her death, in 1822, at the advanced age of eighty years, she was informed that the Wesleyans then numbered about 8,000, upon which, raising her hands to Heaven, she exclaimed, with streaming eyes, "I was once one of eight, but God has permitted me to see the little one become a thousand."—(*Duncan's Wesleyan Mission to Jamaica*, p. 12.)

and the infidel mob: her bold remonstrances, together with the christian composure of Dr. Coke himself, exercised such an influence over the meeting, that the disturbance ended more quietly than might have been expected; and was even satisfactory as proving that though many were inclined to persecute, or, at best, tacitly discountenance so new an experiment as the evangelization of the negroes; some were disposed to favour and encourage it.* A missionary, the Rev. William Hammett, was sent out in the following year, and a small society was formed, whose members continued to extend their operations without interference, until they found it necessary to quit the inconvenient and obscure house they had hitherto occupied, for a spacious building, which comprised a good chapel, meeting-room, and dwelling-place. The grand jury of Kingston, in 1790, declared their chapel a nuisance, and urged that Methodist teaching was injurious to the peace of the town. The magistrates do not appear to have taken any steps with regard to this presentment, but neither would they interpose to prevent the systematic annoyance offered to the missionaries, or punish the attempts made to injure their persons, and destroy their premises.

Notwithstanding various discouragements the mission prospered, and gradually spread to different parts of the island, by means of the negroes themselves. The contemptuous indifference with which its commencement had been viewed by the local authorities, was exchanged for alarm and aversion, which soon manifested itself most unequivocally. Towards the close of 1802, a small body of Wesleyans, newly formed at Morant Bay, of free coloured persons and slaves; being repeatedly molested in their prayer meetings, applied for a licence for the houses in which they were in the habit of assembling. This was refused by the magistrates, and the houses were indicted at the next quarter sessions, as nuisances. The Assembly determined to apply the axe to the root of the tree, and passed "an Act to prevent preaching by persons not duly qualified by law," under the penalty of being treated as rogues and vagabonds; if of free condition to be sent to the work-house (*i.e.*, the House of Correction), to be kept at hard labour one month for the first offence, and six for the second; or in the event of the offence appearing of "extraordinary heinousness," to suffer such punishment as the judges of the next supreme or assize court should see fit to inflict, not extending to life. If a slave, the offender was to be publicly flogged,—and any person permitting unlicensed prayer meetings in his or her premises, to be fined £100 for each offence, and compelled to furnish whatever securities the judges might think fit.

This disgraceful act was signed by Governor Nugent the following day, and was of course a most formidable weapon in the unscrupulous hands of the planters. "Not only," says Dr. Coke, "the Methodist missionaries, but many pious and useful preachers of different denominations, were involved in its influence. Mr. Reid, the Scotch missionary, and

* Among the extraordinary and unlooked-for results which attended this meeting was the effect it exercised upon the minds of many who heard of it only by report. For instance, a free coloured woman residing at Manchioneal Bay, nearly sixty miles from Kingston, learned that Dr. Coke had especially urged the performance of two duties; namely, that people ought to meet together to pray to God, and that instead of living as they were doing, they ought to be regularly married. She set to work forthwith, and assembled a few neighbours, who joined with her in prayer. The solemnization of matrimony was

Mr. Swiggle, the Baptist minister, [a man of colour,] together with all the local preachers and exhorters throughout the island, were silenced in an instant." The first person who suffered under this act was a free coloured man, of exemplary character, named John Williams, who had done much good in the capacity of a local preacher. He applied to be qualified according to law, but was refused, and reprimanded, as were others who made a similar request.

On the evening of the day on which his application had been made, about twenty persons having assembled in his house, he joined them in singing a few hymns, and offering up prayer to God, but he did not venture either to teach or preach. He was, nevertheless, taken before five magistrates on the following day, and found guilty of singing and praying, and encouraging others in committing the same offences, which, by some strange species of casuistry, their worships decided to be equivalent to preaching, and he was sentenced to a month's imprisonment and hard labour—but only the former part of the sentence was performed—the authorities probably fearing the notoriety that would result from such an evidence of the first working of this intolerant measure, when known in England. As it was, a month's imprisonment in a close unhealthy room, paved with brick, was no slight punishment. Mr. Campbell, a white missionary, was soon incarcerated in the same place, for having ventured to preach on the authority of the licence he had received in England, and was afterwards obliged to escape to Europe, in consequence of the numerous attempts made to arrest him and subject him to a fresh prosecution, on the plea of his having committed the crime for which he had been already punished, in his own house. The magistrates, therefore, could not only compel him to pay the penalty of £100, but were also authorised, as before shown, to require such sureties for his future good behaviour, as *they should think fit*; and as he was well aware that he could find none, which might not, for very plausible reasons, be rejected, it was clear that he was threatened with nothing less than perpetual imprisonment. The same proceedings were instituted against Mr. Williams, but were happily cut short by George the Third's disallowance of the intolerant enactment under which they were commenced.

The House of Assembly, when informed that His Majesty in Council had refused to sanction the Act passed by them respecting preaching, by persons not duly qualified, and had sent the draft of another bill for that purpose; formed themselves into a committee, and resolved, *nem. con.*, that such an attempt to direct or influence their proceedings on a matter of internal regulation, was an interference to which it was their bounden duty never to submit.

Long before this the Assembly of Jamaica had been in the habit of indulging in intemperate invective against the mother-country, more especially since the abolition of the carrying trade, and the amelioration of a worse difficulty—negro marriages had never been heard of; the parish church was between twenty and thirty miles distant, and no minister of the Gospel ever visited the district. In this emergency she thought it best to take upon herself the clerical duty, and actually married several couples, who were among the first of their race united by any christian ceremony in the island. Gradually her mind became more enlightened, and she continued learning and teaching for the rest of her life, dying in peace in 1840, having numbered, it was believed, little short of ninety years.—(Duncan, p. 20.)

tion of the condition of their slaves, had been so warmly advocated. When the decree was at length finally issued (1807) for the complete renunciation of the foreign traffic by British subjects in every part of the globe, their anger was unbounded.

By their own accounts they had for the last fifty years been constantly becoming more deeply involved in debt and embarrassment; some of their earlier reports on this head have been already cited. A gleam of prosperity had followed the revolution in St. Domingo, in consequence of the increased price for sugar and coffee, occasioned by the temporarily diminished supply; but this soon passed away, for a Report of the Assembly, issued in 1804, and published by the House of Commons, 25th February, 1805, states that—"Every British merchant holding securities on real estates, is filing bills in Chancery to foreclose, although when he has obtained his decree he hesitates to enforce it, because he must himself become the proprietor of the plantation, of which, from fatal experience, he knows the consequence." The document proceeds to assert, that sheriffs' officers were everywhere selling property "at less than half the original cost;" that "all kind of credit is at an end;" that "confidence has ceased," and that "a faithful detail would have the appearance of a frightful caricature."

In 1807, a West-India Committee of the House of Commons reported that "since the year 1792 there had taken place a progressive deterioration in the situation of the planters." A report of the House of Assembly in the same year declared that within the five or six previous years sixty-five estates had been abandoned, thirty-two sold under decrees of chancery, and that there were 115 more, respecting which suits in chancery were pending, and many other bills preparing. Moreover that "the sugar estates lately brought to sale and now in Chancery in this island and in England, amount to about one-fourth of the whole number in the colony." The committee anticipated "very shortly the bankruptcy of a much larger part of the community, and in the course of a few years that of the whole class of sugar-planters," with few exceptions.

The most sceptical inquirer could scarcely desire stronger evidence of the ruinous tendency of the system so blindly pursued. Several of the best informed British statesmen beheld its working with alarm, and scrupled not to declare their belief that the suppression of slave importation was a measure demanded not only for the sake of justice and humanity, but also necessary to save Jamaica from utter ruin. This view of the case the colonists could not understand, nor could they be induced to believe the abolitionists actuated by any better motive than a sickly sentimentality to be gratified at their expense. For a long time they had repudiated the idea of the forcible suppression of the slave-trade, as an infraction of their rights of internal traffic which England would never venture to attempt, much less to enforce; and so late as 1793, Bryan Edwards had declared, that no man could "hesitate a moment to pronounce, that an attempt to prevent the introduction of slaves into our West Indian colonies, would be like that of chaining the winds, or giving laws to the ocean." This grandiloquent declaration proved to be nothing better than bombast; it showed, however, how deeply this clever though prejudiced writer was imbued with the principles of his fellow-colonists. The decree of abolition went forth, and its most active

promoters were content to wait quietly and watch its effect, hoping that the increased-value of the slaves would lead to their improved treatment, and that consequently their numbers, instead of annually diminishing (by the preponderance of deaths over births) might be yearly augmented. But they did not calculate upon the effect of the fierce passions roused into action, in the minds of men already soured by disappointment and debased by the habitual exercise of tyrannical power, nor in the bitter animosity which would be manifested to the negroes.

The missionaries did not escape unscathed. On the 15th of June, 1805, a bye-law was passed by the common council of Kingston, enacting heavy penalties against any person who should hold a meeting for the purpose of preaching, teaching, praying, or singing, without being authorized by licence to officiate in that particular place; and even, if licensed, as aforesaid, the same penalties were attached to preaching, praying, &c., if performed before six in the morning, or after sunset. This effectually prevented any instruction being afforded to the negroes in the week-days, and almost precluded it even on the Sabbath. Still the planters were not satisfied; they desired nothing less than the expulsion of the missionaries; but the well-known character of the sovereign, his deep-rooted religious feelings, evinced in many acts of his long reign, and impressed upon them by the fate of their recent enactment, forbade the hope of acquiring the royal assent to any measure bearing upon the face of it a tendency to keep back spiritual instruction from the negroes. They therefore embodied the obnoxious measure in a law, or rather code of laws, professedly passed "for the protection, clothing, and for the better order and government of the slaves, and for other purposes," which really contained several clauses calculated to improve their condition, and would, the assembly trusted, by its general tenor, outweigh the disapprobation that might be excited by a provision which forbade "any Methodist missionary or other sectary, to presume to instruct our slaves, or to receive them into their houses, chapels, or conventicles under the penalty of £20." This unqualified intolerance was attempted to be justified upon the plea of an ardent desire for the instruction of the slaves exclusively in the doctrines of the Established Church; but for the performance of this duty by masters and overseers, no rules were laid down, and for its neglect no penalty was attached; and it is to be feared that it was urged with no better view than to blind the home-government to the utter indifference, not to say aversion to every species of religious observance entertained by the major part of the community.

Mr. Renny, writing in 1807, says—

"Surely there never was greater inconsistency than a profession of religion here; in some parishes, which are larger than our shires, there is no church; in others there is no priest, and in most of them there is not a sermon above once in a quarter of a year, and even then the white inhabitants never think of attending. * * *

In the town of Port Royal, which though only the ghost of what it was, is still a place of considerable trade and wealth, where the church, from age and neglect, had gradually decayed, a subscription was opened for building a new one, when, strange to tell, there was not one righteous person found in the whole town (at least if one may judge from this part of their conduct), since not one would subscribe a single *bitt* (a Spanish coin value 7½d. currency) for this pious purpose. In the town of Kingston (the commercial capital of the island), which contains

* Bryan Edwards, vol. ii. p. 137.

between twenty and thirty thousand inhabitants, there is but one church, while the attendance of the people is really at first sight somewhat surprising. When you enter the church on Sunday, you see the curate, clerk, sexton, one or two magistrates, and about a dozen gentlemen, with nearly double that number of ladies. The mulattoes, who are more ignorant, more unhappy, and consequently, perhaps, more devout, attend to the number of about one hundred or one hundred and fifty, and this composes the congregation of the faithful in Kingston.* "Nothing," he adds, "troubles the inhabitants of this island less than the concerns of religion; and, like the philosophers of old, they are neither elated or comforted with its hopes, nor depressed or tormented with its fears. When a people disregard religion, not from a serious belief of its being an imposition, but either from a carelessness of its truth, or the example of others, in a country too where the laws do not require, or do not exact any credit to its doctrines, attention to its precepts, or attendance on its ceremonies, and where they have not only the necessities, but the luxuries of life in abundance, while a great majority of them are kept in the most abject slavery—there, laziness, pride, cruelty, and the most irregular desires will naturally prevail in the conduct of the inhabitants. These general observations will I am afraid be but too applicable, not only to the Jamaicans but to the inhabitants of all the West India islands. Christianity is so contrary in its spirit, in its doctrines, and its injunctions to their conduct, their prejudices, and their interests, that it is not at all surprising it should be very obnoxious, and though not much spoken against, yet secretly despised and openly neglected." * * * [Writing from personal observation, he states that in the towns many of the stores were open on Sundays; amusement, idleness, and debauchery prevailed among the clerks and negroes; the gentry passed the sabbath in smoking, drinking, playing cards, or dancing. Few of them were married, but almost every householder kept a "housekeeper," without being at all thought guilty of any breach of morality or decorum; and so completely had this arrangement superseded a holier tie, that the "parents of brown ladies never think of seeing them married,"† but would in fact have regarded the position of the wife of a mulatto, much less a negro, as far inferior to that of the "housekeeper" of a white man.]

The act of November, 1807, was eventually disallowed, as its predecessor had been, but it continued in operation until August, 1809, the labours of the missionaries being meanwhile completely stopped. It was quite evident that if the local authorities were permitted to continue making laws; enforcing them until they were disallowed, and then repeating the same subterfuge over and over again, the supreme power of England was an empty name, and could afford no real protection to any injured class of persons, whether white or coloured.

To prevent a repetition of the same conduct, the governors of the West Indian colonies were directed

‡ Southey, vol. iii., p. 468.

§ George Lisle and his wife had formerly been slaves to a British officer, who brought them to Jamaica in 1782; and when he died, bequeathed to them their freedom. Lisle first preached on the race-course at Kingston, and pleaded so earnestly, that he succeeded in raising a public subscription, amounting to several hundred pounds, towards the construction of the first dissenting place of worship in the island. His funds proving insufficient, he was imprisoned by the builder, and although urged to take the benefit of the insolvent act, in order to regain his liberty, he refused to do so, and remained incarcerated until he was enabled to pay the whole debt. As may be easily conceived, much contumely was heaped upon the "black parson." One Sabbath morning, during the celebration of the

to withhold their assent from any law relative to religion which should be devoid of a suspending clause, to prevent its provisions being carried out until it should have received the royal sanction. The Assembly of Jamaica resented this most necessary precaution with such intemperate violence, that the Duke of Manchester, although a "planter's governor," was compelled to dissolve the house. The corporation of Kingston, availing itself of a clause in its charter,‡ forbade the missionaries to reopen their chapel in that city; at Morant Bay they were for a time more successful, but they were at length compelled to relinquish preaching there also, and the only places which remained open to them were Spanish Town and St. Thomas-in-the-Vale. Notwithstanding the numerous impediments heaped in their path, through divers public and private channels, the sectarians, as they were reproachfully termed, still strove to hold their ground, and towards the close of the year 1815 they succeeded in obtaining, through the influence of some worthy proprietors, leave to reopen the chapels at Kingston and Port Morant on the Sabbath before dark, but not on any week-day, excepting at such times as divine service should be performed at the parish church. Even this was a great boon, notwithstanding the severe restrictions by which it was fettered, and the coloured people attached to the mission received it thankfully. The chapels were opened with much rejoicing; at Kingston, the ceremony was performed by the hands of the venerable lady who some six and twenty years before had interfered to preserve Dr. Coke from the personal violence offered him at the very commencement of his benevolent enterprise. (See p. 34.) Mrs. Smith accompanied the act with a fervent prayer, that the Father of Mercies would never more permit those gates to be closed against his worshippers by oppression or intolerance, and her petition was granted, the chapel having been ever afterwards exempt from magistral interference.

In 1813, the Baptist Missionary Society in England having been informed of the efforts made by coloured people of their own denomination for the improvement of the slaves, and of the considerable number who, in despite of imperfect teaching and great external discouragements, still adhered to the ministrations of Mr. Lisle's§ zealous though illiterate disciples, determined upon sending them a duly qualified instructor, which was accordingly done in the following year. Mr. Rowe, the gentleman selected for this arduous service, possessed both the piety and discretion necessary to enable him to act as a successful pioneer in a work in which his suc-

Lord's supper, a gentleman, so called, rode into the chapel, and urging his horse through the midst of the people to the very front of the pulpit, exclaimed, "Come, old Lisle, give my horse the sacrament." Mr. Lisle mildly replied, "No, sir; you are not fit yourself to receive it." On a similar occasion three young men went up to the communion table, and one of them took the consecrated bread, broke it, and gave it to his companion, who, with a horrid oath, swore it was good ship bread, and presented it to the third of the party, who refused to take it. The Rev. F. A. Cox, in recording the above incident, says, "It is not unworthy of remark, that the two former individuals were, in a few days, removed into the presence of that God, with whose institution they had so profanely trifled. One died in a state of raving madness, from brain fever; the other went out of the harbour in a boat, which was upset, and never seen after."—(Cox's *History of the Baptist Mission*, vol. ii., p. 15.)

cessors were destined to suffer and accomplish so much. His own labours were arrested by death in June, 1816; but the legal prosecutions which had impeded the progress of all missionary teaching having been meanwhile suspended, his place was soon filled, and Moravians, Baptists, and Wesleyans were allowed to pursue their course, comparatively unmolested, for several years.

Meanwhile the condition of the slaves was much what it had been before the abolition of the carrying trade. Their increased value, by reason of the cessation of external supplies, had effected little if any amelioration in their condition, and the evident policy of augmenting their number by births, had been counterbalanced by the constantly progressing decay of estates, by which resources being diminished, and hands lessened, the negroes were too generally becoming harder worked and worse fed.

From a dread of the effects which exposure of the practical working of the system might produce on the British public, the only enactment that ensured even partial evidence of natural increase or loss (see p. 25) was set aside at the very time when the question became of paramount importance. In 1815, Mr. Wilberforce and others having reasonable grounds for believing that negroes were surreptitiously brought into the British West Indies, introduced a bill into the House of Commons for the purpose of obtaining in every island the registering of the number, age, and condition of each slave; H.M. ministers consequently forwarded to the Jamaica Assembly a courteously worded but positive intimation, that a law for this purpose must be forthwith passed, leaving its details to be framed according to the feelings of the planters. The law being, after much violent declamation, reluctantly passed, affected, not the slaves only, but also guarded the free coloured inhabitants. The following circumstance may serve to illustrate the strong necessity that existed for such a measure. A free woman, named Ann Higgins, and her three children, had been seized by a man named Rutherford, and kept in a state of slavery, though they were removed two degrees at least from any servile stock. The mother was separated from her infants, transported to Honduras, and there sold as a slave, whence she succeeded in returning to Jamaica, bringing an action against her oppressor, and obtaining a verdict of £350 (currency),* but he nevertheless continued to detain her children in slavery. Nor was it until after nearly six years of obstinate litigation, through which she found friends to uphold her, that she (in 1813) obtained the restoration of her children.† A single case like this was alone sufficient to show the necessity of general and complete registration, unless indeed white men were to be suffered to commit the last outrages upon coloured men, even though confessedly as free as themselves, without the slightest prospect of punishment. The days of such unbroken tyranny were fast passing away; the free coloured race were steadily improving, under missionary influence, and though, as a class, orderly and well-conducted, they were no longer disposed to submit to the hopeless dead-level of inferiority in which they had heretofore been kept. In 1813 their firm, though temperate, remonstrances, presented in the form of a petition signed by 3,000 of their number, induced the House of Assembly to pass a bill, expressly for the

extension of their privileges, which rendered them for the first time capable of giving testimony against a white man, either in civil or criminal cases. This was a great point gained, and such the white inhabitants of Kingston evidently considered it, for they first petitioned the Assembly to throw it out, and failing in this, appealed to the privy council of the island to protect them from the measures of their representatives by refusing their assent, but with equal ill-success. The preamble of the bill was almost as ungracious as even the Kingston faction could have desired—it expressly precluded the free people of colour from ever holding civil or military rank, or in any shape interfering with the legislation of the island.

In the following year, the onerous enactments by which free coloured persons were exposed to the alternative of providing one or more white persons for the militia service, in proportion to the number of slaves they possessed, or of paying a very heavy annual fine; and the absolute restraint placed upon devisees of land, or bequests of personal property, were repealed. These were certainly concessions; but the spirit in which they were made was very evidently that of compulsion rather than of justice or liberality; they therefore were not likely to be received with any grateful feeling. The same remark applies, still more forcibly, to the slaves who, from the intemperate language of the planters themselves, especially since the Registration Act, were led to attribute every amelioration in their state to the direct interference of England, and with only too much cause, for even the most moderate portion of the abolitionist party—those who, like their great leader, Wilberforce, had hoped to see the social improvement, and eventually the emancipation, of the slaves gradually brought about by almost unfelt transitions—through the workings of just and holy principles in the minds of both master and bondman, found their hopes disappointed by the perverse and short-sighted conduct of the colonists, and especially of the House of Assembly, and could not but feel that England alone possessed the power of forcibly arresting, in her West Indian colonies, the ruin of the dominant, and the extermination of the servile class.

In 1823, Mr. Buxton moved a resolution in the House of Commons, declaring that "slavery was repugnant to the principles of the British constitution and of the Christian religion, and that it ought to be gradually abolished throughout the British dominions." One chief means which he proposed was the emancipation of all children of slave parents who should be born after a certain stated period. This motion was negatived; but Mr. Canning moved and carried a resolution expressive of the desire entertained by parliament for the adoption of effectual and decided measures, for the improvement of the condition of the slaves, and for their emancipation at the earliest period compatible with their own well-being, and with "a fair and equitable consideration of the interests of private persons." To this end, circular letters were addressed by the government to the different colonial authorities, recommending them to adopt various reforms—such as the abolition of the Sunday Markets, and the allowance to the negroes of equivalent time on other days; the admission of the testimony of slaves (*quantum valeat*) in

* The nominal difference between Jamaica currency and sterling was 40 per cent.; but this did not include the premium on bills, which varied. The average real difference

was greater, being about £60 per cent. In 1841 the currency was assimilated to that of the United Kingdom.

† Stephens' *Defence of the Registration Bill*, pp. 49, 50.

courts of justice, and the legalization and protection of their marriages. Reform in this last respect, as in so many others, was loudly called for in Jamaica, marriage being still far from general even among the white population, and among the slaves almost wholly unknown, except in four parishes, where the Wesleyan missionaries insisted on the union of those whom they received into their society being consecrated by the sanction of religion. In these parishes the number, in fifteen years, amounted to 3,467; in the whole of the remaining portion of the island there were only 109 marriages between 1808 and 1822.

Notwithstanding the reasonableness of the measures suggested by the British government, the West Indian legislatures, for the most part, viewed them with unqualified disapprobation. When H. M. orders in council were sent to the Jamaica House of Assembly by the governor for its consideration, it was proposed that they should be thrown over the "bar" of the House, and there burned by the hands of the common hangman; it was intimated that the Assembly had 18,000 bayonets at its command, a force which recent events had shown to be "most truly great, most truly powerful, and most truly formidable;"* and that with such means of defence it would never submit to be dictated to by H. M. government. Despite this insulting and absurd language, and very much more of the same description, the British ministers, aware of the deep-rooted prejudices of the planters, and of the unpopularity of the just and necessary reforms they were endeavouring to introduce, made every possible allowance for their unruly conduct, but continued steadily to urge that they should, as the lesser evil, do that for themselves which would otherwise be done for them.

With the view of producing an improvement in the general state of the Established Church, a bishop (Dr. Lipscomb) and some additional clergy were sent out. The records respecting this stormy period of ecclesiastical history in Jamaica are scanty and unsatisfactory, but there seems ground to believe that Dr. Lipscomb effected a very beneficial change in the general character of his clergy, and exerted himself diligently to repair the evils done by the appointment of notoriously unfit men during the nearly twenty years' administration of the Duke of Manchester, whose long rule was in itself a standing reproach to the home government. The difficulties with which the bishop had to contend must have been very heavy. Among the most popular of his subordinates was the Rev. Mr. Bridges, the author of the cleverly and carefully written *Annals of Jamaica*, cited in these pages; a man whose seditious disposition, joined to a ready and unscrupulous pen, wrought an incalculable amount of mischief. "Sectarians" of all denominations, but especially the Wesleyans, (who, in addition to the tacit reproach of leading exemplary lives as heads of families, added that of keeping no slaves, either predial or household,) were honoured with his undisguised aversion; and much public and yet more private persecution was traced to his direct instigation.

On one occasion, in consequence of an inflammatory morning discourse, an attack was made on the evening of the same day (the 25th of December, 1826), by a militia guard, composed exclusively of white persons, who, about midnight, came to the outside

of the mission-house, and knowing that Mr. Ratcliffe and his family were within, fired upon it in different directions. Several of the bullets perforated the walls and went through the opposite side; but seven of them were afterwards found in various parts of the house, exclusive of one which stuck fast in a wooden post not far from the defenceless inmates, who, by the providence of God, escaped uninjured. In the island the matter soon dropped, but the news reaching Great Britain, Dr. Lushington brought the whole case before the House of Commons, and some official correspondence passed between the colonial secretary and the Duke of Manchester, who made light of the whole business, and endeavoured to exculpate Mr. Bridges by pleading that the discourse in question had "been repeatedly preached before on the island, and that it was not written by Mr. Bridges, but by the archdeacon of Colchester."† His grace does not explain how the archdeacon came to express himself so bitterly with regard to the proceedings of the Wesleyan missionaries and their coloured congregations, but he states on the authority of the attorney-general, that after strict magisterial investigation no evidence could be found to induce the grand jury to find a bill: this was incorrect, for although the young men concerned in the riot surrendered themselves, the grand jury ignored the bill; and though the missionaries long expected that the attorney-general would prosecute *ex-officio*, he never did, and thus the affair ended.

The chief point urged by Mr. Bridges (or the archdeacon of Colchester) against the Wesleyan missionaries, was their receiving pecuniary oblations from the negroes, who cheerfully offered a liberal share of their hard earnings to aid in the propagation of religion. According to Mr. Bridges, the Wesleyans were convicted, "on their own reluctant testimony, of draining the almost incredible sum of at least £7,000 from the lower orders, the slaves principally." (Vol. ii., p. 496.) As the restrictions on devises of property to mulattoes had been removed, it is probable a large portion of the yearly contributions came from them; in any case it was absurd to urge against the missionaries the self-denying liberality of "the lower orders," as it was well known their salaries were fixed and paid from home, and, unlike the ministers of the establishment, were in no way affected by the contributions of their flocks. Nevertheless the Assembly took up this point very seriously, and in the new law for the admission of the evidence of slaves, enacted in reluctant compliance with the repeated injunctions of the home government, a clause was introduced forbidding, under heavy penalties, any dissenting missionary to receive offerings or contributions from slaves, or to hold prayer-meetings between sunset and sunrise. Notwithstanding the express direction issued to all governors to abstain from assenting to any act containing restrictions on the religious liberty of any class, the Duke of Manchester (who was soon afterwards recalled) gave his immediate assent, and thus its enactors secured at once the rejection of the bill, and an interval of legal persecution for the sectarians. Bitter indeed that persecution was; even before the time specified for the new law to come into operation had arrived, a Wesleyan minister, Mr. Grimsdall, for preaching between the hours of

Jamaica-born British subjects, named Leceane and Le-coffery, under pretence of their being aliens, but in reality because they had given offence by taking part in the endeavours made by the mulattoes for the removal of their

† Despatch, dated King's House, Jamaica, April, 1827.

‡ One of the most tyrannical acts committed by the duke of Manchester, was the deportation of two free

seven and eight o'clock, was confined in a loathsome den, only separated by a wooden partition, which did not reach half-way up to the roof, from a hospital or rather lazaretto, where a number of diseased negroes and others were confined; nor was he allowed so much as a straw pallet to lie upon. Three months after his release he was again apprehended, and charged with having married a couple of slaves without obtaining the consent of their owner, although Earl Bathurst, in an official despatch, had expressly declared no such consent was required. Mr. Grimdall was bound over to answer this charge at the next quarter-sessions; but before the time arrived his earthly career was ended, his healthy frame having been brought to the grave at the age of thirty-two, mainly by the cruelties to which he had been subjected. (Duncan's *Wesleyan Mission*, p. 206.)

The disallowance of their last attempt at slave legislation was the occasion or pretext for a fresh outbreak in the House of Assembly; and the observations of the new colonial secretary, Mr. Huskisson, respecting the intolerance evinced in it, drew forth a torrent of fierce invective. One member (Mr. Barrett) declared Mr. Huskisson's despatch to be neither "the work of a statesman, nor of an honest man, but that of an enemy to his country." Another (Mr. Stamp) talked freely of the "fraud and villany" of British ministers, and advised the House of Assembly to impeach any minister who should attempt to violate the constitution of the island.

Harangues like this re-echoed through the island, and were diligently circulated by a very discreditable publication called the *Courant*; in public and private society, separation from England, and junction with the United States, was the favourite theme. The morning deliberations of the slave-holding politicians of Jamaica were scarcely exceeded in violence and sedition by their after-dinner harangues. In England the reports of these proceedings were treated with the contempt they deserved, but the effect on the minds of the slaves was very different. They beheld with indignation the insults and injuries to which the missionaries were subjected for endeavouring to instruct and benefit them; they knew that they were sent by English people, and protected by English ministers; and the names of Clarkson, Wilberforce, Buxton, Sturge, Macaulay, and many others, were familiar to their ears, as persons who for their sakes had earned the bitter hatred of their oppressors. They heard repeatedly that the British public desired universal emancipation, and that the planters deprecated it as the greatest possible evil, and the exaggerated and contradictory statements put forth in the public journals, which many of them could now read, kept them in a constant state of excitement, which was repressed mainly by the exertions of the missionaries, who urged them most strenuously to wait with patience, and do nothing to disgrace their Christian calling. Meanwhile they were most cruelly treated by their masters, many of whom flogged them severely for no other crime, real or alleged, than attending prayer-meetings. In 1829, the same slave-law that had been previously sanctioned by the Duke of Manchester, and disallowed by H.M. ministers, was again (with very slight alterations) passed by the Assembly; and, notwithstanding its intolerant clauses regarding religion, obtained the assent of the new governor, the Earl of Belmore. Sir

civil disabilities. They obtained redress and pecuniary compensation from the British government, and by a decree in chancery procured the cessation of the sale of the

John (now Lord) Keane, while, after the recal of the duke, holding for a brief season the reins of office, had been solicited to consent to this same measure, but had refused and had interfered to protect the dissenting ministers, by warning their implacable foes, the magistrates of St. Ann's, that "they were not to be hunted like a parcel of dogs." Probably the hopes of the colonists in again passing the oft-rejected measure, was the total change in the administration which had recently occurred, and still more the favourable reception it might receive from the new sovereign, William IV., who, from the part he had been induced to take in the abolition question, and also from his having personally visited Jamaica, and received from the people a valuable star of brilliants, would, they probably considered, be induced to comply with their wish. Their expectations were completely disappointed, the act was again disallowed, and the governor was admonished to abide by his instructions for the future.

To add to the exasperation of the Assembly, they were compelled in this year to remove entirely the disabilities of the free coloured people, who, conscious that they would be supported by the mother country, in claiming their rights, had used their power and influence to obtain at length their full privileges as British subjects. The slave law of 1826 was again brought before the House, but rejected by a majority of eight. In the next year, 1831, Lord Goderich, the secretary of state for the colonies, intimated to the governor the necessity of reconsidering and adopting, the reforms suggested in 1823. The often-mooted bill was, in consequence, passed without the favourite sectarian clauses, and duly confirmed by an order of the king in council. But though, by its provisions, the slave obtained a hearing, and the privilege of legal protection in a court of law, yet, in effect, when his crime amounted to a resistance of authority on the part of his master, however cruel and tyrannical the attendant circumstances might have rendered it, these advantages were almost wholly nominal. As to surrendering the right of flogging females, or carrying out the various other ameliorations recommended, these innovations were rejected with unqualified disdain, as was also a bill brought in for the purpose of enabling slaves to demand manumission, on payment of a reasonable price.

The discussion of these measures, both in and out of the House, was attended with extreme excitement. The local papers were filled with the most inflammatory language, and the before-named *Courant*, edited by a man of low origin and immoral character, teemed with violence and sedition. Resistance to the authority of Great Britain, separation from such a saint-loving and slavery-hating nation, and annexation to the United States, were the favourite watchwords of the day. The *Courant* numbered among its contributors the Rev. Mr. Bridges, a writer who certainly could not be excused for flinging about fire-brands, under the plea of not understanding the danger of such a proceeding, since he had himself stated, very few years before, "that a spark of republicanism falling upon a combustible body of nearly three hundred thousand slaves, would produce a conflagration which a present example [San Domingo, or Hayti] had proved could never be extinguished." Yet any hazard was deemed preferable to the adoption of measures calculated to lead

Rev. Mr. Bridges' *Annals of Jamaica*, on account of the calumnious libels it contained respecting them.

* Bridges, vol. ii., p. 255.

the way to emancipation. Parochial meetings were held to determine upon the best manner of resisting the "unconstitutional interference" of the mother-country; the missionaries were stigmatised as the paid advocates of the anti-slavery party, and the negroes themselves were more cruelly used than ever, and taunted with the increased severity of their treatment, as being the only harvest they would ever reap from the exertions made on their behalf.

These proceedings, but especially the parochial meetings, inspired the negroes with the idea that their masters were not merely conspiring to defeat the ultimate designs of their friends in England, but also to disobey a general order for their emancipation, already issued by the home government.* The missionaries, towards the close of 1831, perceiving with alarm the deep root this opinion had taken in their minds, strove diligently to undeceive them, and to induce them to bear, with hope and patience, their galling servitude; but the intrigues of a very clever negro, named Sharpe, who took advantage of the suspicions aroused among his fellows by the impolitic conduct of the planters, and some peculiar acts of barbarity exercised at a critical moment, defeated their efforts, and the result was an insurrection in the north-western part of the island, which the undecided conduct of the militia, in the first instance, and their ruthless destruction of life, when all resistance was at an end, would have converted into a servile war, but for the judicious and temperate policy adopted by Sir Willoughby Cotton.

SLAVE INSURRECTION OF 1831-'2.†—The parishes of Hanover, Westmoreland, St. James, and Trelawney, where the slaves were very numerous, constituted the scene of the outbreak which commenced a few days before Christmas, at an estate called Salt Spring, in the neighbourhood of Montego Bay, under the following circumstances:—Mr. Grignon, the "planting attorney," while visiting the property, met a female slave with a piece of sugar-cane which he supposed to have been stolen from the cane-field. After flogging her himself on the spot, he took her back to the estate to have her flogged by the head driver, who, happening to be the woman's husband, positively refused obedience. The second driver was then called upon, but he being a brother or near relation of the alleged culprit, likewise refused, and these examples probably influenced others, for the attorney could not succeed in inducing any one to fulfil his hateful orders. Being aware of the reports current among the negroes in the neighbourhood, that their "free papers" were wrongfully kept back by the planters, he became alarmed at so extraordinary an instance of insubordination, as for men to refuse to strip and flog a defenceless woman; and rode off at once to Montego Bay. Constables were despatched to apprehend the offenders, but were glad to retreat speedily; and before a party of militia could reach Salt Spring, the persons chiefly implicated had made their escape. Tranquillity was

temporarily restored, but so great were the apprehensions generally entertained, that at the monthly muster of the Westmoreland militia, held the day before Christmas day, the black companies were disarmed, on some trivial pretence, which ill concealed the true reason, namely, fear, in the event of an outbreak, of their taking part with their enslaved brethren. Eventually their fire-arms were restored, and their services thankfully availed of for the suppression of the insurrection. Christmas day came, and passed without the anticipated disturbances. On the following morning, a new Baptist chapel was opened at Salter's Hill, near Montego Bay. The Rev. Mr. Knibb, during the service, adverted to the report he had heard was current among them, of their "free paper" having been sent out by the king, warned them that they had been cruelly deceived, and reprobated in the strongest terms the resolution which many of them had avowedly taken of not working any more except for wages.

This address occasioned great surprise and dissatisfaction; the excited audience declared that "Parson Knibb had no right to meddle with the free paper; that the white people had bribed Mr. Blyth (a Presbyterian missionary) to tell lies; and that Mr. Blyth had given Mr. Knibb half the money to keep the free paper from them."

After earnestly entreating the negroes to return submissively to their work at the expiration of their brief season of rest,‡ the clergy, of whom several had assembled to witness the consecration of the chapel, left the place. The effect of their arguments was probably instrumental in deterring many from taking part in the conspiracy then organizing, the existence of which the missionaries did not suspect, but believed that they had a feeling of general discontent and disaffection to deal with, rather than a deeply-laid plot, as it afterwards proved to be, originated by one firm and clear-headed man. Samuel Sharpe, the individual before referred to, had long been connected with the Baptist communion, and was much respected both by his own pastor (Mr. Burchell), and by the family to whom he belonged. The absence of Mr. Burchell in England removed a powerful restraint, and allowed the discussions of the period to have their full influence upon the mind of the slave, who suspected that the colonists, in their endeavours to rivet the chains of their victims, would, as the pages of the *Courant* daily advised, not scruple to proceed to the last extremities. He was not, of course, sufficiently well versed in the condition of foreign powers to understand the utter folly of the grandiloquent language held by the planters, but he could not mistake its seditious tendency, or misunderstand the open threats of a West Indian confederacy and union with the United States—which measures he well knew could have but the one end and aim of defeating the humane intentions of Great Britain. Resolving therefore to make, while time permitted, a desperate struggle for liberty, he spent

* The hope of emancipation by the power of England, had long been cherished by the negroes, and the celebrated M. G. Lewis, M.P., author of *The Monk*, &c., while visiting his estates, in 1817, was reported to be the bearer of the welcome gift. Mr. Lewis says, "'Good King George and good Mr. Wilberforce' are stated to have 'given me a paper' to set the negroes free [i.e. an order], but that the white people of Jamaica will not suffer me to show the paper, and I am now going home to say so.'" (*Journal of a West India Proprietor*, p. 232.)

† For the account of this important feature in the history of Jamaica, I am largely indebted to a manuscript account written by the Rev. Henry Bleby, a Wesleyan missionary, who was located at Lucea and Montego Bay during the insurrection, was an eye-witness of the scenes he has graphically described, and by the request of the Major-general of the district, examined several of the rebel leaders after their capture.

‡ Three days' holidays were given them by law at Christmas. This time, Sunday intervened, and some of the planters refused to allow more than two days, counting Sunday as the third, a proceeding which excited much dissatisfaction.

months in gradually imbuing the minds of his fellow-slaves with the idea that their "free papers" had already been sent out and were withheld by their masters; that their friends in England who had done so much for them, now expected them to do something for themselves; that the soldiers had received secret orders not to make war upon them; and, in short, that emancipation would be theirs if they would only be true to the cause, and with one consent stop work after Christmas, and refuse to recommence except for wages. In support of his assertions, he read to them passages from the local papers,* and bade them listen to the language uttered by their masters in their own hearing. Being gifted with much natural eloquence, and an excellent memory stored with Scripture, Sharpe roused the enthusiastic minds of his countrymen to a state of extreme excitement, and persuaded them to take on the Bible an oath of secrecy and fidelity. His scheme hinged on the power of passive resistance: doubtless, he said, many would be cruelly tortured, and even killed, but everybody must die some day, and at the worst, the planters could not destroy them all; besides which, the king of England would not suffer it. The opportunities offered by the Baptist prayer-meetings were used by Sharpe for the purpose of spreading his doctrines, and thus it happened that so many members of this denomination were concerned in the outbreak. Had his plan been strictly followed—no property destroyed, no life assailed, and readiness to work for reasonable wages been very generally manifested, the result might have been different, but the appeal of the missionaries had induced many even of his immediate followers to resolve to stand by their masters; and the Wesleyans, without exception, remained in the ranks of order and submission. Notwithstanding his intimate acquaintance with Holy Writ, and his evidently careful study of life and character, the conspirator had forgotten the emphatic warning, that the beginning of strife was like the letting out of water, and that negroes in the first moments of freedom, snatched by force, would be far beyond human control. And so it proved. On the evening of the 27th December, a few ungovernable spirits, excited, in the first instance, by the curtailment of their holidays, and infuriated with liquor, set fire to an estate named Konsington, belonging to a Mr. Morris; the example once given was speedily and extensively followed, and incendiary fires burst forth on property after property, until one of the fairest portions of the island became the scene of wide-spread desolation. It is impossible to describe the consternation that prevailed when the fires commenced; the horizon for miles shone with the red glare of the burning estates. None could tell the extent of the danger; and the strongest hearts turned sick at the thought of the horrors enacted so lately in San Domingo. The feelings of many an overseer at that awful hour must have been maddening, as pictures rose before him of bleeding figures, covered with deep welts and gashes; of beings in whom the dignity of manhood, the tenderness of womanhood, and the endearing weakness of

childhood, had been long crushed under the iron heel of oppression, now rising in the might of the savage ferocity, so repeatedly but so falsely attributed to them. Even at this hour, incited by revenge and by unchecked success, they displayed no blood-thirstiness that would bear comparison with the spirit displayed, by the conquering soldiers of any European power, in civilized warfare. Many disgusting atrocities were, it is true, attributed to them by the late Peter Borthwick, and other hired advocates of the West India interest, but these, almost without exception, were proved to be unfounded: it would be well if the conduct of the white militia could bear the same investigation.

To return to the narrative. The terrified inhabitants of Montego Bay crowded their wives and children on board the few ships, then in the harbour. The militia of the various parishes, who were "keeping guard" as usual during the Christmas holidays, now augmented with the addition of all capable of bearing arms, were assembled in the towns, or distributed on the estates skirting the shore, with the exception of the Western Interior regiment (under the command of Colonel Grignon, the planting attorney† already referred to), which occupied a central position at Belvidere estate, and the barracks of Shottlewood, near the borders of the three parishes, St. James, Hanover, and Westmoreland. On December 28th, Colonel Grignon, with about 150 men, thought proper to quit these stations, and take up a position at Old Montpelier, the property of Lord Seaford, where he was strengthened in the evening by the arrival of the 7th company of the St. James' regiment from Montego Bay. The insurgents, encouraged by Colonel Grignon's retreat, burnt the deserted barracks, and proceeded to attack Montpelier. They advanced in two parties, making a loud and discordant noise with shells, horns, &c. The 7th St. James' (coloured men) boldly withstood them, but, owing to the darkness of the night, could not for some time see where to direct their fire, except by the flashes of the insurgents' pieces, as they fired over the walls at the militia, from among the cane pieces. At length, a negro succeeded in setting fire to one of the "trash houses," (i.e. where the refuse of the cane is kept for fuel); the light, thus produced, enabled the militia to aim correctly, and a few volleys sufficed to put the undisciplined assailants to flight, one leader, calling himself Colonel Johnson, being killed; the other, Colonel Campbell, mortally wounded. All this time Colonel Grignon, being apparently little disposed to face his former victims, remained inactive, with his entire force, the men being drawn up in a hollow square. Immediately after the enemy had been driven off, the coloured company proposed that the united force should proceed further into the country, and attack the fugitives in their strongholds, but this proposition was negatived, and the colonel,‡ on the following morning, headed a hasty march to Montego Bay, without stopping even to carry away the body of one of his own people, who had been killed overnight. Nothing could have been more ill-advised than this second retreat;

* For instance, such quotations as the following:—"It must be alarming when *whispered* that our brethren the BRITISH SOLDIERS, who have been ostensibly stationed for our protection, who are liberally paid by us, the expense of whom forms the chief drain upon our exchequer, have received secret orders to remain neutral, or to act against us, in the event of disturbance!"—(Umbratus' letter, *Courant*, August 16th, 1831.)

† The term "planting attorney" was applied to the person who, by power of attorney, represented the proprietor.

‡ The conduct of this officer formed the subject of investigation by a Court of Inquiry, and the result of its proceedings being laid before the governor, his excellency directed a court-martial to be convened, but from some informality in the trial (probably not undesigned), it was suddenly brought to a close without result.

had the 200 or 300 insurgents, for there were no more then in the field, been pursued at once, thousands of well-disposed slaves would have flocked round his standard, and the whole affair would probably have been speedily ended. Two of the ringleaders, who afterwards acquired considerable notoriety under the names of Colonel Gardiner and Captain Dove, declared that they had determined to abandon the enterprise after the repulse at Montpelier, but were inspired with fresh hope on finding the "buck-rus" (white men) had run away.

The negroes soon learned the desertion of Montpelier; they immediately proceeded thither, burnt the buildings, took the corpse of the white man out of the coffin that had been made for it, threw it into the flames, and substituted that of their own comrade Johnson, whom they buried with the usual ceremonies.

By the desertion of Colonel Grignon's body, nearly the whole county of Cornwall, with the exception of a few isolated spots round the sea-coast, was left in the hands of the blacks, the militia being generally all stationed in, or round about the principal towns of the parishes to which they belonged, so that for about eight days, the roads were in the possession of the rebels, and hardly a white face was to be seen from Montego Bay to Savanna la Mar, and from Black River to Lucea. Thus the insurgents met with no obstacle, but went about from place to place destroying everything in the shape of a building, sparing only their own huts, and all places of worship, overpowering the well-disposed slaves, who in many cases attempted to prevent the destruction of their masters' properties, and compelling them, under pain of death, to join their ranks.

As soon as tidings of the insurrection arrived at the seat of government (Spanish Town), martial law was proclaimed throughout the island. General Sir Willoughby Cotton, the commander-in-chief, arrived at Montego Bay, January 1st, 1832, with a detachment of the 84th regiment, and on the following day the *Blanche* frigate arrived from the south side of the island, having on board 200 men of the 77th, and two companies of the 84th regiments. Sir Willoughby spent several days in making himself acquainted with the actual state of the case, and then rightly judging that kindness and leniency, would be more effectual in reclaiming the insurgents and inducing them to return to the estates, than the adoption of violence and excessive severity, he offered, in the king's name, a free pardon to all, who within a limited period, would return to their masters, except the principal leaders and incendiaries. This proclamation had the effect of undeceiving many of the negroes, who had been previously fully persuaded that H.M. troops had come down expressly to take part with them; and it would have been almost alone sufficient to quell the disturbance, but for the bad faith of the majority of the militia officers, whose ungovernable passions had been roused to fury by the destruction committed by the insurgents, and were probably additionally exasperated by the panic to which they had blindly yielded.

* By an order of Sir Willoughby Cotton, this person was afterwards tried by court-martial. He did not attempt to deny the act of which he was accused, but in defence, declared that he had acted for the best, and could not tell why, among several similar acts of his, this one should have been brought forward. His planter-judges, in the teeth of the clearest evidence, and even of his own admission, declared the charge not proved.

† Parl. Papers (Commons), August, 1832; p. 260.

Many, who returned to the estates to which they respectively belonged, in reliance upon the promise held out to them, were put to death nevertheless, and thus the proclamation came to be regarded simply as a snare, and numbers held out who would otherwise have gladly surrendered. In one instance, a subaltern officer of militia actually went on an estate about an hour after the general had left it, and without any pretence of trial, shot dead a man whom sir Willoughby had himself expressly pardoned.* Cases such as these induced the negroes to continue the struggle, but it was a hopeless one, for by the able plans of their commander, both the regular troops and militia were effectively employed, and soon reduced to subjection the undisciplined, and, for the most part, unarmed mob. The attack on Montpelier was the only approach to a battle that occurred during the whole insurrection, which sir Willoughby completely crushed in a few days; but several subsequent weeks were spent by the militia in hunting and taking vengeance upon the wretched fugitives. They marched from estate to estate, shooting every negro who attempted to escape; and such was the terror excited by their approach, that the very sight of one of them would be the signal for a general flight, while the Maroons were employed in their old service of murder and mutilation, the usual premium being offered for every pair of human ears, however acquired, without any proof being required of the guilt of their victims.

Some few of the militia officers conducted themselves with creditable humanity, but by so doing became extremely unpopular with their fellows. One of them (Mr. Beaumont) in replying from his place in the Assembly, to a taunt respecting the non-efficiency of the corps which he had commanded, declared that by its exertions 1,500 deluded slaves had been brought in, without one life being sacrificed; and held up in strong contrast to the deeds of other bodies, that his soldiers had "killed no old men, no old women, and no children."

At a very early period, many persons, suspected of being concerned in the disturbances, were apprehended, tried by court-martial, and executed immediately. The mode of destruction was soon changed from shooting to hanging. At Montego Bay, and the other principal towns, the amount of life thus sacrificed must have been terrific; nor must it be forgotten, that for each slave put to death the master was liberally remunerated by the parish; but for this arrangement the planters might not have been disposed to witness, without remonstrance, the waste of so much property. At Montego Bay alone, above a hundred executions took place; a court-martial sat there daily for some considerable time, and it often happened that men were tried, sentenced, and hanged, all in one hour and a-half.† No return was ever made of the number thus destroyed; the Assembly absolutely refused to answer the questions put to it on this subject by H. M. ministers;‡ but some idea of the extent may be formed by the fact, that one of the local papers gravely announced, after six weeks incessant slaughter, that "the exe-

‡ The late Sir Fowell Buxton moved in the House of Commons for a return of the number of lives lost on either side, the sentences passed by the respective courts, and the punishments actually inflicted, with various other information which it was highly desirable to obtain. Returns to this effect were demanded through the governor, Lord Mulgrave, but obstinately resisted by the planters, who might well shrink from offering an exposition of their sanguinary excesses.

cutions during the week have been considerably diminished, being in number only fourteen," and this related exclusively to the town of Montego Bay. The effect of such continuous carnage on the public mind, was to render it utterly callous to the very sights which were intended, it is to be hoped, to serve as a warning. "I have seen," says Mr. Bleby, "three men led out, tied up to the gallows, and launched into eternity, in the public market-place; and the people around buying and selling, and scarcely turning round their heads to look at the awful scene that was passing in their presence, so entirely had they become familiarized with the slaughter of their fellow-men. The gallows erected in the public square, in the centre of the town, was rarely without occupants. Generally four, seldom less than three, were hung at once." The bodies remained stiffening in the breeze, till the court-martial sent other victims to the hands of the executioner, a savage brutal fellow, who would then ascend the ladder which rested against the fatal beam, and with his knife cut the ropes, and let the corpses fall heavily to the ground. The poor creatures, newly arrived, were then suspended in the vacant places, and in turn, removed to make room for others; the accumulating heap remaining at the gallows-foot, until the workhouse negroes came in the evening, carted it away as if it had been so much dung, and flung it into a pit dug for the purpose, a little way out of the town. In receiving any sepulture at all, these unfortunates were, however, better treated than their comrades who had fallen in the open field, for they were left to rot where they fell; and years afterwards, the bones of scores of human beings, whose flesh had been devoured by carrion, remained to taint the heated air, and bear loathsome testimony to the barbarities of war.—(Parl. Papers, August, 1832; p. 261.)

It need hardly be stated, that no very conclusive evidence was required to secure the conviction of the accused. Mr. Bleby gives the following account of one of the many trials at which he was present:—

"A man named George Spence was charged with rebellion and rebellious conspiracy. All that was proved against him was, that he was present in a crowd of persons when the buildings of an estate were burning. Much of the evidence was elicited from himself, in answer to inquiries put by the president of the court; but nothing came out to show that he had borne arms or taken any part with the insurgents. Leading questions were proposed, the design of which was to criminate Mr. Burchell, the Baptist missionary, then on his way from England. 'Burchell told you you were to be free at Christmas, didn't he?' 'Didn't Burchell say that you must fight for freedom?' In answer to these and similar questions, the poor man said he didn't know Mr. Burchell; he was not a Baptist, but belonged to Mr. Watson's church. The manifest impropriety of such proceedings induced an officer present, though not a member of the court, to interfere and protest against them. However, he was silenced, the court cleared, and the prisoner led out to be shot. That the formality of passing sentence had been omitted, I am not prepared to say, but I heard the man inquire as he came out, 'What are you going to do with me?' The marshal replied, with a bitter sneer, 'O you never mind; you will see presently what will be done with you.' He was marched direct to the market-place, and tied between the posts of the gallows. Observing the soldiers load their muskets, he seemed to apprehend the truth, and in great alarm repeated his former inquiry. No reply was made, but the officer, commanding the detachment, took the jacket the man had worn, and threw it over his head, tying the sleeves loosely round the neck,

and stepping aside, gave the fatal order, 'Make ready—present—fire!' The report echoed amongst the cliffs for a second or two, and the poor fellow dropped a bloody corpse. Several negroes had gathered round, and were looking on the body, when a white man addressed them; 'Come here,' he said, 'and put your finger in this hole,' pointing to the spot where a bullet had entered the skull; 'you want free, do you? this is the way we'll give you free, every devil of you.'

The above is a specimen of a formal trial; but many were put to death by the decree of what was called a drum-head court-martial, and some without any pretence of official investigation whatever. In all cases it was the veriest mockery of justice, to allow men, many of whom had been recently reduced to the verge of ruin, to sit in judgment upon those, by whom they had been thus injured; under such circumstances, it was not to be supposed that they would be capable of impartially weighing the merits of the cases brought before them.

A planter would come from his estate, driven thence by the insurgents, gnashing his teeth, and literally foaming with rage against the negroes; and a few hours after, that same person might be seen presiding at a court-martial, and sending those by whom he had been, or by whom he believed himself to have been aggrieved, to die by the bullet or the halter.

Where life was spared, other severe punishments were inflicted. The floggings extended in some instances to 500 lashes, and occasionally terminated fatally, which is not to be wondered at, since the cat having nine thongs, the number of lashes amounted in effect to 4,500. From twenty to thirty persons would be successively tied up to the gallows-foot, and after receiving a certain number of lashes, were cast aside to lie bleeding and fainting about the streets, until they were sufficiently recovered to crawl to a place of shelter.—(Parl. Papers, Aug., 1832; p. 259.)

On the 8th of February, the governor, Lord Belmore, repealed martial-law, and offered pardon to all the negroes who still held out, having neither surrendered nor been captured, on condition of their giving themselves up within 10 days, with the exception only of the principal ringleaders. Great popular outcry was raised at these measures; and in fact, though intended to stop the slaughter which had been so long suffered to continue, they only partially checked it. Courts-martial were superseded by slave-courts; and although these included trial by jury, yet the alleged criminals were little benefited by the change, since both judges and jurors were generally planters. The prisons were still crowded with captives charged with having taken part in the insurrection, and as if enough blood had not been shed already, a general gaol delivery took place, after the most approved Jamaica fashion, and nearly the whole were sent to the different estates to which they belonged, to be executed there, as a means of striking terror into the breasts of their comrades. "One day," says Mr. Bleby, "I saw nineteen negroes led out at once to be hanged; these were followed by fourteen the day after, and the day after that by twenty-two;" and this system was being carried out in more than one parish at a time. The attention of the governor being at length called to these proceedings, he directed that no more executions should take place without his sanction; but Gardiner, or Colonel Gardiner, as he was termed, a noted leader of the insurgents, was hanged upon the estate to which he belonged, in defiance of this prohibition.

The number of lives^{*} lost during the insurrection cannot now be exactly ascertained, the Assembly having, as before stated, refused to make any return on the subject. Of the white population probably not twelve persons perished; of the negroes there is reason to believe at least 1,500 must have been sacrificed. The destruction of property was unquestionably very large, although the committee of the House of Assembly much exaggerated the facts, in stating it at £1,111,628 8s. 9d. currency, equal to £666,977 1s. 3d. sterling. This included the loss occasioned by the destruction of buildings, grass, and cane-fields, robbery and plunder of every description, damage done to the existing and succeeding crops, loss of the labour of slaves, and the marketable value of the vast amount of life wantonly destroyed during and after the disturbances. To this was to be added the sum of £165,000, being the military expense incurred during the period of martial law, and another sum, not specified, incurred afterwards for the pay and rations of a portion of the Maroons, as well as detachments of militia employed in hunting fugitive slaves. Upwards of 160 properties, of various kinds, were desolated by the hands of the incendiaries, leaving thousands of people homeless; and the militia following the example of the negroes, without any politic reason to plead in excuse, utterly destroyed the huts upon many properties, under the pretence of retaliation; but the loss ultimately fell upon the proprietors, at whose expense they were necessarily rebuilt, before the disaffected could be brought to their usual employments. The mischief done in this respect would have been much greater, but for the interposition of Sir W. Cotton, who was much blamed for this, as for other judicious measures.

The leaders of the insurrection were all captured at an early period. Sharpe, as before stated, acknowledged himself to have been the originator of the conspiracy. He admitted that as an individual he had had no cause to complain of the treatment he had received. His master, Samuel Sharpe, Esq., and the family, had always been very kind to him; but he thought white people had no more right to keep black people in slavery, than black people could have to make white people slaves; and, for his part, he would rather die than live in slavery. He expressed sorrow that he should have been the cause of so great destruction of life and property, but declared that it had formed no part of his plan of passive resistance. Mr. Bleby (who, with two other ministers, was requested to procure from him evidence respecting the origin of the rebellion) endeavoured to convince him that he had sinned in violently asserting his claim to freedom, and at length drew from him the admission, "I have done wrong in that, but I cast myself upon the atonement." After this, the missionaries were prohibited by the magistrates from visiting the prisoners. Some weeks elapsed before Sharpe's execution, on the 23rd of May, 1832. Long confinement in a close and noisome dungeon had not impaired his courage; he walked to the scaffold with a calm, firm bearing, and, unappalled by the near approach of an ignominious death, or by the number of spectators, who, in consequence of the notoriety he had acquired, had assembled to witness it; he addressed them with a clear, unfaltering voice, acknowledged that he had violently trans-

gressed the laws of his country, vindicated the missionaries from any share whatever in the insurrection, and exhorted all his hearers to practise the christian duties enjoined by their ministers. He declared emphatically, "I depend for salvation upon the Redeemer who shed his blood upon Calvary for sinners." In a few moments the executioner had done his work, and a man, endowed with capacities far above mediocrity, and whose ardent thirst for liberty for himself and his fellows, had alone led him into the grievous but too common error of seeking right ends by wrong means, had been cut off from the earth, as if too vile to live.

Of the other conspirators, none equalled him in ability; but their behaviour, and, indeed, the whole conduct of the insurgents, from first to last, proved beyond dispute that their object in the struggle was not blood, plunder, or revenge in any shape, but solely freedom, and this they firmly believed to have been conceded by the Imperial Parliament, and wrongfully withheld by the colonists. No single instance of violence was committed by them until after the executions by martial law had commenced. Then they perpetrated the literally few barbarities of which they were really guilty. On the 5th of April, 1832, Mr. Jones, a member of the "Rebellion Committee," stated in the House of Assembly, that "Mrs. Holmes and Mrs. Pearce were the only persons whose husbands were murdered during the rebellion." Mr. Pearce, who belonged to the Hanover regiment of militia, having imprudently ventured into the interior alone, and in his military dress, fell into the hands of a small party of negroes, who slew him with their cutlasses, and left his mangled body lying in the road, where it was soon afterwards found by a body of militia. The principals in this horrid transaction were afterwards captured and executed at Montego Bay, with the bloody clothes of their victims tied about their necks, and the head of their leader was cut off and carried to Welcome Estate, to which he had belonged, to be set on a pole as an object of terror to others. The most cruel act perpetrated by the insurgents was the murder of Mr. Holmes, in the presence of his wife. Two other white men were reported to have been killed by small bodies of negroes, into whose hands they fell. In reference to violence offered to females, concerning which so many vague charges were made, only one solitary case was ever authenticated.

Fifty thousand negroes were probably more or less concerned in the insurrection, and out of these perhaps twenty were accessory to acts of personal violence. When it is considered how many defenceless families of men, women, and children, were completely in their power, and that it is the very nature of war to give a free rein to every evil passion, that moreover a large part of these negroes were totally devoid of any religious instruction, that they had groaned and writhed under the lash, and been for years subjected to the most degrading and grinding oppression,—the wonder is, and ever must be, not the excesses of the few, but the moderation of the many.

The cold-blooded murders committed by the militia were known to be numerous, and the assembly when called together at the close of the "Reign of Terror," hastened to pass a bill of indemnity, to prevent inquiry into the doings of a period in which sooner than remain in slavery.—(Parl. Papers, Commons, 1832.)

† The planters and overseers were scarcely in any in-

* The negroes who were executed, almost without exception, manifested remarkable firmness; many declared that if they had twenty lives they would sacrifice them all,

all law, and even Christianity itself, was considered to be abrogated.*

The opportunity afforded by the insurrection was availed of for the persecution of many slaves, whose religious character and habits had rendered them objects of ill will. One of them, Henry Williams, whose name had previously been brought before the notice of the British public in connexion with the unjust treatment he had received at the instigation of the Rev. Mr. Bridges, the rector of St. Ann's, had long been a marked man with the anti-sectarian, or rather anti-religion party.

Although there had been no disturbance, and no evidence of insubordination in the parish of St. Ann's, Henry Williams was taken from the estate which he was superintending during the absence of the white people on militia duty, and questioned concerning what the missionaries had preached about, &c. His answers were deemed unsatisfactory and impertinent, and he was sentenced to receive some hundred lashes. Part of the punishment only was inflicted, because a medical man declared that if it were continued, he would die under it. Another case was that of a negro at Falmouth, named Lamont, who was also flogged, not for any share, real or alleged, in the insurrection, but simply for being a Methodist. Three hundred strokes, i.e. 2,700 lashes, were inflicted upon him, and he was sent to the workhouse for life; where, separated from his wife and children, degraded and oppressed, he soon sunk under the effects of the torture of body and mind to which he had been so causelessly subjected.

James Malcolm, a class-leader among the Methodists, had rendered himself extremely obnoxious to the overseer of the property to which he belonged, by having more than once stood in the way of his guilty pleasures, by persuading female slaves to marry and live consistently with their Christian profession, for whom the overseer had other and very different views. Such offences were too great to be forgiven, and although the unfortunate slave was actually employed during the rebellion, as a pioneer to the militia, and on the restoration of tranquillity sent back to his master's estate, yet through the malice of the overseer he was forwarded to take his trial as a rebel, and would have been hung but for the strenuous exertions of the missionaries, Messrs. Murray and Bleby, who, by causing the intended victim to be subpoenaed on an approaching trial, procured his removal by writ of habeas corpus to Montego Bay, trusting that during the delay thus occasioned something might transpire to save his life. The governor's prohibition of further executions, without his own warrant, had the desired effect. The man was removed to his own parish, tried by a slave-court, and condemned to death; but the sentence, notwithstanding the opposition of the overseer, was commuted to imprisonment and hard labour for life. The prisoner's gentle and inoffensive conduct during his confinement, pleaded for him: he obtained a pardon from the benevolent Earl of Mulgrave, and was restored to his wife and family. But the irons with which he had been loaded, lamed him for life, and the horrible ordeal of a Jamaica workhouse had

stance, however tyrannical their previous conduct, subjected to personal violence, or even insult.

* The attorney-general gave it as his opinion that "martial law abrogated all law," and a colonel of militia gravely asserted, that "martial law abrogated Christianity."

broken down his frame, as it had done many an one before, and did many an one after; so that he lingered only a few months, spent in communion with the church of which he had been a consistent member, and then his spirit passed away, rejoicing in the dawn of the freedom which his children and his countrymen were soon to inherit.

As an instance of the minor oppressions daily committed by overseers in compliance with the dictates of that fiendish spirit of tyrannous cruelty which, in all ages, and among all races, is found, like every other fearful propensity, to grow the faster the more it is indulged, I cite the following passage, from the Journal of the Rev. Mr. Bleby, not as by any means exhibiting an extraordinarily heinous case, but simply as an illustration of the every-day workings of the slave system, in its ameliorated form, as it prevailed in the West Indies in the year 1832, at a period when the planters impudently asserted, that if compelled to change their state with that of a slave or a free British labourer, they would choose the lot of the former:—

"One day soon after the rebellion, while I was residing at Montego Bay, a gang of negroes were repairing the road opposite the house in which I lived. I observed a decent-looking man, with an iron collar fastened about his neck, fainting by the road-side, apparently from exhaustion and loss of blood, with which his shirt and pantaloons were saturated. I called the driver, and requested that he would allow the sufferer to come over to my house, and take something to revive him, as he appeared so much exhausted. When he was brought over, I was surprised to find that he was one of our own members, who had distinguished himself in the late disturbances by his faithfulness and courage in defence of his master's property. On inquiring what had brought him into his present circumstances, he stated, that on account of the cruelties of the overseer, a number of the negroes on the estate had fled into the woods. To revenge this, the overseer had taken away or spoiled everything he could find belonging to the fugitives, and, without any provocation, had entered his house, and destroyed the little property he possessed, whilst he was at work as usual. On learning this, he went to inquire why he had been so dealt with; but the overseer answered him only by calling him a rebel and a sectarian; and then beat him severely about the face with his fists, to which statement the poor man's bruised and swollen features bore ample testimony. Not satisfied with this, the overseer sent him to 'the cage' [prison], and lodged a complaint against him before a magistrate, by whom he was dispatched to the workhouse, and sentenced to receive three hundred lashes. When the punishment had been inflicted, a collar and chain were fastened round the sufferer's neck, and he was turned out, all mangled and faint, with his clothes soaked in blood, to labour in the streets."

Immediately after the abolition of martial law, a committee (whose proceedings have been already referred to) was appointed by the House of Assembly to examine into the origin and consequences of the insurrection. Under the weak government of the Earl of Belmore, the popular faction carried matters with a high hand; and the sole design of this movement was to obtain aid from Great Britain, and shelter themselves from deserved censure by casting it abundantly where it was least merited. The men chosen for the investigation† were, with only two excep-

† A singular fatality attended the thirteen men who formed that committee, for, although mostly in the prime of manhood, before as many years had elapsed, they had all, except one, passed from the earth. The chairman (L. Lynch) secretly left the island a few months after, a defaulter to a large amount, with regard to property en-

tions, known to belong to the anti-sectarian party; one of those two, Mr. Beaumont, openly accused the chairman and others, of having "garbled the evidence taken before them." They refused to listen to the statements of Samuel Sharpe and other ring-leaders, obtained through the intervention of Messrs. Murray, Knibb, and Bleby, at the express desire of Mr. Miller, the commanding officer of the Montego Bay district, and suppressed all testimony as to how, when, and where the disturbances commenced; and this from the evident fear of criminalizing themselves, as they assuredly would have done had they permitted the truth to be told.

The result of their investigations may be readily conceived. They declared, "the primary and most powerful cause" of the insurrection to have been "the excitement created in the minds of our slaves by the unceasing and unconstitutional interference of H. M. ministers with our social legislature, in regard to the passing of laws for their government; with the intemperate expressions of the present ministers, as well as other individuals in the Commons House of Parliament of Great Britain, coupled with the false and wicked reports of the anti-slavery society." Another alleged cause was the teaching of the missionaries—Baptist, Wesleyan, and Moravian—but especially the former, and the mischiefs attendant on their system of distinguishing certain members of their congregations as leaders or elders; and, lastly, the committee introduced a brief mention of the main source of so much misery, by noticing "the public discussions of the free inhabitants here, consequent upon the continued suggestions made by the king's ministers regarding further measures of amelioration, to be introduced into the slave-code of this island."

The committee commented on the ill effect produced by the publicity given by the press to speeches made in the House of Commons, but they passed over in silence the direct lessons of incendiarism given in the pages of the *Courant* and *Courier*, which teemed with abuse against England, and declared that unless measures were adopted to put a stop to "the encroachments of such statesmen as now rule the destinies of the empire," a revolution would take place, which "would reach across the Atlantic;" and fearful pictures were drawn of "blazing corn-fields" and "burning houses" * * * "Neither earth nor hell has power to sustain the colony another year; but what St. Domingo is, Jamaica too soon must be."† Language like this was not likely to pass unnoticed by the negroes, any more than the measures of sedition and rebellion against constituted authorities, constantly urged in these papers, but the Assembly thought proper to ignore all this, and these journals in return lavished praise on the local authorities very much in proportion to the blame they deserved, and inveighed against the "sectarians" more bitterly than ever. Had there been a title of evidence to prove that the teaching and preaching of the missionaries, referred to in the report, had tended to cause the rebellion, it is certain the authorities, whether civil or military, would have

spared no pains to use it as a means of bringing them to condign punishment. Prosecutions were instituted against Messrs. Burchell, Knibb, and Gardner, Baptist missionaries. The bill against Mr. Burchell was ignored by the grand jury, but he narrowly escaped assassination at the hands of a white mob: the prosecution against Mr. Knibb was dropped for want of evidence to sustain it; and Mr. Gardner was honourably acquitted; Mr. Box, a Wesleyan minister, was apprehended and his papers examined, but nothing was alleged against him, and he was discharged.

The efforts of the Assembly to disguise from the Imperial Government the true causes of the insurrection, and vilify the missionaries, were all in vain, as may be judged from the following extracts from an admirable despatch written by the Secretary of State for the Colonies, Viscount Goderich (now Earl of Ripon).

"After exhortations repeated by H.M. Government for more than eight successive years, without effect; after such public meetings as I have mentioned in every part of the island; after the circulation of the resolutions and public journals already noticed; after the convention of a body of delegates at the capital; and after secret debates in the House of Assembly, followed by the rejection of the measures proposed there for the benefit of the slaves, it must have become, to every reflecting man, sufficiently evident, that the peace of the island was placed in extreme jeopardy, and that the slaves could scarcely escape the infection of these opinions, which they appear to have adopted. How fraught with danger to the public safety was the prevalence of such opinions among a people so ignorant, and so easily excited, it were superfluous to remark. Induced as they had been to suppose that the royal authority was opposed in their favour to that of their owners; and that designs were entertained by the king's government, which the colonial magistracy and proprietors intended to counteract by force; the sense of supposed injustice, combining with a plausible expectation of impunity in resisting it, could scarcely fail to urge them to acts of open rebellion."

After adverting to the necessity of suppressing the manifestation of "any intemperate or hostile spirit" towards the missionaries, his lordship thus proceeds to comment on the charge made against them, as fomenters of disaffection.

"I must distinctly avow my conviction, that the improbability of the charge is so extreme, that nothing short of the most irresistible evidence could induce a belief of it. The missionaries who engage in the office of converting the slaves in our colonies cannot, in charity or in justice, be supposed to be actuated by any views of secular ambition, or personal advantage. They devote themselves to an obscure, and arduous, and ill-requited service. They are well apprised, that distrust and jealousy will attend them, and that the path they have chosen leads neither to wealth nor reputation. If in their case, as in that of other men, motives less exclusively sacred than those which are avowed, may exercise some influence on their minds, it were irrational either to feel surprise, or to cherish suspicion on that account. The great ruling motive must, in general, be that which is professed, since, in general, there is no other advantage to be obtained, than the consciousness of having contributed to the diffusion of Christianity

trusted to him as a master in chancery, and finished his career by committing suicide. Another, during the following year, was mortally wounded in a duel by a third member of the committee. A fourth perished from the result of a family dispute, occasioned by the refusal of the son to sit down at table with his father's concubine. The father, in a fit of passion, struck the son upon the mouth, and slightly wounded his hand against the teeth; the

wound inflamed, and finally terminated in gangrene and death. I do not record, without reluctance, details such as these, but I dare not withhold facts which I believe to be absolutely necessary to show the fearful depths of depravity in which Jamaica was fast being engulfed, and from which England saved her by the noble sacrifice which has been so little appreciated.

* *Courant*, 15th Aug., 1831. † *Idem*, 30th Sept., 1831.

throughout the world. To suppose men who act habitually on such a principle, either so insensible to the restraints of conscience, or so perverted in their estimate of right and wrong, as to foment insurrection and civil war, for the subversion of slavery; or to believe them insensible to the extreme danger and suffering, in which by engaging in such an enterprise they must involve those, for whose benefit the contest was to be undertaken, would argue rather a heated and prejudiced mind, than a discerning judgment, and a correct acquaintance with human character. When, therefore, I consider that no motive can be rationally assigned, which should have induced the missionaries to embark in so guilty and desperate an undertaking, I cannot but earnestly trust, that the trial of any one of their number, who may be charged with a participation in this rebellion, may have been postponed, until comparative tranquillity should have succeeded to the first panic; and that such trials may have been conducted, not before a military tribunal, but with all the regular forms of law. Should any such missionary have been convicted, and be awaiting the execution of his sentence, on the arrival of this despatch, your lordship will not permit that sentence to be carried into effect, till his majesty's pleasure can be known.***

When Lord Goderich penned these temperate and judicious admonitions, he probably little anticipated the excesses to which the "heated and prejudiced minds" of the planters were then being impelled. The *Courant*, weary of repeating such verbal abuse, as styling them "vagabondizing reverends," "consummate hypocrites," and "preaching miscreants," proceeded to declare that "if evidence could be elicited to prove their guilt, it would be a grateful exhibition to the island to see a dozen of them gibbeted." (*Courant*, January 11, 1831.) To obtain the desired evidence, most unwarrantable measures were resorted to, including shameless bribery and perjury. Torture was used to induce the slaves to criminate the missionaries: one man was flogged, another was smoked with fire and brimstone in the gaol; a woman had the gallows shown her, and was told she would be hung there. William Plummer, an aged free man, a servant of the Rev. Mr. Burchell, when confined in Montego Bay gaol, on suspicion of being connected with the rebellion, had "a pot of brimstone and other materials placed in his cell, and set on fire, and those who brought it said they did it to give him a taste of hell before he went there." It was done "to extort confession." [*Evidence on Oath before the House of Lords Committee*, 18th July, 1832; pp. 776-7.] The property of Mr. Box (who was arrested merely on suspicion, and confined for upwards of a week in a loathsome cell, surrounded by negroes suffering with small-pox) was ransacked to find papers which might be made to bear testimony against him; and his trunks having been broken open by a magistrate named Dyer, the editor of the *Cornwall Courier*, extracts from the private journal found therein were published in its pages. When dismissed from prison, no specific charge having been brought against him, Mr. Box demanded that his property should be restored, and, at length, succeeded in obtaining all, except his journal; eventually, Lord Belmore having been superseded in the governorship by a nobleman of very different character, Mr. Dyer, alarmed at the probability of being prosecuted for having, in his magisterial capacity, broken open, rifled, withheld, and used for his own purposes, the property of an innocent person, thought it

prudent to resign the office which he had so greatly abused. The Moravians did not escape persecution—

"The case of Mr. Pfeiffer furnishes a remarkable instance of the extraordinary measures resorted to, to procure evidence against missionaries; while it shows the barbarity and villany of the men, who, as militia officers, rioted in the plenitude of almost irresponsible power, and controlled the lives and destinies of their fellow-beings. Mr. Pfeiffer was arrested in his own house, by some thirty or forty militia men and their officers, and dragged away from home, without being allowed time to get a change of apparel, or take leave of his wife and family. The first thing after that was to remove him, on some pretence, to another parish, where he could not, without difficulty, obtain the testimony of those who knew him and attended his ministry, for his defence. His wife had found means to send a small bundle after him, containing a change of apparel, which he was allowed to receive. Arrived at Mandeville, in the parish of Manchester, he was imprisoned in the organ-loft of the church, with four soldiers to watch over him, but forbidden to remove, or to speak a word with the sentinels. He lay down, and had begun to sleep, when he was aroused by the demand, 'Prisoner, give me your bundle.' The bundle was examined and returned; but no sooner had he laid down and began to sleep, than he was aroused with the demand, 'Prisoner, shew me your bundle.' This was repeated so often, as to make it evident that it was only done to tantalize him, and prevent his getting the rest which his exhausted frame required. At length, one of them, making the observation that such a rascal did not want a pillow, the contents of his bundle were scattered about where he dared not move to pick them up. By the kindness of one of the sentinels, he afterwards obtained his property. For twenty-four hours they kept him without food or water; and on his remonstrating against such barbarity, food was tendered to him, but it had been wantonly thrown in the dirt, and covered with grit and filth, so that he could not eat more than a small portion of it. He had to complain a second time of having been kept without food or water for a whole day, when it was excused as an oversight by the very officer, who was looking after him every half-hour of the day. One evening, after having been kept several days in entire ignorance of the charges that were to be alleged against him, he was informed by the deputy-judge-advocate, that his trial would take place the following day, 'for rebellion and rebellious conspiracy.' He inquired what he would be permitted to do in his defence; but was distinctly informed that he might obtain whatever documents he liked, to lay before the court-martial, but he could not be allowed to bring any witnesses. This, of course, was depriving him of all opportunity of defending himself; for the ruffians had taken care to remove him away far from those, who might be induced to give testimonials in his behalf. However, it providentially occurred that a gentleman obtained an interview with Mr. Pfeiffer, and informed him that he had the right of producing witnesses; and that what had been told him was only a part of the diabolical plot laid for his destruction; at the same time, tendering his services to summon whatever friends Mr. Pfeiffer might wish to be called. This was only a few hours before the trial was to commence; but so well was the time improved, that a respectable array of witnesses was prepared for Mr. Pfeiffer's defence, by the time the trial commenced. For nine days the court-martial sat on the trial of that persecuted missionary; and such was the weight of testimony brought to rebut the charges against him, that they were compelled to bring him in 'not guilty,' although two of the officers in the court clamoured for his death. Of the witnesses brought to criminate Mr. Pfeiffer, two women afterwards offered to make affidavit that they were bribed to swear away his life. Their freedom was promised, with a donation in money, and a certain quantity of land, if they would swear that he had preached freedom to them. The barbarities inflicted upon this unoffending man by the wretches into whose hands he had fallen, after all, nearly proved fatal to him. The sufferings, privations, and cruel anxieties to which he was sub-

* Despatch dated Downing Street, 1st of March, 1832; given in full in appendix to House of Lords' Committee on Slavery, August, 1832; part ii., p. 1321.

jected, ended in a serious illness, which placed his life in jeopardy for six months.”—(Mr. Bleby’s manuscript.)

It was indeed quite necessary that something tangible should, if possible, be proved against the sectarians, as nothing else could palliate even, much less justify, the open persecution to which, both as societies and as individuals, they had been subjected. On the 26th of January, a public meeting was held at St. Ann’s Bay, for the permanent establishment of a COLONIAL CHURCH UNION, the avowed object being to expel all sectarian preachers from the island, and oppose the Anti-Slavery Society in every possible manner. Happily for the good name of the Colonial Church, her clergy, with only two exceptions, one of whom was the Rev. Mr. Bridges, the instigator of the plot, and the other an unhappy man who fell in a duel, were never even suspected of having had any concern in a conspiracy, the results of which were equally mischievous and disgraceful.

The favourite motto of the Unionists was—“Destroy their nests, and the rooks will fly away.” The pages of the *Courant* and *Courier* were crowded with similar advice; and the direct consequence was, the destruction of 31 Baptist, and 6 Wesleyan chapels, and other mission property, to the value of £30,000.

The Baptist chapel at Falmouth was the first demolished, on the 7th of February, after which the Methodist chapel, a handsome building, which had just been put in complete repair, shared the same fate, at the hands of some of the local magistrates and the militia of St. Ann’s western regiment, aided by a mob composed of troopers from the Trelawney regiment, sailors from the ships in the harbour under the direction of their captains, and other white inhabitants of the town of Falmouth. At St. Ann’s the triumph of the Unionists was complete, so far as the destruction of property was concerned, the chapels at the Bay and at Ora Cabessa being pulled down, and those at Ocho Rios and Ebenezer burnt to the ground; but, to the great disappointment of the incendiaries, the Wesleyan missionaries, Messrs. Whitehouse and Wood, and the Baptist missionary, Mr. Nicholls, succeeded in effecting their escape, so that they were obliged to content themselves with hanging them in effigy. Attempts were made to destroy the chapels at Kingston, but defeated by the firmness and discretion evinced by the free coloured population, who night after night kept guard over them.

The governor (Lord Belmore) issued a proclamation, desiring the magistrates to seek out and punish the authors of these outrages, and to use the force entrusted to them in preventing similar proceedings. This proclamation was treated with the utmost contempt; one of the copies was hung upon the gallows,* others were torn down, and under one posted up in the court-house was written, “Whoever gives information respecting the above shall entitle himself to be tarred and feathered.”

The papers continued to put forth such counsel as the following:—

“We can only say, in the words of the reformer, John Knox, ‘To get rid of the rooks effectually, you must destroy their nests.’ As to the rooks—the preachers, we

would recommend the advice of our staunch friend —† to be observed towards them. ‘Tar and feather them whenever you meet them, and drive them off the island, excepting always those who may merit a greater elevation—a more exalted distinction.’”—(*Jamaica Courant* and *Cornwall Courier*.)‡

The often-urged tarring and feathering scheme so exactly accorded with the promptings of popular feeling, which in fact these journals did but echo, that many attempts were made to put it in practice.

One of the most ferocious of these was directed against Mr. Bleby, who had been selected to occupy the Falmouth station (from which Mr. Box had been driven), because “his prudence and respectability were admitted by all.”§ The emissaries of the Union bestirred themselves so actively, that the proprietor of the house which he had hired, requested him to quit, as it would certainly be destroyed if he were suffered to remain in it, and threatening letters were sent him advising him to quit the place; but as the coloured people had welcomed him gladly and gratefully, he felt it his duty to remain, and endeavour, by patience and forbearance, gradually to disarm opposition. Mr. Dyer, the magistrate-editor before mentioned, abused Mr. Bleby in the public streets, and sent several constables to inform him that he would be prosecuted if he preached without a licence, and that all persons attending his family worship would be taken into custody. Justly apprehending personal violence, Mr. Bleby requested several free coloured persons to sleep in and near the house, a precaution which probably disconcerted the machinations of his enemies, by obliging them to renounce the idea of a midnight attack and choose an earlier hour.

On the evening of the 7th of April, while Mr. and Mrs. Bleby, and some visitors (a lady and her daughter), were seated at tea, a large body of men, from eighty to one hundred in number, were seen approaching the house. They forced in the garden gate, smashed the windows, broke open the front door, ascended the stairs, entered the room where the family were assembled, and seizing Mr. Bleby, secured and held him fast, loading him with opprobrious epithets. One of them named Dobson dealt him a heavy blow on the head with a stick, the violence of which was providentially broken by the glass candle shade, which it shattered in a thousand pieces; while others brought in a keg of tar, and turning up their coat sleeves, dipped their hands into it and commenced daubing the person of the missionary, especially his head and face, and rubbing the tar into his eyes with the intention of blinding him. Dobson then took a candle from the table, and stooping down, attempted to set fire to the trowsers of the intended victim, but Mrs. Bleby, having forced her way through the crowd, struck the candle out of his hand. She was dragged away and violently trampled upon; but seeing some of the ruffians seize the remaining candle, and try to ignite the tar with which her husband’s neckcloth, and, indeed, his whole apparel, was by this time covered, she again rushed forward and succeeded in extinguishing the light, just in time to prevent the commission of a foul murder. At this moment, an infant of a few months old, who had been lying asleep on the sofa, awakened by the uproar, cried piteously, upon which the person who appeared to be the leader of the party called out, “Throw that d—d child through the window;” and this brutal order was actually about to be obeyed, when the mother, disengaging herself a third time from the hands of

the men who were now endeavouring to fasten her into an adjoining closet, sprung forward, seized her infant, and rushed out of the house bareheaded, with only one shoe, and nearly covered from head to foot with the tar she had received in her endeavours to protect her husband. The alarm given by her brought several black and coloured persons to the rescue; they seized some sticks from a bundle of firewood in the yard, and commenced a vigorous attack upon that portion of the assailants who had remained in the lower part of the house. Those in the upper room, having no light but that of the moon, hearing the noise, and thinking it might possibly proceed from a detachment of troops, precipitately retreated down stairs, where a general scuffle took place.

Favoured by the darkness and confusion, Mr. Bleby made his escape; but one of the gang, an overseer named Hopkins, being mistaken for him, was set upon by his own companions, who broke his collar bone and fractured his skull.—The injuries thus inflicted were long expected to prove fatal, but after undergoing the operation of trepanning, the wretched man partially recovered, and survived a few years, subject to periodical fits of insanity.

On learning what had occurred, Mr. Miller, a magistrate who formed one of the bright exceptions to the general character of the body to which he belonged, hastened to the scene of the riot with a party of the 22nd regiment, then garrisoned in the town. Mr. Bleby was taken to the barracks, where he found a safe asylum for the night; and his wife and child were kindly received and sheltered by Mrs. Jackson, the lady of the clerk of the peace.

With a view to prevent the repetition of similar outrages, Mr. Bleby, in the following week, waited upon several magistrates; but Mr. Miller having left the town, none of them cared to receive his statements. On the return of that gentleman, he discharged his duty, in defiance of the menaces of the "Colonial Union" party, and arrangements were made to prosecute the rioters at the Cornwall assizes. But though no magistrates could be found, on Mr. Bleby's first application, who would take his depositions, there was no want of promptitude in dealing with the men who ran to his rescue. They were speedily arrested, and bound to answer at the quarter sessions;* but when one of them requested that his depositions should be taken against a rioter who had assaulted him, he was sternly refused.

Oppression had now reached its climax; in a professedly Christian land, chapels erected for the worship of God might be destroyed, and ministers of the Gospel hunted to death's door with impunity. The Colonial Union boasted, that while they kept possession of the jury box their members might feel secure

* A coloured man, named Brown, was fined £5.

† In the early part of 1833 an extraordinary sensation was created throughout the United Kingdom, by a pamphlet, entitled, "*Three Months in Jamaica*," by Henry Whitley, a young man of unimpeachable character, who had gone out, with an excellent introduction, to the estate of a planter, a relation of his own, for the purpose of obtaining a situation as book-keeper. The scenes he there witnessed inspired him with deep disgust, and he returned to England, bringing with him a fund of valuable, but to him dearly-bought experience. His simple narrative of the common incidents of a sugar plantation, bore the impress of truth on every page. The driver looking on with lazy indifference—the piercing cries of the miserable negro woman, the mother of several children, and her earnest entreaties to be allowed to retain some portion of her covering for the sake of decency—the aged negro man brought out,

as to the results of any prosecution that might be commenced against them; and this was literally the case, for, in opposition to the clearest evidence produced respecting the destruction of the chapels and the assault upon Mr. Bleby, the grand jury in each case ignored the bills. Meanwhile a great change was working in the mind of the British public; and the internecine strife, pecuniary involvement, and moral degradation, which had for so many years characterized the beautiful and fertile island of Jamaica, began to be generally looked upon in their true light, as the fruits of that root of bitterness which pervaded and poisoned the whole social system. The excesses of the planters, whether committed against the missionaries or against their wretched slaves, afforded the strongest arguments against their being permitted any longer to retain the power which they so grossly misused; and their very intolerance, by inducing Messrs. Knibb, Burchell, Duncan, and Barry, to proceed to England, did good service to the anti-slavery cause; for these men, coming fresh from the scene of action, and describing atrocities which their own eyes had witnessed, and hardships inflicted on their own persons, spoke with a power and energy which exercised irresistible influence over their hearers.† They arrived at a critical juncture, in time to give most important evidence before Parliament, and to support, by their personal testimony, before the numerous public meetings convened throughout England and Scotland on the question of slavery, the emphatic statement of Powell Buxton, who had declared, "I stake my character on the accuracy of the fact, that negroes have been scourged to the very borders of the grave, uncharged with any crime save that of worshipping their God." In reference to the cruelties and indignities heaped upon those who had ventured to preach the gospel among them, he added—

"There have not been, in our day, such persecutions as these brave and good men have been constrained to endure. Hereafter we must make selections among our missionaries. Is there a man whose timid or tender spirit is unequal to the storm of persecution? Send him to the savage—expose him to the cannibal—save his life by directing his steps to the rude haunts of the barbarian: but if there is a man of a stiffer, sterner nature—a man willing to encounter obloquy, torture, and death—let him be reserved for the tender mercies of our Christian brethren and fellow-countrymen, the planters of Jamaica."‡

The Assembly were not blind to the effect the missionaries would assuredly produce by their revelations respecting the late proceedings, and a motion was made that none of them should be permitted to leave the island; but it did not pass. Two delegates were, however, sent by the House, whose statements,

and lying quietly down to receive the decreed punishment; the crack of the fearful cart-whip, and the shriek of agony, as it cut deeper and deeper into the mangled flesh—youth and age, womanhood and childhood, all subjected to the same brutalising and degrading torture,—appalling as the picture was, every feature was incontestably correct, only perhaps it had never been so graphically, because so plainly told before. Many and many British youths must have shuddered at similar scenes; but they had not dared or cared to reveal them, and the great majority had probably grown callous, and ceased to sicken at such loathsome sights. I much regret having no space to spare for the lengthy extracts which could alone convey an adequate idea of the deeply interesting and thrilling descriptions given by Mr. Whitley, but the entire pamphlet well deserves, and will well reward a careful perusal.

‡ *Anti-Slavery Reporter*, vol. v., p. 149.

it was hoped, would counteract the influence of the religious and anti-slavery parties, whose views were, of necessity, now daily becoming more nearly identified.

In May, 1832, select committees were appointed in both Houses of Parliament,—that of the Lords for the purpose of inquiring into the “condition and treatment of the slaves, their habits and dispositions,” &c., and also “into the distressed condition of the several West India colonies;” that of the Commons, to consider “the measures most expedient to be adopted for the extinction of slavery throughout the British dominions at the earliest possible period compatible with the safety of all classes in the colonies.”* A large mass of evidence was collected; that adduced for the information of the Commons was peculiarly valuable, and “disclosed a state of affairs demanding the earliest and most serious attention of the legislature.”

The active members of the House of Lords' committee were all proprietors of estates in the West Indies, excepting the Duke of Richmond (the chairman), and Lord Suffield; the three spiritual peers (Canterbury, London, and Lichfield,) attended only twice, and then for some brief ten minutes. The one-sided character of the evidence, its absurdities and inconsistencies, were well exposed in December, 1832, by Sir George Stephen, under the name of *Legion*, in a publication addressed to the Duke of Richmond.† The Commons committee also contained some West India proprietors, but their manœuvres were counteracted by Powell Buxton, the chairman, and by the uprightness of Sir R. Peel, Lord John Russell, and other impartial men, and the inquirers, instead of diverging into the wide and discursive field of vague generalities, directed their investigations mainly to the two following points:—

1st. Whether the slaves, if emancipated, would be likely to maintain themselves, and would be industrious and disposed to acquire property by labour.

2nd. Whether the dangers of convulsion were greater from freedom withheld than from freedom granted.

The evidence adduced was considered to afford so decisive an answer to these questions, that not even the *ex parte* statements made to the Lords could hinder the general conviction, that slavery was an unmitigated evil, which must be speedily extirpated throughout the British dominions.

In the ensuing session of parliament a bill was introduced for this purpose; and it was proposed to make a loan of £15,000,000 to the planters, at a low rate of interest, to assist them in cultivating their estates by means of labour obtained by the stimulus of wages instead of the whip. This arrangement was far from being satisfactory; the West Indian proprietors persisted in asserting that slavery had utterly unfitted the negroes for continuous voluntary industry, or for peaceful habits, and that a sudden transition to complete freedom was fraught with imminent danger to society and utter ruin to themselves. They alleged—unhappily with truth—that the purchase of slaves had been approved and encouraged by the British government—and this was, in reality, their strongest argument; but against the flagrant iniquity of making slavery an hereditary curse, they could plead no law divine or human. save that of

an infamous custom.‡ They succeeded in inducing Parliament to convert the loan of £15,000,000 into a gift of £20,000,000, and to renounce the idea of immediate emancipation in favour of a system of apprenticeship. Before entering into the details of the new measure, it is necessary to return to Jamaica, and notice the changes there taking place.

The recall of Lord Belmore in June, 1832, sorely disconcerted the Unionists; their leader, Mr. Bridges, having been well known to possess considerable influence with the Earl. This circumstance accounts, to some extent, for the miserable inefficiency of the administration of a governor whose private character was generally admitted to be amiable, and in many points deserving of respect. Lord Belmore, in tacitly permitting the fierce current of religious persecution to flow on unchecked, could not have been actuated by the culpable desire of obtaining popularity thereby, since, had he placed so high a value upon the short-lived applause of a colonial faction, he would hardly have dashed it to the ground by publicly expressing, when about to quit Jamaica, his opinion that “the resources of the island would never be developed till slavery was abolished.” The records of the House of Assembly amply support the truth of this assertion.

It has been previously shown, by statements made at various intervals, that the condition of Jamaica before the abolition of the slave-carrying trade, in 1807, had for many years been gradually deteriorating. It now remains to demonstrate that the possession of upwards of 300,000 slaves did not enable the planters to cultivate sugar and coffee either so extensively or so profitably as to repay them for the heavy expenditure with which compulsory labour must ever be attended.

In 1808, a committee of the House of Commons recommended a suspension of the use of grain in the distilleries of Great Britain for one year, in order to “save the West Indies from the disasters that await them” in consequence of the depreciation in the price of sugar, and the increased expense attendant on its cultivation, the value of the produce being barely equal to the charges of production, leaving no rent for land and no interest for the large capital employed on it. (The price was, in 1807, 34s. per cwt.) The committee stated that 115 sugar estates were then in the Court of Chancery, that foreclosures had become unusually frequent, and that “annuitants dependent on West India property for their provision have in many instances been totally deprived of their income.”—(Report, 13th April, 1808, p. 4.)

In 1812, a memorial from the Jamaica planters to the Crown states “that the ruin of the original possessors has been completed; exactions, debasement, and privations have been long and patiently endured by the proprietors; a large portion of them now see approaching the lowest state of human misery, absolute want to their families, and the horrors of a gaol for themselves. Estate after estate has passed into the hands of mortgagees and creditors, absent from the island; until there are large districts, whole parishes, in which there is not a single proprietor of a sugar plantation resident.” The non-residence of proprietors would certainly be no proof of their dis-

* Report on “Extinction of Slavery,” by House of Commons' Committee, dated 11th of August, 1832; p. 3.

† *Two Letters from Legion, &c.* London: Bagster, Paternoster-row; 8vo, pp. 196 and 152.

‡ Infamous, indeed, was that custom, which enabled

“the father to hold his own son in bondage, and the son to demand the wages of slavery from his own mother, and to claim the services of his own sister as his bond-woman.” (Madden, vol. ii., p. 171.) These practices took place in Jamaica, even under the apprenticeship system, and the special magistrates had no power to prevent them.

treas; but the meaning of the above passage apparently is, that the European mortgagees had generally, by foreclosures or otherwise, superseded the resident planters. The remedy proposed was a high protecting or prohibitory duty on foreign coffee. It was also declared that a price of 50s. per cwt., exclusive of duty, could alone save the sugar-grower in the crisis that had arrived.

In 1813, during a debate in Parliament on the East Indian sugar duties, Mr. Marryat, an eminent colonial agent, declared that "there were comparatively few estates in the West Indies that had not, during the last twenty years, been sold or given up to creditors."

In 1821, the Jamaica House of Assembly addressed the King on the "distresses which afflict this colony," and complained of the "pressure of unmitigated suffering." They protested against the introduction of sugar from British India—a territory then yielding an income to the imperial revenue of several millions sterling—and claimed the privilege of exclusively supplying the United Kingdom with sugar and coffee.

In 1822, another address from the House of Assembly to the King petitioned for assistance to rescue the landholders and capitalists from ruin and their "labourers from absolute want."

In 1824, a somewhat similar memorial declared that property had gradually depreciated to one-half its value; and, in 1825, the still increasing sufferings of the planters were set forth.

In 1826, it was asserted that "commerce is deserting the shores of Jamaica"—that "signs of prosperity are no longer perceptible, one universal gloom lowers around, and ruin in the most dreadful shape, and to all appearance inevitable, advances with rapid strides,"—and the petitioners intimate the probable "dismemberment from the empire of this valuable colony."

In 1831, Viscount Goderich, then Colonial Secretary, in a despatch, dated 5th November, observed—"The existence of severe commercial distress amongst all classes of society connected with the West Indies is unhappily too evident." His lordship added, "Without denying the concurrence of many causes, it is obvious that the great and permanent source of distress which almost every page of the West Indies records, is to be found in the institution of slavery. It is in vain to hope for long-continued prosperity in any country in which the people are not dependent on their own voluntary labour for support—in which labour is not prompted by legitimate motives, and does not earn its natural reward. * * * I cannot but regard the system itself as the perennial spring of those distresses of which, not only at present, but during the whole of the last fifty years, the complaints had been so frequent and so just."

In 1832, the West India interest petitioned Parliament, declaring that "the alarming and unprecedented state of distress in which the whole of the British West India interest is at this time involved," justified them in imploring the legislature "to adopt prompt and effectual measures of relief, in order to preserve them from inevitable ruin." The remedies proposed were a large additional bounty on sugar, &c.

* See "Addresses and Memorials to his Majesty from the House of Assembly at Jamaica," printed by order of the House; pp. 5, 6, 16, 17, 20, 22, 29, 38, &c.

† Vide some very able remarks on this head, in Bigelow's *Jamaica* in 1850; p. 81.

‡ Dr. Madden, referring to the evils consequent upon leaving the management of estates solely in the hands of

Mr. J. M'Queen, in his evidence before the House of Commons, on 8th February, 1832, was asked (question 844)—"Is the distress which prevails among the various interests connected with the West India colonies, the proprietors of the colonies and the mortgagees, at present urgent?" He answered, "Exceedingly severe; hardly anything can be more so. I do not think it possibly can be worse." Evidence of a similar nature to that above quoted might be multiplied to almost any extent, but enough has been already given to show that the commercial state of Jamaica, after gradually declining from bad to worse, had at length well nigh reached the last stage of prostration. The evils described by Long, in 1775, still rioted in open day, and their consequences had verified his predictions. Insolvent planters had continued to the last possible moment living in splendid style in England, on money advanced, at the rate of 15 to 20 per cent., by the merchants to whom their sugar, rum, and coffee, were consigned; and their whole properties, including lands, buildings, and slaves, were heavily mortgaged. Meanwhile, in Jamaica, this system of absenteeism, combined with slavery, necessitated the maintenance of a perfect hierarchy of agencies,—every estate requiring, first, the supervision of a resident attorney; secondly, that of an overseer, who usually occupied the mansion, and was personally waited upon by from three to five, and not unfrequently twice that number of servants, and as many horses; thirdly, from one to three book-keepers, according to the size of the estate, whose duty was primarily to keep the accounts, and incidentally to act as checks upon the overseer, who was, in his turn, supposed to be under the surveillance of the planting attorney. It followed, of necessity, that whatever reached the pocket of the proprietor was just so much additional profit as could be raised over and above that required for the support of the local establishment; and, consequently, when the estate, through mismanagement or misfortune, such as the failure of crops, &c., failed to produce even that amount, it became insolvent.

If the planters, in some few cases, escaped the alternative of sale or mortgage, they were rarely able, perhaps more rarely willing, to invest money in improvements, in labour-saving machinery, in irrigation, drainage, or manuring.† Of their animate or inanimate possessions—of their sugar plantations, or of the human chattels by whose blood and sweat they were cultivated—they knew just what their delegates thought fit to tell them. They persisted in blind reliance on the subordinates to whom they entrusted the charge of their pecuniary means, and the lives of their miserable slaves; and though occasionally a man like Mr. Lewis visited Jamaica,‡ and exposed the horrible inconsistency existing between the plausible humanity and discretion of the attorney and overseer, as set forth in their carefully-prepared communications, and the cruelty and extravagance of their practical conduct; yet even revelations such as his appear to have had little effect in shaking the misplaced confidence of the planters.

EMANCIPATION.—The administration of the earl of Mulgrave forms a turning-point in the history of

strangers, says, that the two visits paid by Lewis to Jamaica, and the reforms instituted by him, such as ameliorating the condition of his slaves by abolishing the use of the cart-whip among them, and increasing their indulgences, saved his two estates, which were inherited by his relatives, instead of being added to the long list of those whose superintendence has devolved upon the court of chancery.—(Vol. ii., p. 31.)

Jamaica. He was selected by Lord Goderich, as a man fitted by the possession of principle, firmness, and discretion, for the difficult task of carrying out great and unpopular changes, and the result proved that the secretary of state for the colonies had exercised sound judgment in his nomination.

For some time after his arrival, in July, 1832, the new governor remained quietly watching the signs of the times, and they must certainly have both surprised and startled the refined mind of the author of *Matilda*. Unfortunately his position precluded him from giving to the public a picture of the then state of society. From the evidence adduced before Parliamentary Committees of that year, little alteration would appear to have taken place since Renny described it in 1807, excepting only in one important point—the conduct of the clergy of the Established Church, which had materially improved. The white population was, for the most part, characterized by the same shameless immorality, as may be judged from the reply of Mr. Baillie, a Jamaica planter, who had resided there for twenty-seven years, and occupied an influential position as the proprietor of 350 slaves, a magistrate, and the acting-agent and attorney for several estates. This witness was brought forward by the West India body as capable of bearing high testimony in their favour, but his bold statements, and subsequent contradictory admissions,* could have done their cause no real service. For instance, he denied that there was any greater extent of licentious intercourse observable in Jamaica than in England, yet when subsequently asked—“Can you name any overseer, driver, or other person in authority, who does not keep a mistress?” he was, after a long series of evasions, reluctantly compelled to reply—“I cannot.”—(P.P. Lords, 1832; part i., p. 109.)

Suicide was not unfrequent, and the kindred vice of duelling greatly needed to be discountenanced by the leading authorities, in the absence of a holier influence. Dr. Madden, writing two years later, says—“Many a duel has been fought in Jamaica by persons who sat the night before their meeting at the same table. There is a gentleman now living in Kingston who has fought his ten or twelve men. There are members of Assembly who have been on the ground half a dozen times; there are lawyers who have had two challenges out at a time; there have been doctors who have killed themselves about a medical theory,”† undeterred by the fate of Messrs. Williams and Bennet, who perished in 1750, in consequence of a dispute respecting the nature of yellow fever. Nor were the clergy wholly exempt from the reproach of seeking revenge by means which, even when resorted to by laymen, could not but disgrace a nominally Christian and civilized community. The following case was related to me by a gentleman resident in Jamaica at the time of its occurrence.

In 1833, a minister of the Establishment, in a fit of causeless jealousy, challenged a former friend to fight a duel, but was refused on the ground that it was contrary to “the code of honour” to meet a gentleman of the sacred profession for such a purpose. The clergyman persisted, and at the meeting which ensued, fired thrice at his antagonist, who in

* This unhappy man committed suicide while on his return voyage to Jamaica, owing, it is said, to *Legion's* exposure of the contradictory character of his evidence made on oath.

‡ Speech of the Earl of Mulgrave at Freemasons' Hall, 1st of August, 1834. Published by Hatchard and Son.

§ A loan of three hundred thousand pounds was made

return discharged his pistol each time in the air, without taking aim. The seconds vainly attempted to interfere—the challenger persisted in declaring himself unsatisfied, and insisting on another shot; his antagonist considering that if he persisted in refusing to take aim, his own life would be sacrificed, fired for the first time at his opponent, and hit him in the knee. The wounded man still desired to continue the contest, but his friends carried him off the field; and, though only slightly wounded, fever seized him, and in about a week he died raving mad.

Perjury was notoriously prevalent, so much so that it was clearly understood, and almost undisguisedly stated by the members of the Colonial Union which had gradually extended its ramifications over most of the parishes, that juries would not scruple to forswear themselves sooner than pronounce verdicts which should necessitate the punishment of their associates. The impunity thus obtained, was largely availed of by the Unionists, whose proceedings towards the missionaries and their followers, had at length raised such strong feelings in the free black and coloured inhabitants, that they began to organize in turn. The distracted country was threatened with civil war, but was happily saved by the interference of Lord Mulgrave, who, before he had been six weeks in Jamaica, was, to use his own words, “compelled to hurry across the country to check an attempt, which the custos of the parish announced as imminent on the part of the militia, to force the jail on the day of their muster, and to rescue some Colonial Unionists, who, refusing to give bail, under the expectation of a rescue, were confined upon a charge of pulling down a house in which a Baptist minister was sheltered.”†

Still, although obliged to interfere in this matter, the earl continued to abstain, as far as possible, from exercising his authority until he should be better able to decide upon the extent and power of the opposition he was likely to encounter, and diligently employed himself in examining different parts of the island, inquiring into its institutions, and visiting the hut of the slave as well as the mansion of the planter, appearing everywhere the same worthy representative of a just and paternal sovereign.

The legislature was summoned to meet on the 30th of October. His excellency's address was long, minute, and conciliatory; but it nevertheless expressed the regret with which he had observed “a turbulent and lawless spirit occasionally betraying itself in open acts of violence, and consequent symptoms of alienation between different classes of the free population;” and his resolve to suppress such outbreaks “wherever they might occur, and by whomsoever they might be fomented.” He alluded with tact to the recent appointment of parliamentary committees, and informed the Assembly that a bill had passed the Imperial Parliament for the relief of the island from the consequences of the recent insurrection;‡ also that the Orders in Council of November, 1831, with regard to the amelioration of the condition of the slaves, would not be pressed, but that he strongly recommended to them the adoption of effective measures to that end.

by the home government to the planters, at a low rate of interest. The House of Assembly was appealed to by the British government to reimburse the Wesleyan and Baptist Societies by means of a special grant, for the mission property so wantonly destroyed by white people; but as some of the chapel destroyers were members of that House, this proposition was positively rejected. (See section on religion.

This speech was favourably received by the Council, but not by the Assembly, whose members, stung by the significant warning given to the Unionists, endeavoured to excuse if not to justify their outrages, by referring to the previous disasters. They denied the competency of the British legislature to make any effectual inquiry into their affairs, repudiated all participation in the appointment of the recent Committees, declared that they had never recognized the resolutions of 1823 (Mr. Canning's), and protested against the interference of the House of Commons. The proffered loan produced no grateful response, and welcome as it undoubtedly was, the only notice it excited was a remark that it should be taken into consideration.

Under many former administrations, all this would probably have passed without animadversion; under the present the Assembly received a startling rejoinder. The governor, setting aside the few formal sentences usually employed on similar occasions, openly expressed the dissatisfaction with which he marked the spirit which pervaded their long and desultory address. His speech, he observed, had "broached no theory, and required no sacrifice; it announced only a boon." He left it to themselves to settle how far it was fitting to disclaim connexion with the West India body at home, but reminded them that their own accredited agent (Mr. Burge) had united in the request for the Lords' Committee, and that their speaker had just vacated the chair, having embarked for England with another of their body, to be in time for the next meeting of the British parliament. Nothing, he declared, could have induced him to originate the irritating question of the right of Parliament to legislate for the whole empire, but he could not be thus formally assured of their opinions "without asserting, in the most unequivocal terms, the transcendent power of the Imperial Legislature, regulated only by its own discretion, and limited only by such restrictions as itself may have imposed." He advised them to refrain from indulging in the "groundless accusations which alienated the public mind in Europe from the cause of the colonists," adding, "if you continue thus to speak for yourselves, I much fear it will be vain for any one to speak for you."

Lord Mulgrave's view of the Colonial Union was at length unequivocally manifested by the dismissal of Colonel Wilton from the command of that rabble regiment, the St. Ann's western militia, in consequence of his having signed certain intolerant resolutions of the Unionists in his military capacity, and (together with other officers) exerted himself to procure the signatures of the men. Mr. Cox, the joint president with Colonel Hilton, was likewise compelled to resign his position as Custos of St. Ann's, and major-general of the same corps, for a similar reason.

In January, 1833, a proclamation from the sovereign denounced as illegal the confederacy formed by the Unionists, required it to be immediately broken up, and called upon all judges and magistrates "to give full effect to the laws for the toleration of religious worship, and to bring to justice all such persons as might be found violating them."

Copies of the proclamation were forwarded to the

custodes of the various parishes, accompanied by a circular in which the governor ordered, that any violation of the royal injunctions should be reported to him, declaring that in the event of the offenders holding either civil or military offices under the crown, they should be instantly deprived of them, "that all others concerned in similar proceedings may perceive, that neither actual violence, nor a repetition of illegal threats will be allowed to pass unpunished."

The publication of the above instructions gave great joy to the missionaries, and enraged their adversaries in an equal degree. In many of the parishes the Colonial Church Union was heard of no more, some of its members being little disposed to risk for its sake the loss of honours and offices, while others were really glad of a plea for seceding from an association into which they had been led by want of moral courage to hazard the vituperation they would assuredly have encountered from the dominant faction. The only opposition of any importance was made in the parish of St. Ann's, where the Unionists had the audacity to advertise a proposed meeting of their body "to take place on the 10th of February, to consider H. M. late proclamation."

Lieutenant-colonel Browne, who had succeeded Colonel Hilton, addressed the men newly placed under his command in very indiscreet language; openly vindicating the proceedings of the Unionists, and expressing his hope that their "most distinguished colonel" might soon be reinstated in the command. Such conduct could not be overlooked. Lord Mulgrave repaired to St. Ann's, ordered an immediate muster of the regiment, and undeterred by the formal assurances he received of the danger to which his person would be exposed, proceeded to the appointed place, attended only by his own small staff, and then and there announced to Colonel Browne, that his unmilitary conduct in addressing the troops, when under arms, on a political subject, rendered it necessary to cancel his commission. The disgraced officer was considerably excited, and attempted a sneering reply, but his lordship quietly remarked—"I must not be replied to on parade;" and, notwithstanding various expressions of disapprobation, proceeded with the review, which being concluded, he praised the discipline and order evinced by the soldiers, and then retired.

Several other dismissals of officers followed the memorable review at the Huntly pastures, in consequence of endeavours being made to induce the men to mutiny and insult their captain-general (the governor), besides which, three major-generals and two colonels of militia sent in their resignations, to avoid being publicly and disgracefully dismissed. Nor was it only as military officers that the Unionists experienced the consequences of their perseverance in evil, no less than eleven magistrates in the parish of St. Ann's being deprived of the authority they had so greatly abused. The true leader of the Union (Mr. Bridges) remained, however, unpunished by man; nor was it until several years after, that a terrible dispensation inflicted upon him a far heavier retribution than the arm of earthly power had dealt upon his fellows;* he continued for some time after his

* "Several years elapsed, and, while many persecutors of lesser note had fallen around him, he remained unscathed, retaining his place, and, probably, a large degree of his influence in the island. But at length, the blast of divine displeasure fell upon him, and was, perhaps, the

more severely felt, for having been longer delayed. One morning, having breakfasted on board a ship in the harbour with his four daughters, who were but too fondly loved and idolized; they, with several other ladies and gentlemen, went out in boats to sail about the bay. A squall

carefully-planned conspiracy had been destroyed, to endeavour to keep alive the dying embers of religious persecution. A disgraceful riot took place at the quarter sessions in July, 1833, on the occasion of Mr. Greenwood, a Wesleyan minister, appearing in the court-house of St. Ann's, for the purpose of obtaining a licence to preach in that parish. Many of the ex-magistrates and Unionists, including Messrs. Browne and Rose, attended, armed with clubs. The Custos (newly appointed by Lord Mulgrave, in the place of Mr. Cox), earnestly strove to maintain order and to protect the person of the missionary from violence, but was at length compelled to abandon the attempt, and opening the grand jury room door, he afforded Mr. Greenwood the opportunity of escaping by an open window. The rioters tried to follow in pursuit, but were prevented by the intervention of the Custos and some of the magistrates, who were themselves soon glad to quit the place, leaving the mob in possession, the railings and the bar having been broken down, and the fury of the assailants still increasing.

This ebullition of rage and malice being reported to the governor, a detachment of regular troops was forthwith stationed at the Bay, and measures were adopted to bring the ringleaders to justice. The attorney-general well knew what would be the result of placing a bill of indictment against them in the hands of the grand jury; he therefore resolved to prosecute by *ex officio* information. The evidence adduced on the part of the crown was clear and conclusive; the counsel for the defendants, unable to invalidate it, declaimed with much eloquence against *ex officio* informations as formidable engines of governmental oppression, and thus succeeded in obtaining a verdict of "Not guilty."

But the object of the prosecution was not entirely lost; for though the rioters left the bar untouched by legal punishment, the manifest perjury by which their immunity had been obtained excited the indignation of the populace of Spanish Town (where the trial took place), who hissed and hooted, and were with difficulty prevented from inflicting upon the acquitted culprits severe retribution. In truth, the times were fast changing; "the loyal and independent parish of St. Ann's" was beginning to be regarded as a disgrace to the island; and its respectability was certainly not increased by the trundling of a figure representing the governor about the town of St. Ann's Bay in a wheel-barrow, suspending it to the bell-post of the church, and then burning the effigy. His lordship, if made aware of this insult, doubtless bore it with the same dignified equanimity with which he met the scurrilous defamation poured forth by the *Courant*,* and the occasional storms of spoken vituperation with which he was assailed, even

arose while they were thus engaged, and the boat containing the four sisters, with two or three other persons, upset, and they all disappeared to be seen no more. The bereaved parent never rallied from this agonizing blow; the towering pride which had heretofore characterised him was utterly broken down, and he left the country, recognising in this mournful event the hand of God, and frankly acknowledging the sins of his past life."—(MS. of Mr. Bleby). In a most affecting memorial, recorded in the annals of the Assembly, this unhappy but highly-gifted man stated, "That petitioner, struck to the earth by an unexampled calamity, finds himself utterly unable to rise again, or conscientiously to discharge the duties of a station in which he better strove to serve his country than his God; he therefore resigns his living, and entreats the house will consider him as one who has died in its service. That petitioner, thus

while walking in the streets of Kingston, accompanied by the countess.—Duncan's *Wesleyan Mission*, p. 343.

In October the new Assembly was convened; the old one, to which Lord Mulgrave had addressed his stern and dignified rebuke, having been dissolved, in consequence of a difference which arose between that body and the Council, occasioned by the latter (prompted, it was supposed, by the governor) having set up a claim to originate bills, after the manner of the House of Lords, to which branch of the Imperial Legislature the Council was considered to bear some analogy.

The election of fresh representatives enabled the free coloured portion of the population to exercise, for the first time, the right of voting; and though the enlarged constituency did not immediately produce any great alteration in the composition of the House, yet it certainly did in the tone and temper of its members, who now ceased to be the representatives of a mere class of their own colour, not exceeding 2,000 in number, and became dependent on the suffrages of all the free citizens.

This change, together with Lord Mulgrave's other judicious and well-digested measures, accounts for the comparatively decorous manner in which the Act of the Imperial Legislature for the abolition of slavery throughout the British colonies, was received in the House of Assembly, where, two years before, the propositions made by Mr. Beaumont to abolish female flogging and establish the principle of compulsory manumission, had been angrily rejected. The large portion of the £20,000,000 compensation money which would be allotted to Jamaica proprietors, and a proviso on the part of H. M. ministers, that none would be awarded to any governments which should fail to carry out the provisions of the statute, had, doubtless, considerable weight in influencing the conduct of the Assembly, and the apprenticeship system would, they well knew, afford them large licence for coercing labour, little less cruelly than before. Buxton, Macaulay, Lushington, and the emancipist party at home, were not blind to the dangers of the apprenticeship system, as it was likely to be worked by the planters, but they dared not hazard what they were on the eve of obtaining, by standing out for immediate and complete emancipation.

The public assent of Lord Mulgrave to the Abolition Bill was given on the 12th of December. In proceeding to prorogue the House, his excellency remarked, that slavery, the greatest curse that could afflict the social system, had received its death-blow. It had, he said, long been evident that its continuation could only lead to the dissolution of that society, the powers of which were paralyzed by its baneful effects. The dangers of the transition by which alone a cure could be effected, would, the British govern-

ment bereft of all his children but one of seven years old, the wretched companion of his retreat and poverty, humbly implores that the house will place that lone child as a pensioner on the fund to which his father for twenty-three years contributed." The Assembly generously responded to this appeal by a grant of £50 per annum for ten years.

*The editor of this paper, about two years after the insurrection, was convicted of fraudulent bankruptcy. In order to deceive his principal creditor, and former partner in the newspaper, he had wantonly destroyed upwards of 5,000 advertisement vouchers, falsified his accounts, and received money without accounting for it; he was sent to gaol, the judge remarking, that he had never seen so flagrant a case. The bankrupt, when set at liberty, left the island, smitten with a loathsome disease, which covered his body with sores, and soon terminated his life.

ment considered, be lessened by an intermediate state of probation, the extreme duration of which (six years) was already fixed, and the lessening of which, by the voluntary act of the local legislature, would be received with the greatest satisfaction by the authorities and people of England. No one, his lordship declared, would rejoice more than himself at the last traces being utterly effaced of a state of things of which he had personally witnessed the inseparable evils. He emphatically warned his auditors of the extreme importance of judicious management during the momentous interval on which they were soon to enter, alluded briefly to the cases of flagrant abuse of power found to exist, and pointed out that it was not desirable either for the present tranquillity of the country or the future efficiency of its labour, "that the weapon of arbitrary punishment should be exercised with undiminished severity, on individual responsibility, up to the last moment when the law shall abruptly arrest the arm that wields it."

In the concluding part of his speech, lord Mulgrave expressed the satisfaction with which he should hereafter remember the proceedings of that day, in terms which were correctly supposed to convey an intimation of his intended departure. During the last few months, he had endured constant fatigue and anxiety, added to which his generous spirit must have been continually wounded by the knowledge of sufferings he had no power to relieve; and to such an extent had his bodily strength been impaired, that Dr. Madden, as a medical man, unhesitatingly stated that he could not survive for six months, the prolonged discharge of such onerous duties.

His lordship, before quitting Jamaica, had one pleasant task to fulfil: for three weeks he occupied himself in traversing the island, and daily announcing to large bodies of slaves, amounting in all to considerably above 50,000 of the adult population, the change to be made in their position, on the coming 1st of August. "There were three circumstances," says Lord Mulgrave, "in the statement I made to them which seemed to excite the greatest interest. The first was when I announced to them the utter and immediate extinction of the power of corporal punishment of women. This was always hailed with lively expressions of gratitude from all my auditors of both sexes. The next was, that though they themselves were still for a certain term to be subjected to limited restraint, their young children were at once absolutely free. * * * The

* "While slavery," said Lord Mulgrave, "lasted as the law of the land, no man, be he who he might, could effectually control its abuses. * * * I was frequently made to feel the helplessness of my position. During the whole of my residence in Jamaica, I never refused to hear any complaint myself that any negro wished to make direct to me, a privilege of which they largely availed themselves. I always heard their story to the end. I have listened to a tale of truth from their lips; I have seen the hope of redress beaming on their brow, and I have felt a painful conviction of what must be my answer, and the unexpected despondency it must cause. * * * However apparently cruel must have been the infliction, I was obliged to ask the fated question, could they say, that the legal number of thirty-nine lashes had been exceeded? In vain they answered, how in such a state of suffering could they count the number of stripes? The driver, probably, was the creature of the inflictor; evidence, if obtained, would probably be discredited, and I was often obliged, when I thought them wronged, to advise that they should not press my interference on a point which

third point to which I would allude, was the intelligent manner in which they comprehended, and the gratitude with which they received the promise, that though a certain number of hours were still given to the masters, in return for their houses and grounds, which was the footing I found it best to put it, still they might by working for wages at other times, themselves advance the period of their perfect freedom."—(Speech at Freemasons' Hall, August, 1834.)

On the 15th of March, 1834, Lord Mulgrave sailed for England, followed by the prayers and good-wishes of all the orderly and well-disposed portion of the community—white and coloured, bond and free. His brief administration of one year and eight months had accomplished wonders; most truly might he congratulate the country which he left, on its improved condition, even though very much remained to be done. Nor must the praise due to his true-hearted lady be omitted, for not inferior to his own was the moral courage she displayed in breaking down the barrier of caste, and receiving at the government-house people of colour, who, though well entitled by position and personal character to that privilege, would scarcely have been deemed worthy to sit at the table of a white overseer.

The Marquis of Sligo succeeded to the government, and arrived in April, 1834. His lordship was himself a Jamaica proprietor, but having been a member of the West Indian Committee in the House of Lords, he was there, to use his own expression, "converted to anti-slavery principles," upon which he faithfully acted during his administration. As he could not visit all parts of the island before the 1st of August, he issued an address to the slaves, in which, while announcing in simple and affectionate language the near approach of the great change of which his predecessor had informed them, he especially assured them that they would be "only required to work four days and a-half in each week," and that the remaining day and a-half would remain entirely at their own disposal.

The eventful epoch at length arrived, and instead of heralding the horrid scenes of drunkenness and immorality, and even of rapine and slaughter, which the planters had anticipated, or pretended to anticipate, it was hailed and celebrated by the redeemed slaves with a thrilling rapturous gratitude, the very depth of which precluded loud and noisy expression even in their excitable breasts.

On the evening of the 31st of July, many places of worship were thrown open, and the slaves crowded

would probably only entail on them, on another occasion, a repetition of a punishment within these limits uncontrollable, because irresponsible. * * * It was but too necessary that I should be cautious in my interference, that I should seem cold, really to be kind; for in some cases, on the part of low and violent overseers, I know it as a fact, that whilst the punishment has been inflicting, he has cried out to the driver, "do not spare him, that he may have something to show to the governor next time he complains." Such is the demoralising nature of the system, necessarily leading to cruelty, that some of the worst cases I knew were in the instances of domestic slaves, when the cause of the punishment was rather caprice and personal feeling, than incitement to industry. More than once I have heard of unspeakable cruelty inflicted by women on those of their own sex, from motives of jealousy—and some instances have been reported to me, though I trust these are rare, of punishment partaking of the character of torture, perpetrated by monsters in the shape of men, on the uncomplying objects of their disappointed passions."—(Speech at Freemasons' Hall, August, 1834.)

into and around them. As the hour of midnight approached, they fell upon their knees and awaited the solemn moment, hushed in silent prayer. When twelve sounded from the chapel bells, they sprang to their feet, and throughout the island rang the glad sound of thanksgiving to the Father of all, from the ransomed multitudes.

Great indeed must have been the delight of the nonconformist ministers, both Baptist, Wesleyan, and Moravian, at the progress of the good work in which they had laboured and suffered. Their own personal liberties had indeed been restored some time before, the toleration laws of England having been enacted in Jamaica during the previous sitting of the House of Assembly; but the planters had continued to the last to persecute the slaves for attending prayer meetings.

Another gracious measure which crowned the day was a proclamation issued by Lord Sligo, offering a free pardon to all runaway slaves who should surrender themselves to the special magistrates on the 1st of August. "Every difficulty," says Dr. Madden, "that was possible to be thrown in the way of that humane and most politic measure was given to it," but the governor persevered, nevertheless. Hundreds of fugitives flocked in to surrender themselves; slaves who had been five, ten, twenty, nay, five-and-twenty years away from their masters, delivered themselves up; but unhappily some of them, misunderstanding the terms of the proclamation, instead of going to the special magistrates, went direct to their owners, and arriving a few hours, or even a day or two before the stated period, were cruelly flogged by the tyrannical planters who, in despite of Lord Mulgrave's warning, had persisted in wielding the horrid cart-whip up to the very last moment the law would suffer them.

It had been judiciously decided that the 1st of August should be a holiday; and on that day, as well as on the following sabbath, thousands of the apprentices were seen thronging to the various places of worship,* on the ensuing morning, they all, without exception, cheerfully returned to their respective duties. Sunday markets were abolished; and the negroes doubted not that they should now have ample time in the week to support themselves and their families creditably by labour, without infringing on the period allotted by the Creator for needful rest and sacred exercises. Too many of their just and reasonable expectations were, however, unhappily dashed to the ground by the short-sighted policy of the planters, who, first by the alterations made by them in the spirit and letter of the British act of emancipation, and afterwards by local enactments, and partial adjudications, contrived to make the apprenticeship system little better than another form of slavery. To understand this, it is necessary to show what the intentions of the home authorities were, and how they came to be so grossly perverted.

APPRENTICESHIP.—On the 28th of August, 1833, the "Act for the abolition of slavery throughout the British colonies; for promoting the industry of the manumitted slaves, and for compensating the persons hitherto entitled to the services of such slaves," was finally passed by the British legislature. Under its provisions, all slaves in certain named British colonies (the West Indies, Mauritius, and Cape of

Good Hope) were declared to be, on the 1st of August, 1834, "to all intents and purposes free and discharged of and from all manner of slavery," and "absolutely and for ever manumitted." Children thereafter born, and the offspring of such children, were pronounced in like manner to be "free from their birth;" and from the above date, slavery was "utterly and for ever abolished and declared unlawful throughout the British colonies, plantations, and possessions abroad." All slaves in the colonies, duly registered, and of the age of six years, became, from the 1st of August, 1834, *apprenticed labourers*. These were divided into three classes: 1st, predial, attached; 2nd, predial, non-attached; 3rd, non-predial: from the latter class were excluded all persons of the age of twelve years, not habitually employed for twelve calendar months before the passing of the act, in agriculture or manufacture of colonial produce, or otherwise upon lands. The term of predial apprenticeship of classes 1st and 2nd, was to *cease* on the 1st of August, 1840, and their labour in the meanwhile was restricted to forty-five hours per week; that of the non-predials, or 3rd class, was to terminate on the 1st of August, 1838. Children under six years of age, at the before-named period, or born of any female apprentice after that time, if unprovided with an adequate maintenance, might be apprenticed for twenty-one years, reasonable time being allowed for the education and religious instruction of such children. The master might discharge any of his apprentices, unless they were of the age of fifty, or incapacitated by disease or mental or bodily infirmity, in which case he was to be obliged to maintain them during the term originally specified. Masters might sell or otherwise dispose of the services of their apprentices; but the latter could not be removed from the colony in which they were registered, nor separated from their families; nor, if attached predials, from their accustomed plantations, except (in the latter case) with the written consent of two special justices. The apprentice was entitled, according to age and sex, to such food, clothing, lodging, medicine, medical attendance, and other maintenance and allowances as by any law then in force they could claim, and where provision grounds in lieu of food were allotted, they were to be adequate in quantity and quality, situated within a reasonable distance of their place of residence, and sufficient time was to be allowed *out of the forty-five hours of weekly labour* for their cultivation.

The apprentice might purchase his discharge with or without the consent of the person entitled to his services, subject to appraisal under certain formalities and conditions. Sunday was declared a day of rest, and the ordinances of religious worship on that day were to be unfettered by any let, denial, or interruption whatsoever. There were various other regulating clauses, and 100 special justices were appointed under the act, at salaries, in no case exceeding £300 per annum, to superintend its practical working; and commissions of arbitration were nominated to appraise the value of the slaves in the several colonies, and the proportion in which the £20,000,000 sterling voted by parliament was to be distributed.

The above is an abstract of the chief clauses of the celebrated Abolition Act, a measure which, as has been before stated, was far from satisfying the minds of

* Dr. Madden says, that "all the sectarian places of worship were thrown open, and thronged to an unprecedented extent; but," he adds, "I regret to say that, for some reasons which to me are unknown, divine service was

not performed in the protestant churches in this town (Kingston.)" This omission on the part of the clergy of the Establishment is certainly much to be regretted, from whatever cause it may have arisen.

the abolitionists, especially of some of the most distinguished members of the Society of Friends, who had for years, it might almost be said for generations, borne an active and consistent part in the anti-slavery struggle.* Indeed, no one accustomed to examine the proceedings of the local authorities of Jamaica, and aware of their deep-rooted prejudices in favour of coerced labour, could doubt that the details of the measure to be passed by them, though nominally in accordance with that of the British parliament, would be in reality made to favour as far as possible their own supposed interests and privileges, and in all possible ways to hamper and discourage the apprentices. The result of this desire was the production of "an anomaly in the form of a legislative enactment, such," says Madden, "as the amended abolition measure, in which hardly a single clause is to be found which is not in contravention of some other." For instance, one clause of the Act provided that the negroes should labour forty-five hours a week; another forty and a-half: so that the amount and distribution of time for compulsory labour at once became a bone of contention between masters and apprentices. The former of course took advantage of the vaguely-worded colonial Act, and the governor was compelled to retrace his steps, and issue a second proclamation, in which the forty-one and a-half working hours were distributed over the whole five days, instead of being limited to four and a-half, an arrangement which a defect in the law was the occasion of, and which produced discontent only short of total insubordination. The extra four hours and a-half were to be required only in cases of sudden emergency, such as fire, earthquake, &c., or at such period of the year as the proprietors might "deem it necessary for the cultivation of the estate or plantation." Of course there were few seasons in which such a plea might not be successfully urged. It would occupy too much time to analyze minutely the British and Jamaica Acts, and show how widely different, even when apparently similar, were their provisions; but it must not be overlooked that the great defect of the initiatory measure was the want of any sufficient incitement of fair and honest remuneration for work performed; and that of the local one, the absence of "an executory principle," so far as the interests and protection of the weaker class were concerned.

One of the first acts of the planters, after the 1st of August, was to take away from the negroes all those allowances and customary gratuities which were not literally specified in the island law. Thus the weekly allowance of herrings, or other salt fish; and in the case of invalids, pregnant women, and mothers with young children, of a small quantity of flour or oatmeal, rice, sugar, &c., was stopped, and certain other arrangements necessary to the welfare, and even the subsistence, of the negroes, and long sanctioned by general custom in the colony, were, by many planters and overseers, suddenly set aside; no

* "It is well known," writes Joseph Sturge, "that the measure so undeservedly termed an Act for the Abolition of Slavery, was opposed to the views of those who objected on principle to slavery, whose exertions had excited general public sympathy for the oppressed, and at length urged the question of abolition on the attention of an unwilling government. They could not have done otherwise than protest, as they did, against a law which declared slavery to be for ever abolished, and the slaves set free, subject to such exceptions as created a new kind of slavery, under the name of apprenticeship; an anomalous condition, in which the negroes were continued, under a system of coerced and

watchmen were henceforth provided for the provision grounds, to prevent the crops from being destroyed by the trespass of cattle, or plundered by idle and improvident slaves; no women were any more employed as field-cooks and water-carriers, to prepare the breakfasts and dinners of the gangs in the field, in order that their meal times might be also intervals of rest, and to carry water for them, to quench the thirst excited by exhausting labour under a burning sun. These so-called indulgences scarcely deserved this name, since they were granted by the master for his own interest's sake, as necessary to the health of his slaves, who subsisted before as after the passing of the Abolition Act, chiefly on farinaceous roots, cultivated by their own hands. Yet these were, with bitter truth, called "the indulgences of slavery," and their partial continuance was made the pretext of extorting a far more than equivalent value in extra labour. The attorney-general (Dowell O'Reilly), who discharged the arduous duties of his office, honestly and firmly, at the expense of his private interests, gave his opinion, that the apprentices were entitled to their former allowances; upon which the planters appealed from him to the ex-attorney-general, himself a planter, who declared that no such allowances were obligatory on behalf of the masters. The government did not enforce the views of its own responsible legal adviser; and the counsel of an interested person, whose opinion in this case ought clearly not to have been taken, was suffered to decide the condition of the negroes with regard to this important part of the question of maintenance.

A large volume might be easily filled with a description of the various cruelties exercised by the overseers and planters on the apprentices in Jamaica and the other British West Indian islands, excepting in Antigua and Bermuda, where immediate abolition took place; yet so patiently did the negroes bear their heavy burdens, that for some time the horrors of the system were scarcely even imagined in England. Fowell Buxton writes to Bishop Wilson—"the apprenticeship system seems to go down with the negroes. This is wonderful to me; for I cannot reconcile it even now to my reason that this system should flourish." At length the representations of the Baptists and others again drew attention to the sufferings of the negroes, and in March, 1836, a select committee of the House of Commons was appointed to inquire into the "working of the apprenticeship system in the colonies, the condition of the apprentices, and the laws and regulations affecting them, which have been passed." The committee sat during the session of 1836, and held sixteen sittings during 1837, when the demise of the sovereign terminated its labours; but it was recommended that the inquiry should be pursued in the ensuing session of parliament.

In the report prefixed to the evidence of 1836, the committee pointed out various violations of the Imperial Act of 1834 by the authorities in Jamaica,

unrequited labour. Nor, although they might have concurred in the grant of a liberal relief to the proprietors whom slavery had ruined, in order to commence a better system under more favourable auspices, could they have avoided protesting against the acknowledgment of their claim to "compensation," by which, for the first time, the British statute book was disgraced by the formal recognition of the right and lawfulness of slavery. These were fatal objections to the new scheme, and the event proved that they were not merely of a theoretical character."—(*West Indies in 1837*, by Joseph Sturge and Thomas Harvey, p. 320.)

evasions of its leading provisions, and many illegal and unjust proceedings; yet, strange to say, the conclusion arrived at was, "that the system of apprenticeship in Jamaica was working in a manner not unfavourable to the momentous change from slavery to freedom, which is now going on there." To understand this statement, it should be borne in mind that Buxton, and other parliamentary abolitionists, had a strong motive for not choosing to dwell on the evils of the present arrangement, to which they allude by expressing "their conviction that nothing could be more unfortunate than any occurrence which had a tendency to unsettle the minds of either class with regard to the fixed determination of the imperial parliament to preserve inviolate both parts of the solemn engagement by which the services of the apprenticed labourer were secured to his employer for a definite period, and under specified restrictions; at the expiration of which he is to be raised to a state of unqualified freedom, and be governed by laws framed in all respects on the same principle as those to which his white fellow-subjects are amenable." In fact, the great dread entertained by Buxton was the attempted introduction by the planters of a vagrancy law at the expiration of the apprenticeship, which he feared would be "slavery in reality and for a permanence;"* and to avoid this danger he tacitly concurred in the maintenance of the apprenticeship system, being at that time probably but partially acquainted with its attendant evils. So unsatisfactory and contradictory was the evidence adduced before the committee of 1836, that it excited a strong desire for more conclusive information among the Society of Friends, and Joseph Sturge, John Scoble, and William Harvey, determined to proceed to the West Indies, and investigate for themselves the actual condition of the negro population. On their return to England, they were examined before the House of Commons committee, and presented a large but well-digested mass of evidence, abundantly proving the manifold cruelties and abuses of the existing system, derived from personal observation, from the testimony of white men, and from the most trustworthy of the apprentices themselves. Mr. Burge,† the agent for Jamaica, who was present during the examination, objected to the publication of the evidence, as calculated to bring discredit on the character of the planters, and suggested that he should be permitted to communicate to the parties implicated the communications made with regard to them. This extraordinary request was granted, and a copy of the evidence in question was despatched to what was termed the Committee of Correspondence; by which body it was kept, to be referred to the House of Assembly, and by them returned *unopened*, a clear indication of the unwillingness of the planters to expose themselves to the public condemnation likely to result from an attempt to rebut charges of whose general correctness they were doubtless well assured.

Respecting the information received in 1837, the committee made no remark, beyond calling attention to the jails, hospitals, &c.; the evils pointed out by them in 1836 were classed under seven heads, viz. :—

* Letter to Macaulay, see *Buxton's Memoirs*, p. 361.

† William Burge was a distinguished member of the English Bar, and for many years attorney-general of Jamaica. On his return to England he was provided with a seat in parliament by the Jamaica proprietors, and became the agent for the island with a salary of more than £1,500 a-year. As a defender of slavery, he was active and unscrupulous; and through his instrumentality the

"1st. The want of reciprocity in the amount and application of the penalties inflicted by the authority of the special magistrates, on managers and on apprentices." This great injustice had been early commented on by Lord Stanley, who, in a despatch dated 20th of February, 1834, pointed out that since the act provided that the apprentice should compensate by labour the loss which his employer might sustain from his ill-conduct, it was but right that a clause should be introduced empowering the special magistrate, in the event of the opposite case occurring, to compensate the apprentice out of the fine to be levied from his employer, instead of passing the whole sum into the island treasury. No such proviso, however, was introduced into the bill, and even the governor, from some inexplicable cause, appears to have acquiesced in the disregard shown by the Assembly to Lord Stanley's suggestions, and to the common principles of justice. Thus, while the law gave the master a direct interest in convicting his negroes of crime, by affixing a penalty which insured him their labour without payment, for a variety of offences, some of which did not in the smallest degree trench upon his interests, it did not recognise the right of the negro to compensation even for severe personal injury, and decreed in the most aggravated case no greater penalty than £3 sterling. While the punishment to be inflicted on the employers was thus kept within very narrow bounds, no similar care was manifested for the apprentices; they might be mulcted of their time to any extent the special magistrate might see fit; sometimes they were compelled to pay back the time lost to their masters during their confinement in the workhouse, and in others compelled to forfeit so many days as to be reduced to the verge of starvation, from inability to cultivate their provision grounds.

"2nd. The defective constitution of the tribunal for the valuation of apprentices applying to purchase their freedom." The unjust mode of appraisement enjoined by the Jamaica Act, rendered the compulsory manumission clause of the Imperial Act almost nugatory. For instance, the appraisers were, one special, and two local magistrates, the latter being of course directly interested in keeping up the value of apprenticed labour; and there being no specific rule or principle whatever laid down, but in this, as in other equally important cases, everything being left to the judgment, discretion, and integrity of the magistrates, the natural result was, that the appraisements afforded specimens of every degree of injustice, fair and honest ones being the rare exceptions. Dr. Madden states—"about eighty apprentices have obtained their freedom before me, either by valuation or mutual agreement; and the average valuation has been £25 (currency). In one instance, a tradesman was valued at £80, in the others it varied from £16 to £35." (Vol. ii., p. 217.) There were cases in which he allowed as much as £80; in some he would not agree to the inordinate amount fixed by his colleagues, consequently, the appraisement remained incomplete, and the negro could not buy his freedom. The conduct of Dr. Madden is by no means to be taken as a sample of the spirit which actuated the ministry were turned out in 1839 on the Jamaica Constitution Suspension Bill. His occupation ceased on the termination of that modification of slavery, the apprenticeship system, and he received a lucrative appointment as a commissioner of the bankruptcy court at Leeds; there he obtained money on false pretences, forfeited his situation, and died in prison a bankrupt and a criminal.

‡ The coopers, smiths, &c., on estates are so called.

majority of the special magistrates, as but very few long persisted in an impartial discharge of their arduous and ill-remunerated duties. Few cared to offend the planters and overseers, on whose hospitality in a country devoid of inns, or other accommodation for temporary residents, they were almost wholly dependent; and of those few some resigned, and others fell victims to the change of climate, coupled with the incessant fatigue and harassing anxiety to which they were subjected. Their places were supplied by the governor, as he best could, from persons then resident in the island; and the result was, the formation of a tribunal in which the sympathies and interests of the judges were alike enlisted on the stronger side. The marketable value of the apprenticeship was not taken into consideration; the chief evidence received by the magistrates, one of whom was appointed by the owner himself, and the third by the joint desire of the other two, generally related to the daily or yearly value of the negro's services, which being multiplied by the remaining term of apprenticeship, with one-third generally, but not always, deducted for the contingencies of life and health, formed the amount of the valuation. When the three magistrates differed in their estimates, it was customary to add the amounts together, and take an average of the total sum as the value of the apprentice; the contingent loss was likewise considered, which the master might sustain from the difficulty of replacing the labourer, as also the profit he might have gained by his services.* The whole proceeding was fraught with gross injustice to the negroes; their value was rated at higher prices than while they were slaves for life, and the colonists stood self-convicted of fraud; for, during crop time, extra labour, equivalent to two or three working days, if remunerated at all, would be generally paid by a sum scarcely equal to the sworn value of half a day's toil. Notwithstanding, therefore, the immense sacrifices which the negroes were willing to make for freedom, numbers who were anxious to purchase it, at a fair price, were compelled to remain in bondage; and those who succeeded in effecting their release were crippled in their resources, or involved in debt, from which years of assiduous toil might fail to relieve them.

"3rd. The want of adequate protection to the special magistrates against vexatious prosecutions." Actions of trespass were brought by the planters and overseers against several of the special magistrates who rendered themselves obnoxious by their justice and courage in defending the apprentices,† and the colonial juries inflicted heavy damages for acts performed in their magisterial capacity, and in

strict accordance with their duties. The government eventually indemnified the individuals subjected to such galling and mortifying treatment; but in some instances, in which it was peculiarly to be regretted, suffered some of the most meritorious, Drs. Palmer and Madden, for instance, to be removed at the instigation of the colonists. The case of Dr. Palmer was a very flagrant one. He was appointed by Lord Sligo to succeed a "planter's magistrate" named Jones, who had been living with the overseer of one of the large estates in the parish of St. Thomas in the Vale, and whose habitual intoxication, which eventually destroyed him, rendered him the subservient tool of every overseer in the district, until Rodney Hall, the local work-house, became, from the numerous and severe punishments inflicted there, "like a hell upon earth." The planters did their utmost to exclude Dr. Palmer, by preventing his obtaining a residence in the district; and upon his taking up his abode with his colleague, special justice Harris, who had been permitted to occupy a scarcely habitable building on one of the estates, the attorney belonging thereto issued a peremptory order for its evacuation, and directed the overseer to have the roof stripped off by a gang of negroes, as a means of completing this summary ejectment. The new special magistrate being undeterred by this violence, and the apprentices flocking to him by hundreds, the planters took the opportunity afforded by the arrival of a new governor, Sir Lionel Smith, in August, 1836, to request his removal on the ground that the apprentices of the parish were in an alarming state of insubordination. A commission of inquiry, composed of two special, and two local magistrates, planters in the neighbouring parish, were appointed to investigate Dr. Palmer's conduct. Their proceedings, as might be expected, were characterized by extreme unfairness, and at their conclusion, a report was drawn up and signed by the commissioners, upon the strength of which the obnoxious magistrate was immediately suspended by the governor from his office. "Every paragraph of that report," Joseph Sturge remarks, "might be quoted by Dr. Palmer in triumphant vindication of his impartial conduct as special magistrate."‡ The reporters declared openly their view of the necessity of a "mutual understanding existing between the special magistrate and those placed in authority over the labourers;" (i.e., between the magistrates and overseers;) and in the concluding paragraph they summed up the errors of Dr. Palmer as having consisted in administering "the abolition law in the spirit of the English Abolition Act," an accusation, the meaning of which they explained more fully by adding, that

* Sturge, writing in 1837, saw, on the 31st of January, "several negroes valued; one family of five persons for £210 (currency), a weakly woman for £50, and a tradesman on a plantation for £122:10s. The owner of this last was a local magistrate, who had been previously sitting at the table, assisting in the other valuations."—(P. 157.) Many of the apprentices purchased the residue of their freedom at the prices of from £150 to £200 (currency), and some even higher.

† As an illustration, the case of Captain Oldrey, R.N., may be cited. This gentleman interfered to protect the unfortunate slaves of a wealthy planter, named Mason, and ineffectually endeavoured to bring him to justice for having caused the destruction of one of his field-apprentices, named Tabitha Hewitt. The old woman being afflicted by a horrible disease, called the yaws, he had driven her off the property to the river side, despite the entreaties of her relatives, whom he had prevented even from carrying her food,

and compelled to leave her to perish. From an apparently intentional mistake in the wording of the indictment (the *one trick* of the Jamaica planters), it was thrown out by the grand jury, and Mason forthwith proceeded to threaten Captain Oldrey with fourteen actions, which were subsequently condensed into three, the chief plea being the alleged injury sustained by the complainant from his apprentices having been summoned to attend a court ordered by the governor himself. Captain Oldrey resigned his position in disgust, as did also a worthy magistrate named Hill. Special justices Colebrook, Connor, and Clinch, who were colleagues of Captain Oldrey, died. Among those who maintained their office, and conscientiously performed its onerous and important duties, "the names of Hill, Palmer, Madden, Daughtrey, Baynes, Grant, Bourne, and Kent," are especially mentioned by the Rev. J. M. Philippo.—(Vide *Jamaica, its Past and Present State*, p. 173.)

‡ *West Indies in 1837*, p. 457.

"in his administration of the law he has adapted it rather to the comprehension of freemen, than to the understanding of apprenticed labourers." While rendering, however, ample justice to the integrity of Dr. Palmer, it seems probable that excited by the gross abuse and even personal violence he received from the planters, and by their cruel treatment of the apprentices, he sometimes allowed his zeal to outrun his discretion, and thus furnished the weapon with which his opponents succeeded in obtaining from Lord Sligo, and afterwards from Sir Lionel Smith, his suspension and eventual dismissal. Nor could Lord Glenelg (the secretary for the colonies), be reasonably expected to persist in reversing a decree the necessity for which had been expressly insisted on by successive governors. The result was most injurious to the apprentices, for the special justices in general followed only too closely the conciliating policy to the planters, enjoined upon them by Sir Lionel Smith, and, after such an example as that of Dr. Palmer, were less than ever inclined to brave the enmity of the planters.

The 4th head under which abuses were noticed by the Parliamentary Committee, comprised the absence of any clause in the Jamaica law to regulate the distribution of the time the apprentice was bound to give his employer, and the withholding of the allowances and indulgences previously general. Both these subjects have before been noticed. The former, being left entirely at the discretion of the overseers, frequently proved a serious grievance to the negroes, for if, instead of adopting the nine hours system, which left them the half of Friday at their own disposal, the overseer insisted upon their working eight hours a-day for four days in the week, and eight and a-half on the fifth, it virtually deprived many of them of half a day's labour on their own ground.* There was a strong inducement to enforce the latter system on the part of the overseer, because the apprentice would sell his extra hour of labour each day for a mere trifle, as the distance from his provision-ground (not the small plot attached to his hut but it remembered) would render it comparatively valueless, whereas the half-day was a real boon to him, not to be lightly parted with. The provision-grounds were from one to fifteen and even twenty miles distant from the huts, but seldom if ever was allowance made for the time spent in going and returning. Yet during illness the apprentices supported themselves, and their young families and aged relatives were also dependant on them for maintenance. Mr. Sturge bears testimony to the fact that their poultry and live-stock were "frequently wantonly destroyed by the overseers," and that the small portion of time left them to procure the necessaries of life was diminished by the frauds practised upon them by their owners, and by the mulcts of the special magistrates. The shameful and openly illegal manner in which they were detained at work beyond the appointed time was notorious, and in 1837 the result of it began to affect not only the negroes themselves, but

* Lord Sligo pithily remarked, that if the overseer wanted to get work done, he chose the nine hours system; if to harass the apprentices, the eight and a-half.

† According to Madden, "the mill is about nine months out of twelve on many plantations."—(Vol. ii., p. 242.)

‡ See Appendix to *West Indies* in 1837.

§ This governor, like his immediate predecessor, expressed in strong terms the result of his personal experience. In a letter to Powell Buxton, he says that before he went to Jamaica, he thought the stories of the cruelties of the slave owners disseminated by the Anti-slavery Society,

also the supplies of the public markets, where scarcity and excessive price began to prevail, the negroes whose surplus produce had formerly supplied them, having been themselves too generally reduced to the extremity of want.

The labour during crop time, which extended on sugar-estates over a period of from three to six months,† necessarily involved an additional amount of exertion, and several properties are instanced by Sturge in which the mule-boys and sugar-boilers worked continuously for six days and nights, snatching a few minutes' rest during the short intervals of their toil, all this extra labour and night-work being sometimes obtained through the coercive power of the special magistrate, without any remuneration, and sometimes extorted for most inadequate payments, under the sanction of real or fictitious contracts.

Without, however, referring to extreme cases, the general practice was sufficiently severe, as the following evidence of an eye-witness will testify:—"On the property of a gentleman, who is one of the most humane owners in the island, I visited [says Dr. Madden] the works during crop time one morning, at a very early hour. The men who were scumming the sugar when I entered, I observed appeared worn out with fatigue and watching. They had then been at work twenty-four hours without intermission, day and night; it was then five o'clock in the morning: they had gone to work at the same hour on the preceding day, and were to continue at labour till seven o'clock in the evening of that day—in all making thirty-eight hours of constant labour. * * * I was told, some of the others who kept spell were for a shorter period: these were the coopers and carpenters; they had only kept up all night, but at sunrise were again expected to be at their ordinary employments."—(Madden, vol. ii., p. 242.)

Under the 5th head, the Committee adverted to the "corporal punishment inflicted on female apprentices," and the barbarous "practice of working females in chains" and penal gangs. Lord Sligo,§ in a speech to the Jamaica House of Assembly, in 1836, thus adverted to the cruelties practised in this respect:—"The whipping of females, you were informed by me officially, was in practice, and I called upon you to make enactments to put an end to conduct so repugnant to humanity, and so contrary to law. So far from passing an act to prevent the recurrence of such cruelty, you have in no way expressed your disapprobation of it. I communicated to you my opinion, and that of the secretary of state, of the injustice of cutting off the hair of females [a most cruel practice in such a climate] in the house of correction, previous to trial. You have paid no attention to the subject."

All this was disregarded, and Mr. Sturge, writing in 1837, declared that females were still flogged upon the treadmill, and that they "were publicly worked in the penal gang, chained to each other, with iron collars on their necks; besides being liable to the punishment of solitary confinement, with an insufficient diet, and to mulcts of time, by which they are "rather a caricature than a faithful representation of what actually did take place," adding, "before, however, I had been very long in Jamaica, I had reason to think that the real state of the case had been far understated, and that I am convinced was the fact. I was an ardent supporter of emancipation before I went out, but after being there for a short time, I was shocked at ever having held different opinions."—(*Memoirs of Sir T. F. Buxton*, by his Son, p. 317.) Lord Sligo confirmed his sentiments by liberating all his apprentices before the act of emancipation was carried.

deprived of the means of providing food for themselves and for their children. All these punishments," he adds, "women in a state of pregnancy, and others with infants at the breast, endure in their full proportion."

The truth was, that everything connected with the condition and management of prisons and hospitals in Jamaica was about as bad as it could be; and both Lord Sligo and Sir Lionel Smith exerted themselves in vain in endeavouring to rouse the House of Assembly to a sense of the necessity of legislating effectually on this matter. According to Mr. James Stephen (generally known as Master Stephen, and father of the present distinguished Sir James Stephen, many years Under Secretary of State for the Colonies), Jamaica holds a fearful pre-eminence, by having been "the first of the British colonies that adopted those terrible slave prisons called workhouses, and the public or parochial slave chains, which thirty years ago (i.e., in 1796) were unknown in the Leeward Islands, and, as I believe, in all the Windward Islands." Mr. Dallas, a pro-slavery writer, in his *Journey in the West Indies*, states that in the "King's Chain" twenty to a hundred persons, without regard to age or sex, would be linked together; the chain being fixed about the leader, was carried round the bodies of his followers, and secured to each by a padlock. At the commencement of the day a brisk walk was kept up by means of the never-ceasing activity of the cattle-whip, unsparingly used by the drivers, but at length the feeble began to add the weight of their exhausted limbs to the stronger, and the stronger to tread upon the heels of the weaker, until even the stimulus of the whip failing, the exhausted sufferers were driven back to their loathsome cells. To this galling and degrading torture masters might expose their slaves for the most trivial offences.* The tread-wheels used in the workhouses were very different to those employed in England, and from their construction, incapable of their legitimate object, the enforcement of a species of severe labour. The permanent injuries inflicted by them were frequent, as may be imagined from the following description of the one used at St. Ann's Bay in 1837. "The tread-mill at this workhouse is a cylinder, about eight feet in diameter, with broad steps. The hand-rail above it has eight pairs of straps fastened to it, with which the wrists of the prisoners are always secured. The board under the rail descends perpendicularly, and not in a sloping direction, towards the mill, and does not, therefore, afford them the slightest protection when they lose the steps and hang by the wrists. In that case, the sharp steps of the mill, which project twelve or fifteen inches from the cylinder, must revolve against the bodies and legs of the prisoners with torturing effect," especially against the breasts of the women, who were exposed to this torture even while in a state of pregnancy, or still nursing their infants. Every step was stained with blood, both recent and old; even the sand on the floor was thickly sprinkled with it. If the prisoners could not keep step, as was almost invariably the case when put upon it for the first time, they were suffered to hang, battered by the wheel, until the allotted time, generally about fifteen minutes,

* Before the passing of the Emancipation Act, the power given to masters of sending their slaves to be worked with the public convicts, was not only used for oppressive and vindictive purposes, "but it produced also," says Mr. Stephen, "fraudulent abuses upon sordid and avaricious principles, which a person unacquainted with the feelings generated by colonial slavery would hardly anticipate, or,

had expired. On the morning the workhouse was visited by Sturge, a small weakly old woman was put upon the wheel, and being unable to "dance," as the cruel exercise was tauntingly called, was so much injured that she could not be put upon the mill the next morning; but this did not prevent her from being sent to work in the penal gang, in the usual livery of chains and an iron collar. "Several other women," says Sturge, "also showed us the severe injuries which they had received on the tread-mill. Two of them had infants in arms, of two or three months old, and had been sent, as the driver expressed it, 'for not being able to please their overseer.' One old man was a pitiable object, both his body and limbs being swelled by dropsy to a great size. He had been apprehended as a runaway. When asked whether the prisoners on the wheel were flogged, the deputy supervisor replied that it was necessary "to touch them up, women as well as men," the whip employed being a cat composed of nine lashes of knotted small cord.† The driver of the penal gang, superintendent of the tread-mill, and other similar officers, in this, as well as in the other workhouses, were taken out of the gang of life-convicts, and to these petty tyrants was frequently entrusted the administration of the magistrates' careless sentences of "a few spells on the tread-mill." Besides the time of the punishment, its intensity might generally be increased at any moment beyond endurance by the caprice of the driver, who, even before *English witnesses, not planters*, would sometimes relax his hold for a few seconds, so as to make it revolve with such rapidity as to throw all the prisoners off.

That no repellant feature should be wanting in such scenes as this, it should be added, that mixed gangs of men and women were frequently placed upon the mill, and being provided with no proper dress, were liable to indecent exposure. Twice a-day this torture was repeated. After the first spell they were sent out in penal gangs, chained together in pairs, two men or two women, but, in some instances, even respectable married women, the mothers of many children, were chained to men, and all sent together to labour in the fields; and when night came, men and women were often locked up together indiscriminately, and in some of the workhouses, Rodney Hall, for instance, the insecure state of the building was considered to necessitate fastening the legs of the prisoners to an iron staple at night, on the inclined board on which they slept.

While nursing mothers and aged men, girls and boys, were subjected to the severest cruelties, it may be readily supposed, that the adult males did not escape more easily.

Of the general treatment of the "apprenticed labourers" in Jamaica, it may afford some idea to cite the following statement from the Government returns. Out of 260,000 apprentices, the number punished by the cat, the tread-wheel, &c., in twenty months was:—males, 35,536; females, 22,881 = 58,417; the number flogged was 10,770; and the total number of lashes inflicted was 242,325.

Thus, more than a fifth part of the entire number had, in less than two years of apprenticeship, been punished without good authority, believe. Planters whose slaves, from sickness or infirmity, had become expensive incumbrances, often sent them to the king's chain to be punished as delinquents, merely to deliver themselves from the charge of their support, and of their medical relief."—(*Slavery in the British West Indies Delineated*, vol. i., p. 354.)

† Sturge, p. 188.

ished by the special magistrates, the great majority for offences stated in the official reports under the two favourite heads of "neglect of duty," and "disobedience."* As to the reports themselves, there appears to be only too much reason for remembering, in this respect, the declaration made to the committee by Mr. Beaumont, once the most popular member of the House of Assembly, but discarded thence for daring to propose the abolition of the flogging of women; that he knew "enough of the mode of making up returns in the island of Jamaica to place very little reliance upon any such returns."† Two magistrates were actually dismissed by Sir Lionel Smith for having reported only the legal part of their sentences, omitting to mention the riveted iron collars, used by their authority. As has been before stated, great difficulty was found in filling up the vacancies that occurred among the magistracy, since very few would accept the stipend who were really adapted for the duties of the office; and consequently men were appointed who, from family connexion, personal character or previous habits of life, were quite unfit to be entrusted with the great and almost irresponsible power vested in the special magistrates. Indeed, the very fact that to several, remarkable for their cruelty and injustice towards the apprentices, and removed from their situation expressly on that account by the governor, the planters offered votes of thanks, accompanied, in some instances, by costly pieces of plate,‡ shows clearly enough the one-sided nature of the arrangement. Among the smaller objections noticeable in the appointments of special justices may be cited the fact, that many of them were half-pay officers in the army or navy, unhappily habituated to witness the brutal punishment of flogging; yet some of these were nevertheless among the efficient magistrates. In addition to the sentences recorded, and *not recorded*, against the apprentices, the overseers, on many estates, continued to inflict private punishments at their own will, as the dark holes and dungeons on many estates could testify; in fact, the so-called hospitals, in which the sick were locked up until dead or convalescent, notwithstanding the risk of contagion, were often used as prisons. It was in attempting to examine a horrible den of this kind on Reeces Plantation,§ by the express command of Lord Sligo, that Dr. Palmer, and other special magistrates, were violently assaulted by the proprietor (named Giles), his wife, and some of his friends. Bills of indictment were preferred in the Supreme Court against Giles for obstructing the magistrates in the execution of their duty; but, as may be supposed, the grand jury ignored the bills, whereupon Giles in his turn served the magistrates with notices of action for trespass. Mr. Harvey, more fortunate than the special magistrates, succeeded in exploring this

celebrated place of confinement, which the proprietor told him he had made many years ago to punish a woman after whose name he had called it; but the negroes had given it the more appropriate designation of "the coffin." It was divided from the hospital (a small room without a window, furnished only with an inclined plane of boards, on which the patients slept, and lit and ventilated by means of the holes worn in the locked door) by a small wooden partition, and was not above five feet high, so that no person could stand upright in it, or sit without being wedged, or lie in any other position than on the side; the heat there must have been excessive, and the absence of light total. Such was a sample of one of the worst places of punishment; the best were bad enough; and it is no slight evidence of the extent to which private and illegal punishments were carried, even during the apprenticeship system, that at Montpelier, the estate of one of the largest and most humane proprietors (Lord Seaford), whom anxiety respecting the condition of his slaves had led to pay more than one visit to Jamaica; a new and substantial stone dungeon, consisting, besides a narrow passage, of two arched cells, about twelve feet by nine, and eight or nine feet high, perfectly dark, was actually erected at a time when penal confinement on estates ought to have wholly ceased; nor was it untenanted, for, says Mr. Sturge, "one of the attorneys, without any magistrate's order, has twice directed to be locked up in it thirteen old women who refused to cut grass on their own days [i.e. to work for their master in their private time]. They were kept, during their confinement, on a short allowance of bread and water."—(*West Indies* in 1837, p. 211). I have no space to enter into the detail of the numerous cases in which unprincipled proprietors contrived to make special magistrates the mere tools of their cruel purposes; but it was certainly not without some truth, that an overseer sarcastically declared, "instead of a black driver we have got a white one, and he answers the purpose just as well."—(Parl. Papers, Commons' Committee, 1836, p. 354).

The 6th head laid down in the Report, referred to the defective state of the marriage laws, which confined to clergymen of the Church of England the power of solemnizing the marriage ceremony. This grievance was soon removed, and unions solemnized by ministers of various denominations were duly legalized.

The 7th and last head had regard to the existing "condition of that part of the negro population which was under the age of six years on the 1st of August, 1834," and were consequently free. "It appears," says the report, "that there exists a general disinclination on the part of the parents of those children to become apprentices (a circumstance

their time, up to the end of the apprenticeship.—(*Vide Operation of the Apprenticeship System in the British Colonies*, by the Rev. W. Bevan; p. 33.)

† Mr. Beaumont further specifically declared, when his opinion was asked by Sir George Grey respecting the number of lashes inflicted monthly during the apprenticeship system, that, looking at the character of the greater number of special magistrates, he did not place the slightest reliance upon any return made by them, adding, and "I am ready to name the magistrates, and give my reasons."—(Question, 4,030.) It seems strange that he was not pressed to do so, as the conduct of these functionaries was beyond doubt a feature of vast importance in the working of the apprenticeship system.

‡ Parl. Papers, Commons' Committee, 1836; p. 355.

§ In the parish of St. Thomas-in-the-Vale.

* Mr. Sturge remarked, with regard to the Local Abolition Act, that such were the number and severity of its penal enactments, for the offences of the apprentices, both circumstantially defined and of a vague and general character, that it was probably the most highly penal law that had ever disfigured the statute-book of the colony. Thus under its provisions (see p. 44), a gang convicted of the vague charge of indolence, or neglect, or improper performance of work, might each and all be sentenced to fifty lashes if males, and if females to three months' imprisonment and hard labour, or twenty days' solitary confinement; and then, in addition to this, to labour for any number of hours or days, in their own time, for the benefit of the employer, as the special justice might think proper, not exceeding fifteen hours in any one week. There was no preventive against taking from the whole gang the *entire* of

which your committee cannot but consider indicative of the just value which the negroes attach to freedom; that the means of education are provided for them in a most inadequate manner, and the consequence is, that they are growing up, for the most part, in ignorance and idleness." The committee consequently recommended that the legislature of Jamaica should take immediate means for the better encouragement of schools, which, they proceed to state, independently of the peculiar case of the children referred to, were "exceedingly wanted for the general use of the negro community." It will be remembered that by the Act of Abolition, all children under six years of age, though declared unconditionally free, were left liable (cxlii.) in case of destitution, to be apprenticed* by the special magistrate to the owner of their parents till twenty-one years of age. This was undoubtedly one of the most dangerous parts of the act, as such an apprenticeship of the rising generation involved the indefinite continuance of a system which was in fact only a modified form of slavery. Through the constancy and resolution of the parents, the most determined and insidious attempts to procure the apprenticeship of the children were defeated, but at an expense of infant life, and of an amount of suffering to the mothers, which may be faintly, and only faintly guessed at by recollecting that the free children were wholly dependent on their mothers for support; that the latter, inclusive of the frauds of overseers, and the mulcts of special magistrates, had only one day and a-half at the very best to cultivate ground for this purpose, and that every birth rendered their tasks heavier, and lessened their ability of providing for their increased offspring, and escaping punishment themselves.

At the commencement of the apprenticeship, efforts had been made both by the government and public of the United Kingdom for the instruction of the rising free black population. The funds of the Mico† charity were appropriated to educational purposes, and clergymen and missionaries were sent out by the Church of England, the Wesleyan, Baptist, and London Societies, to strengthen those already in the field. But while the galling yoke of apprenticeship remained, little could be done, beyond comforting the negroes, and urging upon them unweariedly to endure to the end; and this was the more easily done, because the apprentices, with the gladdening prospect of liberty, full, free, and unlimited before them, would sooner have died under the present system, than reverted to hereditary and perpetual slavery, even under the gentlest and most modified form.‡

Both Lord Sligo and Sir Lionel Smith had exerted themselves to induce the House of Assembly to enact efficient measures for the protection and instruction of the children of apprentices, but had been met by continued and vexatious opposition. In an address to the House of Assembly, in February, 1836, Lord Sligo, while enumerating the instances in which the suggestions of the home government and his own views had been utterly

disregarded, remarked—"I sent you down no less than four messages on the subject of an extended system of education; as no measure on the subject has emanated from the House, can I do otherwise than conclude that you are indifferent to it? I informed you that £25,000 sterling had been voted for the support of education in the colonies, with the promise of still further assistance being afforded; and you have taken no steps to make it available. I transmitted to you despatches of the Secretary of State, recommending the repeal of the 33rd canon, with a view to increase religious instruction in the colony. You have not attended to the recommendation."

It would appear from this and other evidence that the more unruly members of the House of Assembly were inclined to resume the tone and bearing so firmly though temperately checked by the Earl of Mulgrave.

Thus, in June, 1834, the House, in an address to the governor, openly declared the regret with which they had passed the Abolition Bill, and spoke of being "unaided by the mother-country;" this, Lord Sligo in reply, stated that he could not understand; he reminded them of the £20,000,000 granted by England to compensate the colonies on the change of system, and of "her never-failing replies to the applications made to her in all cases of real emergency, in which Jamaica had more largely participated than any other colony;" adding, that within the previous three years, £300,000 had been forwarded as a loan to individuals who had suffered in the late rebellion, in addition to which, within a few days the island had received another loan of £200,000, at a reduced rate of interest, and payable at a protracted period. These and other facts incontestably proved that Jamaica had largely benefited by the fostering attention of the home government.

This reproof did not suffice to quiet the turbulence of the Assembly, who it would appear felt aggrieved by a share in the £20,000,000 having been extended to their fellow-subjects, the slave-holders in the Cape of Good Hope, Mauritius, &c., and declared later in the same month in one of their "humble memorials"—"Had we anticipated that the miserable reward of our submission [to the emancipation act of the British parliament] would be in the chief part withheld from us to enrich the foreign settlements conquered from the enemy, we would have rejected the unworthy compromise, and incurred all the evils which the authority and anger of the mother-country might have inflicted, protesting against her tyranny before the world, and reserving our rights [the perpetuation of slavery] to be vindicated and resumed at some happier moment."

The above remarks of the Assembly were doubly ungracious, as great care had been taken in the distribution of the contribution money; and indeed the clauses relating thereto were by far the most accurately worded portion of the Imperial Abolition Act. They had been carried into full effect. The whole stipulated sum of £20,000,000 sterling had been

* It is scarcely necessary to remark, that this term bore no relation whatever to its application in England.

† A Lady Mico, who died in 1710, left a sum of money to her daughter, on condition of her not marrying a specified individual, in which case it was to be devoted to the redemption of white slaves in Barbary. The daughter married, and forfeited the money, which accumulated until, in 1827 (when no Christian slaves remained in Barbary), it amounted to £110,000. This sum, by the exertions of

Lushington, Buxton, Macaulay, and others, was applied to the education of the negroes in the West Indies.

‡ The apprentices on the Trelawney estate "said they heard that some of the people on other estates were worse off than before the apprenticeship." For themselves, in answer to an inquiry, they said, "How can we like the old system? We are well satisfied with the present when we think when the whole come."—(*West Indies in 1837*. Appendix, p. 462.)

paid, with accumulated interest, and free of all charges; no single slave-owner could complain of having been defrauded of his share by the British government, though some of the poorer and more ignorant coloured proprietors, duped by the reports circulated by their fellow colonists, were (as in the Cape of Good Hope, see African Division, p. 90,) induced to sell their claims for less than half their value.

The following table shows the apportionment of the compensation-money awarded to the Jamaicans:—

Divisions and Classes.	Number of Slaves.	Compensation per head.	Value per Class. ¹
<i>Predial attached—</i>			
Head People . .	14,043	£31 0 6	£435,727
Tradesmen . .	11,244	31 5 11	351,902
Inferior ditto . .	2,635	20 13 9	54,514
Field Labourers .	107,053	26 12 2	2,848,836
Inferior ditto . .	63,923	12 16 2	818,946
Total . .	198,898	—	4,509,927
<i>Predial unattached—</i>			
Head People . .	1,329	31 0 10	41,254
Tradesmen . .	1,133	31 11 2	35,759
Inferior ditto . .	322	20 17 11	6,728
Field Labourers .	11,670	26 11 6	310,130
Inferior ditto . .	5,104	13 4 6	67,452
Total . .	19,558	—	461,324
<i>Non-predial—</i>			
Head People . .	1,759	30 19 2	54,455
Inferior Tradesmen	780	20 11 5	16,045
Head People, employed on wharfs, shipping, &c. .	1,428	30 5 5	43,229
Inferior People do.	901	22 13 8	20,440
Head Domestic Servants . .	12,883	29 3 1	375,619
Inferior Domestic	19,083	19 10 10	372,933
Total . .	36,834	—	882,724
Children under six years of age . .	39,013	5 9 10	214,368
Aged, diseased, &c.	15,692	4 6 8	67,998
Runaways . . .	1,075	—	13,593
Grand total . .	311,070	—	6,149,934

Notes.—Number of claims having reference to each division: predial attached, 5,562; predial unattached, 1,798; non-predial, 9,075. The average compensation awarded was £19 15s 4d. for each slave.—(Parl. Papers, Lords, March, 1838.) ¹ Shillings and pence omitted.

Sir Lionel Smith, on succeeding Lord Sligo, in September, 1836, openly expressed and markedly evinced his desire to conciliate and soothe the planters as a means of obtaining better treatment for the apprentices, and in consequence his early intercourse with the Assembly went on smoothly enough as far as words were concerned, but the numerous much needed measures of reform seemed farther off than ever; on perceiving which the governor changed his tone, and lost his popularity.

This state of things did not long continue; great interest had been excited throughout the United Kingdom by the statements made before the committee of 1836, and few that examined them with common attention, could fail to agree with the exa-

miners, when they stated in one of the concluding paragraphs of their report, that abundant proofs had been adduced of the general good conduct of the apprentices, and of their willingness to work whenever they were fairly and considerably treated by their employers; they moreover held it to be fully proved, that the labour voluntarily performed by the negro was more effective than that obtained from him either formerly as a slave, or during the working hours of the apprenticeship system. The effect created by this report was heightened by the publication by Messrs. Sturge, Harvey, Lloyd, and Scoble, of the results of their investigations in the West Indies, and of several atrocious cases of cruelty, in particular that of James Williams, which forcibly demonstrated the inefficiency of the Jamaica laws to protect the apprentices, or to correct the abuses of the prison and hospital systems.

The testimony of this unfortunate negro,* did much to confirm the opinion that many of the overseers, and even proprietors, had entered upon the apprenticeship scheme, with a determination to make the most of the compulsory labour they still had power to exact, and to use up, so to speak, the strength of the negroes as much as possible. This, at first sight, would seem to imply an incredible degree of blindness to their own future interests; but, in the first place, it should be remembered that the tendency of all bad passions, and especially those fostered by the indulgence of tyranny and licentiousness, is to produce a species of infatuation which utterly excludes the light of reason or reflection; and, in the second, many of the overseers probably concluded that the negroes, disgusted with long years of toil and cruelty, would never be induced to labour voluntarily. Let the motives, however, have been what they might, it is certain that the House of Assembly, by its enactments, and the colonists (with

* The history of James Williams came to the knowledge of Joseph Sturge while visiting Jamaica; and the lad, who was only eighteen years of age, having obtained his manumission, by the payment of £46 for the seventeen months residue of his apprenticeship, through the kindness of the Rev. Mr. Clarke, who advanced the money, Mr. Sturge brought the youth to England, where his statements of what he and others had endured, through the injustice of various special magistrates, of drunken, tyrannical, or venal character, at the instigation of masters and overseers, were published in the form of a narrative taken down from the lips of the sufferer. Williams had been flogged seven times during the working of the apprenticeship system, his lacerated flesh being not even allowed to heal, before it was again torn by fresh lashes, and the torture inflicted was so great as to seem likely to carry out his master's diabolical threat, that he was ready to bet £1,000 he would make an end of him. "What make me so much afraid of is," said Williams, "that he did kill a man; he got him ordered a severe flogging, and because the constable did not flog him enough, he ordered the policeman to take the whip. The man coughed blood. He went afterwards to Brown's Town to complain to Captain Dillon, and died in the town; "and the master, (named Senior,) magistrates, and other accessories to his violent death, remained unpunished. The only reason assigned for the furious malice by which Senior was stimulated, was that when the new law came in, in the words of Williams, "the master take spite, and do all he can to hurt them before the free come. I have heard my master say, 'Those English devils say, we to be free, but if we is to be free, he will pretty well weaken we before the six years and the four years are done; we shall be no use to ourselves afterwards.'" A copy of the narrative was transmitted to the Colonial Office, and being there deemed of such

some bright exceptions, such as Alexandro Bravo,* for instance,) by their perverse conduct, contrived to render the whole scheme worse than abortive. The British public became roused to an almost unexampled state of excitement by the bad faith kept with them by the people of some of the West Indian colonies, but especially of those of Jamaica; public meetings were held, and within the space of about six months, deputations, varying in number from 140 to 600, assembled in London from different parts of the three kingdoms. Downing-Street and Westminster Hall were besieged, and petitions, signed by upwards of one million of British subjects (including 450,000 English, 135,000 Scotch, and above 77,000 Irish females), imperatively demanded the abolition of the system on the ground of a violation of the contract on the part of the planters. A large portion of the London press, the different religious journals, and the great majority of the provincial papers, zealously espoused the same cause.

Early in the year 1838, active discussions took place in both houses of parliament. On the 20th of February, Lord Brougham, who had from the first opposed the apprenticeship system, set forth in one of his most brilliant speeches its practical working, as tending to alienate yet more employers and employed, and argued for its immediate abolition, on the plea that the British public had already paid in advance £20,000,000 to compensate the planters for a loss which his lordship maintained was wholly imaginary, inasmuch as wherever the experiment of free negro labour was fairly tried, it proved more remunerative than slave labour.

On the 30th of March, 1838, Sir George Strickland moved the immediate abolition of negro apprenticeship in the West Indies, but was opposed by H. M. ministers on the ground that such a procedure would be a violation of the compact entered into with the slave proprietors, and the motion was defeated by a majority of 64 over a minority of 215.

The day following the division, Lord Sligo, in his capacity of a large Jamaica proprietor, communicated to the House of Assembly a plain statement of the strong feeling which predominated in the British Senate and throughout the country, declaring, that

importance as to demand special investigation, it was immediately sent out to the governor, who appointed a commission of inquiry, composed of a special magistrate and a local justice, who reported, in October, 1837, that it had become their duty to state, "that the allegations of James William's 'narrative' have received few and inconsiderable contradictions, whilst every material fact has been supported and corroborated by an almost unbroken chain of convincing testimony." They added, that "the House of Correction in St. Ann's parish had been, until recently, a place of licentiousness and cruelty," and that "the tread-mill has been, from the time of its erection, and still is an instrument of torture, rather than of just and salutary punishment." The evidence adduced before the commissioners was not published among the Parliamentary Papers, possibly from the revolting nature of its details, and no inquiry was instituted into the deaths alleged to have been directly caused by barbarous and unjust punishments. The whole matter was much canvassed in England, the anti-slavery party holding forth the narrative of James Williams as an example of the cruelties to which the whole of the apprentices were liable; the pro-slavery party declaring it to be a single instance, to be viewed only in an exceptional light. Of the two extremes, the latter was much the farther from the truth, because the investigations pursued with regard to Williams proved beyond dispute the complete contempt of justice

in the debate of the previous night not one voice had been lifted up in their favour, but that their condemnation had gone so far, that Sir Edward Sugden, though opposed to the abolition as a general measure, had said that a complete case had been made out against Jamaica, and that though none of the other colonies deserved it, Jamaica ought undoubtedly to lose the last two years of the apprenticeship. His lordship warned them not to trust to the fallacious statements or rely upon the injudicious advice which they had been so long in the habit of receiving, and by following had been brought to their present condition; instead therefore of vainly attempting to prolong the existing system, he advised them at once to abolish it by their own act and deed, and thus avoid the unpleasant position they would be placed in by the Bill to amend the abolition law proposed to parliament by Lord Glenelg, on the express ground of the existence of very serious grievances in the West Indies which the colonial legislatures, and especially that of Jamaica, contumaciously refused to correct by adequate measures.†

On the 11th of April, the Imperial Parliament passed an Act for the purpose of remedying the defects in the Jamaica Abolition Act, and preventing the recurrence of the abuses pointed out by the Committee of 1836. Many of its clauses were calculated to materially ameliorate the condition of the apprentices, and were so clearly and decisively worded as almost to defy misconstruction, even by a Jamaica assembly. One of them especially directed the classification of the apprentices by a complete and correct registration. This measure was most necessary, for great numbers of the apprentices, who properly came under the denomination of non-predials, had been made predials by their masters, for the sake of wrongfully retaining their services six years instead of four, and domestic servants had been turned into the field for the same end, as also to increase the proprietors' claims for compensation. In some parts of the island frauds of this kind had been carried to a great extent; thus, a local magistrate of Vere, declared, that in that important and populous parish, the class of *non-predials* had been abolished by the planters.‡

and humane feeling openly manifested in the important parish of St. Ann, and subsequent official inquiries showed that other parts of the island were scarcely inferior to this notorious locality, in the disgraceful condition of their houses of correction, and hot-houses (hospitals), or in the oppressive character of the white inhabitants. In fact, Mr. Senior was an illustration of a numerous class of men, who would, probably, have passed what is commonly designated a "respectable" life, had not their evil passions been fostered by the temptations offered by the unholy power over their fellows, which no Christian government can be justified in allowing its subjects to exercise.

* This gentleman being one of the most extensive and respected proprietors in the island, a *custos* and member of Assembly, his views on matters of internal policy could not but have great weight. He considered slave-labour, of all others, the most uneconomical and expensive, and was persuaded that twenty free men were equal to 100 slaves. Under a slave system agricultural operations could not be carried on but with immense masses of men, which he believed would not be required, even in West India cultivation, when placed on a proper footing. — (*West Indies in 1837*, p. 168).

† *Vide* a pamphlet on the Abolition of the Apprenticeship, p. 13. Published by Oliphant and Sons, Edinburgh, supposed to have been written by Sir George Stephen.

‡ *West Indies in 1837*, p. 322.

On the 22nd of May,* Sir Eardley Wilmot, M.P., carried a motion for immediate abolition, by a majority of three; but this vote was neutralised by the interposition of H.M. ministers, who still shrank from the forcible abbreviation of the apprenticeship; and Sir George Grey, a few days later, caused a resolution to be passed by the House of Commons, declaring it inexpedient to adopt any procedure for the purpose of giving effect to the resolution of the 22nd, whereupon Lord Glenelg's measure was again reverted to.

As might be expected, the British re-amendment of the Jamaica "Amended Abolition Act," excited great indignation; the Assembly protested against it in no measured terms, and stigmatised the proclamation which declared the said act in force in the island, as illegal, unconstitutional, and utterly subversive of all their privileges. Not content with this vent for their excited feelings, they proceeded to calumniate and vilify the mother country, not only for her conduct towards Jamaica and other colonies, but also in matters respecting the internal administration of the United Kingdom, with which the Assembly could have no possible concern. Nothing could well exceed the bitterness of their "Protest," which they crowded with sneers and reproaches in default of more convincing arguments. It chanced, that about this time a small gang of British ruffians had been detected in the commission of several horrible murders, seizing and silencing their victims, by means of pitch-plasters suddenly applied to the mouths of their unsuspecting victims. It was just one of those moral epidemics which occasionally startle metropolitan communities; it excited, as may be remembered by many readers, general and unqualified abhorrence, and, in some minds, excessive alarm; and, perhaps, had the good effect of showing sin in so hideous and hateful a form as to offer a public and terrible warning. Yet the representatives of an island, where men, women, and children had been again and again, within the last few years, and even months, destroyed with impunity; where juries, it was notorious, would almost, without exception, commit perjury sooner than pass a just

verdict on a white manslayer, did not hesitate to express their sentiments when quite uncalled for, and taunted the mother country with the crimes of a few wretched men, whose lives had paid the earthly penalty of their crimes, and whose memories were held by the British public in the deepest detestation. The sufferings almost inevitably connected with a surplus population, were likewise adduced in the same taunting style of recrimination, by the Assembly, who seemed to think that, because the imperial government could not by ceaseless efforts succeed in banishing sin and suffering from the United Kingdom, therefore it had no right to interfere for the protection of the oppressed coloured subjects of the sovereign, or even to compel the fulfilment of the conditions of a compact into which the people of Great Britain had entered, influenced, perhaps, by the very purest and most Christian motives which ever prompted a great national act. What English heart is there so cold as not to sympathize with the feeling that prompted the dying Wilberforce to exclaim—"Thank God that I have lived to witness the day in which England is ready to give twenty million sterling, for the abolition of slavery."

Yet the Jamaica Assembly hesitated not to issue a protest, filled with the bitterest invective, against a nation, of whose glory they might well be proud, and whose generosity they had repeatedly experienced. The following paragraph shows the petulant and wayward tone assumed by the Assembly, and is interesting as illustrating how closely the pro-slavery arguments used by British planters in 1838, resemble those urged by American slaveholders in 1853.

After alluding to Ireland, that unhappy land of absenteeism, which has long been a reproach to England and a thorn in the side of her statesmen, and boasting that their labourers and artisans never combined as those of Dublin and Glasgow had recently done to raise wages (quite forgetting that the insurrection of 1832 had, by their own accounts, been rather a remarkable instance of a "strike" for wages), they proceeded to declare that "the horrible trad^e of Burke† (and we fear of many more), which has

* The venerable Zachary Macaulay died just before this glorious consummation of his life-long labours.

† The annals of Jamaica contain quite as horrible a page as that occupied by the murders of Burke and Hare in the Newgate Calendar, and it would be equally unjust to cite it as an illustration of national instead of individual depravity. It is cruelty and oppression tolerated, if not sanctioned, by law and public opinion, that degrades a people,—not startling cases, which by the penalty inflicted, and the horror excited, are incontestably shown to be detested by the vast majority of the community. Therefore, the crimes of a wretch like Hutchinson, inflict no stain upon the character of the white population towards each other, though they, perhaps, afford indirect evidence of some of the many evil tendencies and opportunities of slavery, since such a career would have been next to impossible in any but a slave colony. Towards the close of the last century a man named Hutchinson lived in the parish of St. Ann, who built for himself a small and lonely dwelling with a turret, which he (being a Scotchman by birth) designated by the name of Edinburgh Castle. It stood in a close and wood-bound vale called Pedro, situated nearly in the centre of the island (see map), and occupied a pass leading from the southern to the northern coast, the defile being scarcely 100 yards across, and the mountains rising on either side almost to an Alpine height. It was not want that tempted the master of this lonely spot to make it the scene of many a horrible butchery, for he possessed a small stock of cattle, and some slaves, recently imported from Africa, who appear to have implicitly obeyed his

sanguinary commands. The solitary traveller was aimed at from a loop-hole, under which he was compelled to pass, or sometimes would be received into the murderous dwelling, nursed if sick, or fed if hungry, and then when about to depart recruited and refreshed, was suddenly assassinated. The mangled carcasses were thrown down one of the deep and hollow drains peculiar to mountainous countries of volcanic origin, whose mouths descending perpendicularly, form a channel for the torrents which periodically fall to the level of the ocean. In spite of the inquiries suggested by the disappearance of numerous individuals, Hutchinson remained for many years unsuspected. At length, the manager of a property in the same vale, named Callendar, came to complain about the trespasses of the cattle which strayed from the Castle; he was hospitably received, the visit was returned, and there the matter apparently ended; but a few days later a sick traveller, confined to bed in the turret above, saw Callendar, while riding past, shot dead by a bullet discharged from behind a thick-set hedge by the road-side. The witness of this foul murder deeming himself an intended victim, contrived to effect his escape, and gave the alarm. The assassin fled, and the premises being examined, no less than forty-seven watches were found. The unfathomable charnel-house resorted to by Hutchinson, being pointed out by one of the guilty slaves, the mangled body of the unfortunate Callendar was discovered by the help of a bundle of lighted straw, caught at the depth of many feet below on the point of a projecting rock; but the yawning abyss beneath had more effectually engulphed the previous victims. Hutchinson meanwhile escaped to

given a new word to the English language, was never heard of here; nor have we ever known an instance of parents putting their infant families to death, to save them from the protracted sufferings of starvation [substitute slavery for starvation, and a more fruitful cause would be found for this crime]. It is not in Jamaica that unfortunate mothers outrage nature by the destruction of their new-born offspring, to avoid the persecution of a hard-hearted and destroying morality;* nor is it under our laws that wretches commit suicide to escape the refuge which is provided for worn-out and aged industry. We have no corn laws to add to the wealth of the rich, nor poor laws to imprison, under pretence of maintaining the poor; we cannot, as the English parliament does, boast of a pauper law which has taken millions from the necessities of the destitute, to add to the luxuries of the wealthy.†

Notwithstanding the general violence of their language, the more temperate members of the Assembly were not blind to the probable consequences of the position in which they had placed themselves, and the considerations so forcibly urged upon them by Lord Sligo doubtless had their due weight. Besides this, the example of the neighbouring islands were, as additional weights, thrown into the wavering scale. The legislatures of Montserrat, Nevis, and the Virgin Islands, St. Vincent and Barbadoes, had successively passed acts for the termination of the apprenticeship system on the ensuing 1st of August. Jamaica held out chiefly in the hope of obtaining further compensation, i.e., an increased bribe to perform a clear duty. This expectation was effectually dispelled by Sir Lionel Smith, who, in addressing the local legislature, specially convened in June, 1838, declared that he had been commanded to state that H.M. ministers would not entertain any question of additional compensation. As governor, under existing circumstances, he pronounced it physically impossible to maintain the apprenticeship with any hope of successful agriculture, "since the exaction of coerced labour, always difficult, would in future be in peril of constant comparison with other islands set free, and with those estates in this island made free by individual proprietors." He therefore advised them "to abolish a law which had equally tormented the labourer and disappointed the planter; a law by which man still constrains man in unnatural servitude."

The reply of the Council was dignified and liberal. They expressed their cordial concurrence with the governor's views, adding, "we feel pleasure in recording our perfect conviction that the apprentices will be found worthy of freedom in every respect, and will so conduct themselves as to ensure the future interests of the planters."

The reply of the Assembly contained a tacit admission that the apprenticeship could not be maintained, and an expression of their anxious hope, that should they determine to remove what even they now termed

sea in an open boat, from the port of Old Harbour; but his flight being intercepted by the vigilance of Admiral Rodney, he threw himself into the waves, from whence he was rescued to meet a more ignominious end. He evinced to the last the most utter recklessness, and at the foot of the scaffold left a hundred pounds in gold to erect a monumental record to his infamous memory, and his death at the age of forty years.

* Certainly, no one had ever dreamed of accusing the Jamaicans of persecuting individuals guilty of any degree of licentiousness. It was there unnecessary to assume a virtue really wanting. At this very time four or five coloured

an "unnatural servitude," they would be left, in the exercise of their constitutional privileges, to legislate for the benefit of all classes, without any further parliamentary interference.

On Thursday, the 7th of June, a bill for the termination of the apprenticeship on the 1st of August, 1838, was brought in by Mr. Guy, of St. George's, and referred to a committee, and on the 8th it was passed without a single dissentient voice. Some honourable members even desired that it should take place on the following Sunday, others would have reserved it for the day of her majesty's coronation; and, by a strange but not unnatural revulsion of feeling, several evidences of a loyal and kindly spirit on the part of certain members of the Assembly, marked the extinction of an evil which had for half a century been constantly productive of bitterness and alienation between the colony and the mother country, and had from its very commencement proved baneful alike to the commercial and moral condition of the island, hindering the development of its rich and varied resources, by blighting and narrowing the naturally generous and expansive energies of its colonists. Thus, after having been 329 years a European colony, and 183 years an English one, receiving, until the last thirty years, unceasing and unlimited supplies of slave labour, not one-fourth of the 4,000,000 acres contained in the island had been brought under cultivation,‡ and the state even of the chief towns was a disgrace to a civilized community.

The glorious 1st of August at length arrived, and the negroes of the British West Indies became unconditionally free. This triumphant termination of the labours of their long-tried friends, and of their own patience and good conduct, was received by them with the rapturous delight natural to the impulsive African, blended in the breasts of a very considerable proportion with the deep sober thoughtfulness of reasoning and intelligent beings, who fully appreciated the extent of the responsibilities which accompanied the privileges newly conferred upon them. Many congregations being assembled by their ministers, as in 1834, awaited the auspicious dawn on bended knees, in silent prayer, and the temples of God were thronged throughout the day by multitudes who came to pour out praises and thanksgiving from their full hearts to Him who by earthly instruments had redeemed them from bondage, and to bless and pray for that great empire whose free citizens they now were, whose dutiful and patient subjects they had long been.

After the exemplary conduct evinced by them during the trying period of apprenticeship, there could be little doubt in any impartial mind that they would receive the consummation of their hopes, in an equally orderly and satisfactory manner. Nevertheless many of the planters persisted in predicting general insubordination, refusal to work for wages, riots, and even bloodshed, as the immediate results

children of a late governor (the Duke of Manchester) were pupils at a school maintained chiefly by the charity of a society of ladies in England, and one of the teachers was the daughter of the duke's celebrated secretary Bullock. This remark is, of course, not intended to affix any stigma upon the innocent offspring of erring parents, but only to show that, in the words of an eye-witness, "the dreadful state of social disorganization" in Jamaica, and the "bad eminence" to which it had attained was legibly written even on the surface of society.—*West Indies in 1837*, p. 167.

† *Parl. Papers*, 1839, Part I.; p. 51.

‡ *Parl. Papers*, July, 1842; p. 338.

of emancipation, and would actually have made formal preparations in that assumed belief, their true object being to procure labour at the lowest possible rates, but for the firmness of the governor in resolutely opposing their belligerent intentions. Sir Lionel Smith mentions as an instance of the spirit in which the planters met the change from slavery to freedom, that they had made his prohibition of the employment of the militia against the labouring population, the ground of a solemn charge against him, as rendering it impossible that the majesty of the laws could be upheld. Sir Lionel pledged himself that it should not be infringed, and he subsequently declared, "I have, not only without employing the militia, but without raising a policeman or appealing to the support of a single soldier, amply fulfilled my promise. It has been accomplished no doubt by means which they [the previous slave-owners] would utterly despise—the influence of the religious teachers of the people—the moral restraint under which that people consequently exist—and the loyalty to their sovereign and the confidence in the British government which these very teachers, calumniated as they have been, have sedulously inculcated upon their flocks."—(Parl. Papers, 1839; part i., p. 3.)

It was indeed well that the negroes were influenced by good principles at this important crisis, for difficulties surrounded them on every side.

The island itself had been long and gradually declining, public and private bankruptcy threatened to engulf it in irremediable destruction, and oppression, carried to its height, seemed about to end in a fierce and deadly servile war. Emancipation averted the latter catastrophe; and the princely sum given to the planters, together with the large advances recently made to the island, would, it was hoped, restore a more sound financial condition than had existed for upwards of a century. But this expectation was founded in ignorance of the extent of existing evils. Jamaica was fast becoming rotten to the core; and though emancipation sufficed to save her from destruction, yet, to restore her long-lost vigour and energy, there needed a succession of remedies suited to the deep-rooted and complicated character of the disease. At this important crisis, no time ought to have been lost either by government or by influential individuals interested, whether from philanthropic or pecuniary motives, in the welfare of the colony. While the warm hearts of the negro peasantry were thrilling with grateful delight, and the desire of showing themselves worthy of freedom, and of earning an honest livelihood for themselves and their little ones, actuated the whole body as one man, an excellent opportunity offered itself to the planters of entering into new and amicable relations, and thus counteracting the effects of the impolitic and too frequently unjust severity exercised during the apprenticeship.

The good that might have been effected at this time, had the majority of the absentee proprietors, aware of the urgency of the case, visited their properties, and taking advantage of the kindly feeling entertained by the negroes for them personally,*

* The works of writers on the West Indies, whatever their pro or anti-slavery bias might be, concurred in describing the respectful affection entertained by the negroes for their absent proprietors in England, which extended even to the different members of the family, and was, in many cases, encouraged by acts of personal favour, such as sending out presents at Christmas time.

† On this subject, see Gurney's *Winter in the West Indies*.

made terms with them, cannot now be estimated. Probably several families, since reduced to hopeless indigence by the direct consequence of perseverance in total absenteeism, might, by following a different course, have been living in comparative wealth, and holding the proud position of British landholders, connected by the two-fold tie of interest and affection, with an honest and laborious peasantry.

It is true, that the peculiar position of the Jamaica landholders rendered such a step difficult, inasmuch as when the payment of their large share of the compensation money came to be made, it necessarily caused a balance to be struck between them and their creditors, and revealed to them the full force of what they had long been declaring, namely, that their estates were mortgaged considerably beyond their value, and, consequently, that great part of them were irretrievably ruined.

As far, therefore, as many of the proprietors were individually concerned, the case was hopeless; they had long been consciously playing a desperate game, involving themselves deeper and deeper in debt and difficulty, until they found themselves in the position of a ruined gambler; for speculations carried on, under such circumstances, can scarcely be viewed in any other light.

Still there were the estates, and though they might have changed hands, it was self-evident that the proprietors, whether old or new, ought to give, in regard simply to their own interests, immediate and most careful attention to placing them under a more satisfactory system, and abolishing the cumbrous and expensive machinery necessary for the coercion of slave labour. Very few, however, took this pains, either from actual inability, indolence, and hopelessness of any good result, or else from being still deceived by the mis-statements of their local representatives, and the overseers and negroes were left to settle matters as best they could, under the nominal supervision of the planting attorneys, whose first thoughts were necessarily directed to the supervision of their own properties, and who literally could not have had time to do more than officially correspond with the actual managers, and assent, as a matter of course, to arrangements and documents which imperatively demanded the active investigation of persons deeply interested in the welfare of the estate. Under the most favourable circumstances, the want of capital would have been of necessity a serious bar to the employment of labour; but the conduct of many of the overseers, in withholding the promised wages, upon frivolous and even false pretences, greatly increased these difficulties. The provision grounds formerly allotted to the negroes soon became a bone of contention, for not only were the most exorbitant rents demanded and enforced by a Petty Debt Act, which afforded great facilities for the obtainment of fictitious or exaggerated claims, but the question of rent and wages was wilfully mixed up, so as to be a constant source of vexatious oppression to the negro;† whose natural desire to obtain a freehold of his own, and thus become independent of such influence, was stimulated to the highest degree.‡ Once master of that much coveted

‡ Many negroes had to earn money wherewith to repay the debt incurred in the purchase of their freedom. The total number of apprentices manumitted, and the amount paid by them, I have not been able to ascertain, but the Journals of the Assembly record that between 1st August, 1834, and 31st May, 1836, 581 purchased their release for £18,217; between 1st November, 1836, and 31st July, 1837, 1,029 paid £29,499, and 465 others agreed to pay £18,115, at

possession, the labourer could no longer be induced to relinquish its profitable cultivation, unless the wages offered him for toiling elsewhere were both remunerative and certain.

This, many overseers had it not in their power to offer; however willing, they could not furnish, on the Saturday evening, those weekly earnings which the labourer, all the world over, rightly values so much more when paid regularly, and in cash, than by any other system. The consequence was, a loud outcry for more labour, which there was no capital to employ. Ill-assorted cargoes of immigrants, composed only too largely of the very dregs of the population of Calcutta and other cities, were imported at different periods (as will be shown in the population chapter), but the experiment has proved little better than a failure. No proper provision or regulations were made respecting them by the authorities; many perished for lack of suitable food and lodging; others prolonged a miserable life by hanging about the towns, and procuring as best they might a wretched subsistence; while a considerable portion, having completed their stipulated period of service in the island, demanded vainly to be restored to their native country, in compliance with the agreement entered into by the colonial government, a stipulation which has been shamefully violated on the plea of want of funds.

CONCLUSION.—In subsequent sections, the present condition of Jamaica, and of the other West India islands, will be shown; as also, so far as space will permit, the effects produced by the yet recent change from slave to free labour. To what may with propriety be termed the history of the colony, a few events still remain to be added.

No sooner had the agitation caused by the discussion of the emancipation question passed away, than the disgraceful state of the hospitals and jails again compelled the renewal of the parliamentary interference so strongly deprecated by the Assembly. In consequence of the statements made by Joseph Sturge and other eye-witnesses, H.M. government sent an able officer (Captain Pringle) to inspect the prisons in the West Indies, and in Jamaica in particular. His report, laid before parliament on the 8th of July, 1838, by amply confirming the accounts before received, and revealing yet further evils, necessitated the immediate passing of an act (4th August, 1838) by the Imperial Legislature, "for the better government of prisons in the West Indies," whereby it was provided that H.M. in council, or the governor and council of any colony, should be authorised to make rules for the management of "prisons, gaols, houses of correction, hospitals, asylums, and workhouses," in the said colonies; inspectors of prisons were to be appointed by governors, and as Captain Pringle had been obstructed by local authorities in his endeavour to investigate the abuses prevailing in Jamaica, penalties were to be imposed in the event of any future wilful obstruction; and other stringent regulations were to be enforced.

The passing of this act gave great offence to the Jamaica Assembly, who declared that their rights were infringed, that they would vote no more supplies but such as were necessary for the maintenance of public credit, and that they would abstain from further legislation until the obnoxious measure was rescinded. Although repeatedly summoned by the

governor, the refractory members constituting the majority, persevered in their resolution, and stopped all business. Sir Lionel Smith then made the strongest representations to H.M. ministers respecting the conduct of the Assembly, and on the 9th of April, 1839, Mr. Labouchere introduced a bill to suspend the constitution for five years, and to empower the governor and council, aided by three commissioners to be sent from England, to administer the affairs of the island.

Long debates ensued; Sir R. Peel and the conservative party opposed the measure, and council was heard at the bar on behalf of the Assembly. The House divided, 294 were in favour of the bill, and 289 against it, leaving to ministers only a majority of 5, whereupon Lord Melbourne and his cabinet resigned. Sir R. Peel was sent for by the Queen, but failed to form a government in consequence of stipulating that H.M. should dismiss the ladies of the bed-chamber, and replace them by others belonging to the Tory party. This H.M. very properly refused to comply with, declaring to Sir R. Peel (*vide* the royal communication of 10th May, 1839) that the Queen "cannot consent to adopt a course which she conceives to be contrary to usage, and which is repugnant to her feelings." Lord Melbourne again succeeded to office, and on the 19th of July, 1839, an act was substituted* for that abolishing the constitution of Jamaica, which declared that as the Assembly had suffered certain legislative enactments to expire,† some of which ought without delay to be revived or re-enacted, it should be lawful for the governor in council to revive or re-enact all or any part of such expired laws, unless the House of Assembly should, within two months of the date of its assembling, have itself revived or re-enacted the said laws. It was deemed advisable to recall Sir L. Smith, as he was too deeply committed in the discussions with the Assembly to afford any ground for hoping that an amicable feeling could be restored during his tenure of office. He left Jamaica on the 1st of October, 1839, and was succeeded by Sir Charles (afterwards Baron) Metcalfe, under whose administration the measures required by the home authorities were eventually passed. The talents and integrity of Sir Charles were aided by the resources of a large private fortune, which enabled him, by the indulgence of his munificent and charitable disposition, joined to the charm of a naturally pleasing manner, to win golden opinions from all classes of the population, and to do much towards calming the excitement of party feeling. Happily for Jamaica, his successor, the Earl of Elgin, was also an able upright governor, whose public and private character was equally calculated to exercise a most beneficial influence on the colony, and he succeeded in inducing a few of the more rational colonists to cease depending on bounties, protection, and aid from England, and endeavour to work out their own improvement by the development of the numerous and valuable resources which Providence had placed within their reach.

But the influence of even master minds could not work miracles, or change the decree of Omnipotence, that communities who sow the wind must reap the whirlwind; after ceasing to do evil men must also learn to do well; and the education requisite for the fulfilment of this correlative command is difficult, and its

which their residue of bondage had been appraised. These three sums alone amount to £65,831, and the fact bears high testimony to the negro character in several respects.

* 1 & 2 Vict., c. xxvi.

† This alluded more especially to some important clauses contained in the British Amended Abolition Act of 1838.

results are only gradually manifested; the abolition of slavery was but a step, though a primary one, in the right direction, and unless succeeded by measures calculated to foster kindly relations between master and servant, so that both might appreciate their changed relative position, evils would inevitably ensue. It is doubtful whether this necessity is yet fully understood in Jamaica.

In 1846, considerable excitement was created by the admission of foreign sugar into the markets of Great Britain and Ireland at reduced duties, an important step in the change from the system of Protection, to that of Free-trade, the propriety of which it would be quite out of place to discuss here, more especially as the introduction of political questions is inconsistent with the design of this work. The people of Jamaica naturally regarded the measure with grief and displeasure; and still consider it as having materially checked their improving commerce. On the other hand, it is asserted by those who have had good opportunities for forming an unbiassed opinion on the subject, that coffee, sugar, cotton, or any other product, can, by good management, be cultivated more productively by free than by slave labour, and, consequently, that the former need never dread competition with the latter.

Good management, except in a few and rare cases, is, however, an experiment yet to be tried. Most of the proprietors may exclaim with the late Lord Seaford—"God has done everything for us in Jamaica, but we have done little hitherto for ourselves."

No political event of any moment has since occurred in the history of the colony; a liberal elective franchise has been adopted; fifteen free coloured citizens (including three of pure negro blood) have been elected representatives of the people in the House of Assembly, and a respected coloured gentleman (Mr. Jordon)* sits in the Upper House of Legislature as one of H.M. council.

In 1850-'51, cholera caused great destruction of life. At least thirty thousand persons perished; small-pox and other diseases have since raged with some violence: and their combined effects have operated injuriously in diminishing the effective available labour of the country.

Droughts, or excessive rains, at seasons when

least desirable, have impeded the growth and production of the island staples, to the increase of which no improved means of tillage or irrigation, or superior breeds of farming stock, have been applied or added with a view to cheapening the cost of production and raising the value of the articles produced.

A large and lucrative part of the trade with the Spanish main, of which Jamaica was formerly the entrepôt, is now carried on direct from England. Numerous failures of mercantile firms in London, Liverpool, Bristol, and Glasgow, as well as at Kingston, have contributed to diminish commerce, while the fraudulent conduct of persons in government employ, in public institutions, and in private life, who were entrusted with monies, which they appropriated to their own use, have weakened confidence in the trustworthiness of every class. The large and increasing burden on the local revenues, amounting to nearly £800,000, and the almost total absence of capital in the colony, has tended still further to diminish the value of property which it has unhappily been the interests of agents and managers to depreciate, in order that they themselves might ultimately become the purchasers of abandoned estates. These and other circumstances, in most cases the result of deep-rooted evils of long standing, have tended to reduce this noble colony to a state of great mercantile depression,† of which the temporary diminution in the cultivation of coffee and sugar, is perhaps the least important, especially as the condition of the vast mass of the export producers is rapidly improving. Eighteen years ago the coloured proprietors of land were few and scattered; now there are considerably upwards of *one hundred thousand coloured freeholders*, working hard, living thriftily, and endeavouring to accumulate real capital, which has not existed for many years in Jamaica, unless, indeed, slaves can be so termed. As yet, these small proprietors can do little more than raise a sufficiency of food for the support of their families; but they gladly labour for their former masters provided a remunerative rate of wages is offered. When, however, it is considered that meat is 6d. to 1s. per pound, corn-meal 50s. to 60s. per barrel, and other things in proportion, it must be evident that 9d. or even 1s. a day is insufficient to provide for the wants of a

* Mr. Jordon was for many years the editor of the *Watchman* newspaper, in which capacity he rendered good service to the cause of religious toleration, by advocating the rights of the missionaries; he was also instrumental in promoting the abolition of slavery. For these reasons he was persecuted by several members of the Assembly of that epoch. In the number of the *Watchman*, published on the 7th April, 1832, Mr. Jordon, in replying to some remarks by the editor of a rival paper, and congratulating him on having come over to the side of abolition, said, "we shall be happy with him and the other friends of humanity, to give a long pull, a strong pull, and a pull altogether, until we bring the system down by the run, knock off the fetters, and let the oppressed go free." For this expression, without any warning, a true bill for treason was found against him by the grand jury, and he heard it for the first time read publicly in court, while sitting there reporting for his journal. He was tried, 17th April, 1832, for his life, but acquitted, as his partner, Mr. Osborne, firmly refused to give any evidence in proof of who wrote the alleged treasonable article; but the coloured people had armed themselves, and determined that if found guilty he should not be put to death. Any such attempt would have caused a civil war, which would, in all human probability, have merged all other distinction in that of colour. Those days of oppression

are now happily past, and Mr. Jordon, Mr. Osborne, and others, are reaping the reward of a consistent and upright life.

† A recent visitor (Mr. Bigelow), after commenting severely, but with only too much justice, on the evils of absenteeism, the immense extent of the several estates, and the clumsy and expensive mode of cultivation persevered in by those who ought to set a better example, declares his conviction, that these causes "would have conducted Jamaica to inevitable ruin, had the tariff laws never been altered, nor the slaves been set at liberty."—(*Jamaica in 1850*, p. 14). He adduces some of the "thousand ways in which labour is squandered," as evidence "that there is no intellect invested in the cultivation of the island." With regard to the alleged high price of labour, he naturally asks, in what quarter of the civilized world it is lower in proportion to provisions? adding, that four-fifths of all the grain consumed in Jamaica is grown in the United States, on fields where labour costs more than four times this price, and where every kind of provision but fruit is less expensive.—(p. 125.) "The importation of salt fish is very large, and yet the waters around Jamaica abound with some of the finest fish in the world. The people will send to Maine for lumber, and pay twenty-five dollars per 1,000 feet for it, rather than be at the trouble of cutting down their own magnificent forests. There is not a single saw-mill upon the

labouring man with a young family. The negroes toil on their own properties with unceasing assiduity, and where they are employed at task-work, their efforts are extraordinary. Gradually, new proprietors are entering Jamaica with capital; and if an "Encumbered Estates' Act" could be passed for the island, as has been done for Ireland, good would ensue by facilitating the purchase of land in small allotments by men likely to reside on their property and to improve it. Under judicious management, Jamaica would not require to import from America nine-tenths of the provisions, including maize and fish required annually to supply the population; the whole might, with great advantage, be obtained in and around the island; and a large surplus be provided for exportation. Protective duties on sugar and coffee would not restore the insolvent planters; the renovation of the colony must spring from within, by the cultivation of the soil, in the first instance, so as to provide sufficiency of the necessaries of life for

its own population, whose attention would then be naturally turned to the production of those varied crops which a rich earth, fertilized by a glowing sun, and abundant moisture, is capable of yielding.

The following is a list of the Governors:—

Colonel D'Oyley	1660	W. H. Lyttelton, Esq.	1762
Lord Windsor	1662	Sir Wm. Trelawny, Bt.	1767
Sir T. Modyford, Knt.	1664	Sir Basil Keith, Knt.	1773
Lord Vaughan	1675	Major-gen. Dalling	1777
Earl of Carlisle	1678	Major-gen. Campbell	1782
Sir Thos. Lynch, Knt.	1682	Earl of Effingham	1790
Duke of Albemarle	1687	Earl of Balcarras	1795
Earl of Inchiquin	1690	Lieut.-gen. Nugent	1801
William Selwyn, Esq.	1702	Lieut.-gen. Sir E. Coots	1806
Lord Arch. Hamilton	1711	Duke of Manchester	1808
Peter Heywood, Esq.	1716	Earl of Belmore	1829
Sir Nich. Lawes, Knt.	1718	Earl of Mulgrave	1832
Duke of Portland	1722	Marquis of Sligo	1834
Major-gen. Hunter	1728	Lt.-gon. Sir Lionel Smith	1836
Hen. Cunningham, Esq.	1735	Sir C. T. Metcalfe, Bt.	1839
Edw. Trelawny, Esq.	1738	Earl of Elgin and Kin- cardine	1842
Charles Knowles, Esq.	1762	Sir C. E. Grey, Kt.	1847
George Haldane, Esq.	1768		

CHAPTER III.

PHYSICAL FEATURES—DIVISIONS, RIVERS, HARBOURS, MOUNTAINS, CHIEF TOWNS, FREE VILLAGES, AND GENERAL CHARACTERISTICS OF THE ISLAND—GEOLOGY, MINERALOGY, SOIL, CLIMATE, AND DISEASES.

JAMAICA, like the contiguous islands of Cuba, Hayti, and Porto-Rico, would seem to have derived its origin from submarine convulsions, during which the axis of perturbation extended from east to west, thus giving a longitudinal character to the land, and causing the highest elevation to be situated at the eastern extremities, from whence, in each island, there is a gradual decline to the westward.

On the other hand, the position of the West Indian archipelago, which stretches from the entrance of the Gulf of Mexico along the northern boundary of the Caribbean Sea, over 25° of longitude, and 27° of latitude, and forms an almost uninterrupted chain between the peninsula of Florida in North, and that of Paria in South America, would appear to confirm the tradition that a vast region called *Atlantis*, after successive fierce throes, had here sunk beneath the ocean, leaving the existing islands as the loftiest peaks of the submerged territory.

Jamaica is happily situated to the westward of Hayti, and southward of Cuba; by

these islands it is sheltered from the violence of eastern or northern tempests, yet cooled by the winds which descend from their elevated lands; while access to the Atlantic is facilitated by the adjacent *Windward Passage*, which separates Cuba from Hayti.

The magnificence of the mountain scenery, the beauty of the swelling hills and uplands—the stately forests, rich pastures and fruitful fields, the numerous harbours, and the varied climate found in different portions of this far-famed island, have been dwelt on by many travellers. In some of these respects it seems superior even to Ceylon in the eastern hemisphere, in others inferior; perhaps it may be better compared with Java, one of the finest islands of the Malayan archipelago, some of whose physical features correspond with those of the West Indian group. Jamaica, Ceylon, and Java have, however, their respective and peculiar excellencies; and speaking from a personal knowledge of each, it would seem difficult, irrespective of area or position, to decide to which the palm of superiority might justly be assigned.

The "Queen of the Antilles," as the colony now under consideration is sometimes called, is of an elongated form, more indented on the southern than on the northern coast, and with a range of moun-

island. There are no manufactories of any kind, except of sugar and rum. Even their brick they import. The hilly surface of the country supplies an abundance of water-power over forty constant rivers, and over 200 rivulets, and yet there is not such a thing as a water-wheel to be found in use, except on the plantations, and for agricultural purposes."—(p. 109).

tains and wooded heights, more or less broken, passing throughout the centre from east to west. It was divided by the local legislature, in 1758, into three counties, named *Surrey*, *Middlesex*, and *Cornwall* (see map); the first, or eastern, is about forty miles long by twenty broad; the second, or

central, averages fifty miles by forty-five; and the third, or western, is of more irregular form, the extreme length being nearly sixty miles, and the breadth varying from forty-five to seventeen miles. These counties are subdivided into the following parishes:—

Counties and Parishes.	Area in square miles.	Physical Features of each Parish.
Surrey—		
Kingston . . .	6	Flat shore, gradually sloping up from the coast; <i>Kingston City</i> .
St. Andrew . . .	124	Flat in the south, hilly and mountainous in the north; <i>Liguanea Plain</i> .
Port Royal . . .	40	Intersected by lofty mountains and deep ravines; coast-line broken.
St. David . . .	74	Generally hilly, mountainous rising to the northward; scenery grand.
St. Thomas in the East . . . }	215	Mountainous and hilly, picturesque valleys, flat towards the S.E. coast.
Portland . . .	139	Part of <i>Blue Mountain range</i> , hilly and sloping to north coast, woody.
St. George . . .	140	Ditto, and, like the preceding, well watered; wild scenery.
Metcalf ¹ . . .	—	In general hilly, declining towards the north coast; aspect rugged.
Middlesex—		
St. Catherine . . .	159	Generally level, <i>Healthshire</i> hills to the southward; <i>Spanish Town</i> .
Dorothy . . .	58	Almost an unbroken level, between hilly ranges; coast flat.
Vere . . .	300	Some hills, but generally flat; sterile appearance; <i>Portland Ridge</i> .
Clarendon . . .	317	Hilly to the northward, plains and savannahs to the southward.
Manchester . . .	210	Very hilly; Mandeville and Alligator Pond the only level spots.
St. Ann . . .	433	The Park of Jamaica; diversity of mountain, hill, plain, and valley.
St. Mary . . .	600	Intersected by hills; where level, marshy; numerous streams.
St. John . . .	128	Pretty level, slightly varied with hills and pleasing scenery.
St. Thomas in Vale . . .	125	Flat, surrounded by mountains on all sides; <i>Sixteen Mile Walk</i> .
Cornwall—		
St. Elizabeth . . .	213	Mountainous and large plains, with fine breeding farms.
Westmoreland . . .	308	Some mountains, but generally flat or undulating marshy coast.
Hanover . . .	212	Ditto, with intervening plains and swampy shore.
St. James . . .	227	Chiefly mountainous, hilly, well watered, and wooded.
Trelawny . . .	264	Mountains, hills, dales, and plains—flat towards the north coast.
Total . . .	4,292	

Note.—¹ Area of Metcalfe not known.

HARBOURS.*—Among the many bays, havens, coves, and creeks, on both coasts, some afford perfect shelter for large vessels, and many are available for *droghers*, or small craft employed in the coasting trade. On the south may be noticed Port Morant, Morant Bay, Cow Bay, Bull Bay, Port Royal, and Kingston Harbour, Hunt Bay, Old Harbour, West Harbour, Black River Bay, Blue Fields Bay, and Savanna la Mar Harbour; Port Royal or Kingston is the principal haven in the island. On the north there are Port Antonio, Annotta Bay, Port Maria, Ocho Rios, St. Ann's Bay, Rio Bueno, Falmouth or Martha Brea, Montego Bay, Lucea Harbour, Green Island, and Musquito Cove. The distribution of these havens in such different localities, indicates the advantages they afford for commerce, and their importance is increased by the mountainous and broken features of the country, which render the transit of heavy goods by carriage roads almost impracticable, and necessitate the carriage of merchandise by water, between several of the chief towns. Thirty bays, roadsteads, and shipping stations might be enumerated, but the places at which custom-houses have been established are—on the south coast, Kingston, Black River and Savanna la Mar, and Port Morant; and on the north, at Port Antonio, Port Maria, An-

notta Bay, Falmouth Harbour, Rio Bueno, St. Ann's Bay, Montego Bay, and Lucea.

RIVERS.—There are about 200 rivers and rivulets, 70 of which are perennial. The dividing ridge of high lands, which gives rise to these numerous and fertilizing streams, precludes the possibility of their attaining any length, or being navigable for ships. The chief of those which flow towards the south coast are the Cobre, Minho, and Black Rivers; towards the north, are the Great, Martha Brae, White, Agua Alta, and Grande Rivers. Numerous mountain streamlets, which are nearly dry for part of the year, become swollen into broad and rapid torrents during the rainy season, and frequently form picturesque cascades, which, being generally surrounded by wooded heights, constitute a marked feature in the scenery.

MOUNTAINS.—The main range begins near the eastern extremity of the island, and stretches for some distance in a nearly due west direction, about equi-distant from either coast. The highest points of this great barrier attain an elevation of nearly 7,000 feet above the sea, and their summits stand out in majestic grandeur against the blue sky, while rolling clouds surround their base. From the central chain several offshoots of considerable extent diverge, like gigantic buttresses, giving an alpine character to the central portions of the county of Surrey. This portion of what may be termed the *backbone* of the island, is known by the name of the

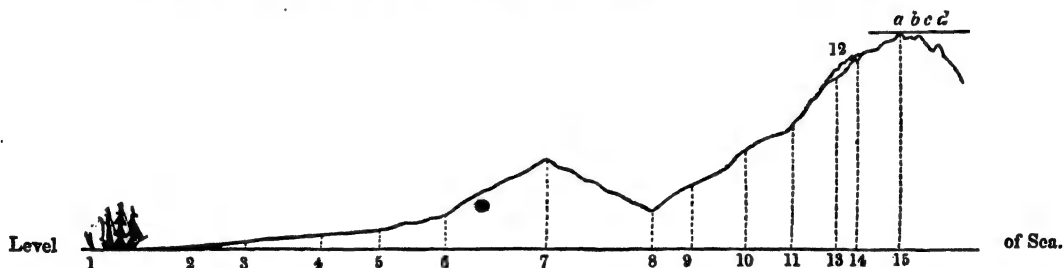

* A desire to comprise within the division allotted to the West Indies, as much information as possible induces me again to resort to small type.

Blue Mountain Range, and is situated in the parishes of Port Royal, St. David, St. Thomas in the East, Portland, and St. George. The three principal peaks were stated to be of the respective heights of 8,186, 7,656, and 7,576 feet, but this estimate has recently been corrected by actual barometrical measurement. The results of the observations of Mr. Arnaboldi, who ascended to the peak with Mr. J. R. Hollingsworth, Mr. Harrison, and other gentlemen, on the 3rd of May, 1851, at twenty minutes after eight, A.M., are thus stated in the *Colonial Standard*, Jamaica, 2nd of June, 1851:—

"The barometer then stood at 23.65 inches; the attached thermometer, 54°; detached thermometer, 64°; force of vapour by hydrometer, 42.539; dew-point, 53.8. When in Kingston, same day and hour, the barometer stood at 30.10 inches; attached thermometer, 82°; detached thermometer, 82°; force of vapour by hydrometer, 74.730°; dew point, 70.9. In order to ensure the correctness of the calculations, they were made according to the rules laid down by the following different authorities:—Troughton and Simms, height of peak, 6,830; Greenwich, (Sir George Shuckburgh) 6,824; Greenwich (table), 6,838; Professor London, 6,642; Professor Jones, 6,574; Dr. Robinson's method, 6,514; boiling of water, 6,955—Total, 7)47,177. Giving an average of 6,739.5 for the height of the peak. The variation

between this calculation and that reported in October, 1850 (6,592 feet), is attributable to the great difference of the dew-point and force of vapour at the two periods." On the 7th of October, 1850, in Kingston, the force of vapour by hydrometer was 91.017 grains to a cubic foot of air, and the dew-point was 77°. At the Blue Mountain Peak, on that day, the force of vapour was 44.380 grains to a cubic foot, and the dew-point was 61°. The accompanying barometrical section from Kingston to the Blue Mountain Peak was taken on the journey up. It was ascertained that there was but four feet difference between the height of No. 1 Peak and No. 2 Peak, and 28 feet between Peaks 1 and 3. By the barometrical section, there is shown to be a difference between No. 1 and the Easternmost Peak of about 250 feet. Mr. Tyrrell, who had visited the Peak on thirteen different occasions, had never before found the temperature so high as 62° of Fahrenheit. A self-registering night and day thermometer having, however, been buried on the occasion of a previous visit, gave 51° as the minimum of heat during the previous six months, and the maximum, 81½° Fahrenheit.

A trigonometrical survey of the island is much needed; the following sketch will convey an idea of the progressive rise from Kingston to the Blue Mountain Peaks:—

1, Kingston Harbour; 2, Parade, 38 feet; 3, Cross Roads, 214 feet; 4, Hope Tollgate; 5, Hope Tavern, 690 feet; 6, Botanic Gardens, 1,100 feet; 7, Guava Ridge, 2,866 feet; 8, Yallahs River, 1,425 feet; 9, Hagley Gap, 2,143 feet; 10, Radnor, 3,212 feet; 11, Abbey Green, 3,892 feet; 12, Portland Gap, 5,495 feet; 13, Jacob's Ladder; 14, Radnor Gap, Hog Pond, 6,339 feet; 15, Blue Mountain Peaks—a 6,739 feet, b, c, d Easternmost Peak.

Another neighbouring range, of inferior altitude, extends from north-west to south-east through the parishes of Port Royal, St. Andrew, and St. George; these may be called the Port Royal Mountains, and have their highest elevation in St. Catherine's Peak, which is about 5,000 feet above the sea.—(See map of Jamaica.)

Proceeding to the westward, through Middlesex County, the dividing range diminishes in height, and in boldness of outline, and is connected by several elevations which extend north and south, with various lesser parallel chains. Here and there (in Clarendon and St. Ann's parishes) abrupt hills or hummocks are clothed with trees of enormous bulk, while the adjacent dales, or "cock-pits," as they are called, are carpeted with perpetual verdure. In Cornwall County, the mountainous outline becomes still more indistinct, the surface presenting an irregular congeries of broken heights, rising from 1,000 to 3,500 feet. The forms of the eminences throughout the island are very varied, sometimes presenting, like a Titanic wall, steep, and, occasionally, inaccessible sides; thus the central portion of the "Blue Mountain" ridge (properly so called) is traversable at only one spot, termed the Portland Gap, which is itself 5,495 feet above the sea, and but a few yards wide. In

other places there are long extensions of mountain slopes, gradually forming narrow vales, through which a river generally flows, while, elsewhere, semi-circular sweeps of irregular height bound a shelving plain. Here and there gigantic spines of sharp ascent and difficult access, clothed with dense and sombre forests, approach the coast-line. Not unfrequently, a conical shape is assumed, like the Dolphin's Head, in Hanover Parish; or the hills appear piled upon one another, and marked by fearful rents, as in the Port Royal Mountains, which are grand in the extreme, the effect of light and shade upon the steep sides and chasms being such as even *Salvator Rosa* could not pourtray. The prevailing features must frequently have reminded many travellers, of the ocean during a gale of wind, in some such tempestuous localities as the Cape of Good Hope, or the Bay of Biscay, where the mighty billows seem separated by long "intervalles" and their crested summits are strangely contorted by the violence of the storm. The heights of the Blue Mountain Peaks have been already stated. Catherine's Peak, in St. George's Parish, about 7½° north of Kingston, is stated to be 5,075 feet in altitude; and Hardwar Hill, to the westward of it, in the parish of St. Andrew, attains nearly an equal elevation. The

summits in Middlesex and Cornwall rarely exceed half a mile; *Liman's Mountain*, six miles north of Spanish Town, is 2,282; the *Bull's Head*, in Clarendon Parish, is 3,140; and the *Dolphin's Head*, south of Luces, is 3,445 feet above the level of the sea. There are several private residences, situated at a considerable elevation. Among these may be named Clifton, 4,228; Pleasant Hill, 4,000; Flamstead, 3,800; Sheldon, 3,417. Many coffee plantations and dwellings occupy heights varying from 1,000 to 3,000 feet. The Blue Mountain range is markedly separated from the Port Royal Mountains by a narrow isthmus, termed *St. Helen's Gap*, from whence the view is indescribably magnificent. Coffee plantations stud the sides of the hills, and are scattered along the valleys. At *Belle Vue*, about 5,000 feet above the sea, Port Royal, Kingston, and the Liguanea Plain are visible. The garden attached to the plantation is well laid out, and stocked with apple and other fruit trees. I gathered excellent strawberries, and saw peas, potatoes, and artichokes in full perfection, in June, 1851; hedges of roses and fuschias divided the applotments, in which grew varieties of English flowers. At *Resource Plantation*, somewhat lower than *Belle Vue*, the avenue was lined with orange, lemon, and citron trees, intermingled with white and red roses, and adorned, as at Pleasant Hill, with the gaudy hybiscus. Here, also, the pink, blue African lily, heliotrope, and other English flowers delighted the eye. At Morse Gap, a pass in the dividing range, whence the northern coast is visible, the road, or rather mule-path, for a distance of several miles, becomes entirely overshadowed with the most luxuriant foliage; in the adjacent ravines the graceful bamboo rises to a height of thirty feet, and is rivalled by the artistically branching fern tree, interspersed with mahogany, lignum vitae, cedar, pine, and other timber: and at different parts, industrious negroes may be seen clearing land on the steep mountain slopes, for the cultivation of potatoes and other produce, afar from any township or property where rent could probably be demanded.

PLAINS.—The *Liguanea Plain* is the most extensive in the island; it begins a few miles east of Kingston, and stretches westward through the parishes of St. Andrew, St. Catherine, and St. Dorothy, to a point west of Old Harbour, a distance of about thirty miles, the average breadth being from four to seven miles. Its eastern extremity is about 700 feet above the sea, towards which it gradually declines, until joined by the sand-bank, termed the *Palisadoes*, by which it is defended from the incursions of the ocean. Inland, the Liguanea Plain is bounded throughout its whole extent by mountains, and to the seaward by the shore west of Port Henderson, where it widens. The *Healthshire Hills*, a low range, intervene, for a few miles, between the plain and the sea. *Vere Plain*, separated from that of Liguanea and Lower Clarendon, by a narrow range of hills, which approach the sea at Salt Bay, extends from south-east to north-west, about eighteen miles, with an average breadth of seven to eight miles. On the north-west, the Vere Plain is joined by the *Mill Gully*, a picturesque valley, several miles in extent. *Lime Savanna*, is a plain, extending east and west across the parish of Clarendon, from the border of St. Dorothy to that of Manchester, and north and south between the parish of Vere and the Mocho Mountains. *St. Thomas-in-the-Vale Plain*, embosomed in the hills, is nine miles long by two and a-half wide, and would form a perfect basin, were it

not that the Rio Cobre bursts through the barrier on its southern boundary. *Pedro Plains*, near Great Pedro Point, in Hanover Parish, and the *Savanna-la-Mar Plain*, in Westmoreland, though of no considerable size, are the largest on the western side of the island; and, together with some lesser ones, have much of their surface covered with swamp. On the northern coast, no plains of any extent occur. The country between Montego Bay, on the west, and St. Ann's Bay, on the east, consists of low, abrupt, and precipitous hills, with but little land between them and the sea. On the east, *Bath Plain*, in St. Thomas-in-the-East, extends from the town of that name to the mouth of the Plain Garden River, near Point Morant, the eastern extremity of the island, where there is a great morass. There are innumerable valleys, remarkable for their beauty and fertility, such as *Luidas Vale*, in St. John's, and the basin of *Whitney*, in the Mocho Mountains, in Clarendon parish.*

CHIEF TOWNS.—Nearly 200 years have elapsed since this large and fertile island was taken from the Spaniards, and yet it possesses only two places claiming the title of cities. After personal examination, with few exceptions, of every city and town of any note in the United Kingdom, and in the widespread maritime dominions of the crown, I have no hesitation in asserting that the political capital (Spanish Town) and the commercial emporium (Kingston) of this valuable and productive colony are, taken as a whole, the least creditable to the British name. This opinion is supported by the testimony of many impartial travellers, including the incidental evidence afforded in the valuable Report of Dr. Gavin Milroy, on the Sanitary State of Jamaica in 1851-'52.

Spanish Town, founded by the Spaniards in 1500, and named by them *St. Jago de la Vega* (St. James of the Plain), occupies nearly the centre of an extensive savanna or flat, which forms part of the Liguanea Plain, and extends, on the eastward, to Kingston (distant thirteen miles), and on the south-west to Old Harbour; it slopes gradually on the south-east to Passage Fort and to Hunt Bay, an inlet of Kingston Harbour (see Map), and on the north and north-west, is bounded by the hills of the parishes St. Catherine and St. John. The view terminates with a portion of the Liguanea Mountains, which have there an elevation of about 2,200 feet above the sea.

Among the few remains of Spanish architecture still standing, may be mentioned the Spanish admiral's house, at the head of Hunt Bay. From a "look-out" upon the roof, there is a fine view of Port Royal and Kingston harbours. Like most Spanish edifices, the house is substantially built, and is still in excellent preservation.

A small, lazy, and very tortuous stream (the *Cobre*) after meandering through the plain in an easterly direction, skirts the city and falls into Hunt Bay. A considerable portion of the savanna is occupied with grazing farms or "pens;" much of it is wooded or covered with scrubby bush; large tracts lie waste, termed the *Salt Pond Plains*; and as the soil is clayey, it is very retentive of moisture. Owing to these circumstances the air is by no means salubrious, the heat is excessive, being but slightly mitigated by the distant sea breeze. The city is quite indefensible against an attacking force provided with artillery. Even in its best days it must have looked sombre

* Report of the Central Board of Health, Jamaica. Printed in 1852, pp. 81-'2-'3.

and cheerless, but now its aspect is most deplorable.* Writing in 1797, Dr. Pinckard alludes to its "humble" appearance; to its narrow, confined, dark, and dirty streets; to the evident disregard of cleanliness and personal adornment remarkable among the people there (as also at Kingston); and declares that when arrived in the centre of Spanish Town, he thought himself still in the suburbs. There was only one tavern in the place, where even "a very indifferent and badly-served breakfast" was obtainable.—(*Notes on the West Indies*, vol. ii. p. 375.)

The King's House (as the residence of the governor is termed) forms one side of a large, handsome square, around which are constructed the House of Assembly, Council Chamber, Court House, Arsenal, Library, and public offices. It was finished in 1762, and has cost upwards of £50,000; the exterior is in the Castilian style, the interior is badly lit and ill ventilated. A fine statue of Admiral Rodney, executed by Bacon, stands in the square, in an open temple, and was erected by the Jamaicans, at a cost of three thousand guineas, in commemoration of the decisive victory obtained by him over the French fleet in 1782; and a similar tribute is being paid to the memory of Lord Metcalfe. There are tolerably good barracks, of two stories high, in the southern quarter of the town; St. Catherine's cathedral, completed in 1755, at its entrance, is a handsome building in the form of a cross: the main aisle measures 129 feet in length. The Baptist and Wesleyan chapels are neat and appropriate edifices. There are two Jewish synagogues. The gaol is a substantial structure. The city occupies about one square mile; but only a small part of this area is covered with buildings; some of the houses have large gardens and grounds attached; the streets run slanting from north to south, and are crossed by others from east to west; none of them are paved; a few are imperfectly macadamized; during the rainy season they are coated with a cohesive mud, which hardens into a thick crust, from whence the rays of the sun are powerfully reflected. Deep gullies are formed by the heavy rains in their progress to the river, and in some places the water collects in stagnant swamps. Dr. Milroy has drawn a melancholy picture of the existing condition of the city; the better class of houses falling to pieces, the gardens choked with weeds, and the surface littered over with rubbish of all sorts. The dwellings of the middle classes are very generally but single floored, they have "a mean appearance," are "most imperfectly ventilated," and are "anything but suitable for such a climate."†

The negro habitations, scattered in different directions, are usually of the most squalid and miserable description, both inside and out, and all of them are crowded to excess. From the neglect of regular scavenging (except on the part of the vultures, *John crow*, turkey buzzard, or carrion vulture, dirt and rubbish meet the eye in every quarter; and the traveller of the present day might, with equal truth, repeat the words of Dr. Lempriere, at the close of the last century, in alluding "to the stable sweepings left in the

streets to be saturated by the rain, and afterwards giving rise to unhealthy exhalations."

There is but one under-ground sewer in the whole town, which was constructed about a century ago; it leads from the barracks to the river, and is frequently obstructed. The communication recently made by the local authorities of the impurities in and around the dwellings of all classes; of the filthy state of the market; of the neglected burial-grounds and "cholera-pits," and of the "loathsome poisons" thence arising, is too repulsive and disgusting to be quoted, but far too important to be passed over without comment. There are no pumps, and only three wells for the richer citizens; a small quantity of water, often muddy and impure, is raised from the Cobre River; the poorer are still supplied by means of carts, whence it is doled out to them at a high cost. Under such circumstances it need excite no surprise, that when cholera appeared in 1850-1, it should spread rapidly. Its ravages, in many respects, were, indeed, most dreadful; whole families and households were swept off, and the utmost difficulty was experienced in providing for the speedy interment of the dead. Out of a population estimated at 10,000, about 1,500 are supposed to have perished.

The amount of pauperism is large, and is in a great measure ascribable to the apathetic neglect of the local authorities, the extent of which may be conjectured by the fact, that "no less than 1,200 acres of land round the town, held in trust by the parochial authorities, under the provisions of Geo. II., cap. 10, and which ought to be available for the diminution of parochial rates, and for the relief of the poor, are now lying, not only unproductive, but have, from neglect, become a public nuisance, most pernicious to the health of the community, and are thus serving to increase the very evil which they were intended to relieve."‡

Spanish Town is totally devoid of maritime commerce, and has no local trade. There are two shipping places whence produce can be conveyed from the plains around and beyond the city to Kingston. viz. Passage Port, and Port Henderson; but the railroad established between the governmental and commercial cities is a more convenient and cheaper mode of conveyance. The scenery along this line is very beautiful; rich meadows, noble mango and other trees, swelling uplands, backed by wooded heights, and lofty mountains, afford, in a very limited space, some of the finest road views to be met with in any part of the world.

Kingston was founded in 1693, after the destruction of Port Royal; it is built on the margin of the harbour, and slopes upwards to the fine plateau already frequently mentioned as the Liguanea Plain. The city forms an irregular quadrangle, and covers an area of nearly two square miles. The main streets run north and south, and are crossed by others at right angles; all are tolerably wide, and, in the upper part, generally open to the sea-breeze. A large square in the centre of the town, called the Parade, contains the large barracks, a handsome Wes-

* Spanish Town, says Bigelow, "is supposed to have been founded by Diego Columbus in 1523. No one visiting the place at this time (1850) will dispute its antiquity, nor experience much difficulty in believing that all the houses at present standing were built before Diego left the island, so old and ruinous is their general appearance."—(*Jamaica* in 1850, p. 31). The Rev. David King, LL.D., alludes to the "poor appearance," and "general unattractiveness" of the place.—(*State and Prospects of Jamaica*,

p. 3). And the Rev. P. Samuel speaks of the "grotesque contrast" formed by mansions of the first class being placed side by side with the most miserable sheds in which human beings may submit to take shelter.—*Missions in Jamaica*, p. 114.

† Report on the Cholera in Jamaica, and on the general Sanitary Condition and Wants of that Island, by Dr. Gavin Milroy, July, 1852.

‡ *Idem*, p. 92.

leyan chapel, a theatre, and some tolerable dwelling-houses. The chief public buildings are, a Court-House, and Church of England, Wesleyan, Presbyterian, Baptist, Independent, Roman Catholic, and Jewish places of worship. The penitentiary is large, and the separate cells are well arranged. The lunatic asylum, now in course of erection, will supply a great and long-standing want; it promises to be an extensive and commodious structure, with considerable pretensions to architectural beauty. The edifices generally, excepting the numerous temples dedicated to Christian worship, are of mean appearance. Some of the private houses are well constructed, and abundantly provided with verandahs, windows, and jalousies, for the free admission of the refreshing sea-breeze, by which the extreme heat of the city is materially mitigated; but the merchants' stores are mostly dark and ill-ventilated; and the shops in the main street resemble those of an inferior English town; not a decent inn or hotel exists; there is no paving or macadamizing, no drainage, no gas-lights (as in most of our colonial cities), and scarcely any side-way.*

During the heavy rains in May and October, the water finds its way, by broken and irregular channels, into the gullies on the east and west sides of the town, but much of it pours down the steep streets, forcing along a broad muddy stream a foot or more in depth. As none even of the leading thoroughfares are paved, nor provided with any artificial channels for the water, and the soil is generally loose and sandy, their surface has become ploughed up with deep ruts and broken hollows; while, from the quantity of gravel, stones, and bricks strewed about, they present more the appearance of river courses than of streets in an inhabited city. The amount of vegetable refuse and other rubbish brought down and lodged at the bottom of the harbour is usually considerable; and as there is no sewerage, the poorer classes avail themselves of the current caused by the periodic rains to cast the accumulated filth of their dwellings and yards into the streets: all this noxious matter accumulates and sinks into the porous ground of the lower part of the town, where there is no

declivity. The cross streets are, in some respects, still worse, being often flanked by dilapidated buildings, and littered over with rubbish, which renders driving by day perilous to carriage springs; while walking by night through these unlit pitfalls, is manifestly to hazard broken limbs. Nor is it only by inanimate objects that the senses of sight and smell are offended: lean, mangy hogs are to be seen at all times rolling about in the noisome puddles, while others are wandering here and there, grubbing up the rubbish for food, bestrewing the surface with their ordure.† Besides the swine and goats, constantly moving about, Kingston has always been noted for its number of half-starved dogs. It is no uncommon thing to see the carcase of one of these unfortunate brutes lying in the middle of a street, with a troop of the vulture crows, which are ever wheeling about the city, tearing it to pieces, while the air all around is tainted with the most baneful effluvia.

Altogether, the stranger, on first landing in Kingston, especially if he has visited other British colonies, will, with difficulty, bring himself to believe that he is in the metropolis of the chief of the British West Indies. One pleasing feature is the negro market, which furnishes a constant and plentiful supply of all sorts of vegetables and fruits peculiar to the climate. Fish, which abounds along the whole coast-line, is to be had in great variety, and of the finest description, and fresh meat of the best quality the island affords. But this very abundance is made a source of evil by the wasteful and untidy habits of the people, and the quantity of putrifying provisions everywhere strewed about is in perfect accordance with the description given by Dr. Lempriere,‡ and his statement regarding the practice of filling up the hollows in the streets with stable refuse, is also applicable at the present day. One dung-heap, at the west end of the city, has been accumulating, says Dr. Milroy, "for the last century at least;" and the miserable state of the habitations of the poorer classes; the offensive condition of the grave-yards; together with other disgraceful features, which could not but be set forth in a sanitary report, yet cannot,

* "Nowhere," says Dr. Milroy, "are the magisterial duties so negligently and inefficiently performed as in Kingston; the general impression, among the respectable part of the community, is, that the utmost jobbery and corruption prevail in the corporation of that city; and to judge of them by their acts there appears to be too much ground for the charge."—(Cholera Report, July, 1852; p. 41.) [Since the above extract was printed, I have ascertained that the income of the Kingston Corporation for 1851, was £13,956, of which only £1,050 is stated to have been expended on the streets, £4,317 is put down as on "loan," and £2,644 jumbled together under the head "miscellaneous."—(See *Blue Book* for 1851.)

† Report of Central Board of Health, Nov., 1851, p. 139.

‡ The statements of many other impartial witnesses have, for a long series of years, borne testimony to the deplorable want of order, and even decency, uniformly manifested in the principal towns of Jamaica. Municipal institutions have utterly failed to produce their ordinary result; in fact, the "social institution" of slavery, as by a monstrous perversion of language, its advocates sometimes term it, appears to have blighted and blasted even the development of patriotism in parochial matters, usually so conspicuous in the Anglo-Saxon race wherever located. A better day is now dawning; but it would be unreasonable, in the highest degree, to expect any out a gradual change; both the white and coloured population are finding their own level, after long subjection to the alienating system which injured both by placing one class far above, the other far below their just position. Nothing

could well have been worse than the material, as well as financial and social condition of the island, when the Abolition Act of 1834 came into operation. Want of space prevents the multiplication of evidence on this subject; but the following extract from Dr. Madden may serve as an illustration of the state of Kingston at the above named period. After remarking on the extreme beauty of the city, when viewed from the harbour, or from the neighbouring mountains, the writer adds, that on a near approach, the glory of the prospect, like that of Stamboul, is soon forgotten; "the distant beauty of the varied buildings vanishes before the sight of streets without a plan, houses without the semblance of architecture, lanes and alleys without cleanliness and convenience; and the principal thoroughfares ploughed up into water-courses, and the foundations of the houses literally undermined, or the level of the streets on which they are situated lowered from two to four feet below the foundation. * * * The effects of this lowering of the level of the streets, and undermining of the front foundations of the houses; and, consequently, of the shattered appearance of the greater number of them, gives Kingston the aspect of a ruined city that has been recently abandoned. It is impossible to form any idea of an inhabited town so desolate and so decayed. * * * Its decadence arises not from the actual inability of restoring or improving it, but from the indolent inanity of a corporation that is powerless for any good or useful purpose. The evil genius of municipal arrogance and imbecility presides over its slumbers.—(*Twelve Months in the West Indies*, vol. i., p. 98.)

with propriety be detailed elsewhere, are vividly portrayed by the same able pen. It is of the last importance that the corporation of the city, if not for the sake of decency, yet in regard to their own lives and those of their fellow-citizens, should exert their utmost energies to remove these glaring evils, more especially if the prevailing theory be correct, that cholera comes in the form of miasm or poison, floats in the atmosphere, and may be likened to an electric cloud, which is ready to discharge its fluid on the first object of attraction. While hovering around, or passing over such places as Kingston, it would be drawn thither as the needle to the magnet; there is, moreover, the further danger of the malady fixing its permanent abode in spots so fitted for the reception and reproduction of disease. When the cholera visited Port Royal, it was necessarily soon wafted to Kingston, and there its ravages were awful, especially in the lower portions of the city; in one of whose purlieus (Harbour Street), nineteen corpses were carried out of a single house of ill-fame in the space of thirty-six hours. About 5,000 persons perished in five or six weeks, out of a population of 40,000. Supposing London to suffer in the same ratio, the loss would be between 200,000 and 300,000. In the upper part of the town, adjoining an open, somewhat extensive, and slightly elevated plain, termed the Race-Course, there are some good detached dwellings, but even they are far inferior in comfort and style to the habitations of our merchants and civilians in the East Indies. In different parts of the Liguanea Plain, which slopes upwards to the mountains, distant only about five miles, there are several "Pens" as the country houses or grazing farms are indiscriminately termed; some of these are of ample size, and the grounds around are laid out with taste. They afford a quiet and cool retreat from the toil and heat of Kingston. Beyond the race-course stands *Up Park Camp*, an extensive series of barrack buildings, which cover an irregular square of more than 200 acres, situated about 200 feet above the sea, two miles north of Kingston, and one and a-half distant from the *Long Mountain*, which having a nearly perpendicular elevation of 800 feet, unfortunately prevents the free circulation of air over the camp. The barracks consist of two long parallel lines of buildings, two stories high, with a six-feet basement, extending from east to west; that to the south, or seaward, comprising the officers' quarters. There is an excellent hospital, and a spacious bath of forty feet wide and four deep, containing 70,000 gallons of running water, supplied from Papine estate, four miles and a-half distant; the pipe conveying it is six inches in diameter, and discharges 4,500 gallons per hour. This constant abundance enables the soldiers to irrigate their gardens, which are laid out in the camp, and furnish the garrison with vegetables. The whole cantonment, at sixty feet distance, is surrounded by a wall of six feet high, surmounted by an iron palisading. Two regiments of Europeans may be accommodated; but the mortality among the English soldiers formerly stationed there was very great, and Sir William Gomm, when commander of the forces in the island, evinced sound judgment and humanity by causing the removal of the Europeans to a position, termed *Newcastle*, within view of Kingston, but elevated about 4,000 feet above the sea.

A village, called *Halfway Tree*, not far from *Up Park Camp*, possesses one of the neatest churches that I have seen in any of the colonies. It was built in the reign of Queen Anne, has several good monu-

ments, and in its pewing and interior arrangements resembles somewhat (though on a smaller scale) the pretty church of Hammersmith, near London. The commodious, healthful, and tastefully ornamented dwelling of the present hospitable Bishop (Dr. Spencer) is not far distant from *Halfway Tree*; the route through this village leads to *Stony Hill*, a military post (not now garrisoned) which commands the main road that traverses the island from south to north; the ascent, though abrupt, is practicable for wheeled carriages; but the roads here, as well as elsewhere, are of the most wretched description, and often impassable during the rainy seasons.

Port Royal, (formerly called *Caguaya*) five miles south-west of Kingston, and nine miles south-east of Spanish Town, is situated near the extremity of a tongue of coral rock covered with sand, called the "Palisades," which stretches ten or twelve miles from the shore, and forms a natural breakwater for the protection of *Kingston Harbour*, although scarcely elevated above the level of the sea. This fine haven is, when entered, exceedingly spacious, commodious, and well sheltered from all winds, but its mouth at Port Royal is narrow and intricate. As previously stated (p. 24), an opulent city formerly stood near this place, which in 1692 was almost overwhelmed by an earthquake; and having been partially rebuilt, was in 1703 again desolated by a conflagration, that reduced all the buildings to ashes, except the forts. Notwithstanding these calamities, and several minor ones, attempts were once more made to restore it, with some success, but in 1722 the sea broke over the breast-work, flooded the streets, and nearly destroyed the church and houses at the eastern end; notwithstanding this series of visitations, the site gradually became re-covered with houses mostly constructed of wood. On 13th July, 1815, about mid-day, a fire broke out which, in a few hours, burnt down almost the whole of the buildings, including the naval hospital. No further effort was made to reconstruct the town; government purchased part of the adjoining land, enclosed it within a high and strong wall, and strengthened the fortifications, making it almost exclusively a naval and military station. The town, Port Royal, now consists of five or six moderately wide streets, traversed by lanes, in which are situated "square blocks of ill-ventilated filthy hovels, the majority of them not deserving the name of a house. Many of them contain only one apartment, in which five or six human beings are to be found huddled together, in a space of little more than about double as many square feet, without any domestic conveniences; the floors are generally earthen, dirty, and damp, more like cellars than human habitations." As usual, in Jamaica, there is no paving, macadamizing, cleansing, sewage, or lighting. The Earl of Dundonald, the commander-in-chief on the West India station, in 1849-'50, called the attention of the Admiralty to the bad condition of the town, as exercising an injurious influence on the health of the patients in the naval hospital; and in a letter to the Mayor of Kingston, his lordship remarked, "never have I seen, in the whole course of my life, a place so disgustingly filthy, or which could give so bad an opinion to foreigners as the town of Port Royal." The Admiral then pointed out the spot where cholera would probably break forth, and his prediction was verified in October, 1850, when the pestilence raged with fury, carrying off

* Report of Dr. Wingate Johnstone, Deputy Inspector of Naval Hospitals and Fleets.

many victims, boatmen, fishermen, bum-boat people, washerwomen, and artisans, in four or six hours; collapse almost immediately supervening on the attack. The population is about 1,000.

Fort Augusta, formerly called *Mosquito*, is a strong fortress, built at the extremity of a low neck of land, which juts out into the western portion of the extensive inlet, comprising the havens of Kingston, Port Royal, and Hunt Bay. The buildings occupy the whole area of the point of the peninsula, which is surrounded by the sea, except on the west—the south face of the fort being washed by the deep water of the ship channel, while the east and north sides are environed by the shallow waters of a lagoon. The fort is not considered unhealthy, owing to the prevalence of the wind from the south and south-east. The barracks are two stories high, and well ventilated. Fort Augusta has suffered the devastating power of both fire and hurricane. In 1763 the magazine was struck by lightning; in an instant 3,000 barrels of gunpowder exploded, the buildings, bastions, and guns, were blown to atoms, and 300 human beings perished. A small fortification, termed the *Apostles' Battery*, stands on a high rock on the shore opposite the town of Port Royal. By means of this battery, and of the strong and easily defensible positions at Fort Charles (Port Royal) and Fort Augusta, hostile fleets are effectually excluded from Kingston harbour; and landing, except in small boats, is not easy at any contiguous part of the coast.

A detailed statement of the features of each division of the colony is not practicable within the prescribed limits of this work; it remains therefore to notice a few of the principal places, proceeding in an easterly direction from Kingston round the island.

Port Morant, ten miles south-west of Morant Point, is a good harbour, but has reefs on each side of its entrance. The scenery in the vicinity is very picturesque. The village of *Bath*, with sulphureous hot, and cold mineral springs, effectual for the cure of rheumatism, is situated some miles inland. There is a botanic garden here, on which large sums of public money have been expended, but, it would appear, not under a judicious system. The spot, however, has been well selected; the mountains in the immediate neighbourhood are clothed with varied and magnificent foliage, and the orange, cocoa-nut, bread-fruit, mango, star-apple, palmetto-royal, mahogany, avocado pear, jack-fruit, lime, citron, guava, the arrowy bamboo, and the tree-fern with its slender trunk and crown of feathery leaves, appear in the greatest luxuriance, interspersed with shrubbery, guinea-grass, tropical esculents and flowers, kept in perpetual verdure by the rain, which falls abundantly throughout the year in this humid region.

Morant Town and Bay, a few miles to the westward, and thirty-one miles east of Kingston, is the principal shipping place. The anchorage is protected by a coral reef, and commanded by a battery. The town is neatly built, and supplied with excellent water. Most of the houses are of brick, stand on elevated ground, and are surrounded by a profusion of cocoa-nut, plaintain, and banana-trees. The inland view presented to the voyager while sailing along the coast, between Port Morant and Kingston, is truly magnificent; the "Blue Mountains" tower in the back ground, vast buttresses jut out in various directions, some nearly disjointed spurs approach the coast, all covered with forests; the hills also clothed with verdure, the soft green of the cane-fields, the deeper hue of the guinea-grass pastures, varied with

wild savannas, and dotted here and there with white-washed plantation works, dwelling-houses, sugar-mills, and negro villages peeping out in the distance, embowered in cocoa-nut groves—all these fair sights, illumined by the brilliance of a glowing sun and cloudless sky, form a series of landscapes, whose rare beauty those who have travelled most will best appreciate.

Yallahs, a small Wesleyan station, about twelve miles west of Morant Bay, and nineteen east of Kingston, though close to the sea, is remarkably dry and warm, which contributes to render it a favourite retreat for snakes, lizards, scorpions, centipedes, mosquitoes, and sand-flies. Water-melons, pumpkins, sweet and sour sops, papaw, and such productions as grow here, are of excellent quality. The *Yallahs River*, with its ever changing banks, is, in wet weather, fraught with danger; rising amid lofty mountain recesses, it receives tributary torrents from many a rugged glen, and rushes towards the sea, occasionally sweeping away in its brief and headlong course, stones of large size, timber, &c. In the awful hurricane, accompanied by shocks of earthquake, which took place in 1815, the works of several sugar and coffee plantations in this neighbourhood were destroyed, and a large iron bridge was carried away by the stream, not a particle of which was seen afterwards. Many lives were lost at this time, one case (that of a Mr. Smith and his family) was peculiarly distressing, these unfortunates were last seen clinging to a tree, and were then literally torn piecemeal by the fierce war of the elements, some of their severed limbs being alone recovered. "It is worthy of remark," says Mr. Barclay, "to how small a space these visitations are frequently confined. In the present instance the centre of the storm passed from north to south across the island from Annotta Bay, down the course of Yallahs River; on the other side, at Spanish Town, about forty miles west, it was scarcely felt, and one vessel off the Morant Keys at the time, about fifty miles to the east, experienced only a fresh gale."*

Plantain Garden River flows through a fertile level, and highly cultivated vale or savanna, about ten miles in length, terminates in a good harbour, and enters the sea, nearly in the centre of a bight which indents the eastern coast, to the north of Morant Point. It is bounded on the south by low hills, and on the north by an ascending series of heights, from whence the luxuriant beauty of its cane-fields, studded at intervals with extensive estates, buildings and works partially hidden in cocoa-nut groves, is seen to great advantage.

Manchiomeal Bay, situated to the north-west of *Plantain Garden River*, and towards the centre of the eastern coast, has a small harbour, difficult of access, from being crowded with rocks, and open to the trade wind and current of the sea, which sweeps westward, and passes down the Gulf of Florida. The village of *Manchiomeal* is of inconsiderable size, the houses and stores are not numerous, nor is the population large; the most interesting feature is the ruins of the massive stone walls of a fortification built by the Spaniards. Passing the promontory, called from its position, *North-East Point*, and following the coast, which here exhibits a succession of coves and creeks in a western direction for about six miles, we arrive at *Port Antonio*, under which name is comprised two harbours, divided into eastern and western by a pro-

* *Wesleyan Missions in Jamaica and Honduras*, by the Rev. Peter Samuel. London, 1850; p. 272.

jecting tongue of land; the eastern is well defended from north winds by *Navy Island*, which contains about eighty acres of land: both are easy of access, and have good anchorage. A fort with a half-moon battery commands the double entrance, being built at the northern point of the small but elevated peninsula above alluded to, as are also the barracks, the hospital and other buildings forming what is termed the Upper Town, the streets of which, though laid out at right angles, are overgrown with weeds and grass, and afford pasturage for goats, horses, and donkeys, while hogs, the privileged favourites of the Jamaica public, range about at pleasure. The officers' barracks run northward, and overlook the east harbour, with a verandah back and front; but the rooms are low, and not well adapted for the climate; the men's quarters are comparatively superior. The hospital is an excellent structure. The Lower Town consists of two principal thoroughfares, of which *Harbour-street* forms a segment of a circle on the shore of the eastern haven; and *West-street*, with its stores and warehouses, is convenient for vessels lying alongside the wharves, which they can do in the western port all the year round. The scenery here is very grand; rock, wood, and water combine to make it so; but the situation of the Lower Town is nevertheless considered very unhealthy, owing to the miasma generated in the surrounding morass, and to the want of efficient drainage. The soil is extremely prolific, consisting generally of vegetable mould, mixed with some clay, resting upon porous lime and chalkstone; the former intersected with fissures, the latter soft and more compact, fit for building purposes. Along the sea shore honeycomb-rock abounds, to the great annoyance of pedestrians, being pointed and sharp as broken glass.* In the vicinity of the Lower Town there is an extensive cavern in the limestone formation, on the steep side of the hill, about a hundred feet above the level of the sea, having the usual variety of chambers and passages adorned with stalactites and stalagmites, and carpeted by a soft elastic substance, which feels like moss, but is in reality a coating of bats' dung several feet in depth, and has been successfully used as manure. Numerous skulls of these creatures are everywhere scattered about, and while crowds of living ones flap their heavy restless wings, a pair or more of owls may be seen in the lofty vaults near the entrance, gloomily engaged in picking the bones of deceased bats.†

Seven miles inland from Port Antonio, in direct distance, but perhaps twice as many by the road, is *Moore Town*, the largest Maroon settlement in the island, which contained, when visited by Messrs. Lloyd and Harvey, a population of 600, dwelling in 100 cottages larger and more finished than the negro huts on estates, and dispersed over the slope of a hill, backed by rising mountains. Their own grounds were carefully cultivated, and they occasionally hired themselves out in parties to clear the pastures of the neighbouring proprietors, but insisted on working with their cutlasses, not choosing to employ the more appropriate implements, which they regarded as tokens of slavery.‡ Four miles from Moore Town a settlement named *Allamont* was commenced in 1837 by a few Scottish families, who, allured by the promises made by the local legislature, established them-

selves in an irregular valley about a mile and-a-half in length, through which the Rio Grande runs, sometimes a gently flowing, shallow stream, but during the frequent and heavy rains, an impetuous torrent. The adjacent land was considered extremely fertile, and well suited to the cultivation of coffee and ginger, and the only obvious defect was the difficulty of transporting produce to market.

The result of the experiment would seem to have been a failure, and the consequent loss to the country, and suffering to the poor families must have been great; as also in other instances where immigrants have been introduced at great cost from the East Indies, Africa, Portugal, and Germany.

The *Rio Grande* enters the sea about five miles to the westward of Port Antonio. *Hope Bay* about four, and *Buff Bay* fifteen miles further in the same direction, afford shipping places for the estates in their neighbourhood; at the latter there is a church, a court-house, and other public buildings. From Buff Bay to Kingston the distance by the road is about thirty miles, across the narrowest part of the island.

Annotta Bay has anchorage exposed to the north and north-west winds; on its western shore there is a village of the same name with a church, Baptist chapel and parochial schools, and about 300 or 400 inhabitants. A little to the westward of Annotta Bay, and between it and Port Maria is a small inlet distinguished in Arrowsmith's recent and excellent map, as *Don Christopher's Cove*, and supposed to have been the scene of Columbus' weary sojourn in 1502 (see p. 18.)

Port Maria gives its name to a town built upon the edge of a semicircular bay, which faces the north-east, and is bounded by two bold elevated promontories, one of which (that to the westward) has on it the remains of an old fort. The buildings stand at the opening of a long narrow valley, inclosed by hills on either side, and between the mouths of two streams, whose banks are clothed with the most luxuriant vegetation. On the opposite shore of the west stream are the suburbs called *Stennet's* and *Manning's Town*; in the rear of Port Maria there is lagoon or marsh, and beyond, and draining into it, a swamp, which stretches for a considerable extent up the valley. The whole appearance of the place is very picturesque, but it is decidedly insalubrious. During the recent visitation of cholera, the population and deaths were—

Locality.	Population.	Deaths.
Port Maria	420	239
Manning's Town . .	330	200
Stennet's Town . .	250	114

Fully two-thirds of those who remained on the spot perished. In one house in the middle of the town, fourteen out of seventeen inmates were swept off within fifty hours. Half the prisoners in the gaol died, and many of the houses of the lower classes, from being crowded to excess, became quite depopulated.—(*Cholera Report*, June, 1852.)

Separated from *Port Maria* by a small peninsula, the north-eastern extremity of which is termed *Galina Point*, is *Ora Cabessa*, a port and river visited and named by Columbus.

St. Ann's Bay, the shipping place of the rich district of St. Ann's parish, has a narrow entrance between two reefs. The town, built on a hill at the south-east side of the bay, is beautifully situated,

* *Vide Wesleyan Missions*, by Rev. P. Samuel, p. 143.

† *Vide Jamaica Monthly Magazine and Scientific Journal*, June, 1848; p. 57.

‡ *West Indies in 1837*, p. 297.

but so surrounded by sea swamp as to be very unhealthy. The neighbouring heights afford a pleasant and salubrious retreat to the more wealthy inhabitants. There are three villages included in the parish, named *Ocho Rios*, *Dry Harbour*, and *Brown's Town*, the first of which stands on an inlet of the same name, to the eastward of St. Ann's Bay; the second, where there are barracks, to the westward; while the third is charmingly situated inland, and is considered to possess a climate far more temperate and salubrious than that of the coast. In this vicinity, several "free villages" have been formed, which will be subsequently noticed. St. Ann's parish is remarkable for the beauty and variety of its scenery and the richness of its productions. Cane-fields extend for a distance of about ten miles from the sea, and then give place to coffee plantations, whose bright green foliage, crimson berries, and jasmine-like flowers, exhaling a delicious perfume, contrast agreeably with the more sombre hue and aromatic fragrance of the pimento (all-spice) groves. About the beginning of February, these latter offer very striking and pleasing scenes to the eye of a stranger. The trees, then covered with the green, unripe berries, just fit to be gathered and dried for exportation, are each surrounded by groups of children busily engaged in plucking the loaded twigs, and stripping off the fruit, while flocks of green parrots and paroquets shoot from tree to tree, screaming discordantly while on the wing, but with the characteristic intelligence of their race, becoming as quiet as mice, when, alighting to revel upon the luxurious food, they conceal themselves amid the foliage, which the colour of their soft plumage enables them to do very successfully. The pimento, which, when ripe, becomes black, pulpy, and sweet, retaining very little of its spicy flavour, even in its immature state, offers such irresistible attractions to some of these birds as to tempt the Glass Eye (*Merula Jamaicensis*), and even the Solitaire (*Ptilogonys armillatus*), from the deep mountain recesses, whence they rarely emerge.* In what is termed the *Moneague* savanna and its neighbourhood, there are numerous large farms for the rearing of horses, cattle, and mules, whose bodies are almost hidden by the gigantic tufts of the Guinea grass,† among which they delight to roam. Orange trees, and other varieties of the citron tribe, laden with golden fruit, are thickly scattered over the landscape, to which a park-like character is given, alike by the grazing cattle, the gentle elevations crowned by clumps of trees, and the absence of fences, the estates being only marked by the walls which divide them.

Sevilla Nueva, or *D'Oro*, the first Spanish settlement, stood on the shore of St. Ann's Bay; the site is now partially occupied by a sugar plantation, long remarkable for its productiveness; but relics of the former city still remain, and the ruins of the cathedral are in excellent preservation. On the coast, a little to the eastward of the bay, a remarkable waterfall, called *Roaring River Cascade*, is formed by the junction of eight small streams. The road across to Spanish Town, through the centre of the island, presents varied scenes of Alpine grandeur, cultivated beauty, and tropical luxuriance, but has much more attraction for the eye of a painter than for the ordinary traveller, who, doubtless, would often gladly forfeit some marvellous prospects for an easier road.

* *A Naturalist's Sojourn in Jamaica*, Gosse, p. 64.

† The seeds of this valuable grass were brought from Guinea, about 1740, as food for some birds, a present from

Near Mount Diavolo, the way is especially steep and difficult, and from its zigzag and winding ascent, would be tedious, but for the enchanting views presented at certain points. One spot in the romantic inland parish of St. Thomas-in-the-Vale, is very remarkable; the road there lies through a deep gorge, called the Bog Walk (i.e. *Bocágua*, a sluice), by the side of the Cobre River, here formed by the union of the Negro and D'Oro. The rocks often rise to a great height on either side, closely hemming in the channel of the rushing stream, with the narrow adjacent pathway. Here and there the channel is obstructed by rocky islets, and in one place a broad mass of limestone, called *Gibraltar*, attains an absolutely perpendicular altitude of 500 or 600 feet (twice the height of St. Paul's), while in its crevices grow many small and slender fan-palms (*thrinax*). Even in dry weather it is a singularly imposing object; but when, as sometimes occurs during seasons of excessive rain, a cataract pours down from its very summit, breaking into a cloud of mist and spray before it reaches the distant river beneath, the spectacle must certainly be one of extraordinary grandeur. Near Dry Harbour, there is a cavern of great width and depth, terminating in a subterranean lake, a few miles to the westward of which is the inlet forming the *Rio Bueno Harbour*, which though exposed, is yet available for shipping produce.

To the westward of *Rio Bueno*, a cocoa-nut grove extends for three or four miles, and stretches from eight to ten miles inland; yet, notwithstanding this abundant supply of the raw material, from the want it would appear of well-directed capital and enterprise, cocoa-nut oil is still imported from Ceylon. The nuts, however, have now become an increasing article of export.

Falmouth, the chief town of Trelawney parish, is the next place on the northern coast that demands attention. It is situated near the mouth of the *Martha Brae River*, which rising in the mountains of the interior, there almost unexplored, falls into the sea after a winding course of about thirty miles. The original town, named from the Brae, about two miles inland, has for many years resigned its pretensions to Falmouth, both as to convenience for the shipping, and general business, the latter excelling all the towns on the north side except that of Montego Bay, while its general aspect is more English than that of any other in the island. The streets are laid out at right angles, and most of the houses being kept well painted with stone or lead colour to preserve them, look remarkably neat and clean. In the centre of the town there is a large reservoir of water, which is supplied through underground pipes, reaching the river at Martha Brae, where there is an hydraulic engine to keep up the supply when the river is too low to work the water-wheel. The most prominent building is the Court-house, which is of stone, having a portico, supported by four massive pillars; a broad flight of steps branch off right and left, and lead to two large halls, into which the upper part of the edifice is divided. There are Episcopalian, Presbyterian, and Wesleyan places of worship, and a substantial Baptist chapel erected by Mr. Knibb. At the extremity of the low sandy projection on which the town stands, a fort, barracks, and hospital have been built; the guns of the fort command the entrance of the same coast. The birds died; the remaining seeds being thrown away over a fence, took root, and the anxiety of the cattle to obtain them, soon drew attention to their value.

the barred harbour, which affords safe shelter for ships, being defended on the north by a coral reef, running parallel with the shore, but the coral formation threatens to close up the mouth of the haven; already first-class ships have not room to enter, and are compelled to go to Montego Bay. The site of Falmouth has been but recently reclaimed; it is a dead level, without drainage, and scarcely elevated above high-water mark, while a marshy lagoon, of several miles in extent, hems it in on the east, south, and west, covered with mangrove, sea-grapes, and other semi-marine trees and vegetation, affording shelter and nourishment for myriads of crabs, mosquitoes, and sand-flies; and generating a most offensive miasm, which is felt strongly during the night, when the land-wind carries it over the town towards the sea.* In such a locality, fever and disease could hardly fail to make frequent and severe inroads, and so it has proved. During the recent cholera epidemic, out of a population estimated at 3,500, 485 perished. In a single house, a place of dissipation and vice, eighteen out of twenty-six inmates were rapidly seized with the malady, and fourteen died within forty-eight hours.

Montego Bay, in the parish of St. James, about fifteen miles to the westward of Falmouth, is the chief emporium of trade on the northern side of the island, and is distant from Kingston about 120 miles. The town is well laid out, on an elevation which slopes westwards towards the sea; the main street, which divides the town, runs nearly north and south. Many of the buildings and houses are of brick or stone, and the dwellings of the respectable inhabitants are both elegant and comfortable, having gardens or grass-plots attached, adorned with various characteristic trees, shrubs, and flowers; while verandahs, piazzas, and other features of tropical architecture, render the houses as pleasant and cool as possible in this extremely warm neighbourhood. The bay being sheltered on the east and south by a semi-circular hill, the sea breeze by day and the land wind by night, are alike cut off from the greater portion of the town, where the temperature is almost always very sultry. The anchorage for the shipping ranges from four to thirty-four fathoms water, with ample space for a large fleet; but the entrance is not good, and the haven open and exposed, and when the north-west wind blows, unsafe for ships. A large outlay has been incurred in attempting to form a breakwater to keep off the swell; but, from defective engineering, nothing has been achieved, besides burying an immense quantity of large stones in the sea, which have been swept away by the violence of the waves. The plantations here, not only skirt the shore but extend inland for several miles, and render the view from the bay very pleasing. The town forms, as it were, the centre of the picture; and its various places of worship—Church of England, Baptist, Wesleyan, and Presbyterian—together with numerous good houses, stores, and wharves, stand out, relieved by the foliage of the cocoa-nut, orange, star-apple, plaintain, banana, and other trees and shrubs; the sides and back-ground are formed by hills, which stretch along the coast as far as the eye can reach, and rise one above another, richly studded with cane-fields; interspersed with clumps of bamboo, trumpet, broad-leaf, prickly-yellow, cocoa-nut, and majestic wild cotton trees, from whose far-extending branches hang innumerable wreaths of wild flowers,

* Samuel's *Wesleyan Missions*, p. 176.

† Vide Dr. Roper's statement, Cholera Report, June, 1852.

parasitic plants, and creeping vines, which, sometimes bending downward, take root in the ground.

Here, however, as in all the towns of Jamaica, with few, if any, exceptions, the habitations of the lower classes are characterized by extreme wretchedness, and by that absence of cleanliness, ventilation, and sufficient space for the decent accommodation of families, which ever proves a fruitful source of disease and crime. Even the public, as well as private dwellings of the poor, too frequently manifest the same lamentable deficiency, alike in policy and humanity, and the results have been appalling. Thus, when Montego Bay was visited by cholera, in December, 1850, nearly 800 persons perished in that single month, out of a population of 6,000 or 7,000; and in the workhouse, only three out of fifty-five paupers survived.†

Great River divides St. James from the parishes of Hanover and Westmoreland; it is not navigable, but is crossed by two large stone and one wooden bridge, and enters the sea after a winding course of thirty-four miles.

Lucea, the town of Hanover parish, stands on the south-west shore of a beautiful horse-shoe-formed bay, the entrance to which is about half-a-mile across, and the depth of water from four to six fathoms throughout. Two streams, called East and West Lucea, flow into the head of the harbour. There are some respectable buildings in the town, such as the Church, Presbyterian, and Methodist chapels. Ridges of high land surround it so closely as to leave only a narrow strip of flat surface adjoining the beach; this is occupied by one large street, above which there are many houses on the sides of the steep adjacent hill, from whence the view is magnificent. The parish is well watered, and full of charming scenery, and the coast abounds in bays and creeks.

The character of Lucea, in a sanitary point of view, unhappily does not correspond with its pleasing appearance; the site of great part was originally a swamp, the soil is generally loose and sandy, riddled in many places with the burrowing of land-crabs; water is found at a depth of two or three feet, and at the east end there is a foul quagmire with large pools of stagnant water; altogether this spot has proved one of the most insalubrious in the island. Diarrhoea, dysentery, and remittent fever, are of frequent occurrence; and in 1837, a very fatal typhus prevailed. In 1850-1, a full third of its inhabitants died of cholera, most of them at the hospital, which was not to be wondered at, considering its situation at the side of stagnant ditches, its extreme overcrowding, and the want of proper nursing and medical attendance. *Fort Charlotte*, so named in honour of the sister of the Earl of Elgin, is built on the extremity of the peninsula which bounds the harbour of Lucea.

Elgin and Johnson Hamlets are situated on the opposite side of the harbour.

Proceeding a few miles to the westward we arrive at a beautiful little inlet called *Orange Cove*, immediately beyond which is *Pedro Point*, the north-west extremity of the island. The coast here takes a south-westerly direction, and is much indented; the chief inlets are *Green Island Harbour*, which receives its name from a little island at the offing, about half-a-league distant from the main land, and is defended by a fort; and *Orange Bay*, into which a river of the same name flows. A bight called *Long or Negril Bay* occupies chief part of what ought properly to be termed the western coast, and terminates in a

promontory known as *South Negri*, which forms the western extremity of Jamaica; the shore then trends to the south-eastward.

Savanna-la-Mar is situated in Westmoreland, the parish which occupies the south-western portion of the island. The harbour, or rather roadstead, is by no means a good one, the water is shoal, and the anchorage unsheltered. The town is built by the sea-side, on an alluvial flat, and is scarcely raised above high-water-mark; the chief buildings are the Church of England, Baptist, and Wesleyan chapels. Though not peculiarly attractive in other respects, the place is very characteristic of West Indian manners. On its eastern side a grove of cocoa-nut palms, nearly a mile in length, fringes the white beach, and on the other the eye rests on a wall of sombre mangrove trees, growing actually out of the sea for miles. The wharf being passed, the visitor enters the broad, long, straight street that constitutes the town. There is no pavement but the sandy earth, ploughed into ruts by the waggons, some of which may frequently be seen with their long teams of oxen, bringing in puncheons of rum and hogsheads of sugar from the country. Right across at irregular intervals run large water-courses, dry at times, but in the rainy seasons, liable every day to be flooded; each then becoming a foaming torrent of muddy water, rushes noisily into the great mangrove morass that environs the town. This swamp extends to the westward for several miles, and exhales a most pestilential miasm, but being below the level of the sea, cannot be drained.

The lower parts of most of the houses are used as shops, or *stores* as they are called in American fashion, each one, whatever the character of its merchandise,—drapery, "dry goods," "hardware," provisions, spirits, or tobacco, are all fitted up in the same manner, with an open piazza in front, three or four yards wide, where the various goods are exposed, and in which the proprietor, and a friend or customer, may commonly be seen, seated on chairs, the feet often on another chair (also in the American fashion), smoking a cigar, and sipping some cooling syrup, or imbibing the more enticing and dangerous beverage known as "sangaree." Behind the piazza is the shop, with unglazed windows, through which communication is freely held with the clerks and assistants inside; this is fitted up with counters and shelves in the English style. Above, the ceiling of the piazza being supported, on the street line, by one or two slender pillars, are the rooms of the dwelling-house, or else balconies; in either case furnished with jalousies, or strong Venetian blinds. Towards the upper end of the long street the shops cease, the houses become more elegant, each inclosed in a court or garden, often adorned with the beautiful or fragrant blossoming trees and plants of the island, or such as unite fruit with beauty and shade. Of the former the scarlet cordia, the noble agave, and the oleander, or South Sea rose, both beautiful and odorous, are great favourites; and of the latter, the wide spreading genip and tamarind, the tall papau, and the golden-fruited members of the *Citrus* genus, from the gigantic shaddock to the diminutive lime. Although the town itself is so superabundantly supplied with water, both from the heavens above and the earth beneath, yet the supply for the houses is miserably deficient, and contributes to the want of cleanliness, which is doubtless one cause of insalubrity. In 1851, out of a population estimated at 1,600, 329 died of cholera between 7th of June and

21st July. Some of the wealthier merchants have pleasant country seats a few miles inland; one of these (Phoenix Park) is graphically described in the book from whence the above description of the town has been chiefly derived, viz., the delightful volume that has resulted from the labours of P. H. Gosse, A.L.S., assisted by the scientific knowledge and long experience of the well-known naturalist, Richard Hill, which affords much interesting detail respecting the endless variety of trees and flowers, birds and insects, that forms one of the loveliest features of this richly-gifted country. As the best class of Jamaica houses are usually constructed on the same principle, the following portraiture will serve as an illustration of the whole:—

"The furnished part of the house is all on the same level, forming what we should call the first floor, the whole of the ground-floor being devoted to store-rooms and cellars. An arched passage, open at each end, leads through the house, beneath the dwelling apartments, from the road in front to the yard behind. A flight of stone steps, with iron balustrades, on which run beautiful twining and creeping plants, such as the lovely crimson *Quamoclit*, the wax-like *Hoya carnosa*, and others, leads the visitor up to the front door, and he is immediately ushered into a spacious hall, in the form of a cross, extending the whole length and breadth of the house. This large hall is characteristic of all Jamaica houses, it forms the principal sitting-room, and, from its shape, admits the cooling breeze to sweep through it, whenever there is a breath of air. The two square areas formed by one side of the cross are filled by bed-rooms; but with these exceptions, the whole of the sides and ends of the hall are either occupied by windows, or open and furnished with jalousies, a broad sort of transverse Venetian blinds, which freely admit the air while they exclude the glare of light, which in this country is scarcely less distressing than the heat. This large and cool apartment is furnished with sofas, ottomans, tables, chairs, &c., not differing from ours; but there is no fireplace, nor any carpet. [In the mountain residences, however, both these articles are requisite.] Instead of the latter, the floor is made of the most beautiful of the native woods, in the selection of which much taste is often displayed, as also in the arrangement, so that the various colours of the wood may harmonize or contrast well with each other. Mahogany, green-heart, bread-nut, and blood-heart, are among the trees whose timber is employed for floors. Great hardness is an indispensable requisite in the wood used, and capability of receiving a high polish, which is given and maintained with great labour. Scarcely anything surprises a European more than to tread on floors as beautifully polished as the finest tables of our drawing-rooms. The mode in which the gloss is daily renewed is curious; if the visitor should peep out of his bed-room about dawn of day, he would see some half-a-dozen sable handmaids on their knees in the middle of the floor, with a great tray full of sour oranges cut in halves. Each maid takes a half orange, and rubs the floor with it until its juice is exhausted; it is then thrown aside, and the process is continued with another. When the whole floor has been thus rubbed with orange juice, it is vigorously scrubbed with the half of a cocoa-nut husk, the rough fibres of which, acting as a stiff brush, soon impart such a reflective power to the hard wood, as would put Day and Martin into ecstasies. After the last touch is given, it is amusing to see the precautions taken by the waiting-maids to avoid dimming its beauty. The preparation for breakfast, and various other duties, performed by servants with bare feet, would seem to make it impossible that the floor should remain untarnished, but it does; and it is thus managed. The girl takes two pieces of linen, and sets one foot upon each, then with her great toe and its next neighbour, she grasps a pinch of the cloth (for the negroes' toes are almost as effective as fingers), and thus scuffs about the floor; practice enabling them to do this with facility, without

their feet ever coming in contact with the wood. A small garden partially surrounds the house, filled with ornamental trees and shrubs, some native and some exotic. The beautiful *Nerium*, called the South Sea rose, is prominent among the latter, as also the gorgeous *Hibiscus rosa-sinensis*, and the Spanish jasmine, as fragrant as it is elegant; and the scarlet *Belladonna* lily, and many others, add to the gaiety of the parterre. In the garden, and around it, are several curious trees. The noble Malay apple (*Eugenia Malaccensis*), or, as it is here called, the Otaheite Cashew, there erects its conical head, covered either with its beautiful flowers, like clusters of crimson tassels, or with its close, luxuriant, richly-green foliage. The Sago Palm, likewise transported from farthest India, has found here a climate and a soil congenial to its growth, and presents a singular object in its stiff, bristling leaves, radiating in all directions, and its heart covered with a brown, woolly, or mealy substance. Immediately before the door is a large arborescent *Euphorbia*, probably *E. Grandidens*, a native of South Africa, with rather inconspicuous flowers, but sure to attract the attention of a stranger by its long, angular, leafless branches, set with spines, like long *Cacti* growing from the trunk of an ordinary tree. A row of Shaddock trees, hung in the season with their golden fruits, as large as a child's head, combines beauty, fragrance, and utility; while cashew trees, mangoes, custard apples, sops, and guavas, all valuable fruits, but too common to need description, form groves around the mansion. * * * Scores of humming-birds hover from day to day around the blossoms of the trees, sucking from flower to flower upon the wing, just as the hawk-moths do in our English gardens in the summer twilight, on trees in the sunshine.—(*A Naturalist's Sojourn in Jamaica*. London: 1851, pp. 155—159.)

Bluefields Harbour is very spacious, and possesses excellent anchorage; a coral reef stretches off some distance from the shore.

The water is unusually transparent, so that at a depth of six fathoms, the bottom, with every rock, patch of sand, or bunch of weeds, is as distinctly visible as if seen through the medium of a broad plate of glass. There is a fort here, but no town. The view from seaward is extensive and imposing; the verdant Guinea-grass pastures of Bluefields, and the neighbouring pens, sloping upwards, backed by the lofty rampart of the Bluefields ridge, rising into one conical peak of half a mile in height, and others of less elevation, and jutting out into the bay in a bold promontory, covered from its rounded summit to its base upon the sea-beach, with dense primeval forests. To the westward the view is very fine; the town of Savanna-la-Mar, being, as before stated, scarcely above the sea-level, can be recognised only by the clustered masts of the shipping; but above the town and the adjacent flat country, rises blue and distant, yet bold and well-defined in outline, the noble mountain named the *Dolphin's Head*, which, however, in form resembles rather a crouching lion. To the south end of Bluefields a tract of country extends for some miles, to which the name of *Surinam Quarters* was given by the planters who came here from Surinam in 1675. The remnant of the ill-fated Scottish colony at Darien also found refuge here, and settled farther to the eastward, in the neighbourhood of *Scott Cove*.

Black River Bay is a wide open inlet, at the head of which stands a village of the same name built at the mouth of the *Black River*. This stream enters the sea after a meandering course of about thirty-four miles, during which it flows, for the most part, through a flat country, and receives several tributaries both on the eastward and westward; it is the deepest and least rapid river in the island, and is

navigable for canoes nearly thirty miles from the sea. The village is remarkable for little beyond the handsome parish church in its neighbourhood.

Iacovia, the chief town of the parish of St. Elizabeth, is situated a few miles inland in a kind of basin, and is liable to be inundated by the waters of a large morass which surround it.

The *Val de Vuca Morass* extends along the shore from Black River to the *Pedro Plains*, and these terminate near *Great Pedro Bay*; the south-eastern boundary of which is formed by the promontory called *Pedro Bluff*. A low ridge or spur, called the *Santa Cruz Mountains*, runs nearly parallel with, though some miles distant from, the flat land above mentioned.

Alligator Pond, situated at the junction of St. Elizabeth and Manchester Parishes, is merely a shipping place for the latter parish, which is chiefly occupied by pens and coffee plantations; upwards of 10,000 tierces of coffee have been shipped in one year from this port. The town named *Mandeville* is one of the most healthy, agreeable, and improving places in the colony. It stands on a plateau 2,500 feet above the level of the sea, in the midst of green woods and pastures, and is surrounded on all sides by chains of high land; to the north a ridge extends, near the extremity of which is an isolated eminence called *Martin Hill*, and to the south and westward the *May Day Hills*, which seem connected with the lofty *Don Figuerreros Mountain*, environ the town.

Mandeville contains a church and rectory, and a chapel established by the London Missionary Society, but now chiefly supported by its coloured congregation. It has a court-house, jail, house of correction, a magazine and arsenal, and other buildings. There was formerly a great deficiency of water, there being only one spring of fresh water in the whole parish, but tanks have been constructed, and in the town at least there is now an abundant supply.

The inland and mountainous parish of Clarendon bounds that of Manchester on the eastward, and contains an isolated eminence called *Bull Head*, 2,140 feet in altitude, which is considered to mark the centre of the island. In the southern portion of this parish tobacco was grown by the Spaniards. All the roads are exceedingly bad, and impassable in wet weather; in the mountain districts there are literally none, and the people cannot reach town or market, save at the hazard of life. The *Rio Minho*, or *Dry River*, rises near the north-western boundary, crosses Clarendon in a south-easterly direction, and after receiving several small, and one considerable tributary, called the *St. Thomas*, enters the parish of Vere, flows through it in a tortuous but southerly direction, and joins the sea near *Carlisle Bay*, after a course of about twenty-six miles in direct distance, but including its various meanders, above fifty. The lower part of Vere projects into the sea in the form of a peninsula, at the extremity of which a neck of land (through which runs a low limestone range of hills called *Portland Ridge*) juts out in a south-easterly direction, enclosing a small but secure haven called *West Harbour*. Near the termination of the ridge is *Portland Point*, a little to the westward of which is an inconsiderable promontory, in 17° 44' S. lat., 77° 10' W. long., which constitutes the southern extremity of the island. Near *Portland Point* there is a remarkable cave, with two entrances, 300 or 400 yards apart, comprising several spacious chambers, supported by massive natural pillars, and adorned with endless varieties of stalac-

tites. A hot salt spring, near the mouth of the *Milk River*, has been found beneficial for rheumatism. Vere has no town, and only a few scattered negro hamlets; there are, however, about twenty-six sugar estates in cultivation.* The early English settlers in this neighbourhood made large fortunes by the cultivation of indigo, in which the Spaniards had probably set them the example, as when visiting the southern coast, in 1851, I saw some large stone vats, constructed evidently and used for the preparation of this valuable dye.

At the head of the extensive bay, known as *Old Harbour*, is a town or village of the same name, the chief place of the small and level parish of Saint Dorothy, and famous as the spot selected by the Spaniards for their principal ship-yard. The entrance to the bay is rendered perilous by shoals; the eastern haven, sheltered by *Goat Island*, still bears the name of *Galleon Harbour* (see map), from its having been the custom of the Spaniards to moor their richly laden vessels here for security during hurricanes; but the channel leading to it is now so choked up with mud as to have become useless, and even the merchantmen visiting this port to take in cargoes, lie further out in the bay, where there is depth of water for vessels of almost any burden, and excellent anchorage. At the distance of about two miles from the town is a small hamlet called the *Market*, where the negroes assemble to dispose of the produce of their land, and supply their own wants. The next parish is that of St. Catherine's, from whence this brief description of the leading topographical features of the island commenced with an account of Spanish Town. The mountainous parish of St. John, whose chief stream is the *Rio Montano*, has no town, but at a place which retains the native name of *Guanaboa*, there is a small hamlet, with a church and parsonage, and further to the north-eastward are some strong stone barracks, which command a narrow pass communicating between the northern and southern portions of Jamaica.

The romantic scenery of the adjoining inland parish of St. Thomas-in-the-Vale, has been noticed in connection with the road between Spanish Town and St. Ann's Bay. A charming vale, called *Sixteen-mile-walk*, from its distance from the former place, is a favourite resort of the citizens, its only drawback being the singular fog which almost every morning obscures its beauties, until about nine o'clock, when it is dispersed by the rarefying power of the sun. The neighbourhood is, however, considered very healthy, and some of the earliest and best sugar-fields were established here.

NEGRO OR FREE VILLAGES.—The dwellings of the negroes, during slavery, were of the most wretched

and unwholesome description, being usually low mud huts, with long thatch almost reaching the ground, nearly devoid of light or ventilation, placed in some useless swamp, with a rank vegetation around, and a pestilential miasm diffusing at all times the seeds of disease. In one of these hovels, eight or nine feet square, seldom boarded, sometimes the moist floor strewn with half-dried grass or herbs, eight or ten human beings, in a state of semi-nudity, would enter at the close of their weary day's toil, and after labouring like the beasts of the field, incited by the same stimulus, the cart-whip, prepare, as best they might, a hasty and often insufficient meal, and then flinging themselves down, and huddling together, without regard to sex or age, would seek a brief respite from suffering, if, indeed, the too frequent pangs of bodily pain, caused by hard labour, exposure to every vicissitude of weather, or lacerated limbs, would let them; till the hated "shell blowing" summoned them at dawn to return, with steps quickened by fear, to the scene of their misery. Blessed be God, these times are past; but owing to various causes, since emancipation, the majority of the people have been unable to construct better habitations; nor, it would appear, have the proprietors and overseers of estates, as a body, deemed it necessary to provide accommodation suited to the altered position of the labourers in their employ. Dr. Milroy, in alluding to the results of his official investigation, after describing the general character and condition of the lowest class of dwellings, says, "still more wretched than the ordinary negro houses are the huts which are provided in some places for occasional or stray labourers, and far too generally for the use of the watchmen, consisting of a few bamboo rods stuck into the ground in this form, A with some thatch rudely thrown over them; often have the poor occupants been found lifeless in the morning, having died during the night without any one near them. Is it not an outrage on our common nature to require human beings to occupy such kennels?"—(Letter to the Governor of Jamaica, 31st March, 1851).

From this and other statements it would appear, that even the inhabitants of the towns, in the occupation of their own freehold, or hired dwellings, are better, rather than worse off, than when tenantry the miserable shelter provided for them on the estates. If this be so, it is one more mistake added to the long list which have alienated, and to a great extent, still alienate the employers and employed in Jamaica. Certainly the negro is not insensible to the comforts, conveniences, and even luxuries of life; and considering the long and grinding oppression to which he has been subjected, it is perfectly

* Vere and Clarendon are dry parishes, and here, as in other parts of the island, the difference in the production of sugar and coffee between a season of abundant moisture and one of drought, is very great; in sugar it is as *four to ten thousand tons*. The late Edward M'Geachy, Crown Surveyor of Jamaica, endeavoured in vain to induce the planters to undertake works of artificial irrigation, as is practised in the East Indies and other countries. In an able pamphlet, published at Kingston, in 1846, Mr. M'Geachy pointed out how much of the diminished production of Jamaica was owing to destructive droughts, by which the peasantry were compelled to attend to their own provision grounds, which they could not neglect, for any wages that it was in the power of the planter to give; and he demonstrated, by figures, that certain sugar estates in Vere, Clarendon, and a few other parishes in the great plains, produced in 1846 only 14,150 tons, whereas, even

with the labour then available in the island, they ought to have yielded 48,125 tons. Referring to the "rich and extensive plains (of Liguanea), exceeding 154,000 acres of mostly rich, and perfectly flat ground, intersected and bounded by several large rivers, and some bog land, capable of the most profitable system of drainage, and traversed for a distance of fifteen miles by a highly finished, substantial railway," and adjacent to the "city and seaport of Kingston, with its 40,000 inhabitants;" and also to the "rich and flat district around Spanish Town, with several small villages, numerous grazing farms, and fifty to sixty fine sugar estates, with room for five times as many more," he adds: "although sugar is the chief cultivation, there are not now, even in good seasons, more than 5,000 to 6,000 tons produced," whereas, by a proper use of the water power, available in the neighbourhood, that amount could easily be five times multiplied—(pp. 30, 31.)

marvellous to see the progress in these respects already made, not by a few individuals, but by hundreds, and even thousands.

"Free villages," as they are termed, have been extensively established; they had their origin in the constant disputes between a large and respectable portion of the emancipated negroes and their former masters, who in many cases offered an insufficient rate of wages, which the peasantry were unwilling to take; whereupon they were subjected to exaction and arrogance in regard to the rent of their mud cabins and provision grounds, the previously fixed amount was arbitrarily doubled, and even trebled, or each member of a family, from childhood to old age, was charged with payment for permission to remain on an estate; and in some instances they were forcibly ejected from their hovels, their live stock killed, and their growing crops destroyed.

The negroes naturally desired to escape the species of villinage to which they were being subjected. One of their first and most considerable attempts was the formation on the borders of Clarendon and Manchester parishes, of a village named Porus. About 1,500 settled there, having bought land in small lots; but, unfortunately, much of the soil has proved of bad quality. A Mr. Andrew Drummond about the same time bought 700 acres for £600 currency, and sold it in small lots (excepting about twenty reserved acres) for £2,000.* At the Baptist station of *Sligo Ville*, so called from the delightful country seat of Lord Sligo, some fifty acres of fertile mountain land were divided into 150 freehold lots, which were gradually purchased by the negroes, and a similar course was I believe adopted at the Wesleyan mission villages of *Brown's Town*, *Beechamville*, and *Watsonville*, in St. Ann's parish; *Guy's Hill*, in St. Thomas-in-the-Vale, and other places. Then again the negroes frequently formed distinct settlements in the following manner: out of their scanty earnings they clubbed together funds which they placed in the hands of their respective ministers, to be invested in the purchase of such suitable landed properties as might come into the market. A Baptist missionary (the Rev. John Clarke) has recorded in a letter (dated February, 1852), addressed to the excellent Joseph Sturge, of Birmingham, some evidences illustrative of the beneficial results of this plan. The first purchase he made consisted of a property containing 120 acres of good land, distant about eight miles from Brown's Town, where a Wesleyan mission was established in 1835; the cost, with the expenses of conveying and surveying, was £700; of this sum £400 was paid down by about eighty or ninety of the negroes, and the remainder was contributed by instalments, and by additional purchasers; one hundred building lots were laid out, with an acre of provision-ground to each; on these neat cottages were built; a house on the property was converted into a school, and a chapel and mission-house were subsequently erected. The settlement was called *Sturge Town*, and its condition was thus described by Messrs. Candler and Alexander during their visit to Jamaica, in 1850:—

"Population, 541; houses wattled and shingled, 103; wattled and thatched, 2; huts, 6; total number of houses, 111; floor of apartments boarded, 45; terraced, 163. Families, 113; parents, 228; children and unmarried per-

sons, 313. Children who attend the day-school, 112. Sabbath-school, 200. Copies of the Scriptures, 187. Each house has its separate acre of land, where, in addition to provisions, pimento is frequently cultivated, and in some instances sugar-cane. There are also in the village some small wooden mills for grinding the cane, and on almost all the little properties some simple contrivance for expressing its juice. Such villages, built on the summit or slope of some fine hill, interspersed with bananas and plantains, and shaded by mangoes and bread-fruit trees, have a very pleasing appearance, and greatly enliven the face of nature. The moral condition of Sturge Town is, we believe, superior to most that have not the advantage it possesses of a resident missionary. The minister of the station, Mr. Samuel Hodges, for the last seven or eight years, has laboured with much devotedness to promote the temporal and spiritual welfare of the people."

Clarkson-Ville was established on a property of 600 acres, the cost of which was nearly £1,500. One hundred families settled there, each possessing a building lot, and one to four acres of provision-grounds. A portion of the land is rocky and mountainous, and did not readily sell. A mission-station and school has been commenced, and is proving a blessing to the neighbourhood. Mr. Francis Johnson, formerly a slave, is the respected and useful minister of the congregation.

Wilberforce, near Brown's Town, has forty families comfortably located on a small piece of land.

Stepney contains 100 acres, which were bought for £300; it is a picturesque village, with a commodious school-house and place of worship. Numerous other hamlets have been built in different parts of the island on land which the negroes have bought at prices varying from £3 to £12 per acre, according to its situation and productiveness. Their designations show the feelings of the people; some, like those already named, indicate the grateful veneration with which they regard the leaders of the great national movement, that struck off their fetters; among others denoting glad and grateful sentiments, may be mentioned *Bethany*, *Salem*, *Philadelphia*, *Goshen*, *Providence*, *Harmony*, *Standfast*, *Happy*, and *Liberty Valleys*. Several have English names, such as *Stepney*, *Homerton*, *Highbury*, and *Claremont*. Others still retain their colonial designations, as *Greenhill*, *Thatchfield*, &c. "In almost every one of them there is a small place of worship called a classroom, in which many of the people assemble for devotional exercises every morning, before going forth to labour, and in the evening when the toils of the day are over."† The villagers have naturally become more industrious, thoughtful, and frugal, and are generally desirous of occupying respectable stations in society; a large number have acquired the franchise, and vote for the election of members of the House of Assembly, and for parochial officers. Their agricultural efforts are at present mainly directed to the cultivation of articles required for domestic use, and those for which there is a daily demand in the town markets. A considerable quantity of sugar is even now prepared, and if central manufactories were established, or the *Métayer system* adopted, much more would be produced.

The bare fact that, whereas twenty years ago, there was scarcely any coloured landowners in the island, and that their number is now estimated at upwards of one hundred thousand, places in its strongest light the immense improvement which has taken place in the physical and civil condition of the bulk of the population, and not less so in their moral state, when it is considered how much industry and self-denial

* See evidence of R. M. Martin, before Select Committee of Parliament, on East India produce; 21st July, 1840; p. 255.

† *Anti-Slavery Reporter* of 1st March, 1852, pp. 38, 39.

must have been exercised to enable a negro to lay by out of his small earnings sufficient for the purchase of a piece of land, which once obtained, he never tires in improving, and never parts with but for a larger or better homestead. The free villages are very beneficial to the sugar or coffee estates in their vicinity, provided the owners or managers manifest a kindly spirit towards the peasantry, who are glad to work four or five days a week for hire, in order that they may add to their money acquisitions for the purchase of clothes, or to invest in the improvement or extension of their own little properties. Gradually they are adding to their marketable and exportable products; coffee, pimento, ginger, arrow-root, cocoanuts,* wax, and honey, are now in this list, to which it is to be hoped cotton may soon be added.†

Nor is it only as cottier proprietors that the industry of the negro is manifested; when unable, from want of funds or other causes, to purchase a legal right to land, they often settle as "squatters" on the mountains, where I have seen them in secluded dells and on the steep slopes of hills, cutting down the forests, burning the brushwood, planting potatoes and maize, creating gardens in the wilderness, and toiling with an energy and continuousness that gave the fullest contradiction to the assertion, of the Jamaica negro creole being indolent, or at best fitful, in his work.

GEOLOGY.—The lowest formation of the island, according to the observations of a distinguished geologist (Sir Henry de la Bèche), consists of a slaty schist; above it blue limestone, next grauwacke, surmounted by red sandstone with seams of clay. More recent investigators assert that the base of Jamaica is porphyry, sienite, and greenstone, supporting deposition and transition rocks. White and blue limestone abound, as does also quartz of different varieties. The lower mountains, near Kingston, are principally composed of a whitish bastard marble, of a smooth even grain, which takes a good polish; it is frequently used as limestone. In some places a kind of *ribbon* rock is observable, formed of alternate porphyry, trap, hornstone, and petro-silex; in other localities basalts appear in strata, under cover of different incumbent rocks, and are also found in amorphous masses, but never in the columnar form, which they are supposed to assume only on being exposed to sudden refrigeration, by the action of the external air, and when freed from the pressure of incumbent rocks.

* It is really wonderful what a degree of economy and intelligence these people manifest in making the most of their limited means, and the results of this earnestness will probably in a few years become very striking. On a space of from two to five acres (the average of negro properties being about three) may be seen an extraordinary variety of the tropical trees, most prized for their fruit, as well as eminently conspicuous for their beauty. There is the tall and graceful cocoa-nut; different kinds of the citron tribe, with evergreen foliage, golden fruit, and delicately white and fragrant blossoms; the star-apple, with parti-coloured leaves of shining green on one side, and on the other of a bright bay; the papaw, whose large fruit has the singular property of rendering tender the toughest meat, by a few drops of its juice; the mango, which, though introduced at no very distant period, now towers around every homestead; and the bread-fruit, with its enormous leaves eighteen inches in length, and bunches of fruit of proportionate size. Rows of young plantain trees rise from amid the verdant carpet formed by the broad leaves of the coco (*cocolaria esculenta*), and in another part of the ground,

The diffusion of the white limestone is very extensive; it constitutes whole ranges of hills, as in the parishes of Manchester, St. Catherine, St. Thomas-in-the-Vale, and St. Ann's, also the Long Mountain near Kingston; pervading, in fact, nearly all the midland, and by far the greater portion of the whole island. It is characterized by being hollowed into innumerable holes and cavities, among which the falling rains immediately disappear; hence arises the general scarcity of springs, the occasional sinking of rivers in districts principally composed of these rocks, and the necessity the inhabitants experience for the construction of tanks. The Port Royal and St. Andrew mountains are composed of white limestone, porphyry, sienite, greenstone, red porphyritic, conglomerate and silicious sandstones, with red sandstones and conglomerates of an older date. Rounded pieces of all these rocks form the diluvial gravel of Liguanea Plain. The surface of St. Catherine Plain, or *Vega*, consists, for the most part, of an earthy clay; the immediate substratum is generally a silicious sand of varying depth. Beneath the sand is a blue clay-overlying strata, in which are water springs. The talus of the neighbouring hills is fragmentary limestone, mingled abundantly with a red friable earth, highly charged with oxide of iron. A black carbonate of iron, in the form of ferruginous sand, may be always observed in the water-courses of the streets of Spanish Town after rain-floods. On some parts of the banks of the river Cobre, a humid brick mould formed from disintegrated trap rocks, lies to a considerable depth; in this mould small particles of gold are found, and the river soil is slightly auriferous. The pebbles within the stream are composed of angular masses of black basalt, green serpentine with mottlings of white, a brown grit, and pebbles of porphyry, and compact limestone. The detrital washings of these rocks compose the river sand.

Crystalline spar, in small detached masses, is seen in various parts of the island; rock-spar, very clear, and in masses of great size, is obtainable in the mountains of St. Ann, where it constitutes entire strata. Mixed and purplish coloured schist is common in the mountains of St. John, and also the hard lamellated amianthus, in a form resembling petrified wood. Argillaceous slate forms a considerable feature in the Blue Mountains, but the greater part of the higher range appeared to me to be trappean. The united action of heat and pressure has formed several conglomerates. The convulsive submarine impulses which the island has received, have greatly the luxuriant yam twines its slender stems up tall poles, while melons and gourds trail along the surface. A little patch of sugar-cane occupies one corner; a few bunches of the castor oil plant, or of the cassava, another, with two or three cotton trees—not the lowland giant of that name, but the Malvaceous shrub that here throws out its snowy bunches of genuine cotton. A small tract, carefully cultivated and kept free from weeds, is usually exclusively devoted to the growth of those useful and closely-allied plants, arrow-root and ginger, each consisting of succulent green shoots, formed by the sheathing leaves, and the former displaying handsome heads of scaly flowers.

† A poor man in Jamaica has recently invented a "gin," for separating the wool from the seed, of such simple and cheap construction, as to induce the House of Assembly to give the inventor a small sum of money in acknowledgment of this useful exercise of his mechanical genius. I saw this simple but effective machine tried by the intelligent Speaker of the Assembly, Mr. M'Larty Morales, who stated that he was devoting a portion of his estate to the cultivation of cotton.

disrupted the several formations, and changed the horizontal continuity of various masses.

When Sir Henry de la Bèche wrote his able sketch of the geology of Jamaica, the science, to whose progress he has so largely contributed, was comparatively new, and the island was, as it is even now, but imperfectly examined. Mr. Richard Hill, of Spanish Town, who has done much to illustrate this as well as other portions of the natural history of his native land, thinks that Dr. Darwin's sections of the Andes, some four times repeated, would correctly delineate the geology of Jamaica.

Fossil corals are imbedded in the chalky white limestone, and the teeth of sharks have been found at Bath estate, in the parish of Westmoreland, and at or near Prospect estate, in the parish of Portland. Similar fossil teeth have been obtained at Malta, and in the United States of America, being, in some instances, six inches long, and five wide at the base. The white shark, and other large species of the genus *carcharias productus*, and *carcharodon*, which possess cutting triangular teeth, crenated (finely notched) on their margins, with a broad base, and respectively hollow or solid in the centre, are at the present time known to attain a size of forty feet; but this magnitude is far inferior to that attributable to the extinct species, which, judging from the teeth found in the tertiary deposits of this, and other countries above alluded to, must have been from 60 to 100 feet in length.—(*Jamaica Monthly Magazine*, June, 1838.)

MINERALOGY.—The geological formation of Jamaica indicates the presence of metals—among which may be named gold, silver, copper, lead, and iron—all of which have been found in the neighbouring islands of Cuba and Hayti. Long says (vol. ii., p. 240.) that "it is very certain" the Spaniards obtained both gold and silver here; and adds—"the bells which hung in the great church at St. Jago de la Vega, when the English took possession, were cast of copper produced in the island."

"Lead ore likewise abounds here, richly impregnated with silver." A silver mine is said to have been worked by the Spaniards in the Health-shire Hills, in St. Catherine's, and ruins of works are found in several places, some arched with brick, and having regular paved or flagged galleries. Copper has recently been discovered, widely scattered in small deposits, but not as yet in any continuous vein, yielding a steady supply. Owing to the great contortions caused by earthquakes, and other subterranean action, the lodes appear to have been disrupted, and the ore dispersed in masses of various size. In richness, it is equal to any found in Cuba or in Australia, and especially so as regards the grey carbonate, which has been ascertained to contain 60 to 70 per cent. of pure copper. The blue carbonate and the sulphates are also rich, and gold and silver have been traced, mingled with different varieties of the ore. Several companies are now searching for a continuous and available lode, of which the miners entertain confident hopes. Judging from the copper I saw myself in the Blue Mountain range, and its collateral buttresses, and that obtained from other localities, there is a fair field open for enterprise; if successful, the result must be advantageous to the island by drawing labour thither and furnishing a profitable article of export.

THE SOIL is of various descriptions, differing in depth and fertility. On the north side of the island it is generally of a chocolate colour, in other parts a

bright yellow, and remarkable for a shining surface when first turned up, and for staining the skin like paint when wetted; it appears to consist mainly of a chalky marl, containing a large proportion of calcareous matter; the earth, termed "brick mould," is deep and mellow, on a retentive under strata; this, next to the ash mould of St. Christopher's, is considered the best soil in the West Indies for the sugar-cane. A red earth abounds most in the hilly lands, and a purple loam, sometimes mixed with a sandy soil, in the savannas and low lands. The principal soils on the interior hills and mountains may be thus enumerated—a red clay on a white marl; a red clay on a grit; a reddish brown clay on marl; a yellowish clay, mixed with common mould; a red grit; a loose shelly mould; a black mould on a clay or other substrate; a loose black vegetable mould on rock; a fine sand; and varieties of all the foregoing. The mountain-land, even to the highest summits, when first cleared of wood, possesses more or less a deep surface of rich black mould mixed with shells; a soil which will grow anything. The brick mould (a compound of very fine particles of clay, sand, and black mould), is even more productive, but far less extensively distributed. It is often of great depth, easily laboured, and so inexhaustible as scarcely to require manure; during droughts it retains sufficient moisture to preserve the cane-root from perishing, and in very wet seasons it suffers the superfluous waters to percolate, so that the roots are never in danger of being rotted; next in fecundity is the black shell mould, previously mentioned, which owes its fertility to the mineral salts and exuvie intermingled with it. The soil about Kingston, on the Liguanea Plain, consists of a layer of deep mould, chiefly composed of decayed vegetable matter, with a proportion of marl and some carbonate of lime, entirely free from gravel, and highly absorbent of water: the substratum varies, being sometimes a compact aluminous earth alone, in other places mixed with gravel; in sinking a shaft, layers of aluminous earth and gravel are found, running horizontally, approaching to pure clay at the bottom, and at four feet from the surface a strata of finely pulverized silica. Around Stony Hill, the surface is similar to what is frequently met with in elevated situations in Jamaica, namely, a rich dark mould, varying in depth from two to twenty inches, with a substratum of argillaceous and red earth, evidently containing a mixture of carbonate of iron; and in many parts the surface of the ground studded with limestones of a very large size. Mica frequently occurs, especially among the hills between St. Catherine's Parish and Sixteen Mile-Walk, and when washed down with the floods may be easily mistaken for golden sand: near Spanish Town it is found incorporated with potter's clay.

CLIMATE.—Although situated within the tropics, extraordinary varieties of temperature characterize different parts of the island, occasioned by distinct degrees of elevation, position north or south of the dividing range, and exposure to the winds on the eastern or western coast. At Kingston, the medium temperature throughout the year is 80°. The heat is mitigated by sea and land breezes, and by the dense canopy which masses of cloud occasionally interpose between the almost vertical rays of the sun and the earth. The difference between the heat of the coast districts and that of the elevated regions in the interior may be illustrated in the range of the thermometer (F.) at *Up-Park Camp*, near Kingston,

and at the agreeable mansion termed *Pleasant Hill*, opposite St. Catherine's Hill, in the Port Royal Mountains, about 4,000 feet above the sea.

Months.	Pleasant Hill.	Up-Park Camp.	Mean of each.		Difference.
January . . .	61° to 64°	71° to 84°	63°	77°	14°
February . . .	61 " 66	72 " 84	63	78	15

Note.—Fractions of degrees omitted.

In examining the above table, it must be borne in mind that although 80° of Fahrenheit's thermometer does not denote an oppressive degree of heat (for the mercury frequently attains that height in England during the summer months); yet every degree beyond that point is felt by the human frame in a greatly increased ratio. At *Pleasant Hill* the mercury reached 81° during only one month in the year; at Up Park Camp, it ranged to 84° every month, and for two months to 89°; the difference at the hottest period is very material, inasmuch as it makes the distinction between an enjoyable and a very trying temperature.

I have often experienced, in different parts of the globe, the rapid diminution of temperature consequent upon exchanging a lowland for a highland climate, but never more remarkably than in this part of Jamaica. In the middle of May I left the hospitable mansion of Mr. Atkinson at 6 A.M., after a restless and feverish night on the plain of Liguanea, not far from Up-Park Camp; and at noon, under the guidance of a kind friend, reached *Pleasant Hill*, part of the journey having been performed in a carriage, and the remainder on mules, over narrow mountain roads, down steep declivities, across the rapid Yallahs River, and amid grand, picturesque, and ever varying scenery. The change of climate was delicious, the air cool, fragrant with the white and red rose, and perfumed with the orange blossom; on the Liguanea Plain during the previous night the lightest covering had been scarcely bearable, yet at *Pleasant Hill* a couple of blankets were agreeable. At *Abbey Green*, about 5,000 feet above the sea, the highest habitation, and coffee plantation in the island, a fire during the evenings in June was acceptable. Mr. Coppard, the proprietor of this estate,* is a good specimen of rude health, and as active and energetic as if still dwelling in his native county of Sussex; never, in fact, feeling ill, though all day out of doors. On the 21st May, I rode thirty miles in the mountains, and was on horseback ten hours, without suffering much fatigue, a day's work not easily accomplishable in the lowlands.

At Stony Hill, nine miles from Kingston, and 2,000 feet above the sea, the thermometer is generally, during the hot months, 74° at 6 A.M., 82° at 2 P.M., and 80° at 6 P.M.; during the cold months

* Excellent potatoes, peas, and other English vegetables, including carrots of large size, are cultivated here in great perfection.

DIV. VIII.

at corresponding hours, 68°, 75°, and 73°; in November and December, when the north winds prevail, the mercury falls as low as 66° Fahrenheit.

At Maroon Town, formerly Trelawney, situated on a high mountain between the parishes of Westmoreland and St. James, the thermometer seldom or ever rises higher than 71° or 72° at noon, falling during the night and early part of the morning as low as 50° and 52°. The troops stationed here, have for several years, enjoyed excellent health; and, in 1795, when the yellow fever was at its height in Jamaica, a newly raised regiment, the 83rd, did not lose a man from this malady.

The four seasons may be described as that of vernal or moderate rains, in April and May, lasting six weeks; the summer hot and dry, including June, July, and August; the autumn, the dreaded period of hurricane and heavy rains, often lasting through September, October, and November; and the winter serene and cool, comprising December, January, February, and March.

Considerable allowance must, however, be made for the differences occasioned by aspect and local circumstances, between places on the northern or on the southern side of the island; the winter is always longer on the former coast:—westerly winds prevail at this season over the whole space between Jamaica and Cuba, and even as far as Hayti.

Hurricanes have several times ravaged different parts of the colony. On the 3rd of October, 1780, a terrific storm destroyed an immense quantity of property; in one parish alone the damage was estimated at £700,000. The town of Savanna-la-Mar was entirely swept away by the sea, and 300 persons perished. Several men-of-war foundered, were wrecked, or dismasted. The merchants of Kingston subscribed £10,000, and the British Parliament voted £40,000 for the relief of the sufferers.

Rain,—the quantity which falls during some seasons is enormous. The northern side of the island receives a larger amount than the southern, distributed in smaller but more frequent showers. I have vainly endeavoured to procure returns of the quantity which has of late years fallen at Kingston or Spanish Town. At Manchioneal the quantity which fell from 1831 to 1839, dividing the early or May from the latter, or September rains, is thus shown—

Year.	1st January to 31st August.		1st September to 31st Decem.		Total.	
	In.	Parts.	In.	Parts.	In.	Parts.
1831	55	55	45	57	101	12
1832	63	13	40	32	103	45
1833	73	83	54	13	127	96
1834	60	4	62	87	122	91
1835	86	98	35	14	122	12
1836	37	45	21	68	59	13
1837	75	1	21	43	96	44
1838	62	80	53	39	116	19
1839	30	64	51	78	82	37

Sir Hans Sloane states the amount at Spanish Town, in 1688, to have been upwards of 100 inches. Long, in 1774, makes it much less, and considers that 65 to 70 inches is about the annual mean for the whole island. At Newcastle barracks the annual fall is found to be 70 inches. Even this measurement, compared with that of climates in the temperate zone, is very large; for example, only 35 inches fell in England, in 1852, yet this was the largest quantity registered in any twelve months during the previous forty years.

That the climate is not inimical to the human constitution is evident from the long lives and good health enjoyed by Europeans and negroes of regular and moderate habits; and indeed a degree of intemperance, which in many countries would be speedily followed by death or disease, here often and long escapes with comparative impunity. Governor Modyford, in a letter to the secretary of state, Lord Arlington, dated 1665, observes, with regard to the healthiness of the island, "really, my lord, no man hath died but an account hath been given—y^t e gott his decease either by surfeits or travelling at high noone in a hott day—or being wett with rain, and not changing in season. The Spaniards, at their first coming, (I mean those who trade with the Royall Company) wondered much at the sickness of some of our people; but when they understood of the strength of their drinks, and the great quantity they charged themselves with, and the little observation of times and seasons, they told me they wondered more they were not all dead." There have been several instances of whites, mulattoes, and negroes attaining a great age in the island. Colonel Montague James, the first white person born in Jamaica after its conquest from the Spaniards, lived to the age of 104; it is stated that for the last thirty years of his life he took scarcely any other food than chocolate.* Long says he knew three white inhabitants of the island who were upwards of 100 years of age, and he speaks of others living when he wrote his work, who were beyond ninety. These persons, he says, were not decrepit; they were able to stir about, had good appetites, and moderately sound faculties. Among the numerous instances of longevity among the coloured people, the following are well attested. A negress who arrived in Jamaica four days after the destruction of Port Royal, died in 1834, aged at least, 148 years. Another lived to the age of 151, and in the early part of 1850, a black man died on the property of Mr. Justice MacDougal, who had attained 130 years. A creole negro, well known as "Old Hope," who was baptized shortly before his death, on 31st May, 1815, by the name of Roger Hope Elletson, lived upwards of 140 years. He was full six feet high, and must have possessed great vigour; twelve months before his demise he could walk from Hope estate to Kingston (between six and seven miles) and back in the same day. His head was well covered with hair, very slightly tinged with grey; he had lost one eye by an accident, but the sight of the other was perfect, and he retained some of his teeth to the last. All his other senses were good, and his mental faculties unimpaired. He had never been ailing, never drunk rum or any ardent spirit, was never treated with harshness or severity, but had always had good masters and overseers. In the early part of 1819, he began to decline by imperceptible gradations, and quietly expired without any bodily pain or mental anxiety, on Whit Monday, 31st May, 1819.† There are perhaps few other parts of the globe where an African, Creole, and European population can, within the same limited space, find climates adapted to sustain the peculiar energies, and preserve the healthy condition of each race.

* See Bryan Edwards' *History of the West Indies*, and also Dr. Binn's Essay on Cocoa and Chocolate, in Simmonds' *Colonial Magazine*, vol. ii. p. 210.

† Derived from an account printed in H.M. printing office, Kingston, 1819.

‡ See Valuable Report of Dr. Milroy to H.M. Secretary of State, in 1852.

DISEASES.—Yellow, or continued fever, has, on several occasions, afflicted Jamaica; other forms of the same malady, of a typhoid, remittent, and intermittent character, together with dysentery, diarrhoea, rheumatism, and influenza, are the most prevalent disorders extant. The negroes, owing to poor diet and unhealthy locations, suffer greatly from cutaneous eruptions, ulcers, and *yaws*, a species of leprosy. Recently the island has been severely visited by cholera, which chiefly attacked the coloured population; very few white persons died, although freely mingling with the sick. The progress of this formidable epidemic in the West Indies, and in the New World, is worthy of chronological record:—

1832.—Cholera appeared at Quebec, Montreal, Upper Canada, and the north-west states of the American Union; and thence it spread to New Orleans.

1833.—It reached Cuba, where the mortality was very great; at the city of Havanna above 10,000 people died; and in the country districts from a fourth to a half of the entire black population perished.

1834.—Different parts of the New World were affected, Halifax and Charleston for the first time.

1835.—It still lingered in the southern states of the Union and at Cuba.

1836.—At the end of this year all traces of it disappeared; and for twelve years it was not heard of in America or in the West Indies.

1848.—(December). It appeared nearly simultaneously at New Orleans and at New York, followed the track of the great rivers, spread over every part of the Union, and descended the St. Lawrence to Montreal and Quebec.

1849.—The Mexican Gulf was visited by the disease, which proceeded along the line of the Magdalena River up to the city of Bogota, which is 9,000 feet above the sea, and several hundred miles from the coast.

1850.—(March), Cuba was attacked; in June, Mexico and the Mexican coast; also the North American cities, especially the southern ones; the President died at Washington of the disease.‡

On 7th October of this year, the fearful pestilence appeared in Port Royal; on the 9th, at Kingston; and on the 18th, at Spanish Town. Thence it spread over different parts of the island, raging particularly at such places as invited the pestilence by their marshy or uncleanly state, as previously shown in the topography.

The great amount of sickness, and the rapid destruction of life which attended it, caused an almost complete prostration of the industrial pursuits of the colony, a very enhanced price for labour, and even the abandonment of many estates. At Bath and Plantain Garden River districts, in the parish of St. Thomas-in-the-East, which contains numerous sugar estates, the population was estimated at 8,000; of these 1,708 were swept off in a few weeks. According to returns laid before the House of Assembly, 1851-'52, the numbers who perished by this fearful scourge are thus stated—(from George, Metcalfe, Catherine, and Ann parishes, the returns are imperfect; and the mortality has been guessed at):—Kingston, 3,675; St. Andrew, 2,012; Port Royal, 474; St. David, 802; St. Thomas-in-the-East, 2,626; Portland, 305; St. George, 800; Metcalfe, 1,345; St. Catherine, 2,400; Dorothy, 358; Vere, 782; Clarendon, 892; Manchester, 20; St. Ann, 1,531; St. Mary, 2,319; St.

The amount of sickness and death has greatly varied at different stations; during six years ending with 1822, the ratio of mortality at several barracks, was—Up-Park-Camp, 1 in 5; Port Maria, 1 in 3½; Savanna-la-Mar, 1 in 7; Spanish Town, 1 in 6½; Port Antonio, 1 in 6½; Port Royal, 1 in 8½; Montego Bay, 1 in 10½; Stoney Hill, 1 in 11½; Fort Augusta, 1 in 16; Falmouth, 1 in 10½; Lucea, 1 in 14½; Maroon Town, 1 in 64.

By the removal of the troops to Newcastle, the mortality of the European soldiers has been diminished to *one-fourth* of its former amount; and it might be still further reduced, but for the pernicious evils of the "canteen system," by which an ever present temptation is offered to the soldier, the government making a large item of revenue by renting the privilege of selling spirits, &c., at a heavy annual sum. At Newcastle, for instance, the rent of the canteen-shop is £900 per annum, and the soldier, already fevered by the climate, drinks new rum per force; for cooling drinks, tea, coffee, &c., are not placed within his reach; beer is a shilling a bottle, and there are no light wines to be had.

The quarantine law, according to the recent report of the Central Board of Health, as at present conducted, is "an irksome incumbrance, interrupting commerce, obstructing national intercourse, perilling life, fostering and engendering disease, and squandering large sums of public revenue."—(Report, p. 71.)

The board, therefore, recommend a revision of the existing laws on the subject.

Return showing the Average Strength, Admissions into Hospital, and Deaths, &c., of the Troops stationed at Newcastle, 4,000 feet above the sea.

Year.	Average strength.	Admissions.	Deaths.	Ratio of admissions per 1,000 of mean strength.	Ratio of deaths per 1,000 of mean strength.
1842	632	647	15	1.023	23.0
1843	633	502	11	793	17.0
1844	614	1,038	13	1.690	21.0

Note.—¹ Year of cholera.

At Newcastle, 1,077 per 1,000 of strength admitted annually
 " 21 per 1,000 " died annually.

CHAPTER IV.

POPULATION, WHITE AND COLOURED—RELIGION—EDUCATION—PRESS—CRIME—GOVERNMENT—FINANCE—COMMERCE—AGRICULTURE, AND SUMMARY.

THE statistics of population are more imperfect in Jamaica than in any other British settlement. During slavery there was naturally a desire to withhold, as far as possible, all information calculated to illustrate the frightful decrease constantly taking place in the slave population. Since emancipation, only one census (1844) has been taken. It was deemed advisable that, in the year 1851, an enumeration of the subjects of the crown should be made throughout the empire, and the Governor in October, 1850, suggested to the Assembly that it was "desirable to make arrangements for having the population of Jamaica numbered at the same time." This recommendation met with no response.

The island annals are far from affording materials for a succinct account of the progress of the colony, with regard to its increase by slave importation, by free immigration, or by births. The Journals of the Assembly, however, record some valuable, though fragmentary, evidence on this head.

The earliest statistical document illustrates the condition of the island at Lord Windsor's departure, 28th October,

1662; there were then—men, 2,600; women, 645; children, 408; negroes, 552; acres planted, 2,917. In June, 1670, the roll of officers and men in six regiments of militia (one of cavalry and five of infantry) gives 2,720 men; and a "list of the ships under the command of Admiral Morgan," comprises, *English*, 28 vessels; tons, 1,120; guns, 180; men, 1,326. *French*, 8 vessels; tons, 465; guns, 95; men, 520.

The following census, taken in 1673, shows the parishes then formed:—

Parishes.	Men.	Women.	Children.	Negro Slaves.
St. George . .	60	17	21	20
St. James . .	89	20	16	22
St. Mary . .	78	15	13	79
St. Anne . .	86	24	25	28
St. John . .	246	82	100	745
St. Thomas . .	475	166	171	1,570
St. David . .	173	84	105	735
Clarendon . .	460	169	234	1,123
St. Elizabeth . .	270	57	61	783
St. Andrew . .	565	274	430	1,408
St. Catherine . .	834	569	110	2,679
Port Royal . .	714	529	426	312
Total . .	4,050	2,006	1,712	9,504

Note.—There were, besides, 800 seamen belonging to ships; and privateers, who offered themselves for the defence of the island, then threatened by the Spaniards.

PROPORTIONATE PROGRESS OF SLAVE AND FREE POPULATION. 93

* The manner in which England followed the example set by Spain, in the introduction of labour obtained by violence to cultivate the fair land, whose native owners had been exterminated for the gratification of the most shameless and cruel avarice, has been detailed in the preceding chapter (see p. 25), as

far as imperfect data would allow; the following table shows the distribution of the slaves in the various parishes, at intervals during the century preceding emancipation, and the total amount of the whole coloured inhabitants according to the census of 1844.

Counties and Parishes.	Slaves.							Free.

Note.—¹ The returns for 1734 are from the House of Assembly Journals, vol. i. ² Edwards says that one-seventh part of the whole was not returned in the rolls of 1787. ³ Bridges' average of 1823-4. ⁴ The population of 1834 is from the Valuator's return, on abolition of slavery; and that of 1844 is derived from the census of that year, by adding the black and coloured population together.—The parish of Manchester was formed, in 1814, out of St. Elizabeth, Vere, and Clarendon parishes; that of Metcalf, in 1841, out of St. George and St. Mary. ⁵ General census.

Respecting the increase of the population by births, and its decrease by deaths, there is no correct evidence whatever; all that can be stated with certainty is, that there was, on the whole, a heavy annual diminution, which was, however, more than counterbalanced by fresh importations. The decrease of a branch of so proverbially prolific a race, can be attributed to no other cause than the inherent evils of slavery, manifested more especially in the ill-treatment and insufficient food often allotted to adults, and the premature births resulting from the practice of flogging women during pregnancy; infanticide, or wilfully-procured abortion was, moreover, a frequent crime, committed by the wretched parents to save their offspring from a life of bondage. The mortality of slave infants was excessive. Dr. Maxwell, some years ago, estimated from the results of an extensive course of observation, for a series of years during slavery, that no less than a fourth part of the whole of the negro children perished from one disease alone; viz., *tetanus nascentium*, a species of lock-jaw developed soon after birth; in some districts the loss was considerably higher. It is to be feared that the present generation are comparatively enfeebled, by the injuries inflicted upon them, or upon their immediate progenitors; for, in the Report of a Committee of the Assembly in 1846, on the condition of the rural classes as affected by the want of proper medical assistance, it is stated that "one-

fourth of the black infant population die from the first to the eighth day after birth."

The relative proportions of the white, slave, and free coloured inhabitants, are thus shown at intervals ranging from 1658 to 1851; but the statements must only be regarded as approximate.

Year.	Whites.	Free Coloured.	Slaves.
1658	4,500	—	1,400
1670	7,500	—	8,000
1698	7,365	—	40,000
1734	7,644	—	86,534
1746	10,000	—	112,428
1768	17,947	3,408	176,914
1775	12,737	4,093	192,787
1788	23,000	—	256,000
1800 ¹	30,000	10,000	300,000
1807	—	—	360,000
1817	—	—	346,000
1829	—	—	324,420
1834	—	35,000	310,368
1844	15,776	361,657	—
1851	15,000	450,000	—

Note.—¹ According to Edwards (vol. v., p. 57) the slaves imported from 30th of September, 1800, to 30th September, 1806, were 86,821, and the number re-exported was 7,886. There are no returns where the dash (—) is inserted.

94 CENSUS OF JAMAICA TAKEN IN 1844.—DESCENT, AGE, ETC.

A general census of Jamaica was taken in 1844, and though by no means so full or so accurate as those made in some of the neighbouring islands, it still affords much valuable information :—

The total population is stated by the census at 377,433, of whom 15,776 are white, and 361,657 coloured. Those born in the island numbered 322,992.

The descent of the inhabitants is thus distinguished :—African, 33,519; American, 480; Belgian, 1; British, 1,689; Danish, 3; Dutch, 18; English, 3,450; French, 1,342; German, 615; Haitian, 12; Irish, 1,298; Indian, 1; native, 332,922; Portuguese, 2; Scotch, 1,523; Spanish, 331; South American, 225; Swede, 2.

Profession, trade, or employment.—Artists, 108; architects, 29; agriculturists, 61; bankers, 13; boatmen, 564; clerks, 1,555; fishermen and women, 1,484; household servants, 20,571, (5,181 are males, 11,194 females; of 4,196, sex not distinguished in the returns); labourers, 50,653, (21,633 males, 16,970 females, sex of 12,050 not stated); agricultural labourers, 132,192, (males, 60,958; females, 49,777; of 31,457, sex not stated); lodging house-keepers, 157; ministers of religion, 267; military attached to, 104; military pensioners, 32; mariners, 97; miners, 41; merchants, 433; pilots, 26; policemen, 315; planters, 3,987; professional persons, 453; retail traders, 1,672; surveyors, 86; store-keepers, 544; teachers, 640; master tradesmen, 7,399; journeymen tradesmen, 10,097; tavern-keepers, 59; other various occupations, 948; no occupation, 142,831. (This latter head probably includes a large proportion of women and children, both white and coloured, and also many of the small freeholders, who occasionally work for hire).

Sex.—Is it gratifying to learn from the census of 1844, the rapid establishment of a fair relative

proportion between the sexes, which has taken place since the abolition of slavery. Among the creoles or criolles (a corruption of a Spanish word, signifying native, and consequently applicable to all born in the island, whether of white or coloured parents), the preponderance is in favour of females, an indication of an augmenting population.

Age.—Under 5 years, 51,707; from 5 to 10, 47,221; from 10 to 20, 62,733; from 20 to 40, 121,309; from 40 to 60, 68,499; over 60, 25,963. Nearly one-half the population are between the ages of 10 and 40. Nearly 100,000 (98,928), or more than one-fourth, were born between 1834 and 1844. The increase under the head of children under 6 years of age, between these two periods, by far the greater part of which has taken place since the termination of the apprenticeship system, appears to have been 20,512, which affords a marked contrast to the period of slavery, when a constantly decreasing population furnished the philanthropists with some of their most forcible arguments. Premiums held out by the legislature, and by humane or politic proprietors, had then utterly failed to check this decrease; now, without any factitious aid, the natural law of increase has resumed its operation; so much so, that a recent visitor remarks, concerning Kingston, that he had never seen "a place so abounding in old people and babies. Almost every woman you meet, and of whatever age, has an infant in her arms, or somewhere upon her person, while the streets are littered with children more advanced."

Houses.—In 1844, there were inhabited houses,

with "footland," 9,406; sugar estates, 644; coffee plantations, 671; breeding "pens," or farms, 378; pens with residences, woodland, and pasture land, 822; farms, and other settlements, 22,703.

CHARACTERISTICS OF POPULATION.—The heterogeneous ingredients of which the early population of Jamaica was composed, after the period of its conquest by England, has been partially shown in the previous chapter. Royalists and republicans, Jews and Quakers, have at different times sought shelter here from the violence of political tempests. The warlike attitude which even civilians were compelled to assume in a slave colony, soon banished the peace-loving members of the Society of Friends; but the Jews have multiplied greatly, and are now among the most enterprising and successful traders in the colony. Among the lower class they frequently strike the traveller, who has not before seen a black Jew, very forcibly, the colour and some of the other characteristics of the African race being strangely blended with the marked profile, and unmistakeable lineaments of the Israelite. The varieties of colour resulting from the intercourse of Europeans and Africans are distinguished with nicety by the Spaniards, and are shewn in the annexed diagram, taken, but slightly altered, from Long—*

White man = Negro woman.

Do. = Mulatto.

Do. = Terceron.

Do. = Quateron, or Quadroon.

Do. = Quinteron.

Mestee (nearly white.)

There are mediate or stationary grades, neither advancing nor receding, and retrograding steps by marriage between the mulatto and the negro, whose offspring are termed "Sambos," and are frequently very quick and intelligent people. In Jamaica the quateron was always considered free.

The white creoles—that is, persons born in Jamaica of white parents—are of slender form, very fair, or rather of a waxen hue, and possess pleasing features, with fine gazelle-like eyes. They are characterized by considerable talent, indolent habits, and affectionate, though often proud and irritable temperaments. The coloured race, i.e. those of mixed blood, are tall, of sinewy structure, and well-favoured, especially the women; both sexes partake more largely of the traits of their European, than of their negro progenitors. In early youth, their form and features are remarkable for grace, flexibility, and vivacity; in more advanced life they usually incline to corpulence, and frequently sink into the listless, apathetic, and luxurious habits induced by a seductive climate.

The mestees, and even the quinterons, are often so fair as not to be distinguishable from natives of European descent, but sometimes the dark blood will be manifested more strikingly in the child than in the parent, and at others a singular diversity will be remarkable between own brothers and sisters: thus one or two will be much fairer than the rest, and devoid of the more distinguishing African character-

istics, or woolly hair. The pure negroes differ much from one another, and although a large number of them do not bear the more marked peculiarities observable in the numerous and distinct nations of the western coast of Africa, from whence they were originally taken, yet the origin of many may be easily conjectured, and the descendant of the warlike Coromantine, or the peaceful Eboe, be readily recognised. They are all well made, though they vary much in height and proportions, and the practice of carrying heavy weights on the head, gives them, especially the women, an erect bearing.

The Maroons are a noble-looking race, tall and elegant in person, with an European, rather than an African cast of features, and the independent demeanour of a mountain race. Some of the women are decidedly handsome, and have the complexion of Spanish gipsies. The total number of Maroons was stated, in 1834, at about 1,500; since then their distinctiveness, as a free people, has been merged in general emancipation, and in the last census they are classed with the negro population: their number now may possibly be about 2,000.

There has been some immigration from various quarters since 1834, but the statistics of this as of other important matters, have been so sadly neglected, that it is not possible to present any distinct view of the subject. In 1844-'46, and '47, there were introduced, from the East Indies, 6,932 "Coolies," the name given in Calcutta and some other portions of British India to a large class of the labouring population. The result of this costly and ill-conducted experiment has been referred to (p. 70); the majority of the unfortunate strangers have proved utterly worthless as labourers, and many of them are to be seen in the principal towns, wandering about, and picking up such refuse as they may find in the streets, which they throw into a sort of chiffonier's sack, generally slung over their shoulders. Their lithe and graceful figures, set off by the eastern costume, to which they adhere as far as extreme poverty will permit; their chiselled features, and large, dark, lustrous eyes, render their appearance very striking; and their pertinacious, silent mendicancy, has rather the character of an appeal for justice than for charity. Their presence affords a painful warning of the impolicy as well as inhumanity of lavishing large sums upon the introduction of ill-selected labour. The money thus worse than wasted, in adding to the burdens of the colony by increasing its dead weight of pauperism, if devoted to the encouragement of the existing labouring population, by the irrigation of land, or mechanical improvements for the economy of labour, might have produced unqualified good. The total number of immigrants, from 1834 to 1849, was 15,309; and the cost to the island, for eleven years, ending 1848, was £180,252. Some of the Africans captured in slave ships, and liberated at Sierra Leone and St. Helena, have voluntarily proceeded to Jamaica, but the aggregate number is not stated in any of the ordinary official records. From an isolated document, it appears that the number of these liberated Africans who reached Jamaica, up to July, 1850, was 2,765. Probably the total number of immigrants, since 1834, has not exceeded 20,000. The entire population was thus estimated by the Governor, Sir C. Grey, in June, 1852: negroes,

* "The Dutch transcend the Spaniards very far in their refinement of these complexions. They add drops of pure water to a single drop of dusky liquor, until it becomes tolerably pellucid. But this needs the apposition

of such a multitude of drops, that to apply the experiment by analogy to the human race, twenty or thirty generations, perhaps, would hardly be sufficient to discharge the stain."—(Long's *History of Jamaica*, vol. ii. p. 261).

350,000; coloured, or mulattoes, 100,000; whites, 15,000 = 465,000. His excellency adds, "the white creoles and the natives of Europe, both together, are at most only fifteen or twenty thousand." As this estimate was given subsequent to the devastations of cholera, the population of all classes (including the Maroons, who are in number probably about 2,000), may be taken at half a million. Calculating the area of the island at 4,000,000 acres, or 6,250 square miles, this would give a density of 80 mouths to each square mile of territory.

The inhabitants are, however, unequally distributed. In Cornwall county, the density ranges from 79 in Westmoreland parish, to 119 in St. Elizabeth to the square mile: average of its five parishes, 102. In Middlesex the range varies from 28 in Vere parish, to 125 in St. Thomas-in-the-Vale; the average for Middlesex county, including St. Catherine's parish, which comprises Spanish Town, is about 73 to the square mile. Bearing in mind the immense portion of the area composed of mountains, ravines, and swamps, the density is not inconsiderable; and the industry of half a million of inhabitants rightly directed, and thrifflily employed, ought to yield satisfactory results alike to employer and employed.

Mr. Anderson, in a letter published in the *Colonial Standard* in 1850, declared his accordance in the opinion of the Chief Justice, Sir Joshua Rowe, in designating the reiterated cry of want of labour as absolutely suicidal, calculated to discourage the approach of capitalists, and put a seal on the permanency of depression. He stated that he could readily obtain hard labour (viz. trenching, ditching, draining of lagoon lands, and grass planting) "to any extent for a shilling a-day, and that many individuals in various districts confirmed his experience by their own;" adding with much truth, "we shall never, by mere importations of people from Africa, raise the country to true prosperity. That is not the true remedy—quantity we have already, but a good quality of people [labour?] we have yet to seek, and we must establish it by every means in our power."

Mr. Bigelow's remarks concerning the waste of labour have been before quoted. Another keen observer bears the following confirmatory testimony.

"There is an immense amount of producible labour in this island running to waste, so to speak: * * * a prodigious waste of time and labour, which might be more profitably expended, and which is sorely needed for the sugar estates all round: dozens are engaged where, under better management, two or three might suffice; and this remark applies to the people in the towns as well as in the rural districts. * * * In nothing is the wasteful expenditure of money and labour more conspicuous than in the common practice in Jamaica of yoking eight or ten oxen to a cart or a plough, when the same amount of work would, it is well known, be done with two or four, in the adjoining island of Cuba. * * * There is nothing in the character of the negro to forbid the hope of even rapid improvement and social amelioration, if he be not left to himself, or at the mercy of political or mercenary traffickers; he is quick, shrewd, and apt to learn when he chooses, and works hard if he has an object in view; he makes a good soldier, boatman, and even pilot; he is marvellously improved if he has had an opportunity of visiting England; he then aspires to have English habits. There are many points of resemblance to the Irish character about him." (Dr. Milroy's Cholera Report, 1852; p. 96.)

The Rev. Dr. King says, "I have inspected some of the mountain residences, and been struck with their great superiority to our highland cottages; I have seen the negroes extracting, by mills of their own making, the saccharine juice from sugar-canes

of their own growing, and applying an energy to the process such as I have never witnessed in any of the operations of our indolent highlanders."—(*State and Prospects of Jamaica*. Published in 1850; p. 212).

Whenever the African is placed in a situation favourable to the development of physical and intellectual power, he rapidly substantiates a claim to an equality at least with his Asiatic brethren, and in some respects to the higher orders of the European race. In Jamaica several gentlemen of mixed or of pure African blood, stand on a par, both as regards natural and acquired advantages, with any of their fellow-subjects of European descent. Mr. Moncrieff, now chairman of Quarter Sessions, is a lawyer of repute, and by his forensic attainments and eloquence would, probably, take a leading position at Westminster Hall. Messrs. Heslop and Russell are also barristers of ability; Mr. Richard Hill, to whom is confided the important trust of 'superintending the stipendiary magistrates' department, by his scientific researches has identified his own name with the natural history of the island. Drs. Scott and Clarke are eminent in the noble profession which aims at the relief of physical suffering; the Hon. Edward Jordon, who formerly represented the city of Kingston, has been recently elevated to the Council. Robert Osborne, though born a slave, is now a distinguished member of that Assembly by whom his testimony, a few years since, would have been contemptuously rejected.

Several coloured missionaries are labouring zealously and successfully to inculcate the blessed precepts of the gospel; and I have heard able and pious European missionaries bear witness to the respect and attachment with which their fellow-labourers in the Lord's vineyard are regarded.

I could have wished that space were afforded to illustrate at length the general character of the coloured and negro population. The official communications of such men as the Earls of Mulgrave and Elgin, the Marquis of Sligo, and Lord Metcalfe, of Sir Lionel Smith, who ruled over Jamaica during the trying period of transition from hereditary and unmitigated slavery to entire freedom, afford abundant evidence, that in orderly conduct, peaceableness, industry, obedience to the laws, and loyalty to their sovereign, they are unsurpassed by any section of British subjects. It is deeply gratifying to be able to state that the feelings expressed by H.M. representatives were cordially shared by the Bishop of the Established Church. Considering the leading part which non-conformist missionaries had been privileged to bear in the good work referred to, the testimony of Dr. Lipscomb is at once valuable, as proceeding from an unprejudiced source, and interesting as indicative of the writer's generous and Christian spirit. In describing to the Secretary of State the manner in which the memorable 1st of August, 1838, had passed, the Bishop writes—

"I have very sincere pleasure in bearing my testimony to the peaceable and orderly behaviour of all classes, and particularly of the negroes, on this auspicious occasion. I never beheld a more impressive and affecting scene than Spanish Town exhibited, where I assisted at the duty; and all the accounts received from the clergy concur in reporting the same correct behaviour generally throughout the island. I had long known the objects of this benevolent measure as the most patient, enduring, and 'long-suffering' people on earth, and 'not easily provoked;' but it was not till the actual promulgation of this great and glorious measure of justice and mercy, that I was enabled fully to appreciate their advancement in Christian prin-

ciples, evincing the good effects of religion on 'servants who have hitherto not known,' or very imperfectly, 'their Lord's will.' They have proved themselves worthy of the boon they have received by their conduct, and are much better prepared for it than I could have possibly conceived. The quiet manner in which the whole has passed off has added much to the general effect, and made a deep impression on men's minds. It has encouraged and animated the good, and confounded and disappointed the bad. I feel convinced that nothing less than this happy change in their condition could ever have held out to us the hope of effectually improving the people; and, so long as one link of the hateful chain of slavery remained, that great work must have been delayed. I have only to repeat to your lordship, that the conduct of all classes of the people on this joyful occasion has been beyond all praise; and I am not aware of any instance of intoxication or boisterous merriment, in either of the large towns in this neighbourhood, to mar the Christian character of the late festival."—(Letter to Lord Glenelg, 6th August, 1838.)

Ministers of all religious denominations have borne, and continue to bear, similar witness: Presbyterian, Wesleyan, Independents, Baptists, and Friends, have vied with each other in expressing admiration at the conduct of the people, at the period of and subsequent to emancipation.

John Candler, a much respected member of the Society of Friends, who recently visited the West Indies, gives the following statement as to the condition and bearing of the people in Jamaica; which entirely coincides with what I felt and witnessed myself in 1851:—

"The change effected in their civil condition, though very great, and at last somewhat sudden, has served to elevate their character in the estimation of all observers. I expected, on landing, to find a race who, having been always oppressed, treated with contumely, and trod upon, would continue to exhibit some traces of their former degraded condition, some marks of servility that belonged to the slave; but in passing through the country from one end to the other, I should scarcely believe, from what I see, that slavery had ever existed here. Freedom has wrought wonders for the people: there is an air of independence in their carriage and manner, when they meet and converse with you, that is quite astonishing, equal to that of the freest nations; not bold and obtrusive, but attended with a civility and courteousness that are very pleasing, and tell much in their favour." [In a separate communication, the same writer observes]—"Some of the planters still insist upon it that they are an idle people, because they do not on the whole perform as much work as in slavery; but who that has seen them at work in the cane-fields, or hoeing coffee on the steep hills, or has travelled among their provision grounds in the mountains, can call them an idle people? I have seen them again and again, hundreds and thousands of them, men, women, and children, loaded with provisions and fruit, which they carry on their heads, pouring down from the hills to Kingston market, carrying weights which no European would encounter, and sweating under the heavy toil; yet all labouring cheerfully, because they are free."

In fact, market-days are the festivals of the Jamaica negro population, and the fatigue they then undergo is literally a labour of love. Almost every coloured proprietor has a donkey of his own, it is the next thing to be acquired after his freehold, and upon it he packs, in small panniers, his surplus produce, sending it under the care of a woman, often of a child, to join the long, joyous, straggling procession of some miles in length, which may be seen entering Kingston in the cool of the morning. It is indeed a pleasant sight, full of promise for the future.

Governor Sir C. Grey, in his annual official report for 1851, speaking of the former slaves, states,

DIV. VIII.

that where they have freehold or permanent provision-grounds, their huts are tolerably clean, and their life is not by any means devoid of physical comfort. He adds—

"It is unjust to make a general imputation against them of laziness; for although, in common with the inhabitants of all warm climates, they feel, more than those of cold ones, a liking for repose, and a sense of enjoyment in it, there are few races of men who will work harder or more perseveringly, when they are sure of getting for themselves the whole produce of their labour."

And in another despatch he remarks—

"The hamlets, villages, and towns, as they are called, of the negroes, which have sprung up in the interior, and amongst the mountains, and in which they live in great physical comfort, are a remarkable and interesting feature in the state of the island."—(Report on *Blue Book*, published in 1849; p. 97.)

Lord Stanley, who visited Jamaica in 1849, speaks of the negroes, says, "the labourer, out of his earnings, buys land, builds a cottage, furnishes it handsomely;" his lordship adds, "I have seen one of these negro-houses, belonging to a common *field-hand*, provided with all the comforts of an English farm-house."—(Letter to Mr. Gladstone. London, 1850, p. 61).

RELIGION.—The morals and habits of the European portion of the population have, during the last fifteen or twenty years, undergone a great and very satisfactory change. The fashionable vices of former times, if still occasionally, are at least only covertly committed; intoxication has much decreased; and the practice of duelling, once so frequent, is now regarded as an exploded barbarism. The sabbath is becoming more and more respected, and the temples of Divine worship better attended. The spiritual condition of the coloured population is the object of much anxiety, and is considered by some zealous Christians as discouraging. But this feeling does not seem to be well grounded, but rather to be formed upon an imperfect view of the whole bearings of the case. The enthusiastic ardour with which the new-made freemen, on the memorable 1st of August, 1838, thronged the chapels, poured out glad hosannas to the Great Redeemer of their souls and bodies, and prayed for blessings on the heads of those who, in His name, and for His sake, had braved many hardships while representing their sufferings, and pleading their cause, was undoubtedly an extraordinary manifestation of religious feeling, swaying a multitude, of whom a very large portion must have been still in the darkness of heathenism. But was it reasonable to expect that from that moment the negroes would, as a body, show themselves consistent, practical Christians?—that in their poverty they would charge themselves with the entire support of ministers in a position far above their own, and would for ever utterly abjure the pagan superstitions instilled into their minds in infancy, and handed down from generation to generation? As individuals, hundreds, probably thousands, have done all and more than this, and some communities liberally support their own ministers, but very few are willing, if, indeed, able, to exert the great self-denial necessary for this end, in the present distressed condition of the island; nor does a readiness to communicate, always, or indeed often, increase proportionately with any man's worldly possessions, whether white or black; for successful thrift, however praiseworthy in itself, is apt to be attended with covetousness. Then, too, many of the

98 VARIOUS RELIGIOUS DENOMINATIONS—NUMBER OF MINISTERS.

oldest and most respected ministers have been withdrawn by death, or for other circumstances; nor is it to be wondered at that their successors, however good and pious, should possess less influence over their flocks, than the men who had endured persecution with and for them, who had been literally friends to the friendless, eyes to the blind, and feet to the lame, and who could consequently appeal to their past trials in attestation of their present disinterestedness.

Besides this, there is no question but that, about the period of emancipation, some missionaries of the Baptist denomination, such as Mr. Knibb and others, by their avowed abhorrence of slavery and unhesitating exposure of its iniquities, during their visit to England, had earned great and well-deserved popularity among the negroes, many of whom not unnaturally came to look upon them rather as the champions of their political and civil rights, than as spiritual guides, and consequently sought their aid more as a means of obtaining deliverance from bodily coercion, than from the deeper bondage of sin.

In such nominal converts as these, a grave reaction after the first thrill of grateful delight had passed away, was to be expected; but it is to be hoped that the supporters of Christian missions will not, for this reason, slacken their endeavours for the instruction of the people, lest they also should come under the imputation of acting upon impulse rather than upon principle. It is true that *Myal* and *Obeah* men, by dint of lies and cunning, contrive to make many dupes among the more ignorant of their race, and by adroitly practising on their excitable and superstitious temperaments, induce them to apply to them for their relief from sickness or any other infirmity, or to aid them in procuring the immediate object of their desires. These are dense dark clouds, which nothing but the pure strong light of Christian truth can ever dissipate. Even in Europe, centuries of civilization, where not attended with sound and practical religious views, have failed to banish such popular delusions as the evil-eye, philtres or love-charms, fortune telling, and the like; and though witchcraft and witch-finding are no longer heard of, quackery in many forms, and but thinly veiled, prevails, and sufficiently attests the credulous weakness of even educated communities.

Among the negroes, the true converts are very easily recognizable—they afford many eminent examples of devoted piety. Dr. King, a minister of the United Presbyterian Church at Glasgow, who visited Jamaica in 1850, speaking from actual observation, says that "in the missionary churches of all evangelical denominations," there were examples of "artisans and sempstresses who contributed in some instances a tenth or even larger proportion of their living," to religious purposes. "Where, in this country," he asks, "shall we find a handful of people of whom most are poor and none are rich, willing, as in Kingston and at Montego Bay, to raise [each] £300 sterling per annum for the support of their religious ordinances?"*

He instances one congregation (that of Mr. Blyth at Hampden) which "it is impossible to look on, with its large and diversified machinery of beneficence, and hesitate to acknowledge that great good has been accomplished. There are about 800 communicants in his church; the average attendance on his

ministrations is greater by several hundreds. Abla and sedulously assisted by members of his family, he superintends classes of young people, prayer-meetings, out-stations, &c., and all these institutions are numerically prosperous." * * * There are like fruits of pastoral efficiency to be found, he adds, in the Established Church, and also in the various dissenting bodies.†

The Governor (Sir Charles Grey), in his report on the state of the island, dated 12th February, 1849, thus refers to the condition of various denominations: "the ecclesiastical establishment is in good and useful working condition, and is respected and popular: the ministers of the Wesleyan Methodists in this colony are a highly intelligent body, whose influence is apparently increasing: the Baptists are much divided amongst themselves, and certainly have not the power over the negro population which they possessed a few years ago: the Presbyterians are a considerable sect, and of great respectability: the Moravians have several establishments, which they carry on in that peaceable and benevolent spirit which is their invariable characteristic."—(*Blue Book*, printed in 1849, p. 98).

The temperance movement has been attended with very beneficial results among the christianized section of the negro population. In a number of the churches more than half of the members are connected with total abstinence societies, and many more act on the principle, although they have not taken the pledge.

I have not been able to learn the number of individuals connected with different communions, but hope to be enabled to offer some information on this subject in the concluding section on the West Indies generally.

The ministers of various denominations are as follows: the Established Church of England and Ireland has a bishop with an annual stipend of £3,000; three archdeacons, of whom two have £600, and one £800 a-year; the whole of which is paid from the British treasury. There are twenty-two rectors with stipends varying from £500 to £780, and fifty-one island curates, who receive from £100 to £400 per annum, paid from the colonial revenue. In addition to these, there are fourteen stipendiary curates, whose aggregate incomes amounting, in 1851, to about £2,100, are paid from the British treasury; and twelve missionary clergymen, supported by the *Society for the Propagation of the Gospel*. Altogether the ministers of the Episcopal Church in the island number about 100. The Presbyterian Church has twenty-four stations, and sixteen ministers; the Wesleyans have 119 places of worship, and twenty-four ministers; the Independents, or London Mission, thirteen stations, and nine ministers; the Moravians, or United Brethren, twenty-nine stations, thirteen places of worship, and seventeen ministers; the Baptist Western Union possess thirty-nine chapels, and have twenty-two ministers: and the American Mission seven chapels, and six ministers. The Roman Catholic Church has a vicar-apostolic, and six priests; and the Jews have four readers, or rabbi. The total number of ministers of religion of all denominations, in 1851-2, was 208, or in the proportion of one to every 2,500 of the inhabitants.

EDUCATION.—The extent and nature of public

had several of their chapels destroyed by the white colonists in 1832. Compensation, to about half the amount of the damage, was made to the societies by a parliamentary grant.

* *State and Prospects of Jamaica*, p. 210.

† *Idem*, pp. 43, 45.

‡ It will be remembered that the Baptists and Wesleyans

and gratuitous instruction is very imperfectly shown in the official returns. Some returns were laid before the House of Assembly in November, 1851, respecting 196 schools of all denominations, containing 13,950 scholars of both sexes; it would appear that fifty-two of these schools, containing about 5,000 pupils, are maintained or aided by the Diocesan Church Society. A normal school established in the middle of the year 1847, is supported by the local government, and it is to be hoped will work well. There are ten free schools, supported mainly by funds bequeathed by various benevolent individuals, among whom may be named Peter Beckford, who made a large bequest in 1744; Francis Smith, who left £3,000 for a school in connexion with the Church of England; and Messrs. Munroe and Dickenson, who made a donation of about £20,000 for educational purposes. Woolmer's Free School has an endowment of £12,000; Manning's of £7,852; and Vere Free School of £9,000. The funds of these and other charities have been vested in the Island Treasury, and bear a high rate of interest, but the capital has been all spent.

Among the seminaries established by religious bodies of different denominations may be mentioned, twenty-four Wesleyan, forty-one Moravian, and thirty-five Baptist Western Union schools. The return to the Secretary of State respecting these latter thirty-five schools is very complete. It appears they contain 1,836 boys, and 986 girls. From eight other Baptist Western Union schools there are no returns for 1851; but they are officially stated to be "in vigorous operation." In connection with the Baptist Western Union there are fifty-two Sunday schools, having 718 teachers, and 9,067 scholars; in twenty-two of these schools 2,065 scholars can read the Scriptures.

The following table will convey an idea of the chief scholastic establishments of four denominations.

Denomination.	Day-schools.	Pupils.	Sabbath scholars.
Wesleyan . .	24	1,870	3,252
Moravian . .	41	2,614	2,090
Baptist . . .	43	2,822	9,067
American . .	—	310	732

The other religious associations have also effective Sunday schools; but the information forwarded to England respecting them appears to be very slight and defective. There is a *Calabar Baptist Institution*, for the education of young men devoted to the ministry in Jamaica, and in Western Africa. It is supported by voluntary contributions, and is said to have accomplished much good. The *Presbyterian Synod of Jamaica* has an academical institution at Montego Bay for the training of teachers for Jamaica and Africa. The *Mico Charity* normal and model schools in Kingston, were established in 1836, for the purpose of aiding missionary and educational societies in training teachers, who are provided with board and lodging during their studies.

A board of education is presided over by the governor, bishop, president of the council, and speaker of the assembly, and five other gentlemen named by the governor. The board has a paid secretary and inspector of schools.

It is to be feared that the landed proprietary of the colony are not yet aware how much of future peace and prosperity depends on the moral and indus-

trial training of the rising generation; the intelligent editor (Mr. Henderson) of the *Jamaica Almanack* for 1852, observes that "little public interest appears to be taken by civilians in the education of our peasantry. . . . There are other and serious evils connected with the education of the people of Jamaica, but an almanack is not the place to notice them." Of the episcopal schools it is remarked—"some, where under favourable auspices, are well attended, and comparatively prosperous; others doing little good." (pp. 156-7.) Examples of resident proprietors earnestly striving to educate and elevate the poorer classes within the more immediate sphere of their influence have come within my own knowledge, especially that of Mr. Charles McGregor, of Kingston, and his sister, whose efforts have been seconded by several excellent persons, and who have found a rich reward in witnessing the beneficial results attending on their Christian endeavours. Certainly there is no lack of talent on the part of the negro or mulatto children; indeed those who have examined the classes jointly composed of the white and coloured races, have frequently considered the advantage to be on the side of the latter. Education or rather *knowledge* of some sort they will acquire, and it is of the last importance to all interested in their welfare or that of the island, that it should rest upon a sound basis.

Nor is it with regard to the lower classes only that there is so great need of improved educational arrangements; the higher ranks, if unable to afford the expense, or unwilling to incur the hazard and manifold trials attendant on sending their children to Europe or America, under the charge of strangers, for some of the most critical years of their life, are in a still worse position. This, and the scarcity of labour cry, are among the obstacles which chiefly prevent the emigration of small farmers and capitalists to Jamaica, where they are especially needed to form that middle class, so necessary to the prosperity of all free countries, but which cannot exist in a slave-state, where the dignity of labour can never be duly admitted, or labour and capital be united in the same individual.

NEWSPAPERS.—There are about seven, three of which are published daily at Kingston, two at Montego Bay, and two at Falmouth, tri-weekly. The *Jamaica Almanack*, prepared annually by Mr. George Henderson, a bookseller at Kingston, is a creditable publication, and contains much useful information.

CRIME.—It is impossible to frame a comparative statement of the amount and nature of offences now committed, and those perpetrated during the period of slavery; because then the master flogged at his own discretion, or caused the delinquents to be punished by the local tribunals; and there were no trustworthy returns kept of committals or crimes. But from the general tenor of the various documents transmitted to the Secretary of State, it would appear that crime is not increasing, and that it is decidedly small in proportion to the population, especially with regard to the more aggravated descriptions of offences. The negroes are generally of a mild and peaceful disposition; and deeds of violence are of unfrequent occurrence among them. There are nineteen prisons in the island, and a large penitentiary* at Kingston, where criminals from each county

* The building is constructed on the radiating principle, in its simplest form, which has been found so advantageous for inspection and supervision. The wall encloses an area of about ten acres, twenty feet in height, and has a

undergo the sentences awarded them. During the year ending 30th September, 1851, the commitments to the penitentiary from nineteen prisons amounted to 336, out of a population of about 450,000. There was not one murderer. Among the crimes the greater number, namely, 184, were for petty larcenies; for riotously demolishing a house, 26; for assault, 18; cutting and wounding, 13; burglary, 7; felony, 2; and the remainder were comparatively minor offences.

GOVERNMENT.—As previously stated (pp. 23-4) Jamaica was at first ruled despotically, then a municipality was established, and soon afterwards a representative assembly.

Deputy-governor Littleton and council, in an ordinance, "dated at Point Cagua, 23rd October, 1663," declared that they "had seriously debated and considered the great good and content it will be to this island, and to all the good people thereof, as well the merchant and the planter, to have an assembly chosen and selected by the votes of the inhabitants;" whereupon all freeholders were empowered to return members to the first assembly, which met at St. Jago de la Vega, 20th January, 1663-4.

From this period the affairs of the colony have been administered by a governor, council, and assembly.* Various changes have been made in the franchise. In 1774 the qualification requisite for voting at elections was £10 per annum, arising from lands, tenements, or hereditaments; and for a representative, an income of £300 per annum, or £3,000 in gross over and above what was sufficient to pay his debts. In 1830 the franchise was extended, for the first time, to the free coloured people; and considerable modifications have since been made in the qualifications of the electors of the members for the Assembly; at the last election the privilege of voting was conferred by the possession of a freehold of the annual value of £8, or by the receipt of any rent-charge payable out of freehold lands in the island, of not less than £30 per annum;—the occupation of a house of the annual rent of £20;—or the payment of direct taxes to the amount of £3 per annum. The money qualification of a member of Assembly at the same time was the payment of direct taxes in his own right (and not as the representative of an absentee) to an extent of not less than £10 per annum. With regard both to the electors and representatives, all distinctions of creed or colour have been abolished. In the present House (1853) among forty-seven members there are nine Jews, and three Roman Catholics; and fifteen men of colour, of whom three are of pure negro descent.

Kingston, Port Royal, and St. Catherine's parish (which includes Spanish Town) return respectively three members; the other parishes send two each. The Council consists of a president, or senior member, the commander of the forces, the chief-justice, bishop, attorney-general, and six other members guard tower at each angle. The plan was devised by the humane and active prison inspector, Mr. John Daughtrey, after a careful examination of the best plans of confinement in the United States. The foundation-stone was laid by the Earl of Elgin, in 1846.

* The Council and Assembly, with the consent of the governor, who represents the crown, may enact laws, statutes, and ordinances, for the government of the colony, so that they be not repugnant, but as near as may be agreeable to the laws and statutes of Great Britain. By an order in council, dated January, 1800, it was declared, that in all cases where the royal confirmation was neces-

ominated by the governor. As in the Assembly, so here, creed or colour is no disqualification; at present one member is coloured, and two are Roman Catholics. This body exercises the functions of an executive or privy council, and that of a legislative council.

The House of Assembly, however, claims and exercises the extraordinary power (to which even the Commons of England do not pretend) of initiating all legislative enactments, leaving to the governor and council only the authority of a veto. The governor receives no official communication respecting the contents of any bill until it is brought before him for his decision—there is no member of the Assembly to act as the exponent of the views of the executive, and no other official means by which suggestions can be offered, or information conveyed from the representative of the Crown. The undivided authority of the Assembly, and the exclusion of the governor and council from all participation or responsibility in the allocation and disbursement of the public revenue, has certainly not worked well, but has, with other circumstances, contributed to the present financial embarrassment of the colony. Sir Charles Grey, in a despatch dated 31st December, 1851, says—

"The whole course of fixing, raising, and managing the public revenue in Jamaica is exceedingly faulty and perverted. The government is in no way represented in the House of Assembly, nor has any organ there by which any tax can be proposed, or any estimates of expenditure, or of ways and means, can be laid before the legislature. All advice, by way of message, from the governor as to particular measures, is regarded as dictation, and resented as breach of privilege. No member has more right or authority than any other to recommend the sort of taxes that are to be imposed, or the rate or duration of them; and so jealously careful is the Assembly of its privileges, that the revenues for the most part are voted only from year to year, though in 1850 I prevailed on the legislature to make the interest of the island certificates a permanent charge on the import duties, and to that extent provision is made against the contingency of no Import Duty Act being passed in any particular year. Every member has the right also to propose a grant or appropriation of public money; and in the course of each session a number of miscellaneous grants, though of much less amount now than formerly, are successively authorized, without much reference to estimates or to the ability of the revenue to bear them, and towards the end of the session are included in one enactment, each individual member who has a grant to propose being naturally inclined to reconcile other members to his own measure by consenting to support theirs. Much of the expenditure, loosely, and without much responsibility, is managed by boards, and there is one principal board of commissioners of public accounts, the remarkable constitution and functions of which were, perhaps, sufficiently explained in my general report connected with the *Blue Book* of Jamaica for 1847. In the last session, a step, but I fear a very imperfect one, has been taken towards a better system of audit, by the appointment, under the Island Act of the 14 Vict. c. 53, of an officer with the title of auditor-general. Upon the whole, it may be truly said that there is no system or consistency sary to give validity and effect to an act passed by any colonial legislature, such act, unless confirmed by H.M. within three years of its being passed, should be considered disallowed. By the English statute 6 Geo. III. c. 12, all the British colonies are declared to be dependent upon the crown and parliament of Great Britain, who have full power to make laws to bind such colonies in all cases whatsoever. But by the 18 Geo. III., c. 12, the king and parliament declared, that thenceforth they would not impose any duty payable in the colonies, except for the regulation of commerce, and that the produce thereof should always be applied to the use of the colony in which it was levied.

whatever in the conduct of the financial affairs of the colony, nor any recognised organ of government or legislation which has the power to bring about effectual and comprehensive improvements."

The remarks referred to with respect to the Commissioners of Accounts are as follows :—

"For the public taxes the collecting constables are accountable to the receiver-general and the commissioners of public accounts, whose powers in this respect may be said to be almost unlimited. I do not believe there is a person in the island whose real opinion does not condemn this system of superintendence and control, which is provided for the collection and the remission of the taxes and the keeping of the public accounts, as vesting the power and the responsibility in far too many persons, as being in practice lax and inefficient, full of uncertainty and confusion, and abounding in facilities either for partial favour or unequal pressure. The board of commissioners of accounts consists, as I have mentioned, of all the members of assembly for the time being; and in these, all powers of auditing the public accounts are vested: but although the receiver-general is placed more at their mercy than he ought to be, and is liable to be infinitely harassed, yet, as there are forty-seven members of the board, and what is everybody's business is nobody's, there is practically, and in reality, no efficient audit at all: what is done in that way is chiefly done by the secretary. The function of the board, however, which is the most liable to abuse, and that which in turbulent times, and in the hands of designing men, might be subversive of all government, is the control which it holds over the collection of the revenue, with a large power of relieving both taxpayers and collectors from their debts and liabilities. Of the forty-seven members of the assembly, with all their divisions and subdivisions of political sentiment and party feeling and connection, three are a quorum for many important purposes, and nine for any purpose whatsoever which is within the compass of the extraordinary and various powers of the board."—(Government Report, p. 85.)

A searching inquiry and thorough reformation is certainly much needed.

There is a supreme court of judicature, assize courts in Surrey and Cornwall, courts of quarter-sessions in each parish or precinct; several inferior courts of common pleas, with limited powers; a court of error, held by the governor in council for hearing appeals from supreme and assize courts, together with vice-admiralty, and ordinary or ecclesiastical tribunals. An insolvent debtors' act is in force. Each parish has a *custos rotulorum*, holding an office somewhat analogous to that of the lord-lieutenancy of an English county, who, together with a bench of justices, holds sessions of the peace every month, and common pleas courts for trying actions to the extent of £20. There are about twenty stipendiary magistrates paid by the British treasury (see Finance section). The *custos* also presides over the vestries in each parish, who assess and appropriate local taxes, and fulfil other parochial duties.

MILITARY DEFENCE.—Up to the period of emancipation, a large and increasing European military force was deemed necessary to prevent the slaves from forcibly attempting to acquire their freedom; since 1838, this large item of expenditure to the British treasury has been materially diminished, and now one European and one black regiment, with a small force of whites and coloured artillery, suffices for the island. Formerly the militia included nearly every able-bodied freeman in Jamaica; in 1834 it consisted of 25 troops of horse, with 683 effective men, and 21 regiments of infantry, containing 9,256

men; altogether about 10,000 well-armed white and coloured citizens. Now the regiments, with few exceptions, are disembodied in respect to their quota of non-commissioned officers and men; and the whole system, notwithstanding its imposing muster-roll of major-generals, colonels, subalterns, &c., is rapidly falling to decay.

FINANCE.—Among the features which characterize the present condition of Jamaica, none is more conspicuous, or, when inquired into, more discreditable, than the state of the public treasury, and the means by which it has been gradually completely emptied, even of the charitable and other funds deposited therein. The actual state of affairs has for years been purposely shrouded in obscurity, as little as possible being stated on the subject; but partly because concealment is no longer practicable, and partly from the decidedly improved principles manifested in the Assembly, the veil has at length been raised, and consequently there is now some prospect of reformation, since the necessity for it can hardly be longer denied. A finance committee of the Assembly, with Mr. William Smith as their chairman, published documentary evidence at the latter end of 1850, which clearly exhibited the ruinous system that had been so long continued, and which, unless stopped by stringent measures, must inevitably end in public bankruptcy, even though for a time it might be propped up by assistance from England; which, however, would, as on previous occasions, tend rather to enrich, or at least to keep up for a time the falling credit of individuals, than to effect any permanent improvement in the island. No satisfactory comparison can be drawn between the amount of revenue levied during slavery, with that raised at the present time; the necessary records having been very badly kept, and the nature of some of the leading items differing; for instance, a poll-tax of 6s. 10d. per head on slaves, furnished a considerable sum of money in the former list. The general taxation was formerly equivalent to about £300,000 sterling per annum.

The income and expenditure for a series of years is shown in the following table, collated from the Assembly returns :—

Year.	Revenue.	Expenditure.
1845	£276,045	£273,199
1846	281,885	276,787
1847	240,310	306,658
1848	190,787	235,695
1849	179,230	192,552
1850	187,425	218,648
1851	209,379	260,196
1852	—	—

The sources from which the revenue is derived are numerous, and can only be briefly alluded to. Fees are demanded on all imaginable pretexts; a list of those authorized would occupy some pages, and there are many besides which are exacted without legal right. The quit-rent and tax on land is at the rate of 1d. per acre per annum. The tax on stock consists of 2s. 6d. per head on all "horse-kind," excepting breeding stock, for which and for unbroken colts and mules used for agricultural purposes, the tax is 6d. per head per annum. On each coach, chariot, &c., there is levied 6s. per annum; on the net profits of any business or profession or agency,

5s. per £100, and the same on all salaries, public or parochial, or on sums received as fees of office. There is a duty of 2s. per gallon on all spirits made in the island; stamp duties are exacted on commissions, licences, appointments, deeds, &c.; import duties are very various, and in some instances heavy. Beer pays £4 7s. per tun; corn, 3d. per bushel; wheat, 6d.; spirits, 6s. to 8s. per gallon; tobacco, £32 per cent. on the value; various wares and merchandise for plantation supplies, £4 per cent. There

are tonnage, light, and other dues. A cholera tax was imposed on houses of 6d. in the pound, to meet the heavy expenses incurred during that terrible visitation, which cost the island about £50,000, independent of the large contributions sent from England, Barbadoes, and elsewhere. Of the revenue for the year ending 5th January, 1852, amounting to £193,228, the import duties yielded £136,757; poll, land, and stock tax, £21,763; rum, £30,684; gunpowder tonnage, £2,620; stamp duties, £7,183.

Parochial and Public Taxation on Hereditaments, according to Parishes, irrespective of Custom Duties and other sources of general revenue, for the year 1851.

Counties and Parishes.	Actual value.	Assessed annual value at 6 per cent.	Rate per £.	Amount of taxes as per rating.	Other parochial taxes. ¹	Total taxation for parish purposes.	Total public taxes in aid of general revenue. ²	Grand total of public and parochial taxes.

Note.—¹ Including taxes on horses, mules, asses, and dogs; also on wheels, licences for rum, for taverns, and for billiards; on waggons, drays, and carts; on hawkers, on trade, business, and profession; on sale of gunpowder, pounds, markets, pew rents, fines, parish lands, &c. ² On hereditaments, houses, horses, mules, asses, and dogs; wheels, trade, business or profession, and land-tax. ³ Partly for 1850 and partly for, on an average, 1847, which is considerably greater than for 1851. ⁴ For 1849, the latest year for which I can obtain returns on this head.

The expenditure in 1851 was,—for civil government, £179,170; military disbursements, £972; governor and council, £6,000; grants, £9,830; cholera expenses, £36,509. Among the items in the civil expenditure were,—interest on loans, charities, &c., £23,499; police, £10,001; constabulary, £8,201; public hospital, £6,380; prisons, £14,050; penitentiaries, £8,831; printing, £4,877; immigration, £1,902; highways, roads, and bridges, £3,377; rectors' stipends, £11,858; curates', £19,749; judges' salaries, £16,037; clerks of the peace, £5,225; magistrates' clerks, £2,847; Assembly, £3,619, and £900 for speaker. Among the grants there were, £3,425 for board of education; and £1,148 towards the lunatic asylum now building. The civil list comprises about 460 persons, who are paid out of the general revenue.

This statement, which is derived from the *Blue Book*, transmitted to H.M. Secretary of State, varies somewhat from the returns laid before the House of

Assembly for the year ending 10th October, 1851, in which the following disbursements are set forth:— for the collection of the revenue, £26,278 (or about 15 per cent. of the whole); civil departments, £41,408; which includes, amongst other items, police, £13,620; constabulary, £3,629; public hospital, £7,670; printing, £5,161; roads and bridges, £4,733; ecclesiastical, £34,036; judicature, £45,362; governor's salary, £4,320; secretary and clerks, £1,800; House of Assembly, £4,240; governor and council, £6,000; parochial transferred to public, including clerks of peace, and vestries, coroners, &c., £13,770; interest on loans, charities, and deposits, £25,852; boards and committees of health, £45,918; grants to public institutions, &c., £10,338.

I cannot trace when the island debt commenced; it appears to have existed in some shape or other long anterior to the abolition of the slave trade, and to have originated in the power entrusted to the

Assembly of issuing paper-money in the form of island certificates bearing interest. Permission to create a paper currency was given by the Crown to the Earl of Carlisle on his appointment as governor in 1678: his lordship was authorised on any sudden emergency to pass laws (with consent of the Assembly only) to raise money without transmitting such money bills to His Majesty.* Emergencies and pretexts were of course not long wanting to justify or excuse the exercise of this dangerous power.

In 1722, the government was so deeply in debt that its bills were at a discount of 50 per cent., and even the expenses incident on the trial of some pirates could not be defrayed.† The revenue was then inadequate to meet the ordinary annual expenditure.

In 1758, "the island was obliged to borrow £6,000 from the golden chests of chancery, hitherto untouched. * * * It was the reproach of Governor Knowles that, with an increase of taxes, and in a time of profound peace, he left behind him a considerable debt." About 1760, owing to an alleged deficiency of circulating medium, "the Assembly was obliged to stamp and issue \$100,000 at an advance of two-pence each upon their former rate." In 1763, "the exigencies of the public service required an unexpected vote of credit, and in the sportive flow of wealth, a public lottery was proposed and adopted under the authority of the Assembly, and the management of the receiver-general."‡

In 1787 that official exposed his empty chest, and declared himself unable to pay the troops, which was certainly an alarming state of affairs, when it is considered there were then 240,000 slaves in the island, and but 30,000 whites. Bridges records that in 1796 the public debt pressed hard upon the revenue, and again in 1801, that a very heavy debt existed, for which a high rate of interest was paid. But it was not only by issuing an unlimited quantity of paper money, and by gambling lotteries, that the finances of the colony were deranged; in 1811 the current coin (dollars) was clipped, by cutting a piece out of the centre equal to 12½ per cent. This was done on the plea of an insufficient circulating medium, caused by the Americans refusing to take bills at a fair rate of discount in payment for their bread-stuffs, fish, &c., for which they required specie, and thereby drained the island of its metallic currency.

In 1832 the "certificates" in circulation amounted to £399,255; and the loan certificates, including £64,415 loan deposits, to £250,035, showing a debt exclusive of loans from Great Britain of £649,240 currency=£389,544 sterling. The distribution of the "certificates" in circulation from 1822 to 1832, was £645, £6,585, £41,203, £79,928, £61,741, £39,965, £96,499, £10,825, £12,000, £49,864=£399,255.

Under irregular and often interested management, unchecked by any efficient control from England, it may readily be supposed that there would be, as indeed there have been, many fluctuations in the currency; in fact the system of finance has been bad throughout, and has given a licence to jobbery and extravagance, under the plea of expediency, of which the present generation are reaping the results, in embarrassment and excessive taxation.

Parliamentary grants, several of which have been referred to in previous pages, were from time to time voted out of the taxes of the United Kingdom, to

meet pressing exigencies; and in February, 1834, a loan of £200,000 was paid over from the same source to commissioners nominated by an act of the Assembly, dated the 10th of October, 1833. An agreement, contract, and declaration, was executed by these commissioners, providing for the payment of interest at 4 per cent. per annum; viz., £24,000 sterling, being three years' interest to February, 1837; and £8,000 annually during the years 1838, '39, '40, '41, '42, '43, and 1844, in which latter year, the principal was also to be liquidated. The whole interest yet paid has however amounted to only £22,000; viz., £8,000 paid in 1845; £7,688 in 1846; and £7,640 in 1847. The Assembly asked for a longer period of time to discharge the principal, which being granted, they, in 1844, passed an Act agreeing to pay off the whole loan by annual instalments of £10,000: but only two sums of £20,000 each have yet been repaid, leaving £140,000 of the original loan, and about £25,000 interest, still due.

The increase of the island debt is thus stated in the Journals of the House of Assembly:—

Year.	Debt.	Cash in Chest.
1841	£546,267	£25,621
1842	613,297	108,497
1843	591,584	143,953
1844	499,786	45,258
1845	512,053	56,026
1846	555,445	97,032
1847	551,439	21,583
1848	578,135	11,352
1849	584,295	4,486
1850	627,369	4,878
1851	690,651	—
1852	—	—

Note.—The amount paid for immigration purposes from 1st of October, 1834, to 11th of October, 1847, was £217,034, exclusive of £2,069 paid by the British Colonial Land and Emigration Commissioners. In 1851 there does not appear to have been any cash left in the chest.

During four recent and successive years there has been a heavy deficiency of income to meet expenditure; viz., in 1847, £64,348; in 1848, £44,958; in 1849, £16,147; and in 1850, £38,078: total, £163,531; to which must be added £69,193 due for deposits and other credits, and £7,150, the estimated loss by the defalcation of the late receiver-general, making a total of £239,874. "The consequences of this enormous deficiency have been postponed, and its amount in a great measure overlooked by the creation, in 1848 and 1849, of red notes, amounting, on the 10th of October, 1850, to £36,988; and in 1850, of exchequer bills, amounting, on the 10th of October, 1850, to £28,350; and by the appropriation of the funds applicable to the payment of chancery, charitable, and savings' banks deposits, to the extent of £174,536." * * * The actual excess of expenditure and unliquidated liabilities over the revenues collected during the five years, ending the 10th of October, 1850, amounted to the sum of £298,805."§

It is evident from the above statements, that nothing could have been more injurious to the financial condition of the island than "the facility which was presented to the receiver-general for meeting demands by the creation of 'red' notes and exchequer

bills, and the appropriation of the funds belonging to depositors."—(Report of Finance Committee.)

The "liabilities of the island in 1851," were—"Charities and other depositors, £192,502; notes in circulation, old issue, £37,337; exchequer bills ditto, £36,000; loan certificates due in England and Jamaica, £212,313; notes issued for cholera purposes, £15,000; exchequer bills ditto, £37,500; interest on loan to H.M. government, £29,867; interest, salaries, &c., £58,716; loan (P due) to H.M. government, £160,000. Total, £779,235.† The total debt may now be estimated at a million sterling.

The following statement, shows the items composing the debt in 1851, irrespective of interest on loan from Great Britain, or arrears of salaries, grants, &c.:

Curates' fund, £8,428; rectors' ditto, £22,605; customs (unappropriated salaries), £598. *Charities*—Munroe and Dickenson's, £22,178; Gregory's, £2,400; Jamaica Free School, £4,051; Manning's ditto, £7,852; Merrick's Charity, £1,200; Presbyterian Institution, £2,262; Russes's Free School, £2,700; St. Jago de la Vega ditto, £600; Smith's Charity, £1,800; Vere Free School, £9,000; Woolmer's, £12,000; Jamaica Life Assurance, £19,850; apprentice valuations, £2,168; island notes of 1841, £344; ditto, 1848 and 1849, £36,993; ditto, 1850, cholera purposes, £15,000; court of chancery deposits, £28,222; insolvent act deposit account, £8,179; loan due to H.M. government, £160,000; island loan certificates, £212,312; savings' bank deposits, £34,722; trustees of the Ferry and River Road and Liguanea Water-works, £36; trustees of marriage settlement of Duke and Duchess of Buckingham, £821; John Auvray, £100; heirs-at-law of S. Denton and J. E. Wilmot, £273; exchequer bills, £36,000; ditto ditto, £37,500; Jamaica Orphan Asylum, £450. Total of debts due by the public of Jamaica, £690,651.—[See Journal of House of Assembly for 1851-'2, p. 202.]

The above deposits in the public treasury were made under the authority of divers acts of the colonial legislature. The curates' and rectors' funds are composed of fixed drawbacks on their stipends, and dedicated to the purpose of providing for the widows and children of the clergy of the Established Church. The interest on all these deposits and liabilities now amounts to about £35,000 a-year. The receiver-general recently, by a clause in the Annual Import Duties Bill, is directed to pay from the proceeds of those duties, before any other claims, the interest on all loans, charities, and deposits. The interest on the island loan certificates issued prior to July, 1850, is secured upon a permanent fund by the Island Act, 14 Vic. c. i. & ii. The interest of the so-called exchequer bills is charged upon the stamp duties.‡

The "loan certificates" outstanding on 10th October, 1850, amounted to £213,312. The whole was issued on a pledge of being redeemed at intervals; the latest instalment being payable on the 1st January, 1855: £43,668 at six, and £107,844 at five per cent., are payable in Jamaica; and £17,650 at six, and £44,150 at five per cent., in London.

The money expended by England in Jamaica must have been enormous.§ The expenses defrayed by Great Britain in 1851 consisted of allowances, provisions, &c., to the troops, £79,500; navy, £17,669; ordnance department, barracks, &c., £21,211; special services—stipendiary magistrates,

* On the death of the late receiver-general of the revenue, as the colonial treasurer is termed, it was ascertained that there was a deficiency in his chest of more than £12,000, of which not one-half has been recovered from his securities.

† Journals of Assembly, 1851-'2, p. 402.

‡ Despatch from Governor Grey, 31st December, 1851.

£10,541; cholera relief, £2,325. Total, £131,246. This is irrespective of the ecclesiastical charges borne by the mother country, and of course of the large sums expended in the colony by the different missionary societies.

BANKS AND MONETARY SYSTEM.—The circulating medium, and the banking arrangements of the colony, are as defective as the other portions of the financial system.

The power assumed by the Assembly of issuing irredeemable paper-money was equally unjustifiable and impolitic; and the unavoidable evils of the system were aggravated by the very slight control exercised over the parties entrusted with the responsible office of carefully guarding against fraud; consequently, in these issues it is difficult to say to what extent malversations have been practised.

The following fact, which I ascertained by direct communication with several members of the Assembly, affords a curious illustration of this subject. In 1843-'4, the whole of the old currency notes issued in 1832, and amounting to £240,000, were called in. It is well known that a considerable loss invariably occurs in paper-money; some notes are accidentally burned, and otherwise destroyed, or they are hoarded in some secret place, and rarely found again; but in Jamaica the notes were found to have increased, and there proved to be an outstanding excess, amounting in value to between £7,000 and £8,000, beyond the sum originally issued.

The island treasury notes not bearing interest in circulation on 31st December, 1851, amounted to £52,337; these are received at the government offices in payment of taxes, custom duties, &c.; but should the holder desire to convert them into cash, he is obliged to submit to a discount. There is also a large amount of paper which the Assembly designates as *exchequer bills*; on the 10th October, 1851, their nominal value stood thus—old issue, £36,000; ditto, for cholera purposes, £37,500—making a total of £73,500. There are two banks in the island; one, the *Jamaica Bank*, has a paper circulation of £42,366; the other a branch of the *London Colonial Bank*, £41,100; both these establishments redeem their notes with specie; but the total circulating medium of the island is so restricted, as to exercise a decidedly injurious effect upon commerce and internal industry; the redeemable paper scarcely exceeds four shillings per head for the whole population.

The diminished issues since 1842, are thus shown:

Year.	Issues.	Year.	Issues.
1842	£288,439	1847	£208,372
1843	334,833	1848	172,784
1844	245,707	1849	130,288
1845	222,798	1850	145,276
1846	220,498	1851	135,803

An institution termed the *Planter's Bank*, whose notes had a circulation of from £50,000 to £80,000, was, in 1846, owing to mismanagement, not to use a harsher expression, obliged to suspend operations in 1849-'50. There are no proper returns, as in other

§ The sums expended in the ordnance and barrack department between 1829 and 1847-'8, amounted to £147,874, of which Great Britain defrayed £72,527. Since the commencement of the present century, there have been spent from the imperial revenues at least ten million sterling, irrespective of the slave compensation-money or charges connected with emancipation.

colonies, to show the deposits, coinage, discounts and liabilities of each bank. The coin in the island was roughly estimated to amount, in 1851, to £200,000; but this is being continually lessened, as the Americans, who bring food and lumber in large quantities to Jamaica, take nothing in return but cash or bills.

Monies—English; doubloons are also current;—Old Mexican, at 66s.; Columbian, at 64s. Accounts are kept in English denominations. There are four savings banks in the island, whose original establishment is chiefly attributable to an excellent man, the Rev. T. B. Turner, one of the island curates. The *Kingston* savings bank was formed 17th November, 1838. In May, 1852, the number of depositors was 385, and their deposits £9,989. *St. James'* savings bank, established 1838; deposits in May, 1852, £21,722. *Trelawney* savings bank; deposits in May, 1852, £4,122. *St. Ann's* savings bank, established 14th of June, 1845; deposits in May, 1852, £2,002; total deposits, £37,835. The Assembly has absorbed these as well as all other funds committed to its trust; and this circumstance cannot fail to check the beneficial influence which such institutions are calculated to exercise in encouraging, among the poorer classes, industry and thrift.

COMMERCE.—The trade of Jamaica has undergone considerable fluctuations, occasioned by various political and social changes. A mere statement of the money value of the past and present imports and exports would convey a very erroneous impression respecting the internal consumption of British manufactures; for, during many years, the island was an entrepôt for the supply of different places in Central and Southern America with European goods; and although the custom-house entries gave a large total of imports, a considerable proportion was re-exported. This traffic has almost ceased; and the value of both imports and exports now indicates the actual consumption and production of the colony.

* Prices of articles for domestic use, in the market of Kingston, Jamaica, May, 1851:—Beef, 8d. per lb.; mutton, 1s.; veal, 7½d. (very inferior); pork, 7½d.; turtle, from 6d. to 7½d.; fish, generally about 9d.; turkeys, 10s. to 14s. each; ducks, 3s. 6d. to 4s.; guinea fowls, 3s. 6d.;

While slavery existed, the mass of the population were wretchedly and scantily clad, but at present they generally wear decent habiliments, and, as their means increase, indulge in luxuries; hence, as a market for British manufactures, the value of Jamaica to England has decidedly increased since emancipation. Moreover, when the production of sugar was deemed the sole means of acquiring wealth, the food of the inhabitants for ten months out of the twelve was imported from England and America; this improvident system is now, to some extent, rectified by the negro proprietors of small allotments, through whose labour the markets are partially supplied with daily requisites.

But for the surplus food raised by them, numbers of the inhabitants of this fertile island might die of absolute starvation; for, with strange inconsistency, the higher proprietary classes will sooner allow their sugar-fields to remain out of cultivation than employ them in the production of cerealia and vegetables, or the rearing of live stock. The fine fish with which the shores abound, meets with the same supine neglect; for, poor as the people are, they will sooner pay for a foreign supply than use that with which a bountiful Providence has liberally provided them. In a few instances, where the owners of estates have devoted their time and means to the production of food, they have derived considerable profit, and might reasonably be expected to do so, since every article, even wheat, may be readily and economically raised in different portions of Jamaica.

At present, the prices* of provisions are exorbitant, and they are nearly all of inferior quality.

The following tabular view shows the quantity of food imported during the last year of slavery, 1834; the last year of apprenticeship, 1838; during 1846-'50, and 1851. The years 1850 and 1851 must be considered as exceptional, because of the interruption to all ordinary avocations occasioned by cholera.

fowls, 2s. 6d. to 4s.; pigeons (tame), 1s. to 1s. 6d. per pair; yams, vary according to the supply, from 3s. to 12s. per 100 lbs.; potatoes (native) from 1½d. to 4½d. per lb.; cabbage, 6d. for a good head; English peas, 6d. for a pint; eggs, from three to four for 3d. and 6d.

106 DECLARED VALUE OF IMPORTS AND EXPORTS, TONNAGE INWARDS.

The absence of any consecutive commercial returns renders it impracticable to show the actual quantity or value of British manufactures imported previous and subsequent to the abolition of slavery; there is no doubt, however, that the inland dry goods trade of the colony has considerably increased since 1834. In some returns the imports are given for Kingston only; in others, for the various ports.

The declared value of imports from Great Britain exclusively, at two periods, during slavery and apprenticeship, was in currency:—1830 to 1833, £5,103,328; annual average, £1,275,667; 1835 to 1838, £6,457,969; annual average, £1,614,492 = £968,695 sterling.

But a large portion of the goods thus represented were re-exported; Jamaica, as before stated, being then an entrepôt for the Spanish main and other places. There is no complete record of the annual re-exports, but the following statement, for two years, will illustrate the well-known fact. British manufactures, paying 1 per cent., were, in—

Year.	Imported.	Re-exported.
1839	£1,171,401	£359,032
1840	1,256,880	347,026

At this period, £100 currency was only equivalent to £60 sterling; £1,256,880 was consequently equal to £754,128 sterling; from this is to be deducted £347,026 currency = £208,215 sterling; thus, the actual value of British manufactures consumed in 1840, was £545,913 sterling.

The conversion of currency into sterling in 1841, must still be borne in mind that the increased value of the present imports may be appreciated: these, in the last two years, ending January, have been—1850, £1,218,073; 1851, £1,129,776 sterling.

During 1851, the value of British imports at the different stations was thus rated:—Kingston, £501,287; Montego Bay, £52,167; Falmouth, £49,247; Savanna-la-Mar and Black River, £25,807; Port Morant, £17,762; St. Ann's Bay, £9,662; Port Maria, £7,335; Annotto Bay, £5,664; Lucea, £4,273; Rio Bueno, £2,008: total, £675,212. Almost the whole was required for domestic consumption. The average of British imports only for several years may be given at £800,000 sterling; a greater quantity than was consumed during slavery.

In the next page a table is given showing the chief exports for a series of years; among the minor items not included in that list, may be mentioned:—

Articles.	1848.	1849.	1850.	1851.
Arrowroot . . lbs.	88,218	99,118	226,186	258,426

Ebony, &c.	—	—	—	—
Cocoa nuts . . No.	—	—	6,400	264,923
Cotton . . lbs.	—	—	—	6,516

Cotton of every kind can be produced in Jamaica, and, indeed, a variety of spices are found wild; the plant itself is unquestionably indigenous. The valuable description termed "sea island" yielded the first year the seeds were sown, 500 lbs. to the acre,

whereas in the southern states of America, 400 lbs. is considered a good yield. The total expense of cultivation is £5 to £7 per acre, the value of the produce £35 to £37. The absence of winter (which not unfrequently blights the United States crop), and the abundance of fertile unoccupied land, indicates that Jamaica might become a great cotton country; and the chief justice, Sir J. Rowe, at a recent meeting for the purpose of forming an experimental plantation, declared there was no want of labour for the production of cotton simultaneously with that of sugar. One hundred acres might be planted, and the produce taken to market with fifteen labourers, four ploughs, and four mules.

Rice, of a fine grain, and not much inferior in size to that of Carolina, has recently been grown on morass lands by Mr. W. W. Anderson. Tobacco, quite equal in quality and size of leaf to that of Cuba and Manilla, grows almost wild; yet in 1851, 195,198 lbs. manufactured, and 513,436 in leaf, were supplied from a foreign market. Salt may be collected on the sea-shore, but 32,077 cwt. were imported in 1851. Bricks to the number of 456,608 were brought in, in the same year, although the best materials for their manufacture abound. In the time of the Spaniards Jamaica was literally overrun with cattle, yet, in 1851, 2,157 head were introduced.

Cacao and indigo, once the staple products of the island, are now entirely neglected. Although the soil is peculiarly favourable for cocoa-nuts, and the trees abound, yet the colonists import cocoa-nut oil from Ceylon. Now the negroes are turning their attention to the subject, as the produce of a tree is worth from £2 to £3 per annum, and it will continue to bear nuts for 100 years. The cottiers usually plant one or more trees on the birth of a child. Silk might be largely exported, as the mulberry thrives well. Various spices, dyes, and drugs, which we now obtain from foreign countries, might all be grown and prepared in Jamaica.

Soap might become a valuable article of trade; a Dr. Robinson, in 1767, obtained a premium of £100 from the local legislature for the manufacture of an article which united all the qualities of Castile soap to another of singular efficacy, namely, perfect solubility in salt water. The process of preparation consists in expressing by heavy rollers the juice of the lower leaves of the *coratœ* or *curaçâ* plant, a species of the *agavé*. The juice, after being strained through a hair sieve, is inspissated by the heat of the sun, or over a slow fire; the material is then made into balls or cakes.

The shipping entering the island ports has not been sensibly diminished of late years. In 1830 the tonnage inwards amounted to 120,721 tons; since the abolition of slavery it has ranged from 110,000 to 115,000 tons; in 1851 (the year of cholera) the tonnage of shipping entering inwards was from Great Britain, 46,554; from British colonies, 19,994; from United States, 28,286; from other foreign countries, 11,134. Total, 105,968 tons.

The exports unquestionably manifest a very large diminution in very important items. The decrease, however, at first sight appears greater than it really is, especially as regards sugar. Within the last few years the size of the sugar hogshead has been augmented from seventeen or eighteen to twenty and twenty-two cwt., for the convenience of carriage, and lessening of dues, &c. Thus 40,000 now represent 50,000 hogsheads of the former measurement. Moreover, during slavery the bulk of the

EXPORTS OF SUGAR, RUM, MOLASSES, GINGER, PIMENTO, COFFEE. 107

population never tasted sugar except what they obtained surreptitiously, or the skimmings or refuse during crop time; whereas it now is largely consumed by all classes. Allowing eight ounces a week

per head for a population of 450,000, an annual supply of 5,000 hogsheads is required exclusively for domestic consumption. The same remark, though in a lesser degree, applies to rum and coffee.

Year when Exported.	Hogsheads of Sugar.	Puncheons of Rum.	Casks of Molasses.	Pounds of Ginger	Pounds of Pimento.	Pounds of Coffee.

Note.—The Jamaica sugar hogshead is singularly ill-adapted for inland transit and for ship stowage: in Cuba the sugar is packed in small and nearly square boxes, admirably suited for any description of carriage; in the Mauritius and Bengal mat bags are used, which are nearly as advantageous as the Havannah boxes. The cane is probably indigenous; the manufacture of sugar commenced about 1673, in which year the governor (Lynch) sent H.M. secretary of state, a pot of the then precious commodity, with its history. Coffee (according to Lunan) was introduced by Sir N. Laws, in 1728.

108 CAUSES OF DECREASED SUGAR CULTIVATION IN JAMAICA.

The cruel and ignominious treatment to which the labouring population were exposed up to the very termination of the apprenticeship system, and which happily had no parallel in any other part of the West Indies, has made many of the Jamaica negroes detest sugar cultivation, and consider it as a badge of their former hateful servitude. The planters and overseers were emphatically warned of this danger by successive governors, and several of the most upright and intelligent of the special magistrates offered valuable suggestions, respecting the best means of establishing a good understanding between masters and labourers. Mr. Stephen Bourne, special magistrate, strenuously recommended the proprietors to undertake "a general repair of all the negro houses, and to offer an ample portion of good land for gardens, as near as possible to the cottages and provision grounds;" to dismiss "every harsh and unkind overseer;" to provide schools and religious instruction for the people, so that consolation might be afforded to the sick and dying; to "offer every apprentice a lease of his house and land for a term of seven, fourteen, or twenty-one years, at a fair rent, to be paid either in money or in labour;" to choose "two of the steadiest men on each estate, swear them in as constables, and in consideration of their taking on themselves to promote the public peace on the property, to let them have their houses and lands rent-free, with an undertaking of a gift of an acre of land

in fee at the end of two years, if they have faithfully performed their duties during that period."

Except in a very few instances, these and all similar preliminary measures were, as has been stated (see p. 69), despised or neglected; the overseers, deprived of the power of coercion by the whip, thought only of using it in another form by the exaction of oppressive rents, and if these were not paid, the cattle were turned in on the provision grounds of the people, their few pigs, goats, and poultry shot, and the ties of old association which might, and (from the peculiar attachment cherished by the negro to the spot on which he was born) probably would, have sufficed to attach them to the properties to which they had previously belonged, was thus rudely and for ever severed. By impolitic harshness or neglect, a large number of people were compelled, in self-defence, to cease from being labourers for hire on the sugar estates, and to become cottiers; the more so, because the high price of provisions absolutely necessitated that they should grow food for their families, who must otherwise have starved. Proprietors, or their agents, have therefore, to a great extent, themselves to blame for the diminution of labour which they have experienced, and which has tended to bring about the diminished cultivation of sugar and coffee, shown in the following return, advertised by order of the House of Assembly in the leading London journals of March, 1853.

"A Return of all Properties in the island of Jamaica, upon which cultivation has been wholly or partially abandoned since the 1st day of January, 1848; and showing the number of acres; the assessed annual value on the 1st day of January, 1848; the assessed annual value on the 28th of March, 1852; the average amount of taxes paid annually for four years, prior to the 1st day of January, 1848; and the amount of taxes assessed for 1852:—

Note.—The shillings and pence are omitted.

There is without doubt a great depreciation of landed property in Jamaica; numerous estates, both of sugar and coffee, have been thrown out of cultivation, or in other words "abandoned." For this various causes may be assigned. 1st. Several properties, during the period of high prices for sugar

and coffee, were laid out for the raising of these products, which, by reason of soil and position, were utterly unfit for such culture, although they would have proved profitable if kept as grazing pens, or, in

* See *Colonial Freeman* of 26th March, 1838, a periodical published at Kingston.

some instances, as agricultural farms. This may be illustrated by the well known fact that when the price of wheat in England was eighty shillings per quarter, land was appropriated to its growth which was only fit for pasture or timber. 2nd. The absence of available capital wherewith to remunerate labour, or purchase new and improved machinery, by which the quantity of sugar obtained from the cane might be largely increased. 3rd. The disinclination manifested by the proprietors to parcel out their estates in small farms or allotments on lease or sale to the coloured people, who have consequently been often compelled to resort to the mountains, and become squatters. 4th. Many of the abandoned estates belong to absentees or mortgagees, who will neither continue the cultivation, nor sell, but hold on in the hope that "protection" will be revived, or that something will be done by government to raise the value of property, and thus enable them to realize more profitably, or incur less loss, than would be the case if the lands were now sold. The sooner the proprietors of estates, thrown out of culture, can be brought to understand that government is alike unable and unwilling to give an artificial worth to such possessions, the better; like many insolvent Irish estates, those of Jamaica would then be brought into the market, and find purchaser able and willing to provide capital, energy, and skill, for turning the land to good account. At present one great check to the sale of Jamaica properties is their unwieldy size. A decided change for the better would probably be made by the passing of an Encumbered Estates Act.

Sugar is now cultivated extensively, and with profit, in Demerara, where land is abundant, and the negroes have largely become proprietors of the soil; there is no reason why Jamaica, under a sound and judicious system, should not be equally productive. With an honest Assembly, an able governor, a sound financial system, a cessation of party and political squabbles, a cordial co-operation of all classes for a restoration of harmony, and above all, a prayerful reliance on Divine Providence, the island might become permanently prosperous, and an honour to the empire of which it forms an important and integral part. To accomplish this great object, the evils and deficiencies of the past agricultural and manufacturing system must be remedied, and the improvements adopted in Barbados, Antigua, Demerara, and other places introduced. On this subject many interesting facts have recently been published by several gentlemen in the colony, and especially by Mr. Thomas Henney, in a prize essay "on the defects of the agricultural system hitherto pursued in Jamaica." This skillful tropical farmer dwells much on the absence of fencing, whereby a flourishing field of canes is laid waste in a few hours by the trespass of stock (an evil which I myself noticed in 1851); on the general want of sufficient guinea-grass to fodder the stock when penned; on the wretched state of the pastures, which are seldom cleaned at all, or only in the most superficial manner; on the absence of manuring, and the collection of any proper composts, to which neglect, irrespective of the long-continued and successive droughts, he considered all the falling off in the production of sugar might be justly attributed. In commenting on the want of proper agricultural implements, Mr. Henney says, that until recently, "except on a very few estates, even the plough was unknown or despised;" in a large district there was only one estate where that very simple instrument,

the three pronged fork, was used; "the hoe, dung-basket, and bill, were, with few exceptions, the sole implements of husbandry up to a very late period."

He likewise points out the want of care or judgment manifested in not planting the varieties of the cane in the peculiar soil best suited to their respective qualities, and the disgraceful state of the roads, by which the mill is not unfrequently stopped during crop-time, the cattle being unable to drag the loaded wains through sloughs where they were axle-deep in mud. The state of agriculture makes the island present a mortifying contrast to Cuba, the estates of whose resident proprietary exhibit stone-fenced cane-fields, and husbandry which would delight a Norfolk farmer. The manufacturing process in Jamaica, which is equally slovenly, imperfect, and ill-adapted to the requirements of the present age, was ably described in a series of papers published in *Simmond's Colonial Magazine* in 1848-'9. They were written by a Mr. John Biggs, a colonial engineer, who had spent twenty-six years in the British West Indies, during twenty-two of which he had resided in Jamaica. This gentleman's remarks agree with, in many points, and confirm those of Mr. Henney, and so far as the actual cultivation and preparation of sugar are concerned, seem well deserving of attention.

Respecting the 120 resolutions drawn up by the late Lord George Bentinck's celebrated parliamentary committee on the sugar-producing colonies, Mr. Biggs declares, that while many of the premises were indisputable, the conclusions thence drawn were totally at variance with facts. West Indian distress he attributes mainly to the want of common attention to their own interests on the part of the planters, which had been in a great measure caused by the protection they had so long enjoyed in the sugar market, whose effects had been to render them careless of attending to an improved cultivation and manufacture, or to the prevention of waste.

The errors of the present system are stated under ten distinct heads, of which the following abstract shows the leading points.

First.—The imperfect preparation of the lands before planting, whereby the labour expended in the after-cleaning of the crops is doubled, or even trebled.

Second.—The practice of cultivating quite one-third of the canes, rather for the purposes of fuel, than for their yield of sugar.

Third.—The wilful waste of valuable manures, which, if properly applied, would restore the temporarily exhausted lands in the immediate vicinity of the sugar-works, and prevent the necessity of cultivating more distant ground, and bringing the canes from a distance, which, owing to the mountainous character of the country, and the wretched state of the roads, must inevitably increase materially the labour of the cattle, and in bad weather form a very heavy item in the long list of contingencies.

Fourth.—The use of the hoe in numerous operations, that could be more speedily and efficiently performed by implemental husbandry, and thus expending from 50 to 75 per cent. more manual labour than is necessary.

Fifth.—The employment of six to seven months in taking off the crop, whereas the machinery and arrangements ought to be such as to complete the whole operation in three months, otherwise the canes must inevitably be cut at improper periods, either too early or too late. In the former case the saccharine matter cannot be perfected in them, and a waste of time and fuel must ensue in evaporating the extra quantity of aqueous parts in the juice, which, after all, can only produce sugar of a very inferior quality; while in the latter, the greater portion of the saccharine will have gone to support new

vegetation, some of the late cut canes frequently having new sprouts eighteen inches in length; and the effect on the succeeding crop must of course be very mischievous, from the sprouts or rattoons being necessarily deprived of the best seasons for growing.

Sixth and seventh.—The loss of juice by the imperfect grinding of the cane, and the bad and wasteful method of clarifying it, by which the sugar is greatly deteriorated.

Eighth and ninth.—Petty thefts, and the material thrown away by careless packing in the wharf-stores, by drainage, and on board the ships on their voyage home.

Tenth.—The consumption of double the quantity of fuel, and more than double the amount of labour, at an increased cost, to that which would be required, but for the employment of non-efficient machinery, and a dilatory manner of cropping.

Nor is it only the evils of their manufacturing and agricultural system that are now openly admitted and canvassed by the Jamaica colonists. The publication, by the House of Assembly, of such plainly expressed sentiments as those contained in the following extract, shows that other deficiencies and abuses are likewise acknowledged and deplored.

"Absenteeism is at an end. Proprietors, to reap any benefit from possessions, must make Jamaica their home; they must reside here, they must be content with limited means. Had this been done some years back, the state of Jamaica would have been different now, the most beautiful island in the Carribbean sea would have been able to boast of cities as great and as wealthy as the Havanna. The time has now arrived when, to save ourselves from utter ruin, we must be up and doing, we must cast off that apathy which has so long distinguished us as a community, which has made the creole a bye-word among nations, which hangs as a veil over all our undertakings, and is visible throughout all the departments and workings of our constitution, mars the usefulness of all our public improvements, and is too evident in all the concerns of private life. It is useless to cry out for more labourers, or for immigration; where are the thirty and odd thousand beings who this time last year were among us? Before we import others to supply their place, let us ascertain why it is our population has not increased, why has immigration so signally failed; let us search out the number of those who daily and hourly die from the effects of preventable causes; let us apply the remedy that experience assures us does exist; let the mouldering bones of hundreds of immigrants, victims of misplaced confidence, cause those in authority to pause, ere they, by their sanction, delude others; ere they hold out promises which can never be realised. Examine the present sanitary condition of the island; mark the fact, that districts of twenty, thirty, and forty square miles in extent exist, without a single qualified medical practitioner; observe the fact that the existing laws, meagre as they are, as relates to sanitary matters, are daily broken, are put to open defiance in our very towns and thoroughfares. Consider this, and few, under such circumstances, can advocate the further introduction of his fellow-man. Correct all this, and then will immigration prove to us a benefit; then will it be a boon to

* Second report of the General Board of Health of Jamaica, signed by J. Gayleard, *president of the council*; C. Mc Larty Morales, *speaker of the House of Assembly*; P. Yule, *lieutenant-colonel commanding royal engineers*; L. Q. Bowerbank, *president of the college of physicians and surgeons of Jamaica*, and others; presented to the legislature, and printed by order of the Assembly, dated 29th November, 1851; pp. 116-7.

† The mountain climate is peculiarly salubrious, and has been found very beneficial to invalids of consumptive habits; it closely resembles that of Madeira, and is becoming a favourite resort with the Americans.

‡ When visiting Jamaica in 1851, I paid my respects to the House of Assembly then sitting at Spanish Town, and the following insertion was ordered to be recorded in the

the liberty-crippled American black, a source of temporal and eternal advantage to the African heathen. Till this is done, any further attempt to induce strangers to embark their fortunes here, can be but to disregard the laws of God and man, and by exposing the deceived to destruction, to bring down greater judgments yet upon the authors of their ruin; as it is, with the population we already have, great difficulties must be anticipated; old habits and darling prejudices must be torn up and rooted out, and whatever the labour may be, it must be done."*

SUMMARY.—The facts narrated in the preceding pages will, it is hoped, enable the reader to form his own conclusions respecting the past and present condition of Jamaica, many of them have not been recorded without pain, for the memory of the writer vividly retains the remembrance of the superb scenery of this noble island, of its invigorating mountain air,† but, above all, of the hearty kindness of its impoverished but still nobly hospitable white inhabitants, and the contented and happy appearance of its coloured population. With regard to the House of Assembly, he takes this opportunity of acknowledging the courteous reception he there received, and the acceptable gift of a copy of their journals and laws, which has since been forwarded to him in England.‡ The concluding pages of the historical section were already in the press; and owing to the periodical issue of the work, could not be delayed; otherwise it would have been a grateful duty to have transcribed some of the many just and munificent legislative acts recorded in the island annals. Their examination has not, however, led him to regret the insertion of any statement in the preceding pages, but rather served to deepen his convictions respecting the evils inevitably associated with a system which in all ages, and among all nations, has produced similarly baneful results. The colony is at the commencement of a new era; the Representative Chamber now stands on the broad basis of popular franchise, and contains intelligent and patriotic men, alive to a sense of the serious responsibilities attached to their position, and having a stake at issue in the property of the island. Still a faithful history of the past is necessary both in explanation of the present state, and as a guide and warning for future legislation, and he who honestly narrates the truth, whether in regard to an individual or a community, performs a service and confers a benefit of which the value will be tested by time and experience. The persons more especially identified with the unhappy period of slavery have, most of them, passed away; many were permitted to live and acknowledge the errors committed under a false and corrupting system; and of those who remain, few, if any, now believe that real advantage can ever be derived from a policy essentially opposed to the dictates of Christianity, and to the first and universal principles of justice.

journals of the House:—"That a committee be appointed, of which Mr. Speaker shall be chairman, to procure a copy of the journals and laws of this island, and to present the same in the most acceptable manner to Montgomery Martin, Esq." In February, 1853, I was favoured with a case containing the journals and votes of the General Assembly from 1663 to 1851-'2, comprised in fourteen large folio volumes of about 520 pages each, and in fifteen lesser sized thick volumes, ranging from 580 to 880 pages each. The laws of the colony are printed in twelve quarto volumes, varying in size from 220 to 950 pages each. They comprise the statutes and all the acts passed by the Assembly since the thirty-second year of Charles II. The whole of these records are well arranged, and possess copious indices.

I never heard a single Jamaican attribute the present condition of the island to emancipation; and I firmly believe that, supposing the restoration of slavery possible, the planters would oppose it from a conviction of its impolicy, as well as from a conscientious sense of its iniquity.

With regard to the change in protective duties in 1846, the case is certainly different; that measure could not but seriously affect the whole West India interest, as it is termed, though even the severest sufferers during the transition must admit, that since it had been decided (whether wisely, or unwisely, this is not the place to discuss) that the colonies generally were not to be connected in commercial relations with the mother country, by the admission of their goods in preference to those of foreign states, it would have been evidently unfair to the others to make exceptions in favour of any particular branch, where all had such strong claims.

One good effect the sharp spur of competition at least appears to have had, in rousing the colonists to a sense of the necessity of self dependence, and combined effort for the reformation of those internal evils whose ruinous tendencies no protective legislation on the part of the imperial government could ever neutralize.

In conclusion, I cannot but express somewhat of the deep solicitude inspired by an examination of the past and present state of the coloured population. During slavery, their gentle, forbearing, unvengeful dispositions, and the grateful readiness with which they received the holy and consoling doctrines of Christianity, at once encouraged the abolitionists to persevere in the long and arduous struggle undertaken for their sakes, and furnished some of their most

efficient weapons. The fiery ordeal of adversity has been triumphantly passed, but prosperity has many insidious and dangerous temptations, which can be guarded against only by an abiding and practical knowledge, that rights and privileges are invariably accompanied by proportionate responsibilities.

The duties of freemen, and they are great, are now expected from the peasantry; and the Christian world looks anxiously for the visible working of that faith to which even, as regards earthly things, they are so largely indebted, since it has indeed proved to them a very present help in time of trouble, not only in alleviating, but even in removing their heavy bondage; since, to the glory of God be it spoken, it was almost exclusively a religious movement which prompted the British public to cry with one voice, and in a spirit not merely of disinterestedness, but of self-sacrifice, "unloose the heavy burdens, and let the oppressed go free." Now may the Africans prove their gratitude to Him who can alone continue and increase their present blessings, by conscientiously fulfilling the duties of the station to which Divine Providence has raised them. Let them think of the thousands of their countrymen still yearly torn from their native land; of the millions of wretched captives whose bodies are still galled by iron chains, or lacerated by the whip, and whose minds are yet in the darkness of heathenism, and let them remember, that by showing themselves industrious, orderly, and self-denying Christians, they may largely contribute to prove to the world the capabilities of their race, and by offering indisputable evidence of the superiority of free over slave labour, may do more than any other community to serve the great cause of universal emancipation.

CHAPTER V.—BARBADOS

THE Caribbee Islands form a segment of a circle, to the eastward of the sea which bears their name. Barbados does not, properly speaking, belong to this group, which constitutes a pretty regular curve, but lies seventy-eight miles due east of St. Vincent (see Map), in $13^{\circ} 19' N.$ lat.; the North Point being $59^{\circ} 37' W.$ long. It is about twenty-one miles long by twelve miles broad; has a circumference of fifty-five English miles, and a superficial area of 106,470 acres, or about 166 square miles. In size, and, in some measure, in its irregular triangular outline, Barbados may be compared to the Isle of Wight.

To enter into much detail regarding the history of Barbados, and of the other British possessions in the West Indies, would be impracticable within the space allotted to this section of the colonies; it

must, therefore, suffice to record the leading events in their respective progress, and offer some statistical illustration of their past and present condition.

Jamaica has been dwelt upon at more length, because it appeared necessary to exemplify the practical workings of slavery. The description there given will, with some minor differences, answer for all—cruelty, though not to the same outrageous excess, insurrections, and destruction of human life, constituting the prevailing features, while hurricanes, earthquakes, and pestilence, with various commercial fluctuations, fill up a picture which, but for the lesson it conveys, were better consigned to oblivion. The reader, desirous of fuller data, on the various points briefly sketched in the following pages, will find a large but undigested mass in the parliamentary records, and much informa-

tion in a more interesting form, in the voluminous but generally pro-slavery writings of Ligon, Oldmixon, Frere, Poyer, Smith, and the recent interesting and extensive work by Sir R. H. Schomburgk.*

HISTORY.—The exact date of the discovery of this island is not recorded, but it is supposed to have been known as early as 1618.†

The Portuguese, in their voyages to Brazil, are conjectured to have been the first Europeans who landed here; and to them is attributed the application of the name *Las Barbadas*, or *Barbudos*, signifying, in their language, one who has a long beard, in allusion to the abundance of a species of fig-tree (*Ficus laurifolia*), from whose branches masses of twisted, fibrous roots, hang down like luxuriant beards.

The Spaniards subsequently resorted to the island, and carried off the natives to work as slaves in the mines of Cuba, until not one was left; and nothing but a few Indian implements and utensils remained to bear witness to the white men who were to inherit this beautiful land of their ill-fated predecessors.

In 1606, the "Olive Blossom," an English vessel, fitten out by Sir Olive Leigh, "a worshipful knight of Kent," while on its way to Guiana with colonists and stores, accidentally touched at Barbados. A portion of the crew landed on the leeward shore, and finding no inhabitants, took possession, on behalf of their country, by erecting a cross in a conspicuous position, and inscribing on several trees a declaration of the sovereignty of "James, king of England, and of this island."‡

Eighteen or twenty years afterwards, some Dutch vessels, specially licensed by the court of Spain to trade to Brazil, landed for the purpose of procuring refreshments; and on their return to Zealand, gave a flattering account of the fertility and commodious situation of the island, which was communicated by a correspondent to Sir William Courteen, a wealthy London merchant, one of whose ships was, shortly after (in 1624), driven by stress of weather on the Barbadian coast. The crew were detained here for a time; their description fully coincided with that given by the Dutch navigators, and confirmed Courteen in his plan of establishing a settlement.

Lord Ley, afterwards Earl of Marlborough, and Lord High Treasurer, applied to and obtained from James the First a patent, granting the island to him and his heirs for ever. Under his protection, Courteen despatched two vessels laden with intending colonists, and with the necessary articles for their establishment. Of these ships, one only reached its destination, and on the 17th of February, 1625, landed forty English persons, with seven or eight negroes, who laid the foundation of James Town, on the spot occupied by the crew of the *Olive Blossom* twenty years before.

It would appear, however, that notwithstanding the patent conceded to Lord Ley, a grant or warrant of a grant, under the great seal, was subsequently

made by the same monarch, whereby all the Caribbean Islands were erected into a province under the name of Carlisle, on the model of the Palatinate of Durham, and the sole dominion thereof conferred upon the Earl of Carlisle. On learning the occupation of Barbados, his lordship, who had been almost simultaneously engaged in colonizing St. Christopher's, applied to Charles the First, who had recently ascended the throne to, confirm his former grant; but was opposed by the Earl of Marlborough, who pleaded priority of right in the case of Barbados. A tedious litigation ensued, which terminated in a compromise, Lord Carlisle agreeing to pay the lord high treasurer, and his heirs, an annuity of £300 in perpetuity for his claim; whereupon the patent, on the 2nd June, 1637, again passed the great seal, and his lordship was declared to be sole proprietor of the Caribbee Islands, comprising "St. Christopher, Grenada, St. Vincent, St. Lucia, Barbados, Martinique, Dominica, Mariegalante, Deseada, Todo Santos, Guadaloupe, Antigua, Montserrat, Redondo, Barbuda, Nevis, Eustatia, St. Bartholomew, St. Martin, Anguilla, Sombbrero, and Anegada, and many other islands." The majority of the territories above enumerated, were still in the possession of their native proprietors, the Caribs, but neither the monarch nor his subjects ever stopped to consider their rights or interests. The noble patentee and his heirs, or representatives, were empowered in ease of necessity to enact ordinances, under certain restrictions, without the express consent of all the people of the province, but the latter were nevertheless specially pronounced to be under the protection of the Crown, and entitled "freely, quietly, and peaceably to have and possess all the liberties, franchises, and privileges of this kingdom, and them to use and enjoy as liege people of England."§

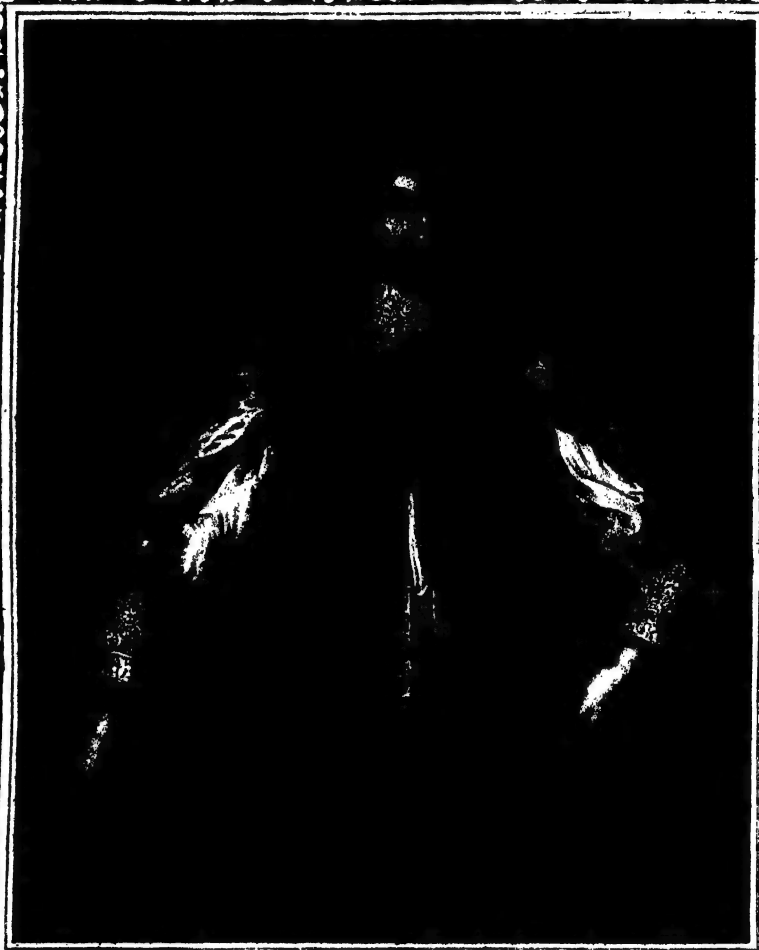

Courteen naturally considered himself very ill-used, and during the absence of Lord Carlisle on a diplomatic mission, appealed to the king through the medium of the Earl of Pembroke, who succeeded in obtaining a grant of Barbados in trust for his protégé. Lord Carlisle, on his return to court, complained bitterly of advantage having been taken of his absence, and prevailed upon the unstable monarch to revoke the patent he had so lately granted, and reinstate him in the sole authority; upon which, fearful of the consequences of any delay, he immediately proceeded to offer the lands of Barbados for sale in such parcels as might suit the convenience of adventurers, stipulating that each person should pay him forty pounds of cotton annually. A society of London merchants obtained a grant or lease of 10,000 acres from the Earl, and despatched a party of sixty-four settlers, each of whom was authorised to take up 100 acres of land, under the direction of Charles Wolferstone, a native of Bermuda, who reached Barbados in July, 1628, and immediately issued a proclamation, declaring the settlers sent out by Courteen, who were now in a very flourishing condition, to be usurpers, and summoned them to meet him immediately. This they did, but with the exception of their leader or governor, named Deane,

* *History of Barbados*, large 8vo, with maps, views, &c., pp. 722; published by Longman & Co. † *Idem*, p. 6.

‡ The island was thickly overgrown with wood, and abounded with pigeons, parrots, and wild hogs, which latter have been the subject of some discussion; Ligon asserts them to have been the descendants of some left by the Portuguese for the purpose of breeding, so that in the event of their being driven on the coast they might ensure

a supply of fresh meat.—(*Ligon's History*, p. 23.) Schomburgk considers that the hogs alluded to were of the indigenous breed, the *Peccary* or *Dicotyles labiatus*, and *D. torquatus*, of which specimens are still met with in Trinidad and some of the larger islands.—(p. 259.)

§ *Vide* Bryan Edwards' *West Indies*, vol. i., pp. 320, 321, where the most interesting clauses of this singular grant are given at length.

THE RIGHT HON^{BLE} THE EARL OF CRAVEN.

who, recognising a countryman in Wolferstone, tendered his adherence, they resolutely refused to acknowledge the authority of Lord Carlisle, and returned at night to their homes, using "torches of wild canes" to light the way. A series of disputes, only prevented by the zealous interposition of a clergyman named Kentlane from proceeding to a regular engagement, ensued between the "Windward" and "Leeward" men, as they were respectively termed, from the relative positions occupied by them on the island. In January, 1629, a colonist named Powell was appointed governor by the Earl of Pembroke, (acting on behalf of Courteen,) who succeeded in surprising Wolferstone and Deane, and sending them back to England in irons. A few months later he was himself entrapped on board a vessel despatched by the Earl of Carlisle, and sent home as a prisoner. The Leeward-men thereupon attacked the Carlisle settlement, but were compelled to retreat; the defendants were subsequently rewarded for their brave conduct, by the grant of a free storage of their goods for a term of seven years. Meanwhile the rival claimants to the exclusive dominion of Barbados employed all their interest in favour of their respective grants. The influence of Lord Carlisle at length prevailed; and as in the existing state of the case, the Earl of Pembroke's title rested upon some informalities in the last charter in favour of his opponent, another patent was issued, confirming in the most explicit manner Lord Carlisle's rights as sole proprietor of the much coveted island.† Sir William Tufton was appointed governor, and proceeded thither in December 1629, accompanied by 200 intending settlers, and various requisites for colonization. The inhabitants were then estimated at between 1,500 and 1,600.

Lord Carlisle, at the period of his death, being deeply in debt, his son and heir, about the year 1647, entered into arrangements with Lord Willoughby, of Parham, for the purpose of liquidating these liabilities, by which the latter nobleman was promised a commission as governor of Barbados, and the rest of the Caribbee Islands enumerated in the late earl's charter, and a moiety of all the profits which should arise therefrom for the term of twenty-one years. The king, who was then in the hands of the army, gave his consent. Lord Willoughby had previously been connected with the parliamentary party, but about this period becoming suspected of a share in the plans of the Royalists, was impeached for high treason, and his estates were confiscated. Having escaped to Holland, he openly espoused the cause of the Prince of Wales, who, after the execution of Charles the First, 1649, despatched him secretly to Barbados, where he arrived in 1650,§ and availing himself of the loyal spirit

which was in the ascendant, put down a rising roundhead party, fortified the place, raised a considerable force for its defence, equipped several vessels, and compelled the other islands under his jurisdiction to acknowledge the royal authority.

The Protector, on learning the encouragement and support received by the colonists from the Dutch, and the extensive illicit trade carried on by the latter, issued a rigorous prohibition against all foreign ships trading with English colonies, and despatched a hostile squadron under Admiral Ayscue, for the reduction of Barbados. The fleet, with 2,000 troops on board, appeared off Bridge Town, on the 10th of October, 1651; captured all the vessels in Carlisle Bay, but did not succeed in effecting a landing until the night of the 17th of December, at Speight's Bay. The Barbadians opposed them with nine companies of foot, and three of horse, and killed the leader of the attack, Colonel Alleyne, and sixty of his men, losing on their own side 50 killed and 100 taken prisoners, besides which all their pieces of ordnance were dismounted, and many of their houses destroyed. The place being untenable, the parliamentary forces returned on board the fleet. Some of the leading settlers advocated submission, and Colonel Modyford induced his regiment, of more than 1,000 men, to declare for the Parliament. Lord Willoughby had still 3,000 troops at his command, but he could not trust them; and was compelled to capitulate, and embark for England. His property on the island was however secured to him, and the other inhabitants, with the exception of a few obnoxious individuals, who were banished for a limited period, were not interfered with. After the Restoration, Lord Willoughby applied to Charles the Second for a renewal of his commission, as eight or nine years of the lease granted to him were still unexpired. This was granted, and the king, to reward the fidelity of such of the chief inhabitants as had remained faithful to him, conferred upon seven gentlemen the honour of baronetage, and on six others that of knighthood. Notwithstanding this mark of royal favour, the planters were subjected to great anxiety by the claims upon the soil of the island, which made them feel that they held their estates on a precarious tenure, even though their rights had been recognised in two legislative acts, one passed in the Governor Bill, the other five years after, under Lord Willoughby. The matter was further involved by the death of the second Earl of Carlisle, who bequeathed his title to the Earl of Kinnoul; the creditors of the first Lord Carlisle asserted claims on the revenue of the island to the extent of £80,000, and the heirs of the Duke of Marlborough demanded the arrears of the annuity of £300, no portion of which had yet been paid. The planters petitioned the king to de-

utensils for boiling sugar, tradesmen's tools, clothing, and victuals of various kinds. The exports were indigo, cotton, wool, tobacco, sugar, ginger, and fustic wood. Tamarinds and palms, the latter imported from the East Indies, were now first planted.—(Vide Ligon's *Barbados*, vol. ii.). The servants, referred to in the preceding paragraph, were persons from the United Kingdom, who, for the sake of a certain bounty, and a free passage to the colony, sold their servitude for a term of years. They are described by contemporary writers as having been worked to excess, badly fed, and treated even worse than the slaves: The cruelty shown to these latter is one of the causes assigned for the formation of a conspiracy so early as 1649, to massacre all the English, who were saved by the plot being voluntarily discovered by a slave to his master. Eighteen of the ringleaders were put to death.

* Schomburgk's *History of Barbados*, p. 263.

† The interest of Sir William Courteen in the island ceased entirely, which cannot but excite regret, since to him belongs the honour (unspotted by the blood or violated rights of native owners) of having first settled Barbados, and secured it to the English Crown; for, but for his enterprise, it is very probable that Lord Carlisle, who took great interest in St. Christopher's, would never have turned his attention to Barbados, which might therefore have easily fallen under the dominion of a foreign power.

‡ He was superseded, and shot in 1631, through the intrigues of an island faction.

§ At this time about 100 sail of ships visited the island yearly; they brought servants and slaves, both men and women, horses, cattle, donkeys, camels (which unfortunately did not thrive, owing, it was supposed, to improper diet),

clare the original grant or patent void; a committee of lords was appointed, before which the contending parties, as well as the merchants and planters interested in the question, and then resident in England, were examined; and a Mr. Kendall, in the hope of inducing H.M. to take the sovereignty of the island into his own hands, offered, in the name of the planters, to consent to a tax on all the produce of the island, which he confidently thought would amount to £3,000 per annum at least, out of which a governor might be supported, and the remainder be disposed of as the king should see fit.*

The proposition was very tempting; the legal advisers of the Crown declared the patent void, and arrangements were made to adjust and gradually pay off the claims in their respective proportions. Lord Willoughby proceeded to Barbados, and after some strenuous opposition on the part of the planters (who denied having authorized Mr. Kendall to make any such offer in their name, and pleaded the inability of the plantation to bear so heavy an impost), the question was at length finally settled. In 1663, the proprietary government was dissolved, the planters legally established in their possessions, and a tax of 4½ per cent. in specie placed upon all native produce exported from the island. This heavy duty was exacted for 175 years, having been repealed only in the present reign.

Lord Willoughby's administration was mild and equitable, but it had a melancholy termination. In July, 1666, he quitted Barbados with seventeen sail, and nearly two thousand troops, for the purpose of revenging the incursions of the French and Dutch on the British Caribbee Islands, and perished off Guadaloupe in a tremendous hurricane; of his whole fleet only two vessels were ever heard of afterwards.

In 1673, the Windward and Leeward Caribbee Islands were separated into distinct governments. Barbados had then greatly increased in population and commerce; but in August, 1675, its prosperity received a severe check, the island, especially on the leeward side, being laid waste by the most destructive hurricane which had occurred since the formation of the colony. The shock of this calamity had scarcely passed before a slave insurrection threatened to produce new scenes of terror and disaster. The conspiracy was planned by the Coromantine negroes, and had been in agitation for nearly three years; it was discovered by means of a conversation overheard by a house-servant, named Anna, whose fidelity to her master caused its suppression. Of the alleged ringleaders, six were burnt alive, eleven beheaded, and five who were impeached, hanged themselves before their trial came on. A similar plot, encouraged it was thought by French emissaries from Martinique, was discovered in 1692, by two of the chief conspirators being overheard talking of their design. After hanging in chains four days without food or water, they discovered all they knew; many of their accomplices were tortured, and others executed. These were barbarous and horrible punishments, calculated certainly to deteriorate the character of those who inflicted, quite as much as those who suffered them. But in the Draconian code of that era, death, unaccompanied by torture, would have been no object of dread to the miserable wretches whose lives and limbs were in hourly jeopardy. So late as 1717, the severity of the slave laws of Barbados (upon which those of Jamaica were in great measure founded) was increased by an enactment

decreasing, as a punishment to a fugitive slave, for an absence of thirty days, that he was to have one of his feet cut off.

The administration of Lord Howe, which commenced in 1783, was very popular and beneficial; it was brought to a termination by his death, in 1785. His malady was an attack of fever, produced by excessive fatigue in reviewing the different regiments of militia. Under his auspices the freedom of the press was established, and the factious party spirit which had gradually been gaining ground in the colony, was greatly mitigated. The Council and Assembly, to manifest their grateful respect for his memory, voted a donation of £2,500 currency to his widow. Extreme liberality on this and other occasions marks the character of the colony; between 1687 and 1743, £96,000 sterling were bestowed in presents to governors and presidents.

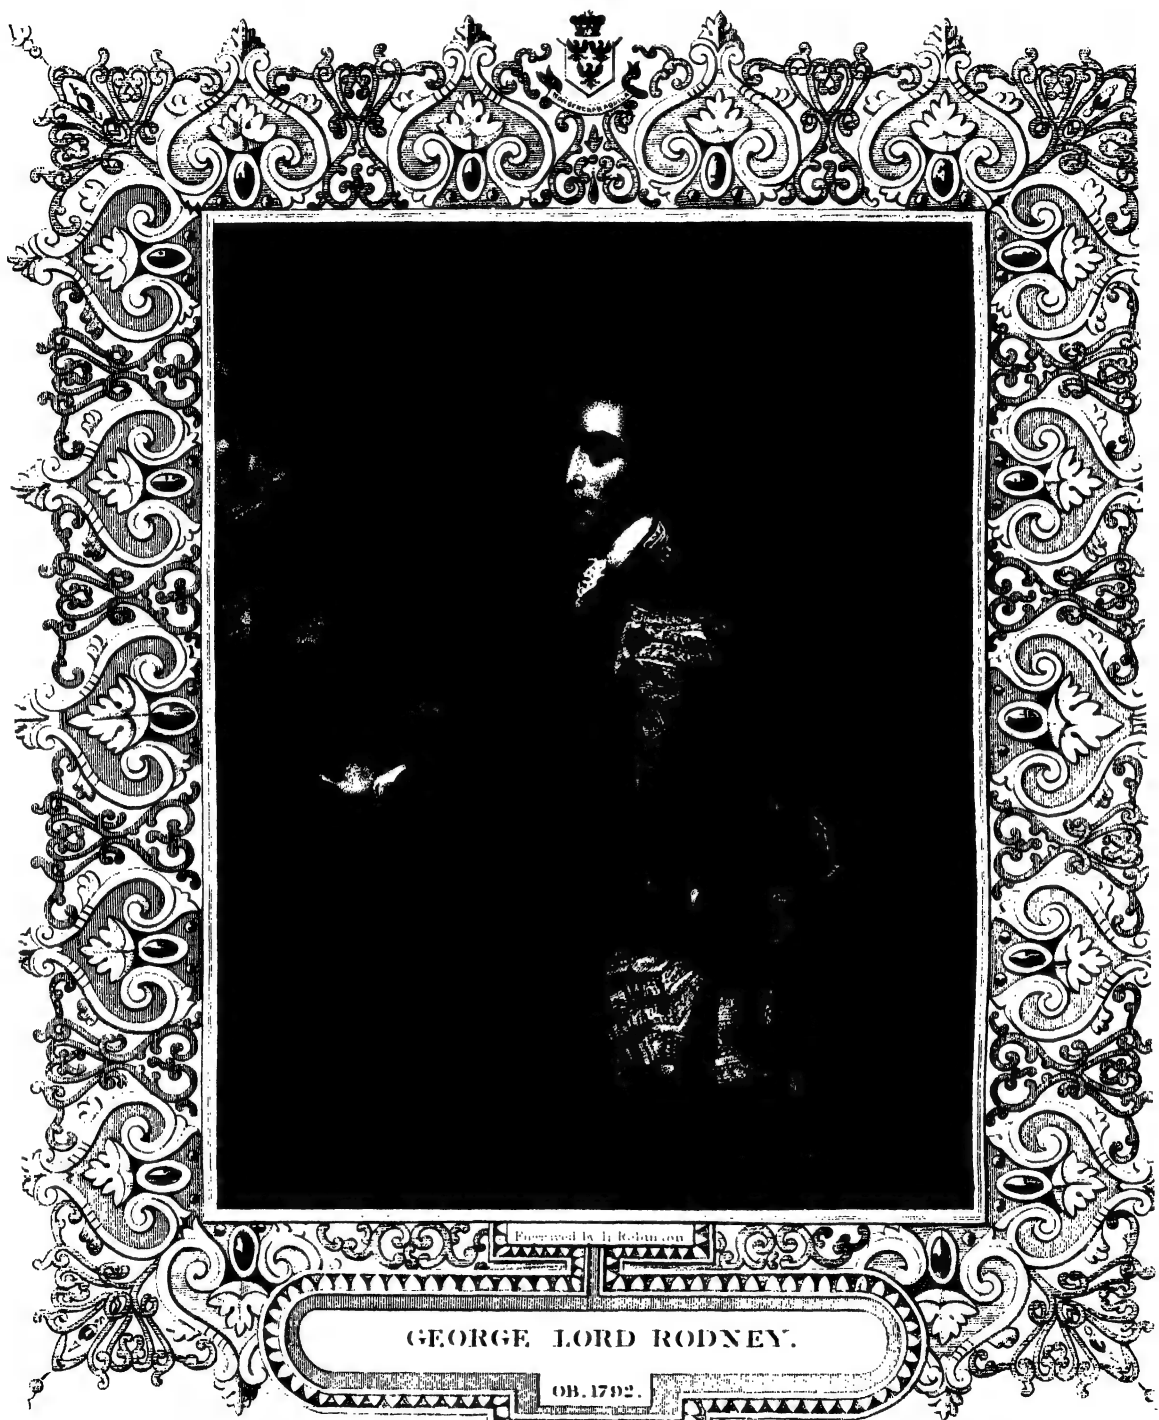

The salaries by them apportioned to their rulers were in some cases extravagantly high. Sir Jonathan Atkins, in 1674, during a time of high prosperity, received from the crown, out of the 4½ per cent. duty, only £800 per annum; in 1703, Queen Anne augmented the governor's salary to £2,000 sterling, payable out of the aforesaid fund, and strictly prohibited any gift or present being made by the local authorities, which prohibition did not prevent the Assembly from granting, or Sir Beville Granville from accepting an additional sum of £500 per annum, and an elegant abode, on a small eminence called Pilgrim Hill, which continues to be the governor's residence to the present day. Notwithstanding the promise given by Queen Anne for the due appropriation of the per centage paid by the planters; the island in 1722, was again called upon to pay (or at least permitted largely to increase) the salary of its newly appointed ruler, Colonel Worsley, who by the part he took in the discussions then pending respecting the President of the Council (Cox) is alleged to have gained the good-will of both parties; for each considering him their friend, united in confirming to him an income of £6,000 sterling per annum, to be defrayed by a capitation-tax of 2s. 6d. upon each negro. This point being settled, and not till then, Governor Worsley showed himself empowered to inquire into, and punish, if necessary, the conduct of the president, which he did by removing him for ever from the council. This decision created considerable dissatisfaction,† and strenuous endeavours were made by the Barbadians to get rid of the heavy tax with which they had burdened themselves for his benefit; at length, in 1731, Colonel Worsley resigned his position, and returned to England. For the support of Lord Howe, £4,000 per annum were nevertheless freely voted, "a liberality which," says Schomburgk, "at a time when their sugar sold for only ten or twelve shillings the hundred-weight, was rather surprising."

In 1780 an awful hurricane occurred, in which the violence of the elements surpassed all conception. Admiral Rodney stated, that the heavy cannon were carried upwards of a hundred feet from the forts; and Governor Cunningham asserted the Secretary of State, that a twelve-pounder had been carried by the winds and waves from the south to the north battery, a distance of 140 yards. The loss of life was estimated at 4,320 souls, that of property at £1,320,564 sterling.† Not a single house or building, however strong or sheltered, escaped uninjured; most of the live-stock and horned cattle perished;

FROM THE ORIGINAL OF SIR JOSHUA REYNOLDS, IN THE COLLECTION OF

THE RIGHT HON^{BLE} THE EARL OF EGREMONT.

the canes, corn, and ground-provisions were totally destroyed. Parliament voted £30,000 for the relief of the colonists, although the nation was then involved in a costly war, and numerous public and private subscriptions were set on foot; among others the generosity of the citizens of Dublin stands conspicuous, the sum of £20,000 having been quickly raised by them. This timely aid was most gratefully received by the afflicted people; and when after the lapse of more than half a century, famine scourged Ireland, Barbados was the first among British colonies to come forward for her relief with a public vote of £2,000 sterling, besides large contributions from private individuals.

The beginning of the nineteenth century was, unhappily, characterized here as in Jamaica, by a strong endeavour on the part of the white inhabitants to retain the coloured ones in slavery; or, where that was not possible, in the lowest position. In 1801, the tax on manumission was fixed at £200 a-head for males, and £300 for females; and in 1811, the free people vainly petitioned to be placed on the same footing as those of Jamaica and other islands. The missionaries were viewed as the friends of the negroes, and consequently as the enemies of the planters. So early as 1676, the Quakers were forbidden, under heavy penalties, to instruct the slaves, or pray with them. So late as 1826, a Wesleyan chapel was destroyed; and it was asserted, that the authorities had not power to protect missionaries from the effect of popular fury. And in 1827, a clergyman of the Established Church, the Rev. Mr. Harte, having rendered himself obnoxious to his parishioners by his zeal for the spiritual instruction of the negroes—"although," writes Sir George Murray, then Secretary of State, "distinguished by personal and professional merits," and pronounced by the Bishop of Barbados entirely free of the charges brought against him—was, nevertheless, brought before the Court of Quarter Sessions, and sentenced to pay a fine of one shilling for the misdemeanor of having, in the words of his accusers, by an "offensive sermon," and disgraceful conduct, while administering the Holy Sacrament, endeavoured to alienate the slaves from a sense of their duty, and inculcate doctrines of equality inconsistent with their obedience to their masters and the policy of the island.

Up to 1805, the fine for murdering a slave was fixed at £15 currency (£11 sterling); it was then made punishable with death; but the act was so vaguely worded as to render conviction a matter of the greatest difficulty; moreover, the perpetrator could in any case only be condemned upon the evidence of one or more white persons.

In December, 1826, John Archer, a white man of property, was indicted for the murder of his slave; with difficulty a verdict of manslaughter was recorded against him, and he was sentenced to twelve months' imprisonment. The last slave insurrection broke out on Easter Sunday in this year, but was suppressed in a few hours.

* The produce of this tax, declared by Lord Brougham, to be "the most injurious to the subject, in proportion to the benefit it produces to the government of any recorded in the history of taxation," was greater than could easily be credited, a sum exceeding £6,000,000 (being three times more than the fee-simple value of the lands) having been thereby raised from the chartered islands. In 1825 a government document showed the salaries, pensions, &c., paid from this fund, to amount to £48,108. The salaries of governors of islands, which did not contribute one lot,

In August, 1831, another hurricane occurred, in which 1,501 persons, and property to the value of £1,802,600, was destroyed. A sum of £100,000 was voted by parliament for the relief of the sufferers in Barbados, St. Vincent, and St. Lucia, of which amount the first-named island received one-half.

In 1834, the apprenticeship system commenced; it worked unsatisfactorily to all parties, and was terminated by the vote of the Assembly, whose members, on the 15th of May, 1838, with a single exception, declared themselves in favour of complete emancipation, on the 1st of August, 1838. The bill passed through the House in one day, met with similar despatch in the Council, and received the assent of the Governor on the following morning.

Towards the close of August, 1838, a most welcome concession was made to the people of Barbados, Antigua, St. Christopher, Nevis, Montserrat, and the Virgin Islands, by the total abolition of the 4½ per cent. duties,* by act of parliament. The patriotic William the Fourth had declared, in 1830, his abandonment of all claim upon this fund; but the complete relief of the colonists from this heavy burden was reserved for the auspicious reign of our present queen. Since then, this valuable colony has progressed steadily, both morally and materially, notwithstanding the trial it has experienced in common with the other West Indian islands, by the change in the sugar duties of 1846, and has attained a position, from its commerce and population, quite marvellous, when considered with regard to its very limited area.

PHYSICAL ASPECT.—On a diminutive scale, there are the various denominations of hill and valley, table-land and low-land, cliffs, gorges, and ravines; the low-lands are of limited extent, and are restricted to the north, south, and south-east parts of the island; Mount Hillaby, the highest elevation, is 1,147 feet above the sea. A narrow strip of land runs from Bridge Town parallel to the west coast, from north to south, and ends in a bold bluff point, from whence the shores assume a rugged cliffy outline. From the west, or leeward coast, the ground rises in successive terraces, interrupted by gullies, to a central ridge. Looking eastward from Mount Hillaby, the aspect is that of a mountainous country in miniature; hills of a conical form radiate from the central ridge towards the sea-shore; their sides worn into channels by the heavy rains, and their colour a dark reddish brown, overspread here and there with a whitish marl. To this district the name of Scotland has been affixed. A deep valley, passing nearly due west, divides the island into two unequal parts; and the rise of the sea fifty or sixty feet above its present level,† would separate Barbados into two islands. The northern section is the larger and more elevated.

The coast line affords no harbours; it is almost encircled by coral reefs, which occasionally extend for nearly three miles to seaward, and prove dangerous to navigation. The shore rises boldly to a amount to more than £6,000 sterling; and among the pensioners, were the Duchess of Gloucester (£3,000), the Princess of Homburg, the Earl of Chatham (£3,000), Edmund Burke (£2,500), and many others who had net the slightest claim on the West Indies. The aggregate amount of pensions was nearly £30,500 sterling.

† See Sir Andrew Halliday's Geological Map, and interesting account of this island, in his work on the West Indies, published in 1837. Through this vale a rail or tram-way might be advantageously constructed.

height of from thirty to fifty feet on the northern point, and on the south-eastern part of the parish of St. Philip's, but elsewhere long lines of sandy beaches are observable, protected against the encroachments of the sea by coral reefs.

STREAMS AND SPRINGS.—There are several streams, but none deserving the name of rivers. During the rainy season, some of the streamlets become impassable torrents, although, at other periods of the year, their bed is dry. They are more numerous in the Scotland district, where the soil is argillaceous, than in the other and far larger part of the island, where it is calcareous. *Scotland River*, as the largest is termed, receives several of the surface springs from the hills, and being barred at its exit on the sea-coast, its waters expand into a basin, termed the *Long Pond*. Water is obtained from numerous hollows in the rocks and by sinking wells, some of which are 180 to 270 feet deep. The total number of wells is 481, and the number of feet excavated amounts to 41,263. There are several very pure springs, and also some of a chalybeate nature, containing chiefly iron, carbonic acid, and fixed alkali, in different proportions. The "boiling spring," one of the great natural curiosities of Barbados, consists of an inflammable gas (carburetted hydrogen), which issues from a spot about two feet in diameter, near the side of a watercourse in Turners' Hall Wood, in St. Andrew's parish; a small remnant of the primitive forests that covered the island when first visited by Europeans. On the application of flame, the gas burns with a pure whitish light.

DIVISIONS AND TOPOGRAPHY.—The island was divided, in 1629, into six parishes, to which five more were added in 1645. Their names, area, and population, are shown in a subsequent section. That of St. Michael contains *Bridgetown*,* the capital of the island, which was erected into a city in 1842, and lies round Carlisle Bay, is nearly two miles in length, and about half a mile in breadth. The situation, though convenient for landing and shipping produce, is insalubrious, from its contiguity to a large swamp, to drain which endeavours are now being made by means of convict labour. The city, viewed from the bay, has a pleasing appearance; the south-eastern limit comprises Needham's Point and the garrison of St. Anne's, with its fine range of buildings, forming an irregular square, encompassing the finest parade ground in the West Indies, abounding in spacious galleries, and terminating, to seaward, in a castle, whose large batteries extend to the water's edge. The north-western extremity is characterized by the

villas of the little suburb of Fontabelle, with Rickett's battery in front; the intermediate space is filled up with houses embowered in foliage, and surmounted by the tufted heads of clustering palm-trees. Hills of moderate height rise in the back ground, and more distant ridges of higher land close the prospect. The commercial part of the town has some handsome and commodious buildings, but the streets are, with one exception (Broad Street) very irregular; and the stores, from the want of shop windows, look heavy and unattractive. A bronze statue of Lord Nelson, erected in 1813, stands in the centre of an open spot, formerly called "The Green," but now dignified with the name of Trafalgar Square.

The chief buildings are, the Queen's house, occupied by the commander of the forces, the central and free schools, the cathedral, and other places of public worship belonging to the Established Church, Wesleyan and Moravian chapels, and a very handsome Jewish synagogue. The public offices are scattered throughout the town, and for the most part contracted and insufficient. There is a commercial hall, a market place, six hotels, besides several private boarding-houses, and an ice establishment, where that useful article is cheaply and abundantly attainable.

Freemasonry has always had a strong hold in Barbados: there are at present three lodges and two arch-chapters. *Carlisle Bay* is merely an open roadstead, which has been materially improved by the erection of an excellent lighthouse, on a rocky cliff, fifty-five feet above the sea level. The tower is itself above eighty-two feet high; and has a revolving light of the first magnitude, visible from a ship's deck nearly eighteen nautical miles. The cost of the work (£6,000 sterling) has been half defrayed by the Imperial Parliament and half by a small extra tonnage duty, already repealed. Pilgrim, the governor's residence, occupies an eminence about half a mile to the east of the town, and is surrounded by extensive grounds. Bishop's Court, the diocesan residence, is placed on another eminence called Gibraltar, and commands one of the finest views of Bridgetown. The suburb of Hastings, which has received its name from the number of establishments for sea-bathing, abuts on the St. Anne's garrison; and about a mile further south, built on a coral cliff, is Worthing, also a favourite watering place.†

There are three other towns in the island: *James*, or *Hole Town*, in the parish of St. James, so called from the bay on which it was built, has now only a few houses, though, according to Oldmixon and

* The town obtained its name from a rude bridge constructed by the aborigines, over the narrowest part of the creek, which receives the surface water from the adjacent heights. It was at first styled the "Indian Bridge," but received its present designation on the substitution of a more solid structure. In 1656, it contained, according to Du Tertre, upwards of one hundred well-furnished taverns, but was unfortunately constructed of wood; ten years afterwards it was rebuilt chiefly with brick and stone. Père Labat, in 1700, described it as being handsome and large, with straight and long clean streets; houses built in the English taste, with many glazed windows, and magnificently furnished,—the town-hall very handsome and well ornamented, the shops and merchants' stores filled with all that could be desired, from every part of the world. There were also numerous goldsmiths, jewellers, and other artisans, who appeared to find abundant and remunerative employment.—(*Nouveaux Voyages aux îles de l'Amerique*, vol. i. pp. 188, 191). Oldmixon confirms this and other particulars of the flourishing condition of

the place, and says it contained 1,200 high stone houses, the rents of which were as dear as in Cheapside, London. The church dedicated to St. Michael, was as large as many English cathedrals, and possessed a fine organ, clock, and good peal of bells.—(*History of America*, vol. i. Various other authorities have attested the opulence and splendour of the city; but like Port Royal, Jamaica, it has been repeatedly devastated, probably for a like cause. In 1756, 160 houses were destroyed by fire; in 1758, 120 more houses were burned. One hundred years after the first calamity, viz., 13th May, 1766, a fire broke out, which lasted from half-past eleven A.M. until nine o'clock the next morning. Four hundred and forty houses, including the custom-house, and other public buildings, were destroyed; the damage was estimated at £300,000 sterling. In the following December the greater number of the dwellings which had been spared in May, were consumed by a fresh conflagration. On several subsequent occasions minor fires have caused great loss of property.

† Sir R. H. Schomburgk's *Barbados*, pp. 242 to 251.

Père Labat, it had, in 1700, about 100 houses, and was defended by two batteries. *Speight's*, or *Spike's Town*, has two principal and a few minor streets, comprising about 150 houses, many of which are now falling to decay. The roadstead here is equally exposed as at Carlisle Bay; it was formerly much frequented, a great deal of sugar being exported direct to Europe, but produce is now sent by droghers and small sailing vessels to Bridgetown. Many of the inhabitants earn their livelihood by fishing, and the flying fish, while in season, form their chief food. The third town, named *Oistin*, after an early settler of profligate character, now contains only a few dilapidated houses.

GEOLOGY.—The coral insect raised the foundation of this island from the bed of the ocean, but the substratum appears to have received six gradual and successive elevatory movements; hence its step-formed terraces, which are rarely seen among coral islands. The structure exhibits two distinct features; 1st, coralline limestone, with beds of calcareous marl, containing recent shells; and, 2nd, strata of siliceous sandstone, intermixed with ferruginous matter, calcareous sandstones, siliceous limestone, different kinds of clay, selenite, earthy marls, frequently containing minute fragments of pumice, selenite, strata of volcanic ashes, seams of bitumen, and springs of petroleum (Barbados tar). The coralline rocks occupy six-sevenths of the whole area, rise in terraces, sometimes to the height of above 100 feet, and are occasionally precipitous as a wall. They are traversed to the west, north, and south, by deep fissures. Not unfrequently these rocks appear like compact limestone, with a conchoidal fracture and translucent edges. Scotland district contains various modifications of tertiary rocks, but with an original uniformity. The stratification is sometimes wavy, at others greatly contorted. The earthy marl—indurated argilla—or, as the colonists call it, *chalk*, occurs in masses, from a few inches in thickness, to a depth of several hundred feet. The summit of Mount Hillaby consists of this substance. Thin seams of bituminous coal and wood have been observed. A hill near Conset's Bay is reported to have been set on fire by a slave, and to have continued burning for five years; and slags found on the slope and foot of the hill, show distinct marks of fire, and confirm the popular tradition.*

The fossil remains of the most minute forms of organic life alone, and chiefly analogous to those of the present day, have as yet been discovered.

SOIL, is varied; in some places light, sandy, and spongy; in others, a rich black earth, or a red clay of considerable depth. Dr. Davy (the brother of Sir Humphrey Davy), through the medium of the *Barbados Agricultural Reporter*, has forcibly represented the benefit derivable from the application of some of the marls in the Scotland district, to the improvement of such soils as are deficient in car-

bonate of lime, and asserts the superiority of the chalk and soft calcareous marl of this island, over that procurable in England.

CLIMATE.—Salubrious, with an even dry temperature, though yellow fever occasionally attacks this as it does other West Indian islands. The north-east is the prevailing wind. The range of the barometer, during 1844, was from 28.82 to 30.10; of the thermometer 76.86 to 83.58 Fahrenheit; the fall of rain, 72 inches.

The clearing of forests and brushwood in Barbados has had its invariable effect in diminishing aqueous precipitation; and even within the last fifty years the decrease is very perceptible. The fearful hurricanes by which this island has been visited have been elsewhere adverted to, shocks of earthquake are occasionally felt, and thunder storms are frequent and severe. Waterspouts often occur in this latitude† at some distance from the shore, and have been known to pass over the land, uprooting trees, unroofing buildings, and sucking up the water from the reservoirs on their way.

POPULATION.—Probably no colony, in proportion to its size, ever offered a more striking example of rapid numerical increase than Barbados. Two years after its first settlement in 1625, the nucleus formed by the handful of original settlers, had multiplied into 1,858 men, women, and children, including Indian slaves. The disturbed state of the British isles, induced considerable emigration to the West Indies, and royalists of rank and note took refuge in Barbados, as many republicans were afterwards glad to do in Jamaica. Others were forcibly transported thither by Cromwell, and thus a class of citizens were introduced, who gave to the colony its peculiar tone and character. In 1650, according to Ligon, the inhabitants were able to muster 10,000 foot, and 1,000 horsemen; and Oldmixon, in 1676, stated them at 150,000, of whom 70,000 were of European descent, and 80,000 negroes. These assertions are, however, considered by Schomburgk as gross exaggerations, as Governor Searle, in 1656, returned the total number of troops at only 5,300, which enormous diminution would hardly be accounted for, even by the fearful ravages made by yellow fever throughout the West Indies about this period; and Governor Sir Jonathan Atkins, in 1676, reported the population at only 21,725 whites, and 32,475 negroes.

In 1683 a very complete account of the population was given by Governor Sir Richard Dutton, who stated the whole at 66,170 individuals, viz., families and householders, 4,156; free persons 17,187; unfree persons and servants, 2,381; slaves; men able to bear arms, 6,761. There were then 358 sugar works in operation, and 90,517 acres of land "possessed, and useful." The freeholders of this period were those who formerly held their lands from the Earl of

following fact may be mentioned, which was related to me by Lieutenant-general Wood, the commander-in-chief of the Windward Islands. When the *Kent* Indianman was on fire in the Bay of Biscay some years since, Captain M'Gregor, of H.M. 31st regiment, threw overboard a bottle, containing a letter for his father, with a label attached to the neck to attract attention. A vessel hove in sight, and took the sufferers off the wreck. Captain M'Gregor returned to England, was promoted to a majority in the 93rd, and proceeded to Barbados. One day while at mess, the bottle which he had thrown overboard in the Bay of Biscay, was brought to him by a negro, who had picked it up on the beach.

* There are some curious caverns along the coast; one of these in the parish of St. Lucy's is much visited by strangers on account of a species of zoophyte (*actinia*), from which it has gained the name of the Animal-flower Cave. In an excavation or basin filled with sea-water, there is an oblong rock clothed with variegated sea-moss, from among which issue small stems or tubes, from whose summit, petals like those of the single marigold suddenly expand; but as soon as a hand approaches to pluck the seeming flower, the petal-like organs retract, and the stem disappears in the crevice whence it issued.

† As an illustration of that difficult subject, the Atlantic currents and their set towards the West Indies, the

118 BARBADOS—PROGRESS AND CHARACTERISTICS OF POPULATION.

Carlisle, under an acknowledgment of forty pounds of cotton, together with other merchants and tradesmen. The freemen had mostly arrived under indentures, or else under sentence of transportation,* and become free by serving out the stipulated time; many of these eventually became landholders. The "unfree" persons, probably, referred to the transports, or indentured labourers; and the Christian servants, as they were called for distinction, were persons from England, Ireland, and Scotland, who, for the sake of a certain bounty and a free passage, sold their services for a term of years, and, as stated in a previous page, were too generally treated with extreme cruelty, to which indeed the great mortality among them is chiefly attributable. So rapid was this decrease, that the number of white men was reduced from 7,235 in 1683, to 2,330 in 1698. This kind of importation was followed to a greater extent in Barbados than in any other colony; at a later period, when the law of the land obliged every estate to maintain a certain proportion of white servants, the proprietors, in many instances, granted small lots to poor men and former servants, from whence arose the appellation of "ten acre men." These formed the majority of the militia. In a free country they might have been valuable colonists; but in a slave-state, a middle class cannot exist; exulting in their European descent, they became idle and dissipated, looked upon field labour as a degradation, and at the utmost planted a few acres of land as a garden or provision-ground. Some who were more prudent and energetic, cultivated ginger, aloes, arrow-root, and such minor articles as did not require any great outlay, and demanded merely manual labour for their production. Others were placed in situations of authority over the unhappy negroes, for which their previous training had grievously unfitted them; since unhappily no man is more likely to become a tyrant than he who has been himself oppressed. The slaves appear to have been chiefly brought from the coast of Guinea, but there were also Indians procured, according to Oldmixon, from the continent, or the neighbouring islands, "by stealth or violence, and always with dishonour."†

The total number of slaves imported is nowhere stated. Between the years 1680 and 1688, the annual supply required for Barbados alone was computed at 4,000, besides those surreptitiously introduced. From June 1698, to December 1707, 34,583 were imported; and at the latter period Governor Crowe computed that it annually required 3,640, or about seven per cent., to keep up the stock. That

* The island appears to have been viewed very much as a penal establishment, both for political and social offenders. In 1651, 7,000 or 8,000 Scots, taken prisoners at the battle of Worcester, are asserted to have been "sold as slaves to the plantations of the American isles." In 1656, about seventy persons implicated in the Salisbury plot were sold to Barbados for 1,500 lbs. of sugar each, more or less, according to their working faculties. Among them were divines, officers, and gentlemen, who were "bought and sold from one planter to another, or attached like horses or beasts for the debt of their masters, being whipped at the whipping-post as rogues, and sleeping in styres worse than hogs in England."—*Barbados Merchandize; a Petition to Parliament, printed in the eleventh year of England's liberty, 1659.* In 1665, Chalmers relates that four young men were whipped through the streets of Edinburgh by the common hangman, and transported to Barbados for interrupting and abusing a minister when preaching. In 1685, between 800 and 900 persons accused of participation in the Duke of Monmouth's

is to say, there was then, by the governor's admission, a yearly sacrifice of human life of seven per cent. beyond the natural increase by births. In the following years the importations increased very rapidly, until in 1753, the number of negroes amounted to 69,870.

The relative progress of the whites, free coloured people, and slaves, has been as follows:—

Year.	Whites.	Free Coloured.	Slaves.	Total.
1773	18,532	—	68,548	87,080
1786	16,167	833	62,118	79,116
1787	16,127	2,229	64,405	82,761
1805	15,000	2,130	60,000	77,130
1812	13,749	2,613	69,132	85,494
1829	14,959	5,146	82,902	103,007
1834	12,797	6,584	82,850	102,231
1844	—	—	—	122,198
1851	15,824	120,115	—	135,939

In the census for 1844, the inhabitants are not classified with respect to descent; but it is certain that the coloured population has been steadily augmenting ever since the final extinction of slavery; and the annexed census of June, 1851, shows a general increase, since 1844, of 13,741 persons, or at a rate of nearly 1½ per cent. per annum.‡

Parish.	Area in square miles.	Inhabitants.	Mouths to each sq. mile.	Local taxation.

60 " " 30	15,398	19,247	34,645
80 " " 60	1,811	3,180	4,991
Over 80 years . . .	169	519	688

It is evident from the above that the climate is propitious to advanced life, and especially as regards females, those above eighty years of age being in the proportion of more than three females to one male.

OCCUPATION.—Public officers and professional men, 691; engaged in commerce, 2,823; tradesmen and mechanics, 7,339; employed in agriculture—under fifteen years of age, 4,541—over fifteen, 32,112; in domestic service—under fifteen years of age, 1,641—over fifteen, 13,694; sick or infirm, 3,559; no fixed employment, 73,098. This last division is well explained by a gentleman of intelligence and experience, Mr. Milner, of the Colonial Bank, thus: children not over five years of age, 26,576; half of those from five to fifteen (36,257), 18,128; two-thirds of persons above sixty (5,679), 3,786; half of sick and infirm (3,559), 1,779: total, 50,269; leaving 22,829, as above classified. This still large number, however, is mainly owing to defective classification, and the circumstance that many have no "fixed" employment. On the whole population, the proportion of males is 45.81 to 54.19 per cent. of females.

The condition of the mass of the coloured population is creditable to their industry; but that of a large number of the white inhabitants is very distressing. They are the principal burthen on the parochial taxation of the island, and receive largely out-door relief. The acting governor, in the annual report for 1851, thus describes their state:—

"It is painful to witness the indigence and indolence of these wretched people, whose position is the result of a system which to uphold it was considered to require the support of a law for compelling the maintenance on every estate of a certain number of white men. Accustomed in times of slavery to an enervating inactive existence, broken only by an occasional militia parade, it is no wonder that they were ill-prepared for the consequences of the great social change of 1833, which rendered their dronish presence on estates no longer necessary, and drove them to seek for a livelihood by some personal exertion beyond the periodical shouldering of a musket. The majority of them, however, have been unable to conquer the habits of their early life. Most of them reside on the windward coast of the island. A few contrive to gain a livelihood by fishing, and by the cultivation of small provision grounds; and there are some who, still more industrious, raise and prepare for market a considerable quantity of arrowroot and cotton. But the greater number lead an abandoned existence, many with large families, who are being brought up amid idleness and vice of the very worst description, and whose occupation, if they have any at all, is confined to the breeding of pigs and poultry. I am assured that not only are they insensible to, but that they positively resist, the efforts that are made to reclaim them."

The consumption of ardent spirits is very large: in 1851 "it was computed," says the acting governor, "that 6,500 puncheons of rum were distilled and consumed in the island," which would give 5½ gallons (old wine measure for each head of the population,

or 9½ gallons to each person above fifteen years of age: the governor adds—"and yet drunkenness is far from being a prevailing vice."

GOVERNMENT.—A council, acting in a legislative and an executive capacity, nominated by the governor as representative of the Crown; and a house of assembly, consisting of twenty-four members, elected by freeholders of all colours and creeds. The governor of Barbados is governor-in-chief of the *Windward Isles* of the Caribbean group; namely, St. Lucia, St. Vincent, Grenada, and Tobago.

MILITIA.—Formerly this domestic force was very imposing: Barbados had its "life-guards," artillery, and other corps. With the abolition of slavery the necessity for this organization ceased. The pertinent remarks of Acting-governor Hamilton, made in April, 1852, are equally applicable to the present state of the militia in other British West India islands.

"The absence of the old prevailing fear of revolt, the great change which has taken place within the last twenty years in the habits and tastes of the middle classes, and which induces them to revert with little pleasure to the festivities that were then a chief attraction of militia musters; the unreasonable number on the personal staff of the governor, who is still supposed to have twelve or fourteen aides-de-camp, and the extent to which general staff appointments were carried, it would seem, only to purchase exemptions from other liabilities; the increasing disregard of the duty of enrolment, prescribed by the existing law; the exemption from militia drill, now periodically sanctioned by the governor; and, above all, the very serious cost of re-establishing a militia force, be it on however moderate a scale—are all reasons which have led the people to view the remains of their militia system with indifference or contempt; and, added to the undisturbed notions of security engendered by a long peace, have lulled the chivalrous spirit for which they were so distinguished during the war, and which had so often the effect of diverting the battle-ground from Europe to these seas."

The Barbados militia now consists of five regiments, represented by only 233 rank and file.

RELIGION.—There is a very liberal provision for the Established Church, which is under the supervision of a diocesan. By letters patent, dated July, 1824, Barbados, St. Lucia, Trinidad, Tobago, Grenada, St. Vincent, Dominica, Antigua, Montserrat, St. Christopher, Nevis, and the Virgin Islands, were formed into a diocese, under the denomination of the "Bishopric of Barbados and the Leeward Islands;" and the sum of £4,200 per annum was placed at the disposal of the bishop for the appointment of ministers, catechists, and schoolmasters. The state of the ecclesiastical establishment, for several years, is thus shown:—

Year.	Number of clergy.	Churches and chapels.	Number of sittings.
1825	15	14	5,030
1834	29	23	7,760
1841	31	35	22,502
1851	34	42	24,967

Since 1851, considerable additions have been made to the several churches and chapels, and new buildings are in course of erection. Eleven rectors have each a stipend of £320 per annum, also a glebe and parsonage, with compensation in lieu of marriage and burial fees, amounting to, for the eleven, £743. There are eighteen curates, at £150 each, and two legislative chaplains. The bishop receives from the

British treasury £2,500 per annum. The governor, in his annual report for 1851, says—"there is probably less dissent in Barbados than in any other British colony; the Wesleyans and Moravians are the only missionaries in the island; and both ministries deserve the highest praise for their energetic pursuit of their calling, and their prudent abstinence from all interference in public matters." There is a small Roman Catholic chapel. None but the Episcopalians receive any pecuniary support from the local revenues.

EDUCATION.—About 5,000 children, exclusive of 1,500 Sunday scholars, are taught in the Established Church schools, in several of which the children are both clothed and fed. There are a few endowed free schools and eighteen "Dame" schools. *Codrington College* was founded by the Society for the Propagation of the Gospel, by means of the munificent bequest of Colonel Codrington, in 1810, of two Barbadian plantations, yielding a clear annual income of £2,000 per annum. It is situated in St. John's parish,* on a table-land about 200 feet above the sea-level, is surrounded by hills on every side, refreshed by the breezes of the Atlantic, and abundantly watered by a clear stream flowing from a spring, which issues from the foot of a neighbouring cliff. The edifice is plain and massive. The students pay a very moderate annual sum for their board and education; and if intended for the church, are examined and ordained by the bishop. At the central school, children are educated precisely upon the plan of the national schools in England; all are fed during the day; and the majority clothed likewise. An educational committee for the whole island is formed from the members of the assembly, by which body a sum of £3,000 was, in 1850, placed at the disposal of the committee. There is a government inspector of schools.

PRESS.—Printing was introduced into the island about 1730. The first newspaper, entitled *The Barbados Gazette*, was issued in 1731; it came out twice a week, and was the earliest regularly published in the Caribbee Islands. There are now five bi-weekly papers.

CRIME.—The philanthropic exertions of the present governor, Sir William Colebrooke, have been judiciously directed to the introduction of an improved system of penal discipline. The total number of commitments during 1851 was 2,174, of whom 123 were whites, and 1,439 coloured. Three police magistrates sit in Bridge Town, and eleven are located in the rural districts. There is an efficient police system, with an inspector-general, at a salary of £750.

FINANCE.—In 1821, the revenue was £13,127; in 1830, £16,349 sterling; in 1833, £20,915; in 1838 (after the abolition of slavery, and at the termination of the apprenticeship), £33,972; in 1851, £55,724; of this, the import duties yielded £29,652; surplus tonnage and Crown duties, £4,404; licences, £3,815; under a militia impost (viz. 8s. on each acre of land, and 2d. on each pound of the annual rent of houses), £2,885. The acting-governor, in reporting on the subject for the last year, says—"the colonial treasury is in a most flourishing condition: the revenue has exceeded the expenditure by about £5,000; and at the end of the year there was a balance in the public chest of nearly £17,000 sterling: this prosperous

* In a neighbouring plantation is a large pond which still bears the name of Yarico, and recalls to mind the heroine of one of the most pathetic pieces in the *Spectator*,

state of things, be it observed, arises from no increase of taxes; on the contrary, the export duties were abolished." The civil establishment, to the amount of £8,350 (including £4,000 a-year to the governor) is paid by England; as are also the sums of £3,500 of the ecclesiastical, and £1,350 of the judicial expenses. From the colonial revenue is defrayed: police, £15,646; gaols and prisons, £2,176; lunatic asylum, £1,526; Established Church, £25,925; the chief justice, £2,000; attorney-general, £500; police magistrates and clerks, £3,237; colonial secretary and clerks, £1,100; education of the people, £1,260; central schools, £512. During 1851, £1,000 was voted in aid of the Jamaica sufferers by cholera. The military expenditure defrayed from the British commissariat chest in 1851, was £105,942.

MONETARY SYSTEM.—a branch of the *London Colonial Bank*; the notes in circulation are equal in value to about 150,000 dollars. The coin in the island is estimated at £31,000. There are no savings banks. The legal denomination of account is that of England; but mercantile dealings are generally transacted in dollars (at 50d. each) and cents. Weights and measures used are English.

COMMERCE.—Since the abolition of slavery both the trade and productions of the island have largely increased; thus,—

Year.	Imports.	Exports.	Tonnage inwards.
1832	£481,610	£408,363	79,005
1851	787,977	887,627	96,381
Increase	305,367	479,264	17,276

The Barbados, like the Jamaica Blue Books, afford no consecutive or satisfactory returns, prior to 1834, at which time a large proportion of imported goods was re-exported. In 1832 the values are given in currency (in which £135 were equal to £100 sterling). The trade of the present period is therefore more largely augmented than would at first sight appear.

About half a million of the imports for 1851, consisted of British goods; the chief part of the remainder was brought from the United States, and comprised fish, to the value of £34,612; flour, £32,092; meal, £27,606; meat, £10,015; wine, £7,582; wood and lumber, £33,352; manure, £13,109.

The number of hogsheads of sugar (irrespective of tierces or barrels) shipped at different periods since 1815, has been:—

Year.	Hogs-heads.	Year.	Hogs-heads.	Year.	Hogs-heads.
1815	11,600	1830	25,111	1845	24,777
1820	12,013	1835	24,189	1850	35,302
1825	22,553	1840	13,319	1851	38,730

"In 1851 [says the acting-governor], more sugar was made and shipped from this island than in any other year since it has been peopled; this year (1852), if no unforeseen event occurs, the crop will be still larger, close on 45,000 hogsheads; and it is a remarkable fact that there will be more labourers' sugar made this year than formerly; so far, therefore, the success of cultivation by free labour in Barbados is unquestionable. The balance of trade is in founded on the real woes of a victim of European treachery, who, in the words of Ligon, "for her love lost her liberty."—Ligon's *History of Barbados*, p. 35.

favour of the island, and still affords something of a margin for interest to mortgagees, and income to absent proprietors."—*Blue Book for 1851*.

Among the exports in 1851 are—sugar, in value £654,351; molasses, £54,730; rum, £106; cocoa, £1,727; aloes, £1,640; cotton, £1,436; coffee, £419; arrow-root, £606. Cotton was at one period largely exported; in 1805, to the amount of 9,395 bales; but in 1832, this item had disappeared; the culture is however being revived.

Landed property is now of higher value in this colony than it has been known to have attained at any former period. It is estimated that there are about 100,000 acres in cultivation, of which 25,000 are annually planted with sugar canes; the remainder is occupied by provision-grounds, or in grass for cattle. The planters (as stated in official communications) decline giving statistical details on this subject. There are

nearly 500 sugar works with mills, and a large sugar-refining manufactory at Bridge Town.

Prices in 1851:—Wheat, £1 : 7s. per bushel; wheaten bread, 3½d. per lb.; horned cattle, £10; horses, £27; sheep, £1 : 5s.; swine, £1 : 10s.; goats, 16s. 8d. each; milk, 3d. per quart; butter, 1s. per lb.; cheese, 1s. 6d.; beef, 7½d.; mutton, 10d.; pork, 5d. *Wages*—Domestic males, £1 : 5s. per month; females, 16s. 8d.; agricultural, 10d. per day; trades, 1s. 8d.

SUMMARY.—The foregoing details attest the satisfactory condition of one of the earliest and (notwithstanding its very limited extent) most valuable of our West Indian possessions. It has always been a "popular" colony, and has well deserved to be so, since loyalty to the crown, patriotism for Old England, and sympathy with their fellow-subjects, have ever been marked characteristics of every "true Barbadian born."

CHAPTER VI.—ST. LUCIA.

THIS island is situated about seventy miles to the north-north-west of Barbados, in 13° 50' N. lat.; 60° 58' W. long. Its extent and area have been very differently stated. Lieutenant-governor Torrens, in January, 1846, declared that, according "to a topographical map, prepared by the surveyor-general from a recent and actual survey undertaken under his direction," St. Lucia was "40 miles in length, 20 at her greatest breadth, and 150 miles in circumference."* Lieutenant-governor Darling, in April, 1850, says—"from a map recently constructed from actual measurement, it would appear that the greatest length is 27 miles, its greatest breadth 13½, and its area 178½ square miles = 114,400 acres."† Again, in a return transmitted in the following year, by the same authority, the area is given at "259 square miles" = 165,760 acres.‡ Mr. Breen, in his useful work on St. Lucia, states the superficies at 158,620 acres. These contradictory statements seem quite inexplicable.

HISTORY.—The date of the discovery of this island is quite unknown; there is a tradition that some French navigators gave it the name of *Sainte Alousia*, from having seen it on the anniversary of the death of a virgin martyr of that name. In 1635, the king of France made M.M. Lotine and Duplessis a grant of all the unoccupied lands in America, i.e. all the territory not yet usurped by white men; but these persons settled at Martinique, and the Caribs remained in undisputed possession of their native island until the arrival of some English settlers in 1639, who established themselves, and remained peaceably for eighteen months, until an English ship, becalmed off Dominica, attempted to kidnap a party of Caribs who had come on board with fruit, and succeeded in retaining four, who were subsequently sold as slaves. The rest jumped overboard, swam to shore, and having informed their countrymen at Martinique and St. Vincent of the treachery which they had experienced, a combined attack was made upon St. Lucia, the settlement devastated, and the majority of the colonists massacred, a few only succeeding in making their

escape to Montserrat. In 1650, about forty French adventurers, under the command of one Rousselan or Chousselan, a man of great personal bravery, who married a Carib woman, and obtained extraordinary influence over that people, succeeded in establishing themselves in St. Lucia; but he died in 1655, and the colonists were kept in constant alarm by the incursions of the neighbouring islanders, by whom three governors were killed in as many years.

In 1664, an armament, under Lord Willoughby, (*vide History of Barbados*) attacked the place, defeated the French troops, and obtained from the natives, who were collected together to the amount of about 600, the actual surrender of the island, which, however, from a variety of causes, was voluntarily evacuated by the English in 1667. On their departure, the French settlers, who had taken refuge in the mountains, returned to their former abodes; but the rival claims of England, and the dread of renewed hostilities, damped their energies, and prevented them from making any sensible progress in cultivation.

At the peace of Utrecht, in 1713, St. Lucia appears to have been viewed as a neutral island in the possession of its rightful proprietors, the Caribs; but in 1718, a number of deserters, sailors as well as soldiers, having taken refuge there, Marshal D'Estrées was induced to apply to the Regent of France for a grant of the island, which being conceded, he proceeded to send out troops, stores, and settlers; in 1722, George the First of England made a similar disposal of a country, not his to give, by bestowing it upon the Duke of Montague, who expended £40,000 in fitting out an expedition for its colonization.

The rival commanders met in January, 1723, and wisely avoided the effusion of blood by agreeing that their respective forces should evacuate the island, which should remain neutral and open to both nations until the home governments should decide to which, if either, it should eventually belong.

In 1744, when war broke out between England and France, the latter power again attempted to gain possession of St. Lucia; but by the treaty of Aix-la-Chapelle, in 1748, the neutrality of this island, and also of St. Vincent, Dominica, and Tobago, were formally recognised, and the remnant of the unhappy

* Report accompanying *Blue Book for 1845*, pp. 84-86.

† *Idem*, 1849, p. 35.

‡ *Idem*, 1850, p. 98.

§ *Coke's West Indies*, vol. ii., p. 293.

Caribs left for a brief period in quiet occupation of their own lands.

On the renewal of hostilities in 1756, St. Lucia was fortified by France, but surrendered to a detachment of Admiral Rodney's squadron in 1762. In the following year, by the terms of the treaty of Paris, the claims of the native proprietors were finally set aside, St. Lucia was made over to France, and the other three islands above named assigned to England.

The permission of French dominion in St. Lucia was deemed by many experienced authorities very unwise; Admiral Rodney especially dwelt on the security, defensibility, and commodiousness of its fine harbours. France seemed fully aware of its value, and formed an expensive establishment there; immigrants flocked in from various quarters; the few remaining Caribs retired to an unappropriated tract in St. Vincent's; slaves were largely introduced; cultivation rapidly extended; and in 1772, the total population amounted to 15,476 souls.

In 1778, European strife again found a battlefield in the West Indian islands; and a small English fleet, under Admiral Barrington, succeeded in entering the Bay of Grand Cul-de-Sac, and gaining possession of the adjacent heights and batteries. The last French flag in sight had hardly been struck, before the Count d'Estaing, with his own squadron of twelve heavy line-of-battle ships, and a numerous fleet of frigates, privateers, and transports, with 9,000 troops on board, was seen approaching the shore. D'Estaing having been gallantly repulsed from the Cul-de-Sac and Carénage harbours, anchored in Grosflet Bay, and disembarked the troops, about 5,000 of whom advanced in three columns to storm the lines thrown up to cover the position of the Vigie, an outpost commanding the Carénage. The assailants dashed forward with impetuous bravery; the British awaited them without firing a shot, until they reached the foot of the entrenchments; then poured one deadly volley, and received them at the point of the bayonet. The struggle was fierce and terrible, but short; twice repulsed with heavy loss, the French charged a third time, but not with their original ardour, and were repulsed and scattered in complete and irretrievable disorder, leaving their dead and wounded in the hands of the victors. General Meadows, the British commander, suffered Count D'Estaing to bury the slain, and carry away the wounded, on condition that the latter should be considered prisoners of war. Of the French, 400 were killed, 500 desperately and 600 slightly wounded—a number considerably superior to the conquering force, whose total loss was proportionately small, having 10 killed and 130 wounded. This blow seems to have paralyzed the energies of M. D'Estaing, who, though still far superior both in naval and military resources, did not attempt another engagement; but after lingering ten days on the island, embarked the troops and took his departure; whereupon the inhabitants, under the Chevalier de Micoud, sued for peace, and were generously allowed to capitulate on very favourable terms. After this, St. Lucia became the rendezvous of the British squadron; the French anxiously desired to regain it, and during the temporary absence of Admiral Rodney, while endeavouring to form a junction with Sir Samuel Hood, the Comte de Grasse invested St. Lucia, and succeeded in disembarking, but was compelled to make a hurried retreat.*

In 1783 a general peace was signed, by one of the

articles of which St. Lucia was ceded to France, though not until after much negotiation.

Grenada, which had been captured from England, was restored to that power, and its French governor, the Baron de Laborie, transferred to St. Lucia, where he arrested the incursions of the Maroon negroes, encouraged agriculture and commerce, and formed an excellent road, which still bears his name.

The revolution of 1792 produced fearful scenes in the French Antilles; slavery under any circumstances is a precarious and dangerous system, but once let the firebrand of sedition and red republicanism be applied to it, and the result is almost as certain as the effect of a lighted torch on a mass of gunpowder. The slaves hearing their masters discuss the grievances inflicted by their rulers, and the rights of man, were in turn led to think how constantly and cruelly their own had been crushed under foot; the work of the estates was discontinued, the plantations abandoned, and a struggle ensued in which one-half of the inhabitants were destroyed.† This internal strife paved the way for the easy triumph of an external foe. Admiral Sir John Jervis (afterwards Earl St. Vincent) attacked the island, and on the 4th of April, 1794, H.R.H. Edward Duke of Kent, after a fatiguing march of fourteen hours from the landing-place, hoisted the British colours on its chief fortress, *Morne Fortuné*. The island, though reduced, was far from tranquil; the insurgent slaves had retired into the woods, where they were joined by a number of French soldiers, and being instigated by a few democrats, they carried on a harassing warfare against the British garrison, which, originally inadequate to the maintenance of its difficult position, was reduced nearly one-half by sickness and fatigue. Such was the condition of affairs, when "citoyen Victor Hugues," associate and protégé of Robespierre, arrived in the West Indies; the disaffected of every class and colour hastened to swell the ranks of the republicans, who, early in 1795, were strengthened by supplies and reinforcements from France; and in June, the British, after repeated contests, bravely waged against a daily increasing force, were compelled to abandon the island so hastily that some of the women and children were left behind, who were chivalrously sent over by the conquerors to Martinique, under the protection of a flag of truce.‡ In 1796, a fleet and land-force, under Admiral Christian and General Sir Ralph Abercrombie, besieged Morne Fortuné, and captured it after a fatiguing and disastrous siege. General Moore (the well known hero of Corunna) was left as governor to maintain, as he best could, a continued bush-fighting with the republicans and negroes who held possession of the interior fastnesses. Towards the end of 1797 the whole of the *armée Française dans les bois* surrendered at discretion, the negroes stipulating only that they should not be again reduced to slavery. They were accordingly formed into a regiment, and despatched to the coast of Africa. By the peace of Amiens in 1802, St. Lucia was for the last time given back to France; eighteen months after the war was renewed, and the island once more captured, after much bloodshed, by a British force under Commodore (afterwards Lord) Hood and General Grinfield. Thus ended this long contest for dominion, during which vast sacrifices of blood and treasure were made by

THE RIGHT HON^{BLE} THE VISCOUNTESS BRIDPORT.

both nations; France especially placed a high value on its possession, alike in a commercial and military point of view, and intended "to have made it the capital of the Antilles, the general market of the Windward Islands, and the Gibraltar of the Gulf of Mexico."*

PHYSICAL FEATURES.—St. Lucia, even amid the beautiful Caribbean group, is remarkable for wild and romantic scenery. A chain of mountains runs north and south through the island, dividing it into eastern or windward, and western or leeward districts; the mountains rise in the most fantastic shapes, and are densely clothed with forest trees; their highest elevations are distinguished by the names of *Sorcière* (2,136 feet high), *Paix Bouche*, and *Barabara*. From either side of this ridge, spurs of lesser altitude strike out towards the sea, forming plains, valleys, and ravines of varying size. The *Pitons*, or *Sugar-loaves*, two singular, and, from their perpendicular formation, probably inaccessible, pyramids of solid rock, respectively estimated at 2,710 and 2,680 feet above the level of the sea, mark the south side of the entrance to the beautiful bay of Soufrière. They are evidently of volcanic origin, appear wholly unconnected with the other mountains, are "feathered from the clouds to the waves with evergreen foliage,"† and, excepting on their seaford, are bordered with verdure and cane-fields in the highest state of cultivation. The *Piton des Canaries*, an isolated eminence, about 2,585 feet in height,‡ rises further inland, and is encompassed with dense forests and ravines. The *Soufrière*, or sulphureous mountain, about two miles to the east of the *Pitons*, is a volcano in active and uninterrupted operation. The crater occupies a space of three acres, and is crusted over with sulphur, alum, cinders, and other volcanic substances; in the midst of which are several cauldrons, more or less numerous, according to the intensity of the subterranean heat; in some of the larger, the water is quite black, and boils up to the height of two or three feet, constantly emitting dense and almost suffocating vapours. The water is celebrated for its medicinal properties;§ it is supposed to flow through an underground channel from the *Etangs* or lakes, about half a mile distant, whose contents are observed to be visibly decreasing.

PLAINS AND VALLEYS.—There are two beautiful plains, one situated in the northern, the other in the southern extremity of the island, each comprising a swamp of some extent, overgrown with aquatic plants. The principal valleys are those of *Mabouya*, on the windward, and *Roseau* on the leeward side, both of which are equally remarkable, says Mr. Breen, "for their extent, fertility, and insalubrity."||

RIVERS (so called) in abundance descend from the mountains,¶ sometimes meandering gently through the lowlands, but, after heavy rains, rushing im-

petuously down the steep slopes, forcing their way through gullies and rocks, and sweeping before them every species of vegetable production. The principal are named *Castries*, *Grand-cul-de-Sac*, *Dorée*, *Roseau*, &c.; none of them are navigable (though some might be easily rendered available for small craft), and their mouths are all dammed up by mounds of sand and gravel, forming basins of stagnant water, called lagoons.

COAST-LINE.—The north-western extremity is styled *the Cape*; the south-eastern, formed by a small mountainous promontory, is called *Pointe Moule-à-Chique*. The shores are indented with innumerable inlets, of different forms and sizes, several of which afford anchorage for ships of every description. Those on the windward are somewhat dangerous and difficult of access, owing to numerous shoals, and the boisterous breezes from the Atlantic; the most remarkable are named *Marquis*, *Grand Anse*, *Louvet*, *Dennerly*, *Praslin*, *Micoud*, *Troumassé*, *Volet*, *Cunelle*, and *Savannes*; the chief bays to leeward, are those of *Gros-îlet*, *Choc*, *Castries*, *Grand-cul-de-Sac Marigot*, (whose double basin is formed like two rings of a chain), *Roseau*, *Anse Laraye*, *Soufrière*, and *Vieux Fort*. The chief shipping station is the noble *Port de Castries*, described by Admiral Rodney under the name of the *Carénage of St. Lucia*, as one of the most accessible, commodious, and easily defended harbours in the Antilles. From the constant direction of the trade wind, only one vessel can enter at a time, whilst the largest fleet may safely ride at anchor within the spacious basin, and stand out to sea at an hour's notice. The entrance between the fortified headlands of the *Tupion* and *Vigie* is about one-third of a mile wide, and it stretches a mile and-a-half inland. There is an excellent quay, and a sufficient depth of water to allow ships of any burden to lie alongside the wharf.

DIVISIONS AND TOPOGRAPHY.—The island is divided** into eleven *quartiers* or parishes, each of which contains a town or village situated at the extremity of its principal bay, the same appellation being given to all three. The villages are described as being inhabited chiefly by fishermen, and by the poor and infirm, and remarkable for nothing save their lonely little churches and deserted streets.

Castries, the principal town and the seat of government, is situated at the head of the bay whose name it bears, on a plain in some places below the level of the sea, consisting chiefly of alluvial formations, and what is termed "made land."†† It is built in the form of a quadrangle, and has wide and well laid out streets, most of which are paved, and some provided with foot-paths, but all unhappily badly kept. The river *Castries* traverses the south side of the town, and empties itself into the bay. The upper part, or *Chaussée* division, is chiefly occu-

|| Breen's *St. Lucia*, p. 6.

¶ In the French Antilles, low ridges are called *mornes*, a name which they still retain in St. Lucia.

** It is also divided into five districts under the jurisdiction of as many special magistrates.

†† In former days a practice was adopted by the local executive of granting certain portions of the *land under water*, on condition that the lots should be filled up and enclosed. Stimulated by this judicious incentive, the colonists have wrested from the sea a considerable portion of the space now forming the western extremity of the town; but those who obtained concessions in the northern division have been less zealous, and swamps still exist there, covered with mangrove bushes, and occasionally inundated, which engender a pestilential miasm.

* *Vide* Report of Governor Noguès to First Consul Buonaparte, quoted in Breen's interesting volume on St. Lucia, published by Longman in 1844. Introduction, p. vii.

† Coleridge's *Six Months in the West Indies*, p. 112.

‡ The heights of the mountains are given on the authority of a map executed by order of Governor Reid, in 1847.

§ Louis XVI., under Governor de Laborie, granted a sum of money for the construction of barracks for the troops, which were established in 1785, but gradually fell into disuse. In 1836 an attempt was made to restore them to the public, but defeated by the proprietor who had become possessed of the property.—Breen's *St. Lucia*, p. 9.

pied by the humbler orders, and the houses are built of wood, and covered with shingles. The lower, or *Bord-de-mer* division, is inhabited by the wealthier classes, whose houses, constructed of stone, brick, or wood, mark the taste of their owners, or the prevailing anxiety to guard against the ravages of fire, hurricane, or earthquake.

Among the public structures may be noticed the *Place d'Armes*, or square, planted with ornamental trees; a substantial stone-built Catholic church in the *Place d'Armes*; an English church erected in the centre of a swamp, in the north-east corner of the town, "as if for the express purpose of checking the growth of Protestantism in St. Lucia;" an asylum for the destitute poor, and a large well-constructed, stone gaol.

The *Government House*, commonly called the *Pavilion*, is a spacious and commodious wooden structure, fitted up with considerable elegance, and situated at the western extremity of Morne Fortuné, on a terrace almost at the edge of a cliff. The prospect from it is very striking; below lies the wide-spreading town, heading the long and deep bay, the quay skirted with vessels of every size, and the broken peninsula of the Vigie; Pigeon Island is seen in the distance, and straight across the channel, as far as the eye can reach, rise the gray cliffs and woody mountains of Martinique; inland also the view is bounded by heights and forests.

The ridge of Morne Fortuné, which is about 800 feet in elevation, is studded with military buildings of every description; the men's barracks, a cluster of brick buildings of one story, are situated within Fort Charlotte. The officers', or "iron barracks," finished in 1833, are two stories high, and built of stone held together by iron bars, with an iron gallery to each story, and an exterior iron staircase from the ground to the roof. They are considered hurricane-proof; but earthquakes are also of common occurrence, and they did not escape damage in that of 1839.

Pigeon Island lies 700 yards off the north-western extremity of the island, at a distance of seven miles from the Tapon, and is about three-quarters of a mile long. It is considered very salubrious, and is used as a military station. Telegraphic communication is kept up between Fort Rodney (which is situated on the southern eminence, and commands the opposite bay and town of Gros-Ilet, on the opposite shore); and no vessel can pass the channel between St. Lucia and Martinique without being distinctly descried from thence. In the distance stands the Diamond Rock,* celebrated in the naval history of these seas.

* This memorable crag of grey limestone, "shaped like a nine-pin, with the point a little broken at the summit," was fortified by Sir Samuel Hood, in 1803, and put upon the establishment of a sloop of war, with almost a frigate's complement of seamen and marines, being allowed as many as 150 men and boys, supplied with ammunition, stores, and provisions from Antigua or Barbados for six months. A thirty-two pounder was hoisted from the top-sail yard-arm of a man-of-war, about half-way up the rock, and at least 360 feet above the water-line, and the summit and other parts being defended with cannon, this natural fortress proved of great service to the squadron. A few bullocks and sheep were kept there, and a cave on the east side formed a good and airy hospital. This non-descriptive man-of-war did good service for two years and a-half; the height of its guns enabled it to command the passage between it and Martinique so effectually, as almost to exclude vessels from entering Fort Royal. The French

The town of *Soufrière*, second in importance to Castries, though little more than a village, is built on the slope of a hill; its pretty villas and negro cottages stand in the midst of fruit and flower-gardens, overtopped by cocoa-nut and palm trees; and on the other side of the bay, the *Pitons Toner*, in lonely and imposing grandeur. There is a pretty church here, whose steeple of cut stone, erected at the expense of the labourers of the district, was thrown down by the earthquake of January, 1829. Between Castries and Soufrière constant intercourse is held by means of pirogues, or five-oared boats, which are much used on the leeward side of the island, but the more dangerous windward coast is only communicated with by means of droghers.

GEOLOGY AND MINERALOGY.—The structure of the island is volcanic. Sulphur is obtainable in abundance, and is now being exported. "Tufa, magnesia, lime, alum, quartz, are found in certain localities.† Copper and iron ores have been observed; and gold is alleged (March, 1853) to have been discovered on the windward coast.

SOIL.—In the valleys and alluvial plains, a deep vegetable mould, mixed with clay, prevails; and a red earth in the more elevated positions. The substratum is a mixture of sand and gravel. On the ordinary soils of St. Lucia the productive duration of the cane, by ratooning only, averages six years, and in some localities is said to have been propagated, by this process only, for thirty years.

CLIMATE.—The vicissitudes of the year are distinguished under two heads—the dry season—called *Carême* by the French, which includes the months of February, March, and April; and *Hivernage*, which embraces the hurricane months of July, August, September, and October; and is ushered in by the humidity and heat of May and June, as the *Carême* is by the light day breezes, and dry invigorating air of November, December, and January. Drought and rain are, however, not confined to any period; exposure to a vertical sun, and a mountainous formation, combined with extensive forests,‡ naturally produce heavy and frequent rains, which in turn encourage baneful swamps and dense vegetation. Throughout the year, according to Mr. Breen, who wrote in 1844, the thermometer ranges between 75° and 90° in the shade; but according to the register kept by staff-surgeon Connell, in 1851 (in what locality is not stated), it ranged only between 71° and 83°; and the annual quantity of rain amounted to eighty-four inches.

DISEASE.—St. Lucia has long had an unenviable reputation for insalubrity, especially the town of

in vain attempted to storm this formidable station; the whole fleet fired at it as they might have done at the rock of Gibraltar; at length they turned the siege into a blockade, and Captain Maurice and his brave band, after a gallant defence, rendered difficult by a great want of ammunition and water, after nineteen nights under arms, "three days and two nights in constant battle, and suffering meanwhile from agonizing thirst, capitulated on very honourable terms, losing three killed and wounded, while the enemy lost fifty."—*Vide* Captain Maurice's *Letter to Lord Nelson*, and other details given by Southey, vol. iii., pp. 328, 332.

† Dr. Levacher's *Guide Médicale des Antilles*.

‡ St. Lucia has several dangerous serpents, the bite of one genus peculiar to this island and Martinique, from six to eight feet long, called the yellow serpent, or *fer de lance* (trigonocephalus), is generally fatal. In 1849, nineteen persons were killed in one parish by the venom of this reptile.

Castries,* and some of the most fertile valleys, the characteristic maladies being fevers, and complaints of the stomach and bowels.† Of late years, the swamps have been partially filled, and the valleys somewhat better drained; the trade winds have been more regular, the temperature lower, and the people have enjoyed better health. The neighbourhood of the Soufrière has always proved favourable in this respect; the sulphureous vapours appearing to purify instead of taint the atmosphere; and both in the town and neighbouring estates the inhabitants attain considerable longevity, especially the females. The reports from the military stations are also improving. At Morne Fortuné and Pigeon Island, in 1845-46, out of an average strength of 277, the daily average number in hospital was 15½, and the deaths during the year from sickness 10. In 1851, out of 205 cases in hospital (white soldiers), only five terminated fatally, and four of these were attributable to excesses. The use of what is called "white rum," fresh from the still, is most injurious to the troops and settlers; generally unpalatable at first, the relish and craving for it is soon acquired, and the baneful canteen system here, as in the other West Indian isles, facilitates instead of discouraging drunkenness. Mr. Breen, from the experience acquired during a residence of thirteen years, attests the fatal effects of intemperance in a remarkable manner, by stating, that out of 142 European adult males (62 British, and 80 French) in the island in July, 1831, 68 (37 British, and 31 French) persons, generally addicted to the use of ardent spirits, were prematurely cut off, very few attaining the age of thirty-five; while the remaining 74, persons of temperate habits, were living, and in good health, in July, 1842.

POPULATION.—The relative proportion of the population has been as follows:—

Year.	Whites.	Coloured.	Blacks. ¹	Total.
1772	2,018	663	12,795	15,476
1777	2,397	1,050	10,752	14,199
1789	2,198	1,588	17,992	21,778
1810	1,210	1,878	14,397	17,485
1825	1,194	3,871	13,530	18,595
1834	2,310	2,657	13,248	18,215
1843	1,039	5,287	14,368	20,694
1851	984	5,689	17,512	24,185

Note.—According to the census of 1851, of the Europeans 468 were males and 521 females; of the coloured, 2,518 males and 3,171 females; and of the blacks, 8,731 males and 8,781 females. ¹ Slaves up to 1834.

It will be observed that the number of females is in excess of the males, which indicates an increasing population. The number under fifteen years of age is 8,469, of whom 4,051 are males, and 4,418

* The position of the Pavilion (government-house) has been regarded as very unhealthy. In a period of little more than four years (November, 1829, to January, 1834), no less than four governors died in it, but since that time no peculiar mortality or even sickness has been observed.

† Vide Captain Tulloch's Statistical Report of Troops in the West Indies in 1838.

‡ The flight from Martinique took place chiefly after the insurrection of 1831 was put down. Sturge, in 1836, states that there were 600 of these fugitives in the island who were "on the whole a peaceable and industrious set of labourers."—*West Indies* in 1837, pp. 107, 113. They obtained the soubriquet of *Passepartout*, probably in consequence of the astonishment excited in St. Lucia at their having made their escape from the vigilance of

females; number of families, 5,706; of married, 3,208; number of persons speaking English, 1,315; of those who can read, 2,636; and write, 1,879.

Castries, the chief town, is a corporate city; it contains 3,102 inhabitants, of whom 355 are Europeans, and 1,349 of mixed race.

Soufrière has 1,588; Vieux Fort, 617; Laborie, 224; Gros-Îlet, 560; Anse Laraye, 247; Choiseul, 89; Micoud, 196; Dennery, 255. The population of St. Lucia comprised under the three heads, white, coloured, and black, presents many minor diversities. The first denomination includes creoles born in this or the neighbouring islands, several of whom are the descendants of old and distinguished French families; and Europeans, from Britain, France, Germany, Italy, and Savoy. The few British settlers are nearly all Scotch.

The coloured class is rapidly progressing in numbers, wealth, and intelligence. The blacks are chiefly natives of the island, with a sprinkling of Africans and refugees from Martinique.‡ During slavery their numbers required constant recruiting by fresh importations; after the abolition of the trade they regularly decreased; but since emancipation have been augmenting by the constant preponderance of births over deaths, though not to the extent that might be expected if a stricter observance of the marriage tie prevailed among them. They have "vastly improved in physical appearance,"§ and their moral characteristics are thus satisfactorily described by the lieutenant-governor, Arthur W. Torrens, in his report on the *Blue Book*, dated 4th January, 1846.

"The enfranchised population is in a high degree grateful to the British government, and by their contentment and orderly conduct they vindicate both the policy and the justice of emancipation. Their disposition to labour improves, and is great considering their few wants in a climate and on a soil requiring so little artificial means to promote comfort, and to create plenty. The influence of the clergy is apparent in the diminution of libertinism, and the greater frequency of marriages. A desire for the education of their children exists to a certain extent. * * * The rise of a class of small proprietors and farmers is apparent among the emancipated population. This class of negroes, the most industrious, has established settlements in many parts of the country hitherto covered with forests. These lots, whether bought or hired, are usually within reach of the neighbouring sugar establishments, permitting the negro to resort at crop time to the cane-fields. Canes are grown on some of these settlements, the grower transporting them to the nearest mill, and receiving in return from the planter a portion of the sugar they produce."

The *métairie* system, adopted in 1840, is on the increase.

GOVERNMENT.—St. Lucia is what is termed a crown colony, ruled by a legislative council, composed of several official and five unofficial persons

the planters and "*guarda costas*," and successfully encountered the dangers of the passage between the two islands, frequently in an open boat or canoe, the distance from the place of embarkation having been in some instances upwards of forty miles. Breen, writing in 1844, says it was no unusual occurrence to see twelve or fifteen men and women land from a canoe in which five persons could not sit at ease; adding that numbers perished in the attempt, either by rough weather or the wretched condition of the boats, while many, upon being closely pursued, plunged into the deep, preferring death to a life of bondage. No less than 4,000 escaped from Martinique, but of these a fearful proportion must have perished on the passage to St. Lucia or Dominica.—(pp. 169, 178.)

§ Breen's *St. Lucia*, p. 167.

appointed by the sovereign. There is an executive council of three to aid the lieutenant-governor. There is no militia. Two companies of a European regiment are stationed in the island fortresses.

RELIGION.—The majority of the people are of the Roman Catholic persuasion. There are ten Roman Catholic, and three Protestant churches.*

EDUCATION.—Is carried on by several private and public schools—the latter contain 644 male, and 260 female scholars. Instruction is communicated chiefly in the French language, of which a wretched patois prevails among the lower orders.†

Press.—There is a well-conducted newspaper, and a useful almanac with statistical and general information.

CRIME.—Aggravated offences are rare; petty thefts and assaults are diminishing.

FINANCE.—The revenue in 1834 amounted to £9,246; in 1838 to £10,743; in 1851 to £13,872: of this import duties yielded £5,147, and rum duties £2,207.

The civil expenditure defrayed by Great Britain, in aid of the local revenue, was, in 1851, £1,816. The disbursements from the British commissariat chest for the same year amounted to £13,317. There is no island bank; the notes of the *London Colonial Bank* branch in circulation are estimated at £5,000.

COMMERCE.—The value of imports was, in—

Imports.				Exports.			
Year.	Currency.	Year.	Sterling.	Year.	Currency.	Year.	Sterling.
1833	£47,271	1850	£68,881	1833	£72,144	1850	£49,127
1834	58,602	1851	60,538	1834	87,136	1851	54,815
Total	105,873	—	129,419	Total	159,280	—	103,942

Note.—£100 sterling = £175 currency. Of the imports in 1851, £22,179 were from Great Britain.

The sugar exported in 1851 was valued at £43,090 sterling. In 1852 all the crops had increased considerably.

Principal exports at three periods, viz., last year of slavery, last of apprenticeship, and last official return—

Articles.	1833.	1838.	1851.

Logwood . tons	784	109	144

Note.—The number of acres under cultivation in 1851 was 4,077, of which 3,015 were in sugar-cane

GENERAL REMARKS.—Up to the middle of the 17th century, little attempt appears to have been made at cultivation on an extended scale, the settlers eking out their subsistence from the fish which the coast (in spite of the depredations of the voracious sharks) and the rivers plentifully supplied, or resorting to the woods to shoot the wild ox, hog, iguana, or agouti; or the edible varieties of the feathered

* In most of the new villages and hamlets which have been formed since emancipation, or recovered from the ruin and pillage caused during the French revolution, churches have been built or enlarged at the sole expense of the enfranchised blacks; and whereas during the existence of slavery, there was but one priest in the island, there are

tribe that visit the island from August to the end of November. As the population increased, the growth of tobacco, ginger, and cotton was commenced, and these products continued to be staple exports for about forty years, being gradually displaced by the more lucrative commodities of coffee and cocoa. The tenure of land was very precarious until 1745, when Governor de Longueville apportioned large tracts among the more influential settlers. In 1763 several respectable French families emigrated from Grenada and St. Vincent, bringing with them capital and slaves; and the culture of cotton, till then insignificant, spread rapidly over various parts of the island. The first sugar estate was established in the Vieux Fort quartier or parish in 1765, and soon became the all-absorbing employment. Slave-labour here as elsewhere was viewed as the only lever of colonial enterprise and prosperity, and it was attended with its usual unfailing accompaniments of waste of life and treasure, varnished over by a brief show of prosperity, covering increasing mortgages and involvements of all kinds. In the absence of any law to authorize the seizure of real property, or any office for the registration of mortgages or other claims, a system was carried on between the planter-debtor, and the merchant-creditor in France or England, in which the latter strove by usurious charges and profits, to counterpoise the manœuvres and double-dealing practised by the former. Lawyers were called in to settle the numerous disputes which were perpetually arising; and their interference, profitable only to themselves, increased the burdens of the contending parties, and frequently completed the ruin of both. In 1829, through the judicious exertions of Mr. Jeremie, president of the Court of Appeal, an office for the registration of mortgages was established, and it was enacted that those only which should be enrolled in the succeeding eighteen months should retain their priority. Before the expiration of the prescribed time, 1,918 mortgages were entered, exhibiting the debts and liabilities of the proprietary body at the enormous sum of £1,199,000 sterling. Their total sugar crop for the year 1830 was about 90,000 cwts., on which a net profit of 5s. per cwt. (without deducting anything for the support of the planters), could have furnished only £22,500 towards the payment of interest, which at five per cent. (a low colonial rate) must alone have required about £60,000 per annum. When this disastrous condition of affairs was ascertained, a measure was passed, known as the *Saisie Réelle*, which had a somewhat similar effect to the Encumbered Estate Act for Ireland, in compelling the sale of bankrupt properties. These proceedings greatly facilitated the proportionment of the St. Lucia share (£335,625 sterling) of the twenty millions granted by the British Parliament on the extinction of slavery; but this sum could not suffice to remove the millstone which the planters had for years been fixing more and more firmly round their own necks, though it doubtless greatly benefited the few who were *bonâ fide* proprietors, employing their own capital. The judicial sale of estates commenced in 1833, and continued year after year until in 1843, no less than sixty-nine out of eighty-one sugar estates

now nine parish churches, and as many curés, whose influence, with very few exceptions, is beneficial in its effects on the conduct and disposition of their flocks.—(Report of Lieut.-governor Torrens, 4th January, 1846.)

† It is much to be desired that efforts should be made for the diffusion of the English language.

had changed owners. In 1850, there were only twelve whose titles bore a date antecedent to emancipation; out of about eighty-three existing in this year, forty-three, including some of the finest in the island, were still mortgaged to the amount of £200,000, the annual interest being £12,000. Their yield was about 2,000 tons, and assuming the net profit at £8 per ton = £16,000, only £4,000 remained for the support of the proprietors and their families, without sinking one fraction in paying off the capital of the debt, or in the improvement of the property.

The system of cultivation and manufacture adopted in St. Lucia is "comparatively rude and defective;" yet Lieutenant-governor Darling, speaking

from the experience he acquired as the resident proprietor of a Jamaica sugar estate, shows the profits to be very large; and states that "an average sugar estate in this island, well found with machinery in order, and water power, may, with ordinary seasons, easily be made to produce 100 hhds of sugar, say 1,400 cwt. each, at a total expenditure, excluding the salary of an attorney, of about £800. Assuming the produce to realize 39s., and deducting 18s. for duty and charges, a net produce of 21s. a cwt. remains."* Recent sales prove the increasing value of estates in St. Lucia, and confirm the opinion entertained by the above authority respecting the improving condition of the colony.

CHAPTER VII.—ST. VINCENT.

POSITION AND HISTORY.—This picturesque Caribbee island, 22 miles south of St. Lucia and 80 north of Grenada, in 13° 10' N. lat., and 61° 5' W. long., is about 18½ miles long, 11 broad, and contains an area of about 84,000 acres. It is said to have been discovered, and thus named, by Columbus in 1498; but it does not appear that any attempt was made to take possession of it by the Spaniards, or any other European nation, until the 17th century;† its numerous and warlike inhabitants, and the natural capabilities of defence afforded by its dense forests, river courses, and ravines, together with a coast-line difficult of access, probably insuring it this long immunity from foreign encroachment. In 1627‡ St. Vincent was included in the charter granted by Charles the First to Lord Carlisle; but no attempt at taking possession was made until Mr. Stede, then Lieutenant-governor of Barbados, St. Lucia, Dominica, and St. Vincent, sent Captain Temple to the last named island to prevent the French from wooding and watering without leave. His proceedings were discouraged by the home authorities, and both nations continued to touch at the island without making any endeavour at permanent settlement until 1719, when some French settlers came in an armed body from Martinique, burned the native huts, destroyed the gardens, and attempted to take forcible possession. At this time two races existed in the island, viz. the red or yellow, and the black Caribs. The former term designates the native Indians, or properly speaking, Americans. The origin of the latter people cannot be explained with certainty, but it is generally ascribed to the shipwreck of a large cargo of Guinea slaves in 1675, who being kindly received by the aborigines, settled among, and, to some extent, intermarried with them. Their numbers were gradually increased by fugitives from Barbados, and disputes arose between the two people, of which the French took advantage, and made peace with the Indians, but finding the Africans still too strong for them, and many lives being sacrificed in their night sallies, they, by persuasions and presents, at length conciliated them also. The planters brought slaves with them, and the Africans, fearful that their colour might eventually become the means of betraying their children into the same hateful thralldom,

adopted the Carib practice of flattening the foreheads of their infants, in token of their being free-born. The internal strife between the Indians and Africans terminated in favour of the latter, who became so powerful as to compel the French to repurchase from them the land which, in some instances, they are alleged to have already bought from its rightful proprietors. The planters were further kept in a state of constant anxiety, from the fear of external enemies; in fact their tenure was throughout very uncertain. In 1723 an unsuccessful attempt was made to capture the island on the authority of George the First's grant to the Duke of Montague; in 1748 its neutrality was acknowledged by the treaty of Aix-la-Chapelle; but war breaking out again, native rights, recognised only as a matter of convenience, were once more set aside. The island was captured by England in 1762; and in the following year confirmed to that power by the peace of Paris. There were then 800 whites possessing 3,000 slaves, and engaged in a European export trade of £63,000 per annum in value. The lands were directed to be sold to defray the expenses of the war, and 28,538 acres produced £162,854 sterling. Of the red or native Caribs only about 100 families remained, of the black about 2,000 persons.§ The tracts actually occupied by the Caribs were to be held inviolable, according to the royal instructions. These being, as they always are in these cases, disregarded by the settlers, a Carib war arose in April 1772, which threatened to be tedious and bloody, but after much parliamentary discussion it was declared that the war was "founded in injustice, and reflected dishonour on the national character;"|| negotiations for peace were forthwith instituted, and the most fertile and beautiful part of the country formally ceded to the Caribs. In 1776 St. Vincent was formed into a distinct government, but in 1779 the unfortunate dissensions existing between the governor and the inhabitants, coupled with the treachery of the Caribs, enabled the French to take possession without a blow being struck; in 1783 the island was restored to the English, and then contained sixty-one sugar estates, 500 acres in cotton, 500 in tobacco, 400 in cotton, 200 in cacao, and 200 in indigo. Although no stipulation was made in favour

a typographical error occurs, the date being given as 1837 instead of 1627.

‡ In the *History of Barbados*, p. 112, 2nd column,

of the offending natives, they were generously treated as ignorant and deluded people, and allowed to return unpunished to their lands and occupations. In 1794 the revolutionary doctrines, which were desolating France, were introduced into the West Indies, and sedulously circulated there by Victor Hugues and his associates. The French planters incited the Caribs to rebellion, and many fierce contests ensued; but after a decisive struggle at a spot called Dorsetshire Hill in which the chief leader, a huge Carib named Chatoyer* fell in single combat with Major Leith of the militia, the Caribs were deserted by their French allies, and at length compelled to surrender. In 1796, above 5,000 of them were transported to the island of Rattan in the Bay of Honduras, and the fine tract appropriated to them "in perpetuity," added to the crown lands. The expenses incurred in consequence of the insurrection were estimated at more than £900,000 sterling.† The few Caribs who remained in St. Lucia were pardoned by an act passed in 1805, and about 230 acres of land granted for their subsistence, which they were prohibited from alienating "or cultivating in sugar." The latter stipulation betrays the jealousy with which native industry was regarded, and together with the decided aversion manifested towards any secular or religious instruction being imparted to the Caribs, and the desire evinced for the fertile lands allotted them, affords some insight into the errors of the system which, instead of converting them into a tractable peasantry, compelled their banishment from the island. The terrible eruption of Mount Soufrière in 1812, and slave emancipation in 1834, are the only events which have since occurred requiring comment, and both will be noticed in the following sections.

PHYSICAL FEATURES.—A connected chain of bold, sharp, and high mountains, run north and south from thence smaller ridges diverge on either side, forming ravines which, as they approach the shore, widen into valleys, whose fertile soil, consisting chiefly of a mixture of sand and clay, well adapted for the growth of the sugar-cane, is irrigated by the abundant rains that the high lands of the interior, densely clothed with fine timber, frequently attract. The streams are numerous, and water-power is the usual agent employed to work the mills. The Soufrière, a volcanic mountain, about 3,000 feet high, with a crater half-a-mile in diameter, forms one of the most remarkable natural characteristics of the island. According to Humboldt it threw out flames in 1711. In 1812, a tremendous eruption took place, in which some lives and much property were de-

stroyed,‡ but happily nothing of the kind has since occurred. There are several mineral springs, of which the principal are the Belleair, and the Muriqua spa; the former, situated about two or three miles from Kingstown, is saline; the latter, which has recently been inclosed, and is in much repute for its chalybeate properties, lies further inland, in a pleasant valley of the same name.

TOPOGRAPHY.—St. Vincent is divided into five parishes; *Kingstown*, the capital, stands in that of St. George, near the south-western extremity of the island, and extends in a narrow line along the shores of a beautiful but exposed bay, about a mile wide, defended by Cane Garden Point battery on the south, and on the north-west by Fort Charlotte, which is placed on Berkshire Hill, a rocky promontory, overhanging the sea, and nearly inaccessible on three sides. The town, behind which the mountains gradually rise in a semicircle, attaining their greatest height in Mount St. Andrew, consists of three parallel streets, intersected by six others, and contains about 300 houses. The church, court-house, gaol, market-house, and dépôt for arms, are substantial buildings, without any pretensions to elegance. There is a Wesleyan and a Roman Catholic place of worship. The government-house has been suffered to go to decay, the residence of the lieutenant-governor of late years, having been at "the cottage" in the once famous botanic garden, which formerly comprised within a carefully tended space of thirty acres, many valuable exotics from the East Indies and South America, as well as indigenous plants of great beauty. The nutmeg, clove, and cinnamon, flourished here, as did also some of the bread-fruit plants, imported by Captain Bligh; but an ill-judged economy induced the withholding of the allowance necessary for its maintenance. A small part has been appropriated for an official residence, and the remainder has become a wilderness. Many cuttings from the nutmeg trees had previously been distributed, and these promise to present excellent and abundant fruit, as do also the clove plants. *Calliaqua*, a small town or village, three miles south-east of Kingstown, is chiefly remarkable for its commodious harbour for shipping produce. Some distance above it lies the Vigie (look-out) a commanding three-topped elevation, where the Caribs formerly fixed their camp, from which various ridges diverge. Eastward lies the extensive vale of Maniaqua, with its almost perpendicular sides, and single cleft or opening, through which the Jambou flows to the sea. Bucament valley, in St. Andrew's parish, is one of the largest and most

* He had on him at the time a silver gorget, presented by H.R.H. Prince William, afterwards King William the Fourth, while visiting St. Vincent. *Vide* Dr. Coke's interesting account of this war, vol. ii., chap. xxii.

† *Shepherd's St. Vincent*, p. 174.

‡ At noon, on the 27th of April, thirty days after the destruction of the Caracacas, a severe concussion of the earth took place, and a black column of smoke burst from the crater, followed by volumes of faville (ash-coloured dust), which continued pouring forth for three days. On the evening of the 30th the flames burst forth, the rolling of the thunder became almost deafening, sand and stones were ejected, earthquakes were felt, streams of lava poured down on either side, the neighbouring estates were covered with scoria, the channels of the Wallibou and Rabacca Rivers blocked up, and some negroes killed. The waters of the Wallibou accumulated in a ravine, and formed a large lake, which some time afterwards found a way through the sandy barrier to its original bed, and carried

away several houses, with their inhabitants, into the sea. The eruption terminated on the 1st of May. The aspect of the mountain was greatly changed, the vegetation having been totally destroyed, the height diminished, old ravines closed up, a new crater found near the old one, and both filled to a considerable depth with yellow-coloured water. Parliament voted £25,000 for the relief of the sufferers by this disastrous and appalling occurrence. Some effects of the eruption were experienced at a great distance. Captain G. P. Hawkins, a cousin of mine, then stationed with his regiment at Barbados, full sixty miles from St. Vincent, says, that for four hours that island was shrouded in nearly total darkness, and the surface covered, to the depth of several inches, with the faville discharged from the crater, which proved a fertilizing agent of great power. Many ships at sea had their decks covered with ashes. The noise of the eruption heard at Barbados and several other islands, was taken for the engagement of hostile fleets, and the troops were placed under arms.

fertile in the island. St. Patrick's parish, on the western coast, contains the small towns of *Layou* and *Barrouallie* or *Princes Town*: the land here is rugged and less productive. *Chateaubelair* or *Richmond Town*, is built on a bay of the name in St. David's parish, near which there are some fine specimens of basalt. The facilities of shipping produce in this vicinity, compared with the bold eastern coast, are very great. Within the last few years, a place called *George Town* has been erected in the beautiful Carib country comprised in Charlotte parish, which though comparatively recently settled, is perhaps the best cultivated in the island.

DEPENDENCIES.—To the south of St. Vincent, and included in its government, lie the Grenadine islands, viz., *Bequia*, comprising 3,700 acres, with a fine harbour called Admiralty Bay; *Union*, 2,150 acres; *Mustique*, 1,203 acres; and *Canouan*, 1,779 acres. There are also the lesser isles of *Balliceaux* and *Battawia*, *Myra*, *Petit St. Vincent*, and *Islet à Quatre*. The air is salubrious, and the waters around abound with fish. There are altogether about 2,000 inhabitants, five villages, twenty arrowroot and six sugar estates.

GEOLOGY.—The character of the island is decidedly volcanic; traces of strata, which have undergone the action of fire, are visible everywhere, and huge masses of rock displaced from their original position, indicate the powerful upheavings which effected the change. Branches of trees and other substances have been discovered in rocks at considerable depth, which must, at one time, have been in a state of fusion. No minerals have yet been observed. The *St. Vincent Gazette* recently announced that gold dust of pure quality has been found at the head of Buccament River.

Soil.—In the valleys a rich tenacious loam, and occasionally a fine black mould; on the higher regions it is more sandy, and less fertile. The lands adjoining the Soufrière are clay, covered with sand ejected by the volcanic eruption of 1812.

CLIMATE.—At Kingstown the average temperature for the year is, lowest 75°, highest 87°, mean 81° Fahrenheit. Quantity of rain in 1849, 76 inches; the number of inches in each month, beginning with January, is about 1, 2, 4, 5, 6, 8, 5, 6, 9, 14, 5, 8; the hottest months from May to November. On the highlands in the interior the air is much cooler. Hurricanes have been severely felt, and that of 1831 was especially destructive. Nineteen vessels were driven on shore in Kingstown Bay alone. The total loss occasioned to the island was estimated at £163,420 sterling; the sum of £20,000 was appropriated by Parliament for its relief.

POPULATION.—The returns are vague and scanty. The following table can only distantly approximate to correctness; but it will give some idea of the relative progress, and illustrate the fact of the invariable decrease of slaves, whenever their numbers were not kept up or increased by new importations.

Year.	Whites.	Free coloured.	Blacks, slaves to 1834.	Total.
1764	2,104	—	7,414	9,518
1787	1,450	300	11,853	13,703
1805	1,600	450	16,500	18,550
1812	1,053	1,482	24,920	27,455

1851	—	—	—	30,128

DIV. VIII.

The census of 1851 is "so incomplete and deficient in all respects as to be almost worthless;" the population was then really "little if at all short of 32,000." In the returns the males are stated at 13,957; females, 16,171; and creoles, 12,820, including 167 Caribs.—(*Blue Book* for 1851.) Between 1844 and June 1851, 2,874 Madcarse and African immigrants were registered.

"Since the memorable 1st August, 1838, 'the condition of the labouring population has greatly improved: schools and places of worship have increased, and large tracts of land have been purchased or leased, upon which villages and hamlets have been erected; and the cultivation of arrowroot is carried on to a great extent, in addition to the usual articles of ground provisions. In cases where the lands have been sold, high prices have been obtained (frequently from £25 to £30 per acre); and some of the labourers located in the villages are now employed, during a considerable portion of their time, on the adjacent estates, at wages of about four dollars per month—that is, for twenty days' labour in the cultivation of sugar, &c.'"—(*St. Vincent Almanack* for 1851; p. 86.)

In 1846 the number of the new or free villages was eighteen, with populations varying from 50 to upwards of 300. Messrs. Candler and Alexander, who visited the colony in 1850, speak highly of these locations, "which are numerous, and planted in very lovely spots." At one, termed *Victoria*, containing 800 inhabitants, the people came out to meet the "Friends," and greeted them with hearty cheers; and a school of fifty children sang their favourite hymn. "Many of the houses are very good; the alleys or paths between them neat and clean; and the gardens fruitful: the men, women, and children were well dressed, and seemed as happy as they are free. All were teetotallers; no spirit store was suffered to exist in the place."—*Anti-Slavery Reporter*.

GOVERNMENT.—An elective assembly of twelve representatives, a legislative council appointed by the Crown, and a lieutenant-governor.

RELIGION.—Various Christian denominations. Church of England, four rectors and four curates; Church of Scotland, one minister, and Church of Rome, one; the Wesleyans, who were formerly persecuted here, have now seven ministers. Number of churches and chapels in 1830, eight; worshippers, 400; in 1844, twenty-seven; worshippers, 10,115; in 1851, churches and chapels, 102.

EDUCATION.—Church of England, seventeen schools, with 422 males, and 378 females; Wesleyan, thirteen, with 809 male, and 596 female pupils. There is also a Presbyterian grammar school, and a Roman Catholic seminary. Scholars in 1830, 209; in 1851, 2,205.

CRIME.—Offences in 1835, 1,248; in 1850, 208.

PRESS.—Two newspapers, and a good almanack.

FINANCE.—The island revenue was, in 1834, £10,142; in 1851, £15,827; of this, £9,129 was derived from import, and £1,662 from tonnage duties. The civil expenditure defrayed by England in 1851, amounted to £3,150, and the disbursements from the commissariat chest, were £5,483.

COMMERCE.	1834.	1851.
Imports . . .	£156,433	£198,679
Exports . . .	424,350	218,521

The price of sugar gave an apparent increase of value to the exports in former years; thus, in 1832, the crop of 21,917,056 lbs. of sugar was valued at

130 COMMERCE—CONDITION AND CHARACTER OF THE PEOPLE.

£200,454; while that of 1851, 37,684,868 lbs. was valued at only £218,521.

Products.	1834.	1851.
Sugar . . . lbs.	24,661,168	37,684,868
Molasses . . gals.	382,880	339,871
Rum . . . "	278,785	82,459
Arrowroot . . lbs.	62,160	887,569
Cocoa . . . "	5,460	1,050
Cotton . . . "	102,000	12,000

In 1851, there was more sugar made in St. Vincent than in any previous year during the present century. In 1852 the crop was still increasing. The values of the chief articles of produce were, in 1851—sugar, £163,707; molasses, £13,013; rum, £5,667; arrowroot, £22,007. The shipping inwards was, in 1834, 29,494 tons; in 1851, 29,246 tons. In 1852, the shipments to November, amounted to upwards of 11,000 hogsheads of sugar, and a large proportion of rum and molasses. Among other articles, there were 195 bales of cotton, 44,324 cocoa-nuts, and 453 tons of puzzuolano, a new manure abounding in the island, said to be also a valuable cement.

The lieutenant-governor, in his annual report on the *Blue Book* for 1849, adverts to the decreasing concubinage, the diminution of drunkenness, and the

independent condition of the lower and middle classes—meaning by the latter, those who had formerly been slaves, but have now established themselves in villages on purchased or rented land: "among these are to be found not a few individuals possessing no small intelligence, and whose position as to worldly means and consequent comfort, is equal, if not superior, to that of a similar class in any other part of the globe." It is only the aged and infirm, who have formerly been slaves, that require charitable aid, which is supplied from private sources.

The same authority, when reporting officially in 1852, says:—

"With regard to the great body of the population, it is beyond all dispute that it has been the subject of progressive melioration, both moral and physical. In treating of the negro people as here existing, it must never be forgotten that seventeen years only have now run their course since they were emancipated from a state absolutely opposed to all improvement; and with this in view, I record not only my satisfaction, but a feeling of joyful surprise, at the advances made by them during the six years to which my observation and experience have extended. As a general rule, they possess, beyond all reasonable question, most of the essential elements of progress; and, in a pre-eminent degree, natural intelligence and quickness of perception, sharpened by a praiseworthy desire to better their condition."—(*Blue Book* for 1851, p. 104.)

CHAPTER VIII.—GRENADA.

THIS island, the most southerly, and according to general opinion the most beautiful of the Caribbean group, is situate in 12° 10' N. lat., and 61° 25' W. long. Its greatest length, north and south, is about twenty-four miles; its greatest breadth, twelve; and its area (according to the latest authorities), 76,538 acres.

HISTORY.—Grenada was discovered and thus named by Columbus in 1498. Its native inhabitants occupied it, unmolested by European invasion, until 1650, when its fertile soil, fine harbours, and salubrious climate, attracted the attention of Du Parquet, the French governor of Martinique, who having resolved to take forcible possession, collected a body of about two hundred followers for that purpose; but being received by the natives with friendly cordiality, he changed his policy, and using treachery instead of open violence, or probably as an excuse for resorting to such measures, he pretended to open a treaty with the chief of the Caribs for the purchase of the country, which, according to Du Tertre, he obtained for "some knives and hatchets, and a large quantity of glass beads, besides two bottles of brandy for the chief himself."

Du Parquet then established a colony in Grenada, built a fort for its protection, and left the government of the island to a kinsman, named Le Compte. Within eight months after this period we find a war of extermination carried on by the French against the Caribs. Du Parquet sent a reinforcement of 300 men from Martinique, with orders to extirpate the natives altogether; but Le Compte had not waited these instructions, having already proceeded to murder, without mercy, every Carib who fell into his hands—not sparing even the women and children!

Père du Tertre, the historian, and too often the extenuator of the abominable transactions of his

countrymen, and indeed of civilized nations in general in the West Indies at this period, gives an account of one expedition which will sufficiently explain the speedy and complete extinction of the native population. Forty of the Caribs, he says, were massacred on the spot. About forty others, who had escaped the sword, ran to a precipice, and being pursued, cast themselves headlong into the sea. A beautiful girl, of twelve or thirteen years of age, who was taken alive, became the object of dispute between two officers, each claiming her as his prize; a third coming up, put an end to the contest, by shooting the girl through the head. The place whence these unfortunates flung themselves was named by the French, in cruel mockery, le Morne des Sauteurs, Leapers' Hill. The French lost but one man in the expedition, and having set fire to the huts, rooted up the provisions, and destroyed or taken away everything belonging to "the savages," returned "bien joyeux."* The inhuman conquerors soon quarrelled over their ill-gotten gains, and conflicts ensued in which many lives were lost. The original invader, Du Parquet, prevailed in this instance, as before, by the right of the stronger, but being nearly ruined by the expense he had incurred in his unjust proceedings, was obliged to sell his authority in Grenada, for a small sum, to the Count de Cerillac, a French nobleman, who sent out a governor armed with despotic power, which was most mercilessly used for the purpose of extorting money. The chief settlers abandoned the plantations they had scrupled at no bloodshed in acquiring, and no labour or expense in improving; the poorer inhabitants remained exposed to daily cruelty and oppression, which ended in a general insurrection, and the execution of the obnoxious governor, after a form of

* Du Tertre, tome i., pp. 427, 430, 446.

public trial. The parties chiefly concerned, alarmed at the probable consequences of their conduct, quitted the island; the Count de Cerillac finding his acquisition as unprofitable as his predecessor had done, disposed of it to the French West Indian Company, which being dissolved in 1674, the sovereignty of the island was thenceforward vested in the crown of France.*

The colony remained in a depressed and almost ruined condition for some years; and, according to the Abbé Raynal, whose testimony however is far from unexceptionable, contained, so late as 1700, no more than 251 whites, and 525 blacks, employed in cultivating three sugar and fifty-two indigo estates. Chiefly, it is alleged, by a smuggling intercourse with the Dutch, the condition of the colony improved, and the population largely increased; and when, in 1762, the English became masters of all the French Caribbean islands, Grenada and the Grenadines were said to yield annually in clayed and muscovado sugar a quantity equal to about 11,000 hogs-heads of muscovado, of 15 cwt. each, and about 27,000 lbs. of indigo.

On the close of the war, Grenada being confirmed to England by the Peace of Paris, it was asserted on behalf of the Crown that the inhabitants were subject to the 4½ per cent. duties imposed upon Barbados, and the islands included in the Carlisle Charter. The case was elaborately argued in Westminster-hall four several times; and in 1774, Lord Chief Justice Mansfield pronounced judgment *against the Crown*. The duty in question was consequently abolished in Grenada, Dominica, St. Vincent, and Tobago.

In 1779 a French armament invaded the island, whose whole force then consisted only of 90 troops, 300 militia, and 150 merchant-sailors; the fortifications were equally insignificant. The governor (Lord Macartney) nevertheless made a determined though unsuccessful defence, and Count d'Estaing, who had landed at the head of 3,000 men, lost 300 in storming an entrenchment hastily thrown up on the summit of the Hospital-hill.

In 1783 Grenada was restored to Great Britain. Although during the former period of dominion, in 1768, the fullest toleration had been, and was afresh, accorded to the Roman Catholics by the British government, yet, owing to local intrigues, in which the governor is alleged to have played a very unworthy part, this boon was withheld, and disputes arose between the French catholics and British protestants, which not only embittered the general state

of society, and greatly retarded the progress of the colony, but paved the way for the introduction of the seditious republican doctrines of the day. In the insurrection which broke out in May, 1795, the negroes of course took part, many dreadful outrages were committed by the insurgents (such as the cold-blooded slaughter of prisoners of war); and when the government, reinforced by troops from England, at length triumphed, scarcely less sanguinary feeling was manifested under the plea of needful severity. The island long felt the consequences of the devastation committed at this time—happily it has since escaped the horrors of external or internal strife. It has shared with the neighbouring colonies, the visitations of fire,† hurricane, earthquake, and pestilence,‡ though none of these agents, powerful as they have proved, have equalled in destructiveness of property, the myriads of sugar-ants§ which made their appearance in 1770, and were at length checked by the effects of the hurricane of 1780.

Since the abolition of slavery, the trade of the island has been placed on a sounder basis, for although the treatment of the slaves was on the whole unusually mild, and the free coloured people were early placed on a legal footing with their white fellow-subjects, yet the system, in a commercial point of view, proved as ruinously expensive here as in Jamaica and other islands. In the midst of much seeming prosperity, the planters were becoming deeply indebted; thus, in 1773, their lands were mortgaged to the value of a million and-a-half, and severe depression could not fail to follow.

PHYSICAL FEATURES AND TOPOGRAPHY.—This island has an air of Italian softness quite distinct from the usual character of intertropical regions. The country, though mountainous, is nowhere inaccessible, abounds with springs and rivulets, and still justifies the description of John Davies in its "abundance of fair trees, some excellent for their fruit, others for their fitness for building."|| There are two or three craters on the crest of the ridge which runs north and south through the middle of this, as of other Caribbee islands, attaining occasionally a height of 3,000 feet, and at the north end is *Lake Antoine*, supposed to be the crater of an extinct volcano, now filled up with water, about sixty acres in extent, fifty feet deep, and eighteen feet above the sea level. In the centre of Grenada is the far-famed *Grand Etang*, with its cloud-capt mountains and picturesque scenery, its sylvan nymphs and Caribbean traditions, another crater

* According to Dr. Coke (vol. ii., p. 53), these events occurred nearly half a century later, but the dates above given, on the authority of Bryan Edwards (vol. i., p. 358), and Père Labat (tome v., p. 240), seem better grounded.

† In 1771 George Town was consumed by a fire, which occasioned a loss estimated at £200,000 sterling; it was rebuilt, and again ravaged in 1775, to the extent of £500,000 damage, and property to the amount of about £100,000 was destroyed in the same town by fire in 1792.

‡ In 1794 yellow fever broke out, and for four years continued to desolate the colony.

§ The *formica omnivora*, a description of ant of red colour, and common size, remarkable for an excessively acid taste when applied to the tongue, and a strong vitriolic smell, suddenly and unaccountably appeared on a sugar plantation at a bay called Petit Havre, and continued to increase for several years, destroying in succession every sugar plantation between St. George's and St. John's, a space of about twelve miles. Colonies of them were also observed in different parts of the island, the roads would be coloured with their red bodies for miles together, and

so thickly in many places, that the print of a horse's feet, in riding through them; would appear for a moment or two until filled up by the surrounding multitude. They were decidedly carnivorous, would devour every kind of cold victuals, and destroyed all vermin, especially rats. The Assembly, fearing that the culture of the sugar-cane would be seriously injured, offered a reward of £20,000 for their destruction. Poison and fire were unsuccessfully tried; multitudes were killed, but they still continued to increase, and make more nests among the roots of the sugar-cane, especially of the ratoons, and of the lime-lemon, orange, and some other trees, which, though they did not eat any part of, they rendered sickly and unproductive. At length came the dreadful hurricane of 1780, which indicated and partially effected a remedy, for by the rooting-up of many canes and trees, and the general disturbance of the earth, by far the greater part of the nests and young ones were destroyed through exposure to heavy rain.

|| *History of the Caribby Islands, rendered into English*, by John Davies of Kidwelly. London: 1666.

turned into an inland lake, about 1,500 feet in altitude, and covering thirty acres of ground. The island is formed into six parishes, bearing the names of *Sts. George, David, Andrew, Patrick, Mark, and John*, the calendar of saints having been the vocabulary chiefly resorted to for the designation of local divisions throughout the West Indies. The parishes of *Sts. Patrick, Andrew, and St. John*, are the least mountainous, and those of *Sts. John and Mark* the most so. The capital, *St. George*, called *Fort Royal* in the time of French dominion, is situated in the parish of the same name, on a peninsula which projects into a spacious bay on the west or lee side of the island, not far from the south end. It is built chiefly of brick and stone, and is divided by a ridge, on one side of which lies the open bay; on the other is the harbour, which still retains its old name of *Carénage*, is almost completely land-locked, and encircled by hills that would give it the appearance of some peaceful lake, but for the shipping, and wharves, where steamers of 1,800 tons burthen can lie alongside. The French, in 1779, intended to have formed a royal dock-yard here. The bay-town has a handsome square and market-place. Fort George, an old and substantial edifice, constructed of freestone, stands on the point or bluff-head of the separating ridge, and a spired church on the isthmus; the chief mercantile houses are situated in the *Carénage*-town, beyond which are seen some beautiful creeks indenting the cane-fields, an aqueduct at which the boats water, a long line of mangroves bordering the sea, a large lagoon, and Point Salines shooting out in a long jagged tongue to the south-west. Over all, and commanding everything in the vicinity, tower the *Richmond Heights*, crested with extensive fortifications, from whence the Bocas of Trinidad (ninety miles distant) have been seen on a clear afternoon.* The rest of the prospect is very charming, the eye wandering in every direction over richly cultivated valleys, with streams of water running through them, orchards of shaddocks and oranges, and cottages embowered in plantain groves and variegated foliage. "The view from government house," says Coleridge, "situated on a ridge of Hospital Hill, is the Bay of Naples, on one side, and a poet's Arcadia on the other." The colonists, naturally proud of the beauty of the scene, have given to the vale below the classic name of *Tempe*, and two neighbouring eminences are known as *Corinth* and *Parnassus*. The neighbourhood is famed for the excellent sugar and rum produced there. One disadvantage attendant on the picturesque character of the town is the extreme steepness of its streets, which are considered barely practicable with safety for any description of wheeled carriages. The ascent of Constitution Hill, leading to the market-place, is at an angle not far removed from the perpendicular. The other towns in Grenada are nothing more than inconsiderable villages or hamlets, situated at the chief shipping places. The principal of these are *Charlotte Town*, in *St. John's* parish, and a village at *Grenville Bay*, on the east or windward side of the island, where there is a convenient harbour.

DEPENDENCIES.—The group of islands called the *Grenadines*,† which form a chain between Grenada and *St. Vincent*, are chiefly comprehended under the government of the former island, and have been

already briefly mentioned. *Cariacou* and *Ronde* or *Redonda* are the principal of those belonging to Grenada. *Cariacou* is about nineteen miles in circumference, with an area of nearly 7,000 acres; it has been formed into a parish, and its town, *Hillsborough*, contains a church and rectory. It was first occupied by French fishermen, who came to catch turtles, and employed their leisure in clearing and planting the ground; cotton became the chief product, sugar having been less successful. *Isle Ronde*, midway between Grenada and *Cariacou*, contains an area of about 500 acres, wholly used for pasturage and the growth of cotton. The great defect of all the Grenadines is the absence of streams or springs, which of late years has been increasingly felt, from the diminished quantity of rain which has fallen since the injudicious destruction of the timber with which they formerly abounded.

GEOLOGY.—The island is evidently volcanic, and the prevailing formation seems to be of the tertiary period. Beds of coral, as well as mountain limestone, interspersed here and there with various grey argillaceous earths and ochres, are found in different places, principally on the western side. The coral is distributed on hills three or four hundred feet above the sea, as well as in the valleys, and contains fossil marine shells, plain and striated. The volcanic indications are for the most part confined to the central mountain range. In the parish of *St. Mark*, at the source of the river *Soumache*, is a very large and deep crater, in a partial state of activity, evolving sulphureous vapours; and at the bottom are found sulphate of alumina, and large boiling cauldrons of mud, sulphur, and bituminous matter, hot springs, lava, pumice-stone, &c. On the east side, dark red conglomerates, mixed with nodules of ironstone, prevail; on the south-east and south-west, dark and grey sandstones, gravel, sandstone grit, indurated tufa and schistose rocks; and on the west and north, darker conglomerates, shingly beaches of water-worn masses, ironstone, pyrites, basalt, and other trap rocks. Near *Black Bay* there are remains of regular basaltic columns rising out of the sea. The main ridge seems to have been raised by the agency of subterranean force subsequent to the madrepore depositions, but before the island had emerged from the sea.

MINERALOGY.—Mr. Cockburn, an intelligent resident, has remarked strong indications of iron and copper; the natural magnet has been found, but none of the quartzose or metamorphic rocks peculiar to the paleozoic period in which gold has hitherto been discovered, are observable.

SOIL.—In the lowlands chiefly a rich black mould, on a substratum of light-coloured clay; in high and central positions, it is of a dingy red or brick colour.

CLIMATE.—The medium heat throughout the year, in the low country, is about 82° Fahrenheit; but at the *Grand Etang* the thermometer rises only to 76°; when it attains 86° at *St. George's*. A large quantity of rain falls, particularly in May, June, July, and August, and in October and November: the number of inches for the year is about 107; the rain-gauge for June marks fourteen to sixteen inches.

POPULATION.—The following table, drawn from various sources, illustrates, to some extent, the progress of the population: the highest number of

like fruit. Its sap is a deadly poison; and if it touch the skin, will cause a grievous sore: even its shade is avoided by animals; and crabs, by eating its leaves, become poisonous. Du Tertre's *Histoire Générale des Antilles*.

* Coleridge's *Six months in the West Indies*, p. 95.

† Close to the sea-shore in many of the islands, the celebrated *Manchenille*, or *Manchineel-tree*, the upas of the West Indies, displays its luxuriant foliage and apple-

Total . .	133.00	15,713	16,958	32,671	—

Descent.—Creoles, 28,082; other British West Indies, 1,168; British, 384; Maltese, 26; Africans, 2,425; Madeirese, 400; and a few from other countries. Nearly 86 per cent. are creoles.

Age.—Under 5 years, 4,824; in proportion to the whole population, 14.76 per cent.; 60 years old and upwards, 2,490; or 7.62 per cent. Nearly 20 per cent. of the male population (7,500) are aged from 15 to 50.

Religion.—Church of England, 10,025; Church of Scotland, 264; Wesleyans, 1,657; Moravians, 34; Church of Rome, 20,675. *Sanitary state.*—401 sick; 1.23 per cent.; 905 infirm, 2.77 per cent. *Houses and cottages.*—Inhabited, 7,669; uninhabited, 134; building, 145. Baptisms in 1851, 1,246; deaths, 718.

Mr. S. Cockburn, the population commissioner of the colony, has appended some valuable remarks to this census, which, in detail and careful preparation, might serve as a model for other colonies. With regard to the condition of the colony, he points out the decay of the small householders in George Town, but says:—

“On the other hand, the few houses that are building are principally by the labourers and lately-imported Africans, who are rising fast in the scale of society, to fill the places, at no distant period, of their superiors of the middle classes, who are fast sinking into poverty and ruin. Even the proprietors of the freeholds feel the difference in the times, and those females who have no means of obtaining a livelihood, save from their rent-rolls, find it now to be a very precarious income to depend upon. In the country districts the picture is more cheering. The peasantry appear joyful and happy in their little homesteads, many of them possessing comfortable cottages on their patches of land, upon which they grow the sugar-cane, and grind it on the neighbouring estates for half the produce, by which they obtain a considerable sum, besides the provisions they send to market, and their daily money-earnings whenever they choose to work on the sugar plantations. Thus are they

in comparatively easy circumstances, and are fast approaching an important position in the community.”—(*Blue Book for 1851.*)

The governor-in-chief of the Windward Islands (Barbados, St. Lucia, St. Vincent, Grenada, and Tobago), in forwarding to H.M. Secretary of State (27th August, 1851) some useful statements, showing the condition of these islands at different periods since 1830, adverts to the peaceable disposition of the inhabitants, and says:—

“A recollection of the injustice and capricious severity to which the labouring classes were at one time subject, and which, to their credit, has engendered in them no retaliatory spirit or revengeful feelings, has led them to look up with respect to the government, to whom they have attributed their rescue from servile degradation, and a disposition to second its efforts made for their improvement.”—(*Blue Book for 1850, p. 56.*)

The ordinary language of the mass of the people is a barely intelligible French patois.

GOVERNMENT.—A lieutenant-governor, council, and house of assembly, representing the people. As in the other islands, the common statute law of England is the general rule of justice.

RELIGION.—In 1851, six clergymen of the Established Church, at salaries varying from £225 to £325 per annum. In 1830, there were 5 churches or chapels, with an average attendance of 720 persons: in 1850 these had increased to 14 churches or chapels, and an average attendance of 2,735—of which 9 were Church of England, 4 Wesleyan, and 1 Presbyterian edifice.

EDUCATION.—Church of England, 11 schools, with 530 male, and 326 female pupils; Wesleyan, 4; pupils, 786 male, and 423 female. Number of scholars in 1830, 356; in 1851, 1,209.

CRIME.—Total number of offences in 1835, 199; in 1850, 197; centesimal proportion, with respect to the population, during the first and last periods ‘8 and ‘6, showing, as in the other islands, both less frequent and less aggravated offences.

FINANCE.—The revenue was, in 1834, £11,190; in 1851, £16,956. The expenditure from the British commissariat chest for 1851, was £11,336; and the civil disbursements paid by England, £4,350, including the salary of the lieutenant-governor, £1,300.

The *Coin* in circulation is estimated at £30,000 to £40,000. There is no statement furnished of the amount of the notes issued by the Branch Colonial Bank.

COMMERCE.—The chief products are sugar, cocoa, and cotton. The value of trade at two periods—

	1833.	1851.
Imports	£73,846	£158,930
Exports	288,683	134,766

The above figures do not, however, convey a correct idea of the actual commerce of those years, because at the former period a custom prevailed, of placing a most exaggerated valuation on both imports and exports. In some years the exports have been quoted at £400,000 to £500,000, a sum manifestly inconsistent with the worth and quantity of their items of production.

While in the possession of France, and cultivated by a resident proprietary, the colony prospered; but long previous to the abolition of the slave-carrying trade in 1807, insolvency and distress were frequent; and Madden (vol. i. pp. 67, ‘8) in January 1834, made

some valuable remarks, which illustrate the fallacies of writers who, in the face of facts, persist in attributing the decline of the colony to emancipation.

Owing to the imperfect state of the early returns, it is not practicable to compare the sugar produce, during the last year of slavery, with that of 1851. The quantity made in 1830 is stated to have been 24,923,314 lbs.; in 1835, 20,467,700; the manufacture then annually decreased until 1845, when it amounted to only 8,447,831 lbs.: since that period it has yearly increased, and now has reached to between

fifteen and sixteen million pounds. The tonnage inwards, in 1834 was 21,325; in 1851, it was 22,176 tons.

PRESENT STATE.—“That Grenada has considerably recovered, during the last few years, from her previously prostrate condition, there is no doubt; her revenue is, if anything, increasing; her imports and exports both shew a considerable addition; her population is, irrespective of immigration, adding to its numbers.”—(Lieutenant-governor's Report, 18th May, 1852).

CHAPTER IX.—TOBAGO.

POSITION AND AREA.—Tobago lies sixty miles south-east of Grenada, and about eighteen miles north-east of Trinidad. The chief town (Scarborough) is in 11° 9' N. lat., and 60° 12' W. long. The length is about thirty-two miles, with a breadth of from six to nine miles; the superficies, about ninety-seven square miles.*

HISTORY.—The island seen by Columbus after discovering Trinidad, in 1498, and by him named Assumption, is supposed to be the same which subsequently acquired the name of Tobago, or Tobacco, from the use of that indigenous herb by the native Caribs when first visited by Europeans. These natives are said to have been driven off the island, and compelled to take refuge in St. Vincent, by reason of the incursions of a hostile tribe from the main land, called the Arrowauks, who, however, were only occasional visitors, often leaving the conquered territory in that desert condition, a description of which is alleged to have afforded De Foe the groundwork of *Robinson Crusoe*. All this rests upon very imperfect evidence, but it is certain that when, in consequence of British navigators having planted the national flag upon the island, in 1580, and the sovereignty having been claimed by James I., in 1608, an attempt was made, about 1625, by settlers from Barbados, to establish themselves in Tobago, and form a sugar plantation; they were opposed by an overpowering Carib force, by whom many of the adventurers were killed, and the rest being compelled to quit, afterwards settled on the island of Providence (St. Catherine's). From this time, up to the year 1684, when the neutral city of Tobago was recognised, attempts were made by private individuals, under the sanction of England, France, and Holland, for its colonization, and various bloody contests for supremacy took place. In violation of the treaty of Aix-la-Chapelle, the French again occupied the island, and the English, after vainly remonstrating against this breach of faith, themselves took forcible possession, in which they were confirmed by the treaty of Paris in the following year. In 1764, a lieutenant-governor was sent out, lands were sold and granted, and the first permanent settlement was made; no other inhabitants than Caribs being then found there.† In 1768, the Council and Assembly

held their first session. The colonists introduced slaves, and had early experience of the anxieties connected with the system, for in 1770 an insurrection broke out in Queen's Bay, which lasted six weeks, and two others succeeded in 1771,‡ and necessitated the costly and harassing measure of forming an extensive and well-disciplined militia in an island where white men had all abundant occupation on the estates with which they were connected, and did not need the incitements to drunkenness and dissipation thus afforded. In 1776, a plague of ants destroyed the sugar-canes so extensively that the cultivation of cotton was generally adopted in the place of sugar. In 1781, the island, after a gallant defence, was captured by the French; in 1783, retaken by the English; surrendered to the French by the Treaty of Paris in 1802; regained by Commodore Hood in 1803; and, for the last time, formally ceded to Great Britain in 1814. Here, as generally in the British West Indies, slavery was superseded by the apprenticeship system, in 1834; unconditional freedom followed in August, 1838, and has been productive of decidedly beneficial results in the moral character and commerce of the colony; confirming the truth of the remark made by Sir Andrew Halliday, from personal observation in 1837, that “certainly here, as has been proved everywhere, free labour has been more productive than slavery could ever be made.”§

In October, 1847, a fearful hurricane, in which many lives were lost, destroyed two-thirds of the buildings throughout the island, and greatly damaged the canes; with this melancholy exception, Tobago, though subject to occasional storms and shocks of earthquake, has suffered comparatively little injury from these visitations.

PHYSICAL FEATURES AND TOPOGRAPHY.—Tobago has been termed the “Melancholy Isle,” because when viewed from the north, it exhibits a mass of gloomy mountains, dense forests, and precipices descending abruptly to the sea; on a nearer approach the aspect is more pleasing, though still very irregular, the surface being extensively occupied by conical hills and spurs, all connected with the interior or dorsal ridge, 1,800 feet high, which stretches through the interior for twenty miles. Deep and

* *Vide* Gov. Sir W. Colebrooke's Report, *B. B.*, 1850.

† This fact is stated in the historical account contained in Mathieson's *Tobago Almanack* for 1849, which has evidently been compiled with great care and judgment; but, unfortunately, no authorities are given.

‡ The cruelties inflicted upon the slaves were horrible. Mr. Jefferys when examined before a parliamentary

committee, stated that he had seen seven executed at one time in Tobago; their right arms were chopped off; they were then dragged to seven stakes and burnt to death. One named Sampson, being hung in chains, was seven days dying. Their crimes were murder and destroying property.—*Parl. Papers*, 1790.

§ Sir A. Halliday's *West Indies*, p. 274.

narrow ravines terminate in small alluvial plains; on the south-west there is some comparatively level land, broken by occasional isolated mounds, with but few swamps or marshes; the northern extremity is precipitous, with basaltic columns, and terminates in the dark island of Little Tobago, and the dangerous rocks of St. Giles. Numerous streams and rivulets rise in the interior, and flow to the sea. The coastline abounds in bays; *King's Bay*, *Queen's Bay*, and *Barbados Bay*, on the windward or south-east side, and *Man-of-War*, *Courland*, and *Sandy Point*, on the leeward or north-west, are adapted to the largest sized ships. The island is divided into seven parishes: those of Sts. John, Paul, and Mary, lie to the eastward; Sts. David, George, Andrew, and Patrick, to the westward.

Scarborough is situated on the south-west coast, on the shores of a wide open inlet called *Rockley Bay*, which affords no good anchorage, until nearly in with the town. Although irregularly built, yet, from its position at the base of a conical hill, 422 feet in altitude, crowned by Fort King George, Scarborough has a pleasing appearance. The public buildings are a commodious court-house, English church, Presbyterian kirk, Wesleyan chapel, public gaol, and commissariat stores. Fort King George is the only fortification in the island in a state of repair; the barracks, hospital, and officers' quarters, substantial brick buildings, were for the most part razed to the ground in 1847, but are in course of restoration. The commerce of the island is conducted here, and the port being free, is the rendezvous for vessels engaged in the import trade. There is a light-house on *Racolet Point*.

Plymouth, which lies nearly opposite Scarborough on the leeward shore, distant about six miles, is a village of increasing importance, being the landing-place of the Royal Mail Packet Company's steamers. *Milford*, on the south-west, is merely a small fishing-place. Two-thirds of the island are still covered with a primitive forest, comprising many varieties of hard wood and ornamental trees. Its shores swarm with fine fish.

GEOLOGY.—There is a general resemblance between the structure of Tobago and of Trinidad, except that there are not seen here the large blocks of hyaline quartz found in the contiguous island. The hill above Scarborough appears to be composed of basalt and schistose rock. The rounded form of the eminences generally, indicates the long continued action of water in rotatory currents.

SOIL.—In the level lands of some districts, a stiff tenacious yellow clay upon an under-stratum of marl or rotten-rock; the former containing a large proportion of lime. Drainage is now being resorted to, and is much needed; bamboos, as thick as a man's arm, in sections of four feet long, fitted into each other, and with the compartments opened, are being employed for this purpose; and if cut at the proper time of the moon, when the sap is down, have been found to last under ground several years.

CLIMATE.—Is salubrious, owing to the narrowness of the island, and the regularity of the sea and land breezes. Dr. Lloyd reported to Sir J. McGregor, in 1827, that "on some of the estates in the interior no European resident had been buried for upwards of ten years." Range of thermometer 75° to 90°; barometer 29° 68" to 29° 85"; hygrometer from 0° to 10° damp, in the wet season, and from 0° to 13° dry, in crop time.

POPULATION.—The following imperfect sketch

partially illustrates the numerical and relative progress of the inhabitants:—

Year.	Whites.	Free Coloured.	Blacks. ¹	Total.
1727	2,300	—	10,000	12,300
1776	2,397	1,050	10,752	14,199
1787	1,397	1,050	10,539	12,986
1805	900	700	14,883	16,483
1830	450	1,163	12,556	14,169
1833	304	1,266	11,628	13,198
1844	—	—	—	13,208
1851	—	—	—	15,000

Note.—¹ The destruction of life in this colony during slavery must have been very great: between 1819 and 1832 the number decreased from 15,470 to 12,091, while the whole of the manumissions during the fourteen years, was only 192;—for example, the births in 1817 were 304, and the deaths 800. The total for the year 1851 is an estimate.

Tobago census in 1844.

Parish.	Area in acres.	Males.	Females.	Total.
St. John	10,520	485	474	959
St. Paul	7,558	443	478	921
St. Mary	10,447	299	412	711
St. George	11,192	785	818	1,603
St. Andrew	3,170	1,049	1,268	2,317
St. Patrick	5,801	899	935	1,834
St. David		1,409	1,580	2,989
Scarborough	437	605	869	1,474
Plymouth	128	178	222	400
Total	62,083 ¹	6,152	7,056	13,208

Note.—¹ Including—Milford, 110 acres; new settlers' lots, 1,500; reserved lands, 2,500. 97 square miles = 62,083 acres. Births in 1851, 491; deaths, 261. No classification of the population of 1851 has been sent home.

"The conduct of the peasantry is very good: they are fast clearing the forest lands, establishing settlements along the sea-coast, and extending cultivation into the interior. By their sole industry [says Lieutenant-governor Graeme,] the extensive forests and waste lands are rapidly giving way to the advances of civilization." He adds:—"It would be difficult, I imagine, to induce any considerable capitalist, at the present time, to clear land and establish a new set of sugar works in the West Indies; and unless the labour is to be performed by the small proprietors of three or four acres, I see no hope whatever of our forests yielding to improvements of any kind. In my evening rides beyond the confines of sugar cultivation, I observe with interest and much pleasure the erection of tenements surrounded by small clearings, and long after sunset I hear the sound of the axe resounding in the distance amongst the hills. It may not here be out of place to give a striking evidence of the economy, laying other considerations aside, of free over compulsory labour. The charge in slavery for preparing and opening an acre of land in this island, by the employment of a task-gang, was £8 sterling. The same amount of work was performed very recently for £1 : 19s. : 10d., upon a Saturday, too, when the people, as stated above, demand the higher rate of wages. The gang consisted of twenty-six men and women, with four water-carriers: each person opened 100 four-feet cane holes, which very nearly cover the surface of an acre of ground."—(*Report*, dated March, 1847, accompanying *Blue Book* for 1846, pp. 30, 31.)

GOVERNMENT.—As in Granada; a lieutenant-governor, council, and an assembly, elected by the people.

RELIGION.—There are three rectors of the Church of England, with stipends of £320 each; and several Wesleyan and Moravian ministers, supported, as in the other colonies, by voluntary contributions, and here, as well as elsewhere, doing much good. In 1835, there were 6 churches or chapels, with an average attendance of 1,000; in 1850, 13, viz., 6 Church of England, 5 Wesleyan, and 2 Moravian, with 6,780 worshippers.—(*Blue Book* for 1850, p. 61.)

EDUCATION, has been neglected by the Assembly on the plea of the inadequacy of the public income to meet the expenditure. The numbers attending the several schools in 1851, are stated as follows:—

Denomination.	Schools.	Scholars.		
		Male.	Female.	Total.
Church of England	11	328	257	585
Wesleyan . . .	7	305	182	487
Moravian . . .	3	304	316	620
Total . .	21	937	755	1,692

The method adopted in Tobago by a meritorious missionary body is thus described by Lieutenant-governor Grème, in an official report:—

“The Moravians commence by a system of discipline which, without fatiguing either the mind or the body, is well suited to children of the most tender age. The more advanced are (as a part of their education) required to sweep the school-rooms, trim the walks, and ornament the grounds within the confines of the mission establishment, plant and weed Guinea grass, raise Indian corn, bananas, and other fruits and vegetables. To the elder

pupils are assigned small plots of land, for their own exclusive benefit; and I am informed that in many cases the boys are not unfrequently at work in their gardens early and late. By such means as these, industrial habits are implanted, and obedience and regularity inculcated imperceptibly on the minds of the rising generation—elements of instruction almost as necessary to the future comfort and happiness of the labouring classes as the intellectual acquirements of reading and writing.”

CRIME, inconsiderable in amount—chiefly minor offences: centesimal proportion to population in 1835, 1.9; in 1850, .9.

PRESS.—A weekly newspaper and a good almanack, with general information.

FINANCE.—Revenue in 1834, £4,242; in 1851, £7,792; of which £4,844 was derived from import duties. Payments from the commissariat chest in 1851, £5,641.

COMMERCE.—Value of imports in 1833, £75,427; in 1851, £63,884 sterling. Sugar exported in 1833, estimated at 6,378 hogsheads; in the year 1851-52, the actual shipments were 4,315 hogsheads. In the former period there were 72 sugar estates; in 1851 there were 70, which have on them 26 steam engines, 33 water, 16 wind, and 5 cattle mills. Cocoon-nuts, to the number of 121,500, were exported in 1851; and other articles are now being added to the small list of staple products, whose only important item is sugar; although cotton, coffee, cocoa, and indigo all thrive here, and pimento, or allspice, grows wild, and the wood is even commonly used for building or burning into charcoal. *Wages* of labour, 6d. to 1s. per day; meat, 6d. to 10d. per pound.

Political dissensions and financial embarrassments have contributed to hinder the progress of Tobago; but these clouds are apparently fast passing away.

CHAPTER X.—TRINIDAD.

POSITION AND AREA.—This large and valuable island, the most southerly of the British West Indies, is separated from the province of Cumana, on the neighbouring continent, by the Gulf of Paria, which it bounds and shelters on the east. The average length is about 50 miles, the breadth from 30 to 35; and the area having never been positively ascertained, is vaguely stated in official returns at from 1,682 to 2,000 square miles. Its form has been compared to a stretched ox-hide; it is oblong, with promontories at three corners, two of which form the north and south-eastern limits of the Parian Gulf; and their extremities are respectively 13 and 9 miles distant from the main land, while the north-eastern and least extensive, terminating in Point Galera,* in 10° 50' N. lat., 60° 30' W. long., lies nearest to Tobago.

HISTORY.—Trinidad was discovered by Columbus in 1498. While in great distress from the leakage of his three vessels, and the want of water, he determined to give the first land he should meet with the name of the Trinity; and, by a remarkable coincidence, three mountain summits were seen from the mast-head, which on a nearer approach proved to be joined at the base. Columbus was delighted with the verdure and fertility of the country; its palm-groves and luxuriant forest sweeping down to the

* So called from an isolated rock, which resembles a gallej under sail.

sea-side, its running streams, and soft pure climate. The interior was cultivated in many places, and enlivened by hamlets and scattered dwellings; but the shores were low and uninhabited. While sailing along the east coast, Columbus for the first time beheld the South American continent; but supposing himself in the seventh degree of latitude instead of the tenth, he had no idea of the greatness of his discovery; and looking upon the low tract of coast, intersected by the numerous branches of the Orinoco, considered it part of another island of limited extent. Entering the Gulf of Paria, by the strait which, from its dangerous and angry appearance, he called the Boca del Sierpe (the Mouth of the Serpent), he feared to attempt quitting it by the opposite pass, which looked yet more alarming, being beset with rocks, through which the strong easterly current forced its way with a violence which induced him to name it the Boca del Dragon. Not venturing to encounter its possible perils, Columbus turned back, and steered along the inner side of the long promontory of Paria, his wonder being highly excited by the various currents and eddies, the placidity of the gulf, which forms in truth one vast harbour, 100 miles in length, and the fresh taste of its waters, caused by the various rivers which empty themselves into its bosom being at that period of the year swollen by rains.

Respecting the native inhabitants of Trinidad,

there are various and occasionally contradictory accounts. According to Las Casas, the majority of them were a part of the same people already described as the Leeward Islanders, and are supposed to have been descended from a colony of the Arrawauks of Guiana, a nation "to whose noble qualities," says Bryan Edwards, "the most honourable testimony is borne by every traveller that has visited them, and recorded his observations."* Humboldt is of opinion, that there was also a branch of the Caribs in this island, which, from other evidence, appears probable,† notwithstanding the general enmity that existed between these warlike barbarians, and their more peaceful and civilized neighbours.

Soon after its discovery, the Spaniards appear to have been in the habit of touching at Trinidad for wood and water, and only too often for the purpose of carrying off the inhabitants as slaves to Porto Rico, or Hispaniola, but no settlement was made until 1532, when, after a fierce struggle, they succeeded in establishing themselves, built a fort, and were sanctioned in their inhuman proceedings by the Spanish Council of the Indies, it being declared lawful to reduce the aborigines to slavery, and carry on rigorous war against them for the extension of the holy faith.‡ The colony made but slow progress during the next fifty years; in 1795, England being then at war with Spain, Sir Walter Raleigh arrived at Punto de Gallo, and burnt a small town styled the city of San Joseph, in revenge for the treacherous capture and execution of eight English sailors a short time before. He set at liberty many captive natives; among them five caciques, whom he found linked together in one chain, almost starved, and having endured grievous torments.§

In 1676, the Marquis de Maintenon in the *Sorcière* frigate, aided by some buccaneers from Tortuga, ravaged Trinidad, and are stated by Charlevoix to have obtained booty to the amount of 100,000 "pieces of eight," which, considering the feeble garrison, and small European population, is barely credible. A last fierce struggle, in which the governor and many Spaniards were killed by the natives, is said to have occurred towards the close of the seventeenth, or the beginning of the eighteenth century; it was used as a pretext for making "terrible examples,"|| according to the gentle phraseology of colonial writers when referring to the infliction of the most agonizing and prolonged sufferings on their darker-skinned fellow-beings. The Spanish monarch absolutely forbade the enslavement of the people, but a very heavy capitation tax was levied from them in maize, cassava, and other provisions, and this probably was used as a means of yet further oppression; they decreased rapidly, and their numbers were also diminished by the ravages of small pox, and other diseases of European origin. There were then but few negroes in the island, but several ship-loads were introduced soon after the signing of the treaty at Madrid between "his most Christian majesty of France," and his "most catholic majesty of Spain."

§ Vide Account of Sir Walter's Expedition to Guiana, in the *World Displayed, or, A Curious Collection of Voyages and Travels*. Fourth edition; vol. iv., p. 59.

|| Vide Mills' *Trinidad Almanack* for 1840, which contains interesting information, extracted from island documents and family papers, respecting the internal history of the colony.

by which the Royal French Guinea Company undertook to supply the Spanish colonies with 4,800 negroes per annum for the term of ten years. Cacao was the chief production; the sugar was inferior in quality, and small in quantity. A blight of the cacao crop in 1725, and a similar visitation in 1740, reduced the colony very low; still more injurious were the effects of an insurrection on a small scale, in which the Ayuntamiento, or Cabildo, a body corporate, combining the functions of a legislative, executive, and ecclesiastical council, a municipal corporation, and a parish vestry, having taken part with the people against the governor (de Linan), who rightfully presided over them, took upon themselves to supersede, chain, and imprison him for the space of six months, on the plea of his vexatious and oppressive conduct. A force sent by the viceroy of Grenada released him; some of the leaders of the revolt were banished for ten years, and a large proportion of the male population hastily quitted the colony, which in 1750 had sunk to its lowest ebb of poverty and apathy. In 1781, measures were taken by the king of Spain (in consequence of the representations of a M. St. Laurent, who had visited and been greatly struck with the capabilities of Trinidad), to induce immigration; many French, and a few Irish immigrants flocked in; and Trinidad, which a few years before appeared with difficulty to support two or three hundred inhabitants, abundantly supplied thrice as many thousands.

In 1783, the Spanish monarch issued a second ordinance, or cedula, which, by promising to each white person of either sex of the Roman catholic persuasion, a free grant of about thirty-two English acres, and half that quantity to the new settler for every slave he or she might possess, and to free blacks half the quantity of land granted to whites, induced a great influx of population from the French islands of St. Domingo, Martinique, Guadaloupe, St. Lucia, and Cayenne, so much that the colony soon became French in everything but name. The premium upon the possession of every additional slave proved fatal to the liberty of many free blacks and people of colour, who were kidnapped from various parts of the West Indies;¶ and another clause in the cedula which insured to persons who had left other places in debt, immunity from the consequences of fraudulent bankruptcy, made Trinidad the resort of the worst class of characters. The aborigines were now fast verging on extinction, and their successors, the descendants of the old Spanish settlers, were themselves in great part superseded, and their large and ill-defined claims to land set aside in favour of the new comers. A strong government, greatly needed to control such an assembly of unruly spirits, was formed under Don Josef Chacon, a naval captain of great physical and mental energy, who, although a zealous catholic, set to work by expelling some of the dissolute monks, and banishing the last emissary of the hateful inquisition. In February, 1797, a British expedition** for the

¶ The Cabildo formally complained of the inferior class of slaves brought to Trinidad. The infirm, diseased, or refractory, for whom no market could be found elsewhere, were brought here; and out of every forty or fifty landed, only five or six remained alive after the first few days. Certain it is, that their treatment in the colony was excessively cruel; and the slave laws adopted at this period, notwithstanding the injunctions of the feeble Spanish government in 1789, were very similar to the horrible "code noir" of the French colonies.

** It consisted of about 20 vessels and 10,000 men.

reduction of Trinidad, sailed from Martinique, under Abercrombie and Harvey. The strong republican and party spirit fermenting among the inhabitants, prevented Governor Chacon from making efficient preparations for the defence of the colony. The seat of government removed, in 1783, from the inland position of San Joseph to Port of Spain, could only be defended by a strong fleet in the Gulf; the Spanish admiral, Apodaca, who had the reputation of a good and pious, but very unwarlike man, had four fine line-of-battle ships and a frigate, manned by about 1,600 men; by the advice of Chacon, the little island of Gaspar Grande was fortified at the entrance of the Boca Grande (the Dragon's mouth of Columbus). Apodaca did not, however, endeavour to defend the colony, but seeing the superiority of the British force, and the impossibility of escape, set fire to his superb ships, which were models of architecture, and took refuge in Port of Spain.* Chacon was of course compelled to capitulate.

Abercrombie made the best arrangements he could, and left his aid-de-camp, the afterwards famous Sir Thomas Picton, a brave and energetic, but stern and unscrupulous man, in the difficult position of governor. He ruled with a rod of iron, systematically violated an article in the capitulation insisted upon by Chacon to secure the rights of the coloured inhabitants; and in one celebrated case (that of Luisa Calderon) he ordered the application of torture (standing on a picket), on a mere accusation of having robbed the man with whom she was living; and adopted a most iniquitous measure for the suppression of obi, or obeah, by instituting an inquisitorial and very sanguinary tribunal, quite contrary to the spirit of British laws, by whose orders burning, hanging, whipping, and cutting off ears and noses, were frequent exhibitions. During the general but short-lived peace of 1802, Trinidad being confirmed to England, Picton, Fullarton, and Hood, were appointed joint-commissioners for the settlement of affairs; the arrangement proved, as might be expected, from the character of Picton, who was placed second to Colonel Fullarton, a very good and humane officer of the East India Company, a perfectly impracticable one; and was put an end to in 1803 by the arrival of Sir Thomas Hislop, a soldier of reputation, but quite unfit for the governorship of a crown colony in a state of almost complete anarchy. In 1805 great sensation was created by Nelson's fleet suddenly appearing off the northern coast, on which stood a single martello tower: the officer in command mistaking the squadron for that of France or Spain, flung his solitary gun over the hill, blew up his fort, and hastened to communicate the news of an approaching foe. Nelson himself, misled by previous reports, which this circumstance tended to confirm, concluded the island in possession of the French and Spanish, and hoping to find their squadron in the gulf, swept through the Bocas in splendid style. Being soon undeceived, and without staying to send even a note ashore, the Admiral sailed out of the gulf in pursuit of the combined fleets of France and Spain. The mistake created confusion; but one satisfactory result was obtained in proving the inhabitants, at the declaration of

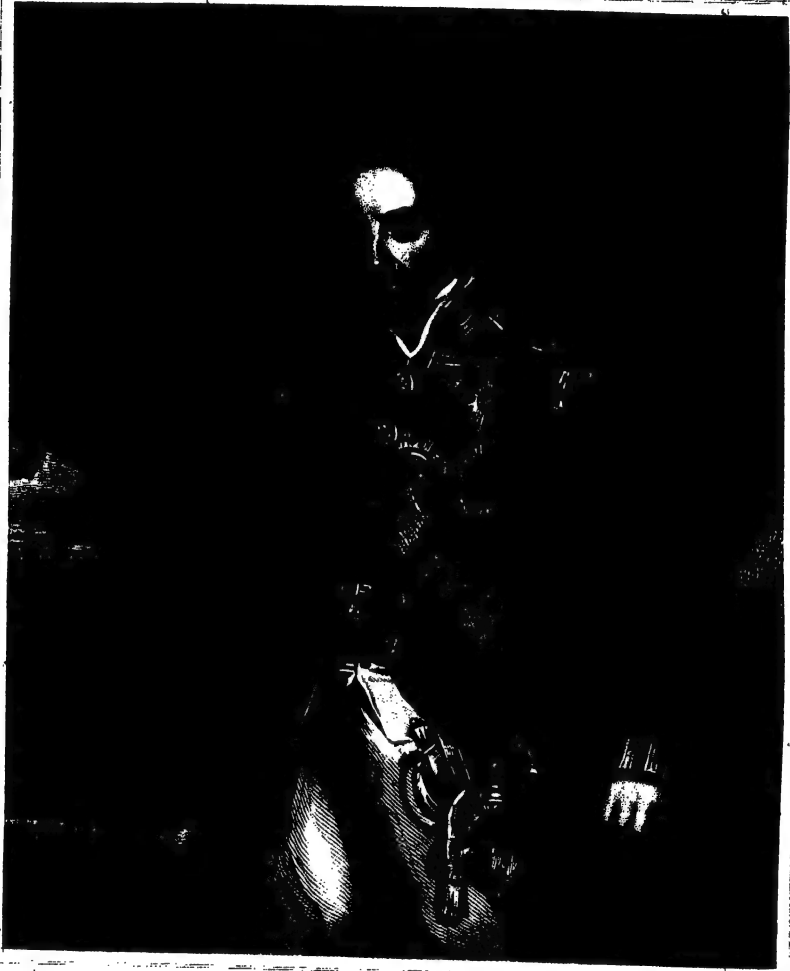

* It is said that Chacon, on learning from Apodaca what he had done, exclaimed—"Then all is lost; you have saved nothing?" "Si, Senor," replied the admiral, with Castilian enthusiasm, "I have saved Saint Jago de Compostella!" exhibiting an image of his patron saint. Both officials, on their return to Spain, were imprisoned, and underwent a long investigation as to their conduct;

martial law, and the assemblage of the militia unanimous in their desire to maintain British rule. In this same year a negro insurrection is said to have been planned, and four of the alleged ringleaders were executed by orders of courts-martial, many horribly mutilated, and some flogged and banished. In 1808, Port of Spain, which had been regularly built, though chiefly of wood, in the South American style, with streets all of equal length and breadth intersecting each other at right angles, was visited with a terrible fire. Three-fourths of the town, including property to the amount of half a million sterling, were destroyed. Parliament voted £50,000 for the relief of the sufferers; and the neighbouring British colonies sent supplies of food, to prevent the famine which, from the mistaken policy of procuring stores from the United States, instead of growing them, threatened to overwhelm the people. In 1809 the condition of the law with regard to slaves was exemplified in the case of Le Bis, a surgeon and planter, who being tried before Judge Smith, on the accusation of having deliberately flogged his slave to death, was discharged after being fined fifty dollars for treating his victim unskilfully in his capacity of surgeon! This was actually the only plea on which he could be punished at all; at that time it being little better than an open question, whether Spanish, and if not, British laws were in force.†

Dr. Coke, on visiting Trinidad in 1810, found several colonists of the Methodist persuasion, and despatched thither a missionary (Rev. T. Talboys), who was very badly received by a factious party on his objecting to do militia duty, from which all clergymen were exempted; attempts were made to expel him; but protected by the governor he held his ground, and since that time the Methodists have met with no further opposition.

Captain Sir Ralph Woodford, R.N., was appointed governor in 1813, and by the zeal and discretion which he displayed in his administration, appears to have greatly improved the condition of the colony, whose capabilities became gradually better understood. He quitted the island, after fifteen years' administration, in April, 1828, and died on his passage to England. Sir Lewis Grant became governor in the following year; he was a kind and just man, though possessed of less administrative ability than his predecessor. He was succeeded by Sir G. F. Hill, as lieutenant-governor, in 1833, and in 1834 the great change from hereditary slavery to emancipation was made without any disturbance, and without the proclamation, according to the desire of the colonists, of martial-law. This favourite measure, employed in the British West Indies for so many purposes, whether to quell imaginary rebellions got up as a means of counter-irritation, whenever Parliament attempted to interfere on behalf of the slaves,—used to ship off an obnoxious "Saint," persecute a missionary, or keep down disturbance liable to be caused by an epidemic disease, a fire, or public rejoicings, has had its day, a long and a bloody one; but with slavery, the desire and excuse for such coercion have alike passed away; and the proclamation of martial-law would probably be deprecated by the colonists, with one voice, in any of strange to say, Apodaca was acquitted and promoted, but Chacon, through the manoeuvres of some of the disaffected Trinidad republicans, was disgraced; and only on his death-bed learned that through the exertions of an affectionate and generous-hearted youth, his nephew, his worth was known to and acknowledged by his sovereign.

HORATIO, VISCOUNT NELSON

OB. 1805

FROM THE ORIGINAL OF HOPNER, IN

HIS MAJESTY'S COLLECTION.

Engraved by W. Finden.

SIR RALPH ABERCROMBY.

O.B. 1801

FROM THE ORIGINAL OF HENRY, IN THE COLLECTION OF

THE HON^{BLE} JAMES ABERCROMBY.

those islands, as earnestly as by the orderly and peace-loving inhabitants of an English town. The present governor, Lord Harris, appears to be labouring strenuously and successfully for the development of some of the numerous, and as yet but partially appreciated resources of the colony.

ASPECT.—The formation of Trinidad is directly opposite to that of the Caribbee group; the mountains have not the towering majesty which distinguishes some of those islands, neither do they run lengthways like a backbone, loftiest in the centre, but, on the contrary, the principal chain, from 2,000 to 3,000 feet in height, clothed from the summit to the base with stately forests, and fringed with mangroves overhanging and actually vegetating in the sea, extends in an east and west direction along the northern coast, commencing at *Point Galera*, and becoming submerged after forming *Point Mona*, the highest summits being still visible in three small isles, which extend across the northern entrance of the Gulf of Paria, leaving four Bocas,* or mouths, towards the Cumana Mountains, with which they were evidently at one time connected, having with them formed a spur of the great chain stretching from the Atlantic to the Pacific, known as the Andes. Whether Trinidad has been insulated by volcanic force, or continuous aqueous irruption, is an open question, but the latter seems very probable, on considering the power of the immense volumes of water poured into the gulf during the rainy seasons by the Guarapiche and branches of the Orinoco Rivers. About twenty miles to the southward of this chain, and eight from the western shore, the *Montserrat Hills* rise with a gentle slope; a few miles further south, near *Mariquire Bay*, is an eminence about 600 feet in altitude, called by the aborigines *Naparima*, or Single Mountain, at whose base stands the town of San Fernando; towards the centre of the island is a double-peaked mountain, called *Tamana*, with a spacious platform from whence the lovely and fertile valleys of *St. Joseph*, *Santa Cruz*, *Maraccas*, and *Las Cuevas*, extend themselves before the eye, and the ocean is visible both on the east and west; the rest of the area consists of plains and undulating lands, with some moderately high ridges, called *Mornes* by the French creoles.

COAST-LINE AND RIVERS.—The Gulf of Paria, as has been before remarked, forms one great harbour, in which ships may anchor in from three to six fathoms, on a gravel and mud bottom; the chief ports resorted to on the Trinidad side, are *Chaguaramas Bay*, where the extremity of the north-western peninsula, *Gaspar Grande*, and other small islets, form an immense natural dock, sheltered from all weathers and all winds, and *Port of Spain*, on whose shores stands the capital of the island. The three other sides of Trinidad are deficient in safe and accessible ports; *Guayaguayare*, on the south-east, formed by the small promontory of *Point Galeota*, is one of the best for small vessels, but it is open to the south wind (which, however, rarely blows with violence), and has a pebbly bar across its entrance; on the east coast, *Mayero* is a good roadstead.

* Boca Grande, or great channel; Boca de Navios, or ship's channel; Boca Nuevos, or Egg, or Umbrella channel; so called from the appearance of a remarkable tree, growing upon a rock on the lee side, much resembling an umbrella; and the Boca de Monas, or apes' channel. The currents here are dangerous, and the navigation very intricate.

† Savanna is an Indian word, signifying a plain covered with, what is here termed fox-tailed grass, and clumps of

Balandra Bay, or *Boat Island*, offers anchorage to droghers or coasting-vessels; *Rio Grande, Toco*, and *Cumana*, on the north-east, are tolerable roadsteads; and on the north are the bays of *Las Cuevas*, where *Fort Abercrombie* is situated, and *Muquaripe*.

Streams abound, several really deserve the name of rivers, and are navigable for vessels of a tolerable size for some distance. The *Caroni*, the chief of those which fall into the gulf, rises in the northern mountains, receives the *Aripo*, *Guanapo*, and several mountain streams, passes *St. Joseph*, is joined by the *Maraccas* or *St. Joseph's River* and *St. Juan's*,—flows through an extensive savanna, and disembogues a little to the southward of *Port of Spain*, being navigable for conveying produce about 18 miles in a direct line. The *Moruga* is the finest stream on the southern shore; the *Guartaro* or *Ortoir*, *Nariva*, *Branche*, and *Oropouche*, on the eastern; and the *Grande* and *Paria*, on the northern coast, which abounds in cascades and waterfalls. One of these, in the valley of *Maraccas*, down which the waters of *St. Joseph's River* are precipitated, is very remarkable.

TOPOGRAPHY.—In 1789, Trinidad was divided into numerous divisions, called "quarters," which upon the enactment of slave emancipation, were consolidated into eight districts, under the superintendence of special magistrates. No good survey has ever been made of the island; and the fertile savannas of the interior, no longer penetrated by parties of militia in search of fugitive negroes, remain in their wild native beauty.

Port of Spain, the capital, is one of the finest towns in the British West Indies. After the calamitous fire of 1808, the inhabitants being forbidden to reconstruct their dwellings of wood, used the good stone which is plentiful in the neighbourhood. The long, wide, well paved and cleanly streets, shaded with trees, extend in parallel lines from the land to the sea, and are intersected with cross rows. The main (Brunswick) square is artistically laid out with straight and circular walks, and adorned with both indigenous and exotic trees. The Protestant and Roman Catholic cathedrals are magnificent buildings. The former is well situated, with a large inclosed lawn in front of it, bordered on two sides by handsome dwellings. There are no aisles, the roof sweeping in an elliptical arch from side to side, and the wainscoting of the various rich native woods tastefully arranged. There is a Scottish church and a Methodist chapel. The spacious market-place and market-house are kept with admirable neatness and order; the gay costumes and vivacious manners of the French and Spanish women, give a mirthful but foreign-looking character to the scene. The stores are crowded with rich European goods, some of which find their way to Columbia. The town is divided into barrios or districts, under the superintendence of alcaides or magistrates, who are responsible for the state of the streets and markets in their several divisions, and the system appears to answer admirably.

St. Ann's, the governor's plain but comfortable dwelling, stands upon a very gentle slope, about crooked dwarf-trees, called savanna wood, or wild cashew trees. In Trinidad, there are other tracts, forming lagoon or marshy savannas, such as the one at the *Caroni River*, which is inundated during a part of the wet season, and at other times covered with tall fox-tailed grass and "tusk" rushes which grow so high that a man on horseback, riding through them, is completely shut in by a green wall on either side.

half-a-mile from the town; the mountain forests rise almost immediately behind it, whilst the lawn and shrubbery would give the place something of an English air, but for the vegetation; the nutmeg-tree, the cinnamon and clove-bushes flourishing there, together with many less rare but most beautiful trees, including the magnificent Bois Immortel (*Erythrina umbrosa*), called by the Spaniards Madre de Cacao, and planted by them beside the alleys of the cacao walks, to shade the young plants from the too fervent rays of a tropical sun. Indeed, a cacao plantation is in itself a charming sight; the trees are placed from twelve to fifteen feet apart, and not suffered to grow above about fifteen feet in height; their broad rich foliage of hues varying from a light green to a dark red, and stems laden with the yellow and dark red pods, which contain the chocolate bean, are far overtopped by the Bois Immortel, which, like the bignonia, at certain seasons exchanges its leaves for a thick covering of brilliant red blossoms. Another striking feature in the scenery of Trinidad, is the abundance and variety of the humming-birds, which, according to Sir Walter Raleigh, obtained for the island the native name of *Jeri*; a third less pleasing characteristic is the number of great red monkeys whose wild yell greets the voyager on entering the Bocas, and ill accords with the extraordinary beauty of the panorama which unfolds itself as the vessel, after safely passing the Dragon's Mouth, sails along the eastern shore of the placid gulf, passing the deep and abrupt mountain clefts, amid which lie the valleys of *Ques*, *Diego Martin*, and *Carenage*; the strong, but now almost dismantled, *Fort George*, whose batteries rise in succession from the coast to the height of about a thousand feet; and the costly but insalubrious *Barracks of St. James*, about a mile from Port of Spain. The anchorage is a mile or two from the extensive and beautiful but low plain on which the town is built, and of its structures, only the cathedrals are seen to advantage from thence. But for the excellent drainage and effective police system enforced, the situation must have proved very unhealthy, the foundation being formed of mud deposits from the gulf and the detritus of the mountain ridges, which rise immediately behind and around it. The waters are still perceptibly retreating, and the sites of *Marine-square* and many fine houses in that neighbourhood, which, says Sir Andrew Halliday, writing in 1837, "were covered with mud not many years ago," are now left considerably inland.

Five miles from the capital is the pretty village of *San Juan*, nestled amid a wooded branch of the northern mountains; and three miles further, the ancient capital *San Josef de Oruna*, now called *San Joseph*. Though ill-suited for commercial purposes, the position is excellent in regard to health and beauty; a clear stream flows from a neighbouring valley, and passes beside the hill on which the town stands, and the view extends over the chief alluvial plains of the island, as well as Mount Tamana, the hills of *Montserrat* and *Naparima*.

Arima, a neat village, interesting because in and around it a remnant of the native Indians still lingered till very recently, is separated from *San Joseph* by an open plain about ten miles in length, upon which the plantations, though of some extent, are as mere patches compared with the vast virgin forests by which they are bordered. The villagers, whether white or coloured, are described as miserably indolent, and devoted to the luxury of swinging in their

cotton hammocks. The town of *San Fernando*, thirty miles from Port of Spain, will probably become of importance from being in the neighbourhood of some of the best populated and cultivated land in the colony; at the back of it there is a gently sloping tract of great value.

The little village of *La Brea*, on the western coast, is visited by strangers on account of the natural phenomena for which its neighbourhood is distinguished. The most remarkable of these is the *pitch lake*, so called from an extensive collection of bituminous matter on the surface of a fresh-water lake, about three miles in circumference, eighty feet above the level of the sea, and surrounded, except to seaward, by dark woods. This exudation from the diluvial clay-hills is of the same nature, and is produced somewhat in the same way as the *green-tar* of Barbados. The surface of the lake is black, more or less intense, according to the season, and clumps of dwarf trees maintain a sort of floating vegetation amid the immense masses of asphaltum, the crevices between which are filled with water, wholesome, but somewhat bituminous in flavour, in which small fresh-water mullets and caymans (small alligators) are caught. Butterflies and humming birds of the most brilliant hues, paroquettes and beautiful "man-grove ramiers," hover round the vegetation which springs up in the dark and gloomy lagoon; but at one part, for about three acres and a half, near the source where the petroleum flows into the lake, no bird dares approach, for to breathe the dense sulphureous vapours would be certain suffocation. Could the asphaltum which nature has provided so abundantly, be made cheaply applicable to common uses, as pitch and tar, it would be a great boon to Trinidad. The traces of former volcanic action are elsewhere manifest; hot springs exist in several places, and not far from Cape Brea there is a submarine volcano, whose eruptions occasionally agitate the waves, and eject considerable quantities of petroleum; there is another crater of the same kind in *Mayero bay*, on the opposite side of the island, from whence, in the months of March and June each year, flames and smoke, attended with a loud noise, burst through the sea, and fragments of bitumen, black and shining as jet, float to the shore.

There are also several *mud volcanoes* in different parts of the island, which cast up quantities of mud, rounded pebbles, pyrites, bits of half-burned wood, and sometimes salt water, but always cold.

GEOLOGY—The absence of calcareous masses in Trinidad and Cumana affords a marked contrast to the mountains and hills of the Caribbean chain. The nucleus here is a dense argillaceous schistus, which becomes laminated and friable when exposed to the atmosphere. Masses of limestone, covered with a superficial soil, are found in most parts of the island; but especially along the northern range of mountains, where gneiss is frequently met with. No granite has been observed. Blocks of milky and finely crystallized quartz have been obtained in all the mountains, and gypsum among those near *St. Joseph*, and at the back of the south *Naparima* hills. On the east side of the island there are extensive strata of ferruginous sandstone. No vestiges of organic remains have been discovered. Marine and land shells are found in the alluvial plains. Madrepores are drifted on the coast; but no coral banks exist.

MINERALOGY.—Large pieces of iron ore have been obtained; sulphate of copper, and brilliant copper pyrites are found among the extinct volcanoes

of Erin. A white metal, specific gravity 10, has been noticed, which, when fused with gold, destroyed its malleability and ductility. M. Vanquelin thought it either a new metal, or composed of several others. Quicksilver, arsenic, and plumbago have been seen, but the mineralogy of the island is little known.

SOIL.—Very various; in the *végas*, or hollows of the rivers, and in the valleys, there is generally a good soil, which is being continually fertilized by the torrents flowing from the mountains, strongly impregnated with calcareous carbonate; some of the soils have a dark reddish appearance, others are of a deep chocolate colour, intermingled with black, both very deep and productive, the latter in a high degree. A loose and deep sand, mixed with shells, with springs immediately beneath the surface, though seemingly very poor, yields fine sugar crops. A deep and fertile argillaceous vegetative earth, without a rock, or even a pebble, covers the surface of several extensive valleys and plains on the east and west coasts. The anonymous but evidently experienced author of an account of Trinidad, published in the Almanac for 1840, says, that canes will ratoon in new and very rich tracts of land for from twenty to thirty years: new lands of ordinary quality yield rattoons for ten years, old lands of good soil eight, and old and inferior soils five. The heavy and regular rains, and the marked alternations of season, doubtless contribute to promote the fertility of the earth. The pasturage generally is of inferior quality, from the exuberant richness of the soil.

CLIMATE.—Not so dry as that of Cumana, and less moist than that of Guiana, with more constant winds, and a frequently renovated atmosphere. At Port of Spain the general range of the thermometer is usually from 70° to 85°; sometimes it rises to 90°; in the country districts it is 5°, and in the mountains 10° to 12° lower. The fall of rain, including the heavy dews, is about 75 inches. The rainy and dry seasons are more marked than in the Antilles; the latter commences with December, and ends in May, when the east-north-east and north winds become less cool; and in June the temperature is at its height. Part of June, July, August, September, October, and part of November, constitute the hot and wet months when earthquakes occur; hurricanes, however, are unknown, not reaching so far to the southward. On the north coast especially, the temperature is enjoyable, and the air for the greater part of the year fresh, pure, and very elastic, by reason of the rains and dews being evaporated by fresh breezes from the Atlantic. The southern side of the island is the warmest, and least humid. It seldom rains at night; but according to the old Spaniards this has only been the case since the English "heretics" took the country. Notwithstanding the implied malediction, the climate on the whole seems to have undergone a considerable change for the better, especially if the improved health of the population affords any criterion, the preponderance of births to deaths being as large as in Europe, longevity with sound mental and corporeal faculties, frequent among persons of temperate habits, and the Creoles healthy and more muscular than is usual among the natives of tropical regions.

POPULATION.—According to a census taken in 1733, it appears that there were then only 152 adult males capable of being taxed for local purposes, and of these but 28 were white. The aboriginal Indians were not taken into the account. Since then, the population has increased, by means already stated;

and though still but limited in number, considering the area of the island, is perhaps the very motliest in the British West Indies. The following table, like those given for other islands, must of course be only taken as approximate, and cannot be relied on; it is formed from many and varied sources.

Year.	Whites.	Free Coloured.	Indians. ¹	Slaves or Blacks. ²	Total.
1783	126	295	2,032	310	2,763
1797	2,151	4,474	1,078	10,009	17,712
1800	2,359	4,408	1,071	15,012	22,850
1802	2,261	5,275	1,232	19,709	28,477
1808	2,470	6,478	1,635	21,895	32,478
1811	2,617	7,493	1,736	21,288	33,134
1813	2,896	8,102	1,265	25,717	37,980
1822	3,341	13,392	893	23,227	40,873
1831	3,319	16,285	762	21,302	41,675
1834	3,632	18,724	600	20,657	43,613
1844	—	—	—	—	60,319*
1851	1,494	—	—	—	68,600

Note.—¹ The varying and at times increasing numbers of the Indians, if correctly recorded, probably resulted from immigration. They are now so diminished in numbers, that they are not separately noticed in the official records. The early augmentation among the free coloured, was caused by immigration in great part. Many of the South American labourers, called *Peons*, a mixed race of African, Indian, and European blood, came over, allured by the promises held out in the Spanish cedula of 1783. ² Before emancipation the decrease of the slave population by death, far beyond any augmentation, here, as in other colonies, necessitated constant fresh importation, not only to increase but even to keep up the numbers. Just before the trade was prohibited in 1807, large numbers were hurried into the country, and eagerly bought and sold on credit. In 1834 the total number emancipated in Trinidad was 20,657—of these, 2,246 were children under six years of age, and 872 aged, diseased, and otherwise ineffective. In 1851 there were 39,913 of the inhabitants who had been born in the island, and of these 16,403 were under ten years of age, showing a considerable increase among the former slave population. ³ Including 20 Chinese immigrants. ⁴ Including 7 Chinese. ⁵ Including 604 military, their wives and children. There are no classified returns for 1844 or 1851.

Census of July, 1851.

Parishes.	Males.	Females.	Total.
St. George	18,538	20,072	38,630
Victoria	8,899	7,041	15,940
St. Patrick	2,679	1,895	4,574
St. David	533	380	913
St. Andrew	145	112	257
Nariva	113	81	194
Mayero	537	448	985
Caroni	4,187	2,920	7,107
Total	35,631	32,969	68,600

Of the above, there were, married, 11,870; unmarried, 56,730.

Descent.—Natives of Great Britain and Ireland, 727; Trinidad, 39,913; British West India colonies, 10,800; East Indies (coolies), 3,933; Europe, 767; Foreign colonies, 2,735; Africa, 8,010; America, 1,395; Asia, and elsewhere, 260.

Age.—Under 10 years, 16,403; 10 to 20, 10,497; 20 to 30, 16,408; 30 to 40, 12,710; 40 to 50, 6,405; 50 to 60, 3,348; 60 to 70, 1,777; 70 to 80, 661; 80 to 90, 237; 90 to 100, 94.

Religion.—Church of England, 16,246; Rome,

43,605; Wesleyan, 2,508; Presbyterian, 1,017; Independent, 133; Baptist, 448; other Christian denominations, 98. Mahomedans, 1,016; Hindoo, 2,649; Heathen, 880. Of these, 8,710 can read and write; 5,019 can read only. Labourers, 32,884; no stated employment, 26,989; employed in agriculture, 34,885; commerce, 760.

Immigration, on an extensive and costly, but very injudicious system, has been carried on since 1836. In November, 1847, a return of the number of men, women, and children located on the estates, or then working, gave the following result:—Natives of Trinidad emancipated in 1838, 20,656; number of immigrants imported—old islanders, 11,339; Africans, 3,990; East India coolies, 4,359; Americans (free blacks), 1,301; Portuguese, 96; from Saba, 64 = 22,015. Grand total, 42,671. The treatment of the immigrants generally, and especially of the East India coolies, has been most discreditable. "The immigrant," says the governor, "is looked upon too much as a mere animal whose labour is valuable;" in 1847, numbers were found destitute, sick, and starving in the roads; their skeletons were seen in the woods and cane pieces; 250 died in the hospital between June 1847, and February 1848, and a great number in other places." "I believe," adds Lord Harris, "that in no country has greater suffering been undergone than by these unfortunate people in the shape of disease, starvation, and ultimate death, and to those who have had to witness it daily, it has been most distressing." The contracts which many of the planters entered into for the obtainment of these labourers were broken; bills were given on their agents for the £2 per head payable to government towards the expense of the introduction, most of which were dishonoured. As might be expected, the gaol was crowded, the hospital full, and lunatics and idiots wandered about the streets, to the annoyance and disgust of all. It is not surprising that the former slave population, witnessing the fate and treatment of these hordes of immigrants, should anxiously desire to be no longer dependent on the precarious wages which the sugar-planter could give, the more so as money was then (according to an official statement) being borrowed in Port of Spain, at 45 per cent. The governor, writing in February, 1849, says—"there is a marked inclination in the population to retire to any spot of land they can purchase, instead of continuing to work as hired labourers; and though it may be of minute proportions, yet it is considered at once as an independence, whether it be sufficient to support them and their families or not." Several free villages have thus been formed at Arima, Aronca, and other places. The character given of their inhabitants, and of the creole population generally, is highly satisfactory. Lord Harris says—

"I can bear witness to their good qualities, which have been particularly displayed during the present distress (1847-'48); the labourers on estates have worked as usual thereon, though there has been a want of money to pay them regularly; and up to the present time wages are due on some estates for three or four months. It is also very gratifying to see the emulation which has been called forth amongst the young by holding examinations, and by the distribution of a few prizes; and I feel certain that it only requires the means to diffuse instruction more extensively to cause a rapid and general improvement in the mental, and I hope also, in the moral state of the population; to what pitch of advancement they are capable of attaining still remains to be proved."—*Blue Book for 1847*, p. 177.)

The population is being yearly increased by immigrants from different countries; in the early part of 1853, Chinese, to the number of 400, arrived, and proved excellent husbands.

GOVERNMENT.—Trinidad is a crown colony, ruled by a governor, an executive council of three, and a legislative council of thirteen members, six of whom are unofficial; but all nominated by the sovereign. There is a town council of San Fernando, with an annual revenue of £2,000; and the island is divided into 40 wards, whose local revenues, in 1851, amounted to £17,906 sterling.

RELIGION.—Eleven ministers of the Church of England, and eighteen of the Church of Rome. The majority of the inhabitants are of the latter persuasion. There are also some ministers of the Wesleyan and other Protestant denominations.

EDUCATION.—One school in each ward; also four public seminaries in connection with the Church of England, and two with that of Rome. I have not the statistics of the missionary bodies.

Press.—Two or three newspapers and an almanac.

CRIME.—Owing to the large immigration since emancipation, and other circumstances, no comparison can be drawn; but in 1847, out of 990 persons convicted of crime, only 240 were creoles.

FINANCE.—Revenue in 1833, £35,120; in 1850, £88,660; in 1851, £95,733, of which custom duties yielded £70,797. The civil establishment (including £3,500 salary of governor) cost in 1851, £28,481, exclusive of £1,800 paid by England; judicial, £10,353; ecclesiastical, £11,129; pensions, £1,027; miscellaneous, £55,322; military expenditure paid from commissariat chest in 1851, £16,370.

Coin in circulation estimated at £40,000; bank notes at £50,000.

Weights and measures.—English.

COMMERCE AND PRODUCE.—Previous to 1783 the whole produce of the island consisted of a small quantity of cocoa, vanilla, indigo, annatto, cotton, and maize, not more than sufficient to employ a small schooner two or three times a-year for its conveyance to St. Eustatia. In 1787, the first sugar plantation was formed. Upon the final cession of the island to Great Britain, agriculture and commerce received a strong stimulus; the progress during the present century is thus shown:—

Year.	Sugar.	Molasses.	Rum.	Cocoa.	Coffee.
	lbs.	gals.	gals.	lbs.	lbs.
1800	9,895,634	128,507	194,488	284,170	449,614
1808	25,950,928	606,100	540,564	688,993	387,028
1833	37,681,572	1,065,649	231,125	2,400,196	161,727
1839	29,208,854	834,609	9,946	2,571,988	175,985
1849	43,678,018	950,158	34,697	3,651,795	92,247
1851	44,575,146	915,193	42,120	5,552,437	898
1852	—	—	—	—	—

Note.—Cotton, in 1800, 317,395 lbs.; 1808, 139,200; 1833, 11,300; 1839, 121,042; 1849, 23,780. ¹ Average of three years, 1847-'8-'9. Sugar crop of 1852, at least 50,000,000 lbs.

The value of the trade has, of necessity, fluctuated according to the quantity of the staple articles produced; and the market prices in different years—

—	1833.	1834.	1850.	1851.
Imports . .	£307,075	£308,178	£476,910	£548,471
Exports . .	341,571	394,541	319,394	390,909
Total . .	648,646	702,719	796,304	939,380

Note.—Shipping inwards, 1834, tons 41,149; 1851, 62,178.

Arrow-root, cocoa-nuts, and cocoa-nut oil, hides, and other articles, are now being added to the export list. The same impolitic system of importing articles which might be far more cheaply and remuneratively produced on the spot, is equally conspicuous in Trinidad as in Jamaica. Thus it appears that from America, bananas, plantains, yams, sweet potatoes, corn, meal, rice, tobacco, and spices, to the aggregate value of at least £30,000, are annually imported, although there is ample space, and even labour, with a favourable climate for the production of all these items. The ungranted land amounts, in round numbers, to 850,000 acres; that granted, to about 220,000, out of which 60,000, at the most, are cultivated in canes, cocoa, coffee, provision, or used for pasture. The labourers were stated in the last census at 32,884; of these, according to a statement recently made by Lord Harris at a public meeting, 15,000 were required for sugar, 2,000 for cocoa

estates, and 6,000 were small proprietors, leaving 9,884 who might be profitably engaged in raising food.

The amount of sugar exported in 1849, viz. 49,000,000 lbs., was 9,000,000 lbs. above the average for the nine years previous, and only inferior to one of those years, viz. 1847. The average value of the previous nine years' imports was £500,000 per annum; the revenue had also increased. The governor, in stating these facts, remarked that they afforded "ground for hope that this island is able to struggle against the difficulties with which it has to contend, and that it may eventually overcome them."—(Report, dated 1850, accompanying *Blue Book* for 1849, p. 210). The crop of the 1852-'53 season was equal to about 56,000 hogsheads.* That of 1853-'54 is expected to be much greater. The crop of cocoa in 1851-'52 was the largest ever obtained in the island.

CHAPTER XI.—ANTIGUA, BARBUDA, DOMINICA, MONTserrat, NEVIS, ST. KITT'S, ANGUILLA, AND THE VIRGIN ISLANDS.

THE above colonies comprise the British possessions in the *Leeward* portion of the Caribbean group, and extend through four degrees of latitude. The governor-in-chief resides at Antigua; under him there are lieutenant-governors (or other subordinate functionaries), who superintend the affairs of the respective islands, in the same manner as do the resident rulers of the *Windward* Caribbees (St. Lucia, St. Vincent, Grenada, and Tobago), under the governor-in-chief at Barbados.

ANTIGUA

Is situated between 17° 2' and 17° 13' N. lat., and between 61° 44' and 61° 58' W. long; forty miles north of Guadaloupe, and twenty-five north-east of Montserrat. It is twenty miles long and fifty-four in circumference, containing an area estimated at 110 square miles = 70,400 acres.

HISTORY.—Columbus sailed by this island in 1493, and named it in honour of a church in Seville, *Santa Maria la Antigua*. Whether it was then inhabited does not appear, but from its almost total lack of springs and rivers, it would probably be considered untenable by any people not acquainted with a method of preserving rain water in cisterns. In 1632, it was taken possession of by Sir Thomas Warner and a few English settlers who, in 1640, amounted to about thirty families. From this period the population increased, and Antigua promised to become a flourishing possession, but was desolated in 1666 by a French force from Martinique, by whom the tobacco plantations, which then afforded the sole export, were ruined, and all the negroes carried off. By the treaty of Breda, in 1666, the island was formally declared a British possession; in the following year it was visited by Lord (William) Willoughby, who re-established the colony, and bestowed large

tracts of land on Colonel Byam and other royalist officers who accompanied him.

A great step in commerce was made by the enterprise of Colonel Codrington, who, believing its virgin soil admirably calculated for the growth of the sugar-cane, which he had already cultivated in Jamaica with extraordinary success, purchased a considerable quantity of land, came over with his family, rapidly amassed a large fortune,† and was appointed, in the phraseology of that day, captain-general of the British Leeward Caribbean Islands. In 1706, the progress of the colony received a severe check by the appointment, through the influence of the Duke of Marlborough, of a man named Park, of infamous and immoral character. His conduct, however, bad as it is represented to have been,‡ can but faintly palliate the disgraceful fury of the colonists. After repeated attempts on his life, in the last of which he was grievously, though not mortally wounded, they at length succeeded in obtaining his recall, which was hailed with an open triumph, which maddened the governor, and appears to have induced him (for the accounts of this wretched business are very confused) to attempt dissolving the Assembly, and continuing his administration by force. The inhabitants assembled, and on 7th December, 1710, about 500 appeared in arms at St. John's, and invested the government-house, where the few regular troops in the colony awaited them. Perceiving, when too late, the crisis he had provoked, the wretched man offered to dismiss his soldiers if six of the chief settlers would be hostages for his safety. The speaker of the Assembly, and one of the members of the Council, inclined towards a compromise, and offered themselves as two of the required sureties, but—the beginning of strife is as the letting out of water—they could not control the movements of an armed assem-

and a packed jury, sentence of death against a merchant and influential settler, named Chester, for having accidentally killed a man; the true cause of the persecution, being the governor's having seduced the wife of Chester, whose vengeance or interference he dreaded.—(Edwards, vol. i., p. 478.)

* The hogshead varies in size in different colonies.

† Schomburgk's *History of Barbados*, p. 295.

‡ The chief charge brought against him during his administration, was an unsuccessful attempt to obtain from a provost-marshal (a creature of his own, whom he had raised to that position from the rank of a common soldier),

blage, whose excited passions reacted upon one another; a rush forward was made in two columns; the government-house was attacked; and being at length broken in, the governor met them, and shot dead the first man who approached him (Piggott, a member of the Assembly); falling wounded himself at the same moment. The assailants seized his prostrate body, and, while yet alive, tore him limb from limb, scattering abroad the bloody fragments in their mad and brutal rage. Thus ended perhaps the most disgraceful scene, always excepting the horrors attendant on slavery, that ever occurred in a British colony.

An ensign and thirteen privates were killed, and a lieutenant and twenty-four privates wounded in defending their miserable ruler; and thirty-two of the insurgents were killed or wounded. After some investigation, influenced, probably, by the great majority of the colonists concerned in this outrage, a general pardon was issued by the Crown to all concerned.

In 1723, the Antigua legislature strove to ameliorate the condition of the slaves, who were then being rapidly imported, by enacting penalties of not less than £100 for wilfully killing one of them; and for dismemberment, of not less than £20 currency.*

In 1737, a plot was discovered on the part of the negroes to massacre all the white inhabitants; about 200 of the wretched conspirators were seized at various times, of whom 58 were chained to stakes and burnt, 5 broken on the wheel, and six hung in chains upon gibbets and starved to death, one of whom lived nine days and eight nights without sustenance.†

Soon after this, a change appears to have come over the minds of the colonists, the mild influences of religion mitigating the evils of slavery, though its precepts were too little understood entirely to banish the hateful system. The Moravian missionaries had, as early as 1732, been permitted to establish themselves in Antigua; they held their ground, and even continued gradually to gain it; and in 1787, had under their care 3,465 slaves.‡ The speaker of the House of Assembly, Mr. Gilbert, who settled in the island in 1760, set an excellent example, by his anxiety for the spiritual instruction of the negroes, manifested in the teeth of much scoffing and contumely. He appears to have been one of Wesley's early followers: after his death, his place was partially supplied from an humbler class of life, by a shipwright named Baxter, who, after his daily toil was concluded, devoted his evenings to the instruction of the slaves. Dr. Coke, when visiting the West Indies in 1789, was obliged, by what he afterwards termed "friendly adverse winds," to land at Antigua. Here he found a small Methodist body, presided over by Baxter, who was then under-storekeeper at English Harbour, with an income of £400 a-year. This, together with his improving prospects, he cheerfully resigned, and joined the mission then duly formed in the island. Religious teaching did more than the dread of torture, to prevent insurrection. The white inhabitants both acknowledged and shared its effects;

and Antigua has the great honour of having been the British colony in which the slaves were first fully emancipated; the local legislature, either from policy or a more noble motive, and it was sound policy at any rate, rejecting the apprenticeship system, and giving the great boon of unqualified freedom on the 1st of August, 1834. The conduct of the slaves justified here, as elsewhere, the highest expectations formed concerning them. The momentous Thursday was awaited by nearly the whole adult negro population assembled at midnight in the Houses of Prayer. Friday, Saturday, and as a matter of course, Sunday, were also devoted mainly to religious exercises, and on Monday they went cheerfully to work. Nor was this a temporary impulse: the following Christmas was the first for thirty years that had been celebrated without the proclamation of martial law. The satisfactory manner in which this mighty change was effected in Antigua, was a great triumph to the anti-slavery party, and did much to remove the apprehensions of those who conscientiously feared the consequences of too sudden a transition; while the money received by the planters relieved many of them from the heavy embarrassments under which they had been sinking, though some were too deeply involved to receive any benefit, their estates being mortgaged far beyond their value.

PHYSICAL FEATURES AND TOPOGRAPHY.—Antigua is in shape somewhat of an irregular oval; its shores are deeply indented with creeks, bays, and coves, some of them running into the centre of the plantations like canals; some swelling into estuaries, and others forming spacious harbours. Beyond these, numerous islets, rocks, and shoals, border the shore, and render the approach very dangerous on every side, except the south-west. There are no mountains, properly so called; the highest points not exceeding 1,000 feet; but magnificent cliffs form stately ramparts towards the sea, sloping gradually inwards, crowned with lofty trees, and often rise so abruptly as to wear an appearance of height which they do not really possess.§ The interior, with its green vales and gently rounded hills, much resembles some of the scenery of England; and though, on the whole, wanting in wood, would not inspire the traveller with an idea of the great deficiency of springs, which is the one drawback of the island, droughts of terrible severity being occasionally experienced. The rain-water preserved in cisterns is, fortunately, by no means unpalatable, and proves wholesome. The colony is divided into six parishes. *St. John's*, the chief town, is prettily situated on the top of a moderate eminence on the north-west side of the island, at the head of a sheltered and capacious bay, which is, however, unfortunately barred at the mouth, to the exclusion of large vessels. About midway up the harbour is an elevated rock called *Rat Island*, connected with the mainland by a causeway, which is dry at low water. The Royal Mail Steam Packets anchor at *English Harbour*, on the eastern coast, a secure and commodious port, twelve miles distant, on whose shores good docks and a busy thriving village

* In the preamble to this Act, it was formally stated that, "several cruel persons, to gratify their own humours, against the laws of God and humanity, frequently kill, destroy, or dismember their own and other persons' slaves, and have hitherto gone unpunished, because it is inconsistent with the constitution and government of this island, and would be too great a countenance and encouragement to slaves to resist white persons; to set slaves so far upon an equality with the free inhabitants

as to try those that kill them for their lives; nor is it known or practised in any of the Caribbee islands, that any free person killing a slave is triable for his life."—(Southey, vol. ii., pp. 235, 236.)

† Southey, vol. ii., p. 264. ‡ Coke, vol. ii., p. 425.

§ By the neighbouring islanders there is said to be a metropolitan air about Antigua; the very hills lift up their heads, and try to look like mountains.—Baird's *West Indies and North America* in 1849, p. 48.

have been established. The terrible earthquake which desolated the Leeward Islands in 1843, committed sad havoc in various parts of Antigua (where about twenty lives were lost), especially in St. John's, and spaces between handsome dwellings now occupied by negro huts or temporary erections, tell of damages still unrepaired. A cathedral, placed on the brow of an acclivity, on which the town stands, was entirely destroyed; but has been replaced by another, built of a kind of marl-stone found in the island, at a cost of nearly £40,000 sterling. The prospect thence commands one of the many pleasing panoramic views in which Antigua abounds, and includes the town, the harbour, Fort James, the romantic hills of the Five Islands, with the ocean in the distance. The court-house is a good structure, and the prison which, in the time of Coleridge (1825) was described as being "like most others in the West Indies, that is to say, as bad every way as possible," is now a cleanly and well-arranged building. Government-house is built on a hill overlooking English Harbour, near a higher eminence called *Shirley Heights*. *Fig Tree Hill* is remarkable for the variety and luxuriance of the vegetation with which it is covered, and for a clear and transparent spring. The summits, called *Ridge* and *Monk's Hill*, which rise above *Falmouth Bay* on the south, and are crowned by massive fortifications, have a very imposing appearance. The so-called towns of *Falmouth*, *Purham*, *Willoughby*, *Bridge Town*, and *St. James*, are mere villages, not needing notice. The country mansions of the of the Antiguans are, many of them, very handsome, and well appointed; some are still possessed by the descendants of the Codringtons, Warners, Byams, and others, whose names are interwoven with the early history of these islands.

GEOLOGY.—Three distinct classifications of the tertiary formation have been noted; on a general view the island consists of a rocky conglomerate of the newest floetztrap, such as wacke, porphyry, trap, breccia, amygdaloid, and some spherical masses of basaltic greenstone; this occupies the hilly district in the south and west: the north and east divisions exhibit calcareous marl and coarse sandstone, interspersed with blocks of tolerably compact limestone; the interior exhibits argillaceous strata of varied character, and extensive irregular beds of coarse chert or flint. No organic fossils, excepting immense shark's teeth and marine exuviae, have been discovered. Petrified woods, with the distinctive and delicate fibres of palms and dycotyledonous trees, perfectly preserved, are found, associated with chert, or on the surface of the conglomerate and the marl, with agate, cornelian, and chalcedony. Nitrate of potass sometimes covers, like a hoar frost, the flat oozy shore on the north and east.

SOIL.—In the highlands a red clay, argillaceous, with a substratum of marl; in the lowlands a rich dark mould, on clay.

CLIMATE.—Owing to the absence of forests, the periodical rains are uncertain, the air dryer, and the temperature less subject to variations than in the neighbouring islands. The mercury seldom ranges more than 4° Fahrenheit in the twenty-four hours. The annual range is between 73° to 84°. Severe hurricanes have been experienced here in 1681, 1707, 1740, 1772, 1780, 1792, 1795, and 1804. Forty-nine of these tempests have been felt in the West Indies since their colonisation by Europeans; of these 8 occurred in July, 19 in August, 13 in September, and 9 in October; on these occasions the barometer

DIV. VIII.

fell from a half to an inch and-a-half below its ordinary height. An earthquake, in 1689, caused much destruction in Antigua, as did also that of 1843. From April to August the refreshing trade-wind blows steadily from the eastward; for the next three months the electric fluid is disturbed, the wind is variable in force and direction, and there are heavy rains; from December to April the wind is more northerly, and the thermometer occasionally as low as 66° Fahrenheit.

POPULATION.—The statistics are imperfect. In 1673, there were 570 slaves in the island.

Year.	Whites.	Free Coloured.	Blacks, or Slaves.	Total.
1707	2,892	—	2,892	5,784
1724	6,200	—	19,800	25,000
1774	2,590	1,230	37,808	41,628
1805	3,000	1,300	36,000	40,300
1821	1,998	4,066	31,064	37,128
1834	1,900	3,895	29,121	34,916
1844	—	—	—	36,178
1851	—	—	—	37,163

Note.—In the years 1844 and 1851 there were no classified returns.

According to the census of 1851, there were, males, 17,616; females, 19,520 = 27,136, which, on an area of 110 square miles, would give 380 mouths to each square mile; the governor states, there are about as many persons as arable acres. In 1851 the births were 1,092, deaths, 902.

The condition of the people who had formerly been slaves, is thus described in a valuable official document drawn up by Governor Higginson:—

"Here, as in other islands, the material condition of the emancipated race is most satisfactory. They are abundantly supplied with all the necessaries, and many of the comforts of life. They are well fed, well housed, and well clothed; the passion for fine dress in both sexes continues unabated. Through the aid of friendly societies, which are in active and beneficial operation, the poorest can command good medical attendance, and other privileges seldom enjoyed by persons in a similar rank of life in other countries. The number of labourers withdrawing from estates and settling in detached villages, where they purchase or rent small independent holdings, continues to increase. As stated on a former occasion, by the latest returns made up to June of last year (1845), there appears to be seventy settlements formed, containing about 3,300 houses, and a population of about 9,300. These village communities are not peculiar to Antigua, but owing to the transition which took place here direct from slavery to freedom, without the intervention of apprenticeship, they have made greater progress in this island, and from them may spring the germ of a middle class, which must exercise considerable influence over the future destinies of the colony."—(*Blue Book* for 1846, p. 48.)

Governor Mackintosh, in April, 1852, confirmed the favourable report of his predecessor, and informed the Secretary of State that there was no "perceptible evidence of the retrogression of the well-ordered community over which it is my good fortune to preside."—(*Blue Book* for 1851, p. 123.)

Messrs. Candler and Alexander visited Antigua in 1850; they arrived on a Sunday morning at St. John's, and were gratified with observing that in a city of 9,000 inhabitants, "scarcely a single person was to be seen in the streets." The people filled the new and great cathedral, the kirk, the spacious Wea-

U

leyan chapel, the Moravian, and other places of worship. It was a gratifying sight when the services were over, to see people of every colour, black, white, and brown, handsomely attired, all slowly returning to their respective homes, and afforded a marked contrast to the riot, debauchery, and iniquity, which characterised the Sunday markets of slavery. The benevolent friends expected a greater advance in the condition of the people in Antigua than in the other West India colonies, and were not disappointed. "The people at once emancipated from bondage, have proved themselves good subjects, and they continue to exhibit the pleasing spectacle of an improved and improving community. Not wishing to remain in the cabins where they once lived as slaves, they soon bought land, and built houses of their own. The free villages are numerous, and scattered over hill and dale, or lying by the sea-side, animate the face of nature, and improve its scenery. One of these villages, consisting of a fair class of houses, with gardens attached, and close to the bay, forms a handsome suburb to the capital."^a

GOVERNMENT.—The governor-in-chief resides here, and is assisted by an elective legislative assembly of fourteen members, and a legislative council, appointed by the crown.

RELIGION.—A Bishop of the Church of England (whose see was formed in 1842, and extends over the Leeward and Virgin Islands), resides at Antigua. Under him there are, an Archdeacon, six rectors, and three curates. There are six parish churches (including the cathedral), and as many chapels of ease. About 10,000 of the inhabitants belong to the establishment. The Moravians have nine chapels under the charge of ten ministers, and about 9,000 members; the Wesleyans have 7 chapels, besides preaching stations. Their chapel in St. John's holds 2,000 people, and is generally filled. The Scotch Presbyterians have a church in St. John's.

EDUCATION.—In 1851, 20 Church of England, 9 Moravian, 6 Wesleyan, and 4 Mico schools; the Moravians had then 610 male, and 490 female; Wesleyans, 251 male, and 187 female; and Mico, 193 male, and 76 female scholars = 1,817.

CRIME.—The governor, writing to the Secretary of State, 12th April, 1852, says, "there has been no increase in crime, if indeed such a term is applicable in definition of the petty offences arising out of the hasty, facile temperament of the negro, which form the bulk of the convictions." This remark is applicable to the other West Indian colonies.

FINANCE.—General revenue in 1834, £12,151; 1851, £21,888; of this sum £16,646 were furnished by custom, and £1,890 by tonnage duties. There is a local revenue raised for parochial purposes; it amounted in 1851 to £7,675 sterling. Disbursements from the British Exchequer in 1851, for civil establishment (including the salary of the governor-in-chief, £3,000), £3,980; ecclesiastical, £2,500; judicial, £450 = £6,930; and from the commissariat chest for military purposes, £11,521.—Coin in circulation, about £45,000. Notes of Branch Colonial Bank, about £5,000.

Wages in 1851, domestic, 6s. per week; agricultural, 6d. to 1s.; and trades, 1s. 4d. to 2s. per day.

Prices in 1851, sugar, 16s. to 18s. per 100 lbs.;

* *Vide Anti-slavery Reporter* for March, 1851.

† Coleridge's *Six Months in the West Indies*.

‡ *West India Sketch Book*, vol. ii., p. 47.

rum, 1s. to 1s. 2d. per gallon; molasses 8s.; Maize, 4s. to 4s. 6d. per bushel.

COMMERCE.	1833.	1851.
Imports . . . value £ .	69,945	198,425
Exports "	206,464	219,235
Ships Inwards . tons .	22,790	34,439
Sugar Crop . hogsheads	12,189	14,739
Molasses ¹ . . puncheons	7,177	8,701

Note.—¹ Average of five years, ending 1833.

By another statement it appears that the annual produce of sugar, on an average of three years, ending 1833 was 155,344 cwt.; and in 1851, 197,025 cwt.

The above brief enumeration of facts, comprises forcible arguments respecting the actual prosperity and satisfactory progress of this ancient colony.

BARBUDA

LIES thirty miles north of Antigua. It is about nineteen miles long by ten broad, and for the most part low and flat, but rises somewhat towards the eastward; the whole rests on a coral basis. The first European settlement was formed by a party of colonists from St. Christopher's under Sir Thomas Warner; but the incursions of the Caribs of Dominica compelled its abandonment. Their strength being ere long much diminished, the English returned and re-occupied the island without further molestation. The whole of Barbuda has been granted by the Crown, under successive leases, to the Codrington family, since 1684, and is held by their representative upon the service of presenting a fat sheep to the governor-in-chief of Antigua whenever he visits the island. This offering is generally commuted for a turtle or a buck; the former abounding on the shores, the latter have greatly diminished in number, but are still hunted in the dense forest, interspersed with patches of savanna, that covers the greatest part of the interior.† There is a roadstead, but no harbour; and the coast is very dangerous, being beset with reefs and shoals under water: many lamentable shipwrecks formerly occurred here. Like Antigua, this island is almost destitute of springs. A narrow neck of land extends along the western shore, forming a lagoon about seven miles in length, on the shores of which stands the village and a dilapidated structure styled the Castle, where the superintendent of the property resides.‡ The population of the island, in 1851, was 121 males, 206 females, 145 boys, and 157 girls, in all 629 souls. The negroes were fully emancipated in 1834, agricultural labour is confined to the cultivation of provision grounds, the chief sources of income are the raising of stock, and the produce of the turtle fishery. A church was erected by the present Sir William Codrington, about 1843, and he now supports a clergyman of the Established Church; there is a school and school-house. The necessary expenses of the establishment are heavy, and the returns comparatively small.

DOMINICA.

MIDWAY between the French colonies of Martinique and Guadeloupe, lies the lofty and densely wooded island to which Columbus gave the above name, in commemoration of its discovery on Sunday, November 3rd, 1493. Its length is twenty-eight miles, and

its greatest breadth about fourteen, its area has been estimated at 275 square miles = 186,436 acres. The chief town (Roseau) is situated in 15° 18' N. lat., 61° 24' W. long.

HISTORY.—When first visited by Europeans, Dominica was thinly inhabited by Caribs, who, more fortunate in this than in other islands, were long suffered to remain undisturbed. At the commencement of the seventeenth century some French settlers established themselves on vacant parts of the sea-coast, having, it would appear, succeeded in obtaining the good will of the natives, with whom they lived on friendly terms. From a few families they augmented by natural increase and immigration, until in 1632 they numbered 349 whites, 23 free mulattoes, and 338 negro slaves, engaged in rearing poultry, and growing cotton, a little coffee, and ground provisions for sale in Martinique. The Caribs then numbered about 1,000. The growing prosperity of the little colony attracted the attention of the rival states of England, France, and Holland, and to prevent further contests, it was declared a neutral island, to which all European traders might freely resort. In this position it remained till the war broke out in the year 1759 between Great Britain and France, when the governor taking part with the latter power, Dominica was attacked and captured by England, and formally ceded to her by the treaty of Paris, in 1763.

The inhabitants being kindly and justly treated, intermixed peaceably with the new British settlers, to whom 96,000 acres of unoccupied land (about half the total area) were disposed of in lots of 50 to 100 acres, realizing £312,090 sterling. A small town, named Roseau, previously formed by the French, was made a free port, and the prosperity of the island, manifested by its exports of coffee, cotton, and sugar, and its increased imports of British manufactures was becoming yearly more evident, when the unhappy struggle between England and her North American colonies induced the interference and renewed hostility of France. Before the declaration of European war had been made known in the English islands, the chief fort of Dominica (Cashacrou) was stormed by the Marquis de Bouille, in September, 1778, and taken without a contest, through the treachery of some of the French inhabitants, who had contrived to intoxicate the soldiers on duty, and fill the touch-holes of the guns with sand. A brave, but unavailing, defence was nevertheless made by the troops and English colonists, who were ultimately compelled to capitulate. They succeeded in obtaining favourable terms, but a contribution of £4,400 currency was levied upon them a few days afterwards, and the new governor, the Marquis Duchilleau, broke through the articles agreed upon, and treated them so tyrannically, that many of the English quitted the island.*

On Easter Sunday, 1781, the town was set on fire by the French soldiers, and from the governor's having frequently threatened to do so in the event of an attack upon the island, the incendiarism was supposed to have been committed by his private orders, the

more so as he was himself present a great part of the time, and would not allow the troops to assist in extinguishing the flames, save only in the houses of the French inhabitants. Property to the value of £200,000 sterling was destroyed in a few hours. The colony became rapidly impoverished; indeed, it appears to have been the policy systematically pursued by the conquerors to reduce it, as far as possible, to insignificance, that they might at the close of the war, be suffered without difficulty to retain possession. The unworthy manœuvre failed; England insisted upon and obtained the restoration of the island in 1783, but the French manifested their ill-will to the last moment, by demolishing the fortifications they had built, destroying with gunpowder several which had been erected previously to their invasion, and doing serious damage to the remainder.

In 1795, Victor Hugues, relying upon the disaffection of many of the French inhabitants, and aware that there was only a single company of regular troops in the island, dispatched a republican force of about 600 men, who landed in two parties, at different spots, and were joined by some of their countrymen. The determined conduct of the militia, and the bravery of the negroes, preserved Dominica to England, and the coast was thenceforth carefully guarded by armed vessels.

On the 9th of April, 1802, the whole of the 8th West India regiment (blacks), stationed at Prince Rupert's, irritated by having been mulcted of their pay and other grievances, but in particular by a wicked report that they were to be sold as slaves, mutinied, and murdered the whole of their officers, with two exceptions. The tidings of this catastrophe were not known at Roseau until the following day. The governor (Cochrane Johnstone) collected militia and regulars, dispatched them by sea to the scene of action, and proceeded thither himself on the 11th. The rebels having scarcely any ammunition, agreed to submit, and were met by the governor at the head of 500 men, and commanded to ground their arms, under pain of being attacked, instead of which they shouldered their weapons, and prepared to resist. A heavy fire was immediately poured in upon them, and a furious but brief contest ensued, which soon terminated in their complete dispersion; some scrambled up the fortified ridges, and fired the cannon fixed there upon their pursuers, and then flung themselves headlong down the precipitous rocks. Sixty were killed, 370 taken prisoners, and a few escaped to the woods and mountains. The loss of the whites was four slain, and twenty-four wounded. Several of the ringleaders were executed, and thus ended this melancholy tragedy, notwithstanding which the governor declared his confidence in the fidelity of the black regiments generally quite unshaken. Unfortunately the part which he is believed to have acted in the matter, would suffice to have prevented full investigation into the causes of an outbreak so inconsistent with the usual loyal character of the negro corps.

In 1805, a marauding attack was made by a French force. About 4,000 men were landed, the town was

* Atwood's *History of Dominica*, pp. 140, 155.

† The father-in-law of the author (the late Mr. George Barron) was seated at whist with the officers of the regiment at Prince Rupert, when the news of the mutiny was communicated. He hastily quitted the table, to proceed to the powder magazine, of which he had charge, but on the way was shot through the thigh and stomach. A negress had him conveyed to her hut, and he lay there con-

cealed two or three days and nights, with the keys of the powder magazine under him, and loaded pistols by his side, determined to defend them with his life. Of his three late associates, two, if not three, were barbarously murdered and literally cut to pieces, within half-an-hour of their quitting the card-table. He received the commendations of the home authorities, and eventually a pension of £300 a-year.

set on fire in several places, and after a severe struggle, during which 500 of the assailants were killed or wounded, General Prevost abandoned Roseau, and retreated to Prince Rupert's, whither the French commander, La Grange, did not attempt to follow him, but levied a heavy contribution from the miserable inhabitants, destroyed or carried away the shipping in the anchorage, and quitted the island.

In 1813, and part of 1814, Dominica was harassed by what was termed a "Maroon" war, occasioned by the marauding incursions of about 500 negroes, fugitive slaves, and others, who had established themselves in the mountain fastnesses. They were at length totally subjugated or killed; the means used were sufficiently unscrupulous, the governor (Ainslie) having publicly proclaimed that the soldiers, or rangers, as they were termed when employed on this service, had "orders to take no prisoners, but to put to death men, women, and children, without exception;" a reward was offered for each fugitive killed, and the owner of every such slave was indemnified by the colony. This flagrant barbarity excited the severe censure of the British Parliament; it was declared, not without some reason, that the colonists, no longer able to procure slaves by importation, had carried on hostilities against the Maroons for the purpose of reducing them indiscriminately to bondage, and the governor was recalled. There is no other event requiring notice in the history of Dominica excepting the great charge common to all the British West Indies, from slavery to apprenticeship, in 1834, and from apprenticeship to complete freedom in 1838.

PHYSICAL FEATURES AND TOPOGRAPHY.—Its early discoverers found the island "so covered with trees that they could not see so much as an ell space of bare earth or stony ground;" and Columbus on his return to Spain endeavoured to satisfy the curiosity of Queen Isabella, by crumpling a sheet of paper in his hands, in order to give her some idea of the jagged and compressed appearance of its mountains. It still retains the same characteristics, and a late writer speaks of it "as truly a highland country, a land of mist, and rainbows, and mountain-torrents," and dwells with enthusiasm on its luxuriant vegetation, its trees laden with fruit, and flowering shrubs descending to the waters' edge, except where the cliff sometimes, for considerable distances, presents a perpendicular face of rock. The mountains, peaked, lofty, and abrupt as they are, occasionally rising to the height of 5,600 feet above the level of the sea, are mantled to their very tops with verdure; sometimes they are divided only by narrow ravines, or luxuriant dells; but at others they enclose large and perfectly level savannas. Dominica is abundantly watered by streams and streamlets, chiefly supplied, it is said, by a large fresh water lake situated on a mountain summit nearly in the centre of the island, which covers a space of several acres, is in some places unfathomable, and spreads into three distinct branches; having altogether a very extraordinary appearance. Several of the mountains emit sulphureous vapours, and are called Soufrières, this term being applied alike to active volcanoes, like those of St. Vincent or Guadaloupe, or to the numerous quarries of hot sand, and boiling mineral springs, which are either the remains of ancient craters, or minor eruptions from a soil highly impregnated with volcanic elements. The island is divided into ten parishes. *Roseau*, the chief town, is situated

in the parish of St. George, on a point of land on the south-west coast, which forms two bays, that of *Woodbridge's* to the north, and *Charlotte Ville* to the southward. Viewed from the sea the town is not a very pleasing object, but seen from the edge of *Morne Bruce*, a lofty table rock occupied by the garrison, it has a very different appearance; its long, spacious, regularly laid out and well paved streets, large square, market-place, government-house, bounded by a pleasant garden, and the shingled roofs of the dwellings, tinged with the intense blue of the heaven above them, have altogether much of the clear, well-defined aspect which the good towns of France have when viewed from an eminence. The remaining portion of the landscape is extremely beautiful, the valley runs up for many miles in a gently inclined plane between mountains of various heights and forms, most of which are crowned with rich coffee plantations, that perfume the air to some distance over the sea; the Roseau River rolls a deep and roaring stream down the middle of the vale, and is joined at the outlet of each side ravine by a mountain torrent, whilst at the top, where the rocks converge into an acute angle, a cascade falls from the apex, in a long sheet of silvery foam.* There are no public buildings requiring notice, except the gaol, a fine stone building erected from funds contributed by charitable persons in England, for the relief of the sufferers by the fire of 1781, which could not, it appears, be distributed, owing to the deaths of some and the emigration of others of the persons for whom it was intended.† The roadstead of Roseau is capacious, but dangerous during the hurricane months (from the end of August to October), when the sea often flows turbulently from the southward, in billows of amazing height. The fortifications of Roseau, namely *Young's Fort*, *Melville's Battery*, *Bruce Hill Batteries*, and *Fort Desmoulins*, occupy strong and commanding positions.

Prince Rupert's Bay, in St. John's parish, on the north-west side of the island, is three miles wide, and one and a half deep, offering a spacious basin, in which the whole of the British navy might safely ride at anchor at all seasons, and sheltered by two mountain ridges called the Cabaretas, the inner of which is about 500, the outer 600 feet in perpendicular altitude, and both beyond the reach of any other elevated land. *Fort Shirley* stands between the two Cabaretas, with a flat of 100 acres in extent at its base; in time of war the fortifications on these heights might be rendered almost as strong as Gibraltar. *Portsmouth*, the so-called town, laid out on the shore of the bay, returns two members to the assembly, but is a very inconsiderable place. The *Grand Savanna*, an elevated plain about a mile in extent, possesses large quarries of excellent freestone, which at one time formed an article of export to Guadaloupe and other islands. Very little of the soil has been brought into cultivation beyond the river levels, and the slopes of the mountains; the rest remains a fertile wilderness. The monkey, wild boar, and agouti, a small hairy animal, half-pig half-rabbit, still tenant the woods, whence a species of boa constrictor occasionally emerges on marauding excursions to the nearest poultry yard; and numerous parroquets, hawks, doves, and varieties of humming-birds, add, by their brilliant plumage, a new charm to the glens and glades, embowered in richest foliage, a prominent and charming characteristic of which is ever formed by the branching tree-ferns, which grow to the height of

* Coleridge's *Six Months in the West Indies*, pp. 157-8.

† Atwood's *History of Dominica*, p. 185.

twenty or even thirty feet, and wave their delicate feathers over the whole scenery of this romantic island. The Guana is not uncommon, and there is a large edible frog, which is caught in great numbers and esteemed a delicacy.

The GEOLOGY and MINERALOGY of Dominica have been little investigated; according to Atwood,* pieces of silver ore have been found in the north-east portion of the interior. The SOIL in some places is a light brown-coloured mould, that appears to have been washed down from the mountains, and is mixed with decayed vegetable matter. In the level country towards the sea-coast, and in many parts of the interior, it is a fine deep black mould, well adapted for the cultivation of the sugar-cane, coffee, and other tropical produce. The under-stratum of the soil is sometimes a yellow or brick clay, in others a stiff terrace; but generally very stony. The CLIMATE is hot and humid, but the frequent mountain breezes are refreshing and salubrious. The wet season sets in about the end of August and lasts till the beginning of January, with frequent intervals of fine weather. Neither the rainy nor the dry season appear to be accompanied by illness, but irregular rain and sunshine usually induce ague and intermittent fevers. Temperature of the low districts varies from 69° to 88°.

POPULATION.—In the statements of different writers (Edwards and Southey more especially), regarding the population at different epochs, there are discrepancies which are not easily explicable. The following table is the best I have been able to frame upon this head:—

Year.	Whites.	Free Coloured.	Slaves or Blacks.	Total.
1763	1,718	500	5,872	8,090
1773	3,350	750	18,753	22,853
1787	1,236	445	14,967	16,648
1805	1,594	2,822	22,083	26,499
1811	1,325	2,988	21,728	26,041
1834	720	3,814	14,175	18,709
1844	—	—	—	22,000
1851	—	—	—	—

Note.—No classified returns for the years 1844 and 1851.

There appears to have been no census in 1851. In that of 1844 there was no classification as to descent. The proportion of creoles and whites can be but small; it comprises, notwithstanding, the issue of English, Scotch, Irish, a few American refugees, a large proportion of French, and some Spanish, Italian, and Genoese immigrants. There are said to be still a few Caribs, who maintain themselves by hunting, fishing, and basket-making. The language commonly spoken is a French patois. The number of males in 1844 was 10,596; of females, 11,604. The town of Roseau contains about 4,000 inhabitants. The conduct of the freed blacks, albeit very cruelly used during slavery and even apprenticeship, is highly satisfactory.

In 1839, the planters at a public meeting acknowledged, "with feelings of unmixed gratification, the peaceable and quiet disposition evinced by the labourers as a body, since their entire emancipation." Here, as in other islands, they have purchased land to a considerable extent, consisting of private estates and Crown property. The lieutenant-governor, in March, 1852, in his annual official despatch, adverts to their prosperous condition and increasing means,

* *History of Dominica*, p. 5.

and to the contentment which "very generally prevails amongst the labouring classes."—(*Blue Book* for 1851, p. 141.)

GOVERNMENT as in the other islands, having representative assemblies; the majority of the representatives, who are in number nineteen, are men of colour.

RELIGION.—The Roman Catholic form predominates; there is a small Church of England, and an active Wesleyan ministry. The numbers of the different persuasions, in 1844, were, Church of Rome, 19,040; Church of England, 714; Wesleyans, 2,531; Moravians, 5; unknown, 179.

EDUCATION.—Nine Roman Catholic and several Protestant schools. A Board of Instruction, with an inspector of schools, was appointed in 1850-'1.

CRIME.—Total commitments, in 1851, 219. The lieutenant-governor reports, "a decided diminution."

PRESS.—One newspaper.

FINANCE.—Revenue in 1834, £3,905; in 1851, £12,901, of which £5,356 were derived from import duties. Civil expenditure paid by England, in 1851, £4,441, including the salary (£1,200) of the lieutenant-governor. Commissariat disbursements in the same year, £7,226.

COMMERCE.	1833.	1851-2.
Sugar . . . hogs.	3,230	4,252
Molasses . . . casks	596	807 ¹
Rum . . . pun.	309	295
Shipping inwards tons	7,606	12,046
Imports . . . value	£53,506	£71,828

Note.—¹ Puncheons.

The statistics of the revenue afford satisfactory proof of the commercial progress of the colony, exhibiting a steady increase during the last three years, whilst the amount of imports and exports, for the same period, present an equally favourable aspect.—(Report dated March, 1852, accompanying *Blue Book* for 1851, p. 140.)

MONTserrat,—

was first seen by Columbus in 1493, and so called from its real or supposed resemblance to a mountain of the same name, about twenty miles from Barcelona. It is situated in 16° 54' N. lat., and 61° 34' W. long., about thirty miles north-west of Antigua, and is loosely estimated at nine miles in breadth, and as many in length, with an area of 30,000 acres.

HISTORY.—The accounts recorded of this small island are scanty and unsatisfactory. According to Peter Martyr, the Haytian captives whom Columbus had on board with him at the time of its discovery, described it as very populous, and replenished with all things necessary for the sustenance of man. In 1632, a party of adventurers from St. Kitt's, chiefly Irish Roman Catholics, came over and, if the testimony of the Abbé Raynal may be trusted, "were not content with disturbing the peace of the many savages then inhabiting it, but very soon contrived to expel them." The colonists would seem to have increased rapidly by emigration, since Oldmixon asserts that, at the end of sixteen years, they numbered upwards of 1,000 white families, the adult males constituting a militia of 360 effective men. In 1712 the invasion and depredations of a French armament greatly injured the island, which in 1782 was captured by France, but restored at the close of the war, and has ever since remained a British possession.

PHYSICAL FEATURES AND TOPOGRAPHY.—The

150 MONTSERRAT—PHYSICAL FEATURES, POPULATION, COMMERCE.

interior is, for the most part, a congeries of mountains, occasionally attaining an altitude of 2,500 feet, extending south-east and north-west, covered with dense forest, and terminating towards the north in a bold headland, close to which vessels may approach with safety, but there is no landing there, and indeed no secure anchorage along the whole coast-line.

The southern shores are lofty and precipitous, rising abruptly to the height of 1,500 feet, and the sea, for a mile or two off, is bordered by immense rocks and shelving coral banks. Of the whole surface, only one-third is considered cultivable, the remainder being very mountainous, or barren. The heights in many places are rendered inaccessible by steep clay-stone masses, and immense perpendicular chasms, several hundred feet deep. Even where the country slopes towards the sea-coast, or extends between the flanks of the various groups, the surface is commonly furrowed with deep and broad ravines, serving as channels for innumerable torrents, which, in the rainy season, bring with them large accumulations of sand and gravel, and often completely blockade roads at all times rugged, and difficult to traverse even on the patient and sure-footed mules. Among the heights there is a Soufrière, situated about 1,000 feet above the sea, in a romantic dell, between three conical peaks. A hot spring rises here, whose waters boil up violently, cooling gradually as they meander towards the sea; the surrounding surface is hot everywhere, and strewn with irregular blocks of limestone and clay mounds entirely crusted with pure alum. The sulphur procured here is less valuable than that of the Dominica Soufrière; it has been shipped to America at a cost on board of four dollars per ton; the expense of freight forbids its being sent to England.

Plymouth, the only town, is small but convenient, the houses are built of good grey-stone, and embowered in trees. The public buildings are not creditable, but the colonists plead poverty in excuse. Great damage was inflicted here by the hurricane of 1825, both to life and property; above 230 persons are said to have perished in various miserable ways.

GEOLOGY—resembles that of the neighbouring islands. Many of the rocks seem vast masses of clay, of various hues. The conical hills abound with carbonate of lime, iron pyrites, and aluminous earth.

The **SOIL** is in general dry, light, thin, gravelly, and thickly strewn, except in the valleys, where there is a loamy deposit.

CLIMATE.—An elastic atmosphere, and temperature varying according to position at the windward or leeward sides of the island, or the elevation above the sea. Hurricanes occasionally occur.

POPULATION.

Year.	Whites.	Free Coloured.	Blacks or Slaves	Total.
1673	1,500	—	523	2,023 ¹
1707	1,545	—	3,570	5,115
1720	1,688	—	3,772	5,460
1787	1,300	260	10,000	11,560
1805	1,000	250	9,500	10,750
1812	444	402	6,537	7,383
1828	315	818	6,986	7,119
1834	312	827	6,401	7,540
1844	—	—	—	7,365
1851	—	—	—	7,053 ²

Note.—¹ An estimate. ² Males, 3,149; females, 3,904. No classified returns for the years 1844 and 1851.

The decrease of population has been owing to the emigration of numbers of the labouring class, between the ages of 16 and 45. The diminution between 1844 and 1851 was about 25 per cent. The increase by births must have been considerable, nearly half the population in 1851 being under 16 years of age. The births in that year were 271, deaths 78.

GOVERNMENT.—A president, acting in subordination to the governor-in-chief at Antigua; a house of assembly of twelve members; and an executive and legislative council of seven.

RELIGION.—Three clergymen of the Church of England, and a small Wesleyan establishment.

EDUCATION.—Ten public schools, containing, in 1851, 345 males and 386 females = 731, and 844 Sunday scholars. The large number in proportion to the scholars is necessitated by the difficulty of communication between various parts of the island.

CRIME.—The president, Mr. E. D. Baynes, in reporting officially on the *Blue Book* for 1851, says—

“ I do not think there is in the West Indies a more orderly community than that of Montserrat. * * * * Such is the confidence of the authorities in the conduct of the population, that the police force was discontinued several years since, and in July last the services of the only remaining paid constable were dispensed with. * * * Our criminal calendars, instead of exhibiting numerous felonies and other offences of magnitude, are now confined to petty police charges. * * * Our prison, instead of being crowded as formerly, has now been for more than a month (including the festive and idle season of Christmas) without an inmate.”

FINANCE.—Revenue, in 1834, about £2,000; in 1851, £3,235; payments by England, in 1851, £1,770 including £500 to president, or officer administering the government.

Coin in circulation, about £1,000.

COMMERCE.—Value of imports, in 1834, £20,123 currency; in 1851, £9,498 sterling. Sugar exported, in 1833, 654 hogshheads; molasses, 425 puncheons: in 1851, sugar, 926 hogshheads; molasses, 434 puncheons.

An extensive change of ownership in the soil has recently taken place, from embarrassed to unembarrassed parties, and has been attended by favourable results—

“ Long-abandoned estates have been restored to cultivation by the new purchasers, who, instead of leaving their labourers for months, sometimes for years, or altogether, unpaid, settle with them punctually, and thus acquiring confidence, instead of having cause to lament the want of labour, have more applicants for work than they can employ, even at the extremely moderate rate of 5½d. per diem for hard descriptions of labour, such as cutting wood and clearing land, and 4d. for lighter work. * * * It is prejudice or fatuity, with so many and such unmistakable signs of amelioration before our eyes, to join in the cry of decay or ruin with those whose imprudence and mismanagement have, beyond all contest, ruined themselves and temporarily injured others, but whose downfall has proved the redemption and safety of the island. That parties in such a position should be incapable of appreciating, or unwilling to acknowledge the improvement in which they can no longer participate, and which in fact their own fall has prepared and made practicable, is by no means matter of surprise; but the impartial observer, the punctual landlord, and the labourer so long unpaid, will not confound individual with general distress, nor mistake private for public depression; but will, on the contrary, hail the beneficial effects of a change that has taken the land from the possession of parties unable, whether from want of capital or want of method, to cultivate it successfully for the advantage of society, and placed it in the hands of others

more sensible of their duties, more alive to the reciprocal obligations between employer and labourer, and who have the will and the means of regularly employing and punctually paying their labourers."—(President Baynes' report accompanying *Blue Book* for 1850, p. 110, 111.)

It would be well for Jamaica, and other islands, if the altered state of affairs so well described in the preceding remarks, were equally applicable to them.

REDONDA,—

so named by Columbus from its rounded form, is a high, rocky, uninhabited isle, situated between Montserrat and Nevis, which seen from different points of view resembles a great ship under sail, a haycock, or a huge tower. It is of easy access on all sides, but its western coast affords anchorage in ten to twelve fathoms. At the south-east is a small islet called the *Pinnacle*, which nearly joins the land. To the westward and northward there are said to be sand-banks abounding in fish.

NEVIS,—

To the north-east of Montserrat, in 17° 10' north lat., 62° 42' west long., is nothing more than a single mountain, rising like a cone in an easy ascent from the sea, to the height of 2,500 feet, and bordered by a fertile strip of level and highly cultivated land. The area is about twenty square miles. The island received from Columbus the appellation of *Nievis*, or *the Snows*, either from the resemblance its lofty summit canopied in a mass of fleecy clouds bore to a snow-capped eminence of that name in Spain, or as Edwards supposes, from a white smoke which probably then issued from a now extinct volcano.

HISTORY.—A small settlement was formed here in 1628 by emigrants from St. Kitt's, under the protection of Sir Thomas Warner, who dying in 1638 was succeeded by Governor Lake, "a knowing person and fearing God,"* under whose administration the little colony progressed so rapidly as to become, within twelve years of its formation, of national importance. Its prosperity continued for nearly half a century, but was then checked by a long series of disasters. In 1689 a dreadful mortality swept off half the inhabitants. In 1706 the French came on a marauding expedition, and carried away between 3,000 and 4,000 slaves, whom they sold to their own

planters in Martinique, and in the following year a fearful hurricane well nigh completed the ruin of the island. By slow degrees commerce revived, sugar however becoming the sole article of export, and its cultivation entirely superseding that of tobacco and ginger, which had been profitably carried on by the early settlers.† The slaves are said to have been comparatively well-treated in Nevis, but this statement it is difficult to credit after perusing the circumstances connected with the case of a miscreant named Huggins,‡ whose trial revealed to the British public, in 1811, the atrocious cruelties that might be committed in slave-holding colonies, in defiance of all laws made by the Imperial Parliament, and which the local legislatures could not or would not prevent or punish. So late as 1825, Coleridge, in describing the island, commented on the wretched clothing of the slaves, alike insufficient for the requirements of common decency, and even health (for it is at times really cold on many of the estates), and adverted to various things which even he, the new bishop's nephew, the petted guest of the planters, and the sworn foe of "methodists and saints," could not but admit ought to "make the planters think a little." Indeed few Englishmen with eyes happily unused to such sad scenes could have "not seldom watched a poor girl in the fields, who has turned away from the gaze of man, and shrouded her bosom with crossed arms and declining head," even though his experience showed him no worse sufferings to which womanly modesty and virtue might be exposed than this degrading want of proper covering, without questioning the soundness of the system under which such things were suffered to continue. The great change visible in the appearance of the labouring classes, speaks volumes in favour of emancipation; the former slaves throughout the West Indies, are all decorously clad, according to the requirements of the varying climates under which they live.

PHYSICAL FEATURES AND TOPOGRAPHY.—When first visited, Nevis was densely clothed with forest, and is still supplied with fine timber, and well watered by clear springs and rivulets. Plantations commence at the sea shore, and ascend the mountain slopes nearly to its summit; the fertility of the soil diminishes with increased height; but the temperature becomes proportionately lower, and favours the growth of many European vegetables, as sea-kale, turnips, and carrots.‡ The coast-line affords no

* Davies' *History of the Caribby Islands*, p. 20. † *Idem*.

‡ In direct opposition to a clause in the Melioration Act of 1798, a wealthy planter, named Huggins, ordered his slaves to labour by night, in carrying out dung, and this illegal exaction was said to have produced some appearance of insubordination among them, to check which, or rather to gratify his own fiend-like cruelty, he, with his two sons, brought thirty-two of them to be flogged with cart-whips in the public market of Charlestown, by two drivers expert in the inhuman office. Many of them were women, one of whom received 291 lashes, and a man 365, this number being inflicted in direct defiance of the amount (thirty-nine) prescribed by law not to be exceeded, yet it was done within sight or hearing of five magistrates, not one of whom interfered. Of the victims, many fell sick of fevers, and a woman wasted away and expired in a few months. A coroner's inquest, composed of three friends of the murderer's, declared her to have died "by the visitation of God." The House of Assembly passed resolutions denunciatory of the whole transaction. Huggins was indicted and brought to trial, and could not attempt to deny having violated a positive statute; which, however, was treated by his counsel as a very slight offence, the Melioration Act

being sneered at as a mere deception, passed for the purpose of silencing the clamours of "the saints" in England. The jury acquitted Huggins, who forthwith prosecuted the printer of the *St. Christopher's Gazette* for libel, for having published the resolutions of the House of Assembly, and the defendant was actually found guilty, and sentenced to a month's imprisonment. When these proceedings became known in England, orders were sent out for the public dismissal of the magistrates who had witnessed without attempting to prevent so horrible a scene; but the chief criminal appears to have escaped unpunished, by man, for this as for many other cruelties perpetrated on his wretched slaves, some of whom committed suicide to escape from him, and many others perished on his estates, like the unhappy woman above mentioned.—(Continuation of Edwards, vol. iv., pp. 456-77. *Quarterly Review*, September, 1819.)

§ The fruits here are peculiarly well-flavoured, especially the pines and oranges, which, according to Coleridge, are "most ambrosial." This entertaining writer says—"In Nevis a man is always placed as sentinel in a pinery; for, otherwise, those dogs the monkeys, who are very good livers, and know a ripe pine to a day, are sure to take an

harbours, but has three roadsteads; the best and most frequented of which is that situated in the wide curving bay, on whose shores *Charlestown*, the seat of government, is built. It is a place of some pretension; the court-house is a handsome building with a square in front, and contains commodious public offices. *Charles Fort* is the chief fortification. Government-house is a convenient and pleasant edifice, situated a little above the town, on the lowest slope of the mountain, which rises gradually behind it. Half a mile to the south of Charlestown are extensive mineral baths, on a rising ground near the margin of the sea. There are three spacious plunge baths on terraces one above another, varying in their temperature, from 50° to 100° Fahrenheit. The lowest and largest is now used as a turtle crawl. The island, small as it is, is divided into five parishes, each of which has a church generally in excellent condition, and most picturesquely situated; that of St. John's parish (Fig-tree church),* is placed half-way up the mountain, and looks down upon a wide expanse of sea; including the town, shipping, the whole of the neighbouring island of St. Kitt's, with the summit of St. Eustatius in the distance. Besides Charlestown there are two other shipping places, called *Indian Castle* and *New Castle*.

POPULATION.—The accounts on this head given by Raynal and others are so conflicting as to afford no satisfactory evidence whatever; but according to official data† it appears that, so early as 1673, there were 1,411 white men able to bear arms, and 1,739 blacks (slaves). During the present century the progress has been as follows:—

Year.	Whites.	Free coloured.	Blacks, or slaves.	Total.
1707	1,104	—	3,676	4,780
1720	2,358	—	5,689	8,047
1730	1,296	—	5,646	6,942
1778	2,050	140	9,100	11,290
1812	501	603	9,326	10,430
1834	300	200	8,815	9,315
1844		9,571 ¹	—	—
1851		10,200 ²	—	—

Note.—¹ Of whom there were 4,418 males and 5,153 females. ² The estimate of the president of the island; there having been no census taken in 1851.

The European settlers are chiefly of British descent. The president reported in 1851 that the working classes still preserved their former good character. The majority of the field labourers work on the metayer or share system, as the planters, whose credit no longer enables them to obtain loans from England, have no capital for the payment of wages, and the credit of the island has for many years been at a low ebb.

GOVERNMENT.—A representative assembly of nine, and council of seven members, and a president, under the governor-in-chief of Antigua.

evening walk from the mountain, and will, I am told, fairly pick, pack, and carry away all the eatable fruit in the garden at one visit. Certainly Jacco is a rogue, a villain, a thief; yet the fellow's cleverness is so great, his malice so keen, his impudence so intense, that it exceeds the hardness of my heart not to like him. You may offer your fine green Seville oranges to him by handful; deuce a bit of the rind of ten thousand of them will Jacco touch! no! no! massa—dem monies savey what bitter as well as buckra [White man.]!'"—*Six Months in the West Indies*, p. 184.

RELIGION.—Five clergymen of the Church of England. A Wesleyan Mission was established here in 1789, and has ever since been prosecuted with diligence and success.†

EDUCATION.—Eleven public schools, with 647 male, and 630 female scholars. There are several seminaries conducted by Wesleyan Missionaries.

CRIME.—Commitments in 1851, six.

FINANCE.—No returns for 1834; in 1833, revenue stated at £5,794 (but doubtful whether for the single year); in 1851, £3,705. There is a debt to Great Britain of £12,000, now in course of liquidation.

Labour is 6d. to 1s. per day.

COMMERCE.	1833.	1851.
Value of Imports	£18,567	£16,483
Sugar exported . . hogsheads	2,826	1,885
Molasses gallons	17,864	66,900
Shipping inwards . tons . .	8,266	8,700

In 1851 there were seven steam engines, forty-five wind and forty-seven cattle mills employed in the manufacture of sugar.

ST. CHRISTOPHER'S, COMMONLY CALLED ST. KITT'S,—

was named by Columbus in 1493, from the form of its mountains; the island having on its upper part, as it were upon one of its shoulders, another lesser mountain, which gave it some resemblance to the statues common at that period on church porches of St. Christopher carrying our Saviour; by its numerous native proprietors, it was called *Liamuiga*, or the Fertile Isle. It is separated from Nevis by the "Narrows," a rocky strait impeded by shoals, but affording a ship channel of at least six fathoms depth. St. Kitt's (*Fort Smith*) is in 17° 17' N. lat., 60° 42' W. long., and extends north-west and south-east about twenty miles, with a small and very unequal breadth, and an area of about 68 square miles, or 43,726 acres.

HISTORY.—The honour of having been the first West Indian island colonised by England has been assigned by different writers to Barbados, Antigua, and St. Kitt's; there was certainly no great difference of time between the three; but the last-named appears to have had the priority. The Spaniards never took possession: and the first attempt at its settlement was made, according to Dr. John Campbell, by Mr. Thomas Warner, who established himself and about fourteen other persons there, in January, 1623, immediately commenced the cultivation of tobacco, and was proceeding very satisfactorily until, towards the close of the year, when their plantations were demolished by a hurricane; Warner returned to England to seek succour, which he obtained from the Earl of Carlisle, who despatched a ship, the *Hopewell*, laden with all kinds of necessaries, in the beginning of 1624. In the following

* In the burying-ground attached to this church is a monument erected by Viscountess Nelson (who was born here), to the memory of her father, or some relation. It may here be remarked, that the British West Indian burial-grounds are generally characterised by costly monumental structures, more conspicuous for size than elegance.

† Report of the Lords of the Committee, 1789. Supplement, No. 15.

‡ Vide Dr. Coke's *West Indies*, vol. iii., pp. 15 to 35; and Latrobe's *Report on Negro Education*. Parl. Papers, June, 1838.

year, Warner returned to St. Kitt's, accompanied by a large body of recruits; and about the time of his landing, or, as some assert, on the very same day, D'Enambuc, the commander of a French privateer, having lost several men in an engagement with a Spanish galloon, retreated here with the remainder of his crew, consisting of about thirty hardy veterans, who were well received by the early settlers, with whom they entered into an offensive and defensive alliance with regard to the Caribs. The English had previously been very kindly treated by the natives, and supplied by them with provisions; but at length some symptoms of anger were manifested at the unscrupulous usurpation of their lands, and suspicions being entertained of their hostile intentions, the Europeans took counsel together; and to prevent the possible attempts of the Caribs, fell upon them by night, and having murdered 120 of the stoutest, drove all the rest from the island, except such of the women as were young and handsome, of whom (says a contemporary writer, *Père du Tertre*, who relates these transactions, as if they were ordinary and quite justifiable), they made concubines and slaves. Some Caribs, however, escaped to the neighbouring islands, and returned, accompanied by a large body of their countrymen. In the struggle which ensued, the Europeans were eventually victorious; but 100 of them were mortally wounded by poisoned arrows, and several died raving mad; 2,000 Indians were killed or wounded, and their dead bodies were piled up into an immense mound.* The survivors fled the island, which Warner and D'Enambuc then formally divided, and some months after returned to their respective countries, where each was well received, the former being knighted by Charles the First, and sent back to St. Kitt's as governor, with 400 new recruits; and the latter, through the patronage of Richelieu, was enabled to assemble 532 intending colonists, who sailed from France in 1627; but, from the wretched and inefficient supplies furnished by the new company who fitted out the ships, for the most part perished miserably at sea for want of food.†

The disasters attendant on the establishment of a colony, founded in crime, did not end here, for the Spaniards who, before the arrival of either the English or French, had been in the habit of touching at the island for wood and water, and had even left their sick men under the care of the natives who had kindly tended them, asserted their right of discovery, and, in 1629, at the head of a powerful fleet, invaded St. Kitt's in a treacherous manner. The French planters hastily quitted the island; but for want of provisions many perished on their way to Antigua; the English fled to the mountains, but were compelled to surrender unconditionally; 600 of the ablest men were captured, and carried off to labour in the Spanish mines; the rest, consisting chiefly of women and children, were commanded to quit the island in some English vessels which had been seized at Nevis; the Spanish commander (Don

Frederick de Toledo) then laid waste all the settlements within his reach, and sailed off to attack the Dutch colony at Brazil.‡

The remaining English persisted, however, in retaining their position in St. Kitt's, the French returned there, and in the absence of an external foe, internal strife, more or less fierce, at different times scourged the population for the next half century; which people were the first and chief aggressors it is now difficult to say;—each party inflicted great suffering, and temporarily succeeded in expelling the other from the island, which was at length, by the Peace of Utrecht, ceded wholly to the English, some few only of the French being suffered to retain their estates, and become naturalised.

In 1782, St. Kitt's was captured by a powerful French armament, after a tedious siege of more than a month's duration, in which the enemy are said to have lost 1,000 men in killed and wounded, and the English between 300 and 400, together with property to the amount of £160,000 sterling,§ “in negroes and cattle, and the burning of the canes,” says Edwards, who adds that this “sum was made up to the sufferers by a poll-tax on the slaves of no less than forty shillings.”|| In the following year the island was restored to England. In 1804, a tremendous hurricane, in which 274 vessels are said to have been destroyed,¶ included in its desolating sweep all the windward islands, but was especially felt at St. Kitt's. In 1805, a French marauding expedition visited the island, and, under the threat of attacking the fortifications at Brimstone Hill, and destroying the town of Basseterre, extorted from the inhabitants a contribution of £18,000, and burned, after first pillaging, six valuable vessels they found in the anchorage. Since this period no other event has occurred requiring notice in this necessarily brief historical sketch.

PHYSICAL FEATURES AND TOPOGRAPHY.—The form of St. Kitt's may be compared to an outstretched leg, the upper and larger part or calf being about five miles in breadth, the lower, or the foot, about four, and the ankle being represented by an isthmus not more than half-a-mile wide. A central ridge of volcanic origin traverses the length of the island, increasing in height towards its northern extremity, terminating to the southward in the verdant slopes of *Monkey Hill*,** and in the middle forming a rugged mountain group, above which, overshadowing the crater of an extinct volcano, the gloomy crag well named *Mount Misery*, rises to the height of above 3,711 feet in nearly perpendicular ascent, its bare, black summit being generally visible, whilst the lower parts of the surrounding eminences are enveloped in clouds. This striking object imparts a peculiar majesty to the softer features of the scenery, the land everywhere sloping from the centre towards the coast, and being for the most part in a state of high cultivation. The crater beneath (or rather forming part of) Mount Misery, is 2,600 feet in depth; the bottom of it is described to be a level of

* Southey, vol. i., p. 256.

† Edwards, vol. i., p. 458.

‡ The treaty of 1630 would, it was hoped, put an end to such enormities as these, but it did not do so: for only eight years after the affair at St. Kitt's, the Spaniards attacked a small English colony established in the small island of Tortuga, and put every man, woman, and child to the sword.

|| DIV. VIII.

¶ Edwards, vol. i., p. 510.

¶ A ship from Surinam sailed for three days through the floating fragments of the wrecks.—Edwards, vol. v., p. 72.

** The monkeys here are mostly small, but even more than usually mischievous. They assemble in troops, and commit sad havoc among the sugar-canes, but are too cunning to be shot, always placing a sentinel in advance, who sets up a terrible screeching on the approach of danger.—Sturge's *West Indies* in 1837, p. 44.

fifty acres in extent, of which seven are covered with a lake, and the rest with grass and trees. Hot water, impregnated with sulphur, still issues from the fissures. Several streams descend from the mountains, four of which are called rivers, though they little merit that name; during the rainy season, few plantations are without rivulets, some of which occasionally become destructive torrents. In the low lands springs are plentiful, but often unfit for use in consequence of their being strongly saline. There are large salt-ponds at the southern extremity of the island. The water in use is chiefly that supplied by the abundant rains, preserved in large tanks. The coast-line has roadsteads, but no harbours.

Basseterre, the capital, is a low, hot, dusty town, with some good buildings, a spacious square, and Church of England and Wesleyan places of worship. Seen from a neighbouring eminence in the road to the picturesque parish of St. Mary Cayenne, on the opposite coast, the town, with the shipping in the anchorage, defended by Fort Smith, has a pleasing appearance; and the lovely vale of Basseterre, with its tall moving windmills, houses, sugar-works, and cottages, embowered in trees, has many points of resemblance to the village scenery of England, although beautiful wild flowers, large hedges of aloes, and groves of the sea-side grape,* are decidedly foreign characteristics. The churches belonging to the different parishes (nine in number), into which the island is divided, are generally large, well-arranged, situated near the sea, and command fine views of the country, forming themselves very pleasing objects, as do also the buildings attached to the Wesleyan and Moravian Missions.

Sandy Point is a sea-port town or village on the north-west shore; near it are the defences of *Charles Fort* and *Brinestone Hill*; the fortifications on the latter are very imposing, being situated on a huge rock, 750 feet high, precipitous on all sides, backed by the mountains, and fronted by the coast-level and the western sea. There are several pretty fishing-places in various localities.

GEOLOGY.—Formation igneous,—immense layers of volcanic ashes are found in every parish; and the soil is chiefly of a dark grey loam, extremely porous. At Sandy Point, St. Ann's Parish, there are alternate layers of this loam, and ashes, to the depth of seventy-five feet, on a substratum of gravel. This compost is considered one of the best in the West Indies for the cultivation of sugar. Brimstone Hill consists of granite, limestone, primary rock, schistus, volcanic ashes and madrepores, with a very small proportion of alluvial deposit on a few spots. Clay is found in considerable quantities in the high or mountain land, but rarely in the low land. Among the central mountains, one contains mines of sulphur; and not far from Fort Charles traces of silver ore have been discovered.

CLIMATE.—From the smallness of the isle and its elevation above the sea, St. Kitt's is extremely dry and healthy; the mean temperature on the coast is 80, but the mornings and evenings of the hottest days are agreeably cool. The coldest month is February—the warmest, August. The winds for the greater part of the year are from the north-east and south-east. The rains that fall are more frequent than heavy, and the bracing atmosphere is evidenced by the ruddy complexions and physical strength of the inhabitants.

* The *coccoloba uvifera* bears a fruit which, when cooked, has the flavour of gooseberries.

POPULATION.—The white inhabitants were formerly numerous; in 1673 there were 496 men able to bear arms, and 352 negroes in the island. Since then the numbers have been as follows:—

Year.	Whites.	Free Coloured.	Slaves, or Blacks.	Total.
1707	1,545	—	3,570	5,115
1720	1,688	—	3,772	5,460
1724	1,000	—	4,400	5,400
1729	1,545	—	5,616	7,161
1756	1,300	—	10,000	11,300
1774	1,912	1,908	8,853	12,673
1805 ¹	1,800	—	26,000	—
1812	1,610	1,996	19,885	23,491
1834	1,200	2,500	19,780	23,480
1844	—	—	—	23,177
1851	—	—	—	—

Note.—¹ No return of the free coloured population for 1805. In 1844 there were 10,523 males and 12,654 females. There was no census in 1851; births in that year, 945; deaths, 650; not including the Roman Catholics, who are less than 200 in number.

The president (Robert Claxton) administering the Government, reports—16th of April, 1847,—“I continue to afford my testimony to the good conduct and industrious habits of the labouring population. The independent villages which are continually starting up and increasing in extent in every parish of the island, afford a regular and healthy supply of labour to the adjacent estates.” The implemental husbandry introduced originally into St. Kitt's, under the charge of Europeans, is now being worked by “native labourers, whose emulation was excited, and has been rewarded by the additional wages which their skill has enabled them to earn.” Lieutenant-governor Drummond Hay, in 1851-'2, corroborates this testimony by stating that churches and other public buildings have been repaired; a large (comparative) amount expended on the public roads; that the schools are respectably conducted, and manifest a large numerical increase of the numbers attending them. The chief justice in the same year bears witness to the “advancement amongst the lower orders in industrial habits, and increased respect for the rights of individual property.”—(*Blue Book for 1851*, pp. 135, 136.)

GOVERNMENT.—A representative assembly, legislative and executive council, and lieutenant-governor.

RELIGION.—Chiefly Protestant; there are nine clergymen of the Church of England, also eight Wesleyan, and four Moravian chapels.

EDUCATION.—Advancing. In 1851 the public schools were—

Denomination.	Schools.	Scholars.		
		Male.	Female.	Total.
Church of England	12	369	347	796
Wesleyan . . .	8	442	443	885
Moravian . . .	4	390	368	758
Total . . .	24	1,201	1,158	2,439

CRIME.—Commitments in 1851, 193. The chief justice, in his address to the grand jury at the commencement of 1852, congratulated them “on the vast diminution of crime,” which had taken place since they last met; and the lieutenant-governor states,

that the state of the population in this respect is "favourable."—(*Blue Book* for 1851, p. 136).

FINANCE.—Revenue in 1834, £3,638; in 1851, £17,902; of this £11,327 were derived from import duties. Lieutenant-governor, salary of, £1,300, paid by England. Disbursements from commissariat chest in 1851, £8,791. Governor Mackintosh reported, in May 1851, that the financial condition of the colony was sound, and stated a fact, creditable to the community, viz., that, notwithstanding the pressure on its means, occasioned by bad crops for several years, "the Island Treasury has just paid off its last instalment of debt."

Coin in circulation, from £10,000 to £20,000. Paper-money in value, about 20,000 dollars.

Wages.—Agricultural, 6d. per day; domestic, 12s. 6d. to 20s. per month.

COMMERCE.—Value of imports :—

Year.	Value.	Year.	Value.
1833	£44,497	1850	£92,418
1834	63,018	1851	112,748
Total . .	107,515	Total . .	205,166

Note.—Shipping inwards, 1834, tons 16,964; 1851, tons 22,066. Value of exports, in 1833, £105,267; in 1851, £126,610.

There are no returns given of the quantity of sugar made during the three years preceding the abolition of slavery in 1834; the average for the six years between 1822 and 1829, was 7,060 hogsheads; the export for 1851 was 7,270 hogsheads; and here, as in other islands, the size of the hogshead has, I believe, been recently increased.

The best estates belong to absentees; nearly all are mortgaged, and from that cause subject to heavy charges. In 1850, the cost of producing sugar was the same as at Barbados; it might be brought to market ready for shipment, including charges of every kind for 12s. 6d. per cwt.; some estimated the cost at 14s.; freight to England 2s. 6d. to 3s. per cwt., except when the properties were mortgaged, when the consignees charged 4s.* The few resident planters are doing well, and here, as in Jamaica and other islands, persons who were formerly agents for absentees are buying up good properties as fast as their means will allow, and obtaining a fair profit from their cultivation. One proprietor recently purchased some land adjoining his estate at the rate of £20 per acre. The planters are wisely economizing labour, by the introduction and use of improved agricultural implements. The peasantry are anxious to buy waste land, or to lease it; but an enormous price or rental is demanded, under the idea that the labourers will thus be kept dependent on scanty and precarious wages, and prevented having homes of their own. In some cases they are working on the *métayer* or share system.

ANGUILLA, OR SNAKE ISLAND,—

so named either from its tortuous form or the various descriptions of serpents with which it is infested, is situated in 18° 15' N. lat., and 63° 0' W. long. It is the most northern of the Caribbee islands, lies forty-five miles to the north-west of St. Kitt's, and is separated from St. Martin's by a channel, of which the least

* *British West Indies* in 1850; by J. Candler and G. W. Alexander. *Anti-Slavery Reporter*; Feb. 1851.

width is four miles, and the depth from thirteen to twenty fathoms. The length is about twenty miles, the breadth varies, becoming very narrow towards the southward; the area is estimated at thirty-five square miles.

HISTORY.—Anguilla was settled by the English in 1650, and was early subject to harassing incursions from the French; but in 1745 they made a more serious attack, and 600 men were landed, under M. de la Touche; but governor Hodge, with 150 militia, defended a breastwork at a narrow pass with such success, that the enemy speedily retired, after a heavy loss in killed and captured, La Touche himself having received two wounds. The Anguillians were, however, destined to suffer severely from a subsequent assault made by order of Victor Hugues, who having, it would appear, conceived an especial dislike to the people of this petty and comparatively undefended island, despatched 300 or 400 picked men, in 1796, who having, without difficulty, made good their landing, set the town on fire, pulled down the church, seized on all private property, including the wearing apparel of the women, massacred many defenceless individuals, not sparing even children, and were preparing to carry out their inhuman orders of utter extermination, when intelligence arrived of approaching succour from St. Kitt's. The marauders hastily re-embarked, to the indescribable relief of the terrified colonists, and on the following morning encountered Captain Barton in the *Lapwing*; a sharp engagement ensued, in which the *Vuliant*, manned by 135 men, ran on shore at St. Martin's, and was destroyed with the greater part of her crew—and the second French ship-of-war, the *Decius*, which was crowded with troops, after sustaining the terrible loss of eighty killed and forty wounded, became so shattered, that Captain Barton, on the appearance of two more of the enemy's frigates, took out his prisoners and set it on fire. By a signal act of retributive justice nearly every man engaged in this iniquitous expedition was killed or captured. Since this period Anguilla has remained in peace, under the British flag.

PHYSICAL FEATURES.—The pastoral aspect of Anguilla is very unlike that of most West Indian islands. The surface is flat, without mountains or rivers, and with a deep, chalky soil. A cliffy wall, some forty feet in height, rises at the northern end, the country then slopes inward in a concave form, and towards the south is only just above the level of the sea. There are several adjacent islets, of which the largest, lying to the north-eastward, is named *Anguillita*. There are two harbours for small vessels. In the centre of the northern part of the island is a large salt lake, which is public property; in favourable years no less than 300,000 bushels have been exported, chiefly to the United States. Although both fertile and level, only a very inconsiderable portion of the surface, two or three-tenths perhaps, at the utmost, is now under cultivation. The ground provisions raised here, especially yams, are excellent; fine tobacco, millet, cotton, maize, and sugar, have all thriven, and cattle find abundant pasturage. There is no town, the houses and cottages of the scanty population are scattered in different directions, and the roads consist of level grassy tracks, pleasant to the eye and agreeable to equestrians.

The **CLIMATE** is salubrious.

POPULATION.—In 1673, Anguilla is said to have possessed 500 men capable of bearing arms; in 1724, the first trustworthy return stated the inhabitants at 360 whites and 900 negroes; in 1819, there were 360

whites, 320 free coloured, and 2,226 slaves = 2,906; in 1834, the whites and free coloured numbered 674, the slaves 2,226 = 2,920; in 1844, the population was stated at 982 males, 1,197 females = 2,179, but were not classified as to colour, the diminution being occasioned by the emigration of able-bodied labourers to islands where they could find more remunerative employment. The proprietary class, previous to the abolition of slavery, had become impoverished and indebted, the same causes having produced the same effects here as elsewhere; since then a change for the better appears to have taken place. "The native inhabitants," says Governor Higginson, "are a superior race, and particularly correct in their deportment. They are in comfortable circumstances, raise stock and provisions for their own consumption, and occasionally for exportation. Crime is almost unknown."—(Annual Report on *Blue Book* for 1846, p. 44.)

The RELIGION professed is Protestant; there is one Church of England place of worship and school-house, and a Wesleyan chapel.

Anguilla is a dependency of St. Kitt's, and sends a representative to the Assembly. The officials, including the rector, are all paid by the Home Government. A free port would probably conduce to the progress of the colony, which, notwithstanding its out-of-the-way position, has useful characteristics.

THE VIRGIN ISLANDS—

were discovered by Columbus in 1493, and thus named in honour of St. Ursula and the eleven thousand maidens famous in Romish legends. They lie to the north-westward of the Caribbee Islands, and appear to consist of the more elevated heights connected with the eastern extremity of the Cuban chain, which extends from 64° to 85° W. long., a distance of about 1,400 miles. Of this space the Virgin Islands occupy a very inconsiderable portion, though comprising about fifty isles and islets, called *Cuys*; they stretch over twenty-four leagues east and west, and sixteen north and south. The Danes possess the islands of *St. Thomas*,* which has a good harbour, *Saint Croix* or *Santa Cruz*, which is cultivated like a garden, *St. John*, and some inconsiderable islets; the remainder, and more easterly, are British: the chief are *Tortola*, *Virgin Gorda*, *Anegada*, *Jost*

* During the last war, *St. Thomas* (which had been occupied by the Danes in 1671), *St. John*, and *St. Croix*, (which they had purchased from the French), were taken possession of by England, but on its termination these islands, and their dependencies, were restored to Denmark.

† Of the manner in which the slaves were treated in the Virgin Islands, appalling evidence was given in the case of Arthur Hodge, a planter of *Tortola*, who was a member of Council; and is represented as having been a man of liberal education and polished manners, but possessed with a spirit of the most diabolical cruelty. By various barbarities, of which even a brief record would fill several pages, he was declared by a witness, upon oath, to have destroyed sixty slaves (including women and children) in about three years. He appears to have experimented upon human life much in the same manner as a chemist might have tried the effects of poison on animals, only with no other motive than the horrible one of inflicting the greatest possible amount of agony on his wretched victims. His fellow-planters (unacquainted with the full extent of his atrocities) do not appear to have regarded him with the detestation he merited; or, at least, his character as a notorious duellist protected him from any manifestation of such a feeling, until he quarrelled with and threat-

van Dykes, Peter, Guana (so called from its abounding in that species of lizards), *Normand, Beef, the Camanos, Ginger, Coopers, Salt*, and others of no importance. The total area is estimated at 58,649 acres.

HISTORY.—This group attracted little attention at the period of its discovery, in 1493; it was visited by Sir Francis Drake, in 1580, and in 1596 by the Earl of Cumberland, when on his way to attack the neighbouring island of Porto Rico; in the records of this last voyage it is mentioned as "wholly uninhabited, sandy, barren, and craggy." The islands now belonging to Great Britain were first colonized by a party of Dutch buccaneers, who established themselves at *Tortola*, about the year 1648, and built a fort, but were subsequently driven out by a stronger body of British adventurers of the same class; soon afterwards, *Tortola* and its dependencies were annexed to the Leeward Island government, in a commission granted by Charles the Second to Sir W. Stapleton. In 1680 some English planters† emigrated from *Anguilla*, and, undeterred by the craggy mountains, laboured with great zeal, and soon raised cotton, ginger, sugar, and indigo, in no inconsiderable quantities. The earliest representative assembly met in February, 1774, and by their first act agreed to subject themselves to an impost of 4½ per cent., similar to that paid by the Barbadians, and this tax continued to be levied until 1838.

PHYSICAL FEATURES AND TOPOGRAPHY.—The prevailing characteristics are rugged heights and precipitous coast-lines, with numerous bays, havens, and creeks. There are tracts of waste land, covered with luxuriant guinea grass, and affording excellent pasturage for cows, sheep, and goats, of which the emancipated blacks are the chief proprietors.

TORTOLA, in 18° 24' N. lat., and 64° 32' W. long., is of an irregular shape, about twelve miles in length and three or four at its greatest breadth; its peaked and picturesque summits are loftier than any other portion of the Virgin Islands—attaining the height of 1,758 feet. *Road Town*, the chief place, and a free port, consists of one large street, extending along the western shores of a fine and well-sheltered harbour. *VIRGIN GORDA* (sometimes called *Spanish-town*, a corruption of *Penniston*) is about nine miles in length, and, in some parts, four in breadth; its central eminence rises to the height of 1,376 feet. It has many ened to challenge a former friend, who, being a magistrate, thereupon preferred a charge against him for several murders committed some years before, especially for that of a negro named Prosper. The counsel for Hodge, boldly asserted that "a slave being property, it was no greater offence in law for his master to kill him than it would be to kill a dog;" and the criminal himself admitted that he had been guilty with regard to many of his slaves, but was innocent in respect to Prosper. The evidence was so abundant and conclusive, that even a planter jury were compelled to bring in a verdict of guilty, accompanied, however, by a recommendation to mercy, to which Governor Elliott indignantly refused to listen. Such was the state of excitement occasioned in the colony by the fact of this monster being adjudged to suffer death—the sole plea in his favour being his having a white skin, and his wretched victims black ones—that the governor was obliged to proceed in person to *Tortola*, proclaim martial law, and avail himself of the presence and protection of a frigate then in the harbour, before he could venture to carry out the sentence of the law, which was fulfilled by the execution of Hodge on the 8th of May, 1811.—(Vide Continuation to Bryan Edwards, 1819; vol. iv., p. 458; and Southey, vol. iii., p. 501.)

inlets affording anchorage. ANEGADA, about ten miles in length and four in breadth, is a bed of coral rock, raised but a few feet above the surface of the ocean. It produces some ground provisions and fruits. The islanders from time immemorial have looked to "wrecking" for their main subsistence; between 1811 and 1838-'9, no less than sixty-seven vessels have been lost on a dangerous reef, which extends for a distance of ten miles, from this island to the south-eastward, towards Virgin Gorda. The remaining isles are all small and unimportant; villages and cottages are scattered in various localities. A Sanitary Act, induced by the ravages of cholera in Jamaica, has been recently passed, and will probably improve the moral, as well as physical, health of the population.

The GEOLOGY resembles that of Cuba, Jamaica, Hayti, and Porto Rico. Granite of a fine quality predominates, and milky quartz abounds.

MINERALOGY.—As gold, silver, copper, platina, arsenic, and other minerals, have been found in the Cuban chain of islands, it is most probable they also exist here. The buccaneers are said to have worked both gold and silver mines, and coined dollars in imitation of the Spanish mints. On Virgin Gorda there are several shallow shafts sunk, it is supposed, by the Spaniards. A few years since several enterprising gentlemen expended £40,000 in mining operations here. They purchased a mining tract at the south-eastern end of Virgin Gorda, erected buildings, made roads and wharfs, set up a steam-engine, sunk three shafts (one to the depth of thirty fathoms), and drove several levels (one fifty fathoms), north and south. During the sinking, driving, and excavating, 210 tons of rich ore were raised, and yielded upwards of 20 per cent of pure copper. Some was exceedingly rich, and produced £31:10s. per ton, dry weight, at Swansea. The lode is composed of yellow pyrites, green carbonate, and grey ores, in a matrix of white spar, carrying with it the rare metal termed Molybdenum. Black copper was found in a large vein, and native copper in "strings." The working ceased from the want, or rather the mismanagement, of capital, owing to a misapprehension of the local agent, just when its value was ascertained, and will probably be resumed.

POPULATION.—The first precise account was given in 1717. Virgin Gorda had then 317 white inha-

bitants and 308 negroes; Tortola, 156 whites, and 176 negroes. The proportions since then are shown in the annexed table:—

Year.	Whites.	Free Coloured.	Slaves, or Blacks.	Total.
1720	1,122	—	1,509	2,631
1756	1,263	—	6,121	7,384
1787	1,200	180	9,000	10,380
1805	1,300	220	7,000	8,520
1834	800	600	5,135	6,535
1841	—	—	—	6,689

The last census was taken in 1841, there were then 3,130 males, and 3,559 females; the registered births 253, and the deaths 47. The area, in acres, and number of inhabitants in each of the principal isles was;—Tortola, 13,300 acres, 4,027 population; Jost Van Dyke, 3,200 a., 1,158 p.; Virgin Gorda, 9,500 a., 764 p.; Anegada, 31,200 a., 345 p.; Beef Island, 1,560 a., 68 p.; Guana, 1,120 a., 36 p.; Caymanas, 65 p.; Peter's Island, 143 p.; Salt, 83 p. The present number of inhabitants is about 7,000.

GOVERNMENT.—A lieutenant-governor, council, and assembly.

RELIGION.—One Church of England, and four chapels, but (in 1852) only one clergyman; eight Wesleyan chapels, and two other places of worship.

EDUCATION.—Five Church of England and three Wesleyan schools: scholars, 944; Sunday-school pupils, 401.

CRIME.—Commitments in 1851, number 54.

FINANCE.—Revenue in 1836, £2,796; in 1851, £1,471.

COMMERCE.—The soil being considered worn out, sugar cultivation has diminished from about 1,000 hogsheads, at the period of the abolition of slavery, to 329 in 1851. Cotton is grown in small patches all over the island, and, like other native produce, is generally shipped in fishing-boats to St. Thomas. Value of imports, £4,417; exports, £6,095. Wages of labour, 6d. to 9d. a-day. Abundance of green turtle, and fish of various kinds, is obtainable; and 200 men are engaged in catching and curing it.

The conduct of the emancipated slaves has been orderly and industrious.

CHAPTER XII.—BAHAMAS, TURK'S ISLAND, AND THE CAICOS.

THE Archipelago, called Bahama, or *Lucayos*,* consists of a large number of small, irregularly-shaped, but generally long and narrow isles, situated on two banks of sand and coral, and surrounded by countless reefs, rocks, and shoals, stretching between Hayti and East Florida, in a diagonal line, for about 550 miles; being the Cays of Grand Bahama, in 27° 31' N. lat., 79° 5' W. long., and the islands of Mariguana and Inagua, in 20° 55' N. lat., 72° 40' W. long. The total area is 3,521 square miles.

HISTORY.—The discovery of these isles, the first to give assurance to Columbus of the reward which

* "*Lucayos*" was the native name for these islands, most of which are small and sandy; probably the term Cay or Key, commonly applied to small sandy islets throughout the West Indies, is simply a corruption of the original

awaited his patient research, has been already described (see p. 4). The numerous and gentle race, who so kindly welcomed the toil-worn adventurers, soon fell victims to Spanish avarice, being deluded or forced from their homes, to work the mines in Hayti, or act as divers in the pearl fishery of Cumaná. From that period, up to about the year 1629, the Bahamas were left uninhabited; New Providence was then settled by the English, who held it until 1641, when they were attacked and expelled by the Spaniards, who after murdering the governor in a very barbarous manner, burned the habitations, and term. The Spanish word Cayos signifies Keys; but it is difficult to conjecture why the early navigators should have applied this name, unless, indeed, it were in allusion to the strange shape of the scattered isles.

departed. The island was re-colonised by the British in 1666; it continued in their possession until 1703, when the French and Spaniards again drove out the settlers, and destroyed the plantations. The Bahamas next became a rendezvous for pirates, whose sanguinary marauding expeditions in the West Indian seas became so alarming, as to induce the British government to re-settle the colony, as the best means for their suppression. An active and intrepid governor (Captain Woodes Rogers, R.N.) was appointed in 1718; and being well supported by a naval force, eventually succeeded in repressing these outrages; some of the leading pirates were slain, and the rest, by judicious lenity, brought to submission. Shortly after this, several of the other islands were settled.

In 1776, at the beginning of the American war, Commodore Hopkins, with a small squadron, attacked and plundered New Providence, and carried away the governor; in 1781, the island capitulated to a Spanish force of 1,500 men, under Don Galvez, but was recaptured by the daring enterprise of a young officer, named Colonel Devereux, and confirmed to England by the peace of 1783. When the independence of the United States was acknowledged, many loyalist families emigrated with their remaining property to these islands.

PHYSICAL FEATURES AND TOPOGRAPHY.—All the Bahamas, seen from a ship, are low, flat, and verdant.

NEW PROVIDENCE—on whose northern shores *Nassau*, the seat of government, is situated, is about nineteen miles in length and seven in breadth; mostly flat, and covered with brushwood and extensive lagoons, but by no means deficient in timber. *Lake Killarney*, in the interior, is three miles long, with a somewhat lesser breadth; it has numerous mangrove islets. A ridge of hilly rocks runs in an east and west direction; and upon them many of the buildings of Nassau are constructed, including an excellent government-house, spacious barracks, and Fort Charlotte. The streets are wide and airy, and the houses well built. The harbour is secure, but small, not admitting vessels drawing above fifteen feet water: it is sheltered on the north by *Hog Island*, which is little more than a reef of rocks.

ANDROS ISLANDS lie to the westward of New Providence, from which they are divided by a "tongue of ocean," as it is here called; they extend about thirty-three leagues in length. The northernmost is of considerable width, and contains much valuable timber (cedar); but the coast alone is inhabited, the interior being filled with swamps, jungle, and musquitos, sufficiently formidable, it appears, to forbid the approach of settlers, whether white or black.

HARBOUR ISLAND—is about five miles in length and one and a-half in breadth; the inhabitants are chiefly employed in ship-building and wrecking, as are also those of the large island, called **GREAT ABACO** (on the Little Bahama Bank), which is long and very narrow, and has four settlements; on the neighbouring Cays there are two villages.

ELEUTHERA—the principal fruit-growing island, is extensive, and of very irregular shape. Its east and north-east shores are washed by the Atlantic Ocean; while, on the westward, is the shallow and smooth water of the Great Bahama Bank. The port of entry is at *Governor's Harbour*. There are also settlements, named *Rock Sound*, the *Cove*, and the *Current*, on the western shore. At **CROOKED ISLAND**, **LONG CAY**, and **NUM CAY**, the people are chiefly engaged in procuring salt—"salt-raking," as it is

termed; but in the last-named island there is some stock raised and ground cultivated. **SAN SALVADOR**, **GUANAHANI**, or **CAT ISLAND**, has good anchorage, and is generally believed to be the first land seen by Columbus. There are two settlements upon it. The population of **GREAT** and **LITTLE EXUMA**, and the **EXUMA CAYS**, are engaged in agriculture, cotton-growing, and salt-raking, which last is their mainstay. The port of entry is at Little Exuma.

There are four *light-houses*: 1. a fixed light on Hog Island, entrance of Nassau harbour; 2. a revolving light, 160 feet above the sea, on the south-east point of Abaco; 3. do., 80 feet above the sea, at Gun Cay; and, 4. a fixed do., 100 feet do. at Cay Sal.

LONG ISLAND—is seventy miles in length and only three or four in width; has an anchorage on its east side, called *Great Harbour*, and exports salt, sponges, conch-shells, and turtles. **RAGGED ISLAND** exports salt largely to the United States. In **GRAND BAHAMA ISLAND**, Indian corn is raised, and other agricultural pursuits are followed. The **BERRY** group, of which the chief is *Stirrup's Cay*, has a scanty population, chiefly employed in the melancholy business of wreckers. The **BIMINIS** are small, but afford good anchorage on the south-west, and have each a well of fresh water. **INAGUA** and **MARICUANA**, the most eastward or windward of the Bahamas, though little known, are reported to exceed all the others in fertility. The former has several prairies, and an enormous salt pond, covering an area of about 1,600 acres, which a joint-stock company are now profitably working.

GEOLOGY.—No rocks of primitive formation have been found; the base is coral reefs. The surface stratum consists of the debris of coral, shells, madrepores, marine deposits, and decayed vegetable matter. Here and there strata of argillaceous earth may be seen, and marl occasionally on some of the outer islets. Porous limestone is quarried for building purposes; it is also used for drip-stones. Meteoric stones have been found rudely sculptured with human features by the aborigines; and at Turk's Island a great number of calcareous balls were discovered, all bearing an indentation, as though a pedicle had been attached to them. There are no traces of minerals, but, at Inagua, the water of several wells blackens silver as if it had been in contact with sulphur.

SOIL AND PRODUCTIONS.—The calcareous masses of which the Bahamas are formed, would, to an inexperienced eye, convey an idea of hopeless sterility; yet, owing to the porous quality of the stone, and its consequent power of retaining moisture, many of the isles (even those most covered with rock) produce increasing quantities of Indian and Guinea corn, grass, vegetables, and fruit of all kinds, the latter in great abundance, particularly the pine-apple, the orange, and the lemon, all of which seem to flourish, to an extraordinary degree, in the midst of huge blocks, which retain the moisture. There is excellent pasturage for cattle, which not only obtain their food from natural grasses, but browse on the branches of the *lignum-vitæ* and other small native trees. There is some excellent timber for ship-building on the larger islands, where varieties of mahogany, brazilletto, satin-wood, cedar, pimento, wild cinnamon, &c., are to be found. Crops on the small islands are frequently damaged by the spray driven from the sea during violent gales of wind.

THE CLIMATE is equable, but, although for the

greater part, the archipelago is situated without the tropics, the heat of summer is considerable. From May to September the thermometrical range is from 73° to 93°, July, August, and September being the hottest months. The prevailing winds, from October to March, are north-east and north-west; during the remainder of the year it blows from the south-east. From the 1st of November to the 1st of May, the temperature is very grateful; the north-east, north, and north-west winds from the continent of America, impart an invigorating coolness to the atmosphere, and render it well adapted for invalids, especially for persons with bronchial affections; for this advantage, Nassau is resorted to by American citizens, who are subject to pulmonary disease. The salubrity of the climate is attested by the healthy appearance and robust forms of the creoles. Cholera has never visited the Bahamas. The vernal and autumnal seasons are distinctly marked by deciduous vegetation. The early and the late rains are abundant. The annual fall is from 43 to 45 inches; exceeding October, November, and December, it is

pretty equally distributed over the other months. Hurricanes occasionally occur; a very severe one was felt on the 3rd of October, 1796, which, in one night, destroyed all the vessels in Nassau harbour but three. On the 21st of July, 1801, another hurricane did much damage on the land, and 120 sail of vessels were counted as wrecks on the shore. A tornado of some violence took place in 1850.

POPULATION.

Note.—Births, in 1851, 1,206, deaths, 576.

There is an extensive building in New Providence for the reception of poor and infirm persons from all the islands: the total number of inmates during 1851 was, *poor and infirm*, males, 22, females, 22; *lunatics*, males, 777; *lepers*, males, 3, female 1, = 62. The average cost of each inmate was 9d. per day; the charge for the year, £1,054. A public dispensary supplies the poor with medicine and medical advice.

Droghing, fishing, and wrecking, give employment to no inconsiderable portion of the population. The last-named business is carried on under the provisions of a colonial law. Many vessels are annually lost here. The wreckers go in search of them in well-built fast-sailing schooners, whose nardy crews are skilled in diving in deep water, whereby much valuable property and many lives are saved. Until the local legislature passed an enactment on the subject, the men who saved passengers had no lien on the cargo or ship for remuneration; and it

was advantageous that no living beings should be found on board the ill-fated vessel. Now, the saving of life is made to some extent consistent with the remunerative preservation of property. When the crew are all drowned, or abandon the ship, the wreckers obtain salvage, amounting mostly to 75, but sometimes to 95, per cent out of the *nett* amount realised, after payment of the charges of the Vice-Admiralty Court. The value of the wrecked goods brought into the custom-house of the Bahamas during the years 1848-'49-'50 was, £90,413. The whole property is subjected to a duty of 15 per cent on its value, as ascertained by the auctioneer's hammer at the "Vendue House," erected on the wharf at Nassau, where cases and packages, whose contents are little more than guessed at, are almost daily put up for auction.

The deep-rooted prejudice against the coloured race, is combated by the personal efforts of the present excellent governor (Gregory); but it is still pain-

fully conspicuous in some of the smaller islands. At Nassau, however, a better spirit is manifested, and white, coloured, and black jurors walk indiscriminately into the jury-box, and perform their important functions on a footing of the most perfect equality. Three of H.M. justices of the peace are pure negroes; two of them were formerly slaves; and they recently sat on the bench with the governor and other white magistrates, and showed themselves well-qualified for the judicial office.

The emancipated population generally appear to be favourably distinguished by habits of sobriety, order, and decency. The administration of the Holy Sacrament in Nassau is rendered very striking, by the numbers, respectable appearance, and devout fervour of the former slaves, as they kneel before the Communion table beside their white fellow-subjects. The fruit of the persevering exertions of the ministers of religion is daily visible in the tranquillity of the streets, the strict observance of the Sabbath, and the rarity of heinous crime. Concubinage (one of the many legacies of slavery) is being gradually superseded by the marriage contract; and religious instruction has also had the effect of raising up a spirit of brotherly love among the negroes.—(Despatch of Governor Gregory, 15th May, 1850).

GOVERNMENT.—A governor, council, and representative Assembly of seventeen members. The salary of the governor is £2,000 per annum, of which £1,200 is paid by England, and £800 by the colonists. He has also one of the best government residences in the West Indies.

RELIGION.—The Bahamas are included in the diocese of Jamaica. Provision is made by law for clerical duty in the thirteen parishes of the colony; but their insularity prevents effective visitation. Connected with the Church of England, there are nine churches and eleven chapels, with 4,078 members, of whom 988 are communicants. There is a Presbyterian church at Nassau, endowed by the local legislature. The Wesleyans have two capacious chapels at New Providence, and places of worship at several of the other islands. The Baptists and Anabaptists have also several chapels. The Church of England has an archdeacon and twelve clergymen; the Presbyterians, one minister; the Wesleyans, five; the Baptists, several missionaries in connexion with England, and others of African descent. The legislature, in 1851, voted £300 towards the erection of three Methodist chapels.

EDUCATION.—In 1833, there were seven public free-schools, with 227 males, and 231 female scholars; now there are twenty-two public schools, supported by funds voted by the colonial legislature, and entrusted to the disbursement of an education board. The system adopted is that of the British and Foreign Society. Number of scholars, males, 1,022; females, 835 = 1857; teachers, thirty-seven, besides stipendiary pupil teachers, and paid monitors. The Church of England have 858 children in daily, and 1,999 in Sunday schools. Governor Gregory, who recently inspected all the schools, says—

“The general intelligence of the negro children, and the quickness with which they answered the numerous questions of myself and others upon a variety of subjects, struck me very forcibly;” * * * “in no part of the world have I ever seen greater proofs of anxiety on the part of parents (most of whom, a few years ago, were in the abject condition of slaves) to have their offspring educated. Children of tender age are to be seen, in almost every island, walking four or five miles a-day, through rocky and rugged paths, to and from school.

In 1851, out of 27,619 inhabitants, 8,126 were able to read.

There is a reading-room, library, and museum at Nassau, including a working-man's library, with suitable books, and a low scale of subscription adapted to their means.—(*Blue Book* for 1851, by Lieutenant-governor Nesbitt.)

CRIME.—Inconsiderable and diminishing. There is an excellent stone gaol at Nassau, and small prisons in the principal islands; but they are generally untenanted.

PRESS.—Three semi-weekly newspapers, and one or two almanacks.

FINANCE.—Revenue in 1833, £10,201; in 1851, £26,105; independent of £1,701 local taxes. The rent received from the salt-ponds in three years, ending 1850, was £2,194, which was expended on the ponds in their keep and improvement. There is a colonial debt of £18,787, after deducting the liability of the Turk's Island government; interest, at the rate of 5 per cent., is paid quarterly. It was commenced about the year 1830, when the Assembly (in their fierce opposition to the humane measures of Governor Smyth for the prevention of the flogging of women, and the better treatment of the slaves), stopped the supplies for four years. The public bank at Nassau (of which the profits are appropriated in aid of the local revenue) issues paper-money to the amount of about £16,000. Coin in circulation, about £20,000; specie in Nassau bank, gold, £8,000; silver, £18,000.

Wages.—Domestics, males, 40s., females, 20s. per month; labourers, males, 18. 6d., females, 1s. per day; trades, 4s. **Prices.**—Beef and mutton, 7½d. to 9d.; turtle, 2½d.; wheaten bread, 3d.; butter, 1s. 6d. to 2s. per lb. Price of land 6s. to 10s. per acre.

COMMERCE.	1833.	1851.
Imports . . value	£123,735	£117,318
Exports . . .	75,875	75,552

Note.—Tonnage inwards, in 1833, 28,377; in 1851, 36,038. The returns for 1833 include, and for 1851 exclude, Turk's Island and Caicos.

The principal trade is with the United States. Formerly, cotton was extensively cultivated; in 1791 the export from the Bahamas amounted to 1,392,348 lbs.; attention is again being given to this useful product.

The consumption of salt is very large in the United States; it is said to average 40 lbs. annually per head; owing to the extensive use of the article in the curing of meat and fish. In 1841, six million bushels were made in the States, and seven million imported = thirteen million bushels. In 1837, about seventeen million bushels were consumed, of which ten were imported. The demand has continued increasing; but the domestic manufacture has not been proportionately augmented, owing to the disappearance of the forests before advancing civilisation. Salt, obtained by solar evaporation, is found to be more effective for the preservation of fish (for which purpose it is ground in mills) than mineral salt. The Bahama Salines are therefore extremely valuable. Other items are being added to the brief export list of these isles; sponge was exported in 1850 to the value of £5,700; in 1851 it rose to £14,000; fruit (pine apples, oranges, &c.) increased, in the same time, from £8,000, to £12,600. Hard and dye woods, and turtle are also exported. The value of salt shipped in 1851 was, £16,600; the number of

bushels furnished for export was, from Rum Cay, 249,909; Exuma, 115,356; Crooked Island, 112,878; Ragged Island, 100,500; the other isles contributed smaller quantities.

The average cost of the salt put on board ship is 3d. per bushel; an export duty is levied at the rate of 5 per cent. *ad valorem*, generally at one farthing per bushel; the price obtained in the United States is 5d. to 6d. per bushel. A rent is paid by the lessees of the salt ponds, amounting, upon an average, to 30s. per acre. The leases, for the term of twenty-one years, are sold by the government, by public auction.

The number of acres of land granted to individuals is, 277,824; the remainder still belonging to the crown, is estimated at 911,841. Inagua has 366,382; St. Salvador, 26,690; Crooked Island, 79,891; and Long Island, 27,660 acres of ungranted land; with valuable salines or salt-pans, and turtle-ponds for breeding. The sale of crown land (which, during the three years ending 1851, amounted to £1,053) "exhibits the increasing ability of the population to purchase their own homestead, and field for cultivation; neat cottages and other more substantial buildings may be seen springing up at various points of the colony, in proof of an increasing successful industry, and corresponding comfort."—(*Blue Book*, report for 1851).

TURK'S ISLAND AND THE CAICOS.

THIS portion of the Bahama Archipelago, situated between the parallel of 21° and 22° N., in consequence of the reiterated entreaties of the inhabitants, has been recently separated, by an order of her majesty in council, from the Bahama government, and erected into a presidency, under the control of the governor of Jamaica. Turk's Island* and its Cays have an area of twenty-one square miles, and the N,W,E, and Grand Caicos, together with *Providen-*

ciales, *Ambergris*, and other cays, extend over about 450 square miles. The bank on which this group is placed, is about sixty miles long, by fifty broad, with not more than six to twelve feet of water. Turk's Island, &c., are also on a narrow bank, of about thirty-five miles in length. It is estimated that there are on the Caicos 55,905 acres of waste land, of which 8,000 are under water, 19,000 barren and unfit for cultivation, 10,648 remaining of escheats that have been cleared, and 18,257 under grant and uncleared. In Turk's Island there are 5,000 acres waste. The aspect is for the greater part that of a moderately elevated platform, about 400 feet above the sea, very sterile and rocky, almost incapable of yielding any vegetable food, and without springs; rain-water is preserved in tanks. The number of the inhabitants is about 3,000, of whom but a small proportion are white, and these are generally wealthy, being the proprietors of salt-pans; in which, however, some of the blacks have a limited share. They are a cheerful, industrious people, remarkably free from crime, and in religious fellowship under clergymen of the Church of England, Wesleyan, and Baptist denominations. Their government is administered by a president, appointed by the Crown, aided by a council of eight, four of whom are elected by a majority of such of the tax-payers as are able to read and write English; the other four are nominated by the Crown.

The settlement is prosperous; according to a despatch from Mr. President Forth, dated 31st of January, 1853, it appears that the total revenue is about £8,000 per annum; the value of the imports in 1852, £29,467; of the exports, £24,826;—the tonnage inwards; vessels, 383; tons, 39,796. The quantity of salt exported, was, in 1851, 766,422* bushels, value £17,245; in 1852, 1,061,177, £22,035. All the trade is carried on with the Americans, who frequently send their new vessels here for a cargo of salt, as it preserves the timbers from dry rot.

CHAPTER XIII.—THE BERMUDA, OR SOMER ISLES.

THIS low and isolated archipelago, the still-vexed Bermoothes "of Shakspeare," situated in the North Atlantic, in 32° 20' N. lat., 64° 50' W. long, is 600 miles from Cape Hatteras, in North Carolina, the nearest point of land. The isles are said to be as numerous as the days of the year, but the majority are mere nameless specks, scarcely elevated above the ocean; an elliptical belt of coral reefs surrounds them, measuring about twenty-seven miles at the largest axis of its inner circumference, and fourteen at the smallest. The area is stated at 12,000 acres.

HISTORY.—In 1527, a Spaniard, named Bermudez, sighted these shores during a voyage across the Atlantic. In 1593, Henry May, and twenty-five other survivors of a shipwrecked crew, were cast upon the north-western coast. They found the remains of Spanish, Dutch, and French vessels; and after sojourning five months on these desert isles, subsisting chiefly on turtle and bread, prepared from the palmetto berry, engaged meanwhile in building a bark of eighty tons, from the valuable native timber, they managed to fit it out with stores saved from the wreck, and sailed for England, whither they arrived in safety. In 1609, Sir George Somers being wrecked here, on his way to Virginia, of which

colony he had been appointed deputy-governor, took possession of the islands for the Crown of England; all his crew, 150 in number, were saved, and, following the example of their predecessors, set to work in the construction of two small cedar vessels, in which there was not any iron, except a bolt in the keel. At the end of ten months, their labours being completed, they succeeded in reaching Virginia; they probably left live-stock behind them, as Somers, on his arrival, was sent back to Bermuda to procure a supply, and died there, exhausted by fatigue.†

A settlement was formed in 1611, by the brother of Sir George Somers, who brought with him about

* So-called, it is said, from the abundance of a beautiful species of cactus, resembling a turban cushion or "Turk's Cap."

† In the parish church of St. George's there is a monument, with an inscription setting forth that,

"In the year 1611,

Noble Sir George Somers went hence to heaven."

And adds, in allusion to his request, that, though his mortal remains should be carried to England for sepulture, his heart should be left in Bermuda:—

"At last his soul and body being to part,
He here bequeathed his entrails and his heart."

sixty persons. The first governor, named Moore, selected a plain in St. George's Island on which to erect his palmetto hut, and the rest of the adventurers establishing themselves near him, it soon became a place of some importance. In 1614, the Spaniards formed a plan for the capture of the islands, which being defeated, they appear to have relinquished the idea. A regular form of government was soon afterwards established, a militia organised, and defences constructed. The civil wars which terminated the reign and life of Charles the First, occasioned a large accession of inhabitants. Among the exiles was the celebrated royalist poet, Waller; but on the Restoration, many of them returned to England, vaunting loudly the soft beauty and salubrity of the lonely isles which had afforded them a safe and peaceful asylum. During the War of Independence, the Bermudas became the seat of a regular court of admiralty, and the prize ships carried into its harbours made the fortunes of several individuals.* Washington well knew the value of these isles, and desired to annex them to the republic, that they might become "a nest of hornets to annoy the British trade;" but his politic desire was rendered fruitless by the precautions taken by the home government to fortify these possessions, and render them a great naval station, for which their situation peculiarly fitted them, affording (during the war with America) a near and safe retreat to the fleet, and at all times a convenient resting-place for West Indian vessels, being in fact the key to our transatlantic territories. Their strong natural defences have been recently rendered almost impregnable by costly and skilful fortifications. In these isles slavery long shed abroad its pestilential influence; the early laws and general treatment of the slaves appear to have been harsh and sanguinary, and, up to the termination of the last century, the ordinances of religion were almost totally disregarded. In 1798 there were, throughout the nine parishes, into which the colony was divided, only three clergymen, of whom one was a man of bad character, and another incapacitated for duty by age and infirmity. At this period the Wesleyans, at the request of certain colonists, sent out a zealous missionary named Stephenson, of tried piety and discretion. A small society (white and coloured) was soon formed, but the more bigoted planters strongly opposed the extension of religious instruction to their slaves, and, in 1800, procured the enactment of a law, declaring "that no man is to preach, exhort, lecture, write, or speak, or in any wise propagate, any doctrine to any collected audience, public or private, who is not ordained according to the rites and ceremonies of the church of England or Scotland, under a penalty of £50 and six months

* It was here that the poet Moore, through the interest of his patron, Lord Moira, was sent as registrar; being soon wearied with the monotonous and uncongenial nature of his occupation, he returned to England, leaving a deputy, who committed extensive malversations, and thereby involved his principal in heavy liabilities, which long oppressed him, but which he eventually fully and honourably discharged.

† Dr. Coke's *West Indies*, vol. iii., p. 253.

‡ When Mr. Stephenson had been imprisoned five weeks, the governor volunteered to liberate him, on condition of his quitting the Bermudas within sixty days; this offer he refused to accept, lest he should thereby injure the cause for which he suffered, but proposed, if liberated, to find bail for not repeating his offence, so long as the law which declared it such, should continue in force; but these terms were refused.

imprisonment for every offence." Mr. Stephenson having rendered himself liable under this arbitrary measure, was committed to trial, found guilty, and sentenced to the above-named punishments, as well as to pay the heavy costs of the court, the severity of the sentence being probably aggravated by the strong feeling displayed by parties in power; the attorney-general, for instance, asserting "that the Methodists were the cause of the rebellion in America, the revolution in France, and the disturbances in Ireland;"† ergo, they would excite a slave insurrection in the Bermudas. After six weary months,‡ spent in a loathsome jail, where, in addition to other wrongs, and injuries, the unfortunate prisoner was at an expense of no less than fifteen shillings a-day, he was at length discharged, and the law against non-conformists being still unrepealed, soon afterwards quitted the colony, almost worn out with sufferings, which his advanced age (being more than sixty years old) had rendered peculiarly trying. Even when the repeal of the persecuting law was proclaimed, the spirit in which it had originated was still so strong, that no minister was found to attempt the re-establishment of the mission until 1808, when a Mr. Marsden arrived, with his wife, and after much opposition and privation, succeeded in obtaining a firm footing. Since then, steady improvement has taken place in the character of all classes of the population, of which marked proofs were given by the more humane behaviour of masters, and the growing honesty of the slaves, so that, in 1834, the one party was ready to grant cheerfully, the other to accept with full advantage, the great boon of immediate freedom; the apprenticeship system here, as in Antigua, being dispensed with as cumbrous and unnecessary.

PHYSICAL FEATURES AND TOPOGRAPHY.—The four chief islands (which are separated from each other by narrow channels) form a chain extending north-east and south-west, in the shape of a shepherd's crook, for a distance of fifteen to twenty miles in a straight line, though considerably longer, if measured round the curve. *St. George's* is three miles and-a-half in length, *Bermuda* fifteen, *Somerset* three, and *Ireland* three. The breadth of the widest portion (Devonshire tribe or parish, in Bermuda) is two miles; and of the narrowest about one-eighth of a mile. The minor islands of *St. David*, *Cooper*, *Smith*, *Long Bird*, *Nonsuch*, &c., form numerous picturesque creeks and bays, several of which are very large and deep—such are the *Great Sound*, *Castle Harbour*, *Harrington Sound*, and others; the larger of which are from seven to fifteen miles in circumference, and being nearly land-locked, have somewhat the appearance of lake scenery without mountains, there being no eminence in the whole Archipelago of above 250

§ *Castle Harbour*, a noble piece of water, encircled by *St. David's*, *Bermuda*, *Long Bird*, and various isles and islets, is of very unequal depth, and dangerous for large vessels, by reason of its numerous banks and shoals of coral which are indicated by the different tints of the water, ranging from the deepest azure to the lightest hue of the chrysoprase. Through its clear waves, the soft, calcareous bottom looks like a flower garden, blooming with the more delicate descriptions of coral, the graceful lilac-coloured sea-fan (*Gorgonia Flabellum*), which is used for sieves, egg-whisks, &c.; the sea-rod, which resembles ebony, and being very flexible, is much esteemed for riding whips; the sea-feather; and brain stones without number. The large and fine oysters found adhering to the rocks or the coral, frequently contain pearls of very clear water.—(See an interesting work, published in 1835, by Miss Lloyd, entitled *Sketches in Bermuda*.)

feet. The northern coast, except at the dangerous passage by the north rock, which lies at the edge of the Bermuda Bank, opposite the northern coast of St. George's, is rendered inaccessible by a heavy surf, and a broad line of breakers extending above ten miles from the shore.

There is no large spring in the islands, and though wells may be obtained at a moderate depth beneath the surface, the water is generally brackish; that which falls from the heavens is therefore carefully preserved in stone tanks, and is usually sufficient to prevent any painful drought among the inhabitants; but it seriously detracts from the pastoral capabilities of these isles, and horned cattle thrive but poorly. Goats are very plentiful, they browse among the rocks, and supply the inhabitants with milk. Salted provisions are imported largely from the United States.

ST. GEORGE'S ISLE, the military station of the colony, and formerly the seat of government, commands the entrance of the only passage for large vessels, and has a land-locked harbour, with a narrow and intricate channel, defended by strong batteries; but, once entered, it is extremely spacious and commodious. The town has a pleasing appearance; the low houses, with their gay verandahs, extend along the water side, and are well built of the dazzling, snow-white Bermuda stone, which contrasts forcibly with the soft verdure of the neighbouring cedar groves and pasture; on a hill to the eastward, large and convenient barracks have been erected. BERMUDA, sometimes styled the *Continent*, from comprising by far the largest portion of connected land, is divided into several tribes or parishes; the seat of government, *Hamilton*, is situated on *Hamilton Harbour*, an inlet of the extensive natural basin, *Great Sound*; it is little more than an inconsiderable village; the back-ground is formed by barren, dreary-looking hills, on one of which stands the court-house. It is, however, convenient for trade, as the largest vessels unlade their merchandise at the very doors. The government house is well situated. Small hamlets or fishing villages dot the shores in every direction. IRELAND ISLAND, the most westerly of the group, is the chief naval and convict station; an extensive breakwater has been formed here by convict labour. A large and commodious hospital is situated in the highest part of the island; and the officers' residences are comfortable, and built in the English style. The dock-yard is kept in admirable order; in fact, ship-building has always been the forte of the inhabitants; and they still possess a good supply of suitable timber. Their chief communication is, from the strange shape of the isles* and the large and numerous lagoons, almost as necessarily by water as that of the people of Venice; and their cedar boats are very agreeable objects, seen sailing beneath an unclouded sky of the deepest blue, and on the bosom of waters so clear that the rocky depths below, the coral, the exquisitely-coloured shells, and the many varieties of excellent fish, in which these shores everywhere abound, are distinctly perceptible.

GEOLOGY.—The basis of the whole group is the work of the industrious coral zoophytes. Above it are layers of calcareous sand and limestone, formed from comminuted shells and corals, closely cemented together, and associated without any definite order of position, the harder limestone occasionally resting upon loose sand; the arrangement of the beds is often dome-shaped; but, in many instances, the

strata are singularly waved; and the dip varies much in the direction it takes, and the angle it forms with the horizon. The so-called Bermuda rock is too porous to be suitable for filtering-stones; it is easily wrought with axes and saws; is naturally friable, but becomes harder when exposed to the atmosphere, and changes in time from white to blueish-grey in hue: when covered with cement or lime, it is impervious to rain or damp. At the bottom of the basin, within the zone of coral reefs, there is a soft calcareous mud, resembling chalk, which is supposed to be derived from the decomposition of zoophytes. The hilly parts of the islands are composed of a calcareous sand, cemented by the action of water, so as to form a hard incrustation of carbonate of lime, about half an inch in thickness.

SOIL—of three kinds—light sandy, deep red, and, in marshy situations, peaty or decayed vegetable matter: all three yield profitable crops: the light sandy is specially adapted for Irish potatoes and onions: the average produce of the latter is not less than 24,000 lbs. per acre, valued at 5s. per 100 lbs. = £600: the red, which is also calcareous, contains a much larger proportion of clay and vegetable deposit, and, apparently, oxide of iron, it grows arrow-root in great perfection: the peat soil unites in its range of product nearly all the vegetables of temperate and of tropical climes. Colonel Reid, an officer of high scientific attainments, and an excellent ruler, effected great improvements while governor of Bermuda, and showed that the tops of the apparently barren and rugged hills, where stunted cedar and sage bush could barely exist, would, when brought under cultivation, furnish table vegetables, fruit, forest and ornamental trees—the ash of the northern regions, the old English oak, the mahogany, India rubber, and green heart of South America.

CLIMATE—is described as resembling that of Persia, with the advantage of a constant sea-breeze; there is a perpetual seed-time, for in winter the seeds of Europe germinate, and in summer those of the tropics. In December, January, February, and March, forming the cold season, the thermometer ranges from 60° to 66°; in June, the hottest month, from 83° to 86°; in April, May, July, August, September, from 75° to 79° Fahrenheit. The dew point ranges high, and the air is therefore moist and favourable to vegetation at all seasons. Frost is unknown; the warm gulf stream which flows from Florida towards Newfoundland, between Bermuda and the American continent, causes, especially in the winter months, an ameliorated temperature, and preserves the heat of the ocean so as to enable the coralline insect to build its rocky structures in this, the most remote point from the equator, where its living work is now found. Captain Page ascertained the main temperature of the sea to range from 61° in March, to 83° in August; mean for the year, 72° Fahrenheit.

DISEASES.—The Bermudas are usually healthy. During two centuries only four epidemics are recorded; one an influenza, with fever, in 1842, raged with violence among the convicts, troops, and white inhabitants, and killed many; but the coloured population were very slightly, if at all, affected by the malady. Rheumatism, in various forms of fever, and of violent tooth-ache, occasionally prevail; the worst is that apparently resulting from the humid exhalations of the marshes after heavy and continued rains: it is here termed the *dandy* or *broken-bone fever*, from the stiff and constrained positions involuntarily assumed by the sufferer.

* See Map in Division 7, vol. iv.

POPULATION.

Year.	Whites.	Free Coloured.	Blacks or Slaves.	Total.
1698	3,615	—	2,247	5,862
1721	4,850	—	3,514	8,364
1756	6,402	—	4,900	11,302
1774	5,632	—	5,023	10,655
1783	5,462	—	4,919	10,381
1805	4,500	—	5,800	10,300
1810	4,755	451	4,794	10,000
1834	3,900	740	4,203	8,843
1843	4,428		5,502	9,930
1851	4,669		6,423	11,092

Note.—Much of the data of the early population of our Western Slave Colonies are derived from a report of the Lords' Committee of the Privy Council, on the Slave Trade, submitted for H.M. consideration in 1789; there is little other reliable information.

Census of 1851.

Parishes, or tribes.	Whites.		Coloured.		Total.
	Male.	Female.	Male.	Female.	
St. George . .	365	436	431	659	1,891
Hamilton . .	177	200	330	387	1,094
Smith's . .	103	135	128	148	514
Devonshire . .	129	217	208	230	784
Pembroke . .	431	606	495	703	2,235
Paget . .	195	293	233	317	1,038
Warwick . .	189	270	241	283	983
Southampton .	145	218	246	308	917
Sandys . .	231	329	520	556	1,636
Total . .	1,965	2,704	2,832	3,591	11,092

Note.—Houses inhabited, 1,796; uninhabited, 90; building, 26. This is exclusive of troops, of persons in the service of the Crown, or of the convicts sent from England to labour in the fortifications and dockyard, whose number, in 1851, was 1,535. Deaths of convicts during the year, 39.

The increase of population since 1843, has been at the rate, among the whites, of one-eighth; coloured, two-eighths per cent. per annum; in 1851, births, 344; deaths, 134. The females, on the whole population, are nearly one-seventh in excess of the males. In the census of 1843—births to deaths—whites, 12 to 10; in 1851, 22 to 10; coloured, 18 to 10, and 26 to 10. The emigration of young white men accounts for the increased proportion of white females to males; but the governor thinks that the increasing ratio of births to deaths in the coloured population must be ascribed altogether to their improved comfort, intelligence, and morality. It is gratifying to remark, that while there has been a large increase since the abolition of slavery in the consumption of articles of food and raiment, there has been an extensive diminution in the importation of rum.”—(*Blue Book for 1850. Report dated 4th June, 1851, p. 27.*)

GOVERNMENT.—A governor, council of nine, and house of assembly, of thirty-six members.

RELIGION.—The Church of England establishment

* The Bermuda arrow-root possesses one great advantage over the West Indian, in being less subject to adulteration; for cassava is scarce, and flour expensive. That grown on St. George's and St. David's is the finest; the limestone soil being best adapted to its culture. The stalk, which, from its resemblance to an arrow, has given its name to the plant, rises, in a single shaft, to the height of two or three feet; and is surmounted by a tuft of

is included in the diocese of Newfoundland. There are four Church of England clergymen, including one chaplain for the dockyard and one for the military. There are also one Presbyterian, one Wesleyan, and one Roman Catholic minister. The religious denominations are—Church of England, 9,322; Wesleyan, 1,018; Presbyterian, 579; others, 113.

EDUCATION.—Twelve free schools, containing 271 male, and 300 female pupils, = 571. Legislative grant for these establishments, £509. There are nine private schools.

CRIME.—Commitments in 1851, number 95, chiefly for petty offences. The convicts sent from the United Kingdom have hitherto been confined in five prison hulks: barracks, I believe, are now constructing on shore for their custody.

PRESS.—A newspaper and almanack.

FINANCE.—Revenue in 1833, about £10,000; in 1851, £11,376. The local or municipal revenue amounts to £2,168. Commissariat payments for military purposes in 1851, £36,713: ordnance department, £12,309: naval storekeeper, agent, victualler, and hospital, £18,695. Charge for the convicts in 1851, £33,910. An annual grant of £4,049 is voted by the Imperial Parliament in aid of the civil disbursements of the colony; of this, £2,199 goes towards the governor's salary of £2,800 a-year. There have been expended in the islands, on roads and public undertakings, irrespective of military works, £43,083. A large expenditure has been incurred by the British government for fortifications and naval works. The yearly sum was reduced from £96,000, in 1846, to £78,000 in 1849. The maintenance of the convicts costs about £23 annually per head.

COMMERCE.—Imports, exports, shipping, and produce:—

Details.	1833.	1851.
Imports	£79,740	£123,710
Exports	£29,954	£22,753
Shipping inwards . . tons .	14,675	32,693
<i>Produce</i> —		
Arrowroot lbs. .	44,651	854,329
Onions	291,550	838,070
Potatoes	46,959	49,268
Garden vegetables . lbs. .	206,520	256,136

Maize, barley, carrots, turnips, and tomatoes have been added to the list of products since 1833, and the area of cultivation has been largely increased. The potato disease, which appeared here in March, 1850, after unusually heavy rains, checked the production of that valuable esculent, which was exported in 1851 to the value of £3,880; also onions to the amount of £1,906, and arrowroot, £10,334. An acre of land capable of producing arrowroot,* gives an annual return to the value of £35; but the number of acres under tillage, including gardens, is only 1,227; in grass for cattle fodder, 33; in wood or natural pasture, 10,339. The live stock in 1851, consisted of horses, 259; mules, 5; asses, 31; neat cattle, 1,643; sheep, 227. Farming implements—

pale green flowers, which are succeeded by small berries. The light green leaves, not unlike those of the lily of the valley, grow each separately from the root, the ripeness of which is denoted by their decay; it is then taken out of the ground, and the end broken off and reserved for the next planting; the remainder being dried and prepared (either by hand-sieves, which is a very tedious process, or mills) in the form of a pure light starch.

carts, 186; ploughs, 104. The rowing boats number 445, and the sailing 123. The shores of the islands abound with fish, which contribute largely to the food of the inhabitants. There is a small coast whale fishery, yielding in the season about twenty whales, which furnish nearly 1,000 barrels of oil.* Excellent vessels, of a small size, are built at Bermuda; the number belonging to the colony is

thirty-nine, with a tonnage of 2,595, manned by 227 seamen. The Bermuda craft are very durable, dry carriers, and cheaply navigated; they are principally employed in conveying sugar and rum from the French West Indies to the United States. Governor Elliott reported, in August, 1852, that the progress of the settlement "continued to be satisfactory, particularly in the rural industry of the people."

CHAPTER XV.—HONDURAS, THE BAY ISLANDS, MOSQUITO TERRITORY, AND THE CAYMANS.

(DEPENDENCIES OF JAMAICA.)

THE British settlement at Honduras is situated in Central America, between the parallels of 15° and 19° N. lat., and 88° and 90° west long. The eastern boundary is formed by the Gulf of Honduras, the north-eastern by the State of Yucatan, and the west and south by that of Guatemala. The length is about 200, and the breadth 100 miles, but the boundaries are imperfectly defined; it is, therefore, impossible to state the area correctly, but it has been loosely estimated at 62,000 square miles. The materials for an historical sketch of British occupation and relations on this coast are very scanty. The more authentic records have been destroyed in times of war, fire, and hurricane—and their loss is much to be regretted, since the subject upon which they have an important bearing may unhappily become matter of national controversy. The following information, the best I have been able to obtain, is given in small type, since it would otherwise occupy space that could be ill-spared:—

DISCOVERY AND HISTORY.—In 1502, Columbus, during his fourth and last voyage, sighted a small, but elevated island, which, from the number and description of its lofty trees, he named the Isle of Pines; it has, however, retained its Indian appellation—being generally known as Guanaja (though sometimes called Bonacca); and this term has been extended to the smaller adjacent isles. While landing at Guanaja, which lies some leagues to the eastward of the Gulf of Honduras, a great canoe arrived as from a distant country. It was eight feet wide, and as long as a galley, though formed of the trunk of a single tree; in the centre was an awning of palm leaves, under which, protected alike from sun and rain, sat a cacique, with his wives and children, with twenty-five Indian rowers. The canoe contained specimens of the various manufactures and productions of the neighbouring continent. According to Herrera (book v., c. 5.), there were blankets and carpets of plaited cotton and palm-leaves, worked and dyed with various colours; wooden swords, with channels on each side the blade, in which sharp flints were fixed by cords made of the intestines of fishes; agate knives, copper hatchets, bells and medals, together with great quantities of cacao, a berry as yet unknown to the Spaniards, but which the natives held in great estimation, using it both as food and money. They made a description of bread from maize, as also a kind of beer. The women wore mantles, in which they wrapped themselves,

like the female Moors of Granada; the men had cotton cloths about their loins. Persuading or compelling an old man to accompany him as an interpreter, Columbus stood southwardly, until he reached the point of land at present known as Cape Honduras, but which he named *Cazinas*, from its being covered with trees bearing a fruit resembling the apple, so called by the aborigines. The fertile land was everywhere verdant and beautiful; the pine, the chesnut, and the palm, afforded deep shade from the fervour of a tropical sun, which was further mitigated by constant but gentle ocean breezes. The people appeared numerous, and were well supplied with corn, fish, and fruit; they were finely formed in person, and conciliating in manners, but spoke different languages. The Spaniards unhesitatingly set aside their rights, took nominal possession of the territory in the name of their sovereign, and then proceeded to examine a few other parts of the coast.

In 1509, the province of Honduras was granted to Nicuesa (see *History of Jamaica*, p. 19), whose territory extended from the Gulf d'Uraba to Cape Gracias a Dios: a bishop's see was formed here, and several towns (of which Truxillo was the chief), but the majority of these were deserted before they were finished. The mines of Honduras were soon exhausted or forsaken for more promising tracts, not, however, until they had been the tombs of, it is asserted, no less than a million enslaved Indians. The land became almost depopulated, and would probably have been left utterly desolate, but for its unrivalled stores of mahogany and logwood. The pirates, who swarmed around the greater Antilles, frequently sought fresh prey upon the shores of Honduras and Yucatan; and, in the latter part of the sixteenth century, Truxillo was taken, pillaged and inhabited by an Englishman of the name of Barker, who built a vessel there, and retired with it before the Spaniards had recovered from their astonishment. Some time afterwards, Newport, another British adventurer, succeeded him—captured four caravels laden with quicksilver, silk, and pearls, and returned to England through the Bahama passage. Gage visited these shores in 1630, and described the chief place as being inconsiderable, and having less than 500 inhabitants; the kindness of the remaining aborigines he spoke highly of, declaring that "the poor Indians thought neither their personal attendance nor anything that they enjoyed, too good for the strangers." At this time, hides, *canna fistula*, logwood, and sarsaparilla, were the chief articles of export.—(*Gage's Survey of the West Indies*, p. 159.)

In 1638 Willis, the notorious buccaneer,† settled on the

* The catching of a whale is a season of great rejoicing among the poorer classes, who, from the scarcity of live stock, rarely taste fresh meat from one year's end to another; many white people also, think a slice of young whale, fried, a dainty dish; and the more delicate parts are often passed off upon strangers as beefsteaks or cutlets. They eat monkeys in Trinidad, crapands (described by

Coleridge as "enormous frogs, of the colour and size of about ten fat toads") in Dominica; snakes, guanias, and other lizards in various islands; and why should whales be considered less edible?

† Buccaneer is derived from *boucan*, a word signifying a sort of wooden gridiron, on which these rough marauders used to broil whole, or "barbacue," the wild hogs they

banks of the river which bears his name. The Spaniards called it *Walis*, and it has since been corrupted into *Balise* or *Belize*. Another English colony was subsequently formed near Cape Cotoche, upon the coast of Yucatan, but the scarcity of logwood soon induced the settlers to migrate to the Laguna de Terminos, in the deep and sheltered bay of Campeche. The Spaniards actively opposed the new settlements, but the Indians of the Mosquito shore, who hated the very name of Spain, and would never suffer any one of that nation to enter their country, took part with the British immigrants. On the arrival of the Duke of Albemarle in Jamaica, in 1687, the Mosquito Indians sought the protection of his sovereign. They represented that, in the reign of Charles the First, the Earl of Warwick, on taking possession of Providence Island, near their own shores, had been very desirous of entering into a friendly correspondence, and had prevailed on them to let him take to England the son of their king, leaving as an hostage his own friend and companion-in-arms, Colonel Morris. The Indian prince, on his return after three years' absence, was so favourably impressed by what he had seen and heard of the power and justice of England, that he voluntarily declared himself her vassal, and, with all his tribe, professed allegiance. Sir Hans Sloane witnessed the Indians present a memorial to the governor to the above effect, and has recorded it in his *History of Jamaica*.—(Vol. i., p. 46.) They have ever since maintained an uninterrupted allegiance with England, and though often exposed to cruel injuries by the bad faith of the people of the neighbouring colonies, both Spanish and English, who captured and carried away many of them as slaves, they have sought redress only by appealing to the local government, or, that failing, to the higher powers at home.

English occupation was recognised by Spain in the treaty of 1670, which "confirmed to Great Britain a right to the Laguna de Terminos, and the parts adjacent, in the province of Yucatan; those places having been actually in possession of British subjects, through right of sufferance or indulgence."—(Reports of Board of Trade and Plantations, for 1717.) The same right or liberty was explicitly confirmed by the treaty of Utrecht, in 1713, and the settlements prospered, the exports of logwood, in 1716, being no less than 5,863 tons. In the following year the jealous Spaniards broke through every engagement, by making a sudden descent upon Campeche, destroying the town and capturing sixty-two sail of merchantmen, which had discharged their cargoes, and were loading with logwood as a return freight. The settlers took refuge at Belize, where their numbers were recruited by swarms of adventurers, who united with them in keeping up a desultory warfare with the Spanish inhabitants of the neighbouring shores and settlements, which lasted about forty years.

In 1742, a British military settlement was planted on the island of Ruan, or Rattan, in the Gulf of Honduras. The Mosquito Indians gladly assisted; a small town was built between two streams of fresh water, a fortress erected at the mouth of *New Port Royal Harbour*, and a governor appointed. A mutiny broke out among the troops, which was, however, speedily quelled, and several logwood-cutters migrated thither. In 1754, a Spanish force of about 1,500 men, from Peten, a town 200 miles to the westward, advanced upon Belize, but were gallantly repulsed by the "Baymen" (as the people inhabiting the shores and isles of the Bay or Gulf of Honduras are familiarly termed), and their slaves.

In 1763, by the treaty of Paris, the king of Spain agreed to guarantee their protection from molestation, in their occupation of wood-cutters; but obtained in return the unwise and unjust concession, that all fortifications erected by British subjects should be demolished, not only in the Gulf of Honduras, but also those which had been erected on the Mosquito shore (where a regular establishment of troops had been placed, in compliance with the wishes

took in hunting. They were, says Du Tertre, "*une sorte de gens ramassez*," that is, a mixed assemblage of men of all nations, who, from various offences, had been banished from civilized society. From this commencement sprang

of the natives). This unsatisfactory and unjustifiable arrangement, adopted by both parties as a matter of expediency, could not stop the strife attendant on national rivalry. Piratical expeditions were undertaken by both Spaniards and English, and these affrays had some share in the renewal of hostilities between the respective states in Europe. The Spaniards took advantage of an early knowledge of the proclamation of war, and with 500 or 600 men attacked the island, formerly known as St. George's Cay, which the Baymen occasionally inhabited as a refuge against the prevailing diseases of the main, and after a brief conflict, carried off many captives of both sexes, put them in irons, and then marched them blind-fold to Merida, the capital of Yucatan, from whence they were again countermarched to the sea-side, and shipped to the Havanna to be imprisoned in solitary cells. While the Spaniards were proceeding to complete the devastation of the island, three English vessels, under Commodore Luttrell, arrived upon the coast, collected the remainder of the scattered Baymen, and drove away the invaders with great precipitation. Captain Dalrymple, with a detachment of the "Loyal Irish," and a body of Indians, immediately afterwards joined the commodore; uniting their forces, and assisted by the Baymen, they formed a body of 500 men; and retaliated upon the enemy, by making a successful attack upon St. Fernando de Omoa, where they spared the lives of the garrison, on condition of the restoration of the captives taken at St. George's Cay. Omoa was soon afterwards retaken by the Spaniards, who continued to harass the settlers, until, in 1783, when the British government having resolved not to relinquish the settlement, obtained a somewhat more explicit understanding, in reliance upon which, the colonists, with their slaves, returned to Belize (having, it would appear, taken refuge in the Mosquito territory), and the boundaries of the settlement were extended by the express permission of the Spanish monarch, from the mouth of the Belize to that of the Siboon. This accession of territory and importance excited the deadly jealousy of the Spanish colonists of Yucatan; and the wily governor silently prepared a formidable armament of 2,000 troops, assisted by 500 seamen, whom, in 1796, he embarked on board a flotilla of thirty-one vessels. The settlers at Belize were on their guard, and after watching the gathering storm, until it was ready to burst over their heads, they pursued a desperate but effectual method of defence, by burning to the ground their valuable possessions on St. George's Cay: they also removed the beacons which would have directed the enemy through the shoals, and, bravely and faithfully aided by their slaves, met the formidable armada with a little fleet, hastily collected, but resolutely manned. After an engagement of three hours' duration, the enemy was completely defeated, and retreated in confusion; the majority of their vessels were soon afterwards lost in a violent tempest by which they were assailed.

Encouraged by this triumph, the Baymen extended their operations; and forts were erected to protect them from further molestation. At the peace of Amiens, Honduras was, by some strange oversight, not even mentioned; and the settlers and merchants connected with the trade became seriously alarmed by the disposition manifested by the Spaniards (prompted by the French) to take advantage of this omission. The war, however, which speedily ensued, terminated the discussion; and Honduras has since remained undisturbed under British authority.

PHYSICAL FEATURES AND TOPOGRAPHY.—The shores of the bay are low, and thickly bordered with small verdant islands or cays, so numerous and so much alike, as to puzzle the most experienced sailor, and render navigation extremely difficult; receding from the coast, the country rises with a gradual ascent into bold highlands, interspersed with rivers

many of the daring, hardy, but cruel and unscrupulous marauders, whose piratical exploits were, for so long a period, the dread and terror of merchant vessels in the western seas.—(See *Jamaica*, p. 23.)

and lagoons, and covered with magnificent forests. *Belize*, the capital of the Honduras settlement, in 17° 29' N. lat., 88° 8' W. long., is situated at the southern mouth of a river of the same name, which divides the town into two parts, and is crossed by a substantial wooden bridge, 220 feet long, by 20 wide. That portion of Belize which stands on the south or right bank, extends along the eastern edge of a point of land, and is completely insulated by a canal on its western side, which runs across from a small arm of the sea forming the southern boundary. The court, government, and council houses are good buildings; there is also a Gothic-looking church, several chapels and schools. Of the private dwellings, constructed of the durable native woods, many are commodious and even elegant; they have upper and lower piazzas, and are generally raised eight or ten feet from the ground (which has been, in great measure, redeemed from the sea) on pillars of mahogany. —(See drawing of Belize in map of Central America.) The streets are shaded by groves and avenues of fine cocoa-nut and tamarind trees. The river, which has generally a north-east course, is alleged to be navigable 200 miles inland, for canoes or "pit-pans;" it receives numerous tributaries, and is connected with many lagoons; off its mouth there is safe anchorage for small vessels, with quays and wharfs; the channel of entrance, though intricate, is deep, and there is a good lighthouse, erected in 1821, on *Half Moon Cay*, about forty-three miles from the harbour. *Port George*, a substantial structure, is situated about half-a-mile from the mouth of the river, on a small, low isle, principally formed by the ballast from the shipping, every vessel being obliged to deposit here an amount proportioned to its tonnage. The seaboard of Belize is almost its only point of attack; to the north lie the barracks, behind which and all round, within the circumference of three or four miles, the country is hemmed in by wooded heights and marshes, and the more distant mountains form an impenetrable barrier, with only one pass, which is easily defensible by a small force.

The *Hondo*, which forms the northern boundary of British settlement, is a fine stream. *New River*, a few miles to the south of it, is of much less importance; it flows from an extensive inland lake or lagoon. Of the other water-courses little is known, save from the report of the wood-cutters, who, from the nature of their occupation, are little inclined to communicate any information calculated to lead others to intrude on the hidden spots where the finest timber is found. Some of the scenery is rendered extremely picturesque by waterfalls; one near the river and lagoon of *Manatee*, about thirty miles south of Belize, is described as peculiarly striking. A large sheet of water stretches northerly for several leagues; lofty hills, in many places ascend abruptly from its margin, forming wooded valleys, in whose deep recesses the tiger (here so called, though little resembling its terrible namesake in Bengal), the armadillo, opossum, antelope, and several species of deer, range securely; quails, plovers, pheasants, wild turkeys, and many varieties of the feathered tribe, also abound. Nor are the waters less amply furnished than the earth and air, the large marshes or shallow ponds, during the greatest part of the year, are filled with many kinds of fish, and their banks are frequented by wild ducks and other aquatic birds. During seasons of drought, the sea-fowl flock hither to prey upon the putrid fish destroyed by the evaporation of the waters; even the alligator

has not unfrequently been seen many miles in the interior, wandering over these trackless wilds, from one pond to another, in search of fish, timidly and warily pursuing his way, and evidently feeling towards man even a stronger terror than that which his formidable appearance and great strength inspires. The *Manatee* lagoon is supplied in the wet season by innumerable rivulets, but during the dry months by three streams only; viz., *Corn* and *Plantation Creeks*, and the *Main River*; the two first, though called creeks, extend so far inland that their sources are, or, at least, have been until very recently, unknown to the British settlers. The banks of the *Manatee* present several striking features; the rapids commence about eight or ten miles from the lagoon; a little further on is a remarkable cataract, a quarter of a mile in length, and of considerable acclivity, succeeded by a series of arched caverns or tunnels, which, during the floods, are impassable for days together. The country generally is technically spoken of under two heads, the *Pine* and *Cahoon ridges*, the pine trees extending over immense park-like tracts; while the latter term denotes a richly fertile soil, producing the wild cotton and other giants of the forest, interspersed with dense underwood.

Of the islands immediately off Belize, the only one of any importance is that formerly known as *St. George's Cay*, now called *Turneffe*, an agreeable and healthy spot, about three leagues distant, to which the colonists resort during the hot months.

GEOLOGY.—The structure of the high lands beyond the alluvial coast-line appears to be still unnoted. Alabaster and fine marble are said to exist in large quantities; valuable crystals have been found within 180 miles of Belize, and pieces of transparent felspar, which are used in ornamental stucco-work, are obtained at different parts of the river banks. Quantities of lava and volcanic substances are scattered in different situations. *Labouring Creek*, about 100 miles inland, is remarkable for the petrifying properties of its waters, which, when taken by strangers, have a cathartic effect; and a healing quality, when applied externally to ulcerations. Gold has been occasionally found in the *Roaring Creek*, a branch of the Belize river.

SOIL.—On the banks of rivers and creeks, a stiff loam, deposited from the waters during their frequent overflowings: on the *Cahoon* ridges, decayed vegetable matter, two to three feet in depth, and of unsurpassed fertility; the *Pine* ridge land has a substratum of loose reddish sand, and its indigenous products consist of those varieties of the vegetable kingdom, whose assimilative powers are strong and perennial.

CLIMATE.—Hot and moist in the neighbourhood of Belize, except during the dry and most healthy season, from the beginning of March to the end of May, when the mercury ranges from 75° to 86° Fahrenheit. In June, July, August, and September, there are frequent and heavy falls of rain, engendering marsh miasm by the decomposition of animal and vegetable matter in the adjacent lowlands and swamps, which is diffused over the town by night land-winds, and gives rise to remittent and other fevers; but of late years the partial clearing of the ground of both underwood and swamps around Belize, has had the natural effect of diminishing disease. During the remainder of the year there are occasional showers more or less heavy; and in October, November, and December, strong north and north-west winds, particularly when accompanied by rain,

cause at night a fall of the thermometer from 80° at noon to 60° Fahrenheit. The sea-breezes almost constantly prevail during the day from north-east, south-east, and east. Temperance and regular habits, here as in other tropical regions, often insure immunity from disease. The elevated inland region has a climate more congenial to the European constitution than that of the coast.

POPULATION.—There has never been a complete census of the settlement; this important duty being neglected, on the plea that the inhabitants were very much scattered, and it would require some time to make the enumeration. The number of slaves emancipated and paid for, in 1834, was, 1,901; at which period the inhabitants of Belize were stated to be, whites, 223; free coloured, 1,788. The present colonists are vaguely estimated at 10,000, of whom about 5,000 reside in and around the town of Belize. The population is of a miscellaneous character, consisting of Europeans, both English and Spaniards, and their descendants, Africans, Mosquito natives, and other Indians. The Honduras blacks are said to be little inferior to the whites in vigour of intellect; the Mosquito men are remarkable for fine muscular forms, but are said to be of slow intelligence; the Indians are a timid, inoffensive race in a low moral state.

GOVERNMENT.—A superintendent, acting under the governor of Jamaica, from whom he receives his commission—an executive council of nine, appointed by the same authority, and an assembly, or “public meeting,” elected by voters possessed of £60 each, which they are required to prove every three years. The qualification of a representative is the possession of £300, after payment of his just debts; and if twenty-five votes are recorded in his favour he is elected for life. There were, in 1848, sixty-four members of the “public meeting,” and fifty-nine voters; only thirty-three of the members were qualified to vote. Any British-born subject can require the provost-marshal to open a poll for seven days; and if the necessary twenty-five votes be recorded, the candidate is elected for life. No adverse votes are received. This singular system had its origin in the circumstance, that, for a long period the “Public Meeting” was the assembly of all the inhabitants, whereby their wishes were expressed; to which a qualification for electors and elected was subsequently annexed.

RELIGION.—Two ministers of the Church of England; one for the southern portion of Belize, with a salary of £600, and the other for the northern part of the town, with £300; both are subject to the diocesan of Jamaica. There is a flourishing Wesleyan Mission at Belize, and at Stan Creek, a Carib settlement, forty miles to the southward, where very praiseworthy exertions have been made. — (Superintendent Fancourt's report in 1848.) The Baptists have two chapels at Belize. A dispensary for the relief of the poor, combined with an asylum for the reception of lunatics, was established in 1847.

EDUCATION.—Six seminaries, with 467 pupils, including a grammar school, towards which £400 is paid out of the £900 voted annually by the colonial legislature for education.

* This does not include goods shipped from the Clyde, which were exported to the British West Indies in 1851, to the extent of 1,001,426 yards; of which, most probably, some went to Honduras.

† Its introduction is said to have originated from the circumstance of a West India captain having brought

PRESS.—One newspaper.

CRIME.—Comparatively small; an effective police force and firebrigade was organized in 1846.

FINANCE.—From 1807 to 1826, the revenue averaged £6,869 per annum; in 1851, it amounted to £17,964. Salary of superintendent, £1,650 per annum. Payments by Great Britain from commissariat chest for 1851, £12,378. A savings' bank was established in 1845; but on this and other matters there is no information in the annual reports of the superintendent.

COMMERCE.—fluctuates, according to the demand in the adjacent provinces of central America; the imports, exports, shipping, and products are thus shown in:—

Details.	1833.	1851.
Imports . . . value £	235,156	289,810
Exports	242,330	153,777
Ships Inwards . . . tons . .	14,018	22,582
Mahogany ¹ . . . feet . .	4,565,034	5,659,552
Cedar	—	7,773
Logwood	1,776	4,665
Sarsaparilla . . . lbs. . .	—	672,456
Tortoise-shell	—	1,505
Cocoa nuts . . . number .	—	386,600

Note.—¹ The quantity of mahogany cut depends upon the state of the foreign demand; in 1846, the export was 9,567,570 feet.

Among the other articles exported at present may be named cochineal, aniseed, balsams, Yucatan hemp, green turtle, rosewood, fustic, Brazilleto, horns, and skins. The mere official values now afford but a very imperfect criterion of the extent of the existing trade. The imports of cotton goods into Honduras from England* during the four years ending with 1852, has been, plain calicoes, 18,538,838 yards; and of printed or dyed, 8,466,442 = 27,005,280. In one year alone (1851) the import was nearly 9,000,000 yards. A large part of these calicoes pay for the cochineal, sarsaparilla, Yucatan hemp, and other articles, which are brought hither from the neighbouring states, in small coasters. Agriculture is entirely neglected, attention being almost exclusively directed to the cutting of mahogany and logwood, and preparing it for exportation, which employs about 2,000 men. The plough is never used, and the labouring classes, when they have diminished the productiveness of the land by successive crops of maize, yams, and plantains, abandon the spot, and make a fresh forest clearance with the axe and hoe. The entire line of coast between the Hondo and Sarstoon rivers is available for agricultural pursuits. Lately, some Spaniards, who have taken refuge in our territory from Yucatan, have commenced the cultivation of sugar and tobacco. The mahogany trade employs a large capital, and is very lucrative; the first trial of the wood was made in 1595 by a carpenter on board one of Sir W. Raleigh's vessels, then lying off Trinidad: its use commenced in England about the beginning of the eighteenth century.†

home some planks as ballast, which he sent to his brother, Dr. Gibbon (an eminent physician), who was then building a house; but it was rejected, as impracticable for working, from its extreme hardness. Some of it being subsequently made into a candle-box, and next into a bureau, which, from its variegated appearance and fine polish, soon became an

THE BAY ISLANDS.

RUATAN,* Bonacea, Utila, Barberet, and other islets in the eastern part of the Gulf of Honduras, occupied during the last century by England, are now chiefly tenanted by emigrants from the Caymans, who, finding it difficult to procure a livelihood, have migrated hither. The aggregate population is estimated at 1,500 to 2,000 souls, of whom about 200 are whites, including nearly 100 Spaniards, who resort to some of the islands from Yucatan. The majority are descended from the old English Buccaneers, by African mothers, and are an athletic race, of industrious habits, and good moral character. They have erected comfortable habitations, are cultivators of the soil and fishermen, and export coconut oil, pine-apples, and other fruit to Belize, New Orleans, and Truxillo, in exchange for manufactures and other necessities. Their exports amount in annual value to £5,000, and their imports to £4,000. They have formed for themselves a Legislative Assembly. The islanders have recently memorialized H.M. government that a resident magistrate should be appointed to dwell among them, for the management of local affairs, the settlement (along with their own justices of the peace) of civil disputes, and the trial of criminal offenders, under the decision of a jury of twelve inhabitants. They have also asked that the Legislative Assembly be convened, prorogued, and subject to the guidance of H.M. superintendent at Honduras, and propose to raise a fund of £300 to £400 a-year for the payment of the stipendiary magistrate to be sent from England.

object of curiosity; the Duchess of Buckingham asked the doctor for sufficient wood for a bureau; and mahogany furniture soon became in general request. The annual exportation for many years has ranged from five to six million feet. The tree is of immense size, and has a magnificent appearance, from the spread of the branches; it is said to require 200 years to arrive at full growth, and be fit for cutting. The trunk is most valuable on account of its dimensions, but the branches or limbs are preferred for ornamental purposes, the grain being closer, and the veins more variegated. The trunk is sawn into logs, which are subsequently roughly squared, for the convenience of ship stowage. The largest log known to have been cut in Honduras was 17 feet long, 5 feet 4 inches deep, and measured 5,168 cubic feet = 15 tons weight. The wholesale prices vary, at Liverpool, from 5*d.* to 9*d.* per foot. Messrs. Broadwood, the pianoforte-makers, are stated to have given £3,000 for three logs of mahogany, the produce of a single tree: they were each about 15 feet long by 38 inches square; and were cut into veneers of eight to an inch. The grain of this tree was particularly beautiful. When highly polished, it reflected the light like the surface of a crystal; and, from the wavy form of the pores, presented a different figure, in whatever direction it was viewed. A log, costing at Liverpool, £378, is calculated to yield about £1,000 when cut into veneers (thin slabs), of which £500 is assumed to be paid as wages to the English mechanics. While the mahogany delights in a comparatively dry and rich deep soil, the *logwood*, which is a low, crooked, prickly tree, thrives in swampy grounds, contiguous to fresh-water creeks and lakes, towards the edges of which, the roots (which are the most valuable part) extend. The wood is very dense, and so heavy as to sink in water: it admits of a fine polish; is of a deep red colour, which it yields to both alcoholic and aqueous menstrua; alkalies deepen the colour to that of purple or violet; acids turn it yellow: it is, therefore, much used for various dyes. There are several other trees; one, called the *pinus occidentalis*, grows to a height of sixty feet, with irregular branches and serrated leaves: owing to the quantity of turpentine and tar which it con-

Her Majesty's government have complied with these laudable requests, and the *Bay Islands* are now a dependency of the British province of Honduras. Measures are being taken to provide the colonists with a minister of religion and schoolmaster, for which they are very desirous. There was a remarkable immunity of crime among this young community, but the Spaniards, who have recently come among them, carry long knives, or stilettos, which have been used with deadly effects; it will therefore be necessary to establish a criminal jurisdiction.

THE MOSQUITO, MOSQUITIA, OR MOSCOS TERRITORY—

is situated on the Atlantic coast, to the eastward of the British settlement at Belize, and stretches to the southward, some say, only to the *San Juan River*, which communicates with Lake Nicaragua;† others assert its extension to the Chirique Lagoon, in the 9th degree of latitude.‡ The inland boundary is also undefined, but is claimed to a distance of from one to two hundred miles from the Atlantic. This fine region is still inhabited by the aboriginal Indians, who have maintained an independent position since the downfall of Montezuma, and cherish a hostile feeling towards the Spaniards, whose former cruelties have imbued the Mosquito race with a traditional hatred, which is continued to the present descendants of the Spaniards in America. For more than two hundred years (see page 166) the Mosquito chiefs and people, have continued in intimate relation and friendship with England; their territory has, on vari-

ties, the wood will sink in water when felled, and is of course highly inflammable; a torch, when stuck in the ground, forming an immense flambeau, around which the negroes collect at night in their dark forests. It is very durable; and even as posts, resists for years the decaying influence of damp ground. The *cahoun* or *co-hoon* yields an almost colourless vegetable oil, which emits an inodorous, pale flame, with little or no smoke. The affinity for oxygen is so great, that iron smeared with the oil very soon rusts; and its caloric is so easily abstracted, that, at the temperature of 60° Fahrenheit, it condenses into a wax-like substance, but resumes its original appearance on the application of heat. The *iron*, *clay*, and *rose woods*; the *palamaletia*, which is dark and beautifully figured; the *Santa Maria*, which possesses the properties of Indian teak; the *caoutchouc*, *sapodilla*, and many others abound, and might be applied to various useful purposes.

* Ruatan is about thirty miles long by eight miles broad; the surface is moderately elevated, and well wooded, but to the westward it consists of grassy plains. Near the southern extremity is the good harbour called Port Royal. The shores abound with turtle and fish: 5,000 Caribs were transported here from St. Vincent's in 1796 (see p. 128). Bonacea is the next to Ruatan in point of size, though greatly inferior.

† Nicaragua Lake is about 90 miles long by 30 broad; circuit, 465 miles; depth, 5 to 40 fathoms; height above the level of the Pacific, 128 feet: water pure. Its communication with the Atlantic by the San Juan River, is unobstructed by cataracts. Lake Leon, through which an extension of navigation might be made to the Pacific, is 48 miles long by 23 broad, and deep enough to receive the largest vessels.

‡ See Maps and Official Correspondence respecting the Mosquito Territory, presented to the House of Commons, 3rd July, 1848. H.M. government "are of opinion that the right of the King of Mosquito (who is under the protection of the British crown) should be maintained, as extending from Cape Honduras down to the mouth of the river San Juan."—(Despatch of Viscount Palmerston to H.M. Consuls and Charge d'Affaires in Central America, of June and July, 1847.)

ous occasions, been recognised and protected, and in 1847-'8, when the Nicaraguan republic attempted to take possession of the San Juan River, H.M. naval forces successfully interfered for the preservation of the river to the Mosquitoes.

The government is an hereditary monarchy, and exhibits the only regularly organized constitution among the aborigines, in any portion of the American continent. The king of Mosquito is assisted in his council by a British resident, and there are many Englishmen dwelling in his dominions. The country affords almost inexhaustible supplies of mahogany, cedar, rosewood, and other ship and cabinet timber; logwood, dyes, drugs, gums, and tortoiseshell abound; and it probably contains mineral wealth. Large herds of cattle depasture on the savannas, and the soil and climate are well adapted for the cultivation of sugar, coffee, cocoa, cotton, tobacco, rice, maize, indigo, and all the productions of tropical regions. Some parts of the coast-line are unhealthy, but there are dry and airy spots, such as Blewfields and Valiente, where Europeans enjoy almost uninterrupted health; while in the interior mountain ridges, and plateaux, every variety of climate may be obtained.

The Mosquito sovereigns adopt English names, and are introducing Christianity among the bold and hardy race, who freely yield them a manly allegiance. In February 1840, "R. C. Frederick, king of the Mosquito nation," made his will at Belize, and devised, that in the event of his death, during the minority of the heir to the throne, the superintendent of the Queen of England at Belize should, with certain commissioners, nominated by the superintendent and appointed by the king, form a regency for conducting the affairs of the Mosquito kingdom, and should cause the royal children (Princes George, William, Clarence, and Alexander, and Princesses Agnes and Victoria) "to be educated in the doctrine and discipline of the united church of England and Ireland, and that the expenses of their support and education be defrayed out of the revenues of the Mosquito nation."*

It is to be hoped that the increasing importance of central America will attract British capitalists to this valuable territory, which England is bound by good faith, and by motives of Christian polity, to preserve in the possession of its aboriginal inhabitants, who have, on various occasions, for more than two centuries, proved their strong attachment to us,

and their implicit reliance on our disinterested and abiding protection.

THE CAYMANS,—

are three small isles between 19° and 20° N. lat., about 130 miles south-west of Cuba, and north-west of Jamaica; the *Grand Cayman* being the most remote, and thirty-four miles distant from *Cayman brague*, and *Little Cayman* (see map of West Indies), which are within five miles of each other, and about one and-a-half mile long, by one mile broad. Grand Cayman contains 1,000 acres, and is so low as to be visible from the quarter-deck of a ship at no greater distance than twelve or fourteen miles, when some lofty trees appear like masts of shipping.

It has no harbour, but has tolerable anchorage on the south-west coast; on the opposite, or north-east side, it is bordered by a reef of rocks, between which and the shore, in smooth water, the inhabitants have their *craals*, or turtle pens. The soil towards the middle of the island is fertile, producing corn and vegetables, while hogs and poultry find ample provender. Columbus discovered these isles on his return from Porto Bello to Hispaniola, and observing the coast swarming with turtle, called them *Las Tortugas*. They were never occupied by the Spaniards, but became the general resort of adventurers or rovers, (chiefly French,) for the sake of the turtle.

In 1655, when Jamaica was taken by England, the Caymans were still untenanted. Mr. Long states them in 1774 to have been inhabited by 106 white men, women, and children. The bishop of Jamaica, in 1827, estimated the population at 1 600. The number of slaves in 1834 were 1,920. These, on the payment of the compensation money, were immediately set free, without the intervention of the apprenticeship system.

The present race of inhabitants are said to be descended from English Buccaneers, and, being inured to the sea, form excellent pilots and seamen: they have a chief or government officer of their own choosing, and they frame their own regulations; justices of the peace are appointed from Jamaica. A large number of them have recently migrated (as before stated) to Ruatan and the Bay islands; the present population cannot be given with any certainty; but it does not exceed a very few hundreds.

CHAPTER XVI.—BRITISH GUIANA, COMPRISING DEMERARA, ESSEQUIBO, AND BERBICE.

GUIANA, or Guayana,* is that part of the South American Main, which lies between the Amazon and Orinoco rivers, extending from 8° 40' N. lat., to 3° 30' S., and from 50° to 68° W. long. The area, of 800,000 or 900,000 square miles, is possessed by several powers. The north-western port-

tion, known as *Spanish Guayana*, belongs to the republic of Venezuela; the south-western portion, called *Portuguese Guayana*, to the Emperor of Brazil. Between these two divisions, which embrace by far the larger part of the country, are the colonies of *British Guiana*, *Dutch Guiana*, or *Surinam*, and *French Guiana*, or *Cuyenne*, belonging respectively to the nations whose name they bear.

British Guiana includes the three former colonies of Demerara, Essequibo, and Berbice; the union of the first and second took place in 1785, the third was joined with them in 1831. The Atlantic forms the north boundary for a distance of about 300

* Correspondence laid before Parliament, 3rd July, 1848, respecting the Mosquito Territory. Appendix C, p. ix.

† Guayana is the Spanish name; Guayana, the Portuguese: the earliest Dutch settlers gave it the designation of Guiana, or the wild coast; and the British portion is so called in official documents.

miles; the Corentyn River, from its mouth to its source the eastern (separating British from Dutch Guiana); the southern and western are still unsettled, and remain to be decided with the Venezuelan and Brazilian governments. The superficies cannot, of course, be correctly stated; but they are loosely estimated at 100,000 square miles; the settlements at present are confined to the vicinity of the coast, and the banks of the rivers and creeks in the lower part of their courses.

HISTORY.—About the year 1576, two Jesuits landed on the coast of Guiana, and for three years preached the Gospel to the natives with some success. At the expiration of that time they are said to have been driven away by the Dutch, who commenced cruising along the coast, between the Amazon and Orinoco rivers, as traders, and established a post near the river Pomeroon, which they called New Zealand, and another at the mouth of the Abary Creek, where there was a large Indian village. Soon afterwards they formed a station on the west coast of the Essequibo; but being driven thence by a party of Spaniards and Indians, they fell back upon a small island at the junction of the Cayuni and Mazaruni rivers, where they found the ruins of a fort, built of hewn stone, with the arms of Portugal over the gate-way; but when or by whom erected they could not discover. The capital of the Essequibo colony was subsequently established on Fort Island, about fifteen miles from the mouth of the river, near its eastern bank.

In 1621, the Dutch West Indian Company was formed, and invested with exclusive control over all the Dutch settlements on the coast of Guiana, and the trade thither; by the concession of the company, an enterprising Dutchman, named Van Peere, was allowed to colonise, for his own benefit, on the bank of the Berbice, Fort Nassau was built some thirty miles up the river, and long remained the capital of the colony.* In 1720 a company called the Berbice Association was formed for the purpose of extending the cultivation of sugar, cocoa, and indigo, and raising money for the purchase of slaves. In 1732,

* The English settled on the Surinam River about 1630; the river was then called the Great Coma.

† Dr. Pinckard relates, that he visited an estate in Berbice, termed *Garden-Eden*, belonging to Mr. T. Cumings, where he saw a mulatto man, twenty-eight years of age, who was said to have been born with all his bones broken, in consequence of his mother having been present at the infliction of this horrible punishment. This statement was confirmed by the mother, who informed the Doctor that when pregnant she had unfortunately witnessed the torture, and was so horror-struck as to be taken extremely ill; her sensations were indescribably distressing. It was expected that abortion would follow; but it was not so; and she was delivered at the usual period of this mis-shapen offspring, having previously borne her husband (a Dutch soldier) four children, who were then athletic mulattoes, remarkable for symmetry of person. The conformation of the deformed son was most extraordinary:—"His person appeared as if it had been composed by throwing the materials into a bag with a loose congeries of broken bones, and shaking the whole together until they assumed a shape approaching to that of a human being. It was not the tortuous construction usually occurring from scrofula or the rickets; he had not the crooked, twisted bones of disease; they appeared as if they had been literally broken, and some of them badly united, some not united at all. The common marks of a sickly constitution were absent, and he enjoyed a state of general health, fully proportioned to the structure of his frame." His head was the only part that was well formed:

Berbice received a constitution from the States General; a governor, assisted by a council of six, was to be appointed by the Directors of the Association, and courts of criminal and civil justice established. Hitherto the settlements, in what is now termed British Guiana, had been small and insignificant, and made along the river's banks: but the greatly increasing demand for tropical produce gave a powerful stimulus to colonial industry, the cultivation of coffee was commenced, and soon afterwards of cotton; and the people of Essequibo discovering the superior fertility of the low lands on the coast, began to remove there in 1741. The long neglected alluvial lands of the Demerara at length attracted attention; and, in 1745, one Andrew Pieters obtained permission to form plantations on the "uninhabited river Demerary," where a separate colony was to be founded. The growing commerce of Berbice received a severe check, in 1763, from an extensive slave insurrection; several thousand negroes united, and in a few days made themselves masters of all the plantations. The whites, many of whom were slain at the commencement of the outbreak, fled to Fort Nassau; but the Governor, considering it indefensible, retired with the inhabitants on board the ships, blew up the Fort, sailed to the entrance of the river, and there awaited assistance. The inhabitants of Essequibo and Demerara were thrown into extreme consternation by the condition of their neighbours. Succour was sent from Barbados (by Admiral Douglas), Surinam, Curaçoa, and St. Eustatia; but it was not until the expiration of eleven months, that the insurrection was finally quelled, by the aid of a squadron despatched from the Netherlands. Several hundreds of the wretched slaves were burnt, or broken alive upon the wheel.†

Upon the restoration of tranquillity, or at least as much of it as could exist in a colony where a handful of whites had been newly enabled, by military force, to regain the power of coercing the labour of more than thirty times as many blacks, a return was given which stated the population at 116 whites and 3,370 slaves. In 1773 the settlements on the Deme-

when sitting upright, the height from the seat to the crown of the head was not quite equal to the length of Dr. Pinckard's fore-arm, from the elbow to the extremities of the fingers. "Every rib and every limb seemed as if it had been fractured; the long bones of the arms being divided in their middles, were loosely held together by membranous or ligamentous unions. Those of the legs appeared as if they had been broken, and the two parts (of the tibia and fibula) afterwards placed together in direct parallel with each other, and thus united into one broad flat bone, the end of which projected forward in the middle of the leg, thinly covered with integuments, while the lower part of the limb was thrown backwards, with the heel up, towards the thigh. He had not the power of moving from his seat without assistance; with some difficulty he could make the lower arm reach the head, the direct motion of the shoulder-joint being extremely limited from the want of the fulcrum commonly afforded to the muscles by the bone of the arm." The poor broken mulatto answered the questions which were put to him expertly, and was considered, in point of intellect, to be quite equal to the generality of the people of colour.—(*Notes on the West Indies*. London: 1816: vol. ii., pp. 218—223.) This incident is quoted here, less from its being a physiological fact of great interest, than from the extraordinary illustration it affords of a peculiar class of dangers attendant on displaying before the public eye, scenes which nature shudders at, but which experience proves to have a strange attraction for the very minds on which they are calculated to produce the most injury.

rara had become so greatly extended, that a Court of Policy, and courts of civil and criminal justice were established at Borselen, an island about twenty miles up the river, but removed, in the following year, to Stabroek, which was then first laid out, and formed the nucleus of what is now George Town. For the next ten years, the people were constantly complaining of the small number and high price of the slaves brought to the colony. In 1781, during the American war, in which Holland had joined France against Britain, Lord Rodney captured Demerara and Essequibo; these colonies were subsequently taken possession of by the French (who compelled the planters to supply slave labour for the erection of forts), but restored to the Dutch at the Peace of Paris.

In 1784, the West India Company published certain regulations against compelling slaves to work on Sundays, or punishing them with more than twenty-five lashes, but these rules were entirely disregarded.* In 1796, Demerara, Essequibo, and Berbice, were captured by England, but restored in 1802, and recaptured in 1803, since which time they have remained British possessions.

As late as 1808, there were but two churches in British Guiana, one (Lutheran) at Berbice, the other (Reformed Dutch) on Fort Island; the London Society, compassionating the spiritual destitution of the people, sent out missionaries in this year; in 1810, the first episcopal church was opened at St. George. In 1823, Mr. Canning's resolutions for "ameliorating the condition of the slave population, and preparing them for freedom," were forwarded to the lieutenant-governor (Major-general Murray). No official communication was made to the slaves on the subject, but they soon learned that steps had been taken in England on their behalf, and were persuaded

by some designing persons that their "freedom had come out," but was wrongfully withheld by the governor and planters. Infuriated by this supposed aggravation of the long course of cruelty and injustice to which they had been subjected, they conspired together, and the rising was so general on the East Coast, that on most of the estates the managers and white people were overpowered and put in the stocks, where they remained until relieved by the troops. Where no resistance was made, no blood was shed; on one or two plantations, fire-arms being used, the assailants likewise resorted to them, and thus one or two white persons were killed, and a few wounded. Among the strange and suspicious circumstances connected with the outbreak, which occurred in the afternoon of Monday, the 18th of August, is the fact that, early in the morning, information of the plot was communicated to a Mr. Simpson by his coloured servant, who, it appeared by the evidence adduced on the subsequent trials, had been one of the very persons in whose reports of "freedom having come out," the whole business had originated. Lieutenant-governor Murray, on learning the intentions of the slaves, mustered a body of mounted militia, and proceeded to the coast; but, apparently, considering his force inadequate, hastily returned to the town, and sent off fresh troops at midnight to the scene of the disturbances. Next day martial law was proclaimed, all the free adult males put under arms, and the united detachments of regulars and militia, marched to a plantation (*Bachelor's Adventure*) where a large body of insurgents had assembled; some few of them had fire-arms, which they scarcely knew how to use, others cutlasses, or bayonets fixed to poles. They refused to lay down their arms, declaring they wanted their

* The treatment of the slaves in Guiana during both the Dutch and English rule, was terrible. One instance, related by Dr. Pinckard, deputy inspector-general of hospitals to H.M. forces, who was sent officially to Berbice in 1796, will illustrate the character of the system pursued, the colony being then under English dominion. During his visit, two slaves, a man and a woman, absconded from the plantation *Lancaster*, at Mahaica: "the manager, whose inhuman severity had caused them to fly from his government, dealt out to them his avenging despotism with more than savage brutality." The victims were taken early in the morning to a remote part of the estate, too distant for the British officers to hear their cries; "two of the strongest drivers, armed with heavy whips," inflicted on the man, who was tied down to the ground, "many hundred lashes;" on releasing him, it was discovered that he was nearly exhausted; in this state the manager struck him on the head with the butt-end of a large whip, and felled him again to the earth, where he soon expired at the feet of his murderer. But not satiated with blood, this savage tyrant next tied down the naked woman on the spot by the dead body of her husband, and with the whips, already purple with gore, compelled the drivers to inflict a punishment of several hundred lashes, which had nearly released her also from a life of toil and torture." Dr. Pinckard, on returning from the hospital, immediately after the transaction, proceeded to the "sick house" on the plantation to satisfy himself by "ocular testimony." He says:—"I found the almost murdered woman lying stark naked on her belly upon the dirty boards, without any covering to the horrid wounds which had been cut by the whips, and with the still warm and bloody corpse of the man extended at her side, upon the neck of which was an iron collar and a long heavy chain, which the now murdered negro had been made to wear from the time of his return to the estate. The flesh of the woman was so torn as to exhibit one extensive sore,

from her loins almost down to her hams: nor had humanity administered even a drop of oil to soften her wounds: the only relief she knew was that of extending her feeble arm to beat off the tormenting flies with a small green bough which had been put into her hand for that purpose, by the sympathizing kindness of a fellow-slave. A more horrid and distressing spectacle can scarcely be conceived. The dead man and the almost expiring woman had been brought home from the place of punishment, and thrown into the negro hospital, amidst the crowd of sick, with cruel unconcern. Lying on the opposite side of the corpse was a fellow-sufferer, in a similar condition to the poor woman: his buttocks, thighs, and part of his back had been flogged into one large sore, which was still raw, although he had been punished a fortnight before." The remaining portion of the description of the unhappy woman is too shocking to be recorded here. It excited deep loathing in the minds of the officers; and a few days after the transaction, the attorney of the estate, happening to call at Lancaster, to visit the officers stationed there, they asked him what punishment the laws of the colony had provided for such horrid barbarity; when, says Dr. Pinckard, to our great surprise, the attorney smiled, and treated our remarks as the dreams of men unpractised in the ways of slavery. To the question, whether the manager would not be dismissed from the estate, he replied, "certainly not;" adding, that "if the negro had been treated as he deserved, he would have been flogged to death long before." Dr. Pinckard concludes by observing, that cruelty had become contagious upon the estate. A former proprietor, not content with severely flogging his slaves, would beat them on the head with the butt-end of his whip between each of the strokes given by the drivers; and he would sometimes order the teeth of the slave to be torn out with a pair of iron pincers, and would himself stand by to see the torture inflicted."—(*Notes on the West Indies*, vol. ii., pp. 45 to 53.)

liberty; or at least two or three days in the week for their own use. After some further parley, the troops were ordered to fire, and the insurgents were dispersed with terrific slaughter. From the 20th to the 30th of August, Colonel Leahy, the officer in command, appears to have employed his entire force in searching the plantations, and apprehending real or suspected ringleaders, some of whom were taken prisoners, and others shot upon the spot. A court martial was assembled in George Town for the trial of the remaining prisoners, who amounted to nearly 200, and Chief Justice Wray sat as a member, in the character of lieutenant-colonel of militia. Many persons were sentenced to death, others to receive from 200 to 1,000 lashes, and to be worked in chains. Several were hung in chains along the East Coast, and others decapitated, and their heads stuck on poles.* On the 24th of May, there still remained fifty prisoners under sentence of death; but these sanguinary proceedings had excited the horror of the British public, and further executions were arrested by orders from home. Here, as in Jamaica, the insurrection of the slaves, though directly provoked by years of the most cruel oppression, was attributed to the influence of the missionaries; they had been for years vilified in the local papers, as agents of the anti-slavery party, engaged in promoting disaffection, and the government paper abounded in the most disgraceful calumnies. All the missionaries were at first seized and imprisoned, but the chief fury of the storm was vented upon the Rev. J. Smith, who was connected with the London mission, and in whose chapel, or its vicinity, the plan of the rising was alleged to have been formed. On the 21st of August Mr. Smith and his wife were made prisoners, and confined in a very small room; they were not even allowed to have a change of linen, or anything but food brought to them, and here they were imprisoned

fourteen weeks, Mr. Smith himself being known to be labouring under a pulmonary complaint. On the 13th of October, the prisoner was tried by court-martial, by which several ends were gained, the evidence of slaves was introduced, while the assistance of an advocate to speak on his behalf, and the means of appealing from an unjust sentence, were precluded. All these proceedings were by the special order of lieutenant-governor Murray, himself a planter. The trial lasted from October the 13th to November the 24th; it was conducted with scarcely veiled malignity,† and it terminated in a sentence of death, accompanied by a recommendation to mercy. The victim (for such he was), in bitter mockery of the palliatory part of his sentence, was removed to a very low room, where the floor consisted of rotten planks, with stagnant water visible between the wide crevices; no executioner was needed, and the mercy, or rather the scanty and partial justice extended by the home government, arrived too late, the meek and holy spirit‡ of the persecuted man had gone to a better country, where his heart would never more be doomed, in his own words, to "flutter at the dreadful sound of the crack of the cart whip." His life, however, was not sacrificed in vain (even to human understanding); in the House of Commons this sad catastrophe raised a long and useful discussion, while throughout the United Kingdom it produced a deep impression of the evils of a system which could so debase and corrupt whole societies. Lieutenant-governor Murray was recalled, but the colonists, in token of their approbation of his conduct, voted him a piece of plate of the value of 350 guineas, and presented testimonials of a similar nature to Colonel Leahy and other militia officers, conspicuous for their "vigorous measures"§. The insurrection was estimated to have cost \$200,000.

Major-general Sir Benjamin D'Urban succeeded

* The actual number of slaves slaughtered during and after the insurrection, was never acknowledged. Mr. (now Lord) Brougham, in introducing the subject to the British parliament, commented on the scrupulous forbearance from bloodshedding evinced by the negroes, who, in avowed accordance with the teaching of their minister (Smith), spared life; not daring to take that which they could not give: and he compared their conduct, during their brief hour of strength, with the unsparing vengeance of the colonists. "Considerably above a hundred," he stated, fell in the field, where they did not succeed in putting one soldier to death. A number of the prisoners, also, it is said, were hastily drawn out, at the close of the affray, and instantly shot. How many, in the whole, have since perished by sentences of the Court does not appear: but up to a day in September, as I learn from the Gazette which I hold in my hand, forty-seven had been executed. A more horrid tale of blood remains to be told. Within the short space of a week, it appears by the same document, ten had been torn in pieces by the lash: some of these had been condemned to 600 or 700 lashes; five to 1,000 each; of which inhuman torture one had received the whole, and two almost the whole at once."—(Debate, House of Commons, June, 1824.)

† Some of the chief evidence was obtained from entries in a private journal, in which the missionary had described in simple, but pathetic language, his anguish at witnessing the sufferings of the slaves, and his fears that they would be driven into rebellion, by the shameless manner in which the laws regarding them were daily set at naught.

‡ While suffering a lingering death, in a place emphatically described by Mr. Brougham as only suited to purposes of torture, the missionary was compelled by his persecutors to draw a bill upon the London Society to defray the expenses of his so-called trial. Many years

afterwards, the secretary of the Society, in arranging some old papers, met with this bill, and noticed in one corner, written in a minute hand, "2 Cor. iv., 8. 9;" a solemn and affecting testimony of the peaceful frame of mind enjoyed by the Christian under his afflictions. Besides his faithful helpmate, and Mrs. Elliot (the wife of his brother missionary, who had gone to England to represent his condition), an unexpected friend was raised up, in the person of the Rev. Mr. Austin, the colonial chaplain, who, having been at first prepossessed against him, was so deeply impressed by the revelations made in the course of the long and tedious investigation, in which he took part, as to sacrifice all his hopes of progress in the colony, and oppose the prejudices of the governor and colonists by stating his conviction that "nothing but those principles of peace which he (Mr. Smith) had been proclaiming, could have prevented a dreadful effusion of blood here, and saved the lives of those very persons who are now, I shudder to write it, seeking his life!"—(Extract from Speech of Sir J. Mackintosh. House of Commons, 11th June, 1824.) Mr. Austin constantly visited Mr. Smith in prison; and performed the last melancholy office of reading the funeral service over his body; when, by the order of the governor, it was ignominiously hurried into a felon's grave. The wretched widow, and Mrs. Elliot (in defiance of the direct prohibition of the governor), accompanied by a free black man, who carried a lantern, for it was before sunrise, left the gaol, and not being permitted to follow the corpse, went another way, but arrived in time to witness the last scene of this tragedy.

§ On the 24th of February, 1824, three weeks after the death of Mr. Smith, a public meeting was held at George Town, and attended by nearly all the leading persons in the colony; and a resolution passed to petition the Court of Policy "to expel all missionaries from the colony."

to the government, and arrived, in April, 1824, to a most difficult office, for the British Parliament had at length resolved upon the amelioration of the condition of the slaves; and the planters were equally determined to oppose it to the utmost. In 1825, as a step towards a better order of things, Demerara and Essequibo were divided into parishes, and arrangements made for the erection of churches, and the maintenance of clergymen. In 1833 Sir James Carmichael Smyth was appointed lieutenant-governor. The prestige attached to his name, as a soldier of unblemished character, might have ensured for him the short-lived popularity, then the usual lot of colonial rulers; but that his reputation for humanity, earned during his previous administration at the Bahamas, where his strenuous efforts had been directed to the abolition of the flogging of women, and, in various ways, to the mitigation of the severity of the slave code, raised up at once a host of enemies against him in Guiana. One of his first measures was, nevertheless, exceedingly popular; for he restored the liberty of the press,* which was immediately availed of, to give vent to the most lavish abuse of him and his proceedings. In August, 1834, the apprenticeship system commenced, the masters entered upon it in much the same spirit as did the Jamaicans (see p. 58), and the labourers did not understand how slavery could terminate, except in entire freedom. This feeling was chiefly manifested on the Arabian (a corruption of Caribbean) coast; 700 or 800 men collected in Trinity church-yard, hoisted a flag, declared that the king had made them free, and when ordered to disperse, refused. The colonists vainly endeavoured to force the governor into declaring martial-law; he proceeded to the coast, explained to the people their error, and advised them to return to their homes, which they immediately did. A large number of persons were tried, and many were found guilty; one was sentenced to death, and executed; thirty-one others, condemned to imprisonment and flogging, were at once pardoned by the governor, who, for his refusal to proclaim martial law, was bitterly assailed in the pages of the *Guiana Chronicle*; and when a suit was instituted, which failed, on the ground of his previous recognition of the liberty of the press, the proprietor received, by subscription, a present of \$3,000; and the lawyer who had defended him a piece of plate of the value of 150 guineas. This liberality was far from being extended to the government officials, for when it became necessary to establish a civil list, in consequence of the abolition of the slave capitation tax; the Combined Court could not be induced to come to any satisfactory decision, until Sir Lionel Smith, the governor of the Windward Islands, came over, and succeeded in negotiating an

arrangement for the term of five years. In token of his sovereign's approbation of his conduct, Sir J. C. Smyth, who had been heretofore lieutenant-governor only, received a commission as governor, in December, 1837. His quiet persistence, in a right course, at length produced a change in public opinion; the insolent tone of the *Guiana Chronicle* was discountenanced as discreditable to the colony, and the apprentices began to reap the benefits of his untiring efforts.† The governor would not suffer the sentences of the Magistrates and District Courts to be carried into effect without his sanction; and by this active superintendence he gradually, at the cost of much personal odium, bitter, though short-lived, procured the abolition of corporal punishment by whipping, except in cases of theft, and prohibited females being sent to the treadmill; undeniably beneficial results speedily ensued, and in addressing the Court of Policy, 3rd February, 1838, his Excellency said:—

"I offer to you my sincere congratulations on the happy, contented, and prosperous state of this province. I challenge comparison with any county of Great Britain; and I affirm that fewer crimes and fewer breaches of the peace will be found to have been committed in British Guiana, during the year 1837, than in any part of H.M. dominions of the same extent, possessing two sea-ports, and containing an equal population." The governor then adverted to the good conduct of the apprenticed labourers; to their anxiety for religious and moral instruction, and to the churches and chapels and school-rooms rising rapidly in every district throughout the province.

By one of those mysterious dispensations, whose wisdom our faith can trust in, though our reason cannot understand, Sir James was suddenly attacked with illness, and died in a few days, leaving the community, who had newly learned his tried judgment and integrity,‡ to appreciate his value by the blank created at a most important crisis; for never surely could a colony more need an experienced pilot at the helm, than in weathering the unknown dangers (of which the real ones were overlooked, and bugbears held up instead), of the great change which took place on the 1st of August, 1838. The planters, no longer restrained by the presence and growing influence of Sir James Smyth, had endeavoured to prepare for it after their old fashion, by passing a vagrant law, which was to give extraordinary powers to the local justices of the peace, and abolish the stipendiary magistracy; this and six other ordinances, framed for the evident purpose of keeping the coloured population serfs, in all but the name, were disallowed in England. The conduct of the emancipated slaves, as described by the new governor (Light), afforded a triumphant answer to the fears (real or pretended) of riot and disturbance, against which the planters were so

* Sir B. d'Urban had suppressed the *Guiana Colonist*, and stopped the publication of the *Chronicle* three times.

† A volume, published in 1850, by Mr. Higgins (a Guiana planter), under the signature of *Barton Premium*, is in direct contradiction to this assertion; and also to the facts as developed in the present condition of the colony. The work is written in the usual graphic and humorous style of the author (the *Jacob Omnium* of "The Times"), who, notwithstanding his bitter complaints of depreciated property, mentions having sold 100 acres of land to the negroes (whose idleness is a leading theme) for the sum of 20,000 dollars.

‡ Governor Smyth was ably seconded in carrying out his humane and just policy by the Colonial Secretary, Mr. (now Sir) H. E. F. Young, the present governor of South

Australia, by whom a useful work, entitled the *Local Guide of British Guiana*, was prepared and published, in 1843.

§ H.M. ministers expressed, in the strongest terms, their esteem for the late governor; in officially acknowledging the melancholy intelligence of his death, Lord Glenelg (then secretary of state) declared that there was "no public functionary in the colonial empire, at the present time, whose continued services would have been of higher importance to the prospects of that portion of the empire, which is now placed in circumstances at once so novel and so interesting to humanity." His lordship also adverted to the proof of "the wisdom of the spirit by which the governor had been guided," afforded by the fact that it had at length been recognized even by the planters; for that "all parties appear to have become equally sensible of the gratitude which was owing to him."

desirous of being fore-armed:—"That day [1st Aug.] was passed in thanksgiving and in prayer in every part of this extensive colony; not one instance of disorderly or offensive conduct can be adduced to throw any slur on the character of the new race of freemen.* The infatuated colonists here, as in Jamaica, were blinded by prejudice to the opportunity then afforded of forming connexions with the labourers based on kind and just principles. The provision grounds, plaintain walks, and fruit-trees, cultivated and reared by the peasantry while in bondage, were destroyed on many estates, in order to compel their dependence on plantation work; and but few owners of the soil could be prevailed on to sell or lease small portions of land sufficient for the sustenance of families. This impolitic conduct had the very opposite effect from that which it was intended to produce; the negroes became increasingly alienated from their late masters, and the estates to which, if encouraged, they might have become permanently attached: they combined, and sedulously hoarded their means, until they were enabled to purchase, generally through the agency of the clergy, some large estates that had been abandoned, or were in the market for sale; then divided them into allotments, built neat habitations, and formed numerous free villages. Up to the end of 1848, no less than 446 estates had thus been acquired, on which 10,541 houses were built and occupied by 44,443 persons, or, on an average, four to each dwelling. These small freeholders raise a large part of their food, and nearly all employ a portion of their time in field-labour when they can obtain fair remuneration, regularly paid.† Among the free villages may be mentioned Victoria (a large settlement), Plaisance, Buxton, Friendship, and Naboclish. The *Good Hope* estate, on the east coast, was bought by a limited number of negroes for \$50,000. *Golden Grove* was bought by a single labourer for \$5,000. It is strange enough, that the idleness of the blacks should be asserted as the cause of the sale of these and other estates which the savings of their industry have purchased. Governor Sir Henry Light furnished the parliamentary committee, 13th March, 1849, with a better reason, when he said—"not a few of the nominal possessors of property are ground to the earth by the debts accumulated annually from the enormous interest which the habits of West India dealing have introduced."

PHYSICAL FEATURES.—The cultivated portion of British Guiana, is an alluvial flat, scarcely elevated above the surface of the sea, drained like Holland or Denmark by canals and sluices, with lofty dikes or mounds of mud of considerable thickness embanking each estate, and together with the numerous bridges kept in repair by the proprietors of the land in which they are situated.‡ Against the incursions of the sea or rivers during the spring-tides, the front line of estates are protected by a dam, inside of which, parallel with the sea shore, or river banks, runs the public road. A back dam wards off the inundation which would otherwise overwhelm

* *West India Papers*, Part I. Jamaica and British Guiana, 17th March, 1839; p. 271.

† Endeavours were made, in 1842, to reduce wages in Demerara and Berbice, and to introduce an arbitrary code of "Rules and Regulations," without any previous consultation with the labourers. A general strike ensued, which lasted about six weeks, and ended in the abandonment of the obnoxious measures; but a mischievous effect had already been produced.

‡ The aborigines in Raleigh's time, during the wet

the plantations from behind, by what is called the bush-water. The low alluvial tract above described extends from ten to twenty, and in some instances (as between the rivers Berbice and Corentyn) even to forty miles inland, and is terminated by a range of sand hills from 30 to 120 feet high, whose pure white cliffs glitter in the sun; they approach the sea within two miles of the Arabisi coast of the Essequibo, thence taking first a south-east by south, and then a south-east direction, traverse the whole colony. Almost parallel with this sandy ridge, lie several detached chains of hillocks, seldom attaining an altitude of more than 200 feet, which cross the Essequibo at Osterbecke Point, in 6° 15', the Demerara at Arobaya, in 6° 5', the Berbice in 5° N. lat. In the last named-parallel, a mountain chain occurs, an offset of the Orinoco mountains; it may be considered the central ridge of the colony, which it traverses in a south-eastern direction, forming majestic cataracts in the river channels, namely, those of *Twasiniki* and *Ouopocari* in the Essequibo, *Itabrou* and *Christmas* in the Berbice, and giving rise to the great waterfalls of the Corentyn. The highest peaks appear to be the *Mountains of St. George*, at the Mazaruni, the *Twasiniki* and *Maccari*, the latter rising about 1,100 feet above the river. The *Itabrou* mountains, on the Berbice river, are considered by Sir Robert Schomburgk to be the old boundary of the Atlantic. The *Pacaraima* mountains, which approach the Essequibo in 4° N. lat., are an offset of the *Sierra Parima*; they extend in an east and west direction, and appear to be exclusively of primitive formation. The culminating point is an extensive sandstone group, rising 5,000 feet above the table-land, or 7,500 above the sea, called by the natives *Roraima*; the upper 1,500 feet present a remarkable mural precipice, from whose summit the highest known cascades descend. These mountains separate the waters connected with the basins of the three great rivers that drain the northern half of South America, the Orinoco and Essequibo on the north, from the Amazon on the south, and are therefore of great importance with regard to the settlement of the boundaries of British Guiana. The *Makarapan* mountain approaches the river Rupununi in 3° 50' N. lat., and attains an altitude of about 3,500 feet above the sea. The *Cannucu* or *Conocoon* mountains in 3° N. lat. connect the Pacaraima mountains with the *Sierra Acurai*, in which the Essequibo, the largest river of Guiana, and the Corentyn, which forms the southern boundary of British dominion have their sources. Their extreme height is estimated at 4,000 feet, and they display the vigorous and luxuriant vegetation which characterises the country. The *Ouangouwai* or *Mountains of the Sun*, form the connecting link between the Acurai and *Carawaimi* mountains; the *Tarapona* between the latter and the Cannucu and Pacaraima mountains.

The interior of the colony is, for the most, thickly wooded with valuable timber, with the exception of the swamps of the river Berbice, and the open tracts called Savannas. Those which extend between season, dwelt in huts built on trees: the narrator adds, that they were "a bold and hardy race, who knew the value of liberty and had the courage to defend it."—(*Curious Collection of Voyages*, fourth edition, 1781; vol. iv., p. 63.)

§ Description of British Guiana. London: 1840.

|| The name is derived from the resemblance which several of the eminences bear to the form of an Indian basket called *Pacara*. On a small hillock at the outskirts of these mountains is a remarkable basaltic column, about fifty feet high, known as *Pouré piapa*.

the Demerara and Corentyn rivers, and approach the sea-shore at the Berbice, are divided by the second ridge of mountains from the Great Savannas of the Rupununi, which occupy about 14,400 square miles, and have an average height of 350 to 400 feet above the sea. They are encompassed by the Sierra Pacaraima to the north, the Cannucu, Taripona and Carawaimi mountains to the south, the thick forests of the Essequibo, and isolated eminences to the east, and the Mocajahi heights, and offsets of the Sierra Parima to the west. The winding courses of the rivers are generally bordered with trees; and clumps of timber occasionally vary the monotonous appearance of the plains, which are otherwise wholly covered with grasses, interspersed with a few stunted trees. The geological structure of this region indicates its having been formerly the bed of an immense inland lake; and traditions of a long past era, related by the natives to Raleigh and his contemporaries, at the close of the sixteenth century, aided by an imperfect comprehension of the language, are supposed, by Sir R. Schomburgk, to have given rise to the reports of its being the site of the famous El Dorado,* a country of matchless riches, variously described; but always retaining certain leading features, such as auriferous mountains, whose rocks were so visibly impregnated with gold as to shine with dazzling splendour, encompassing a vast inland lake named Parima, or the White Sea, upon which stood a city called Manoa, whose houses were covered with plates of gold. In 1599, in a map published by Hondius after the return of Raleigh, this imaginary lake was resented as covering a space of 200 leagues long, and forty broad; and it continued an open question among geographers whether to omit or insert it, until the untiring research of Humboldt at length proved the White Sea, and its gorgeous accompaniments to be entirely an illusion. There is, however, a lake (*Amucu*) in the savannas which, in the dry season, is small and overgrown with rushes; but in time of heavy rains inundates the neighbouring tracts. A native village named Pirara is situated on the banks of the lake.

RIVERS.—The extraordinary facilities for inland navigation which distinguish British Guiana, present the best guarantee for the development of the resources afforded by its prolific soil and humid climate. The *Essequibo*, which Keymis† relates was called by the Indians the brother of the Orinoco, is the largest river in British Guiana, through which it flows from south to north. Its length is estimated at 640 miles; its entire basin, i.e., those regions from which it receives tributaries, covers an area of 42,800 geographical square miles.‡ During the first sixty miles from its source (in the Acarai mountains, forty-one miles north of the equator), it flows through a rich

mountain valley, meandering gently in dry weather, but rising from twenty-five to thirty feet above its banks in heavy rains. After receiving a considerable tributary on either side, and passing the Ouangou mountains, which rise on its eastern shore to a height of 3,000 feet, its course is north and north-east, until it receives in 2° 16' N. lat. the *Cuyuvini*; thence, for the next seventy miles, its channel is so impeded by rapids as to be impracticable even for small canoes. In 3° 15' it forms *William the Fourth's cataract*; being hemmed in by mountains in a width of about fifty yards, the water precipitates itself with great force over two rocky ledges about twenty-four feet high. In 4° N. lat. it is joined by the *Rupununi*, a large river having a course of 220 miles, mostly through savannas. Fifty miles from the mouth of the Essequibo the last rapids occur, and prevent the further ascent of sailing vessels or tidal influences; about six miles from Point Saccaro, it receives the united waters of the *Mazaruni* (400 miles in length), and *Cuyuni*§ (330) whose junction takes place about eight miles to the westward; it still continues its northern course, becoming wider until it expands into an estuary from fifteen to twenty miles wide. In this broad basin there are several islands, some of which are of considerable extent. *Wakenaam Island*, which is about fifteen miles long, and *Leguan* about twelve, are in a high state of cultivation. *Hogg Island* is fifteen miles in length, but only its northern point is cultivated; and *Tiger Island*, the most western in the mouth of the Essequibo, is only partially occupied. The entrance to the river is rendered dangerous by shoals and sand-banks extending to seaward; the best and safest of the four channels formed by the above-named islands, lies between Leguan and the east shore, and has a depth of from two to four fathoms.

The *Demerara*, which receives no tributaries of any magnitude, is situated east of the Essequibo, and parallel to it, having its sources probably in the mountain cluster, called Maccari, in 4° 28' N. lat. Its upper course is known only to the Indians. The last rapids (*Kaicoutshi*) occur about eighty-five miles in a straight line from George Town, to which point it is navigable for vessels of a small size. A square-rigged vessel has been known to load timber at Lucky Spot, in 5° 57' N. lat., about seventy-five miles (the windings included) from the river's mouth, where it is more than a mile and a half across. A bar of mud extends about four miles to seaward, with only nine feet of water at half-flood, but the channel along the eastern shore has nineteen feet of water at high tide.

The *Berbice* enters the Atlantic about fifty-seven miles to the east of the Demerara, which, at an early period of its course, in 3° 55' N. lat., it approaches

charged, but an hour afterwards he was found dead, a long knife having completed the destruction which the bullet, though it had broken one of his ribs, had failed to do.

‡ On the banks of the Guidaru, one of the tributaries of the Essequibo, in 2° 55' N. lat., there is an isolated eminence, with a wooded base about 350 feet high, from which rises a bare granitic mass in the form of a pyramid, 550 feet high, making the entire elevation 900 feet above the river. There are, also, on the west banks of the Essequibo, two gigantic piles of granite about 140 or 150 feet in height, of singular shape.

§ These rivers have been ascended to a considerable distance by Mr. Hillhouse, but both are much impeded by rapids and cataracts. The Mazaruni is only navigable for small sailing vessels to the island of Cairá.

* The first rumours of this golden land reached Europe in 1535, the mountains of New Granada being the reputed locality; and when, after much fruitless search, the honour was transferred to Guiana, numerous expeditions were despatched thither, the last of which was sent by Don Manuel Centurion, governor of Spanish Guiana, so late as 1770.

† Captain Keymis accompanied Raleigh in his voyages to Guiana: during the last, being sent in search of a gold mine, he had a conflict with the Spaniards, in which young Raleigh was killed; his father, enraged at the loss of his son, and the failure of the expedition, bitterly upbraided Keymis, who retired in discontent to his cabin. Hearing the report of a pistol soon afterwards, Sir Walter called out to know the reason; Captain Keymis replied that it had been let off on account of its having been long

within nine miles. From thence it takes a north-west course, sometimes narrowing to thirty feet, at others spreading into lake-like expansions, and occasionally studded with boulders; its banks are low and often marshy. The cataracts and rapids, which for fifty miles impede navigation, terminate in 4° 50' N. lat., leaving the channel free for boats. Vessels not drawing more than twelve feet water can proceed upwards of 100 miles, according to the river windings; and those of seven feet draught, sixty miles further; the influence of the tide being perceptible nearly the whole distance.

The *Corentyn* has its source in about 1° N. lat.; being impeded by the same line of boulders, which traverses the Berbice and Essequibo, it forms in 4° 20' a series of cataracts of great majesty. It receives the river *Cubalaba* from the south, and then becomes navigable for boats drawing seven feet water, to its mouth, a distance of 150 miles, by its windings, which are very tortuous, especially in one instance, from the mouth of the river *Paruru*, to the river *Maipuri*, where it describes almost a circle; it enters at *Oreala* (forty-five miles in a direct line from the sea), the low, alluvial coast plain; at Baboon Island, it turns for fifteen miles north-west, assuming afterwards an almost due northern course, to its embouchure, during which distance it has a breadth of four miles, and forms in 5° 55' N. lat., an estuary impeded by sand and mud banks, with navigable channels between, of which the windward and deepest has eight feet and a-half, at low water, and the tide rises eight feet and a-half at springs, and three at neap. The breadth of the estuary between Plantation Mary's Hope and Nickeri, is ten miles in a north-west and south-east direction; but, if Gordon's Point and Plantation Alness be considered the extremities of the mouth of the *Corentyn*, the distance across is upwards of eighteen geographical miles. The river *Nickeri* flows into the eastern shore of the *Corentyn*; at its entrance is the Dutch fortified settlement of the same name. Between the *Essequibo* and the *Orinoco* are the rivers *Pomeroon*, *Marocco*, and *Wai-ina* or *Guayma*; and although these outlets are comparatively of small size, they are of considerable commercial and political importance from the means of water communication afforded by their branches and tributaries with the mighty *Orinoco* (in the Venezuelan territory), which is navigable for 700 miles from its mouth up to the city of Bolivar, formerly *Angostura*. Between the *Demerara* and *Berbice*, are the small rivers *Mahaica*, *Mahaimoni*, and *Abari*; between the *Berbice* and *Corentyn*, the *Devil's Creek*, was formerly the outlet of the swampy ground behind the sea-coast in that region, but is now blocked up.

All the large streams with which the colony is intersected continually bring down quantities of detritus, and increase the fringe of marshy land, which soon becoming covered with mangroves (*Rhizophora Mangle*) and courida bushes (*Asiennia nitida*), marks the first step of the encroachment of the coast upon the sea. The sandy flat extends from twelve to fifteen miles to seaward, and in proportion as its distance from the shore augments, is covered with three to four feet of water.*

DIVISIONS AND TOPOGRAPHY.—British Guiana consists of the counties of *Demerara*, *Essequibo*, and *Berbice*; the two former have been united, and formed into eleven parishes; the latter into six, named as usual, from the saints' calendar.

* Schomburgk's *British Guiana*, p. 7.

George Town, on the right bank of the *Demerara*, the seat of government, is situated in 6° 49' N. lat., and 58° 11' W. long. The wide streets are traversed by canals; the wooden houses, built in the Dutch style, mostly raised on supports to prevent damp, and seldom above two stories high, are shaded by a projecting roof, have verandahs and porticoes, and are generally surrounded by gardens and lofty trees, and separated from each other by canals or trenches. The most ancient part of the capital (which, until 1812 was called *Stabroek*) runs back from the river to the forest, for about a mile, in two rows of houses, with a broad and shaded road between them, and a canal in the rear of each line, communicating with the river. In consequence of the scarcity of fresh water, the dwellings are provided with large cisterns. The public offices are comprised in a costly brick stuccoed structure, erected opposite the river, at the cost to the colony of £50,000 sterling. There are various places of worship, including a new and handsome brick church of England in the gothic style, a Roman Catholic cathedral, and Wesleyan chapel. There is a colonial and a good naval hospital, and a savings' bank. The shops and stores are numerous and well furnished, and the market abundantly supplied and neatly kept. *Fort William Frederick*, a small fortification, built of mud and facines, is within a mile of the town; to the eastward of it is *Camp House*, the residence of the officer commanding the troops, the commodious *Eve Leary* barracks, two hospitals, the ordnance officers' and the engineers' quarters; the *York* and *Albany* barracks are still further to the eastward. The light-house and telegraph are situated between the *Fort* and *Kingston* district, one of the seven districts into which *George Town* is divided, the superintendence of the whole being vested in a committee, entitled the *Board of Police*. The mayor and town councillors, elected by the inhabitants of the eleven wards of *George Town*, manage the city funds and form a court for the trial of petty offences.

In 1831, *Major Staple*, after unwearied exertions amidst many difficulties and great incredulity, succeeded in forming the first *Artesian well*; at that time government was supplying the poorer classes, in town, with water from the creeks, at the almost incredible rate of nine guilders a puncheon, and the supply for the garrison was obtained at a similar rate.† Now, the whole colony, from *Berbice* to the western coast of the *Essequibo*, is studded with these springs, and in *George Town* alone there were, in 1843, seventeen public or private springs, affording a daily supply of 1,200 puncheons. Two years afterwards, the *Lahama Canal*, a work projected by *Dr. M'Turk*, and carried out under his superintendence, was finished; by it a large body of fresh water (slightly impregnated with iron) is brought a distance of several miles, in a constant stream, for the supply of the capital, and the estates through which it passes.

New Amsterdam, the chief town of *Berbice*, in 6° 15' N. lat., 57° 27' W. long., extends about a mile and a-half along the river, and is intersected by canals; each house has an allotment of half an acre of land, generally insulated by trenches, which are filled and emptied by the change of tide. *Crab Island* is a short distance from the mouth of the river, and occupies the mid-channel. It is low and bushy, and about a mile in circumference; from its northern and southern points, a sandy spit extends, dividing the bed of the river into two navigable channels, of which the eastern has a depth of seven-

† *Local Guide of British Guiana*; 1843.

teen to twenty feet, the western of eight to thirteen at high water. Opposite Crab Island on the eastern bank of the river, is the old Fort St. Andrew, now in ruins. The military barracks, the engineers' and ordnance departments, are erected at the junction of the river Canje, and occupy a square, which is defended by a small battery. There are Episcopalian, Scottish, Lutheran, Wesleyan, and Roman Catholic places of worship; and free and private schools. The court-house is a spacious wooden building. The commercial part of the town, with commodious wharfs and warehouses to land and receive the goods, fronts the river; the tide has free access to the wharfs, which are built on piles. A ferry-boat plies between the town and the opposite bank, and a steamer between George Town and New Amsterdam; there is also a land mail.

There are no other towns in British Guiana; of the villages, *Mahaica*, built on the west bank of the river of that name, is the most thriving. It possesses a church, Wesleyan chapel, and some good stores. The hamlet *Mahaiconi*, on the stream so called, is progressing, and other small settlements are springing up on the road between the capital and New Amsterdam. *Fredericksburg*, on Wakenaam Island, is increasing; *William's Town* and *Catherinesburg*, on the Essequibo, are small hamlets, with Church of England and Wesleyan places of worship. *Victoria*, on the east coast of Demerara, was formed by sixty-three emancipated labourers, who purchased the abandoned estate of Northbrook, chiefly from their savings during their first few years of freedom. There are many others springing up in various directions, under similar circumstances. The present governor (Barklay) is exerting himself with zeal and success for the improvement of the colony. An excellent railway is in course of construction from George Town to Mahaica, along the east coast, a distance of twenty miles; seventeen miles have been completed, at a cost of £262,271, and are in full work. The line runs through sugar estates within a mile to half a mile from the seashore. The total receipts to the end of 1852 have been—from goods' traffic, £14,768; passenger ditto, £23,881 = £38,649; of this, the receipts for 1852, were goods, £4,900; passengers, £7,600 = £12,500. The population along the line (including George Town) is about 60,000; the probable annual traffic from the neighbouring estates is sugar—tons, 14,470; rum, 5,500; sundries, plantains, and supplies for estates, &c., 32,000 = 51,970 tons. The permanent way has cost £100,903; land and compensation, £4,547; stations and buildings, including artesian well, £29,675; engines, carriages, trucks, machinery, &c., £64,686; wages to artificers, workmen, &c., £30,800; law expenses, printing, advertising, &c., £8,122; salaries and management, London and Demerara, £11,443. The line is economically worked; and, judging from what I witnessed recently on railways through sugar plantations in Cuba, will prove an excellent investment.

NATURAL PRODUCTIONS.—Game, chiefly deer, range the upper savannas; there are also tigers, little inferior in size to those of Asia, but very different in character, being rarely known to attack men,* and jaguars,† which prey on the herds of wild cattle and horses that graze on the extensive plains among

the Pacaraima mountains, untouched by the Indians, who do not eat the flesh of cattle.—(Schomburgk's *British Guiana*, p. 114). The maipuri, or tapir, frequents the forests along marshes and rivers; its flesh resembles beef, and is much liked by the Indians. There are various kinds of monkeys, the coatimundi, sloth, ant-bear, &c. Two species of wild hog, the acouri oragouti, the cuba or paca, and many others, are used as food; but space will not permit me to offer any description of them, or of the numerous feathered fowl which abound here, including a species of turkey, pheasant, partridge, the Orinoco goose, and a great number of wild ducks, amongst which is an indigenous Muscovy. The water dog, or Guiana otter, has a soft, fine skin, which has been declared by haters to equal the best beaver. The manati or sea-cow, crocodile, and fresh-water dolphin abound.

The rivers are, at certain seasons, stocked with varieties of fish; that called *pacou* is caught in large numbers, slightly salted, and dried on the rocks. The waters of the Rupununi are remarkable for a fresh-water fish, which occasionally attains a length of twelve feet, and a weight of upwards of 300 lbs.; it is used both fresh and salted. The electric eel has also its habitat in the streams of Guiana, and the armadillo in its woods. The leading characteristic of the country is not, however, its abundance of animal, but of vegetable life; in every form of which it presents new, beautiful, and even marvellous varieties; witness the superb Victoria lily which Sir Robert Schomburgk brought so lately as 1837 from one of the magnificent reaches of the Berbice, as a fitting tribute to the sovereign, in whose honour he had named the gigantic flower.† The timber of the interior is of great worth; the mora and greenheart will bear comparison with the East India teak, and African oak, for ship-building; the forests abound in materials adapted for ornamental work, pre-eminent among which stands the beautiful "letter-wood," and, in trees and plants, valuable for their medicinal properties, or the dyes which they afford, such as ipecacuana, sarsaparilla, caoutchouc, balsam of copaiva, and many gums, arnatto (which covers the banks of the Upper Corentyn), &c. Many pleasant fruits likewise grow in these forests, among them may be named the pine-apple, guava, marmalade fruit, varieties of the anona tribe, the sappodilla, several species of passiflora, Brazil and Souari nuts.

GEOLOGY.—The alluvial soil and clay of the coast-line has been penetrated to the depth of 230 feet, while sinking Artesian wells. In one instance, when the boring was noted, a micaceous substance was reached, at a distance of 140 feet, when water sprung up; at twelve feet below the surface a stratum of semi-carbonized trees was passed through; at forty, blue clay; at fifty, another stratum of decayed wood, twelve feet thick; at seventy, a compact whitish-grey clay; and thence, to the total depth, various coloured clays, the lowest having a smooth, soapy surface. It is supposed that this portion of the continent was formerly habitable at fifty feet below its present elevation, when it was then covered with an immense forest, which was destroyed by conflagration. Water, useful for culinary purposes (except tea) is obtained at depths varying from 100 to 145 feet. After passing the coast-line alluvium, on the Essequibo River, white sandstone, felspar, and in which the Indian women and children caress and conciliate these usually savage animals (p. 11).

† See a series of beautiful views illustrating the Interior of Guiana, with letter-press by Sir R. Schomburgk; 1841.

* Dr. Hancock's *Observations on the Climate, Soil, and Productions of British Guiana*. London: 1840; p. 18.

† The Bishop of Guiana, in his Visitation Tour for 1851, expresses his astonishment at the singular manner

granite are found in successive ridges. On the Demerara River, seventy miles from George Town, a porphyritic sandstone is met with; at ninety-four miles, granitic rocks, with hornblende; at 106 miles, stratified greenstone. The mountain-structure is granite, with a large proportion of ironstone. The ranges, seen on passing from the Essequibo into the Mazaruni (about 5,000 feet high), appear to be white quartz, interspersed with shining particles of mica, which gives them the appearance of gold.

MINERALOGY.—Large quantities of iron and divers coloured ochres are met with. The geological formation indicates the presence of copper and the precious metals. I was informed by Dr. Hancock, who resided many years among the Indians, that gold was frequently seen in their possession.

SOIL.—An alluvium along the sea-belt, extending ten miles inland, then various mixtures of loamy earths, with vegetable moulds, and indurated clays, all capable of yielding vegetable food.

CLIMATE.—On its first occupation by Europeans this coast was extremely unhealthy; but as the country became cleared and drained, and a free circulation of air admitted, the diseases peculiar to a low, hot and marshy region have been mitigated in violence, and the climate is now as good as the peculiar position will permit. There are two rainy seasons in the year; in 1830 there fell at George Town six feet eight inches of rain: the total yearly fall is probably about 100 inches. The wet seasons are—December, January, and February; and June, July, and August, when the land-winds prevail, and the thermometer, which usually ranges from 80° to 82°, becomes lower. The dry seasons are delightful, the air being clear, and invigorated by a strong sea-breeze, which continues from 10, A.M. to 6, P.M., and frequently returns in the night. As the country is ascended, the temperature diminishes, greater vicissitudes are experienced. On the high-lands a climate is found adapted to the European constitution.

POPULATION.—There are no reliable early records. The following table shows the relative number of each class during, and subsequent to, slavery.

Year.	Whites.	Free coloured.	Blacks, or slaves.	Total.
1831	3,529	7,521	89,484	100,526
1834	2,883	7,236	83,824	92,943
1841	—	—	—	98,133
1844	—	—	—	103,959
1851	11,558 ¹	116,137	—	127,695 ²

Note.—¹ Including nearly 8,000 Portuguese labourers from Madeira. ² This does not include the aboriginal Indians, beyond the settled districts, estimated at 7,000: the military, 854; the royal navy, 150; and merchant seamen, 297 = 445.

The number of slaves at the period of emancipation, in 1834, was 83,324, of whom 9,893 were children under six years of age, and 3,852 aged, diseased, and otherwise non-effective. The number of predials attached was 57,807, for whom £3,418,883 was paid; of these, 52,266 were field-labourers, men and women included.

The decrease of slaves, between the year 1817 and 1834, was 18,231. Adverting to this fact, the governor, in 1843, when transmitting Mr. Hadfield's carefully-compiled report on the population of the colony, to H.M. secretary of state, remarked—

"Upon these details the proprietary body ought to be

satisfied that, but for emancipation, there was an annual decrease of their population, which would soon have thrown more estates out of cultivation than their fears have predicted would occur since that happy period. It is now clearly proved, that the Creole population is on a steady increase; that the young and vigorous, in the age most necessary for that increase, are in greater ratio than in any other portion of the population; and that in females—infants under five years—the excess over the same ratio of male infants is considerable; and the excess of both male and female under the same age is greater than in the time of slavery."—(Parl. Papers, 426. June, 1845; p. 27.)

Census of British Guiana in 1851.

Houses, Population, and Race.	Rural Districts.			Urban.	
	Demerara.	Essequibo.	Berbice.	George Town.	New Amsterdam.
Number of houses	5,672	2,254	3,226	4,895	1,103
Population	50,259	24,925	22,370	25,608	4,633
Race—					
European	5,121	1,758	450	3,730	499
Mixed	3,796	1,845	707	6,774	1,632
African	37,383	18,540	19,300	14,133	2,346
East Indies	3,401	2,332	913	871	153
Aborigines	558	442	1,000	—	3

Age.—Under five years, 7,013 males, 7,253 females; five to fifteen, 13,012 males, 12,455 females; fifteen to thirty, 19,926 males, 17,530 females; thirty to fifty, 19,931 males, 15,721 females; over fifty, 7,385 males, 7,469 females.

Native country.—British Guiana, 86,451; Barbados, 4,925; other West India islands, 4,353; African immigrants, 7,168; old Africans, 7,013, Madeirans, 7,528; English, Irish, Scotch, Dutch, and Americans, 2,088; Coolies from Madras, 3,665; ditto from Calcutta, 4,017; not stated, 17.

Occupation.—Public officers, 306; professional men, 187; merchants and shopkeepers, 1,376; clerks, 689; agriculturists, 863; agricultural labourers, 56,505; other labourers, 10,128; mechanics and artisans, 5,987; domestic servants, 5,547; boatmen and mariners, 1,405; others variously employed, 10,922; no stated occupation (including the ladies of the upper class), 12,263; children not employed, being of tender age, 21,517.

The aborigines* (2,003) mentioned in the census, include only those located in or near the cultivated portions of the colony. The Warraus, Caribisi, Accawais, and Arrawaaks, who are located indiscriminately on the Pomeroon, Marocco, Wai-nia, and Barima Rivers, and their tributaries, extending from the Tapacuma Lake to Point Barima, are estimated at 4,160—their respective numbers being 1,896, 832, 315, and 1,117: to these must be added about 3,000 who are scattered among the tributary streams of the Upper Essequibo and Corentyn Rivers. The total number is estimated at 9,000 to 10,000.

Between 1841 and 1848, there were imported into Guiana 46,514 immigrants (the greater number adult males), at a direct cost to the colony of £360,685, which, with incidental charges of hospitals, police, prisons, &c., was increased to not less than £400,000. At the end of 1848, there remained in the settlement—Africans, 5,739; Portuguese, 5,083; East India Coolies, 8,300 = 19,122; of the whole number, about

* The Bishop of Guiana describes them as a gentle and "painfully-interesting" race, desirous of Christian instruction.—(*Visitation Tour*, 1851, p. 31.)

25,000 (more than one-half) had disappeared in fifteen years; some had returned to the countries whence they came; others migrated to different places; and a large proportion perished of disease or destitution. Of the 19,122 who remained, only 12,872 were actually occupied in 1848 as agricultural labourers.*

Recently, more attention has been paid to the health and condition of the labouring classes.

The mortality among 15,200† indentured immigrants who have been working on the plantations during the three years ending 1851, was 364, or rather under 2½ per cent., but the mortality was unequally distributed, the Madeirans losing fully 5, the Africans less than 2, and the East India Coolies very little over 1 per cent. per annum. Chinese labourers are being now introduced into Guiana, and, if well treated, will probably prove excellent agriculturists.

Recently (since the finances of the colony have been restored to a sound footing), considerable sums have been expended on the improvement of the lunatic asylum, the establishment of a leper ward, and the enlargement of the almshouse; an orphan asylum is also in course of erection; and a dépôt has been provided for the accommodation of immigrants.

GOVERNMENT.—When Guiana was under the control of Holland, a constitution was organized which, with some modifications, is still retained; it consists of a governor, appointed by the crown, and a combined court of two chambers, which is thus formed: 1st, *A Court of Policy*, consisting of ten members, five official (the governor, chief justice, colonial secretary, attorney-general, and collector of customs), and five non-official, elected by seven persons, termed the *College of Keizers*, who are chosen for life, or during their residence in the colony, without any property qualification, by the votes of persons contributing direct taxes to the amount of £4:13s. a year, or paying taxes of any sort on an annual income of £140. Absentees vote by proxy. Every second year the senior non-official member retires: the Keizers then send in two names, and one is chosen by the Court of Policy, on whose votes the governor has a casting voice. Local laws, not involving an outlay of money, are made by this court, which has also the power of revising or altering the civil and criminal jurisprudence of the colony, subject to the sanction of the governor and of the Crown. The franchise has been recently lowered.

2nd. *The Financial Representatives*, six in number, are chosen by the same electors that nominate the College of Keizers. The ordinary duration of their sitting is two years; but the governor may dissolve the chamber, which has no legislative power of itself, but meets annually the Court of Policy, to form the Combined Assembly, which discusses, item by item, the estimates of expenditure, and the levy of taxes as framed and proposed by the Court.‡

George Town and New Amsterdam have efficient municipalities. There is now no militia. The regular military forces in the colony, in 1851, consisted of 78th Highlanders, 187; 2nd West India regiment, 369; 3rd ditto, 298 = 854: the last-named corps are composed of negroes.

RELIGION.—Until the first quarter of the present

century had elapsed, the ordinances of religion were almost wholly neglected. In 1827, Guiana was included in the see of Bishop Coleridge, and about this period divided into parishes; in 1838, an archdeaconry was constituted, and there were then thirteen clergymen of the Church of England; in 1842, there were twenty-eight clergymen of the Established Church, and the colony was erected into a bishopric, to which an income of £2,000 per annum was affixed. In 1851, the colony possessed 112 churches and chapels, viz., Church of England, 41; Church of Scotland, 15; London Mission, 19; Wesleyan, 15; Plymouth Brethren, 6; 12 belonging to various dissenting bodies; and Roman Catholic, 3. The average number of persons usually attending divine worship was, Church of England, 10,210; and 22,874 of the other religious denominations = 33,034. When it is considered that 39,716 of the population were between the ages of one and fifteen years; and that there were then about 15,000 East India Coolies and heathen African immigrants interspersed among them, the proportion of habitual attendants on the ordinances of their respective churches is considerable. The total number of each religious persuasion is stated, in the census of 1851, to have been, Church of England, 39,787; Church of Scotland, 11,664; Wesleyans, 8,438; London Mission, 15,502; Dissenters, whose denominations are not known, 13,639; Roman Catholic Church, 9,938; Hindoos and Mahomedans, 7,037; not stated, 21,710. These returns are, however, inaccurate; the Wesleyans, for instance, assert in their published documents that their number is 10,774; the London Mission or Congregational Dissenters are also under-stated. About 3,000 of the aborigines receive religious instruction at various missions carried on by the Church of England, by the Church of Scotland, and by the Roman Catholics.

EDUCATION.—The total number of public schools, in 1851, is not ascertainable, as the Presbyterian, Roman Catholic, and Plymouth Brethren, furnished no returns: the other denominations stood thus:—

Denomination.	Schools.	Average attendance
Church of England . . .	53	4,478
„ Scotland . . .	13	380
London Mission . . .	20	1,781

There are eleven private schools in George Town. Of the entire population, 12,952 can read and write; 11,466 can read only, and the remaining 103,277 are either wholly illiterate, or their state has not been ascertained.

CRIME.—Commitments, in 1851, numbered 2,702; the governor reports a “decrease on the years immediately precedent,” which he considers—

“Attributable, in all probability, to the greater prosperity of the lower orders, arising from cheapened food and enlarged demand for labour, which induces the payment of pecuniary penalties to escape incarceration. * * * In December, 1851, there were, in confinement at the penal settlement and five gaols, only 401 prisoners, though no check had then been applied to the suppression of the petty thefts and trifling assaults which furnish the great bulk of the summary convictions: crime of a deeper dye is so rapidly declining that the records of the Supreme Criminal Court for 1851, show only 68 trials for felony, and 8 for misdemeanours, against 132 and 16 respectively in 1850, and 159 and 18 respectively for 1849. I will only add, that the result of the sessions, to date (April, 1852), is even more satisfactory; and now that the inferior cri-

* Journal of Messrs. Candler and Alexander.

† 3,738 Portuguese, 5,335 Africans, 6,127 East India Coolies.

‡ For fuller details, see Parl. Papers of 1849, on Guiana and Ceylon. Report and Appendix.

minal courts are presided over by the judges. I am encouraged to hope that minor offences may, by a vigorous policy, be also restrained within narrower limits.”—(Governor’s Report, in *Blue Book* for 1851, p. 146.)

There is a well-conducted and nearly self-supporting penal establishment on the Mazaruni river.

FINANCE.—*Revenue* in 1833.—Demerara and Essequibo, £42,273; Berbice, £23,239 = £65,512: in 1851 it was more than doubled, viz., 169,870, of which the custom duties on imports yielded £91,653; rum duties and spirit licenses, £43,460; general revenue, £57,820; tonnage duties, £6,658; export ditto, £3,608. The increase of 1851 beyond 1850 was about £10,000, which afforded a surplus of income over outlay of nearly that amount.—*Expenditure* in 1851.—Civil government (including salary of governor, £5,000) £16,557; judicial, £17,465; ecclesiastical, £14,806; education, £3,212; poor, £7,992; police, £20,924; hospitals, £15,048; penal settlement and prisons, £9,534; roads, £3,746; public buildings, £3,840; immigration, £28,030; public debt interest, £32,884; collection of revenue, £12,503. There is also a municipal revenue of £13,583, of which the local expenditure was, in 1851, at George Town, £10,684; at New Amsterdam, £1,311 = £11,995, (shillings and pence excepted throughout). The expenditure by Great Britain from the commissariat-chest was, in 1851, pay of troops, provisions, &c., £30,304; ordnance, military works, stores, &c., £4,239 = £34,543.

Banks, two—the *British Guiana*, and a branch of the *London Colonial*. Notes in circulation (about)—*British Guiana*, £36,000; *London Colonial*, £26,000 = £62,000, in sums of five dollars and upwards. Coin in use about £80,000.

Monies, Weights and Measures.—English has been recently substituted for the Dutch denominations, formerly employed.

Wages.—Agricultural, 2s.; trades, 4s. per day. Domestic servants, 34s. per month.

Prices in 1851.—Beef, 6d.; pork, 8d.; mutton, 13d. per lb.: all other articles of food proportionately high.

COMMERCE—see p. 183.

Sugar estates in 1851 numbered 171; average of canes, 44,326; number uncut, 31st December, 1851, 8,055 acres; number cut in 1851, 36,271 acres; hogsheads of sugar made in 1851, number 46,325; equal to about 1½ hogshead per acre; probably about 1 ton, taking the hogshead at 1,800 lbs. net: total crop, 82,385,000 lbs. of sugar.*

The landed proprietors are divisible into three classes: the *first* possess estates which yield crops of sugar as large, often larger, than they did during slavery: draining engines of great power, vacuum pans, centrifugal machines, and every description of

* The produce of the colony—including Demerara, Essequibo, and Berbice—in 1834, was 81,085,483 lbs.

† Mr. Stephen Bourne, an intelligent stipendiary magistrate, who resided several years in British Guiana, throws some light on the allegations as to general ruin, in a statement recently furnished me; and at the same time shows the value of well-managed sugar properties in Guiana. I can only give the result. In 1842, when distress was so loudly asserted, five estates in Berbice yielded sugar and rum to the value of £56,795; cost of manual labour, £20,350; and an equal sum for management, interest of capital, &c.; leaving a profit of £16,093; on an average, £3,200 for each estate; the best of which consisted of 500 acres, all in canes, which yielded a net return for the year of £5,900. It should be added, that the labourers were treated with justice and kindness.

machinery found to succeed in the beet-root factories of Belgium and France have been applied with advantage to these properties; with such estates it is no longer a question of abandonment; it is a race of scientific improvement in which, with their immense resources, they must succeed.† The *second* class consists of those who purchased fine plantations, which had declined from the extravagant prices paid for them in 1841-42: this class were generally managers for absentee proprietors, shrewd, possessed of practical skill and local knowledge, but devoid of available capital, which they obtained from the banks at a high rate of interest, on bills renewable from time to time. This extravagant mode of raising money to cultivate could only be sustained by high prices; and the fall in the price of sugar, from £15 to £10 per hogshead, caused the ruin of many: some, however, have weathered the storm; and, with fair seasons and good crops, are now arriving at the condition of the first-named proprietary.‡

The *third* class comprises “the owners of such heavily mortgaged and half-abandoned estates as struggled over the shock of 1847-9, though in so hopelessly encumbered and crippled a state, as to render their retention by their present proprietors possible under no circumstances short of a positive miracle.” The machinery and buildings are completely dilapidated, but the ground has been kept in a state of semi-cultivation at considerable expense to the creditors. It must be evident that no system of protection, no laws to promote immigration, no scheme can save this last class, whose land and dilapidated tenements should, as soon as possible, be brought to sale, in order that persons possessed of capital may endeavour to resuscitate the cultivation either for sugar or for some other product.

Governor Barkly, from whose despatch of the 21st of April, 1852, the foregoing remarks are derived, urges the continuance of immigration on behalf of classes one and two, and adds—“though a trying ordeal is still to be gone through, I entertain no manner of doubt that British Guiana, in the course of a few years, will be able to furnish an unlimited supply of tropical produce, in successful competition with any country in the world.”§ In conclusion, the governor, who is himself a West India proprietor, and had formerly taken a desponding view of our western colonies, thus sums up his elaborate and valuable report on the *Blue Book* for 1851—“it is shown in the authentic records now forwarded, that the revenue has been flourishing, population augmenting, education spreading, crime diminishing, and trade increasing during the year just passed; and there appears as yet no reason, under God’s blessing, to anticipate a less favourable result in any one of those respects in the year now entered upon.”

‡ In support of these observations, the governor cites a return of the cultivated properties sold at execution sale in Guiana in 1851, and says, that two estates on the west sea-coast of Demerara, joining nearly to each other, and of equal value before emancipation, were sold; one for 42,000 dollars, whilst the other, which had been much neglected, brought only 7,400 dollars. Two other adjoining plantations on the Berbice river, both in good cultivation, sold respectively at the rate of 60,000 and 48,000 dollars. His excellency added—“this serves to prove that estates of the first class are not confined to the east coast of Demerara (the most thriving district), but are in fact to be found all over the colony.”

§ Plantains are extensively cultivated in these islands: they form the chief food of fully one half of the population.

CHAPTER XVII.

COMMERCE—SHIPPING—REVENUE—POPULATION, EDUCATION, AND RELIGION, DURING PERIODS OF SLAVERY AND FREEDOM; AND GENERAL RESULTS.

HAVING exceeded the limits allotted to this Division of my work, it is not now possible to do more than advert to the general results attendant on the abolition of slavery in the British West India Colonies. The dates of their European discovery and occupation, are given under their respective heads; and their historical and social progress has been briefly traced up to the year 1851; the latest year in which the records are complete in the department of the secretary of state.

As previously stated, the introduction of slaves into the West Indies from Africa was commenced by several European nations about the beginning of the seventeenth century,* and continued by Englishmen until 1807, when this nefarious traffic was declared unlawful by the British Parliament. At various times during the last five-and-forty years, every Christian state has entered into treaties with England, acknowledging the iniquity of the trade, and professing a desire for its complete abolition. But the maritime or carrying branch of this inhuman commerce is still perpetrated by stealth, under cover of the flags of Spain, Portugal, Brazil, and the United States; while the governments of France and Denmark are the only powers that have followed the steps of England, by putting an end to slavery within their respective territories.

In 1834, the people of England paid twenty million sterling† to the slave-owners in the colonies, in compensation of any loss they might incur; and an apprenticeship system was adopted, which was to continue until 1838 for non-predial, and until 1840

* In 1629, the first African slaves were introduced into Virginia by a Dutch ship, and sold at James Town; the importation was continued under the flag of several nations; and at the period of the Declaration of Independence in 1776 the number of slaves in the young republic was 502,133; their numbers are now about 3,500,000.

† The annexed table gives the number of slaves at the last registration; their average market value between the years 1822 and 1830, and the distribution of the £20,000,000; some alteration took place subsequent to this assignment, but the basis on which the payments were made is shown.

for predial or agricultural slaves. At Antigua and Bermuda the slaves received unconditional freedom, on 1st August, 1834; as did all children under six years of age in every colony.

In our other West India possessions, the provisions of the Imperial Act were perverted by legal ingenuity, or set at nought by direct breach of faith; few or no measures were taken by the colonists to prepare the slaves for unconditional freedom; on the contrary, local laws were passed to retain them, if possible, in a state of serfdom; flogging, the treadmill, and other barbarous punishments, were still inflicted, on women as well as men; and a system of injustice, and even vengeance was pursued in many places, which would have made the state of apprenticeship unbearable, but for the early prospect of its cessation, which took place in 1838. The treatment which the apprentices had received caused a still greater alienation between the labourer and his master, than had previously existed, and deepened his aversion to sugar cultivation, which, having long proved a grievous and unrequited toil, performed under the stimulus of the lash, by the black man only, was naturally regarded as ignominious, and the new-made freeman earnestly desired to be himself a proprietor of the soil. When these facts (of which illustrations are given in the previous pages) are taken into consideration; when it is remembered that tracts of greater or less extent of waste, but rich land existed in all the colonies, excepting Barbados and Antigua; that the *ci-devant* slave proprietors were, in most instances, impoverished, in many ruined, and dependent on the merchants and others, who made annual advances at exorbitant rates of interest, to enable them to cultivate the estates, in consideration of receiving all the consignments of produce, for which accounts were rendered at their own discretion; that communities thus situated and embarrassed were devoid of the ready money whereby wages could be daily or weekly paid to several hundred thousand labourers; and that in all the colonies, for at least nine or ten months of the year, food and other requisites were obtained from America and England; it is surprising that sugar cultivation was continued at all after emancipation; and still more remarkable, that in the efforts to provide for their daily bread, the negro population should have raised themselves from their former degraded position, and exhibited the gratifying picture which is presented in the preceding pages. The returns from the several colonies are irregular, varying in form and denomination, and, in many instances, imperfect, so that it is difficult to group them together into the general and comparative view, which would suffice to refute the allegations sedulously circulated, that emancipation was a quixotic act, alike injurious to both master and servant, commercially detrimental to the nation, and therefore to be considered as a warning, rather than held forth as a lesson for the guidance of other slave-holding states.

The table in the next page gives a comparative view of the West India colonies during a period of bondage and of freedom, so far as there are official returns:—

Comparative Condition of the British Western Slave Colonies in 1833-4 (at the period of the Abolition of Slavery) and in 1851-2.
(Showing the area, population, revenue, values of imports, sugar, rum, and molasses, and shipping inwards.)

¹ The area here given differs in some respects from the statements in the general table at page 17; this table has been framed from the latest authorities.
² In some instances the census of 1844 is given, or the estimates of the governor where there were no returns for 1851. Seven thousand aborigines are not included in the Guiana population.
³ The import from these colonies in 1807 (the last year of the slave-carrying trade) was 3,337,288 cwts. The import into England for 1853 will, it is expected, be equal to 4,000,000 cwts.
⁴ Import during the three years ending 1833, 1,865,763 cwts.; during the three years ending 1851, 1,567,430 cwts.
⁵ Not sugar producing colonies.
⁶ In a few instances, returns of the revenue or imports were not obtainable for 1833; those of 1832 or 1834 have then been given.

⁷ The value of imports from England, in the year 1851, was £485,980; the value of exports to England, in the year 1851, was £814,288. The governor states, in 1851, that the valuation of the exports is purely hypothetical; a remark which applies to the other West India colonies.
⁸ In 1844, Governor Light estimated the produce at only 1 hoghead per acre; and Dr. Scher, the agricultural chemist of the colony, considers that "three times the present return might be secured, and at little greater cost than at present." Cotton was formerly the staple product of Guiana, and so profitable, that one proprietor of six estates in Berbice realised in one year a profit of £50,000 sterling. The high price obtained for sugar, and the competition of the United States, induced the planters to substitute the cane for cotton. The Berbice coffee has been superseded by a cheaper and better berry from Ceylon and from British India.

A leading feature deserving consideration refers to population, which, during slavery, was diminishing so rapidly, that (unaided by breeding farms, as in the United States), the slaves must all have perished in a given course of years. It was ascertained that the decrease on the eleven years ending 1829-'30, was 52,000; this was owing to over-working, under-feeding, and severity of discipline; their condition being, in the words of Lord Stanley (now Earl of Derby), one of "unredressed injustice, bitter oppression, and hopeless wrong." On the abolition of slavery the natural laws of increase at once resumed their sway, and the population, notwithstanding a diminution of whites, no longer required as slave-drivers, overseers, &c., has increased from 827,224 to at least 1,069,885, the census for 1851 not being given for some islands. The prosperous condition of the mass of the people is shown in their increased ability to bear taxation, and to purchase foreign commodities; the public revenue has risen from £432,999 to £715,729, and the imports from £3,205,523 to 4,624,547, although the value of the commodities usually imported has been of late years diminished. The shipping also has benefited, the tonnage inwards having augmented from 473,091 to 651,698 tons, notwithstanding that the voyage to the West Indies is now shortened by steam navigation. The official value of the exports from the United Kingdom to the former slave colonies, was, in 1833, £3,729,888; in 1851, £5,160,110. The increase on the declared or real value was in about the same proportion. The total export to England of sugar, molasses, and rum in the British West Indies, from 1834 to 1852 inclusive, was—sugar, cwts., 55,783,824; molasses, 9,826,026; rum, gals., 89,627,633. At the average price of 20s. per cwt., the value of the sugar, independent of governmental duty or mercantile charges, amounts to £55,783,824; the molasses, at 10s. per cwt., £4,913,013, and the rum, at 2s. 6d. per gal., £11,203,456: produce of the cane, in the last nineteen years, by means of free labour only, £71,900,293. The cultivation of coffee has diminished of late years in the West Indies, owing to the want of capital to establish new plantations in room of the worn-out trees, and the competition of superior-flavoured and lower-priced coffee from Ceylon and other British territories in the East Indies; but cocoa has largely augmented. In 1833, the quantity of this agreeable and wholesome berry imported from our western slave colonies, was 2,125,641 lbs.; in 1851, there were imported into England, from the same territory, 4,347,195 lbs.; increase, 2,222,554 lbs. It is not practicable to show the quantity of sugar now made in the West Indies as compared with a period of slavery; then all the sugar made was exported to England; now there is a large internal consumption in each colony, and by the abolition of the navigation laws, whereby the West Indians are enabled to buy in the cheapest and sell in the dearest markets, the colonial sugars, &c., find entrance to the United States, and other countries. If the actual production were shown in

one denomination (cwts. or lbs.) of sugars, molasses, and succades, it would be found that there is now (excepting in Jamaica) a larger quantity of saccharine matter prepared than was ever done during slavery, while the quality has been greatly improved, and the price reduced.

The improving material and social condition of the mass of the people is also manifested by the increased importations of clothing, which consist chiefly of plain and printed calicoes. The export of these goods to the British West Indies during the three last years of slavery, and the years 1849, '50, and '51, was—

Years.	Calicoes.		Total.
	Plain.	Coloured.	
	Yards.	Yards.	Yards.
1831-'32-'33.	21,898,436	16,403,494	38,301,930
1849-'50-'51.	58,496,276	51,522,249	110,018,525

Note.—Increase on the three years, 71,716,595 yards.

Lest it should be supposed that this extraordinarily increased consumption of more than *twenty-eight million yards* in favour of freedom is attributable to these colonies being depôts for the supply of the foreign West Indies and South American markets, it may be necessary to observe that the depôt trade, excepting that of Honduras, has ceased. During the year 1851, the export of calicoes from England to the foreign West Indies was upwards of forty-five million yards; a large part of which was for re-export to other places. For example, the little barren island of St. Thomas, which is a free port, received, in 1851, 18,819,363 yards out of the above 45,000,000. The exports from England to Mexico and Central America were, in 1851, 21,924,388 yards; to Colombia, 28,929,940; and to the other South American countries in proportionately large quantities. It is but fair therefore to conclude that the whole of the exports of cottons from Great Britain to our West Indian settlements in 1849-'50-'51, were for domestic use. The imports into Jamaica alone, in 1851, were *plain* cottons, 6,055,242; *printed*, 5,288,451 = 11,343,690 yards; and in the previous year (1850) the total imports of both plain and printed amounted to 15,313,172 yards, which was six million yards more than the *whole* export to all our West India Colonies in 1830.*

The next point deserving of inquiry, is the allegation that the blacks are fast relapsing into a state of barbarism;† and that obeahism, witchcraft, and other devices of Satan, have been resumed. An answer to this is given in the details furnished of each island, showing an increase of churches, chapels, and schools, and a decrease of crime. Unfortunately, there are no general returns by which a tabular view could be presented of the religious and educational state of the population in all the colonies; but some documents

* It is often asserted, that Haiti, also, has been ruined since the violent struggle which ended in emancipation; it may be remarked that the population speaking the Spanish language is now estimated at 125,000, the majority being a mixed or coloured race; and those speaking the French language, 800,000, more than seven-eighths of whom are of pure African blood. All enjoy a degree of comfort adapted to their climate, and equal to that of the peasantry of other countries. Sugar-culture has been destroyed, lest it might tempt the whites to endeavour to

restore slavery. They produce annually about *seventy million pounds* of coffee, and export large quantities of this and other articles. In the year ending June, 1851, the Haitian trade employed 74,671 tons of American shipping, navigated by 3,504 United States' seamen; and also a considerable amount of foreign tonnage. The imports of Haitian produce into the United States, in 1851, was, 1,889,968 dols; and the exports in return, 1,816,298 dols.

† See the valuable *Monthly Colonial Circular* of Mr. R. Burn, of Manchester.

will strengthen the conviction which the details previously given are calculated to produce. A complete comparison of one important and eminently successful religious denomination is furnished in the following exposition of the Wesleyan missions in the West Indies, in 1833 and 1852.

186 CHURCH OF ENGLAND, LONDON, AND BAPTIST W. I. MISSIONS.

The operations of the London Missionary Society in Guiana, at two periods, are thus shown—

Details.	1833.	1851.
Chapels	7	21
Missionaries	5	11
Native catechists	1	11
Attending Divine Worship	3,200	20,000
Church members	650	3,090
Schools	7	20
Scholars	1,350	2,050
Sunday schools	—	21
„ scholars	—	3,660

The other West India sphere of the London Mission is Jamaica—where it had no stations in 1833;—one was established at the close of the first year of freedom. In 1851, the mission exhibited the following gratifying results: chapels, 13; missionaries, 9; in attendance on Divine worship, about 8,000; church members, 1,400; day-schools, 12; scholars, 1,150; Sunday-schools, 12; scholars, 1,450.

The Baptists, can now furnish no comparative returns from the London Society. In one of the colonies, where that association had no mission until 1834, their progress up to 1851 is thus shown:—

Baptist Missionary Society's Stations in the Bahamas, in 1851-’2.

Note.—These stations have all been founded since the abolition of slavery. There are a few additional stations, in other parts of the West Indies, which were formed in the following years:—Port of Spain and Savanna Grande, 1843; Jacmel, 1845; Mount Hopeful, Sherring Ville, Mount Elven, and Indian Walk, 1849; Couva and Puerto Plata, 1851.

The Church of England Mission commenced its labours in 1815, at Antigua, St. Vincent's, and Dominica, by the establishment of schools. In 1826, religious instruction was begun at Jamaica; and in 1830, the society had established thirteen stations. On the abolition of slavery, its efforts were increased; nine labourers (four in holy orders) were sent out in 1835; and the cost of the Jamaica Mission in the year 1838-'9, amounted to £12,000, with which 13 clergymen, 23 schoolmasters and catechists, and various schools, containing 6,009 scholars, were maintained. The colonial ecclesiastical establishment being largely increased, the Church Mission reduced its expenditure, in 1842, to £6,000; in 1847, to £1,000; and now to £100, as a maintenance to one of its former agents. A mission was formed at an Indian village in Guiana, where, however, little has yet been accomplished. The total expenditure of the Society in the West Indies has been £122,200, part of which was contributed by government for educational purposes.

The foregoing documents exhibit the religious and educational state of the West Indian population as one of progress. The moral tone of society is necessarily improved:—the coloured girls, who during slavery, were educated to concubinage, now commonly intermarry in their own class, and not unfrequently form legitimate unions with men of European blood. Intemperance, which formerly prevailed among the white inhabitants, has to a great extent passed away.

CONCLUSION.—The facts briefly enumerated in the foregoing pages indicate a few remarkable results of the abolition of slavery in the West Indies.

First.—Internal strife has wholly ceased, and with it the heavy charges upon the revenues of England, caused by the necessity of providing the planters with military aid, to “keep down” the slaves, and to assist in suppressing those struggles for freedom, which in white men, under similar circumstances, would have been deemed heroic, but in black men were termed unprovoked insurrections.

Second.—Revenue, commerce, and shipping, have largely augmented; that is to say, when the state of the islands is considered as a whole, and not viewed, as is frequently the case, simply with respect to some few (Jamaica, for instance), which, by a long persistence in a course of error and improvidence, have been brought to a condition of extreme depression.

Third.—Christian principles and instruction have been diffused, not indeed so widely as might have been hoped, but quite as much as could reasonably have been expected, or as the efforts made for that purpose could warrant; and crime has decidedly diminished.

Fourth.—Population has increased; property has been accumulated by the mass of the people, and the tillage of the soil has been extended.

This is the sunny side of the picture; the reverse is formed by the distress of what is termed the West Indian interest; that is, of a large number of absentee proprietors, who having, with singular pertinacity, persevered to the very verge, and some actually into the abyss of ruin, in a system which

* Sturge, writing in 1837, says, that the dissolute morals of a part of the white and coloured inhabitants of the islands visited by him (excepting Antigua), cannot be described in a work intended for general perusal.—(p. 116.)

common sense might have told them was utterly hollow and unsound, now endeavour to throw the entire blame upon the great and good measure, which afforded them their only chance of righting themselves, which actually saved some, and only, in so far accelerated the crisis with others, as it revealed in broad day-light, the hopeless nature of their involvements. The records of the different local legislatures, and the frequent petitions of the colonists to the home government; the financial embarrassments and heavy public debt of many of the islands; together with the frightfully decreasing population, afford abundant proofs that slavery, in its lowest and most worldly point of view, has never been a profitable arrangement, even to the planter class; and never could have been, though it had been possible for them to have retained the Africans in bondage, and continued to receive from England a costly military establishment wherewith to compel the labour necessary to the production of the sugar, rum, &c., which they afterwards complained proved barely remunerative, though protected by a commercial monopoly. They were then rapidly becoming the merely nominal possessors of estates mortgaged far beyond their real value, and, being devoid of capital for cultivation, were dependent on the annual advances of the merchants for their supplies. Meanwhile the care of the property and slaves was intrusted frequently, or rather generally, to an uneducated and unprincipled class of white men who had risen through the successive grades of slave-drivers, overseers, and book-keepers, until they became managers, or, according to the colloquial term used in some colonies, "Attorneys," from the circumstance of their holding the legal instrument, "a power of attorney." While the absentee proprietors were sinking deeper in debt and difficulty, their representatives were squandering their remaining resources, and keeping up a "Castle Rack-rent" scene, ludicrous, in many points of view, as Miss Edgeworth's well-drawn descriptions, but presenting dark shades of debauchery and crime, to which Ireland, with all her sin and suffering, can happily afford no parallel.

As in Ireland, a new class of proprietors are taking root in the West Indies, freed from past incumbrances, and possessed of capital to make the best of their advantageous position: a large and lucrative field is before them, and, if well tilled, a profitable harvest may be expected. The beautiful Antilles are still the tropical gardens of England, within a fortnight's distance from our shores, and capable of yielding in abundance, sugar, coffee, cocoa, spices, silk, cotton, and other valuable products, to an extent hitherto undreamed of. With climates suited, far better than those of Madeira or the South of France, to the requirements of invalids suffering under the varieties of pulmonary and rheumatic complaints which scourge our population, why, at certain seasons, the West Indies should not be considered as eligible and inviting a tour for Englishmen and Englishwomen, as the hackneyed continental circuit, it is difficult to conceive. The scenery of these lovely islands, which seemed so strangely fair to Columbus, still wraps them like a garment; the "sea-like skies, and sky-like seas," glowingly described by Coleridge, still encompass them, and "glorious stars with lunar beam," irradiate the midnight hours; the forests still display, in wild abundance, the stately trees, reared in the colder north only under careful shelter; our cherished exotics bloom luxuriantly as

common flowers; and the choicest denizens of our aviaries, the brilliantly-coloured parrot, and parrotquet, and the gem-like humming-birds, have here their natural home. There is no drawback now on the enjoyment of the visitor, gazing for the first time on this fairy-land, for the horrid sights and sounds of slavery, the whip and the clanking fetter, dreaded and suspected even when not present to the senses, have passed away with the system fraught with sin and sorrow, of which they formed fitting emblems. That slavery has left no legacy of suffering behind, it would be folly to maintain, but to the Christian principle, which has been blessed to the attainment of the expulsion of that monster evil, we must look hopefully and trustfully for strength to eradicate in time the seeds of moral and physical evil which it has widely sown. The great wants (in a material sense) of the West Indies at the present time appear to be, a resident proprietary, with capital; an increased amount of skilled labour; improved methods of cultivation and manufacture; and a sound monetary system. There is abundant room for small farmers, whether white or black, were it only to raise provisions for home consumption, instead of importing them from the United States, and thus depriving the colonists of the current monies, obtained from Europe in return for produce. With regard to capitalists, whether large or small, an area of 175,000 sq. miles of British territory, in which there are little more than a million inhabitants, or about six mouths to each 640 acres, presents a wide field for commercial enterprise. The products, which experience has proved thrive luxuriantly, are in growing demand. Of sugar, for instance, 8,348,198 cwts. were imported into the United Kingdom, in 1851, of which 5,634,863 came from British possessions, and only 2,713,335 from foreign countries; free grown sugar obtaining the decided superiority over slave-grown, even in the open arena of free trade. The limit of consumption is by no means reached in the United Kingdom: with full and remunerative employment, a population of 28,000,000 would probably take weekly one pound instead of eight ounces of sugar per head, as at present. In the United States the weekly average in 1852 was one pound eleven ounces per head.

Thus, in August, 1846, when the duty levied on British West India and other colonial Muscovado sugars, was 14s. per cwt.; that prepared in foreign slave colonies had its duty lowered from 36s. 1d. to 21s.; and there has been an annual reduction of duty up to July, 1851, when the colonial was 10s., and the slave-grown 15s. 6d. per cwt. Nevertheless, the importations of free labour sugar, from 1846 to 1852, have been as follows (molasses converted at the rate of 3 lbs. to 1 lb. of sugar):—

Years ending 6th of July, 1851.	British Possessions (free labour).		
	West Indies. ¹	Mauritius. ¹	East Indies.
	Cwts.	Cwts.	Cwts.
1846	2,842,655	801,913	1,531,418
1847	2,530,333	1,131,108	1,349,639
1848	3,151,031	881,915	1,432,563
1849	3,086,357	935,935	1,330,294
1850	3,222,869	1,028,440	1,549,733
1851	2,661,513	1,003,033	1,358,228
1852	3,566,394	—	—

Note.—¹ Formerly slave colonies. Where the dash (—) is inserted, the returns are not completed, but exceeding those of 1851.

The entries for consumption in the United Kingdom were—

Year.	Free labour.	Foreign or Slave.
	Cwts.	Cwts.
1847	4,723,232	1,256,421
1850	5,570,461	752,027
1851	5,043,872	1,522,405

The prices in London were, in 1846, per cwt., West India, 35s. 3d.; Havannah, 24s. 8d.; in 1850, 29s. 4d., and 20s. 2d.; in 1851, 27s. 3d., and 24s.; half-year ending January, 1852, 23s. 8d., and 22s.; thus showing that free is as cheap as slave-labour sugar: it will probably soon be cheaper.

It will, perhaps, be answered that increased labour is required for increased production; but the deficiency of the West Indies, in this respect, though the favourite stalking-horse of the colonists is far from being the sole, or even the greatest obstacle. They want the spirit of progress and improvement, which is the characteristic mainstay of England, of her oldest colony—the United States, and of her youngest—Australia. They want improved machinery, economical methods, and a few trustworthy and energetic men to set reforms on foot. In the Spanish, and French, and Danish West Indian Colonies improved machinery has been sedulously introduced; but, excepting on a few estates, comparatively little has been done in our territories. For example, the Woodbrook vertical mill in Trinidad yields 35 per cent. of saccharine liquor from the compressed cane; while by mills in Cuba 75 per cent. is obtained, and at Guadaloupe 83 per cent. out of the ninety contained in the cane. The average yearly loss of sugar in the West Indies, by not extracting from the cane 50 per cent. more than is now done, in consequence of the imperfect means resorted to, is estimated by Mr. Kerr at 70,000 tons; one-third of the crop which has been brought to maturity, at a heavy expense, being therefore wasted.

But there are, happily, indications of a better state of things, in the schemes now put forth for the introduction of efficient modes of tillage and manufacture, and certainly it is no light encouragement to hear, from good authorities, that in the West Indies an acre of land well drained and manured will yield from two and a-half to three hogsheads of sugar, and a proportionate quantity of molasses and rum; so that the proceeds may be estimated at £40 to £50 per acre, on an outlay of £15 to £20. By the use of Fowler's steam-plough, a drainage of three feet is effected, and it has now been ascertained in Guiana, that by thorough drainage an acre of land, which formerly gave only 12 cwts. can be made to furnish 30 cwts.

By means of a new patent cylindrical engine, the aqueous portion of the saccharine matter is rapidly evaporated by the introduction of heated air into a revolving cylinder; within 10 per cent. of the whole of the cane-juice is converted into matter for crystallization; all charring is avoided; there is but little

molasses (which may be converted into bastard sugar) the waste, which for the voyage to England, is estimated at 10 to 12 per cent., is almost nil, leaving the product so dry that it may be packed in boxes like the Havanna clayed sugars; added to these advantages, the whole process is performed in twenty-four hours from the grinding of the canes to the complete crystallisation of the dried sugar, thus avoiding the development of acid by delay; and an estate, which formerly made 800 hogsheads may now turn out at less expense 1,500 or 2,000 hogsheads of an article which will bring, in the London market, a higher price, by 3s. to 4s., than the former manufacture.

In conclusion, it must be reiterated that skill and capital are urgently needed to render the West Indies a remunerative field of production: bring them, and labour will assuredly follow, as it invariably does, wherever men may depend upon obtaining a fair day's wages for a fair day's work. The coloured population are blamed as idle and ungrateful in the extreme, because they will not work for employers, who cannot afford to give them an equal recompense to that which they can earn by tilling their own land, surrounded and assisted by their families. It is a strange fault to bring against the cottiers, that they are too independent, too fond of their small homesteads, too anxious to grow food for their own use, and for the supply of the home markets, to devote themselves exclusively to the cultivation of an article of export, from which they reap but a bare subsistence. Teach them the value of skilled labour; pay them according to their improving performance of the duties allotted to them; and you give them the motive and incitement which is the true spring of progress. The coloured people of the British West Indies, like the fair islands upon which not their will, but the sin of England—doubtless overruled by Providence for ultimate good, has placed them; have great capabilities, which rightly used, may be made instrumental to the production of much benefit to themselves, to the whole British nation, and to the multitudes of their brethren still in captivity. If the rising generation be carefully instructed in Christian principles and practice, and trained to habits of order and industry; if they prove, as to some extent they are already doing, that white and black men have become sufficiently initiated in the spirit of the religion they jointly profess, to live under the same laws; be influenced by the same feelings; and follow, on terms of equality, the same professions and employments; then, indeed, even those who deem it necessary to vindicate England for having ceased to commit what she had learned to recognise as a standing violation of the immutable decrees of justice, will be forced to admit that she has acted wisely, even according to the judgment of this world, in proclaiming that she would not suffer one of her meanest subjects to continue a slave, or to endure the far deeper moral degradation of being a slaveholder; but banished at once, through the length and breadth of her dominions, that accursed source of evil, which had for centuries, like a deadly upas-tree, spread its branches far and wide, blighting everything it touched.

INDEX.

- ABORIGINES (Tasmania), keen senses of the, 6; appearance of the, 10; capture and final removal of the, 13.
- Arthur, Colonel, appointed governor of Van Diemen's Island, 14.
- Auckland, seat of government fixed at, 143; account of, 275.
- Auckland Islands, discovery and position of the, 370; physical features of, 371; geology, climate, and soil of, 372; natural productions and population of, 373.
- Bass' Strait, islands in, 27; navigation of, 29.
- Busby, Mr. J., appointed British resident at New Zealand, 127; lands claimed by, 134.
- Bush-rangers in Van Diemen's Island, 7; cannibalism among the, 9.
- Caledonia (New) Island, physical features and population, 379; cannibalism in, 380; natural productions and geology of, 381.
- Canterbury (New) Settlement, establishment of, 249; account of, 310.
- Chatham Islands, discovery and possession of the, 375; natural productions and population of, 376.
- Cook, Captain, visits New Zealand, 110; second visit of, 115; cannibalism witnessed by, 116.
- Declaration of independence by New Zealand chiefs, 129.
- Derwent River, entrance of the, 24; account of, 37.
- Discovery of an antarctic continent, 357.
- East Cape, description of, 264; mission stations and native villages near, 289.
- Falkland Islands, position and occupation of, 359; early history of, 360; physical features of, 361; geology and mineralogy of, 362; climate and vegetation of, 364; zoology of, 365; population, government, and shipping of, 368; state and prospects of, 369.
- Fitzroy, Captain, appointed governor of New Zealand, 193; Lord Stanley's instructions to, 196; arrival of, 207; decides on the Wairau conflict, 208; issue of debentures by, 210; Lord Stanley's vindication of his measures, 221; recall of, 223.
- Fresne, Captain Marion du, expedition to Van Diemen's Island by, 2; visits New Zealand, 113; massacre of, 114.
- Grey, Captain, appointed governor of New Zealand, 224.
- Hebrides (New) Islands, account of, 381; geology, climate, and natural productions of, 382; population of, 383.
- Heké cuts down the British flag (1844), 217.
- Hobart Town, description of, 42; neighbourhood of, 44.
- Hobson, Captain, appointed British consul in New Zealand, 138; makes a treaty with New Zealand chiefs, 140; death of, 192; clamour against a governor, 175.
- Kororarika village, destruction of (1846), 218; harbour of, 260.
- Land Claims' Court, opening of the, in New Zealand, 191.
- Launceston Town, account of, 45; country around, 46; quantity of rain in, 58.
- Leinster (New), or Stewart Island, account of, 316.
- Maories (New Zealand aborigines), cruelties perpetrated on the, 126; tenacity of, 158; dissatisfaction among the, 168; strength of positions selected by, 228; character and appearance of the, 336; condition of, 337.
- Middle Island, topography of, 295; coast-line of, 302; settlements of the, 304; land in cultivation, &c., of, 317; geology of, 320; population of, 330.
- Nelson Settlement, expedition to fix the site of, 180; first arrival of settlers at, 182; quantity of land around, 183; petition from the, 240; account of, 305; soil and climate of, 306.
- New Zealand Association, formation of, 146; proceedings of the, 149; charter offered to, 150; rejected bill of the, 151.
- New Zealand Company, prospectus issued by, 153; constitution of, 154; charter granted to, 172; large sum entrusted to, 174; injustice of, 179; inexcusable policy of, 190; emigrants sent out by, 205; alleged bankruptcy of the, 212; monetary affairs of, 213; "secret committee" of, 222; expenditure of, 237; government loan to, 243; surrender of charter of, 253; present position of (1850), 254.
- New Zealand, discovery of, 108; first Englishman resident in, 118; establishment of Christian missions in, 120; native population of, 131; "land-sharking" in, 133; cost of Christian mission in, 136; state of the island of (1838), 137; British sovereignty established in, 141; first "civil list" of, 144; treaties for land in, 157; French expedition to, 164; land act passed for, 167; explorations of, 180; disputes concerning land in, 186; condition of (1843), 194; sufferings endured by the colonists of, 241; a militia raised in, 219; hostilities with the natives of, 226; abolition of the native protectorate of, 230; proposed constitution for, 232; leading events in the history of, 256; physical aspect of, 257; coast-line of, 259; bays and islands of, 260; districts and towns of, 277; geology of, 318; fossil bones of gigantic birds of, 321; mineralogy of, 322; climate of, 324; prevalent diseases in, 327; population of, 328; state of religion in, 338; education and crime in, 340; revenue and expenditure of, 342; commerce and shipping of, 344; natural productions, vegetation, &c., of, 345; animal kingdom of, 350; present state and prospects of, 356.
- New Plymouth Settlement, formation of, 169; first settlers arrive at, 171; account of, 286.
- Norfolk Island, account of, 105; advantages of, as a penal settlement, 107.
- Otago Settlement, selection of site for, 244; first settlers sail for, 245; account of, 312.
- Penal discipline, changes in, 91; Lord John Russell on, 93.
- Port Nicholson, Captain Fitzroy's description of, 176.
- Sorell, Lieutenant-colonel, appointed lieutenant-governor of Van Diemen's Island, 5; retirement of, 7.
- Southern Ocean, islands in the, 374.
- Tamar, first settlements on the, 5; account of, 38.
- Tasmania, or Van Diemen's Island, discovery of, by Tasman (1642), 1; insularity of, ascertained (1797-'8), 3; voyages of Flinders and Bass round, 4; high price of

- land in, 15; petitions against transportation to, 16; convicts sent to (1817—'48), 19; military pensioners sent to, 20; physical features and coast-line of, 21; mountain ranges of, 34; rivers and streams of, 37; division of, 41; cattle-hunting in, 47; county and district towns in, 49; magnificent vegetation in, 52; newly discovered country in, 53; geology of, 54; mineralogy of, 55; climate of, 56; population of, 59; state of religion in, 64; educational establishments in, 68; state of crime in, 70; government of, 72; revenue and customs of, 74; imports and exports of, 76; banks and moneys in, 77; fisheries and agriculture in, 79; vegetation of, 83; zoology of, 85; transportation to, 88; probation gangs in, 94; routine of convict labour in, 98; number of convicts in, 100.
- Te Rauperaha, conduct of, before the Wairau conflict, 199; seizure of 229
- Transportation, Commons' committee on, 90; system of, proposed by Lord Howick, 92; benefits of, 103.
- Ulster, New, coast-line of, 259; mountains of, 272; lakes of, 273; geology of, 319; population of, 332.
- Wairau District, examination of the, 185; natives deny the sale of, 186; Captain Wakefield and party proceed to the, 200; purchase of the (1847), 241.
- Wairau Conflict, account of, 200; fatal issue of the, 203; Lord Stanley's opinion on the, 209.
- Wakefield, Colonel, arrives in New Zealand, 156; presents to, 159.
